It does not seem that the discovery of the Island of Palmas (or Miangas) would have been made on behalf of a Power other than Spain; or Portugal. In any case for the purpose of the present affair it may be admitted that the original title derived from discovery belonged to Spain; for the relations between Spain and Portugal in the Celebes Sea during the first three quarters of the 16th century may be disregarded for the following reasons: In 1581, i.e. prior to the appearance of the Dutch in the regions in question, the crowns of Spain and Portugal were united. Though the struggle for separation of Portugal from Spain had already begun in December 1640, Spain had not yet recognized the separation when it concluded in 1648 with the Netherlands the Treaty of Münster—the earliest Treaty, as will be seen hereafter, to define the relations between Spain and the Netherlands in the regions in question. This Treaty contains special provisions as to Portuguese possessions, but alone in regard to such places as were taken from the Netherlands by the Portuguese in and after 1641. It seems necessary to draw from this fact the conclusion that, for the relations *inter se* of the two signatories of the Treaty of Münster, the same rules had to be applied both to the possessions originally Spanish and to those originally Portuguese. This conclusion is corroborated by the wording of Article X of the Treaty of Utrecht of June 26th, 1714, which expressly maintains Article V of the Treaty of Münster, but only as far as Spain and the Netherlands are concerned. It is therefore not necessary to find out which of the two nations acquired the original title, nor what the possible effects of subsequent conquests and cessions may have been on such title before 1648.

The fact that the island was originally called, not, as customarily, by a native name, but by a name borrowed from a European language, and referring to the vegetation, serves perhaps to show that no landing was made or that the island was uninhabited at the time of discovery. Indeed, the reports on record which concern the discovery of the Island of Palmas state only that an island was "seen", which island, according to the geographical data, is probably identical with that in dispute. No mention is made of landing or of contact with the natives. And in any case no signs of taking possession or of administration by Spain have been shown or even alleged to exist until the very recent date to which the reports of Captain Malone and M. Alvarez, of 1919, contained in the United States Memorandum, relate.

It is admitted by both sides that international law underwent profound modifications between the end of the Middle-Ages and the end of the 19th century, as regards the rights of discovery and acquisition of uninhabited regions or regions inhabited by savages or semi-civilised peoples. Both Parties are also agreed that a juridical fact must be appreciated in the light of the law contemporary with it, and not of the law in force at the time when a dispute in regard to it arises or falls to be settled. The effect of discovery by Spain is therefore to be determined by the rules of international law in force in the first half of the 16th century—or (to take the earliest date) in the first quarter of it, i.e. at the time when the Portuguese or Spaniards made their appearance in the Sea of Celebes.

If the view most favourable to the American arguments is adopted—with every reservation as to the soundness of such view—that is to say, if we consider as positive law at the period in question the rule that discovery as such, i.e. the mere fact of seeing land, without any act, even symbolical, of taking possession, involved *ipso jure* territorial sovereignty and not merely an "inchoate title", a *jus ad rem*, to be completed eventually by an actual and durable taking of possession within a reasonable time, the question arises whether sovereignty yet existed at the critical date, i.e. the moment of conclusion and coming into force of the Treaty of Paris.

As regards the question which of different legal systems prevailing at successive periods is to be applied in a particular case (the so-called intertemporal law), a distinction must be made between the creation of rights and the existence of rights. The same principle which subjets the act creative of a right to the law in force at the time the right arises, demands that the existence of the right, in other words its continued manifestation, shall follow the conditions required by the evolution of law. International law in the 19th century, having regard to the fact that most parts of the globe were under the sovereignty of States members of the community of nations, and that territories without a master had become relatively few, took account of a tendency already existing and especially developed since the middle of the 18th century, and laid down the principle that occupation, to constitute a claim to territorial sovereignty, must be effective, that is, offer certain guarantees to other States and their nationals. It seems therefore imcompatible with this rule of positive law that there should be regions which are neither under the effective sovereignty of a State, nor without a master, but which are reserved for the exclusive influence of one State, in virtue solely of a title of acquisition which is no longer recognized by existing law, even if such a title ever conferred territorial sovereignty. For these reasons, discovery alone, without any subsequent act, cannot at the present time suffice to prove sovereignty over the Island of Palmas (or Miangas); and in so far as there is no sovereignty, the question of an abandonment properly speaking of sovereignty by one State in order that the sovereignty of another may take its place does not arise.

If on the other hand the view is adopted that discovery does not create a definitive title of sovereignty, but only an "inchoate" title, such a title exists, it is true, without external manifestation. However, according to the view that has prevailed at any rate since the 19th century, an inchoate title of discovery must be completed within a reasonable period by the effective occupation of the region claimed to be discovered. This principle must be applied in the present case, for the reasons given above in regard to the rules determining which of successive legal systems is to be applied (the so-called intertemporal law). Now, no act of occupation nor, except as to a recent period, any exercise of sovereignty at Palmas by Spain has been alleged. But even admitting that the Spanish title still existed as inchoate in 1898 and must be considered as included in the cession under Article III of the Treaty of Paris, an inchoate title could not prevail over the continuous and peaceful display of authority by another State; for such display may prevail even over a prior, definitive title put forward by another State. This point will be considered, when the Netherlands argument has been examined and the allegations of either Party as to the display of their authority can be compared.

*

In the second place the United States claim sovereignty over the Island of Palmas on the ground of recognition by Treaty. The Treaty of Peace of January 30th, 1648, called hereafter, in accordance with the practice of the Parties, the "Treaty of Münster", which established a state of peace between Spain and the States General of the United Provinces of the Netherlands, in Article V, deals with territorial relations between the two Powers as regards the East and West Indies (Article VI concerns solely the latter).

Article V, quoted in the French text published in the "Corps Universel Diplomatique du Droit des Gens", by J. Du Mont, Volume VI, Part I, 1728, page 430, runs as follows[1]:

---

[1] The English translation given in the Memorandum of the United States runs as follows: "Treaty of Peace between Philip IV, Catholic King of Spain, and their Lordships the States General of the United Provinces of the Netherlands. Anno 1648, January 30th.

. . . .

Article V.

The navigation and trade to the East and West Indies shall be kept up and conformably to the grants made or to be made for that effect; for the security

La Navigation & Trafique des Indes Orientales & Occidentales sera maintenuë, selon & en conformité des Octroys sur ce donnés, ou à donner cy-aprés; pour seureté de quoy servira le present Traicté & la Ratification d'iceluy, qui de part & d'autre en sera procurée; Et seront compris sous ledit Traicté tous Potentats, Nations & Peuples, avec lesquels lesdits Seigneurs Estats, ou ceux de la Société des Indes Orientales & Occidentales en leur nom, entre les limites de leursdits Octroys sont en Amitié et Alliance; Et un chacun, sçavoir les susdits Seigneurs Roy & Estats respectivement demeureront en possession et jouiront de telles Seigneuries, Villes, Chasteaux, Forteresses, Commerce & Pays és Indes Orientales & Occidentales, comme aussi au Bresil & sur les costes d'Asie, Afrique & Amérique respectivement, que lesdits Seigneurs Roy & Estats respectivement tiennent et possedent, en ce compris specialement les Lieux & Places que les Portugais depuis l'an mil six cent quarante & un, ont pris & occupé sur lesdits Seigneurs Estats; compris aussi les Lieux & Places qu'iceux Seigneurs Estats cy-aprés sans infraction du present Traicté viendront à conquerir & posseder; Et les Directeurs de la Société des Indes tant Orientales que Occidentales des Provinces-Unies, comme aussi les Ministres, Officiers hauts & bas, Soldats & Matelots, estans en service actuel de l'une ou de l'autre desdites Compagnies, ou aiants esté en leur service, comme aussi ceux qui hors leur service respectivement, tant en ce Pays qu'au District, desdites deux Compagnies, continuent encor, ou pourront cy-aprés estre employés, seront & demeureront libres & sans estre molestez en tous les Pays estans sous l'obeïssance dudit Seigneur Roy en l'Europe, pourront voyager, trafiquer & frequenter, comme tous autres Habitans des Pays desdits Seigneurs Estats. En outre a esté conditionné & stipulé, que les Espagnols retiendront leur Navigation en telle manière qu'ils la tiennent pour le present és Indes Orientales, sans se pouvoir estendre

---

whereof the present treaty shall serve, and the Ratification thereof on both sides, which shall be obtained; and in the said treaty shall be comprehended all potentates, nations, and people, with whom the said Lords the States, or members of the East and West India Companies in their name, within the limits of their said grants, are in friendship and alliance. And each one, that is to say, the said Lords the King and States, respectively, shall remain in possession of and enjoy such lordships, towns, castles, fortresses, commerce and countries of the East and West Indies, as well as of Brazil, and on the coasts of Asia, Africa, and America, respectively, which the said Lords the King and States, respectively, hold and possess, in this being specially comprised the spots and places which the Portuguese since the year 1641 have taken from the said Lords the States and occupied, comprising also the spots and places which the said Lords the States hereafter without infraction of the present treaty shall come to conquer and possess. And the directors of the East and West India Companies of the United Provinces, as also the servants and officers, high and low, the soldiers and seamen actually in the service of either of the said Companies, or such as have been in their service, as also such who in this country, or within the district of the said two companies, continue yet out of the service, but who may be employed afterwards, shall be and remain to be free and unmolested in all the countries under the obedience of the said Lord the King in Europe; and may sail, traffic and resort, like all the other inhabitants of the countries of the said Lord and States. Moreover it has been agreed and stipulated, that the Spaniards shall keep their navigation to the East Indies, in the same manner they hold it at present, without being at liberty to go further; and the inhabitants of those Low Countries shall not frequent the places which the Castilians have in the East Indies."

> plus avant, comme aussi les Habitans de ce Pays-Bas s'abstiendront de la frequentation des Places, que les Castillans ont és Indes Orientales.

This article prescribes no frontiers and appoints no definite regions as belonging to one Power or the other. On the other hand, it establishes as a criterion the principle of possession ("demeureront en possession et jouiront de telles seigneuries . . . . que lesdits Seigneurs Roy et Estats tiennent et possedent").

However liberal be the interpretation given, for the period in question, to the notions of "tenir" (hold) and "posséder" (possess), it is hardly possible to comprise within these terms the right arising out of mere discovery; i.e. out of the fact that the island had been sighted. If title arising from discovery, well-known and already a matter of controversy at the period in question, were meant to be recognized by the treaty, it would probably have been mentioned in express terms. The view here taken appears to be supported by other provisions in the same article. It is stipulated therein that "les Lieux & Places qu'iceux Seigneurs Estats cy-aprés sans infraction du present Traicté viendront à conquerir et posseder" shall be placed on the same footing as those which they possessed at the moment the treaty was concluded. In view of the interpretation given by Spain and Portugal to the right of discovery, and to the Bull *Inter Caetera* of Alexander VI, 1493, it seems that the regions which the Treaty of Münster does not consider as definitely acquired by the two Powers in the East and West Indies, and which may in certain circumstances be capable of subsequent acquisition by the Netherlands, cannot fail to include regions claimed as discovered, but not possessed. It must further be remembered that Article V provides not merely a solution of the territorial question on the basis of possession, but also a solution of the Spanish navigation question on the basis of the *status quo*. Whilst Spain may not extend the limits of her navigation in the East Indies, nationals of the Netherlands are only excluded from "places" which the Spaniards hold in the East Indies. Without navigation there is no possibility of occupying and colonizing regions as yet only discovered; on the other hand, the exclusion from Spanish "places" of Netherlands navigation and commerce does not admit of an extensive interpretation; a "place", which moreover in the French of that period often means a fortified place, is in any case an actual settlement implying an actual radius of activity; Article VI, for instance, of the same treaty speaks of "lieux et places garnies de Forts, Loges et Chasteaux" (harbours, places, forts, lodgements or castles). For these reasons a title based on mere discovery cannot apply to the situation considered in Article V as already established.

Since the Treaty of Münster does not divide up the territories by means of a geographical distribution, and since it indirectly refuses to recognize title based on discovery as such, the bearing of the treaty on the present case is to be determined by the proof of possession at the critical epoch.

In connection herewith no precise elements of proof based on historical facts as to the display or even the mere affirmation of sovereignty by Spain over the Island of Palmas have been put forward by the United States. There is, however, one point to be considered in connection with the Treaty of Münster. According to a report, reproduced in the United States Explanations and made on February 7th, 1927, by the Provincial Prelacy of the Franciscan Order of Minors of the Province of St. Gregory the Great of the Philippines, the "Islands Miangis" ("Las Islas Miangis"), situated to the north-east of the "Island of Karekelan" (most likely identical with the

Nanusa N.E. of Karakelang, one of the Talauer Islands), after having been first in Portuguese, and then in Dutch possession, were taken by the Spaniards in 1606. The Spanish rule under which the Spanish Franciscan Fathers of the Philippines exercised the spiritual administration in the said islands, ended in 1666, when the Captain general of the Spanish Royal Armada dismantled all the fortified places in the Moluccas, making however before the "Dutch Governor of Malayo" a formal declaration as to the continuance of all the rights of the Spanish Crown over the places, forts and fortifications from which the Spaniards withdrew. There are further allegations as to historical facts in regard to the same region contained in a report of the Dutch Resident of Menado, dated August 12th, 1857, concerning the Talauer Islands (Talaud Islands). According to this report, in 1677 the Spaniards were driven by the Dutch from Tabukan, on the Talautse or Sangi Islands, and at that time—even "long before the coming of the Dutch to the Archipelago of the Moluccas"—the Talauer Islands (Karakelang) had been conquered by the Radjas of Tabukan.

According to the Dutch argument, considered hereafter, the Island of Palmas (or Miangas) together with the Nanusa and Talauer Islands (Talaud Islands) belonged to Tabukan. If this be exact, it may be considered as not unlikely that Miangas, in consequence of its ancient connection with the native State of Tabukan, was in 1648 in at least indirect possession of Spain. However this point has not been established by any specific proof.

But the question whether the Dutch took possession of Tabukan in 1677 in conformity with or in violation of the Treaty of Münster can be disregarded, even if—in spite of the incompleteness of the evidence laid before the Arbitrator—it were admitted that the Talautse (Sangi) Islands with their dependencies in the Talauer- and Nanusa-Islands, Palmas (or Miangas) possibly included, were "held and possessed" by Spain in 1648. For on June 26th, 1714, a new Treaty of Peace was concluded at Utrecht, which, in its Article X, stipulates that the Treaty of Münster is maintained as far as not modified and that the above-quoted Article V remains in force as far as it concerns Spain and the Netherlands.

Article X, quoted in the French text published in "Actes, Mémoires et autres pièces authentiques concernant la Paix d'Utrecht", Vol. 5, Utrecht, 1715, runs as follows:

> Le Traité de Munster du 30 janvier 1648 fait entre le feu Roi Philippe 4 & les Seigneurs Etats Generaux, servira de base au présent Traité, & aura lieu en tout, autant qu'il ne sera pas changé par les Articles suivans, & pour autant qu'il est applicable, & pour ce qui regarde les Articles 5 & 16 de ladite Paix de Munster, ils n'auront lieu qu'en ce qui concerne seulement lesdites deux hautes Puissances contractantes & leurs Sujets [1].

If—quite apart from the influence of an intervening state of war on treaty rights—this clause had not simply meant the confirmation of the principle of actual possession—at the time of the conclusion of the Treaty of Utrecht—as regulating the territorial status of the Contracting Powers in the East

---

[1] *Translation.* The Treaty of Münster of January 30th, 1648, concluded between the late King Philip IV and the States General, shall form the basis of the present Treaty and shall hold good in every respect in so far as it is not modified by the following articles, and in so far as it is applicable, and, as regards Articles 5 and 16 of the said Peace of Münster, these Articles shall only hold good in so far as concerns the aforesaid High Contracting Parties and their subjects.

and West Indies and if, on the contrary, a restitution of any territories acquired before the war in violation of the Treaty of Münster had been envisaged, specific provisions would no doubt have been inserted.

There is further no trace of evidence that Spain ever claimed at a later opportunity, for instance in connection with the territorial rearrangements at the end of the Napoleonic Wars, the restitution of territories taken or withheld from her in violation of the Treaties of Münster or Utrecht.

As it is not proved that Spain, at the beginning of 1648 or in June 1714, was in possession of the Island of Palmas (or Miangas), there is no proof that Spain acquired by the Treaty of Münster or the Treaty of Utrecht a title to sovereignty over the island which, in accordance with the said Treaties, and as long as they hold good, could have been modified by the Netherlands only in agreement with Spain.

It is, therefore, unnecessary to consider whether subsequently Spain by any express or conclusive action, abandoned the right, which the said Treaties may have conferred upon her in regard to Palmas (or Miangas). Moreover even if she had acquired a title she never intended to abandon, it would remain to be seen whether continuous and peaceful display of sovereignty by any other Power at a later period might not have superseded even conventional rights.

It appears further to be evident that Treaties concluded by Spain with third Powers recognizing her sovereignty over the "Philippines" could not be binding upon the Netherlands and, as such Treaties do not mention the island in dispute, they are not available even as indirect evidence.

We thus come back to the question whether, failing any Treaty which, as between the States concerned, decides unequivocally what is the situation as regards the island, the existence of territorial sovereignty is established with sufficient soundness by other facts.

*

Although the United States Government does not take up the position that Spanish sovereignty must be recognized because it was actually exercised, the American Counter-Case none the less states that "there is at least some evidence of Spanish activities in the island". In these circumstances it is necessary to consider *whether and to what extent the territorial sovereignty of Spain was manifested* in or in regard to the Island of Palmas (or Miangas). Here it may be well to refer to a passage taken from information supplied by the Spanish to the American Government and communicated by the latter to the Netherlands Legation at Washington, in a note dated April 25th, 1914. The passage in question is reproduced in the text and in the annex of the United States' Memorandum, and runs as follows:

> It appears, therefore, that this Island of Palmas or Miangas, being within the limits marked by the Bull of Alexander the Sixth, and the agreement celebrated between Spain and Portugal regarding the possession of the Maluco, must have been seen by the Spaniards on the different voyages of discovery which were made in these parts, and that it belonged to Spain, at least by right, until the Philippine Archipelago was ceded by the Treaty of Paris; but precise data of acts of dominion which Spain may have exercised in this island have not been found.
>
> This is the data and information which we have been able to find referring to said island, with which without doubt, because of the small importance it had, the discoverers did not occupy themselves, neither

> afterwards the governors of the Philippines, nor the historians and chroniclers, such as Herrera and Navarrette and the fathers Colin and Pastelle of the Society of Jesus, who refer in their works to the above-mentioned data without detailing any information about the said island.

It further results from the Explanations furnished by the Government of the United States at the request of the Arbitrator that an exhaustive examination of the records which were handed over to the American authorities under Article VIII of the Treaty of Paris, namely such as pertain to judicial, notarial and administrative matters, has revealed nothing bearing on the allegations made by natives of Palmas in 1919 to Captain Malone and Mr. Alvarez on the subject of regular visits of Spanish ships, even gunboats, and on the collection of the "Cedula"-tax. This being so, no weight can be given to such allegations as to the exercise of Spanish sovereignty in recent times—quite apart from the fact that the evidence in question belongs to an epoch subsequent to the rise of the dispute.

Apart from the facts already referred to concerning the period of discovery, and the mention of a letter which was sent on July 31st, 1604, by the Spanish pilot Bartolome Pérez from the Island of Palmas and the contents of which are not known, and apart from certain allegations as to commercial relations between Palmas and Mindanao, the documents laid before the Arbitrator contain no trace of Spanish activities of any kind specifically on the Island of Palmas.

Neither is there any official document mentioning the Island of Palmas as belonging to an administrative or judicial district of the former Spanish Government in the Philippines. In a letter emanating from the Provincial Prelacy of the Franciscan Order of Minors mentioned above, it is said that the Islands of "Mata and Palmas should belong (deben pertenecer) to the group of Islands of Sarangani and consequently to the District of Dávao in the Island of Mindanao". It is further said in this letter that "the Island of Palmas, as it was near to Mindanao, must have been administered (debió ser administrada) spiritually in the last years of Spanish dominion by the fathers who resided in the District of Dávao". It results from the very terms of this letter, which places the "Islands Miangis" to the north-east of the Island Karakelang ("Karekelan"), that these statements, which suppose the existence of Mata, are not based immediately on information taken on the spot, but are rather conjectures of the author as to what seems probable.

In the Rejoinder filed by the United States Government there is an extract from a letter of the Dutch missionary Steller, dated December 9th, 1895. It appears from this letter that the Resident of Menado, at the same time as he set up the Netherlands coat of arms at Palmas (or Miangas), had had the intention to present a medal to the native Chief of the island, "because the said chief, recently detained in Mindanao on business, would not let the commanding officer of a Spanish warship force the Spanish flag upon him". These facts, supposing they are correct, are no proof of a display of sovereignty over Palmas (or Miangas); rather the contrary. If the Spanish naval authorities to whom the administrative inspection of the southern Philippine Islands belonged, were convinced that the Island of Palmas was Spanish territory, the refusal of the native chief to accept the Spanish flag would naturally have led either to direct action on the Island in order to affirm Spanish sovereignty, or, if the Netherlands rights had been invoked, to negotiations such as were the sequel to General Wood's visit in 1906.

As regards the information concerning the native language or knowledge of Spanish, even if sufficiently established, it is too vague to indicate the existence of a political and administrative connection between Palmas (or Miangas) and Mindanao.

In a telegram from General Leonard Wood to the Bureau of Insular Affairs, reproduced in the American Explanations, it is stated that "the administrative inspection of the islands in the south (i.e. of the Philippines), especially round their coasts, belonged absolutely to the naval Spanish authorities". As papers pertaining to military and naval matters were not handed over to the American authorities under the Treaty of Paris, the files relating to the said administrative inspection are not in the possession of the United States. The fact that not the ordinary provincial agencies but the navy were in charge of the inspection of the islands in the south, together with another incidentally mentioned by Major General E. S. Otis; in a report of August 31st, 1899, namely the existence of a state of war or at least of subdued hostility amongst the Moros against Spanish rule, leads to the very probable—though not necessary—conclusion that the complete absence of evidence as to display of Spanish sovereignty over the Island of Palmas is not due to mere chance, but is to be explained by the absence of interest of Spain in the establishment or the maintenance of her rule over a small island lying far off the coast of a distant and only incompletely subdued province.

It has been remarked, not without reason, that the United States, having acquired sovereignty by session only in 1898, were at some disadvantage for the collection of evidence concerning the original acquisition and the display of sovereignty over Palmas. The Arbitrator has no possibility of taking into account this situation; he can found his award only on the facts alleged and proved by the Parties, and he is bound to consider all proved facts which are pertinent in his opinion. Moreover it does not appear that the Spanish Government refused to furnish the documents requested.

*

Among the methods of indirect proof, not of the exercise of sovereignty, but of its existence in law, submitted by the United States, there is the *evidence from maps*. This subject has been very completely developed in the Memorandum of the United States and has also been fully dealt with in the Netherlands Counter-Memorandum, as well as in the United States Rejoinder. A comparison of the information supplied by the two Parties shows that only with the greatest caution can account be taken of maps in deciding a question of sovereignty, at any rate in the case of an island such as Palmas (or Miangas). Any maps which do not precisely indicate the political distribution of territories, and in particular the Island of Palmas (or Miangas) clearly marked as such, must be rejected forthwith, unless they contribute—supposing that they are accurate—to the location of geographical names. Moreover, indications of such a nature are only of value when there is reason to think that the cartographer has not merely referred to already existing maps—as seems very often to be the case—but that he has based his decision on information carefully collected for the purpose. Above all, then, official or semi-official maps seem capable of fulfilling these conditions, and they would be of special interest in cases where they do not assert the sovereignty of the country of which the Government has caused them to be issued.

If the Arbitrator is satisfied as to the existence of legally relevant facts which contradict the statements of cartographers whose sources of information are not known, he can attach no weight to the maps, however numerous and generally appreciated they may be.

The first condition required of maps that are to serve as evidence on points of law is their geographical accuracy. It must here be pointed out that not only maps of ancient date, but also modern. even official or semi-official maps seem wanting in accuracy. Thus, a comparison of the maps submitted to the Arbitrator shows that there is doubt as to the existence or the names of several islands which should be close to Palmas (or Miangas), and in about the same latitude. The St. Joannes Islands, Hunter's Island and the Isle of Mata are shown, all or some of them, on several maps even of quite recent date, although their existence seems very doubtful. The non-existence of the Island of Mata and the identity of the St. Joannes and Hunter's Islands with Palmas, though they appear on several maps as distinct and rather distant islands, may, on the evidence laid before the Arbitrator, be considered as fairly certain.

The "*Century Atlas*" (Exhibit No. 8 of the American Memorandum) and the map published in 1902 by the *Bureau of Insular Affairs of the United States* (Exhibit No. 11), show "Mata I.", "Palmas I." and "Haycock or Hunter I". The Spanish map (Captain Montero), reproduced by the *War Department* of the United States (Exhibit No. 9) also mentions these three islands, although "Haycock I." and "Hunter I." are here different islands. The same is to be said of the map of the Challenger Expedition of 1885. The only large scale map submitted to the Arbitrator which, as appears from inscriptions on it, is directly based on researches on the spot, is that attached to the Netherlands Memorandum (British Admiralty Chart No. 2575). Now this map shows neither an island of Mata, nor of Hunter, nor of any other name in the regions where they should be, according to the other maps, and Haycock Island is indicated at two points other than that adopted in "Exhibits Nos. 8 & 11". Whatever be the accuracy of the British Admiralty Chart for the details in question, these points show that only with the greatest caution use can be made of maps as indications of the existence of sovereignty over Palmas (or Miangas). The maps which, in the view of the United States, are of an official or semi-official character and are of Spanish or American origin are that of Captain Montero and that of the *Insular Department*, referred to above (Exhibits Nos. 8 & 11). The first mentioned gives for that matter no indication as to political frontiers, and the second only reproduces the lines traced by the treaty of December 10th, 1898. They have therefore no bearing on the point in question, even apart from the evident inaccuracies, at least as regards Hunter Island, which they appear to contain precisely in the region under consideration.

As regards maps of Dutch origin, there are in particular two which, in the view of the United States, possess an official character and which might exclude Palmas (or Miangas) from the Dutch possessions. The first of these, published in 1857 by M. Bogaerts, lithographer to the Royal Military Academy, and dedicated to the Governor of that institution, if it possesses the official character attributed to it by the American Memorandum and disputed by the Netherlands Counter-Memorandum, might serve to indicate that the island was not considered at the period in question as Dutch but as Spanish territory. Anyhow, a map affords only an indication—and that a very indirect one—and, except when annexed to a legal instrument, has not the value of such an instrument, involving recognition or abandonment of rights. The importance of this map can only be judged in the light of facts prior or subsequent to 1857, which the Netherlands Government alleges in order to prove the exercise of sovereignty over the Island of Palmas (or Miangas); these facts, together with the cartographical evidence relied upon in their support or submitted in connection with the question of the right location of the Island or Islands called "Meangis", will be considered at the same time as the Netherlands' arguments. While Bogaerts' map does not, as it stands, furnish proof of the recognition of Spanish sovereignty, it must further be pointed out that it is inaccurate as regards the group of islands marked "Meangis" and indicated on this map somewhat to the north of "Nanoesa", as well as in other points, for example the shape of Mindanao and the colouring of certain small islands.

The conclusions drawn in the United States Memorandum from the second map, i.e. the atlas published by the Ministry for the Colonies (1897-1904) appear to be refuted by the information contained in the Netherlands Counter-Memorandum. A copy of a detailed map from the same atlas is there shown which represents "P. Miangis (E. Palmas)" amongst Dutch possessions, not only by the coloured contours, but also because it indicates the Sarangani Islands as "Amerikaansch". The general map, on the other hand, reproduced as "Exhibit No. 10" in the American Memorandum, excludes the former island from Dutch territory, by a line of demarcation between the different colonial possessions. There seems to be no doubt that the special map must prevail over the general, even though the latter was published three months later.

As to the special map contained in the first edition of the same atlas (Atlas der Nederlandsche Bezittingen in Oost-Indië [1883-1885]), where the "Melangies" are reproduced as a group of islands north of the Nanusa and distinct from "Palmas", the same observations apply as to Bogaerts' map, which is fairly similar on this point. The "Explanations" filed by the Netherlands Government make it clear that the authors of the map did not rely on new and authentic information about the region here in question, but reproduced older maps.

*

In the last place there remains to be considered *title arising out of contiguity*. Although States have in certain circumstances maintained that islands relatively close to their shores belonged to them in virtue of their geographical situation, it is impossible to show the existence of a rule of positive international law to the effect that islands situated outside territorial waters should belong to a State from the mere fact that its territory forms the *terra firma* (nearest continent or island of considerable size). Not only would it seem that there are no precedents sufficiently frequent and sufficiently precise in their bearing to establish such a rule of international law, but the alleged principle itself is by its very nature so uncertain and contested that even Governments of the same State have on different occasions maintained contradictory opinions as to its soundness. The principle of contiguity, in regard to islands, may not be out of place when it is a question of allotting them to one State rather than another, either by agreement between the Parties, or by a decision not necessarily based on law; but as a rule establishing *ipso jure* the presumption of sovereignty in favour of a particular State, this principle would be in conflict with what has been said as to territorial sovereignty and as to the necessary relation between the right to exclude other States from a region and the duty to display therein the activities of a State. Nor is this principle of contiguity admissible as a legal method of deciding questions of territorial sovereignty; for it is wholly lacking in precision and would in its application lead to arbitrary results. This would be especially true in a case such as that of the island in question, which is not relatively close to one single continent, but forms part of a large archipelago in which strict delimitations between the different parts are not naturally obvious.

There lies, however, at the root of the idea of contiguity one point which must be considered also in regard to the Island of Palmas (or Miangas). It has been explained above that in the exercise of territorial sovereignty there are necessarily gaps, intermittence in time and discontinuity in space. This phenomenon will be particularly noticeable in the case of colonial territories, partly uninhabited or as yet partly unsubdued. The fact that a State cannot prove display of sovereignty as regards such a portion of territory cannot forthwith be interpreted as showing that sovereignty is inexistent. Each case must be appreciated in accordance with the particular circumstances.

It is, however, to be observed that international arbitral jurisprudence in disputes on territorial sovereignty (e.g. the award in the arbitration between Italy and Switzerland concerning the Alpe Craivarola; Lafontaine, Pasicrisie internationale, pp. 201-209) would seem to attribute greater weight to—even isolated—acts of display of sovereignty than to continuity of territory, even if such continuity is combined with the existence of natural boundaries.

As regards groups of islands, it is possible that a group may under certain circumstances be regarded as in law a unit, and that the fate of the principal part may involve the rest. Here, however, we must distinguish between, on the one hand, the act of first taking possession, which can hardly extend to every portion of territory, and, on the other hand, the display of sovereignty as a continuous and prolonged manifestation which must make itself felt through the whole territory.

As regards the territory forming the subject of the present dispute, it must be remembered that it is a somewhat isolated island, and therefore a territory clearly delimited and individualised. It is moreover an island permanently inhabited, occupied by a population sufficiently numerous for it to be impossible that acts of administration could be lacking for very long periods. The memoranda of both Parties assert that there is communication by boat and even with native craft between the Island of Palmas (or Miangas) and neighbouring regions. The inability in such a case to indicate any acts of public administration makes it difficult to imagine the actual display of sovereignty, even if the sovereignty be regarded as confined within such narrow limits as would be supposed for a small island inhabited exclusively by natives.

IV.

The *Netherlands' arguments* contend that the East India Company established Dutch sovereignty over the Island of Palmas (or Miangas) as early as the 17th century, by means of conventions with the princes of Tabukan (Taboekan) and Taruna (Taroena), two native chieftains of the Island of Sangi (Groot Sangihe), the principal island of the Talautse Isles (Sangi Islands), and that sovereignty has been displayed during the past two centuries.

In the annexes to the Netherlands Memorandum the texts of conventions concluded by the Dutch East India Company (and, after 1795, by the Netherlands State), in 1677, 1697, 1720, 1758, 1828, 1885 and 1899 with the Princes, Radjas or Kings, as they are indiscriminately called, of Tabukan, Taruna and Kandahar (Kandhar)-Taruna. All these principalities are situated in the Northern part of the Island of Sangi (Groot Sangihe or Sanghir) and, at any rate since 1885, include, besides parts of that island, also certain small islands further north, the Nanusa Islands—all incontestably Dutch—and, according to the Netherlands, also the Island of Palmas (or Miangas). These successive contracts are one much like another; the more recent are more developed and better suited to modern ideas in economic, religious and other matters, but they are all based on the conception that the prince receives his principality as a fief of the Company or the Dutch State, which is suzerain. Their eminently political nature is confirmed by the supplementary agreements of 1771, 1779 and 1782, concerning the obligations of vassals in the event of war. The dependence of the vassal State is ensured by the important powers given to the nearest representative of the colonial Government and, in the last resort, to that Government itself. The most recent of these contracts prior to the cession of the Philippines to the United States, that of 1885, contains, besides the allocation of powers for internal administration, the following provisions also, in regard to international interests: exclusion of the Prince from any direct relations with foreign Powers, and even with their nationals in important economic matters; the currency of the Dutch Indies to be legal tender; the jurisdiction over foreigners to belong to the Government of the Dutch Indies; the vassal is bound to suppress slavery, the White Slave Traffic and piracy; he is also bound to render assistance to the shipwrecked.

Even the oldest contract, dated 1677, contains clauses binding the vassal of the East India Company to refuse to admit the nationals of other States, in particular Spain, into his territories, and to tolerate no religion other than protestantism, reformed according to the doctrine of the Synod of Dordrecht. Similar provisions are to be found in the other contracts of the 17th and 18th centuries. If both Spain and the Netherlands had in reality displayed their sovereignty over Palmas (or Miangas), it would seem that, during so long a period, collisions between the two Powers must almost inevitably have occurred.

The authenticity of these contracts cannot be questioned. The fact that true copies, certified by evidently the competent officials of the Netherlands Government, have been supplied and have been forwarded to the Arbitrator through the channels laid down in the Special Agreement, renders the production of facsimiles of texts and of signatures or seals superfluous. This observation equally applies to other documents or extracts from documents taken from the archives of the East India Company, or of the Netherlands Government. There is no reason to suppose that typographical errors in the reproduction of texts may have any practical importance for the evidence in question.

*

The fact that these contracts were renewed from time to time and appear to indicate an extension of the influence of the suzerain, seems to show that the regime of suzerainty has been effective. The sovereignty of the Netherlands over the Sangi and Talauer Islands is moreover not disputed. There is here a manifestation of territorial sovereignty normal for such a region. The questions to be solved in the present case are the following:

Was the island of Palmas (or Miangas) in 1898 *a part of territory under Netherlands' sovereignty?*

Did this sovereignty actually exist in 1898 *in regard to Palmas (or Miangas)* and are the facts proved which were alleged on this subject?

If the claim to sovereignty is based on the continuous and peaceful display of State authority, the fact of such display must be shown precisely in relation to the disputed territory. It is not necessary that there should be a special administration established in this territory; but it cannot suffice for the territory to be attached to another by a legal relation which is not recognized in international law as valid against a State contesting this claim to sovereignty; what is essential in such a case is the continuous and peaceful display of actual power in the contested region.

According to the description of the frontiers of the territory of Taruna annexed to the contract of 1885, the list of dependencies of Taruna on the Talauer Islands mentions first the different islands of Nanusa, and ends by the words "ten slotte nog het eiland Melangis (Palmas)", "and lastly the island Melangis (Palmas)".

The similar description of frontiers attached to the contract of 1899 states that the Islands of Nanusa (including the Island of "Miangas") belong to the territory of Kandahar-Taruna. If these two mentions refer to the Island of Palmas (or Miangas), it must be recognized that that island, at any rate nominally, belongs to the vassal State in question; it is by no means necessary to prove the existence of a special contract with a chieftain of Palmas (or Miangas).

However much the opinions of the Parties may differ as to the existence of proof of the display of Dutch sovereignty over the Island of Palmas (or Miangas), the reports, furnished by both sides, of the visit of General Wood, in January 1906, show that at that time there were at least traces of continuous relations between the island in dispute and neighbouring Dutch possessions, and even traces of Dutch sovereignty. General Wood noted his surprise that the Dutch flag was flying on the beach and on the boat which came to meet the American ship. According to information gathered by him, the flag had been there for 15 years and perhaps even longer. Since the contract of 1885 with Taruna and that of 1899 with Kandahar-Taruna comprise Palmas (or Miangas) within the territories of a native State under the suzerainty of the Netherlands and since it has been established that in 1906 on the said island a state of things existed showing at least certain traces of display of Netherlands sovereignty, it is now necessary to examine what is the nature of the facts invoked as proving such sovereignty, and to what periods such facts relate. This examination will show whether or not the Netherlands have displayed sovereignty over the Island of Palmas (or Miangas) in an effective continuous and peaceful manner at a period at which such exercise may have excluded the acquisition of sovereignty, or a title to such acquisition, by the United States of America.

* * *

Before beginning to consider the facts alleged by the Netherlands in support of their arguments, there are two preliminary points, in regard to which the Parties also put forward different views, which require elucidation. These relate to questions raised by the United States: firstly the power of the

East India Company to act validly under international law, on behalf of the Netherlands, in particular by concluding so-called political contracts with native rulers; secondly the identity or non-identity of the island in dispute with the island to which the allegations of the Netherlands as to display of sovereignty would seem to relate.

*

The acts of the *East India Company* (Generale Geoctroyeerde Nederlandsch Oost-Indische Compagnie), in view of occupying or colonizing the regions at issue in the present affair must, in international law, be entirely assimilated to acts of the Netherlands State itself. From the end of the 16th till the 19th century, companies formed by individuals and engaged in economic pursuits (Chartered Companies), were invested by the State to whom they were subject with public powers for the acquisition and administration of colonies. The Dutch East India Company is one of the best known. Article V of the Treaty of Munster and consequently also the Treaty of Utrecht clearly show that the East and West India Companies were entitled to create situations recognized by international law; for the peace between Spain and the Netherlands extends to "tous Potentats, Nations & Peuples" with whom the said Companies, in the name of the States of the Netherlands, "entre les limites de leurdits Octroys sont en Amitié et Alliance". The conclusion of conventions, even of a political nature, was, by Article XXXV of the Charter of 1602, within the powers of the Company. It is a question for decision in each individual case whether a contract concluded by the Company falls within the range of simple economic transactions or is of a political and public administrative nature.

As regards *contracts between a State* or a Company such as the Dutch East India Company and *native princes or chiefs of peoples* not recognized as members of the community of nations, they are not, in the international law sense, treaties or conventions capable of creating rights and obligations such as may, in international law, arise out of treaties. But, on the other hand, contracts of this nature are not wholly void of indirect effects on situations governed by international law; if they do not constitute titles in international law, they are none the less facts of which that law must in certain circumstances take account. From the time of the discoveries until recent times, colonial territory has very often been acquired, especially in the East Indies, by means of contracts with the native authorities, which contracts leave the existing organisation more or less intact as regards the native population, whilst granting to the colonizing Power, besides economic advantages such as monopolies or navigation and commercial privileges, also the exclusive direction of relations with other Powers, and the right to exercise public authority in regard to their own nationals and to foreigners. The form of the legal relations created by such contracts is most generally that of suzerain and vassal, or of the so-called colonial protectorate.

In substance, it is not an agreement between equals; it is rather a form of internal organisation of a colonial territory, on the basis of autonomy for the natives. In order to regularise the situation as regards other States, this organisation requires to be completed by the establishment of powers to ensure the fulfilment of the obligations imposed by international law on every State in regard to its own territory. And thus suzerainty over the native State becomes the basis of territorial sovereignty as towards other members of the community of nations. It is the sum-total of functions thus allotted either to the native authorities or to those of the colonial Power which decides the question whether at any certain period the conditions required for the existence of sovereignty are fulfilled. It is a question to be decided in each case whether such a regime is to be considered as effective or whether it is essentially fictitious, either for the whole or a part of the territory. There always remains reserved the question whether the establishment of such a system is not forbidden by the pre-existing rights of other States.

The point of view here adopted by the Arbitrator is—at least in principle—in conformity with the attitude taken up by the United States in the note already quoted above, from the Secretary of State to the Spanish Minister, dated January 7th, 1900, and relating to two small islands lying just outside the line drawn by the Treaty of Paris, but claimed by the United States under the said Treaty. The note states that the two islands "have not hitherto been directly administered by Spain, but have been successfully claimed by Spain as a part of the dominions of her subject, the Sultan of Sulu. As such they have been administered by Sulu agencies, under some vague form of resident supervision by Spanish agencies, which latter have been withdrawn as a result of the recent war."

This system of contracts between colonial Powers and native princes and chiefs is even expressly approved by Article V of the Treaty of Münster quoted above; for, among the "Potentates, Nations and Peoples", with whom the Dutch State or Companies may have concluded treaties of alliance and friendship in the East and West Indies, are necessarily the native princes and chiefs.

The Arbitrator can therefore not exclude the contracts invoked by the Netherlands from being taken into consideration in the present case.

*

As to the *identity of the island* in dispute with the islands "Melangis (Palmas)" and "Miangas" in the contracts of 1885 and 1899 respectively, this must be considered as established by the large scale map which was sent to the Governor General of the Netherlands Indies by the Resident of Menado in January 1886 and which indicates in different colours the administrative districts on the Sangi and Talauer Islands in almost complete conformity with the description of the territory of Taruna given in the annex to the contract of 1885, save that the name of Nanusa, applied to the group of seven islands by the contract, is there given to a single island of this group, usually called Merampi (Mehampi). This large scale map, prepared evidently for administrative purposes, of which a reproduction has been filed with the Explanations of the Netherlands Government, shows an isolated island "Palmas of Melangis" which, though not quite correct in size and shape and though about 40′ too much to the south and 20′ too much to the east, cannot but correspond to Palmas (or Miangas), since the most reliable detailed modern maps, in particular the British Admiralty Chart, show no other island but Palmas (or Miangas) between the Talauer or Nanusa Islands and Mindanao.

This comparatively correct location of the island is supported by earlier maps. The map edited at Amsterdam by Covens and Mortier at a date not exactly known, but certainly during the 18th century, shows at about the place of Palmas (or Miangas) a single island with the inscription "'t regte P° Menangus" (the right island Menangus) as distinguished from the "engelsche Eilanden Menangus" and from the group of the Nanusa. This map proves that before that time uncertainty had existed as to the real existence of one or several islands Menangus, an uncertainty evidently due in its origin to the mention of the existence of "Islands Meangis" made by the Englishman Dampier, in his book published in 1698.

In conformity with this statement by Covens and Mortier, the map contained in the book published in 1855 by the navigator Cuarteron shows a single island "Mianguis", not in exactly the place of the island in dispute, but distinct from the "Nanuse" and lying about midway between Cape San Augustin and the "Nanuse". Cuarteron's map shows "Mianguis" distinctly as a Dutch possession—by colour expressly indicated as relating to political boundaries; it is accompanied by geographical and statistical information and due to an author who travelled extensively in these parts (1841-1849), and against whose reliability not sufficient reasons have been given. Among other points the explanation gives for "Mianguis" the comparatively exact geographical location (latitude north 5° 33′ 30″ [Special Agreement 5° 35′]); longitude east of Rome 114° 42′ 00″ = 127° 12′ 53″ east of Greenwich (Special Agreement 126° 36′) and also detailed though evidently only approximative statistical information about the composition of the population. It further appears from Cuarteron's book that "Mianguis" is something apart from the Nanusa, though Cuarteron observes that the "Nanuse" Islands are little known by the geographers under the name of "Mianguis".

A proof of the fact that the Dutch authorities were quite aware of the identity of "Miangas" with the island charted on many maps as "Palmas" is to be found in the reports of the Commanders of the Dutch Government Steamer *Raaf* (November 1896) and of H.M.S. *Edi* (June 1898). These officers mention expressly the double name and give the almost exact nautical location of the island then visited.

One observation is however to be made. The island, shown on the maps and mentioned in the contracts, bears different names: Melangis, Miangas, Miangus, Mianguis. In different documents referred to in the Netherlands Memorandum and Counter-Memorandum more than a dozen other variations of the name appear, although in the opinion of the Netherlands Government they all concern the same island. These differences, sometimes considerable at first sight, are sufficiently explained by the statements of linguistic experts, produced by the Netherlands Government. The peculiarity of the native language from which the name of the island is borrowed and the difficulty of transposing the sounds of this language into a western alphabet seem not only to make comprehensible the existence of different spellings, but to explain why precisely these variations have appeared. Differences of spelling are even recorded as such in documents as early as a letter, dated May 11th, 1701, of the Governor of the Moluccas and a report, dated September 12th, 1726. Moreover, the difference of spelling would not justify the conclusion that the more or less different names referred to different islands; for in the whole region in question no other island has been mentioned to which these names—or at least most of them—would better apply; for the Island of Tangulandang, with the place Minangan already referred to, is clearly distinguished from the island of Miangas in the documents of both the 18th and the 19th centuries relating to the dependencies of Tabukan.

No evidence has been submitted to support the supposition that the island, appearing on some old maps as "'t regte Menangus" would be identical with Ariaga (Marare), which, according to a statement of Melvill van Carnbee, mentioned in the United States Memorandum, is uninhabited.

Great stress is laid in the Rejoinder of the United States on the fact that the Nanusa Isles or some islands of this group are designated by several distinguished cartographers and navigators of the 19th century as "Islands Meangis" or by some similar name, and that amongst these cartographers and sailors some are Dutchmen, in particular Baron Melvill van Carnbee. This statement which is, no doubt, exact, cannot however prove that the island Miangas mentioned as a dependency of Tabukan or Taruna or Kandahar-Taruna is to be identified with the "Is. Meangi" and therefore with the Nanusa Isles. It is clear that the cartographers referred to apply the name of "Iles Meangis" or some similar name to a group of islands. On the other hand, the island the identity of which is disputed can be but a single, distant, isolated island. The attribution of the name Meangis to the Nanusa seems to be an error, because the official documents laid before the Arbitrator which belong about to the same period as the maps mentioning the "Is. Meangis", make a clear distinction between the principal islands composing the Nanusa and the island of Miangas or Meangas or Melangis, though the latter is considered as "onderhoorig" of the Nanusa Isles. The identification of the Nanusa with "Meangis" Islands may be explained by the desire to locate somewhere the Meangis Islands, famous since Dampier's voyage. Seeing that up to very recent times an extraordinary inexactitude about the names and the location of the islands in precisely that part of the Celebes Sea is shown to exist by almost all the maps filed by the Parties, including the two maps of Melvill van Carnbee, an erroneous attribution of the name "Miangas", even by Dutch cartographers, is easily possible.

It is not excluded that the three "English Menangis Islands" which are located on some maps to the east of the "right Menangis" and of which a detailed map with indication of the depth of the surrounding sea has been filed, did in fact exist, but have disappeared in consequence of earthquakes such as reported by Cuarteron.

Finally it may be noted that the information concerning Palmas or the other islands such as St. Juan, Mata, Hunter Island, which are to be identified with it, contains, except for the most recent period, nothing which relates to the population of the island; moreover all these names, given to the island, except Mata, may have been given by navigators who did not land or get into contact with the natives. Miangas however is a native name, which the inhabitants must have communicated to the chiefs to whom they were subject and to the navigators with whom they came in touch. The name of Miangas as designating an inhabited place (negorij) is much older than the establishment of the more centralized village in 1892.

It results from these statements that, when the contracts of 1885 and 1899 mentioned, in connection with, but distinct from the Nanusa, a single island Melangis or Miangis as belonging to Taruna or Kandahar-Taruna, only the island in dispute can have been meant, and that this island has been known under these same or similar names at least since the 18th century. No plausible suggestion has been made as to what the single island "Miangas", the existence of which cannot be doubted, might be, if it is not the island in dispute.

The special map on sheet 14 (issued in 1901) of the "Atlas van Nederlandsch Oost-Indië" (1897-1904), in showing "P. Miangis (Palmas E.)" as a Dutch possession in the place indicated in the Special Agreement, is in conformity with earlier maps and information, particularly with the Government's special map of 1886. Under these circumstances no weight can be given to the fact that on Bogaerts' map of 1857 and in the atlas of Stemfort and

Siethoff (1883-85), as well as on other maps, a group of islands called Meangis, or a similar name, appears.

* * *

The preliminary questions being settled, the evidence laid before the Arbitrator by the Netherlands Government in support of its claim is now to be considered.

As regards the documents relating to the 17th *and* 18th *centuries*, which in the view of the Netherlands show that already at that date the Prince of Tabukan had not only claimed, but also actually displayed a certain authority over Palmas (or Miangas), the following must be noted:

The Netherlands Government gives great weight to the fact that Dutch navigators who, in search of the islands Meangis mentioned by Dampier, were sailing in the seas south of Mindanao and whose reports are at least in part preserved, not only came in sight of Palmas (or Miangas), but were able to state that the island belonged to the native State of Tabukan, which was under Dutch suzerainty as shown by the contracts of November 3rd, 1677, and September 26th, 1697.

The existence of Dutch rule would be proved by the fact that the Prince's flag—i.e. the Dutch East India Company's flag—was seen being waved by the people of the island when the Dutch ships *De Bye*, *Larycque* and *De Peer* were in sight of the island on November 21st, 1700, but were prevented from landing by the conditions of the sea. The commander of the *Larycque*, who had already sighted the island on November 12th of the same year, was instructed to make more precise investigations by landing, and he was able to do so on December 9th and 10th. Not only was the Prince's flag again hoisted by the natives, but the inhabitants informed the sailors that the name of the island was "Meangis". They gave to the commander a document—lost since that time—which, dating from 1681 and emanating from Marcus Lalero, the late king of Tabukan, whose existence and death are confirmed by the contract of 1697, stated the allegiance of the people of "Miangis" towards Tabukan. There exists however only an indirect report on this visit of December 10th, 1700, namely a letter dated May 11th, 1701, and sent by the Governor in Council of the Moluccas at Ternate to the Governor General and India Council. In this letter, based, no doubt, on information furnished by the commander of the *Larycque*, who had reached Ternate on December 29th, 1700, the Governor says that the island in question is the farthest of the Talauer islands and that its name, correctly spelt, is not "Meangis", but "Mayages".

These statements as well as the circumstance that all the reports without any mention of neighbouring islands, speak of a single island, the shape of which corresponds fairly with that of Palmas (or Miangas), would make it almost certain that the island in question is in fact Palmas (or Miangas), unless the nautical observations given in the report mentioned above (4° 49′; 4° 37′; 5° 9′) might point to the Nanusa group, to which the allegiance with Tabukan would equally apply. These observations, though no doubt subject to error, would however seem to offer relatively more guarantee of accuracy than those based on the length of time taken to cover a distance at sea, mainly relied upon in the Netherlands Memorandum for the location of the island. Since, however, no other single island in those parts of the Sea of Celebes seems to exist, and since it is most unlikely that the navigators would on none of the three visits in November and December have sighted and mentioned neighbouring islands, there is at least a great probability that the island visited by the *Larycque* on December 10th, 1700, was Palmas (or Miangas).

The mention of an island "Meamgy", in connection with, but distinct from the Nanusa, appears again in a document, dated November 1st, 1701, concerning regulations as to criminal justice (suppression of vendetta and reservation of capital punishment as an exclusive prerogative of the East India Company) in the native State of Tabukan, to which the island visited December 10th, 1700, was reported to belong. The fact that the regulations for Tabukan are, by an express provision, declared applicable to the "islands of Nanusa and Meamgy thereunder included" proves that an island of the later name was known and deliberately treated as belonging to the vassal State of Tabukan.

In a report of the Governor of Ternate, dated June 11th, 1706, the island "Miangas" is mentioned as the northernmost of the dependencies of the native States of Tabukan and Taruna, in connection with "Kakarotang" (Onrata or Kakarutan on the Brit. Adm. map), one of the Nanusa, and explicitly identified with the island first seen by the *Larycque* on November 21st, 1700. Finally, another report of the Governor of Ternate, dated September 12th, 1726, mentions a decision on the question whether 80 Talauers (inhabitants of the Talauer islands) who had arrived at Taruna from the island "Meangas off (or) Mejages" were subjects of Taruna or of Tabukan. This island is expressly identified with that which was visited in 1700 by the commander of the *Larycque*.

This documentary evidence, taken together with the fact that no island called Miangas or bearing a similar name other than Palmas (or Miangas) seems to exist north of the Talautse (Sangi) and Talauer Isles, leads to the conclusion that the island Palmas (or Miangas) was in the early part of the 18th century considered by the Dutch East India Company as a part of their vassal State of Tabukan. This is the more probable for the reason that in later times, notably in an official report of 1825, the "far distant island Melangis" is mentioned again as belonging to Tabukan.

In the documents subsequent to 1825, Miangas (Melangis) appears as a dependency of Taruna, another of the vassal States in the north of Sangi (Groot Sangihe), which already in 1726 had claimed the island as its own. The date and circumstances of this transfer are not known, but it must have taken place before 1858; for a report of the Governor of Menado, dated December 31st, 1857, mentions the Nanusa and "Melangis" as parts of Taruna. This state of things has been maintained in the contracts of 1885 and 1899. From the point of view of international law, the transfer from one to another vassal State is to be considered as a purely domestic affair of the Netherlands; for their suzerainty over Tabukan and Taruna goes back far beyond the date of this transfer.

Considering that the contracts of 1676 and 1697 with Tabukan established in favour of the Dutch East India Company extensive rights of suzerainty over Tabukan and an exclusive right of intercourse with that State, and considering further that at least two characteristic acts of jurisdiction expressly relating to Miangas, in 1701 and 1726, are reported, whilst no display of sovereignty by any other Power during the same period is known, it may be admitted that at least in the first quarter of the 18th century, and probably also before that time, the Dutch East India Company exercised rights of suzerainty over Palmas (or Miangas) and that therefore the island was at that time, in conformity with the international law of the period, under Netherlands sovereignty.

No evidence has been laid before the Arbitrator from which it would result that this state of things had already existed in 1648 and had thus been confirmed by the Treaty of Münster. It suffices to refer to what has already been said as to this Treaty in connection with the title claimed by Spain. On the one hand, it cannot be invoked as having transformed a state of possession into a conventional title *inter partes*, for the reason that Dutch possession of the island Palmas (or Miangas) is not proved to have existed at the critical date. On the other hand, it was stated that neither the Treaty of Münster nor the Treaty of Utrecht, if they are at all applicable to the case, could at present be invoked for invalidating the acquisition of sovereignty over Palmas (or Miangas) obtained by the Dutch at a date subsequent to 1648. It follows rather from what has been said about the rights of Netherlands suzerainty over Tabukan, in the early 18th century, and as to relations between Tabukan and Palmas (or Miangas), that the Treaty of Utrecht recognized these rights of suzerainty as comprising the radja of Tabukan amongst the "potentates, nations, and peoples with whom the Lords States or members of the East and West India Companies are in friendship and alliance".

*

The admission of the existence of territorial sovereignty early in the 18th century and the display of such sovereignty in *the* 19th *century* and particularly in 1906, would not lead, as the Netherlands Government appears to suppose, by analogy with French, Dutch and German civil law, to the conclusion that, unless the contrary is proved, there is a presumption for the existence of sovereignty in the meantime. For the reasons given above, no presumptions of this kind are to be applied in international arbitrations, except under express stipulation. It remains for the Tribunal to decide whether or not it is satisfied of the continuous existence of sovereignty, on the ground of evidence as to its display at more or less long intervals.

There is a considerable gap in the documentary evidence laid before the Tribunal by the Netherlands Government, as far as concerns not the vassal State of Tabukan in general, but Palmas (or Miangas) in particular. There is however no reason to suppose, when the Resident van Delden, in a report of 1825, mentioned the island "Melangis" as belonging to Tabukan, that these relations has not existed between 1726 and 1825.

Van Delden's report, as well as later documents relating to the 19th century, shows that Miangas was always considered by the Dutch authorities as belonging to the Sangi and Talauer Isles and as being in a particular connection with the Nanusa. An extensive report of the Resident of Menado, dated August 12th, 1857, gives detailed statements about the administrative organisation, including the names of the villages (negorijen) and districts or presidencies (djoegoeschappen) and the number and title and names of the native officials. The island "Melangis" goes with the Nanusa, but is distinct from the island "Nanoesa" (usually called Mehampi, after the chief village) and Karaton; it is administered by one "radja", who at that time was named Sasoeh. This report leaves no room for doubt as to the legal situation of Melangis at that period, and is in conformity with the territorial description given for Palmas (or Miangas) in the contracts of 1885 and 1899 already mentioned, and also with a table, dated September 15th, 1889, showing the whole system of administrative districts in the

Talauer Islands which are dependencies of the native principalities of the Sangi Isles.

It would however seem that before 1895 the direct relations between the island and the colonial administration were very loose. In a report on a visit paid to the island in November 1895 by the Resident of Menado, it is stated that, according to the natives, no ship had ever before that time visited the island, and that no European had ever been there; the Resident himself was of opinion that he was the first colonial official who went to Palmas (or Miangas); also the commander of H.M.S. *Edi*, who patrolled the Celebes Sea in 1898, mentions that "in man's memory a steamer had never been at Miangas". The documents relating to the time before 1895 are indeed scanty, but they are not entirely lacking. A series of statements made by certain natives, chiefs and others, mostly of good age, whose memories went back far beyond 1906—at least to 1870— have been laid by the Netherlands Government before the Tribunal, two of them also in the native language used by the witnesses. It would seem to result from these depositions that the people of Miangas used to send yearly presents (pahawoea) to the radja of Taruna as token of their submission; even details about the distribution of the tribute to be collected are given. On the other hand the radja of Taruna was under the obligation to give assistance to the island in case of distress. A deposition made by a Dutch civil officer gives the list of 8 headmen who had been instituted either by the radja of Tabukan (probably Taruna) or by the Resident of Menado at Miangas until 1917.

Whatever may be the value of such depositions made all since 1924, they are at least in part supported by documentary evidence. Thus the list of headmen is confirmed as concerns the nomination of Timpala by a decree signed on September 15th, 1889, by the Resident of Menado. The most important fact is however the existence of documentary evidence as to the taxation of the people of Miangas by the Dutch authorities. Whilst in earlier times the tribute was paid in mats, rice and other objects, it was, in conformity with the contract with Taruna of 1885, replaced by a capitation tax, to be paid in money (one florin for each native man above 18 years). A table has been produced by the Netherlands Government which contains for all the dependencies of the Sangi States situated in the Talauer Islands the number of taxpayers and the amount to be paid. There "Menagasa" ranks as a part of the "Djoegoeschap" (Presidency) of the Nanusa under the dependencies of Taruna, with 88 "Hassilplichtigen" (taxpayers), paying each Fl. 1.—.

It further results from a report of the Controleur of Taruna dated November 17th, 1896, that the people of "Melangis" paid their tax by selling products on the larger islands and thus getting the money with which the new tax was to be paid. The effective payment of the tax is likewise confirmed by the commander of H.M.S. *Edi* in a report dated June 18th, 1898.

The report of the Controleur of Taruna referred to mentions the fact that on November 4th, 1896, a coat of arms was handed to the "Kapitein-laoet" (administrative head) of "Melangis", just as two days before, the same act had taken place at Karaton (Karatong), an island of the Nanusa. The report mentions that in both cases the native authorities were informed as to the meaning of this act. The distribution of coats of arms and flags as signs of sovereignty is regulated by instructions sanctioned by the Crown in 1843. The coats of arms placed at Miangas in 1896 were found in good state by H.M.S. *Edi* in 1898. The existence of a "vlaggestok" on the island is proved by sketches made in 1895 and 1898 by officers of the Dutch ships *Raaf* and *Edi.*

The orders given, May 13th, 1898, to H.M.S. *Edi* which was to be stationed in the seas of North-East Celebes and Ternate leave no doubt that the task of the said vessel was to patrol these coasts and the Sangi and Talauer Islands, and, "if necessary, to make respected the rules for the maintenance of strict neutrality". The log-book of the ship proves that H.M.S. *Edi* twice visited Palmas (or Miangas) during the war, in June and in September 1898.

*

As regards *the* 20th *century*, it is to be observed that events subsequent to 1906 must in any case be ruled out, in accordance both with the general principles of arbitral procedure between States and with the understanding arrived at between the Parties in the note of the Department of State, dated January 25th, 1915, and the note of the Netherlands Minister at Washington, dated May 29th, 1915. The events falling between the Treaty of Paris, December 10th, 1898, and the rise of the present dispute in 1906, cannot in themselves serve to indicate the legal situation of the island at the critical moment when the cession of the Philippines by Spain took place. They are however indirectly of a certain interest, owing to the light they might throw on the period immediately preceding. It is to be noted in the first place that there is no essential difference between the relations between the Dutch authorities and the island of Palmas (or Miangas) before and after the Treaty of Paris. There cannot therefore be any question of ruling out the events of the period 1899-1906 as possibly being influenced by the existence of the said Treaty. The contract with Kandahar-Taruna of 1899 runs on the same lines as the preceding contract of 1885 with Taruna, and was in preparation already before 1898. The system of taxation, as shown by the table of the years 1904 and 1905, is the same as that instituted in 1895. The headman Timpala, instituted in 1889, was replaced by a new man only in 1917.

The assistance given in the island after the typhoon of October 1904, though in itself not necessarily a display of State functions, was considered as such—as is shown by the report of the Resident of Menado, dated December 31st, 1904—that the island "Miangis", which was particularly damaged, could only get the indispensable help through Government assistance ("van Gouvernementswege"). Reference may also be made to a relation which seems to have existed already in former times between the tribute paid by the islanders to the Sangi radjas and the assistance to be given to them in time of distress by the larger islands with their greater resources.

V.

The conclusions to be derived from the above examination of the arguments of the Parties are the following:

The claim of the United States to sovereignty over the Island of Palmas (or Miangas) is derived from Spain by way of cession under the Treaty of Paris. The latter Treaty, though it comprises the island in dispute within the limits of cession, and in spite of the absence of any reserves or protest by the Netherlands as to these limits, has not created in favour of the United States any title of sovereignty such as was not already vested in Spain. The essential point is therefore to decide whether Spain had sovereignty over Palmas (or Miangas) at the time of the coming into force of the Treaty of Paris.

The United States base their claim on the titles of discovery, of recognition by treaty and of contiguity, i.e. titles relating to acts or circumstances leading to the acquisition of sovereignty; they have however not established the fact that sovereignty so acquired was effectively displayed at any time.

The Netherlands on the contrary found their claim to sovereignty essentially on the title of peaceful and continuous display of State authority over the island. Since this title would in international law prevail over a title of acquisition of sovereignty not followed by actual display of State authority, it is necessary to ascertain in the first place, whether the contention of the Netherlands is sufficiently established by evidence, and, if so, for what period of time.

In the opinion of the Arbitrator the Netherlands have succeeded in establishing the following facts:

a. The Island of Palmas (or Miangas) is identical with an island designated by this or a similar name, which has formed, at least since 1700, successively a part of two of the native States of the Island of Sangi (Talautse Isles).

b. These native States were from 1677 onwards connected with the East India Company, and thereby with the Netherlands, by contracts of suzerainty, which conferred upon the suzerain such powers as would justify his considering the vassal State as a part of his territory.

c. Acts characteristic of State authority exercised either by the vassal State or by the suzerain Power in regard precisely to the Island of Palmas (or Miangas) have been established as occurring at different epochs between 1700 and 1898, as well as in the period between 1898 and 1906.

The acts of indirect or direct display of Netherlands sovereignty at Palmas (or Miangas), especially in the 18th and early 19th centuries are not numerous, and there are considerable gaps in the evidence of continuous display. But apart from the consideration that the manifestations of sovereignty over a small and distant island, inhabited only by natives, cannot be expected to be frequent, it is not necessary that the display of sovereignty should go back to a very far distant period. It may suffice that such display existed in 1898, and had already existed as continuous and peaceful before that date long enough to enable any Power who might have considered herself as possessing sovereignty over the island, or having a claim to sovereignty, to have, according to local conditions, a reasonable possibility for ascertaining the existence of a state of things contrary to her real or alleged rights.

It is not necessary that the display of sovereignty should be established as having begun at a precise epoch; it suffices that it had existed at the critical period preceding the year 1898. It is quite natural that the establishment of sovereignty may be the outcome of a slow evolution, of a progressive intensification of State control. This is particularly the case, if sovereignty is acquired by the establishment of the suzerainty of a colonial Power over a native State, and in regard to outlying possessions of such a vassal State.

Now the evidence relating to the period after the middle of the 19th century makes it clear that the Netherlands Indian Government considered the island distinctly as a part of its possessions and that, in the years immediately preceding 1898, an intensification of display of sovereignty took place.

Since the moment when the Spaniards, in withdrawing from the Moluccas in 1666, made express reservations as to the maintenance of their sovereign rights, up to the contestation made by the United States in 1906, no contestation or other action whatever or protest against the exercise of territorial rights by the Netherlands over the Talautse (Sangi) Isles and their dependencies (Miangas included) has been recorded. The peaceful character of the display of Netherlands sovereignty for the entire period to which the evidence concerning acts of display relates (1700-1906) must be admitted.

There is moreover no evidence which would establish any act of display of sovereignty over the island by Spain or another Power, such as might counter-balance or annihilate the manifestations of Netherlands sovereignty. As to third Powers, the evidence submitted to the Tribunal does not disclose any trace of such action, at least from the middle of the 17th century onwards. These circumstances, together with the absence of any evidence of a conflict between Spanish and Netherlands authorities during more than two centuries as regards Palmas (or Miangas), are an indirect proof of the exclusive display of Netherlands sovereignty.

This being so, it remains to be considered first whether the display of State authority might not be legally defective and therefore unable to create a valid title of sovereignty, and secondly whether the United States may not put forward a better title to that of the Netherlands.

As to the conditions of acquisition of sovereignty by way of continuous and peaceful display of State authority (so-called prescription), some of which have been discussed in the United States Counter-Memorandum, the following must be said:

The display has been open and public, that is to say that it was in conformity with usages as to exercise of sovereignty over colonial States. A clandestine exercise of State authority over an inhabited territory during a considerable length of time would seem to be impossible. An obligation for the Netherlands to notify to other Powers the establishment of suzerainty over the Sangi States or of the display of sovereignty in these territories did not exist.

Such notification, like any other formal act, can only be the condition of legality as a consequence of an explicit rule of law. A rule of this kind adopted by the Powers in 1885 for the African continent does not apply *de plano* to other regions, and thus the contract with Taruna of 1885, or with Kandahar-Taruna of 1889, even if they were to be considered as the first assertions of sovereignty over Palmas (or Miangas) would not be subject to the rule of notification.

There can further be no doubt that the Netherlands exercised the State authority over the Sangi States as sovereign in their own right, not under a derived or precarious title.

Finally it is to be observed that the question whether the establishment of the Dutch on the Talautse Isles (Sangi) in 1677 was a violation of the Treaty of Münster and whether this circumstance might have prevented the acquisition of sovereignty even by means of prolonged exercise of State authority, need not be examined, since the Treaty of Utrecht recognized the state of things existing in 1714 and therefore the suzerain right of the Netherlands over Tabukan and Miangas.

The conditions of acquisition of sovereignty by the Netherlands are therefore to be considered as fulfilled. It remains now to be seen whether the United States as successors of Spain are in a position to bring forward an equivalent or stronger title. This is to be answered in the negative.

The title of discovery, if it had not been already disposed of by the Treaties of Münster and Utrecht would, under the most favourable and most extensive interpretation, exist only as an inchoate title, as a claim to establish sovereignty by effective occupation. An inchoate title however cannot prevail over a definite title founded on continuous and peaceful display of sovereignty.

The title of contiguity, understood as a basis of territorial sovereignty, has no foundation in international law.

The title of recognition by treaty does not apply, because even if the Sangi States, with the dependency of Miangas, are to be considered as "held and possessed" by Spain in 1648, the rights of Spain to be derived from the Treaty of Münster would have been superseded by those which were acquired by the Treaty of Utrecht. Now if there is evidence of a state of possession in 1714 concerning the island of Palmas (or Miangas), such evidence is exclusively in favour of the Netherlands. But even if the Treaty of Utrecht could not be taken into consideration, the acquiescence of Spain in the situation created after 1677 would deprive her and her successors of the possibility of still invoking conventional rights at the present time.

The Netherlands title of sovereignty, acquired by continuous and peaceful display of State authority during a long period of time going probably back beyond the year 1700, therefore holds good.

* * *

The same conclusion would be reached, if, for argument's sake, it were admitted that the evidence laid before the Tribunal in conformity with the rules governing the present procedure did not—as it is submitted by the United States—suffice to establish continuous and peaceful display of sovereignty over the Island of Palmas (or Miangas). In this case no Party would have established its claims to sovereignty over the Island and the decision of the Arbitrator would have to be founded on the relative strength of the titles invoked by each Party.

A solution on this ground would be necessary under the Special Agreement. The terms adopted by the Parties in order to determine the point to be decided by the Arbitrator (Article I) presuppose for the present case that the Island of Palmas (or Miangas) can belong only either to the United States or to the Netherlands, and must form in its entirety a part of the territory either of the one or of the other of these two Powers, Parties to the dispute. For since, according to the terms of its Preamble, the Agreement of January 23rd, 1925, has for object to "terminate" the dispute, it is the evident will of the Parties that the arbitral award shall not conclude by a "non liquet", but shall in any event decide that the island forms a part of the territory of one or the other of two litigant Powers.

The possibility for the Arbitrator to found his decision on the relative strength of the titles invoked on either side must have been envisaged by the Parties to the Special Agreement, because it was to be foreseen that the evidence produced as regards sovereignty over a territory in the circumstances of the island in dispute might prove not to be sufficient to lead to a clear conclusion as to the existence of sovereignty.

For the reasons given above, no presumption in favour of Spanish sovereignty can be based in international law on the titles invoked by the United States as successors of Spain. Therefore, there would not be sufficient grounds for deciding the case in favour of the United States, even if it were admitted, in accordance with their submission, that the evidence produced by the Netherlands in support of their claim either does not relate to the Island in dispute or does not suffice to establish a continuous display of State authority over the island. For, in any case, the exercise of some acts of State authority and the existence of external signs of sovereignty, e.g. flags and coat of arms, has been proved by the Netherlands, even if the Arbitrator were to retain only such evidence as can, in view of the trustworthy and sufficiently accurate nautical observations given to support it, concern solely the island of Palmas (or Miangas), namely that relating to the visits of the steamer *Raaf* in 1895, of H.M.S. *Edi* in 1898 and of General Wood in 1906.

These facts at least constitute a beginning of establishment of sovereignty by continuous and peaceful display of State authority, or a commencement of occupation of an island not yet forming a part of the territory of a State; and such a state of things would create in favour of the Netherlands an inchoate title for completing the conditions of sovereignty. Such inchoate title, based on display of State authority, would, in the opinion of the Arbitrator, prevail over an inchoate title derived from discovery, especially if this latter title has been left for a very long time without completion by occupation; and it would equally prevail over any claim which, in equity, might be deduced from the notion of contiguity. International law, like law in general, has the object of assuring the coexistence of different interests which are worthy of legal protection. If, as in the present instance, only one of two conflicting interests is to prevail, because sovereignty can be attributed to but one of the Parties, the interest which involves the maintenance of a state of things having offered at the critical time to the inhabitants of the disputed territory and to other States a certain guarantee for the respect of their rights ought, in doubt, to prevail over an interest which—supposing it to be recognized in international law—has not yet received any concrete form of development.

Supposing that, at the time of the coming into force of the Treaty of Paris, the Island of Palmas (or Miangas) did not form part of the territory of any State, Spain would have been able to cede only the rights which she might possibly derive from discovery or contiguity. On the other hand, the inchoate title of the Netherlands could not have been modified by a treaty concluded between third Powers; and such a treaty could not have impressed the character of illegality on any act undertaken by the Netherlands with a view to completing their inchoate title—at least as long as no dispute on the matter had arisen, i.e. until 1906.

Now it appears from the report on the visit of General Wood to Palmas (or Miangas), on January 21st, 1906, that the establishment of Netherlands authority, attested also by external signs of sovereignty, had already reached such a degree of development, that the importance of maintaining this state of things ought to be considered as prevailing over a claim possibly based either on discovery in very distant times and unsupported by occupation, or on mere geographical position.

This is the conclusion reached on the ground of the relative strength of the titles invoked by each Party, and founded exclusively on a limited part of the evidence concerning the epoch immediately preceding the rise of the dispute.

This same conclusion must impose itself with still greater force if there be taken into consideration—as the Arbitrator considers should be done—all the evidence which tends to show that there were unchallenged acts of peaceful display of Netherlands sovereignty in the period from 1700 to 1906, and which—as has been stated above—may be regarded as sufficiently proving the existence of Netherlands sovereignty.

For these reasons the Arbitrator, in conformity with Article I of the Special Agreement of January 23rd, 1925, decides that: The Island of Palmas (or Miangas) forms in its entirety a part of Netherlands territory.

Done at The Hague, this fourth day of April 1928.

MAX HUBER, *Arbitrator.*

MICHIELS VAN VERDUYNEN, *Secretary General.*

CHARTER OF THE UNITED NATIONS

AND

STATUTE OF THE INTERNATIONAL COURT OF JUSTICE

SAN FRANCISCO · 1945

CHARTER OF THE UNITED NATIONS

WE THE PEOPLES OF THE UNITED NATIONS
DETERMINED

to save succeeding generations from the scourge of war, which twice in our lifetime has brought untold sorrow to mankind, and

to reaffirm faith in fundamental human rights, in the dignity and worth of the human person, in the equal rights of men and women and of nations large and small, and

to establish conditions under which justice and respect for the obligations arising from treaties and other sources of international law can be maintained, and

to promote social progress and better standards of life in larger freedom,

AND FOR THESE ENDS

to practice tolerance and live together in peace with one another as good neighbors, and

to unite our strength to maintain international peace and security, and

to ensure, by the acceptance of principles and the institution of methods, that armed force shall not be used, save in the common interest, and

to employ international machinery for the promotion of the economic and social advancement of all peoples,

HAVE RESOLVED TO COMBINE OUR EFFORTS
TO ACCOMPLISH THESE AIMS.

Accordingly, our respective Governments, through representatives assembled in the city of San Francisco, who have exhibited their full powers found to be in good and due form, have agreed to the present Charter of the United Nations and do hereby establish an international organization to be known as the United Nations.

CHAPTER I

PURPOSES AND PRINCIPLES

Article 1

The Purposes of the United Nations are:

1. To maintain international peace and security, and to that end: to take effective collective measures for the prevention and removal of threats to the peace, and for the suppression of acts of aggression or other breaches of the peace, and to bring about by peaceful means, and in conformity with the principles of justice and international law, adjustment or settlement of international disputes or situations which might lead to a breach of the peace;

2. To develop friendly relations among nations based on respect for the principle of equal rights and self-determination of peoples, and to take other appropriate measures to strengthen universal peace;

3. To achieve international cooperation in solving international problems of an economic, social, cultural, or humanitarian character, and in promoting and encouraging respect for human rights and for fundamental freedoms for all without distinction as to race, sex, language, or religion; and

4. To be a center for harmonizing the actions of nations in the attainment of these common ends.

Article 2

The Organization and its Members, in pursuit of the Purposes stated in Article 1, shall act in accordance with the following Principles.

1. The Organization is based on the principle of the sovereign equality of all its Members.

2. All Members, in order to ensure to all of them the rights and benefits resulting from membership, shall fulfil in good faith the obligations assumed by them in accordance with the present Charter.

3. All Members shall settle their international disputes by peaceful means in such a manner that international peace and security, and justice, are not endangered.

4. All Members shall refrain in their international relations from the threat or use of force against the territorial integrity or political independence of any state, or in any other manner inconsistent with the Purposes of the United Nations.

5. All Members shall give the United Nations every assistance in any action it takes in accordance with the present Charter, and shall refrain from giving assistance to any state against which the United Nations is taking preventive or enforcement action.

6. The Organization shall ensure that states which are not Members of the United Nations act in accordance with these Principles so far as may be necessary for the maintenance of international peace and security.

7. Nothing contained in the present Charter shall authorize the United Nations to intervene in matters which are essentially within the domestic jurisdiction of any state or shall require the Members to submit such matters to settlement under the present Charter; but this principle shall not prejudice the application of enforcement measures under Chapter VII.

CHAPTER II

MEMBERSHIP

Article 3

The original Members of the United Nations shall be the states which, having participated in the United Nations Conference on International Organization at San Francisco, or having previously signed the Declaration by United Nations of January 1, 1942, sign the present Charter and ratify it in accordance with Article 110.

Article 4

1. Membership in the United Nations is open to all other peace-loving states which accept the obligations contained in the present Charter and, in the judgment of the Organization, are able and willing to carry out these obligations.

2. The admission of any such state to membership in the United Nations will be effected by a decision of the General Assembly upon the recommendation of the Security Council.

Article 5

A Member of the United Nations against which preventive or enforcement action has been taken by the Security Council may be suspended from the exercise of the rights and privileges of membership by the General Assembly upon the recommendation of the Security Council. The exercise of these rights and privileges may be restored by the Security Council.

Article 6

A Member of the United Nations which has persistently violated the Principles contained in the present Charter may be expelled from the Organization by the General Assembly upon the recommendation of the Security Council.

CHAPTER III

ORGANS

Article 7

1. There are established as the principal organs of the United Nations: a General Assembly, a Security Council, an Economic and Social Council, a Trusteeship Council, an International Court of Justice, and a Secretariat.

2. Such subsidiary organs as may be found necessary may be established in accordance with the present Charter.

Article 8

The United Nations shall place no restrictions on the eligibility of men and women to participate in any capacity and under conditions of equality in its principal and subsidiary organs.

CHAPTER IV

THE GENERAL ASSEMBLY

Composition

Article 9

1. The General Assembly shall consist of all the Members of the United Nations.

2. Each Member shall have not more than five representatives in the General Assembly.

Functions and Powers

Article 10

The General Assembly may discuss any questions or any matters within the scope of the present Charter or relating to the powers and functions of any organs provided for in the present Charter, and, except as provided in Article 12, may make recommendations to the Members of the United Nations or to the Security Council or to both on any such questions or matters.

Article 11

1. The General Assembly may consider the general principles of cooperation in the maintenance of international peace and security, including the principles governing disarmament and the regulation of armaments, and may make recommendations with regard to such principles to the Members or to the Security Council or to both.

2. The General Assembly may discuss any questions relating to the maintenance of international peace and security brought before it by any Member of the United Nations, or by the Security Council, or by a state which is not a

Member of the United Nations in accordance with Article 35, paragraph 2, and, except as provided in Article 12, may make recommendations with regard to any such questions to the state or states concerned or to the Security Council or to both. Any such question on which action is necessary shall be referred to the Security Council by the General Assembly either before or after discussion.

3. The General Assembly may call the attention of the Security Council to situations which are likely to endanger international peace and security.

4. The powers of the General Assembly set forth in this Article shall not limit the general scope of Article 10.

Article 12

1. While the Security Council is exercising in respect of any dispute or situation the functions assigned to it in the present Charter, the General Assembly shall not make any recommendation with regard to that dispute or situation unless the Security Council so requests.

2. The Secretary-General, with the consent of the Security Council, shall notify the General Assembly at each session of any matters relative to the maintenance of international peace and security which are being dealt with by the Security Council and shall similarly notify the General Assembly, or the Members of the United Nations if the General Assembly is not in session, immediately the Security Council ceases to deal with such matters.

Article 13

1. The General Assembly shall initiate studies and make recommendations for the purpose of:

a. promoting international cooperation in the political field and encouraging the progressive development of international law and its codification;

b. promoting international cooperation in the economic, social, cultural, educational, and health fields, and assisting in the realization of human rights and fundamental freedoms for all without distinction as to race, sex, language, or religion.

2. The further responsibilities, functions, and powers of the General Assembly with respect to matters mentioned in paragraph 1(b) above are set forth in Chapters IX and X.

Article 14

Subject to the provisions of Article 12, the General Assembly may recommend measures for the peaceful adjustment of any situation, regardless of origin, which it deems likely to impair the general welfare or friendly relations among nations, including situations resulting from a violation of the provisions of the present Charter setting forth the Purposes and Principles of the United Nations.

Article 15

1. The General Assembly shall receive and consider annual and special reports from the Security Council; these reports shall include an account of the measures that the Security Council has decided upon or taken to maintain international peace and security.

2. The General Assembly shall receive and consider reports from the other organs of the United Nations.

Article 16

The General Assembly shall perform such functions with respect to the international trusteeship system as are assigned to it under Chapters XII and XIII, including the approval of the trusteeship agreements for areas not designated as strategic.

Article 17

1. The General Assembly shall consider and approve the budget of the Organization.

2. The expenses of the Organization shall be borne by the Members as apportioned by the General Assembly.

3. The General Assembly shall consider and approve any financial and budgetary arrangements with specialized agencies referred to in Article 57 and shall examine the administrative budgets of such specialized agencies with a view to making recommendations to the agencies concerned.

Voting

Article 18

1. Each member of the General Assembly shall have one vote.

2. Decisions of the General Assembly on important questions shall be made by a two-thirds majority of the members present and voting. These questions shall include: recommendations with respect to the maintenance of international peace and security, the election of the non-permanent members of the Security Council, the election of the members of the Economic and Social Council, the election of members of the Trusteeship Council in accordance with paragraph 1(c) of Article 86, the admission of new Members to the United Nations, the suspension of the rights and privileges of membership, the expulsion of Members, questions relating to the operation of the trusteeship system, and budgetary questions.

3. Decisions on other questions, including the determination of additional categories of questions to be decided by a two-thirds majority, shall be made by a majority of the members present and voting.

Article 19

A Member of the United Nations which is in arrears in the payment of its financial contributions to the Organization shall have no vote in the General Assembly if the amount of its arrears equals or exceeds the amount of the contributions due from it for the preceding two full years. The General Assembly may, nevertheless, permit such a Member to vote if it is satisfied that the failure to pay is due to conditions beyond the control of the Member.

Procedure

Article 20

The General Assembly shall meet in regular annual sessions and in such special sessions as occasion may require. Special sessions shall be convoked by the Secretary-General at the request of the Security Council or of a majority of the Members of the United Nations.

Article 21

The General Assembly shall adopt its own rules of procedure. It shall elect its President for each session.

Article 22

The General Assembly may establish such subsidiary organs as it deems necessary for the performance of its functions.

CHAPTER V

THE SECURITY COUNCIL

Composition

Article 23

1. The Security Council shall consist of eleven Members of the United Nations. The Republic of China, France, the Union of Soviet Socialist Republics, the United Kingdom of Great Britain and Northern Ireland, and the United States of America shall be permanent members of the Security Council. The General Assembly shall elect six other Members of the United Nations to be non-permanent members of the Security Council, due regard being specially paid, in the first instance to the contribution of Members of the

United Nations to the maintenance of international peace and security and to the other purposes of the Organization, and also to equitable geographical distribution.

2. The non-permanent members of the Security Council shall be elected for a term of two years. In the first election of the non-permanent members, however, three shall be chosen for a term of one year. A retiring member shall not be eligible for immediate re-election.

3. Each member of the Security Council shall have one representative.

Functions and Powers

Article 24

1. In order to ensure prompt and effective action by the United Nations, its Members confer on the Security Council primary responsibility for the maintenance of international peace and security, and agree that in carrying out its duties under this responsibility the Security Council acts on their behalf.

2. In discharging these duties the Security Council shall act in accordance with the Purposes and Principles of the United Nations. The specific powers granted to the Security Council for the discharge of these duties are laid down in Chapters VI, VII, VIII, and XII.

3. The Security Council shall submit annual and, when necessary, special reports to the General Assembly for its consideration.

Article 25

The Members of the United Nations agree to accept and carry out the decisions of the Security Council in accordance with the present Charter.

Article 26

In order to promote the establishment and maintenance of international peace and security with the least diversion for armaments of the world's human and economic resources, the Security Council shall be responsible for formulating, with the assistance of the Military Staff Committee referred to in Article 47, plans to be submitted to the Members of the United Nations for the establishment of a system for the regulation of armaments.

Voting

Article 27

1. Each member of the Security Council shall have one vote.

2. Decisions of the Security Council on procedural matters shall be made by an affirmative vote of seven members.

3. Decisions of the Security Council on all other matters shall be made by an affirmative vote of seven members including the concurring votes of the permanent members; provided that, in decisions under Chapter VI, and under paragraph 3 of Article 52, a party to a dispute shall abstain from voting.

Procedure

Article 28

1. The Security Council shall be so organized as to be able to function continuously. Each member of the Security Council shall for this purpose be represented at all times at the seat of the Organization.

2. The Security Council shall hold periodic meetings at which each of its members may, if it so desires, be represented by a member of the government or by some other specially designated representative.

3. The Security Council may hold meetings at such places other than the seat of the Organization as in its judgment will best facilitate its work.

Article 29

The Security Council may establish such subsidiary organs as it deems necessary for the performance of its functions.

Article 30

The Security Council shall adopt its own rules of procedure, including the method of selecting its President.

Article 31

Any Member of the United Nations which is not a member of the Security Council may participate, without vote, in the discussion of any question brought before the Security Council whenever the latter considers that the interests of that Member are specially affected.

Article 32

Any Member of the United Nations which is not a member of the Security Council or any state which is not a Member of the United Nations, if it is a party to a dispute under consideration by the Security Council, shall be invited to participate, without vote, in the discussion relating to the dispute. The Security Council shall lay down such conditions as it deems just for the participation of a state which is not a Member of the United Nations.

CHAPTER VI

PACIFIC SETTLEMENT OF DISPUTES

Article 33

1. The parties to any dispute, the continuance of which is likely to endanger the maintenance of international peace and security, shall, first of all, seek a solution by negotiation, enquiry, mediation, conciliation, arbitration, judicial settlement, resort to regional agencies or arrangements, or other peaceful means of their own choice.

2. The Security Council shall, when it deems necessary, call upon the parties to settle their dispute by such means.

Article 34

The Security Council may investigate any dispute, or any situation which might lead to international friction or give rise to a dispute, in order to determine whether the continuance of the dispute or situation is likely to endanger the maintenance of international peace and security.

Article 35

1. Any Member of the United Nations may bring any dispute, or any situation of the nature referred to in Article 34, to the attention of the Security Council or of the General Assembly.

2. A state which is not a Member of the United Nations may bring to the attention of the Security Council or of the General Assembly any dispute to which it is a party if it accepts in advance, for the purposes of the dispute, the obligations of pacific settlement provided in the present Charter.

3. The proceedings of the General Assembly in respect of matters brought to its attention under this Article will be subject to the provisions of Articles 11 and 12.

Article 36

1. The Security Council may, at any stage of a dispute of the nature referred to in Article 33 or of a situation of like nature, recommend appropriate procedures or methods of adjustment.

2. The Security Council should take into consideration any procedures for the settlement of the dispute which have already been adopted by the parties.

3. In making recommendations under this Article the Security Council should also take into consideration that legal disputes should as a general rule be referred by the parties to the International Court of Justice in accordance with the provisions of the Statute of the Court.

Article 37

1. Should the parties to a dispute of the nature referred to in Article 33 fail to settle it by the means indicated in that Article, they shall refer it to the Security Council.

2. If the Security Council deems that the continuance of the dispute is in fact likely to endanger the maintenance of international peace and security, it shall decide whether to take action under Article 36 or to recommend such terms of settlement as it may consider appropriate.

Article 38

Without prejudice to the provisions of Articles 33 to 37, the Security Council may, if all the parties to any dispute so request, make recommendations to the parties with a view to a pacific settlement of the dispute.

CHAPTER VII

ACTION WITH RESPECT TO THREATS TO THE PEACE, BREACHES OF THE PEACE, AND ACTS OF AGGRESSION

Article 39

The Security Council shall determine the existence of any threat to the peace, breach of the peace, or act of aggression and shall make recommendations, or decide what measures shall be taken in accordance with Articles 41 and 42, to maintain or restore international peace and security.

Article 40

In order to prevent an aggravation of the situation, the Security Council may, before making the recommendations or deciding upon the measures provided for in Article 39, call upon the parties concerned to comply with such provisional measures as it deems necessary or desirable. Such provisional measures shall be without prejudice to the rights, claims, or position of the parties concerned. The Security Council shall duly take account of failure to comply with such provisional measures.

Article 41

The Security Council may decide what measures not involving the use of armed force are to be employed to give effect to its decisions, and it may call upon the Members of the United Nations to apply such measures. These may include complete or partial interruption of economic relations and of rail, sea, air, postal, telegraphic, radio, and other means of communication, and the severance of diplomatic relations.

Article 42

Should the Security Council consider that measures provided for in Article 41 would be inadequate or have proved to be inadequate, it may take such action by air, sea, or land forces as may be necessary to maintain or restore international peace and security. Such action may include demonstrations, blockade, and other operations by air, sea, or land forces of Members of the United Nations.

Article 43

1. All Members of the United Nations, in order to contribute to the maintenance of international peace and security, undertake to make available to the Security Council, on its call and in accordance with a special agreement or agreements, armed forces, assistance, and facilities, including rights of passage, necessary for the purpose of maintaining international peace and security.

2. Such agreement or agreements shall govern the numbers and types of forces, their degree of readiness and general location, and the nature of the facilities and assistance to be provided.

3. The agreement or agreements shall be negotiated as soon as possible on the initiative of the Security Council. They shall be concluded between the Security Council and Members or between the Security Council and groups of Members and shall be subject to ratification by the signatory states in accordance with their respective constitutional processes.

Article 44

When the Security Council has decided to use force it shall, before calling upon a Member not represented on it to provide armed forces in fulfillment of the obligations assumed under Article 43, invite that Member, if the Member so desires, to participate in the decisions of the Security Council concerning the employment of contingents of that Member's armed forces.

Article 45

In order to enable the United Nations to take urgent military measures, Members shall hold immediately available national air-force contingents for combined international enforcement action. The strength and degree of readiness of these contingents and plans for their combined action shall be determined, within the limits laid down in the special agreement or agreements referred to in Article 43, by the Security Council with the assistance of the Military Staff Committee.

Article 46

Plans for the application of armed force shall be made by the Security Council with the assistance of the Military Staff Committee.

Article 47

1. There shall be established a Military Staff Committee to advise and assist the Security Council on all questions relating to the Security Council's military requirements for the maintenance of international peace and security, the employment and command of forces placed at its disposal, the regulation of armaments, and possible disarmament.

2. The Military Staff Committee shall consist of the Chiefs of Staff of the permanent members of the Security Council or their representatives. Any Member of the United Nations not permanently represented on the Committee shall be invited by the Committee to be associated with it when the efficient discharge of the Committee's responsibilities requires the participation of that Member in its work.

3. The Military Staff Committee shall be responsible under the Security Council for the strategic direction of any armed forces placed at the disposal of the Security Council. Questions relating to the command of such forces shall be worked out subsequently.

4. The Military Staff Committee, with the authorization of the Security Council and after consultation with appropriate regional agencies, may establish regional subcommittees.

Article 48

1. The action required to carry out the decisions of the Security Council for the maintenance of international peace and security shall be taken by all the Members of the United Nations or by some of them, as the Security Council may determine.

2. Such decisions shall be carried out by the Members of the United Nations directly and through their action in the appropriate international agencies of which they are members.

Article 49

The Members of the United Nations shall join in affording mutual assistance in carrying out the measures decided upon by the Security Council.

Article 50

If preventive or enforcement measures against any state are taken by the Security Council, any other state, whether a Member of the United Nations or not, which finds itself confronted with special economic problems arising from the carrying out of those measures shall have the right to consult the Security Council with regard to a solution of those problems.

Article 51

Nothing in the present Charter shall impair the inherent right of individual or collective self-defense if an armed attack occurs against a Member of the United Nations, until the Security Council has taken the measures necessary to maintain international peace and security. Measures taken by Members in the exercise of this right of self-defense shall be immediately reported to the Security Council and shall not in any way affect the authority and responsibility of the Security Council under the present Charter to take at any time such action as it deems necessary in order to maintain or restore international peace and security.

CHAPTER VIII

REGIONAL ARRANGEMENTS

Article 52

1. Nothing in the present Charter precludes the existence of regional arrangements or agencies for dealing with such matters relating to the maintenance of international peace and security as are appropriate for regional action, provided that such arrangements or agencies and their activities are consistent with the Purposes and Principles of the United Nations.

2. The Members of the United Nations entering into such arrangements or constituting such agencies shall make every effort to achieve pacific settlement of local disputes through such regional arrangements or by such regional agencies before referring them to the Security Council.

3. The Security Council shall encourage the development of pacific settlement of local disputes through such regional arrangements or by such regional agencies either on the initiative of the states concerned or by reference from the Security Council.

4. This Article in no way impairs the application of Articles 34 and 35.

Article 53

1. The Security Council shall, where appropriate, utilize such regional arrangements or agencies for enforcement action under its authority. But no enforcement action shall be taken under regional arrangements or by regional agencies without the authorization of the Security Council, with the exception of measures against any enemy state, as defined in paragraph 2 of this Article, provided for pursuant to Article 107 or in regional arrangements directed against renewal of aggressive policy on the part of any such state, until such time as the Organization may, on request of the Governments concerned, be charged with the responsibility for preventing further aggression by such a state.

2. The term enemy state as used in paragraph 1 of this Article applies to any state which during the Second World War has been an enemy of any signatory of the present Charter.

Article 54

The Security Council shall at all times be kept fully informed of activities undertaken or in contemplation under regional arrangements or by regional agencies for the maintenance of international peace and security.

CHAPTER IX

INTERNATIONAL ECONOMIC AND SOCIAL COOPERATION

Article 55

With a view to the creation of conditions of stability and well-being which are necessary for peaceful and friendly relations among nations based on respect for the principle of equal rights and self-determination of peoples, the United Nations shall promote:

a. higher standards of living, full employment, and conditions of economic and social progress and development;

b. solutions of international economic, social, health, and related problems; and international cultural and educational cooperation; and

c. universal respect for, and observance of, human rights and fundamental freedoms for all without distinction as to race, sex, language, or religion.

Article 56

All Members pledge themselves to take joint and separate action in cooperation with the Organization for the achievement of the purposes set forth in Article 55.

Article 57

1. The various specialized agencies, established by intergovernmental agreement and having wide international responsibilities, as defined in their basic instruments, in economic, social, cultural, educational, health, and related fields, shall be brought into relationship with the United Nations in accordance with the provisions of Article 63.

2. Such agencies thus brought into relationship with the United Nations are hereinafter referred to as specialized agencies.

Article 58

The Organization shall make recommendations for the coordination of the policies and activities of the specialized agencies.

Article 59

The Organization shall, where appropriate, initiate negotiations among the states concerned for the creation of any new specialized agencies required for the accomplishment of the purposes set forth in Article 55.

Article 60

Responsibility for the discharge of the functions of the Organization set forth in this Chapter shall be vested in the General Assembly and, under the authority of the General Assembly, in the Economic and Social Council, which shall have for this purpose the powers set forth in Chapter X.

CHAPTER X

THE ECONOMIC AND SOCIAL COUNCIL

Composition

Article 61

1. The Economic and Social Council shall consist of eighteen Members of the United Nations elected by the General Assembly.

2. Subject to the provisions of paragraph 3, six members of the Economic and Social Council shall be elected each year for a term of three years. A retiring member shall be eligible for immediate re-election.

3. At the first election, eighteen members of the Economic and Social Council shall be chosen. The term of office of six members so chosen shall expire at the end of one year, and of six other members at the end of two years, in accordance with arrangements made by the General Assembly.

4. Each member of the Economic and Social Council shall have one representative.

Functions and Powers

Article 62

1. The Economic and Social Council may make or initiate studies and reports with respect to international economic, social, cultural, educational, health, and related matters and may make recommendations with respect to any such matters to the General Assembly, to the Members of the United Nations, and to the specialized agencies concerned.

2. It may make recommendations for the purpose of promoting respect for, and observance of, human rights and fundamental freedoms for all.

3. It may prepare draft conventions for submission to the General Assembly, with respect to matters falling within its competence.

4. It may call, in accordance with the rules prescribed by the United Nations, international conferences on matters falling within its competence.

Article 63

1. The Economic and Social Council may enter into agreements with any of the agencies referred to in Article 57, defining the terms on which the agency concerned shall be brought into relationship with the United Nations. Such agreements shall be subject to approval by the General Assembly.

2. It may coordinate the activities of the specialized agencies through consultation with and recommendations to such agencies and through recommendations to the General Assembly and to the Members of the United Nations.

Article 64

1. The Economic and Social Council may take appropriate steps to obtain regular reports from the specialized agencies. It may make arrangements with the Members of the United Nations and with the specialized agencies to obtain reports on the steps taken to give effect to its own recommendations and to recommendations on matters falling within its competence made by the General Assembly.

2. It may communicate its observations on these reports to the General Assembly.

Article 65

The Economic and Social Council may furnish information to the Security Council and shall assist the Security Council upon its request.

Article 66

1. The Economic and Social Council shall perform such functions as fall within its competence in connection with the carrying out of the recommendations of the General Assembly.

2. It may, with the approval of the General Assembly, perform services at the request of Members of the United Nations and at the request of specialized agencies.

3. It shall perform such other functions as are specified elsewhere in the present Charter or as may be assigned to it by the General Assembly.

Voting

Article 67

1. Each member of the Economic and Social Council shall have one vote.

2. Decisions of the Economic and Social Council shall be made by a majority of the members present and voting.

Procedure

Article 68

The Economic and Social Council shall set up commissions in economic and social fields and for the promotion of human rights, and such other commissions as may be required for the performance of its functions.

Article 69

The Economic and Social Council shall invite any Member of the United Nations to participate, without vote, in its deliberations on any matter of particular concern to that Member.

Article 70

The Economic and Social Council may make arrangements for representatives of the specialized agencies to participate, without vote, in its deliberations and in those of the commissions established by it, and for its representatives to participate in the deliberations of the specialized agencies.

Article 71

The Economic and Social Council may make suitable arrangements for consultation with non-governmental organizations which are concerned with matters within its competence. Such arrangements may be made with international organizations and, where appropriate, with national organizations after consultation with the Member of the United Nations concerned.

Article 72

1. The Economic and Social Council shall adopt its own rules of procedure, including the method of selecting its President.

2. The Economic and Social Council shall meet as required in accordance with its rules, which shall include provision for the convening of meetings on the request of a majority of its members.

CHAPTER XI

DECLARATION REGARDING NON-SELF-GOVERNING TERRITORIES

Article 73

Members of the United Nations which have or assume responsibilities for the administration of territories whose peoples have not yet attained a full measure of self-government recognize the principle that the interests of the inhabitants of these territories are paramount, and accept as a sacred trust the obligation to promote to the utmost, within the system of international peace and security established by the present Charter, the well-being of the inhabitants of these territories, and, to this end:

a. to ensure, with due respect for the culture of the peoples concerned, their political, economic, social, and educational advancement, their just treatment, and their protection against abuses;

b. to develop self-government, to take due account of the political aspirations of the peoples, and to assist them in the progressive development of their free political institutions, according to the particular circumstances of each territory and its peoples and their varying stages of advancement;

c. to further international peace and security;

d. to promote constructive measures of development, to encourage research, and to co-operate with one another and, when and where appropriate, with specialized international bodies with a view to the practical achievement of the social, economic, and scientific purposes set forth in this Article; and

e. to transmit regularly to the Secretary-General for information purposes, subject to such limitation as security and constitutional considerations may require, statistical and other information of a technical nature relating to economic, social, and educational conditions in the territories for which they are respectively responsible other than those territories to which Chapters XII and XIII apply.

Article 74

Members of the United Nations also agree that their policy in respect of the territories to which this Chapter applies, no less than in respect of their metropolitan areas, must be based on the general principle of good-neighborliness, due account being taken of the interests and well-being of the rest of the world, in social, economic, and commercial matters.

CHAPTER XII

INTERNATIONAL TRUSTEESHIP SYSTEM

Article 75

The United Nations shall establish under its authority an international trusteeship system for the administration and supervision of such territories as may be placed thereunder by subsequent individual agreements. These territories are hereinafter referred to as trust territories.

Article 76

The basic objectives of the trusteeship system, in accordance with the Purposes of the United Nations laid down in Article 1 of the present Charter, shall be:

a. to further international peace and security;

b. to promote the political, economic, social, and educational advancement of the inhabitants of the trust territories, and their progressive development towards self-government or independence as may be appropriate to the particular circumstances of each territory and its peoples and the freely expressed wishes of the peoples concerned, and as may be provided by the terms of each trusteeship agreement;

c. to encourage respect for human rights and for fundamental freedoms for all without distinction as to race, sex, language, or religion, and to encourage recognition of the interdependence of the peoples of the world; and

d. to ensure equal treatment in social, economic, and commercial matters for all Members of the United Nations and their nationals, and also equal treatment for the latter in the administration of justice, without prejudice to the attainment of the foregoing objectives and subject to the provisions of Article 80.

Article 77

1. The trusteeship system shall apply to such territories in the following categories as may be placed thereunder by means of trusteeship agreements:

a. territories now held under mandate;

b. territories which may be detached from enemy states as a result of the Second World War; and

c. territories voluntarily placed under the system by states responsible for their administration.

2. It will be a matter for subsequent agreement as to which territories in the foregoing categories will be brought under the trusteeship system and upon what terms.

Article 78

The trusteeship system shall not apply to territories which have become Members of the United Nations, relationship among which shall be based on respect for the principle of sovereign equality.

Article 79

The terms of trusteeship for each territory to be placed under the trusteeship system, including any alteration or amendment, shall be agreed upon by the states directly concerned, including the mandatory power in the case of territories held under mandate by a Member of the United Nations, and shall be approved as provided for in Articles 83 and 85.

Article 80

1. Except as may be agreed upon in individual trusteeship agreements, made under Articles 77, 79, and 81, placing each territory under the trusteeship system, and until such agreements have been concluded, nothing in this Chapter shall be construed in or of itself to alter in any manner the rights whatsoever of any states or any peoples or the terms of existing international instruments to which Members of the United Nations may respectively be parties.

2. Paragraph 1 of this Article shall not be interpreted as giving grounds for delay or postponement of the negotiation and conclusion of agreements for placing mandated and other territories under the trusteeship system as provided for in Article 77.

Article 81

The trusteeship agreement shall in each case include the terms under which the trust territory will be administered and designate the authority which will exercise the administration of the trust territory. Such authority, hereinafter called the administering authority, may be one or more states or the Organization itself.

Article 82

There may be designated, in any trusteeship agreement, a strategic area or areas which may include part or all of the trust territory to which the agreement applies, without prejudice to any special agreement or agreements made under Article 43.

Article 83

1. All functions of the United Nations relating to strategic areas, including the approval of the terms of the trusteeship agreements and of their alteration or amendment, shall be exercised by the Security Council.

2. The basic objectives set forth in Article 76 shall be applicable to the people of each strategic area.

3. The Security Council shall, subject to the provisions of the trusteeship agreements and without prejudice to security considerations, avail itself of the assistance of the Trusteeship Council to perform those functions of the United Nations under the trusteeship system relating to political, economic, social, and educational matters in the strategic areas.

Article 84

It shall be the duty of the administering authority to ensure that the trust territory shall play its part in the maintenance of international peace and security. To this end the administering authority may make use of volunteer forces, facilities, and assistance from the trust territory in carrying out the obligations towards the Security Council undertaken in this regard by the administering authority, as well as for local defense and the maintenance of law and order within the trust territory.

Article 85

1. The functions of the United Nations with regard to trusteeship agreements for all areas not designated as strategic, including the approval of the terms of the trusteeship agreements and of their alteration or amendment, shall be exercised by the General Assembly.

2. The Trusteeship Council, operating under the authority of the General Assembly, shall assist the General Assembly in carrying out these functions.

CHAPTER XIII

THE TRUSTEESHIP COUNCIL

Composition

Article 86

1. The Trusteeship Council shall consist of the following Members of the United Nations:

a. those Members administering trust territories;

b. such of those Members mentioned by name in Article 23 as are not administering trust territories; and

c. as many other Members elected for three-year terms by the General Assembly as may be necessary to ensure that the total number of members of the Trusteeship Council is equally divided between those Members of the United Nations which administer trust territories and those which do not.

2. Each member of the Trusteeship Council shall designate one specially qualified person to represent it therein.

Functions and Powers

Article 87

The General Assembly and, under its authority, the Trusteeship Council, in carrying out their functions, may:

a. consider reports submitted by the administering authority;

b. accept petitions and examine them in consultation with the administering authority;

c. provide for periodic visits to the respective trust territories at times agreed upon with the administering authority; and

d. take these and other actions in conformity with the terms of the trusteeship agreements.

Article 88

The Trusteeship Council shall formulate a questionnaire on the political, economic, social, and educational advancement of the inhabitants of each trust territory, and the administering authority for each trust territory within the competence of the General Assembly shall make an annual report to the General Assembly upon the basis of such questionnaire.

Voting

Article 89

1. Each member of the Trusteeship Council shall have one vote.

2. Decisions of the Trusteeship Council shall be made by a majority of the members present and voting.

Procedure

Article 90

1. The Trusteeship Council shall adopt its own rules of procedure, including the method of selecting its President.

2. The Trusteeship Council shall meet as required in accordance with its rules, which shall include provision for the convening of meetings on the request of a majority of its members.

Article 91

The Trusteeship Council shall, when appropriate, avail itself of the assistance of the Economic and Social Council and of the specialized agencies in regard to matters with which they are respectively concerned.

CHAPTER XIV

THE INTERNATIONAL COURT OF JUSTICE

Article 92

The International Court of Justice shall be the principal judicial organ of the United Nations. It shall function in accordance with the annexed Statute, which is based upon the Statute of the Permanent Court of International Justice and forms an integral part of the present Charter.

Article 93

1. All Members of the United Nations are *ipso facto* parties to the Statute of the International Court of Justice.

2. A state which is not a Member of the United Nations may become a party to the Statute of the International Court of Justice on conditions to be determined in each case by the General Assembly upon the recommendation of the Security Council.

Article 94

1. Each Member of the United Nations undertakes to comply with the decision of the International Court of Justice in any case to which it is a party.

2. If any party to a case fails to perform the obligations incumbent upon it under a judgment rendered by the Court, the other party may have recourse to the Security Council, which may, if it deems necessary, make recommendations or decide upon measures to be taken to give effect to the judgment.

Article 95

Nothing in the present Charter shall prevent Members of the United Nations from entrusting the solution of their differences to other tribunals by virtue of agreements already in existence or which may be concluded in the future.

Article 96

1. The General Assembly or the Security Council may request the International Court of Justice to give an advisory opinion on any legal question.

2. Other organs of the United Nations and specialized agencies, which may at any time be so authorized by the General Assembly, may also request advisory opinions of the Court on legal questions arising within the scope of their activities.

CHAPTER XV

THE SECRETARIAT

Article 97

The Secretariat shall comprise a Secretary-General and such staff as the Organization may require. The Secretary-General shall be appointed by the General Assembly upon the recommendation of the Security Council. He shall be the chief administrative officer of the Organization.

Article 98

The Secretary-General shall act in that capacity in all meetings of the General Assembly, of the Security Council, of the Economic and Social Council, and of the Trusteeship Council, and shall perform such other functions as are entrusted to him by these organs. The Secretary-General shall make an annual report to the General Assembly on the work of the Organization.

Article 99

The Secretary-General may bring to the attention of the Security Council any matter which in his opinion may threaten the maintenance of international peace and security.

Article 100

1. In the performance of their duties the Secretary-General and the staff shall not seek or receive instructions from any government or from any other authority external to the Organization. They shall refrain from any action which might reflect on their position as international officials responsible only to the Organization.

2. Each Member of the United Nations undertakes to respect the exclusively international character of the responsibilities of the Secretary-General and the staff and not to seek to influence them in the discharge of their responsibilities.

Article 101

1. The staff shall be appointed by the Secretary-General under regulations established by the General Assembly.

2. Appropriate staffs shall be permanently assigned to the Economic and Social Council, the Trusteeship Council, and, as required, to other organs of the United Nations. These staffs shall form a part of the Secretariat.

3. The paramount consideration in the employment of the staff and in the determination of the conditions of service shall be the necessity of securing the highest standards of efficiency, competence, and integrity. Due regard shall be paid to the importance of recruiting the staff on as wide a geographical basis as possible.

CHAPTER XVI

MISCELLANEOUS PROVISIONS

Article 102

1. Every treaty and every international agreement entered into by any Member of the United Nations after the present Charter comes into force shall as soon as possible be registered with the Secretariat and published by it.

2. No party to any such treaty or international agreement which has not been registered in accordance with the provisions of paragraph 1 of

this Article may invoke that treaty or agreement before any organ of the United Nations.

Article 103

In the event of a conflict between the obligations of the Members of the United Nations under the present Charter and their obligations under any other international agreement, their obligations under the present Charter shall prevail.

Article 104

The Organization shall enjoy in the territory of each of its Members such legal capacity as may be necessary for the exercise of its functions and the fulfillment of its purposes.

Article 105

1. The Organization shall enjoy in the territory of each of its Members such privileges and immunities as are necessary for the fulfillment of its purposes.

2. Representatives of the Members of the United Nations and officials of the Organization shall similarly enjoy such privileges and immunities as are necessary for the independent exercise of their functions in connection with the Organization.

3. The General Assembly may make recommendations with a view to determining the details of the application of paragraphs 1 and 2 of this Article or may propose conventions to the Members of the United Nations for this purpose.

CHAPTER XVII

TRANSITIONAL SECURITY ARRANGEMENTS

Article 106

Pending the coming into force of such special agreements referred to in Article 43 as in the opinion of the Security Council enable it to begin the exercise of its responsibilities under Article 42, the parties to the Four-Nation Declaration, signed at Moscow, October 30, 1943, and France, shall, in accordance with the provisions of paragraph 5 of that Declaration, consult with one another and as occasion requires with other Members of the United Nations with a view to such joint action on behalf of the Organization as may be necessary for the purpose of maintaining international peace and security.

Article 107

Nothing in the present Charter shall invalidate or preclude action, in relation to any state which during the Second World War has been an enemy of any signatory to the present Charter, taken or authorized as a result of that war by the Governments having responsibility for such action.

CHAPTER XVIII

AMENDMENTS

Article 108

Amendments to the present Charter shall come into force for all Members of the United Nations when they have been adopted by a vote of two thirds of the members of the General Assembly and ratified in accordance with their respective constitutional processes by two thirds of the Members of the United Nations, including all the permanent members of the Security Council.

Article 109

1. A General Conference of the Members of the United Nations for the purpose of reviewing the present Charter may be held at a date and place to be fixed by a two-thirds vote of the members of the General Assembly and by a vote of any seven members of the Security Council. Each Member of the United Nations shall have one vote in the conference.

2. Any alteration of the present Charter recommended by a two-thirds vote of the conference shall take effect when ratified in accordance with their respective constitutional processes by two thirds of the Members of the United Nations including all the permanent members of the Security Council.

3. If such a conference has not been held before the tenth annual session of the General Assembly following the coming into force of the present Charter, the proposal to call such a conference shall be placed on the agenda of that session of the General Assembly, and the conference shall be held if so decided by a majority vote of the members of the General Assembly and by a vote of any seven members of the Security Council.

CHAPTER XIX

RATIFICATION AND SIGNATURE

Article 110

1. The present Charter shall be ratified by the signatory states in accordance with their respective constitutional processes.

2. The ratifications shall be deposited with the Government of the United States of America, which shall notify all the signatory states of each deposit as well as the Secretary-General of the Organization when he has been appointed.

3. The present Charter shall come into force upon the deposit of ratifications by the Republic of China, France, the Union of Soviet Socialist Republics, the United Kingdom of Great Britain and Northern Ireland, and the United States of America, and by a majority of the other signatory states. A protocol of the ratifications deposited shall thereupon be drawn up by the Government of the United States of America which shall communicate copies thereof to all the signatory states.

4. The states signatory to the present Charter which ratify it after it has come into force will become original Members of the United Nations on the date of the deposit of their respective ratifications.

Article 111

The present Charter, of which the Chinese, French, Russian, English, and Spanish texts are equally authentic, shall remain deposited in the archives of the Government of the United States of America. Duly certified copies thereof shall be transmitted by that Government to the Governments of the other signatory states.

IN FAITH WHEREOF the representatives of the Governments of the United Nations have signed the present Charter.

DONE at the city of San Francisco the twenty-sixth day of June, one thousand nine hundred and forty-five.

STATUTE OF THE INTERNATIONAL COURT OF JUSTICE

Article 1

THE INTERNATIONAL COURT OF JUSTICE established by the Charter of the United Nations as the principal judicial organ of the United Nations shall be constituted and shall function in accordance with the provisions of the present Statute.

CHAPTER I

ORGANIZATION OF THE COURT

Article 2

The Court shall be composed of a body of independent judges, elected regardless of their nationality from among persons of high moral character, who possess the qualifications required in their respective countries for appointment to the highest judicial offices, or are jurisconsults of recognized competence in international law.

Article 3

1. The Court shall consist of fifteen members, no two of whom may be nationals of the same state.

2. A person who for the purposes of membership in the Court could be regarded as a national of more than one state shall be deemed to be a national of the one in which he ordinarily exercises civil and political rights.

Article 4

1. The members of the Court shall be elected by the General Assembly and by the Security Council from a list of persons nominated by the national groups in the Permanent Court of Arbitration, in accordance with the following provisions.

2. In the case of Members of the United Nations not represented in the Permanent Court of Arbitration, candidates shall be nominated by national groups appointed for this purpose by their governments under the same conditions as those prescribed for members of the Permanent Court of Arbitration by Article 44 of the Convention of The Hague of 1907 for the pacific settlement of international disputes.

3. The conditions under which a state which is a party to the present Statute but is not a Member of the United Nations may participate in electing the members of the Court shall, in the absence of a special agreement, be laid down by the General Assembly upon recommendation of the Security Council.

Article 5

1. At least three months before the date of the election, the Secretary-General of the United Nations shall address a written request to the members of the Permanent Court of Arbitration belonging to the states which are parties to the present Statute, and to the members of the national groups appointed under Article 4, paragraph 2, inviting them to undertake, within a given time, by national groups, the nomination of persons in a position to accept the duties of a member of the Court.

2. No group may nominate more than four persons, not more than two of whom shall be of their own nationality. In no case may the number of candidates nominated by a group be more than double the number of seats to be filled.

Article 6

Before making these nominations, each national group is recommended to consult its highest court of justice, its legal faculties and schools of law, and its national academies and national sections of international academies devoted to the study of law.

Article 7

1. The Secretary-General shall prepare a list

in alphabetical order of all the persons thus nominated. Save as provided in Article 12, paragraph 2, these shall be the only persons eligible.

2. The Secretary-General shall submit this list to the General Assembly and to the Security Council.

Article 8

The General Assembly and the Security Council shall proceed independently of one another to elect the members of the Court.

Article 9

At every election, the electors shall bear in mind not only that the persons to be elected should individually possess the qualifications required, but also that in the body as a whole the representation of the main forms of civilization and of the principal legal systems of the world should be assured.

Article 10

1. Those candidates who obtain an absolute majority of votes in the General Assembly and in the Security Council shall be considered as elected.

2. Any vote of the Security Council, whether for the election of judges or for the appointment of members of the conference envisaged in Article 12, shall be taken without any distinction between permanent and non-permanent members of the Security Council.

3. In the event of more than one national of the same state obtaining an absolute majority of the votes both of the General Assembly and of the Security Council, the eldest of these only shall be considered as elected.

Article 11

If, after the first meeting held for the purpose of the election, one or more seats remain to be filled, a second and, if necessary, a third meeting shall take place.

Article 12

1. If, after the third meeting, one or more seats still remain unfilled, a joint conference consisting of six members, three appointed by the General Assembly and three by the Security Council, may be formed at any time at the request of either the General Assembly or the Security Council, for the purpose of choosing by the vote of an absolute majority one name for each seat still vacant, to submit to the General Assembly and the Security Council for their respective acceptance.

2. If the joint conference is unanimously agreed upon any person who fulfils the required conditions, he may be included in its list, even though he was not included in the list of nominations referred to in Article 7.

3. If the joint conference is satisfied that it will not be successful in procuring an election, those members of the Court who have already been elected shall, within a period to be fixed by the Security Council, proceed to fill the vacant seats by selection from among those candidates who have obtained votes either in the General Assembly or in the Security Council.

4. In the event of an equality of votes among the judges, the eldest judge shall have a casting vote.

Article 13

1. The members of the Court shall be elected for nine years and may be re-elected; provided, however, that of the judges elected at the first election, the terms of five judges shall expire at the end of three years and the terms of five more judges shall expire at the end of six years.

2. The judges whose terms are to expire at the end of the above-mentioned initial periods of three and six years shall be chosen by lot to be drawn by the Secretary-General immediately after the first election has been completed.

3. The members of the Court shall continue to

discharge their duties until their places have been filled. Though replaced, they shall finish any cases which they may have begun.

4. In the case of the resignation of a member of the Court, the resignation shall be addressed to the President of the Court for transmission to the Secretary-General. This last notification makes the place vacant.

Article 14

Vacancies shall be filled by the same method as that laid down for the first election, subject to the following provision: the Secretary-General shall, within one month of the occurrence of the vacancy, proceed to issue the invitations provided for in Article 5, and the date of the election shall be fixed by the Security Council.

Article 15

A member of the Court elected to replace a member whose term of office has not expired shall hold office for the remainder of his predecessor's term.

Article 16

1. No member of the Court may exercise any political or administrative function, or engage in any other occupation of a professional nature.

2. Any doubt on this point shall be settled by the decision of the Court.

Article 17

1. No member of the Court may act as agent, counsel, or advocate in any case.

2. No member may participate in the decision of any case in which he has previously taken part as agent, counsel, or advocate for one of the parties, or as a member of a national or international court, or of a commission of enquiry, or in any other capacity.

3. Any doubt on this point shall be settled by the decision of the Court.

Article 18

1. No member of the Court can be dismissed unless, in the unanimous opinion of the other members, he has ceased to fulfil the required conditions.

2. Formal notification thereof shall be made to the Secretary-General by the Registrar.

3. This notification makes the place vacant.

Article 19

The members of the Court, when engaged on the business of the Court, shall enjoy diplomatic privileges and immunities.

Article 20

Every member of the Court shall, before taking up his duties, make a solemn declaration in open court that he will exercise his powers impartially and conscientiously.

Article 21

1. The Court shall elect its President and Vice-President for three years; they may be re-elected.

2. The Court shall appoint its Registrar and may provide for the appointment of such other officers as may be necessary.

Article 22

1. The seat of the Court shall be established at The Hague. This, however, shall not prevent the Court from sitting and exercising its functions elsewhere whenever the Court considers it desirable.

2. The President and the Registrar shall reside at the seat of the Court.

Article 23

1. The Court shall remain permanently in session, except during the judicial vacations, the dates and duration of which shall be fixed by the Court.

2. Members of the Court are entitled to peri-

odic leave, the dates and duration of which shall be fixed by the Court, having in mind the distance between The Hague and the home of each judge.

3. Members of the Court shall be bound, unless they are on leave or prevented from attending by illness or other serious reasons duly explained to the President, to hold themselves permanently at the disposal of the Court.

Article 24

1. If, for some special reason, a member of the Court considers that he should not take part in the decision of a particular case, he shall so inform the President.

2. If the President considers that for some special reason one of the members of the Court should not sit in a particular case, he shall give him notice accordingly.

3. If in any such case the member of the Court and the President disagree, the matter shall be settled by the decision of the Court.

Article 25

1. The full Court shall sit except when it is expressly provided otherwise in the present Statute.

2. Subject to the condition that the number of judges available to constitute the Court is not thereby reduced below eleven, the Rules of the Court may provide for allowing one or more judges, according to circumstances and in rotation, to be dispensed from sitting.

3. A quorum of nine judges shall suffice to constitute the Court.

Article 26

1. The Court may from time to time form one or more chambers, composed of three or more judges as the Court may determine, for dealing with particular categories of cases; for example, labor cases and cases relating to transit and communications.

2. The Court may at any time form a chamber for dealing with a particular case. The number of judges to constitute such a chamber shall be determined by the Court with the approval of the parties.

3. Cases shall be heard and determined by the chambers provided for in this Article if the parties so request.

Article 27

A judgment given by any of the chambers provided for in Articles 26 and 29 shall be considered as rendered by the Court.

Article 28

The chambers provided for in Articles 26 and 29 may, with the consent of the parties, sit and exercise their functions elsewhere than at The Hague.

Article 29

With a view to the speedy despatch of business, the Court shall form annually a chamber composed of five judges which, at the request of the parties, may hear and determine cases by summary procedure. In addition, two judges shall be selected for the purpose of replacing judges who find it impossible to sit.

Article 30

1. The Court shall frame rules for carrying out its functions. In particular, it shall lay down rules of procedure.

2. The Rules of the Court may provide for assessors to sit with the Court or with any of its chambers, without the right to vote.

Article 31

1. Judges of the nationality of each of the parties shall retain their right to sit in the case before the Court.

2. If the Court includes upon the Bench a judge of the nationality of one of the parties, any other party may choose a person to sit as judge. Such person shall be chosen preferably from among

those persons who have been nominated as candidates as provided in Articles 4 and 5.

3. If the Court includes upon the Bench no judge of the nationality of the parties, each of these parties may proceed to choose a judge as provided in paragraph 2 of this Article.

4. The provisions of this Article shall apply to the case of Articles 26 and 29. In such cases, the President shall request one or, if necessary, two of the members of the Court forming the chamber to give place to the members of the Court of the nationality of the parties concerned, and, failing such, or if they are unable to be present, to the judges specially chosen by the parties.

5. Should there be several parties in the same interest, they shall, for the purpose of the preceding provisions, be reckoned as one party only. Any doubt upon this point shall be settled by the decision of the Court.

6. Judges chosen as laid down in paragraphs 2, 3, and 4 of this Article shall fulfil the conditions required by Articles 2, 17 (paragraph 2), 20, and 24 of the present Statute. They shall take part in the decision on terms of complete equality with their colleagues.

Article 32

1. Each member of the Court shall receive an annual salary.

2. The President shall receive a special annual allowance.

3. The Vice-President shall receive a special allowance for every day on which he acts as President.

4. The judges chosen under Article 31, other than members of the Court, shall receive compensation for each day on which they exercise their functions.

5. These salaries, allowances, and compensation shall be fixed by the General Assembly. They may not be decreased during the term of office.

6. The salary of the Registrar shall be fixed by the General Assembly on the proposal of the Court.

7. Regulations made by the General Assembly shall fix the conditions under which retirement pensions may be given to members of the Court and to the Registrar, and the conditions under which members of the Court and the Registrar shall have their traveling expenses refunded.

8. The above salaries, allowances, and compensation shall be free of all taxation.

Article 33

The expenses of the Court shall be borne by the United Nations in such a manner as shall be decided by the General Assembly.

CHAPTER II

COMPETENCE OF THE COURT

Article 34

1. Only states may be parties in cases before the Court.

2. The Court, subject to and in conformity with its Rules, may request of public international organizations information relevant to cases before it, and shall receive such information presented by such organizations on their own initiative.

3. Whenever the construction of the constituent instrument of a public international organization or of an international convention adopted thereunder is in question in a case before the Court, the Registrar shall so notify the public international organization concerned and shall communicate to it copies of all the written proceedings.

Article 35

1. The Court shall be open to the states parties to the present Statute.

2. The conditions under which the Court shall be open to other states shall, subject to the special provisions contained in treaties in force, be laid

down by the Security Council, but in no case shall such conditions place the parties in a position of inequality before the Court.

3. When a state which is not a Member of the United Nations is a party to a case, the Court shall fix the amount which that party is to contribute towards the expenses of the Court. This provision shall not apply if such state is bearing a share of the expenses of the Court.

Article 36

1. The jurisdiction of the Court comprises all cases which the parties refer to it and all matters specially provided for in the Charter of the United Nations or in treaties and conventions in force.

2. The states parties to the present Statute may at any time declare that they recognize as compulsory *ipso facto* and without special agreement, in relation to any other state accepting the same obligation, the jurisdiction of the Court in all legal disputes concerning:

a. the interpretation of a treaty;

b. any question of international law;

c. the existence of any fact which, if established, would constitute a breach of an international obligation;

d. the nature or extent of the reparation to be made for the breach of an international obligation.

3. The declarations referred to above may be made unconditionally or on condition of reciprocity on the part of several or certain states, or for a certain time.

4. Such declarations shall be deposited with the Secretary-General of the United Nations, who shall transmit copies thereof to the parties to the Statute and to the Registrar of the Court.

5. Declarations made under Article 36 of the Statute of the Permanent Court of International Justice and which are still in force shall be deemed, as between the parties to the present Statute, to be acceptances of the compulsory jurisdiction of the International Court of Justice for the period which they still have to run and in accordance with their terms.

6. In the event of a dispute as to whether the Court has jurisdiction, the matter shall be settled by the decision of the Court.

Article 37

Whenever a treaty or convention in force provides for reference of a matter to a tribunal to have been instituted by the League of Nations, or to the Permanent Court of International Justice, the matter shall, as between the parties to the present Statute, be referred to the International Court of Justice.

Article 38

1. The Court, whose function is to decide in accordance with international law such disputes as are submitted to it, shall apply:

a. international conventions, whether general or particular, establishing rules expressly recognized by the contesting states;

b. international custom, as evidence of a general practice accepted as law;

c. the general principles of law recognized by civilized nations;

d. subject to the provisions of Article 59, judicial decisions and the teachings of the most highly qualified publicists of the various nations, as subsidiary means for the determination of rules of law.

2. This provision shall not prejudice the power of the Court to decide a case *ex aequo et bono*, if the parties agree thereto.

CHAPTER III

PROCEDURE

Article 39

1. The official languages of the Court shall be French and English. If the parties agree that the

case shall be conducted in French, the judgment shall be delivered in French. If the parties agree that the case shall be conducted in English, the judgment shall be delivered in English.

2. In the absence of an agreement as to which language shall be employed, each party may, in the pleadings, use the language which it prefers; the decision of the Court shall be given in French and English. In this case the Court shall at the same time determine which of the two texts shall be considered as authoritative.

3. The Court shall, at the request of any party, authorize a language other than French or English to be used by that party.

Article 40

1. Cases are brought before the Court, as the case may be, either by the notification of the special agreement or by a written application addressed to the Registrar. In either case the subject of the dispute and the parties shall be indicated.

2. The Registrar shall forthwith communicate the application to all concerned.

3. He shall also notify the Members of the United Nations through the Secretary-General, and also any other states entitled to appear before the Court.

Article 41

1. The Court shall have the power to indicate, if it considers that circumstances so require, any provisional measures which ought to be taken to preserve the respective rights of either party.

2. Pending the final decision, notice of the measures suggested shall forthwith be given to the parties and to the Security Council.

Article 42

1. The parties shall be represented by agents.

2. They may have the assistance of counsel or advocates before the Court.

3. The agents, counsel, and advocates of parties before the Court shall enjoy the privileges and immunities necessary to the independent exercise of their duties.

Article 43

1. The procedure shall consist of two parts: written and oral.

2. The written proceedings shall consist of the communication to the Court and to the parties of memorials, counter-memorials and, if necessary, replies; also all papers and documents in support.

3. These communications shall be made through the Registrar, in the order and within the time fixed by the Court.

4. A certified copy of every document produced by one party shall be communicated to the other party.

5. The oral proceedings shall consist of the hearing by the Court of witnesses, experts, agents, counsel, and advocates.

Article 44

1. For the service of all notices upon persons other than the agents, counsel, and advocates, the Court shall apply direct to the government of the state upon whose territory the notice has to be served.

2. The same provision shall apply whenever steps are to be taken to procure evidence on the spot.

Article 45

The hearing shall be under the control of the President or, if he is unable to preside, of the Vice-President; if neither is able to preside, the senior judge present shall preside.

Article 46

The hearing in Court shall be public, unless the Court shall decide otherwise, or unless the parties demand that the public be not admitted.

Article 47

1. Minutes shall be made at each hearing and signed by the Registrar and the President.

2. These minutes alone shall be authentic.

Article 48

The Court shall make orders for the conduct of the case, shall decide the form and time in which each party must conclude its arguments, and make all arrangements connected with the taking of evidence.

Article 49

The Court may, even before the hearing begins, call upon the agents to produce any document or to supply any explanations. Formal note shall be taken of any refusal.

Article 50

The Court may, at any time, entrust any individual, body, bureau, commission, or other organization that it may select, with the task of carrying out an enquiry or giving an expert opinion.

Article 51

During the hearing any relevant questions are to be put to the witnesses and experts under the conditions laid down by the Court in the rules of procedure referred to in Article 30.

Article 52

After the Court has received the proofs and evidence within the time specified for the purpose, it may refuse to accept any further oral or written evidence that one party may desire to present unless the other side consents.

Article 53

1. Whenever one of the parties does not appear before the Court, or fails to defend its case, the other party may call upon the Court to decide in favor of its claim.

2. The Court must, before doing so, satisfy itself, not only that it has jurisdiction in accordance with Articles 36 and 37, but also that the claim is well founded in fact and law.

Article 54

1. When, subject to the control of the Court, the agents, counsel, and advocates have completed their presentation of the case, the President shall declare the hearing closed.

2. The Court shall withdraw to consider the judgment.

3. The deliberations of the Court shall take place in private and remain secret.

Article 55

1. All questions shall be decided by a majority of the judges present.

2. In the event of an equality of votes, the President or the judge who acts in his place shall have a casting vote.

Article 56

1. The judgment shall state the reasons on which it is based.

2. It shall contain the names of the judges who have taken part in the decision.

Article 57

If the judgment does not represent in whole or in part the unanimous opinion of the judges, any judge shall be entitled to deliver a separate opinion.

Article 58

The judgment shall be signed by the President and by the Registrar. It shall be read in open court, due notice having been given to the agents.

Article 59

The decision of the Court has no binding force except between the parties and in respect of that particular case.

Article 60

The judgment is final and without appeal. In the event of dispute as to the meaning or scope of the judgment, the Court shall construe it upon the request of any party.

Article 61

1. An application for revision of a judgment may be made only when it is based upon the discovery of some fact of such a nature as to be a decisive factor, which fact was, when the judgment was given, unknown to the Court and also to the party claiming revision, always provided that such ignorance was not due to negligence.

2. The proceedings for revision shall be opened by a judgment of the Court expressly recording the existence of the new fact, recognizing that it has such a character as to lay the case open to revision, and declaring the application admissible on this ground.

3. The Court may require previous compliance with the terms of the judgment before it admits proceedings in revision.

4. The application for revision must be made at latest within six months of the discovery of the new fact.

5. No application for revision may be made after the lapse of ten years from the date of the judgment.

Article 62

1. Should a state consider that it has an interest of a legal nature which may be affected by the decision in the case, it may submit a request to the Court to be permitted to intervene.

2. It shall be for the Court to decide upon this request.

Article 63

1. Whenever the construction of a convention to which states other than those concerned in the case are parties is in question, the Registrar shall notify all such states forthwith.

2. Every state so notified has the right to intervene in the proceedings; but if it uses this right, the construction given by the judgment will be equally binding upon it.

Article 64

Unless otherwise decided by the Court, each party shall bear its own costs.

CHAPTER IV

ADVISORY OPINIONS

Article 65

1. The Court may give an advisory opinion on any legal question at the request of whatever body may be authorized by or in accordance with the Charter of the United Nations to make such a request.

2. Questions upon which the advisory opinion of the Court is asked shall be laid before the Court by means of a written request containing an exact statement of the question upon which an opinion is required, and accompanied by all documents likely to throw light upon the question.

Article 66

1. The Registrar shall forthwith give notice of the request for an advisory opinion to all states entitled to appear before the Court.

2. The Registrar shall also, by means of a special and direct communication, notify any state entitled to appear before the Court or international organization considered by the Court, or, should it not be sitting, by the President, as likely to be able to furnish information on the question, that the Court will be prepared to receive, within a time limit to be fixed by the President, written statements, or to hear, at a public sitting to be held for the purpose, oral statements relating to the question.

3. Should any such state entitled to appear before the Court have failed to receive the special communication referred to in paragraph 2 of this Article, such state may express a desire to submit a written statement or to be heard; and the Court will decide.

4. States and organizations having presented written or oral statements or both shall be permitted to comment on the statements made by other states or organizations in the form, to the extent, and within the time limits which the Court, or, should it not be sitting, the President, shall decide in each particular case. Accordingly, the Registrar shall in due time communicate any such written statements to states and organizations having submitted similar statements.

Article 67

The Court shall deliver its advisory opinions in open court, notice having been given to the Secretary-General and to the representatives of Members of the United Nations, of other states and of international organizations immediately concerned.

Article 68

In the exercise of its advisory functions the Court shall further be guided by the provisions of the present Statute which apply in contentious cases to the extent to which it recognizes them to be applicable.

CHAPTER V

AMENDMENT

Article 69

Amendments to the present Statute shall be effected by the same procedure as is provided by the Charter of the United Nations for amendments to that Charter, subject however to any provisions which the General Assembly upon recommendation of the Security Council may adopt concerning the participation of states which are parties to the present Statute but are not Members of the United Nations.

Article 70

The Court shall have power to propose such amendments to the present Statute as it may deem necessary, through written communications to the Secretary-General, for consideration in conformity with the provisions of Article 69.

ADMINISTRATIVE PANEL DECISION

Port of Helsinki vs. Paragon International Projects Ltd.

Case No. D2001-0002

1. The Parties

Complainant is Port of Helsinki, Olympiaranta 3, FIN-00099 Helsinki, Finland.

Complainant's authorised representative in this case is Heinonen & Co,

Attorneys-at-Law, Ltd, P.O Box 671, FIN-00101 Helsinki, Finland, with visiting address Fredrikinkatu 61 A, FIN-00100 Helsinki.

Respondent is Paragon International Projects Ltd. In the Complaint, Respondent's address is indicated as: Trafford House, Trafford Street, Chester, Cheshire CH1 3HP United Kingdom. In the Response, Respondent has indicated its contact details as "1 Hunters Walk, Canal Street, Chester, CH1 4EB".

2. Domain Name and Registrar

The domain name at issue is "portofhelsinki.com". The Registrar is Network Solutions, Inc, Herndon, Virginia, United States.

3. Procedural History

The WIPO Arbitration and Registration Center (the Center) received Complainant's complaint in electronic form on January 2, 2001, and in hard-copy form on January 5, 2001. The Center verified that the Complaint satisfied the formal requirements of the ICANN Uniform Domain Name Dispute Resolution Policy (the Policy), the Rules for Uniform Domain Name Dispute Resolution Policy (the Rules) and the WIPO Supplemental Rules. The Center then issued, on January 22, 2001, a Notification of Complaint and Commencement of Administrative Proceeding which was communicated to Respondent, to Complainant's representative and to ICANN as well as to the Registrar.

Having sent a Verification Request to Network Solutions, Inc. the Center received, on January 16, 2001, a Verification Response. In that Response was indicated that:

(a) Network Solutions was in receipt of the Complaint sent to it by Complainant;

(b) Network Solutions is the Registrar of the domain name at issue;

(c) Network Solutions confirmed that the current Registrant of the domain name registration is Paragon International Projects Ltd (PORTOFHELSINKI-DOM) Trafford House, Trafford Street, Chester, Cheshire CH1 3HP, United Kingdom;

(d) the domain name at issue is "PORTOFHELSINKI.COM;

(e) Administrative Contact is Carr, Steve (SC9079) Paragoni@GLOBALNET.CO.UKC, Paragon International Projects Ltd, Trafford House, Trafford Street, Chester, Cheshire CH1 3HP, United Kingdom;

(f) Technical Contact is Hostmaster (HOS194-ORG) hostmaster@NET-WORK.NET, Net-Work, Suite W" 16, Chester Enterprise Centre, Chester, Cheshire CH2 3NE, United Kingdom;

(g) Billing Contact is Dean, David (DD208) d@Vid.NET, Net-Work Internet Ltd, Technology House Rhewl, RUTHIN, LLO15 1TN, United Kingdom;

(h) Network Solutions 5.0 Service Agreement is in effect, and;

(i) the domain name registration is in "Active" status.

On January 26, 2001, the Center received a Response from Respondent; the Center acknowledged receipt of this the same day.

Having invited Mr. Henry Olsson so serve as a Sole Panelist in this case and having received, on February 5, 2001, Mr. Olsson's Statement of Acceptance and Declaration of Impartiality, the Center issued, on February 5, 2001, a Notification of Appointment of Administrative Panel and Projected Decision Date, in which Mr. Olsson was formally appointed as Sole Panelist. The Projected Decision Date was February 19, 2001.

The Sole Panelist finds that the Administrative Panel was properly constituted and appointed in accordance with the Rules and the WIPO Supplemental Rules.

4. Factual Background

The name "Port of Helsinki" refers to the Port of Helsinki, which is the port authority of the City of Helsinki, Finland. The Port Authority is a legal person of public law incorporated under the laws of Finland. Its regulations entitle the Port Authority to represent itself in a court or similar proceeding.

5. Parties´ Contentions

A. Complainant

Complainant contends that the domain name at issue is identical or confusingly similar to a trademark or a service mark in which Complainant has rights, that Respondent has no rights or legitimate interests in respect of the domain name and that the domain name was registered and is being used in bad faith.

In the Complaint, Complainant agrees, in accordance with Paragraph 3(b)(xiii) of the Rules, to submit, only with respect to any challenge that may be made by Respondent to a decision by the Administrative Panel to transfer or cancel the domain name that is the subject of the Complaint, to the jurisdiction of the courts where the principal office of the concerned registrar is located.

Identity or confusing similarity

In respect of the first one of these allegations Complainant states essentially the following:

The Port of Helsinki has used the trademark "Port of Helsinki" for decades in connection with its various port services and the trademark has been used both in Finland and internationally.

The trademark in question has not been registered but enjoys nevertheless protection under the Finnish Trademark Act. Article 2, first Paragraph, of that Act prescribes: "A sole right to a trademark may be acquired even without registration after the mark has become established."

The name "Port of Helsinki" is the only possible name for the port. It is, according to Complainant, common practice around the world that ports are called "port of the *name of the location*." Complainant has submitted a printout from a website to support this statement. In the view of Complainant, port business is international and it is thus naturally the domain name "portofhelsinki.com" that people will look at when they want to obtain information about the Port of Helsinki.

In the view of Complainant a unique geographical name should – just like trademarks- enjoy protection against others registering the name in bad faith; such a geographical name functions in the same way as a trademark by distinguishing one person's goods and services from those of another person. Thus the rights in a geographical name should be considered to belong to the owner of the geographical area in question.

Complainant also stresses that the Port of Helsinki is the owner of the Finnish domain name "portofhelsinki.fi." The Telecommunications Administration Centre (TAC) is the authority that issues domain names under the country code top level domain ".fi". As Finnish domain names are issued only to parties that are entitled to the name, the TAC has been convinced that the name "Port of Helsinki" is an established trademark.

Complainant adds that the "Port of Helsinki" is internationally known as the name of the port in Helsinki. All letterheads, brochures, visiting cards, advertisements and forms – of which Complainant has submitted samples – all include the trademark "Port of Helsinki".

On the basis of these allegations Complainant submits that the domain name "portofhelsinki.com" is identical with Complainant's trademark "Port of Helsinki".

Rights or legitimate interests

Complainant contends that it has not entitled or licensed Respondent to use the trademark "Port of Helsinki" and Respondent does not have any business at Helsinki and especially not at the port of that city and no connection to it. The name "Port of Helsinki" is not a general common word that anyone would have the right to use but refers only to the port of that city and does not have any other meaning. To the knowledge of Complainant, Respondent does not own a trademark or a service mark "Port of Helsinki" and at least in Finland Respondent would not have been able to obtain such a mark without the consent of Complainant.

In view of this, Respondent should not be considered to have any rights or legitimate interest in the name of the geographical area to which it has no connection.

Registration and use in bad faith

Complainant contends that Respondent knows that "Port of Helsinki" is a sign that refers to the port services in Helsinki, Finland. As shown in an Annex to the Complaint, Respondent has registered more than 50 domain names beginning with "portof…." The pattern shows that Respondent has intentionally registered all available port names around the world as its domain names. Respondent has registered the domain name at issue in order to prevent the City of Helsinki from registering the mark Port of Helsinki in a corresponding domain name and Respondent has a pattern of having done so in respect of several ports all around the world. Respondent must have known that the names of different ports belong to themselves and therefore the registration of the domain name at issue has been made in bad faith.

Respondent is selling advertisement space to companies in the website "portofhelsinki.com". Thus the domain name has been registered with the intention to obtain commercial gain from another person's trademark.

According to Complainant, using the domain name at issue creates a likelihood of confusion with Complainant's mark and the website tries to create the impression that the "portofhelsinki.com" website would be the official website of the Port of Helsinki.

In addition, according to Complainant, the website creates a likelihood of confusion as to the source of the services advertised at Respondent's website in that one is made to believe that the advertisers have something to do with the port and that the services are available at the port. According to Complainant the website contains a lot of false or misleading information which can cause damage both to the Port of Helsinki and to third parties. Because the Port of Helsinki is a public authority and as such is trusted for giving accurate information, there is a risk that visitors will believe in the misleading information, which may lead to damages. Complainant submits, as examples, some information from the different pages of the website which in its view includes only a minor part of the different services provided at the Port of Helsinki (only those companies that have paid Respondent for advertising space) and some of the services advertised at the website have nothing to do with the Port of Helsinki. In this respect Complainant has submitted some extracts from the website on, among several other matters, banking, car rental and security services available at the Port.

Remedy requested

In accordance with Paragraph 4b(i) of the Policy and for the reasons indicated Complainant requests that the Administrative Panel issue a decision that the contested domain name be transferred to Complainant.

B. Respondent

General

Respondent contends that the domain name portofhelsinki.com is part of the www.portof.com network containing presently about 23 sites on-line with more than 200 additional ones following in the next eight months as part of Respondent's global plan to launch a comprehensive search engine for the shipping industry world-wide. Consequently, Respondent has a legitimate interest in respect of the domain name at issue. It has been registered and is being used in connection with the global promotion of bona fide shipping related services within Helsinki Port. Until 1998, Helsinki Port promoted itself as "Helsingin Satama" under which name it was known in both the national and international maritime market.

In addition, according to Respondent, the web site which address is www.portofhelsinki.com, is presented as an independent venture totally different from any "official" site the ports may have as shown in the disclaimer included in the website linked to the domain name at issue. Complainant contends that this is the strength of the www.portof.com network as it is recognised and actively promoted as an independent venture that promotes local shipping related companies within a specific global network.

Observations on specific points.

Respondent refers to Complainant's statement that "The name 'Port of Helsinki' belongs to the Port of Helsinki, etc" and Complainant's assumption that a unique geographical name should be regarded as belonging to the owner of the geographical area in question. Respondent does not believe this to be the case as evidenced by a number of examples referring to the names of cities registered as domain names and which are owned by organisations rather than by the respective cities. Respondent refers in this context also to the example of helsinki.com which is owned by another party than the City of Helsinki. Respondent has submitted a number of annexes to support its contentions in this respect. Respondent is firmly of the view that

non-distinct geographical terms cannot be trademarked.

Respondent remarks that "Port of Helsinki" is rather a phrase or sign that refers to the port services in a port and not to the administrative body that handles a specific port.

In the view of Respondent "Port of Helsinki" is not the only possible name for the port until fairly recently Helsinki Port's website was promoted as www.hel.fi/port, and it was only fairly recently that Helsinki Port changed their promotional material to promote the new website address www.portofhelsinki.fi.

Respondent furthermore contends that the statement that all ports around the world are called "Port of *the name of the port"* is not accurate and examples show that domain names containing names of cities are not always owned by the respective cities. From, for example, Annex 6 to Helsinki Port's Complaint can be seen that ports may have varying website addresses (www.revolta.com"/-andrey/port.hmtl). In fact, according to Respondent, it is apparent that only a small number of ports have www.portof.com as their website address. Instead they have, as mentioned, varying website addresses which again, according to Respondent highlights the strength and the legitimacy of the www.portof.com network by promoting a uniform domain name for bona fide and legitimate shipping services around the world.

Respondent furthermore contends that Complainant's statement that Respondent has no rights or legitimate interests in respect of the domain name is not correct, as portofhelsinki.com is part of Respondent's global www.portof.com network. The domain name has not been registered in bad faith and has not been registered to prevent the City of Helsinki from registering portofhelsinki.xxx, as there are other variables available. Helsinki Port already owns portofhelsinki.net which is, however, an inoperative link.

Finally, Respondent contends that the specific points raised about the services and more specifically the accuracy of the services within Helsinki Port refer more to the intention of the individual private company's to join the project rather than of the accuracy of the information. According so Respondent, the information is to the best of its knowledge accurate. However, certain information referred to by Complainant has been removed from the website.

6. Discussion and Findings

Rule 15 of the Rules prescribes that the Panel shall decide a Complaint on the basis of the statements made and documents submitted and in accordance with the Policy, these rules and any rules and principles of law that it deems applicable.

Applied to this case, Paragraph 4(a) of the Policy directs that Complainant must prove each of the following:

(a) that the domain name registered by Respondent is identical or confusingly similar to a trademark or a service mark in which Complainant has rights;

(b) that Respondent has no rights or legitimate interests in the domain name, and;

(c) that the domain name has been registered and is being used in bad faith.

a) Identity or confusing similarity

First the Panel notes that the present Dispute Resolution Policy applies only to conflicts between on the one hand a trademark or a service mark (Complainant's) and on the other hand a domain name (Respondent's). The Policy consequently does not presently apply to, for instance, conflicts between domain names and geographical indications or signs or symbols that are not supported by trademarks/service marks. The Panel cannot agree with the contention that a unique geographical name should be considered as belonging to the legal authority of the geographical area in question under the Policy. Protection for geographical names can be provided through other means, such as the special protection for geographical indications and not *per se* under trademark law.

The domain name at issue is "portofhelsinki.com."

Complainant has invoked that it has rights in the symbol "Port of Helsinki" under Article 2, first paragraph, of the Finnish Trademark Act, which establishes trademark rights on the basis of establishment of the mark on the market. According to Article 2, third Paragraph, "a trade symbol shall be regarded as established if it has become generally known in the appropriate business or consumer circles in Finland as a symbol specific to its proprietor's goods."

From the evidence available in the case appears that the notion "Port of Helsinki" is being used together with its Finnish corresponding denomination "Helsingin Satama" and its Swedish one "Helsingfors Hamn." In view of this and of the fact that no market research or similar evidence has been submitted by Complainant to prove establishment on the market in the sense of the trademark law, the Panel cannot make a finding that trademark rights exist in the denomination "Port of Helsinki.

b) Rights or Legitimate Interests

From the evidence available it appears that Respondent is using this domain name – together with several similar domain names – to provide information about the services available in different ports around the world. In the view of this Panel such a use does not imply that Respondent would have no rights or legitimate interests in respect of the domain name in the sense of Paragraph 4.2(ii) of the Policy.

(c) Registration and Use in Bad Faith

Evidence submitted in the case does not suggest that bad faith would be present in any of the senses referred to in Paragraph b(i)-(iv) of the Policy. In addition, the Panel attaches some importance to the fact that Respondent has put on the website "portofhelsinki.com" a disclaimer indicating that: "This Site Refers to the geographical location of the Port of Helsinki and the Companies located within the port area. It is not the official port authority Site. It is part of the Global port community search Engine portof.com"

Obviously, the registration of the domain name at issue would have an impact on the ability of the Port of Helsinki to register the same domain name for its services. In view of the circumstances just described and of the use that Respondent is making of its registration of the domain name, the Panel does not consider that the domain name has been registered and is being used in bad faith as mentioned in Paragraph 4a(iii) of the Policy.

d) Conclusions

On the basis of the foregoing the Panel concludes that it has not been established;

(a) that "Port of Helsinki" enjoys trademark protection,

(b) that Respondent has no rights or legitimate interests in the domain name at issue in the sense of Paragraph 4a(ii) of the Policy, or

(c) that the domain name has been registered and is being used in bad faith.

Complainant's request for transfer of the domain name at issue shall consequently be denied.

7. Decision

Complainant's request for transfer of the domain name "portofhelsinki.com" is denied.

Henry Olsson
Sole Panelist

Dated: February 12, 2001

Forrest-024

WIPO Arbitration and Mediation Center

ADMINISTRATIVE PANEL DECISION

City of Hamina v. Paragon International Projects Ltd.

Case No. D2001-0001

1. The Parties

The Complainant is City of Hamina, a legal person under public law, incorporated under the laws of Finland, Raatihuoneenkatu 1, FIN-49400 Hamina, Finland.

The Respondent is Paragon International Projects Ltd., Trafford House, Trafford Street, Chester, Cheshire CH1 3HP, United Kingdom.

2. The Domain Name

The domain name at issue is "portofhamina.com", registered with Network Solutions, Inc., 505 Huntmar Park Drive, Herndon, VA 20170, United States.

3. Procedural History

A complaint was submitted electronically to the World Intellectual Property Organization Arbitration and Mediation Center (the "WIPO Center") on January 2, 2001, and was there received in hardcopy form on January 5, 2001. Payment of the administration fee was made by bank transfer on January 2, 2001, and duly received. The Center correctly verified that the complaint satisfies the formal requirements of the ICANN Uniform Domain Name Dispute Resolution Policy (the "Uniform Policy"), the Rules for Uniform Domain Name Dispute Resolution Policy and the WIPO Center Supplemental Rules for Uniform Domain Name Dispute Resolution Policy. The WIPO Center acknowledged receipt of the Complaint on January 9, 2001. Request for Registrar Verification was issued on January 11, 2001, and the Response by the Network Solutions, Inc. was received on January 16, 2001. After appropriate Formal Compliance Review and an ensuing e-mail communication from the WIPO Center on January 22, 2001, to the Complainant, with a copy to the Respondent, the Complainant submitted on January 29, 2001 to the Center, by e-mail (hard copy received on January 31, 2001), an amendment to the Complaint, evidenced to have been transmitted to the Respondent on the same day. The Complaint was properly notified to the Respondent on January 31, 2001, and its response was received by e-mail on February 16, 2001. After an intermediate e-mail communication to the WIPO Center from the Complainant on February 23, receipt of the Response was acknowledged by the Respondent on February 26, 2001.

The Complainant chose to have the dispute decided by a single member Administrative Panel. The Respondent has not elected that a three member panel decide the case. Founded on a Statement of Acceptance and Declaration of Impartiality and Independence dated February 27, 2001, the Administrative Panel was properly constituted on February 28, 2001, the formal date of commencement of this administrative proceeding. There have been no further submissions. The date scheduled for the issuance of the Panel's decision is March 13, 2001.

4. Factual background

The port of Hamina is run by the port authority of the City of Hamina, Finland. The authority works under the name of Port of Hamina as an administrative entity of the City, Complainant in this case and presenting itself as the owner of any port authority's rights related to the complaint. There is also a body corporate, registered under the name of Port of Hamina Ltd./Haminan Satama Oy, for the City of Hamina.

The Respondent has not brought any material to bear evidence of its statements. However, in its response, reference was made the WIPO Case No. D2001-0002, Port of Helsinki vs. Paragon International Projects Ltd., dated February 12, 2001.

5. Parties' Contentions (summary)

A. Complainant

The complaint is based on the assertion that the name Port of Hamina is a trademark widely used over considerable time nationally and internationally in connection with port services by the City of Hamina/Port of Hamina, the City being the owner of an unregistered trademark right to the name of Port of Hamina, based upon Section 2 of the Finnish Trademarks Act, according to which an exclusive right to a trademark may be acquired even without registration "after the mark has become established" (quotation from Annex 5 to the complaint). It is common practice that ports are called "Port of *the name of the location*". The name Port of Hamina is the only possible name for the port of the City of Hamina. Whoever wishes to obtain information related to the Port of Hamina will, consequently, as a matter of cause, look up the domain name "portofhamina.com". Any rights to a unique geographical name should be regarded to belong to the owner of the geographical area in question. The top domain name "portofhamina.fi" has been assigned to the port authority of the City of Hamina, which mirrors the conviction of the issuing authority in Finland, its Telecommunications Administration Centre, that the name Port of Hamina is an established trademark of the City of Hamina. Also, the trademark is widely used for letterheads, brochures, advertisements etc., referring to a port with a yearly turnover of FIM 60 million, visited by approximately 1,200 ships a year with over 55,000 containers passing through. The domain name and the trademark are identical.

The Respondent has not acquired any rights or legitimate interests to the domain name. No right of use to the trademark has been licensed to it and claimant has no business at Hamina or its port. Nor has it any trademark or service mark Port of Hamina and it would not have been able to obtain any right to such a mark without the consent of the City of Hamina. The name Port of Hamina exclusively refers to that port and the Respondent will not have rights or any legitimate interest related to the name of a geographical area to which it is not connected.

The domain name has been registered and is used in bad faith, the Respondent knowing that Port of Hamina is a sign that refers to the port services in Hamina, Finland. The Respondent has internationally as a pattern registered every available name all around the world as its domain names and in the case at hand it has done so knowingly in order to prevent the City of Hamina from registering its mark in a corresponding domain name. Without authorization, the Respondent uses the logo of the Port of Hamina on its website which shows knowledge of the trademark character of Port of Hamina, there presented in figurative form. An intention to obtain financial gain by use of the trademark is evidenced by the fact that the Respondent sells advertising space to companies in the website "portofhamina.com". The use of the domain name creates a likelihood of confusion with the trademark. The site creates the impression that it would be the official website of the Port of Hamina or related to it in co-operation and it also makes believe that advertisers on the website have something to do with the port and that the services advertised are available at the port. This is to be seen together with false and misleading information provided on the website which can cause damage to the Port of Hamina as a trusted party and to third parties. Examples of false information have been adduced as evidence in annexes to the complaint.

B. Respondent

The Respondent argues that its domain name is part of a network "www.portof.com", recognized and actively promoted as an independent venture that promotes local shipping related companies within a specific global network of presently 23 sites

online with another 200 web sites to be introduced online "within the next 8 months as part of a plan to launch a comprehensive search engine for the shipping industry world wide". Thus, "www.portofhamina.com" is used to provide information about services available within a system covering different ports under the concept of "www.portof[name of port].com". As a consequence, the Respondent has acquired a legitimate interest in respect of the domain name at issue, its registration and use being connected with the "global promotion of bona fide shipping related services within Hamina Port." Also, the domain name is presented together with a disclaimer on the home page, saying: "This site refers to the geographical location of the Port of Hamina and the Companies located within the port area. It is not the official port authority site. It is part of the Global port community search engine portof.com." This shows that the domain name is an independent venture different from any "official" site of Hamina port. The Respondent holds that "a unique geographical name can not be considered as automatically belonging to the authority of the geographical area in question".

6. Discussion and findings

On the basis of the Parties' submissions and evidence introduced by the Complainant and in particular with regard to the content of the relevant provisions of the Uniform Policy, (paragraph 4. a to c), the Administrative Panel, noting that the Policy only applies to conflicts between trademarks/service marks and domain names, concludes as follows:

The Respondent has referred to the case No. D2001-0002, Port of Helsinki vs. Paragon International Projects Ltd., *ie,* itself, mentioning that "Nearly all of the legal and technical points raised are specifically covered in the previous case…" mentioned. This Administrative Panel is familiar with the decision in that case. It will, however, not take notice, from that case, for its information or decision, of which "legal and technical points", of the "nearly all", that the Respondent may have intended to draw attention to. Consequently, the Administrative Panel considers the response of the Respondent to concern only what is expressly mentioned in its response of February 16, 2001, in the part following "In general, paragon's response is as follows:" The content of that part of the Respondent's response has been summarized here above under 5(B).

A. Is the domain name "portofhamina.com" identical or confusingly similar to a trademark or service mark in which the Complainant has rights?

The Administrative Panel notes that the name Port of Hamina, as used by the Complainant, indicates the geographical origin of services rendered in that port. It has not been made clear to which extent, if any, the name is used by the Complainant in relation to goods. However, the name should not be seen as just the name of a place, like *e. g.* Newport. It also, in itself, connotes such services as are possibly rendered to ships, boats etc., and, in cities of some significance, implicitly under such rules as may have been established by a port authority of some kind, at least by offering a harbor. Thus, the name Port of Hamina may, in itself, be a trademark for services and protected as such, irrespective of trademark registration, if fulfilling the conditions required under Finnish law for the protection of non registered trademarks (service marks). The test applied to distinguish protected trademarks of this kind from those non protectible bears reference to whether the mark, by its use, has acquired distinctiveness so as to distinguish the goods and services of one undertaking from those of other undertakings. Under Section 2 third paragraph of the Finnish Trademarks Act the notion "established" is defined to mean that the mark has become generally known in the appropriate business or consumer circles in Finland as a symbol specific to its proprietor's goods or services.

Finland is a member of the European Union and consequently, to put it simply, it is bound by European law. The European Court of Justice, in its decision May 4, 1999, in the joint cases C-108/97 and C-109/97 (usually referred to as the Chiemsee-decision), interpreted articles 3.1c and 3.3 first sentence of the Directive 89/104/EEC. Article 3 of the Directive, entitled "Grounds for refusal or invalidity", provides that certain signs and trademarks shall not be registered or if registered shall be liable to be declared invalid. Among these, we find trademarks which "consist exclusively of signs or indications which may serve, in trade, to designate the … geographical origin… of the goods or service". The Administrative Panel finds that Port of Hamina is such a trademark designating geographical origin. Of interest in this context is now the Court's interpretation of article 3.3 first sentence together with the content of article 6.1(b); the latter, however, not subject to interpretation by the Court. Be it, that article 3.3 refers to non refusal of registrations and declarations of invalidation of registered signs, which cannot constitute a trademark, and of trademarks; the criterion for registration is, notwithstanding the presence of any ground for refusal related to trademarks in article 3.1, under the main rule in article 3.3 first sentence, whether the mark has "acquired a distinctive character" before the date of application for registration and following the use which has been made of it. If so, registration may take place and no invalidation shall occur.

The Court: "The first sentence of Article 3(3) of the First Directive 89/104/EEC is to be interpreted as meaning that:

- a trademark acquires distinctive character following the use which has been made of it where the mark has come to identify the product in respect of which registration is applied for as originating from a particular undertaking and thus to distinguish that product from goods of other undertakings;

- it precludes differentiation as regards distinctiveness by reference to the perceived importance of keeping the geographical name available for use by other undertakings;

-in determining whether a trademark has acquired distinctive character following the use which has been made of it, the competent authority must make an overall assessment of the evidence that the mark has come to identify the product concerned as originating form a particular undertaking and thus to distinguish that product from goods of other undertakings;

- if the competent authority finds that the significant portion of the relevant class of persons identify goods as originating from a particular undertaking because of the trademark, it must hold the requirement for registering the mark to be satisfied;

- where the competent authority has particular difficulty in assessing the distinctive character of a mark in respect of which registration is applied for, Community law does not preclude it from having recourse, under the conditions laid down by its own national law, to an opinion poll as guidance for its judgement."

The Administrative Panel takes definite exception to the Complainant's view that rights to a unique geographical name should, evidently as a matter of principle, "be regarded to belong to the owner of the geographical area in question". However, applying by analogy relevant parts of the European Court's interpretation to evidence introduced by the Complainant, the Administrative Panel concludes that the Port of Hamina has acquired distinctiveness and become established in the meaning of the Trademarks Act as a trademark/service mark relating to services originating from the City of Hamina/Port of Hamina. Consequently, Port of Hamina is a trademark/service mark to which the Complainant has rights. The Administrative Panel also finds that the domain name "portofhamina.com" is confusingly similar to that mark.

However, referring to the principle expressed in article 6.1(b) of the Directive about "Limitation of the effects of a trademark", according to which "The trademark shall not entitle the proprietor to prohibit a third party from using, in the course of trade, … indications concerning the … geographical origin … of goods or rendering of services or other characteristics of goods or services; … provided he uses them in accordance with honest practices in industrial and commercial matters" and paragraph 4(a)(ii) of the Uniform Policy, the Administrative Panel now moves to consider the issue.

B. Whether the Respondent has no rights or legitimate interests in the domain name.

The Respondent has registered and uses the domain name "portofhamina.com" within a business concept of presenting under domain names of the type "portof[name of port].com" information intended for users of the respective ports or services rendered there or in connection with the ports by port authorities, servicing companies etc. The Administrative Panel considers that by materializing this business concept which, as such, has not been proven to be in disaccord with honest practices in industrial and commercial matters, the Respondent has acquired a legitimate interest in the domain name "portofhamina.com".

C. Has the domain name been registered and/or is it used in bad faith?

The Administrative Panel disregards the Complainant's contentions about false or misleading information provided on the website of the Respondent. There is no evidence that such information has been introduced under the domain name with an evil intent or else outside the course of, perhaps not infallible, ordinary business services such as mentioned here above under B. There is no evidence of an intent to create confusion as mentioned in paragraph 4.b (iv) of the Uniform Policy, nor of any other element of bad faith. Any confusion that may appear as a result of the semi-identity between trademark and domain name must be accepted under the law, because of the character of the mark and the character of the opposite legitimate interest in the use of the domain name. The risk of confusion may have been foreseen by the Respondent, introducing on its website "http://www.portofhamina.com/"the disclaimer: "This Site refers to the geographical location of the Port of Hamina and the Companies located within the port area. It is not the official port authority Site. It is part of the Global port community search Engine portof.com." Foresight about a possibility of confusion can not under the circumstances be held against the Respondent. The disclaimer rather attests to the finding of the Administrative Panel that no bad faith is involved.

D. Summarizing its findings under A-C., the Administrative Panel finds 1) that although there is a confusing similarity between the trademark Port of Hamina to which the City of Hamina/Port of Hamina has rights and the domain name "portofhamina.com", 2) the Respondent has a legitimate interest in respect of the domain name and 3) that the domain name has not been registered and is not being used in bad faith.

7. Decision

The Administrative Panel denies the remedy (transfer to the Complainant of the domain name "portofhamina.com") requested by the Complainant pursuant to paragraph 4(i) of the Uniform Policy.

Domain Name Allocation and Government Super-Prioritization: Lessons Learned From the UDRP Keep ICANN Out of the Business of Deciding What Is or Is Not a Country

Heather Ann Forrest[*]

ABSTRACT

Governments' growing awareness of the Domain Name System (DNS), the Internet Corporation for Assigned Names and Numbers (ICANN), and its stewardship of DNS policy development fuel recent attempts to steer Internet domain name allocation toward policies that prioritize government interests ahead of all other rights and interests, including trademark rights. As the DNS expands, the top level in its hierarchical structure (the level of domains such as ".com" and ".uk") assumes the characteristics and attributes, and therefore also the conflicts and challenges, of its second level (the level of public-registered names). This Article argues that these developments necessitate a new, holistic approach to developing name allocation policy in which established Uniform Domain-Name Dispute-Resolution Policy (UDRP) norms are brought to bear in evaluating government claims to name priority beyond the limited scope of the UDRP.

She holds a Doctor of Laws (Dr (ius)), *summa cum laude*, from the University of Berne, Switzerland, a Master of Laws (LL.M.) from Queen Mary and Westfield College, University of London, and a Juris Doctor (J.D.) from the College of William and Mary in Virginia. She is currently serving a two-year term on ICANN's Generic Names Supporting Organization Council representing the Intellectual Property Constituency and is a Co-Chair of the ICANN Cross-Community Working Group on the Use of Country and Territory Names as TLDs.

Governments' requests for exemptions from trademark protections to super-prioritize their interests in geographic names bear striking resemblance to the claims made and rejected by UDRP panels in challenges to geographic second-level domain registrations by non-government parties. A unified framework of allocating geographic names in the DNS renders such decisions relevant and indeed integral to current and future policy development.

TABLE OF CONTENTS

I. INTRODUCTION

At the heart of the allocation of names in the Internet Domain Name System (DNS) lies the early, fundamental decision to allocate names on a first-come, first-serve basis.[1] In adopting this approach, the DNS's architects ensured an immediate and uncomplicated registration process that contributed much to the Internet's rapid expansion and widespread utilization. As the steward of DNS policy development, the Internet Corporation for Assigned Names and Numbers (ICANN) has largely maintained the status quo, as evidenced by its agreements with the operators of top-level domains

and the businesses that sell domain names to the public.[2] Accordingly, ICANN has, as a general principle, deliberately avoided assuming responsibility for validating or weighing claims to rights or interests in names. Where prioritization has occurred for other than technical and operational reasons, its legitimacy has been firmly grounded in international law as interpreted by a qualified external body.

Consistent with this approach, ICANN has made it abundantly clear in relation to the use of country code top-level domains (TLDs), the spaces at the highest level in the DNS hierarchy with the familiar ".com," ".net," and ".org" suffixes but designated by a two-letter code that corresponds to an existing international standard of English-language country names,[3] that it "is not in the business of deciding what is and what is not a country. Instead, [it] employ[s] a neutral standard maintained by the ISO 3166 Maintenance Agency."[4] Yet, this Article argues, ICANN steps into "the business of deciding what is and what is not a country" when it accedes to demands from ICANN's Governmental Advisory Committee that geographic names be reserved for governments, or used only with government consent, and that government registrations of such names be prioritized over all others.[5] This is, for ICANN, a new and potentially litigious sphere of responsibility in which its decisions lack the support of a qualified external authority. International law, which ICANN's Board of

Directors undertook to comply with in expanding the DNS,[6] offers no support for the prioritization that governments seek.[7]

The World Intellectual Property Organization (WIPO), the qualified external body upon which ICANN can and should rely in developing DNS policy affecting trademark rights, acknowledged this void of authority soon after ICANN's formation, reporting: "While the misuse of geographical attributions may offend many feelings, only certain types of such misuse are sanctioned by the law."[8] This assessment is plainly reflected in the elements of the widely adopted Uniform Domain-Name Dispute-Resolution Policy (UDRP), the WIPO-developed administrative procedure for resolving disputes involving trademarks registered as domain names by parties other than a trademark owner.[9] A significant body of policy has developed out of disputes resolved under this procedure, which now applies to all generic TLDs in the DNS.[10] It may be argued that these decisions lack precedential significance or are too limited by their context to be relevant to ICANN policy-making more broadly. The objective of this Article is to preempt such arguments, particularly in the context of governments' demands for special treatment of geographic, cultural, and other names of national significance throughout the DNS,[11] and to reveal the applicability and necessity of applying the rationales of existing UDRP decisions to geographic domain name allocation policy.

Part II of this Article discusses the hierarchical structure of the DNS and reflects upon how this has influenced policy development on the use of names. This discussion reveals that policy development at the top level—the level of domains such as ".com" and ".org"—has occurred independently of and without meaningful reference to policy

applicable to the second level—the level of public-registered names. The rationales and mechanisms for prioritization at the top and second levels of the DNS are identified as a basis from which to make the case for unifying these two currently separate streams of policy development going forward. This line of reasoning additionally serves to illustrate the relevance of the UDRP, a policy applicable to second-level domain names, to current and future geographic domain name allocation policy at all levels of the DNS. In Part III, governments' assertions of priority rights in geographic domain names are then assessed against UDRP-derived norms, revealing the full extent of the void into which ICANN steps as it accedes to the advice of the Governmental Advisory Committee.

II. PRIORITIZATION IN THE DNS

Prioritization in domain name allocation is fundamentally driven by the DNS's functional requirement of uniqueness. Uniqueness is imposed at each level of the DNS such that there can only be one single custodian of a given name: only one ".com," only one ".book," only one "book" domain name registered in the ".com" registry (e.g., "book.com"), only one "paris" in ".book" (e.g., "paris.book"), and so on. The end result is absolute uniqueness, such that each domain name corresponds to one—and only one—location of stored information from an ever-expanding number of locations. Without this requirement, the DNS cannot function.

Because there can be only one single custodian of a given name, conflicting claims are inevitable. At the top level—the level of generic top-level domains (gTLDs), such as ".com," ".org," and ".net," and country code top-level domains (ccTLDs), such as ".uk," ".ca," and ".jp"—naming disputes have arisen significantly less frequently than at the second level (i.e., the "book" in "book.com") for several reasons inherent in the DNS's hierarchical design. First, the top level has expanded substantially more slowly than lower levels as a result of the DNS architects' vision of a deeply hierarchical system.[12] Between the implementation of the DNS in the early 1980s and 2011, fewer than three hundred generic country code and internationalized country code domains were created at the top level,[13] while in the same period the second level came to comprise more than 225 million

REYNOLDS, RFC 920: DOMAIN REQUIREMENTS 6–7 (Oct. 1984), https://tools.ietf.org/rfc/rfc920.txt [http://perma.cc/5KAC-WPTZ] ("There are very few top level domains, each of these may have many second level domains . . . ."); POSTEL, *supra* note 3, at 1 (declaring it "extremely unlikely that any other TLDs will be created" beyond the initial eight gTLDs and country code TLDs).

[13] *See generally* FORREST, *supra* note 7, at 44–58.

domain name registrations.[14] Second, naming disputes rarely arise in top-level domains because prioritization is, by design, irrelevant to ccTLDs and was not a pressing problem for gTLDs until recently. Prioritization is irrelevant to ccTLDs because they are strictly derived from the International Standardization Organization's ISO3166-1 standard of "English country names and code elements,"[15] which, given its nature as an international standard of unique naming elements, contains no duplicate entries. Until recently, prioritization was also not appreciably implicated in the creation of gTLDs. The DNS launched with eight gTLDs: ".arpa," ".gov," ".mil," ".edu," ".com," ".net," ".org," and ".int."[16] An initial attempt at expansion commencing in 2000 produced seven additional gTLDs, joined by a further eight in the period of 2005 to 2011.[17] Only twenty-three gTLDs existed by the end of 2011.[18] Few applications received by ICANN in those early expansion efforts implicated names with a semantic value beyond an obviously non-proprietary, generic meaning.[19]

As a consequence of the varied growth paces and design intentions of the DNS's top and second levels, domain name allocation policy addressing this uniqueness has bifurcated, with divergent policy mechanisms applying to each. A review of these mechanisms and the rationales by which they are underpinned in light of the rapidly changing structure of the DNS engenders two key observations: first, the circumstances justifying bifurcated policy development and applicability have radically changed; and second, those changes support merging these two separate streams to form a single, coherent policy framework applicable at all levels of the DNS. Such a unified policy framework rejects a universal role of super-prioritizing government interest in geographic domain names. As this Article will show, this framework would also refocus current and future geographic domain name allocation policy on issues and concerns already addressed by UDRP decisions.

A. Prioritization Mechanisms at the Top Level

A total of twenty-one conflicts arose in the applications for new gTLDs received by ICANN in 2000 and 2004, including ".kids," ".sex," ".inc," and ".site."[20] Six of the fifteen new gTLDs ultimately added to the DNS from these processes had also been applied for by other applicants,[21] but all were generic, non-proprietary terms such that ICANN was not forced to prioritize on any basis other than the strength of the application against stated evaluation criteria. At this point, it was not necessary for ICANN to validate or balance between several competing interests in names at the top level of the DNS.

Conflicts were inevitable, however, when ICANN launched a new expansion round in 2012. This round placed no restrictions on the type or number of successful applications. Certain conflicts were precisely anticipated and dealt with preventatively to avoid technical instability; ICANN's name and names of other bodies responsible for DNS addressing were "reserved,"[22] consistent with technical advice and the recommendations of the Generic Names Supporting Organization (GNSO), the body within ICANN responsible for policy making regarding gTLDs.[23] Similarly, two-letter names, such as ".go" and ".bp," were deemed ineligible due to their potential confusion with ccTLDs.[24] More controversially, the gTLD Applicant Guidebook,[25] the document setting out the policy framework contractually imposed by ICANN on all new gTLD applicants participating in the 2012 expansion round, deemed some names ineligible other than for technical or operational reasons. The reservation of names relating to the International Olympic Committee (IOC) and the International Red

[25] ICANN, APPLICANT GUIDEBOOK, *supra* note 22.

Cross and Red Crescent Movement (IRC)[26] drew support from the widespread practice in domestic legislation of restricting these names from trademark registrability.[27] Country and territory names were, at the urging of ICANN's Governmental Advisory Committee (GAC)[28] but against the recommendations of the GNSO,[29] also deemed ineligible.[30] This restriction cut a broad path, rendering ineligible applications for domain names with three-letter country codes on the ISO 3166-1 standard, short- and long-form names, translations in any language, separable components, permutations, and transpositions of country names.[31] Various sub-national geographic names and supra-national region names were not excluded outright but were eligible only with proof of support or non-objection from relevant governments.[32] Applications for any of these restricted names were rejected by ICANN in a preliminary "Initial Evaluation" phase.[33]

Initial Evaluation additionally entailed a review of applications to identify conflicts. From the 1,930 applications received,[34] ICANN formed 233 "contention sets" of applications competing for "identical or similar"[35] strings. As in the earlier, smaller-scale expansion rounds launched in 2000 and 2004, most of the names placed in contention sets were generic, rather than proprietary, in nature. Consistent with its previous avoidance of responsibility for validating or weighing conflicting interests, ICANN mandated that any conflicts not resolved by the affected applicants themselves would go to auction.[36] As a result, even right-holders with applications in contention sets—for example, applications for ".guardian" by Guardian News and Media

Limited[37] and The Guardian Life Insurance Company of America[38] —were not prioritized on any basis other than pocket depth.

ICANN has previously avoided prioritization of rights and interests at the top level of the DNS except as required by technical and operational security and stability. New expansion initiatives unimpeded by quotas, like those of the 2012 expansion round, however, have generated protectionist policy. In this new status quo heralded by new gTLD policy as recorded in the gTLD Applicant Guidebook, only geographic names stand out for the lack of technical, operational, or legal basis for their protection through the prioritization of government interests against all other parties, including trademark holders.

B. Prioritization Mechanisms at the Second Level

The conflicts created by recent efforts to expand the top level of the DNS, resolved in some instances on non-technical grounds, have long been an issue at the second level, where the term "cybersquatting" had emerged even prior to ICANN's formation, in the earliest days of the commercialized DNS.[39] In the first-come, first-served domain name registration process, where there were no pre-registration eligibility checks, early registrants seized trademark names without restraint, leaving trademark holders with the expense, in time and money, of trademark infringement litigation. Since then, various mechanisms, including the UDRP, have evolved to combat this practice.

One of the first initiatives of the newly formed ICANN was the adoption of the WIPO-proposed administrative dispute-resolution mechanism, the UDRP. To make the UDRP binding upon all gTLD domain name registrants, ICANN contractually requires all registrars, the companies that sell domain names to the public, to include the applicability of the UDRP in their registration

[39] *Avery Dennison Corp. v. Sumpton*, 999 F. Supp. 1337, 1338 (C.D. Cal. 1998) *rev'd*, 189 F.3d 868 (9th Cir. 1999) ("Like all 'cybersquatters,' defendants merely 'squat' on their registered domain names until someone else comes along who wishes to use them. Like all 'cybersquatters,' defendants usurp all of the accepted meanings of their domain names, so as to prevent others from using the same domain names in any of their accepted meanings. And like all 'cybersquatters,' defendants seek to make a financial return by exacting a price before consenting to allow others to use the domain names on which they have chosen to 'squat.'").

agreements.[40] ICANN additionally contractually requires all gTLD operators to sell domain names only through registrars that meet this requirement.[41] Numerous ccTLDs have also adopted the UDRP,[42] although ICANN does not require that they do so. Given this broad applicability of the UDRP and a high volume of disputes resulting from steady registration volumes in the TLDs in which this dispute resolution mechanism applies, UDRP decisions form a significant body of policy in their own right. The Uniform Rapid Suspension System (URS), a rapid response version of the UDRP targeted at "those cases in which there is no genuine contestable issue as to the infringement and abuse that is taking place,"[43] is mandated in all new gTLDs. Late 2014 data revealing fifteen times more UDRP and URS disputes being filed against new gTLD domain names than other TLDs[44] suggest that over time, the URS may also develop into a significant resource for shaping future name allocation policy.

Another mechanism of relatively longstanding use at the second level of the DNS is the sunrise period. This period helps prioritize certain registrants by providing a registration period prior to the availability of domain names to the general public. To date, it has overwhelmingly been used to prioritize trademark holders. In 2012, the gTLD Applicant Guidebook introduced a mandatory sunrise requirement upon all new gTLDs resulting from the 2012 application round to provide a priority registration period of no less than thirty days[45] for "all word marks" meeting the following criteria:

---

[40] *See Registrar Accreditation Agreement 2013*, ICANN 17 cl. 3.8 (Jun. 27, 2013), https://www.icann.org/resources/pages/approved-with-specs-2013-09-17-en [http://perma.cc/X5YH-J7AF].

[41] This requirement is imposed through an obligation in the Registry Agreement into which gTLD registry operators enter with ICANN to comply with and implement ICANN Consensus Policies (of which the UDRP is one). *See, e.g.*, *.asia Registry Agreement*, ICANN art. III, § 3.1(b) (Jun. 22, 2010), https://www.icann.org/resources/unthemed-pages/asia-agreement-2006-12-06-en [http://perma.cc/3FYF-UJUY].

> (i) nationally or regionally registered and for which proof of use—which can be a declaration and a single specimen of current use—was submitted to, and validated by, the Trademark Clearinghouse; or
>
> (ii) that have been court-validated; or
>
> (iii) that are specifically protected by a statute or treaty currently in effect and that was in effect on or before June 26, 2008.[46]

Notable here is ICANN's reliance upon external parties—the specially created Trademark Clearinghouse, courts, and domestic and international law—to validate marks' eligibility.

It would be inappropriate to characterize the Trademark Claims period as a prioritization mechanism because it does not strictly establish priority. However, for completeness it should be noted as the second major rights-protection mechanism introduced by the gTLD Applicant Guidebook resulting from the 2012 application round. During the first sixty days in which domain names are available for registration by the general public in new gTLDs, the registry operator is required to provide a notification service to put domain name registrants on notice of existing trademark rights in an applied-for name.[47] During new gTLD policy development, much discussion revolved around the mitigation of chilling effects of such a notice through precise wording to avoid the message being interpreted as an assertion of priority.[48]

The gTLD Applicant Guidebook thus imposed a minimum standard of protection, affording priority in second-level domain name registration only to trademark holders and only during the sunrise period, without prohibiting operators from extending the mandated trademark protection mechanisms or implementing additional mechanisms. One such approach involves prioritizing the registrants of names in existing TLDs as proposed by the operator of ".xxx" in relation to the launch of the new gTLDs ".sex" and ".adult."[49] This "grandfathering" plan was abandoned in late 2014 after unsuccessful negotiations with ICANN and replaced by a post-sunrise and pre-general availability alternative "Domain Matching Program."[50]

Another approach, reserved names, has long been a feature of second-level domain name allocation policy.[51] This is evident from the Final Report of the GNSO's Reserved Names Working Group, which was formed to evaluate reservations as part of the new gTLD policy development process.[52] As noted in the context of top-level domains above, many status quo reservations address technical and operational stability. A separate stream of work during new gTLD policy development explored reserving well-known trademarks on a Globally Protected Marks List (or, as it is most commonly referred to, GPML).[53] This mechanism was ultimately not mandated by the gTLD Applicant Guidebook, but the concept has been voluntarily implemented by, for example, large portfolio applicant Donuts,[54] whose new domains include ".tennis," ".apartments," ".school," and ".casino."[55]

Prioritization on bases other than trademark rights has been adopted by various ccTLDs and gTLDs, although, to be clear, this was not mandated by ICANN. For example, when the European Union's ".eu" launched, "[h]olders of prior rights recognised or established by national and/or [c]ommunity law," defined to include trade names, business identifiers, company names, family names, and distinctive titles of protected literary and artistic works, were accorded registration priority.[56] When the new gTLD ".jobs" launched in 2005, holders of trade names were eligible to apply during a sunrise-like priority period.[57] Where additional mechanisms are voluntarily adopted by gTLDs, they must comply with, and not circumvent, the trademark rights protection mechanisms contractually mandated by ICANN.

C. The Case for Unified Geographic Name Allocation Policy

The New gTLD Program, which by March 30, 2015 had added nearly 550 gTLDs to the DNS from 1,930 applications received, has

fundamentally altered the DNS landscape. The potential for conflict at the top level is now no less a concern than at lower levels, and the rationales underpinning prioritization policy at the second level now apply with equal logic at the top level. Where the impact of the uniqueness requirement may previously have been mitigated at the second level by the potential availability of the name in other non-semantic gTLDs (e.g., "book.com," "book.net," and "book.org"), the addition to the DNS of new gTLDs with obvious semantic or proprietary value may eliminate any such benefits. Domain name registrations in new gTLDs are not fungible in the way that domain name registrations in the pre-2011 DNS were: a "marriott.hotel" domain name is not substituted by the registration of the name "marriott" in some other gTLD ("marriott.restaurant," for example). There is likewise no substitute for a ".marriott" gTLD. In today's DNS, uniqueness is relevant at *all* levels of the system.

The conditions at the top and second levels of the DNS are no longer sufficiently different to justify separate bodies of policy, rendering the continued bifurcation of geographic domain name allocation policy by level both inefficient and impractical. Going forward, prioritization policy should take a whole-of-system view. The success of such an approach requires clearly defining the right or interest being prioritized; a harmonized definition can then be applied across all levels of the DNS. Transparency, accountability, and consistency demand that definitions be sufficiently clear to enable domain name applicants—at every level—to reliably assess whether a name is subject to a protection mechanism. Policy establishing eligibility for participation in a mandated sunrise process in the launch of a new gTLD, for example, generated few questions and gave ICANN no responsibility in validating claims. Eligibility was expressly limited to "Sunrise-Eligible Rights Holders," defined as holders of "marks . . . verified by the Trademark Clearinghouse."[58] Clearly, what constitutes a trademark, for example, does not change between the top and lower levels of the DNS, nor does the evidence of the existence of a trademark change between the top and lower levels of the DNS. On the other hand, application of the definition of "geographic name" in the gTLD Applicant Guidebook has proved particularly difficult because the interests captured by the defined term cannot readily be identified or verified. Rights or interests such as these that are incapable of clear definition or verification are, quite

---

[58] ICANN, TRADEMARK CLEARINGHOUSE: RIGHTS PROTECTION MECHANISM REQUIREMENTS § 2 (Sept. 30, 2013), http://newgtlds.icann.org/en/about/trademark-clearinghouse/rpm-requirements-30sep13-en.pdf [http://perma.cc/NAM4-47NW] [hereinafter ICANN, RPM REQUIREMENTS].

simply, patently out of place in a system with transparency, accountability, and consistency as its core values.

Governments' interests in geographic, cultural, and related names are not clearly or consistently documented, making their prioritization difficult not only to justify, but also to implement. The fragmented definition of "geographic name" in ICANN's gTLD Applicant Guidebook, which cobbles together various external resources, is clear evidence of the difficulty in prioritizing an interest not elsewhere clearly defined.[59] ICANN relies on existing external lists seemingly to excuse itself from the responsibility of validation. This is particularly evident in the politically-fraught context of geographic names, where adoption of the International Standardization Organization's ISO3166-1 standard of "English country names and code elements"; the ISO3166-2 standard of "Country subdivision codes"; and the United Nations' "Composition of macro geographical (continental) regions, geographical sub-regions, and selected economic and other groupings" has historically removed ICANN from "the business of deciding what is and what is not a country."[60] Yet in fact, ICANN has assumed that responsibility simply in deciding to prioritize *someone's* rights in *something*, irrespective of who that one or what that thing is. In other words, by reserving country and territory names and by imposing a consent requirement on other geographic names, ICANN inherently validates governments' claims to geographic names. Because there is no external qualified body or express international law upon which it can rely, the only way ICANN can avoid the responsibility of validation in this situation is to avoid making policy that prioritizes as yet unverifiable, indefinable government interests.

Consistent implementation is the crucial second step in achieving effective uniform prioritization policy. In addition to complete ignorance of the convoluted definition of "geographic name" just noted, ICANN went on to characterize sixty-six of the 1,930 new gTLD applications it received as "geographic."[61] This characterization

inexplicably includes such domains as ".bar,"[62] ".nrw,"[63] ".ist,"[64] and ".zulu"[65]—none of which are a capital city name of a country or a territory listed in the ISO3166-1 standard, a city name to be used for purposes associated with the city name, an exact match of sub-national place names on the ISO3166-2 standard, a UNESCO region, or included on the UN "[c]omposition of macro geographical (continental) regions . . ." list. Interests neither clearly defined nor legally justified usurp ICANN's new gTLD policy of legally recognized and demonstrable trademark rights. In some cases, this occurred by preventing applications outright,[66] and in other cases by rejecting applications not expressly or impliedly ineligible.[67] Would-be applicants in future expansion rounds have undoubtedly been discouraged by ICANN's inconsistency in this space.[68] Leaving to one side the question of whether one agrees with the substance of

ICANN's definition of "geographic name," or indeed even the legality of prioritization in geographic names, it is unquestionably the case that once a consensus-driven definition is formulated, ICANN must unerringly apply that definition and only that definition.

Further, implementation by ICANN staff must align with and enable the intentions of a policy's drafters. In law, this notion takes shape as an expectation or obligation upon judicial bodies to interpret and apply legislation in a manner consistent with the purpose that legislation is intended by its drafters to fulfill.[69] An expectation of purposive implementation of ICANN's domain name policy would promote critical evaluation rather than acquiescent acceptance of ad hoc special requests to deviate from consensus-driven policy requirements. Such an expectation would certainly have changed the course of ICANN's new gTLD policy implementation, which expressly invited such requests from governments seeking super-prioritization above trademark rights holders.

Clearly sensitive to concerns expressed by the GAC in relation to certain new gTLD applications considered by governments to be geographic in nature but not falling within the gTLD Applicant Guidebook definition of protected "geographic name,"[70] ICANN staff developed the Rights Protection Mechanism (RPM) Requirements document,[71] which set out technical and operational requirements for implementing the mandated sunrise and Trademark Claims notice periods and expressly invited deviations from these agreed mechanisms.[72] Appropriately detailed launch plans set out in a new gTLD application were presumed approved "unless ICANN reasonably determines that such requested registration program could contribute to consumer confusion or the infringement of intellectual property rights."[73] Thus, before ICANN had even begun to constructively apply

[72] *Id.* at § 4.5.2.

[73] *Id.*

its hard-earned, bottom-up, consensus-driven policy, it undermined that outcome by prescribing the pathway to exemption.

In the case of geographic new gTLDs, the RPM requirements went beyond anticipating some applicants' plans to request exemption from the mandated, consensus-driven rights protection mechanisms and positively invited such requests:

> If registry operators that indicated in their applications for their TLDs that their TLD would be a geographic name ("Geo TLDs") and representatives of the Intellectual Property Constituency recommend to ICANN the creation of a registration program that sets forth a defined list of labels or categories of labels that Geo TLDs MAY Allocate [sic] or register to third parties prior to or during the Sunrise Period, and ICANN accepts and implements such recommendation ("Approved Geo Launch Program"), registration programs submitted by the Geo TLDs pursuant to Section 4.5.2 for the Approved Geo Launch Program will carry a presumption of being approved, unless ICANN reasonably determines that such requested program could contribute to consumer confusion or the infringement of intellectual property rights.[74]

The RPM requirements thus opened the door to governments' exerting control over domain name registration by any or all of the following mechanisms:

> (1) Allocating a limited number of names outside of the sunrise process to promote the TLD;
>
> (2) Restricting, reserving, or pre-allocating names specifically related to governmental functions, departments, interests, or initiatives;
>
> (3) Grandfathering based on registrations in existing TLDs;
>
> (4) Expanding sunrise eligibility to include registrants other than trademark holders; and
>
> (5) Offering priority rights to champion stakeholders who promote the new TLD and are actively involved in its launch and development.

To fully appreciate the impact of the exceptions sought for geographic domains, one must acknowledge the critical decision to be made by all new gTLD applicants, including those applying for geographic names: sell domain names to the public (e.g., "juliescafe.paris") or operate an internal TLD making names available only to the TLD applicant and its constituent parts or divisions (e.g., "police.miami"). Where names are sold to the public, ICANN's base Registry Agreement and related documentation present only narrow opportunities for the registry operator to itself reserve or register names.[75] This is a policy that dates to ICANN's formation, put in place to prevent the registry operator from "gaming the system" by

---

[74] ICANN, RPM REQUIREMENTS, *supra* note 58, at § 4.5.3.

[75] ICANN, BASE REGISTRY AGREEMENT § 2.8 (2015) [hereinafter ICANN, BASE REGISTRY], http://newgtlds.icann.org/en/applicants/agb/agreement-approved-20nov13-en.pdf [http://perma.cc/CG8Y-A3JA]; ICANN, APPLICANT GUIDEBOOK, *supra* note 22, at Specification 5 § 3.2, Specification 9 § 1(b).

registering choice names itself or manipulating the registration process to maximize profit.[76] Geographic new top-level domain applicants (and the governments that back them) that seek to "have their cake and eat it too" argue that such restrictions open the door to public registration of names commonly associated with the geographic location, thus producing confusion and abuse. This risk is said to be exacerbated by the community-developed, mandated thirty-day sunrise which prioritizes only trademark holders.

So it came to be that both the rules and the exceptions in new gTLD name allocation prioritized government interests in geographic names at both the top and second levels of the DNS. This super-prioritization relies upon an imprecise definition of interests that cannot be proven by reference to an existing law or standard and are not protected under international law, to the diminishment of rights that can be proven and are protected under international law. It relies upon inconsistent application of an imprecise definition and the willingness of domain name applicants to bear the risk of entirely unpredictable outcomes. This is simply not sustainable in a system that derives its legitimacy from transparency, accountability, and consistency.

Taking a whole-of-system view, as the current DNS now necessitates, consistency and transparency demand that domain name allocation policy at one level of the DNS not be ignored when developing policy at other levels. Such an approach means that existing policy at the second level should be brought to bear on analysis at the top level. It seems to have been forgotten that geographic domain names were some of the first to be challenged under the now more than a decade old UDRP, and that good reasons were clearly provided for not including geographic names as such within its scope. Landmark UDRP decisions in challenges to the domain names "newzealand.com"[77] and "andalucia.com"[78] have normative value in the recognition of non-governmental interests in geographic names' use in the DNS, while decisions in challenges to the domain names "brisbane.com,"[79] "rouen.net," and "rouen.com"[80] have

established that government use of a geographic name is not equivalent to trademark rights. Geographic domain name disputes arise with less frequency at the second level of the DNS today, despite the fact that UDRP decisions have no strict precedential value.[81] This is certainly evidence of the normative value of these early decisions, which were "overwhelmingly unsuccessful,"[82] with complainant governments succeeding "in only a few exceptional cases."[83] In the aggregate, these decisions unequivocally reject the absolute priority of government interests over trademark rights. As the ICANN community lays the foundation for the next generation of domain name allocation policy in a new environment where conflicts arise at every level of the DNS, the substantial and growing body of UDRP decisions should, at a minimum, be reflected upon or, more appropriately, relied upon as a starting point.

III. LESSONS LEARNED FROM THE UDRP ON PRIORITIZING GOVERNMENT INTERESTS IN GEOGRAPHIC NAMES

A. Elements of the UDRP

The Registry Agreement into which each new gTLD registry operator enters with ICANN requires the sale of domain names only through ICANN-accredited registrars,[84] which in turn are bound by ICANN's Registrar Accreditation Agreement to implement the UDRP through the domain name registration agreement into which registrants enter.[85] Under the UDRP, a domain name registration is deemed abusive on proof of each of the following three elements:

> (i) the registrant's domain name is identical or confusingly similar to a trademark or service mark in which the complainant has rights;

> (ii) the registrant has no rights or legitimate interests in respect of the domain name; and
>
> (iii) the registrant's domain name has been registered and is being used in bad faith.[86]

The two-step analysis undertaken to determine the first element underscores the limited scope of applicability to trademarks only:

> (1) Is there a trademark upon which the UDRP claim can be raised?
>
> (2) If yes, is the domain name identical or confusingly similar?

This initial hurdle presents significant difficulties for government complainants challenging geographic names, which in ordinary circumstances connote a geographic location, rather than a particular trader and its goods, and therefore lack distinctiveness.[87] Critically, the first element of the UDRP makes clear that without a trademark, the UDRP is not available to a would-be complainant. It is worth specifically noting, however, that the first element does not require that a mark be registered; specific examples are provided below of common law and statutory rights having formed the basis of successful challenges.

The second element of the UDRP, an assessment of a registrant's "legitimate interests" in a domain name, also presents difficulty because geographic names' ordinarily geographic connotation makes them a desirable and logical descriptive choice for a multitude of domain name registrants, commercial or otherwise. Where the complainant government is able to make a prima facie case based upon a lack of rights or legitimate interests, the burden of proof shifts to the domain name registrant to affirmatively demonstrate rights or legitimate interests.[88] Rights and legitimate interests can be demonstrated by use or preparations to use the name at issue "in connection with a bona fide offering of goods or services"; being "commonly known by the domain name" even in the absence of trademark rights; and making "legitimate noncommercial or fair use of the domain name, without intent for commercial gain to misleadingly divert consumers or to tarnish the trademark or service mark at issue."[89]

The third element, bad faith, has traditionally been less an obstacle to governments seeking to challenge geographic domain

[89] *UDRP*, *supra* note 81.

names once the burden of proving the first and second elements is met.[90] An attempt to ransom a name to its "rightful owner"[91] is perhaps the clearest indication of bad faith, but as the DNS has matured and awareness of the UDRP has increased, the number of blatant cybersquatting cases has declined. Other bad faith activities include disrupting the business of a competitor or diverting business by creating a likelihood of confusion.[92] Disclaimers may, but are not guaranteed to, avoid a finding of bad faith.[93]

While not binding on national courts[94] or on other UDRP panelists, prior decisions evidence the rationale behind prioritization on the basis of demonstrable, verifiable legal rights and elucidate the norms present in weighing government interests in geographic names against those verifiable legal rights. These norms provide a baseline for evaluating government requests for prioritization in the DNS more broadly. From this baseline, successful government challenges to third party use depend upon a narrow and relatively uncommon constellation of facts, while unsuccessful challenges to third party use fall into two (at times overlapping) categories. Both of those categories serve to emphasize the recognition of trademark rights in the DNS and the non-recognition of government interests in names: (1) complainant government lacks trademark rights, and (2) domain name registrant demonstrates a legitimate right or interest in the name. These categories are analyzed in detail in the remaining sections of this Article.

B. Where Government Succeeds

1. No Use by Domain Name Registrant

One clear path to success in UDRP challenges is laid by the respondent being unable to demonstrate use of the domain name registration. This series of decisions illustrates that UDRP challenges brought by state actors against third-party geographic domain name

registrants may succeed where there is no evidence of the respondent's use of the name, provided that the claimant demonstrates trademark rights. Facts in such disputes range from obvious cybersquatting to unrealized intentions to use the domain name registration.

For example, the Sydney Market Corporation, of Sydney, Australia, successfully challenged the registration of the domain name "sydneymarkets.com" by a registrant who claimed to have registered the name for use in connection with an IT consultancy business known as "Shell Information Systems."[95] The Sydney Market Corporation was not itself a government entity but had taken on the operation of the Sydney Markets from a statutorily created state-owned enterprise, the Sydney Market Authority.[96] The state government-owned site from which the markets operated was named "Sydney Markets," a name it acquired in 1996, prior to which it had been known as the suburb of "Flemington."[97] The panelist noted in his decision that "the Sydney Markets occupy the entire suburb 'Sydney Markets,'" but nevertheless considered the case as involving more a local landmark name than a strictly geographical name.[98] The website accessed through the respondent's domain name was headed "Sydney I.T. Markets," but no other evidence of use was presented.[99] Although there was "no evidence that the Respondent registered the contested domain name primarily for the purpose of disrupting the business of a competitor, or even that the Complainant was a competitor of the Respondent," bad faith was found on the basis that the respondent, a Sydney resident, could be assumed to have awareness of the local markets and had registered the domain name to "attract, for commercial gain, Internet users to the Respondent's website, by creating a likelihood of confusion with the Complainant's mark as to the source, sponsorship, affiliation, or endorsement of the Respondent's website."[100] The first UDRP element was satisfied not by a registered mark, but by common law rights in the name "Sydney Markets," and the absence of a link between the respondent's IT consultancy and the name "Sydney Markets" supported a finding of no right or legitimate interest.[101]

An equivalent outcome resulted in an earlier Australian dispute involving the domain name "australianstockexchange.com."[102] At the time of the UDRP complaint, the domain name resolved to a "parked" web page which presented the following message: "This domain was registered through . . . registrars.com. We are Moving in Shortly. . . . [P]lease come back soon."[103] The respondent ran an "Internet Newspaper" but failed to present evidence of use of the domain name at issue in connection with that business or any other activity.[104] The UDRP panelist inferred from this lack of evidence that the respondent had registered the domain name defensively, "as a way of 'protecting' it 'from being registered by hostile persons.'"[105] The first complainant, Australian Stock Exchange Limited, was a statutorily created corporation "formed to operate the first national exchange, which was named the 'Australian Stock Exchange,'" the amalgamation of the six independent stock exchanges that had been operated by the various states of Australia.[106] The corporation notably did not possess a registered trademark at the time of the dispute.[107] However, it was found to have satisfied the first UDRP element through the establishment of common law rights.[108] Finding no right or legitimate interest, it was determined that:

> [the] domain name bears no relationship to any legitimate business or other activity of the Respondent, because that domain name is not one that the Respondent, in the context of provision of goods, services or information via a web site, would use unless seeking to create a false impression of an association with the Complainants, and because that domain name is not one that the Respondent could legitimately use under Australian law.[109]

This final point is notable: that statutorily created complainants may find that their legislative origin speaks to both the first and second UDRP elements, potentially demonstrating the requisite trademark right or preventing third parties from acquiring legitimate rights or interests. Another example of this is provided by the disputed domain name "sydneyoperahouse.net."[110] The

[110] Sydney Opera House Trust v. Trilynx Pty. Ltd., WIPO Case No. D2000-1224 (Oct. 31, 2000), http://www.wipo.int/amc/en/domains/decisions/html/2000/d2000-1224.html [http://perma.cc/SQH2-W4UG].

respondent's IT business specialized in building "web networks," one of which organized various sites including "www.AustNews.com," "www.AustArt.com," "www.AustStocks.com," "www.AustMusic.com," and "www.SydneyHomes.com" under the domain name "Harbourbridge.com." The respondent submitted that it registered the name "sydneyoperahouse.net" and others to "protect" them and create free web networks to be used by the public "for the common good."[111] As in the case of the domain name "australianstockexchange.com," no use by the respondent was demonstrated and the domain name resolved to a holding page.[112] The complainant, Sydney Opera House Trust, was a statutory corporation established under an act of state legislation, the Sydney Opera House Trust Act. The panelist focused on the Trust's legislative mandate, which both confirmed the complainant's trademark rights and prevented the respondent and others from acquiring legitimate rights or interests:

> By conferring upon the complainant the right to acquire and register trademarks in connection with its objects and to exercise its rights thereunder, the NSW Parliament, on behalf of the people of New South Wales, Australia, designated the complainant as the appropriate entity to manage and administer the famous building and protect its reputation. Accordingly, sincere though the respondent may be in seeking to be a responsible owner of the disputed domain name and to prevent others from significantly damaging the cultural heritage of all peoples of the world, as expressed in the Sydney Opera House, the law of New South Wales (where both the complainant and the respondent are located) prevents the respondent from establishing a legitimate right or interest in a domain name which incorporates the complainant's trademark.[113]

This series of decisions illustrates that UDRP challenges by state actors to third-party geographic domain name registrations may succeed where there is no evidence of the respondent's use of the name, provided that the claimant demonstrates trademark rights. Such cases are not guaranteed to succeed. Consider, for example, a 2001 decision rejecting a challenge to the registrations of "rouen.com" and "rouen.net."[114] In that case, the claimant's failure to establish trademark rights made it unnecessary for the panel to reach a determination on the second and third elements of the UDRP. However, one of the three panelists attributed some significance to the respondent's stated intentions to use the domain names at issue.[115]

[114] Chambre de Commerce et d'Industrie de Rouen v. Stenzel, WIPO Case No. D2001-0348 (Jun. 18, 2001), http://www.wipo.int/amc/en/domains/decisions/html/2001/d2001-0348.html [http://perma.cc/NA3R-TPCP] (finding that the response was silent as to the respondent's business but expressed an intention to use the domain name registrations in connection with a website providing travel information).

[115] *See id.*

Another significant norm emanating from this series of decisions is the recognition of name rights of statutorily created claimants, who may rely upon such statutory origin to prove possession of requisite trademark rights and to disprove third party rights or legitimate interests. Where legislation deals with the name of the created entity, this speaks against third-party rights or legitimate interests, but the mere fact of statutory origin does not displace the need to specifically satisfy each of the three UDRP elements.

2. No Nexus Between Registrant and Domain Name

A related stream of UDRP challenges succeed where there is use of a geographic domain name by its registrant, but this use has little or no actual connection to the domain name registrant. From these decisions the principle can be extrapolated that mere use of a domain name by its registrant is not sufficient; rather, the use must be in connection with genuine ongoing activity not aimed at confusing the public. A prime example is Wembley National Stadium Limited's challenge to the registration of "wembleystadium.net" by a registrant named "Bob Thomson [aka Wembleystadium.net]."[116] The panelist had no difficulty in finding the first element satisfied by the complainant's registered and unregistered trademarks, there being "every likelihood that at least members of the British Public [sic] will expect a domain name comprising the words wembleystadium to have some connection with the famous Stadium of that name and the organisation which runs that Stadium, the Complainant."[117] The domain name registrant's claim to the name at issue was unconventional: "one week after the Notification of Complaint and Commencement of the Administrative Proceeding was issued to the Respondent by the Center, the Respondent changed his name by deed poll from Robert Thomson to wembleystadium.net." This evidence gave little difficulty in the panel's finding the second and third elements of the stadium's UDRP claim satisfied.

While geographic names' inherently descriptive character legitimizes third-party use, the strength of this registrant-favorable evidence on the second UDRP element is limited by the need for an actual connection between the respondent, its products or services, and the location. For example, a website associated with the domain

[117] *Id.*

name "montecarlovodka.com" advertised the pending availability of a vodka named "Monte Carlo Vodka."[118] The US-based registrant demonstrated no link to the principality of Monte Carlo or any link between the vodka, which was produced in both France and Monte Carlo.[119] The respondent's pending US trademark application was noted by the panel but considered unlikely to succeed due to its false use of a geographical indication in connection with spirits and use of a logo similar to the coat of arms of the Principality of Monaco, both prohibited under US trademark law.[120] Although the respondent had made use of the domain name, it was considered unlikely that the market knew of the respondent and its products by that name. Thus, the use was found to be insufficient to support a finding of legitimate rights or interest in the name.[121]

This stream of decisions illustrates that use of the domain name by its registrant will not per se defeat government challenges to geographic domain name registrations by third parties. These decisions also highlight the need for a genuine factual connection between registrant and domain name. It must be carefully noted, however, that just as trademark law recognizes acquired distinctiveness,[122] UDRP panels will probe for consumer awareness where the connection is not patently evident. That said, the factual underpinnings of cases falling in this basket are relatively uncommon because they tend not to involve local citizens who identify their business or other activity with the name of its location.

3. Domain Name Registrant Defaults

Finally, government challenges to geographic domain name registrations are successful where the respondent fails to participate in the UDRP process. In a dispute involving the domain name "sydneyairports.com,"[123] for example, the complainant operator of Kingsford Smith Airport—which the panel noted was "known

[123] Sydney Airport Corp. v. John Crilly, WIPO Case No. D2005-0989 (Nov. 22, 2005), http://www.wipo.int/amc/en/domains/decisions/html/2005/d2005-0989.html [http://perma.cc/4UYP-5DSF].

nationally and internationally as Sydney Airport and has been so since 1998 when the airport was privatised"[124]—satisfied the first UDRP element with its stylized Australian registered trademark "comprising the words 'Sydney Airport.'"[125] The panel drew inferences from the respondent's default in finding no rights or legitimate interests.[126] Due to the similarity between the complainant's trademark and "sydneyairport" domain names registered in the ".com," ".info," ".net," ".org," and ".com.au" domains, the panel also found bad faith, characterizing the registration as "a clear attempt by the Respondent to divert users to Internet sites other than the Complainant's."[127]

Each of the three streams of successful challenge circumstances highlighted above is narrowly limited by the facts. Notably, the key to the complainant government's success is an omission or failing on the part of the domain name registrant more than a positive act on the part of the government (although as the discussion immediately following highlights, this assumes that government has taken the affirmative steps needed to secure trademark rights). Accordingly, successful challenges tend not to implicate local citizens and businesses that self-identify according to geography or who acquire a reputation through use of the name.

C. Where Government Fails

1. No Government Trademark

A significant obstacle to success in challenging geographic domain names in UDRP proceedings is the UDRP's limited scope, reflected in its elements, under which only trademarks are actionable.[128] From this stream of UDRP challenges emerges the guiding principle that claims to sovereignty, governments' expressions of dissatisfaction, or public interest-type concerns are not valid bases upon which to construct geographic domain name challenges.

The benchmark for actionability, set according to the harmonized minimum standards of Article 15(1) of the TRIPS

[124] *Id.*

[125] *Id.*

[126] *See id.*

[127] *Id.*

[128] *See Rules for Uniform Domain Name Dispute Resolution Policy (the "Rules")*, ICANN (July 31, 2015), https://www.icann.org/resources/pages/udrp-rules-2015-03-11-en [http://perma.cc/R97K-44DL] (requiring at Cl. 3(b)(viii) that the UDRP complaint "[s]pecify the trademark(s) or service mark(s) on which the complaint is based and, for each mark, describe the goods or services, if any, with which the mark is used").

Convention, is relatively high. These standards allow World Trade Organization members to recognize marks that are not simply inherently distinctive, but have acquired distinctiveness through use.[129] Inherent distinctiveness essentially demands that a sign bring to mind one and only one message;[130] this is extremely unlikely for geographic names because in addition to any other connotations a commercial enterprise might attempt to create in the mind of the consuming public, they identify a particular geographic location. Trademark distinctiveness can only be achieved through commercial use to replace the inherent connotation of geography with a trader and its particular goods or services.

Challenges to geographic names have consequently—and unsurprisingly—failed on the first UDRP element. From these decisions emerge norms that strike the balance of public and private rights and interests in geographic domain names. The oft-cited dispute between the government of New Zealand and a US-based company called Virtual Countries over the domain name "newzealand.com"[131] is a logical starting point in this analysis, as it elucidates the limits of asserting sovereign rights and makes clear that these are not equivalent to the trademark rights upon which a UDRP claim must be based.

Virtual Countries registered a number of countries' names as domain names and used them in connection with websites providing information about the named country. In the case of "newzealand.com," Virtual Countries had taken the additional step of registering "newzealand.com" as a US trademark. At the time of the dispute, the complainant government of New Zealand had five trademark applications pending in New Zealand for the mark "NEW ZEALAND;" the applications were not considered by the panel because none had been issued. New Zealand's claim was therefore based on common law unregistered trademark rights, but no evidence of secondary meaning was presented, prompting the panel to note that "to support the claim to trade/service mark rights the Complainant relies solely and exclusively upon the geographical significance of the name."[132] The first UDRP element was found not satisfied, so the claim failed. Common law rights were similarly rejected in a

[132] *Id.*

challenge to the domain name "cityofdearborn.com" by the city of Dearborn in Michigan.[133]

Equivalent determinations have been made in relation to marks from civil law countries. Challenges to the domain names "olkiluoto.com" and "olkiluoto.net,"[134] as well as "portofhelsinki.com,"[135] for example, relied unsuccessfully on Article 2 of the Finnish Trademark Law. Article 2 establishes trademark rights on the basis of establishment of the mark on the market. According to the third paragraph of Article 2, "a trade symbol shall be regarded as established if it has become generally known in the appropriate business or consumer circles in Finland as a symbol specific to its proprietor's goods."[136]

In the "portofhelsinki.com" dispute, the complainant authority of the Finnish capital city of Helsinki had made extensive and long-time use of the name "Port of Helsinki," but had not registered the term as a trademark. Thus, it relied on the establishment of the mark under Article 2. The panelist rejected this argument for lack of supporting evidence. Similarly, in the challenge to an environmental group's registrations of the name "Olkiluoto," the name of the island on which the complainant's nuclear power facility is situated, the complainant failed to demonstrate that the "general Finnish public through the considerable press coverage has come to identify Olkiluoto." Olkiluoto was not part of the complainant's trade name, which was used by other businesses on the island along with the complainant's power services.[137]

The "portofhelsinki.com" decision was referenced by a subsequent UDRP panel in a challenge by the German city of Heidelberg to the domain name "heidelberg.net."[138] In that dispute, the city asserted protection of the name "Heidelberg" under German

legislation but failed to specify the precise statutory origin in German law of this protection.

The Brisbane City Council's challenge to the domain name registration "brisbane.com" in 2001 was similarly hampered by private action.[139] This dispute also highlights the limits of asserting a government trademark portfolio of marks that include, but are not identical to, the challenged registration. The respondent advertising agency had registered the name "brisbane.com" and the names of other Australian state capital cities as part of a business plan "to develop a network of visual information booths or kiosks to be located in areas including major shopping centres."[140] The complainant city council sought to satisfy the first UDRP element by asserting statutory rights under the City of Brisbane Act 1924 to exercise powers under the name "Brisbane City Council" and trademark rights in the following registrations:

> E-BRISBANE logo;
>
> WATER SAVE IT! – BRISBANE CITY logo (the panel highlighted that the registration disclaimed right to the exclusive words "Brisbane City"); and
>
> BRISBANE CITY WORKS logo.[141]

Just prior to lodging its UDRP claim, the City Council filed an application for the trademark "BRISBANE CITY" in a number of classes.[142] The application, which could only be characterized as optimistic in light of the disclaimer on the City Council's existing "WATER SAVE IT!—BRISBANE CITY" trademark noted above, was pending when the UDRP panel was convened.[143] The panel considered this and the respondent's demonstration of extensive third-party registration of business names, corporate names, and trademarks in Australia incorporating or comprising the name "Brisbane" or "Brisbane City" to be "an indication that the Complainant does not have trademark rights to 'Brisbane City' or 'Brisbane.'"[144]

In another challenge to a domain name registered by Virtual Countries, "puertorico.com,"[145] the complainant, a public corporation of the Commonwealth of Puerto Rico, owned multiple registered trademarks consisting of slogans comprising the name "Puerto Rico" and other words (for example, "Puerto Rico ¡Lo hace mejor!").[146] The challenge was defeated because no registration was comprised solely of the name "Puerto Rico." The Madrid City Council's registrations for marks comprising the name "Madrid" along with other words (for example, "PROMOTION MADRID" and "MADRID CIUDAD 2000") were likewise found to be insufficient to challenge the domain name registration "madrid.com."[147] While trademark rights were established in a challenge to the domain name registration "andalucia.com," the panel in that dispute notably characterized the finding as a "close call."[148]

The domain name registrations "rouen.com" and "rouen.net" were also unsuccessfully challenged by the Chamber of Commerce of the city of Rouen, France, despite the fact that the city's name was mentioned twice in a registered trademark, "C.C.I. ROUEN E.S.C. ROUEN L'ESPRIT DE CONQUETE."[149] The three members of the UDRP panel agreed that the first element had not been satisfied, offering differing reasons that converged on a lack of identity or confusing similarity.[150] It was acknowledged that the "attractive element" of the complainant's French trademark registration, the geographic name "Rouen," was identical to the domain name registration at issue.[151] The panel nevertheless found it impossible for "Rouen" to "be stripped of the abbreviations and the tag or epithet Spirit of Conquest, such that in essence the distinctive element is ROUEN."[152]

Finally, rarely has local trademark law played a more prominent role in a UDRP dispute than in the 2000 challenge to the domain name registration "barcelona.com."[153] The local government based its UDRP claim on various trademark registrations consisting of "one main element, namely the expression 'BARCELONA' and another element of different importance, namely 'Excelentísimo Ayuntamiento de Barcelona.'" The sole panelist (who had also served on the three-member panel in the "andalucia.com" dispute) found the first UDRP element to be established on the basis that the "distinctive character" of the local government's mark was the name "Barcelona." The domain name had initially been registered in 1996 by a resident of Barcelona, who in 2000 transferred the name to a New York company wholly owned by the original registrant and her husband. The respondent's claim to rights or legitimate interests of the domain name was based on priority under the first-come, first-served system. The panelist rejected the claim to legitimate interests and also found bad faith. The respondent subsequently brought an action against the Barcelona local government in US courts under the Anticybersquatting Consumer Protection Act (ACPA).[154] The district court supported the outcome of the UDRP.[155] The Fourth Circuit Court of Appeals subsequently reversed the decision,[156] finding that the lower court had inappropriately applied Spanish law and that the Lanham Act (which incorporates the ACPA) should have been applied.

Applying the ACPA, the court came to:

> the ineluctable conclusion . . . that Bcom, Inc.'s registration and use of the name "Barcelona" is not unlawful. Under the Lanham Act, and apparently even under Spanish law, the City Council could not obtain a trademark interest in a purely descriptive geographical designation that refers only to the City of Barcelona. Under United States trademark law, a geographic designation can obtain trademark protection if that designation acquires secondary meaning. On the record in this case, however, there was no evidence that the public—in the United States or elsewhere—associates "Barcelona" with anything other than the City itself. Indeed, the Chief Director of the City Council submitted an affidavit stating that "[t]he City does not own and is not using any trademarks in the United States, to identify any goods or services." Therefore, under United States trademark law, "Barcelona" should have been treated as a purely descriptive geographical term entitled to no trademark protection. It follows then that there was nothing unlawful about Nogueras' registration of <barcelona.com>,

nor is there anything unlawful under United States trademark law about Bcom, Inc.'s continued use of that domain name.[157]

What emerges from this stream of UDRP challenges is that government prioritization is rejected when interests are based purely on sovereignty, government dissatisfaction, or public interest-type concerns—the very bases upon which governments seek priority over trademark holders and others at both the top and second levels through new gTLD policy. Sovereignty claims are not equivalent to, and do individually provide a basis for, challenging a private party's use of the name in the DNS. This rejection of government prioritization is, of course, explained by the strict limitation of the UDRP to actionable trademark rights, but here it must be highlighted that sovereignty offers no legal (and, specifically, no trademark-equivalent) claim to a particular name.[158] Arguably, this point is inherently acknowledged by WIPO in its having limited the scope of applicability of the UDRP (as is evident from the first UDRP element cited above) to trademarks. In summary, these UDRP decisions explain the limitations of the status quo of prioritization in domain name allocation to recognized legal rights—trademark rights—as an exception to first-come, first-served domain name allocation.

2. Use of the Name by the Registrant

Satisfaction of the first UDRP element, that the complainant has rights in a confusingly similar mark, does not automatically precede satisfaction of the second element, that a registrant lacks legitimate rights in the domain name.[159] Each element must be proven, but the two are conceptually linked.[160] The obvious consequence of the requirement of trademark distinctiveness is that the descriptive nature of geographic terms weakens governments' position in establishing trademark rights. The logical corollary to this should be that the descriptive nature of geographic terms serves to weaken governments' argument that third parties lack rights or legitimate interests in geographic names. Arguments to this effect

Virtual Countries, Inc., WIPO Case No. D2002-0754 (Nov. 27, 2002), http://www.wipo.int/amc/en/domains/decisions/html/2002/d2002-0754.html [http://perma.cc/YE6A-XU5Q] (noting that "even if the Complainant does have trademark or service mark rights in respect of the Domain Name, the Panel would have required a lot more evidence than the Complainant has put before the Panel to persuade it that the Respondent has no rights or legitimate interests in respect of the Domain Name").

[160] *UDRP*, *supra* note 81, at § 4(a) ("In the administrative proceeding, the complainant must prove that each of these three elements are present.").

have not been universally accepted by UDRP panels, as evidenced by the "barcelona.com" UDRP decision,[161] in which the respondent's claims to rights or legitimate interests based on first registration of a descriptive term were rejected by the panel but notably formed, ultimately, the basis for the subsequent litigation in the United States.[162]

The element of legitimacy divided the three-member panel in a challenge brought by the authority of Manchester Airport to the domain name registration "manchesterairport.com."[163] Two of the three panelists found the second UDRP element unmet. The two panelists based their finding on the respondent's claims that they have registered the domain name to offer website services to a group of businesses established at the airport. The presiding panelist questioned whether the choice of name had been motivated solely by descriptive reference and not with the intention to trade as, or suggest affiliation with, the airport.

By contrast, the three-member panel that administered the challenge by the local commerce and tourism department of Andalucia, Spain, to "andalucia.com"[164] agreed in finding legitimacy in the respondent's nexus to the domain name. The respondent had registered the domain name in 1996 and incontrovertibly used it to operate a website providing information about Andalucia for tourists and expatriates.[165] The panel found:

> [W]here, as here, a respondent is using a geographic indication to describe his product/business or to profit from the geographic sense of the word without intending to take advantage of complainant's rights in that word, then the respondent has a legitimate interest in respect of the domain name.[166]

This is a logical point to highlight that proof of the second element of the UDRP does not hinge on a subjective evaluation of the quality of a website. In other words, there are no "minimum

standards for development"[167] of a site operated under a particular domain name. Although the panel found it unnecessary to reach a decision on rights or legitimate interests in the government of New Zealand's challenge of the "newzealand.com" domain name registration,[168] its comments on this point are instructive. The threshold of legitimate use is not so high as the well-maintained and clearly functional website operated under the "andalucia.com" domain name registration; even a website that is "sketchy and badly in need of being updated"[169] may suffice.

While the "anyone can use it" argument tends to defeat the first UDRP element, the existence of a trademark, it is too simplistic to say that the same argument also defeats the second element, the absence of rights or legitimate interests. A more precise articulation of the norm derived from this series of disputes is the fact that anyone can use a geographic name means that private party (i.e., non-government) use of a geographic domain name is not inherently illegitimate. This norm is a cornerstone of domain name allocation at the second level of the DNS. Geographic domain name registrations by private party registrants are not inherently illegitimate, and domain name allocation policy should not be developed at any level that treats them as such. Each dispute turns on its own facts, and allocation policy must facilitate the evaluation of those facts.

IV. CONCLUSIONS

UDRP-derived norms provide meaningful insight into the process and substance of evaluating governments' assertion of priority rights at all levels of the DNS, not simply the second level where the UDRP is applicable. This is not based on an underlying principle of binding precedent—quite clearly, UDRP decisions are not binding on courts, other UDRP panels, or any other decision maker—but rather on the value of relying upon established norms within a system whose core values are transparency, accountability, and consistency.[170]

[170] *See UDRP*, *supra* note 81, § 4(k); *see also* Weber-Stephen Prods. Co. v. Armitage Hardware & Bldg. Supply, Inc., No. 00 C 1738, 2000 WL 562470 (N.D. Ill. May 3, 2000).

Governments' requests to ICANN—to exempt governments' applications for geographic domain names from sunrise requirements, to impose consent requirements on private party uses of geographic names, and to preemptively reserve geographic names for government use—bear striking resemblance to the claims made in a series of "overwhelmingly unsuccessful"[171] UDRP challenges more than a decade ago. The UDRP and decisions under it offer no support for per se prioritization of government interests in domain name allocation. Panels have repeatedly and consistently found that governments do not have what the government of Puerto Rico in its challenge against Virtual Countries, and indeed more recently and broadly by the GAC in new gTLD policy-making, argued were "better rights or more legitimate interests"[172] than non-government parties.

The existing body of UDRP decisions assessing government interests in geographic domain names serves a normative function that contributes to the consistency, accountability, and transparency of ICANN DNS policy making. Procedurally, government claims are treated no differently than private parties' claims. As in all disputes there must be, as a first step, a valid trademark. The existence of a trademark is not of itself dispositive; claimants must additionally prove that the respondent has no legitimate rights or interests, as well as bad faith. The domain name registrant must, therefore, succeed in the context of such ordinary and legitimate business enterprises such as online tourism products and services and where descriptive use is related to geographically identified goods and services.[173]

As the DNS expands, its top level (the level of gTLDs, such as ".com," ".org," and more recently, ".cars" and ".lawyer"), at which expansion has until very recently occurred at a very measured and carefully controlled rate, assumes the characteristics and attributes—and therefore also the conflicts and challenges—of the rapid, conflict-ridden expansion at the second level, where the general public registers domain names. One impact of this convergence of circumstances and challenges in top-level and second-level DNS expansion is that established UDRP norms are now relevant and instructive in evaluating government claims to priority beyond the UDRP context. Governments' requests for exemptions from

[172] Puerto Rico Tourism Co. v. Virtual Countries, Inc., WIPO Case No. D2002-1129 (Apr. 14, 2003), http://www.wipo.int/amc/en/domains/decisions/html/2002/d2002-1129.html [http://perma.cc/W7Q2-D6MQ].

[173] *See, e.g.*, Junta de Andalucia Consejeria de Turismo, Comercio y Deporte, Turismo Andaluz, S.A. v. Andalucía.com Ltd., WIPO Case No. D2006-0749 (Oct. 13, 2006), http://www.wipo.int/amc/en/domains/decisions/html/2006/d2006-0749.html [http://perma.cc/SY8G-6NCE].

trademark protections to super-prioritize their interests in geographic names bear striking resemblance to the claims made by government complainants in UDRP challenges. URDP panels have expressly rejected the claim that geographic domain names belong to government in challenges to both:

> "portofhelsinki.com": "The Panel cannot agree with the contention that a unique geographical name should be considered as belonging to the legal authority of the geographical area in question under the Policy";[174] and
>
> "portofhamina.com": "The Administrative Panel takes definite exception to the Complainant's view that rights to a unique geographical name should, evidently as a matter of principle, 'be regarded to belong to the owner of the geographical area in question.'"[175]

Further, the claim that private parties have no rights or legitimate interests in geographic domain names because only governments have rights or legitimate interests in geographic domain names has been expressly rejected by UDRP panels, including the panel that administered the challenge to "newzealand.com": "[T]he Panel would have required a lot more evidence than the Complainant has put before the Panel to persuade it that the Respondent has no rights or legitimate interests in respect of the Domain Name."[176]

Where governments possess trademark rights, these rights under the UDRP do not—and should not in any context of DNS policy be permitted to—automatically trump non-government parties' rights. UDRP claims brought by governments possessing trademarks have failed despite the claimant government's ownership of registered or unregistered marks; all elements of the UDRP must be established. Where geographic terms are permitted to be registered as trademarks, their registration and use by many is indicative of the non-exclusivity of government's interests. Where geographic terms are disclaimed in a trademark registration, the result is the same.

Finally, it is clear that each UDRP decision turns on its facts, with the outcome depending heavily not only upon the claimant's rights to the name in dispute, but also on the respondent's use and intentions. The varied factual constellations identified above reveal the impracticality and unworkability in developing a uniform name-allocation framework applicable across all levels of the DNS, of

[176] HM the Queen *ex rel* New Zealand v. Virtual Countries, Inc., WIPO Case No. D2002-0754 (Nov. 27, 2002), http://www.wipo.int/amc/en/domains/decisions/html/2002/d2002-0754.html [http://perma.cc/QEN9-WCA5].

a universal rule of government super-prioritization in geographic domain name allocation. While it can be said that "merely because the contested domain name has a geographic connotation does not mean that the Complainant should fail,"[177] neither, as more than a decade of UDRP precedent shows, does this mean that the complainant government should succeed. This conclusion is notably consistent with not only the findings of WIPO on the availability of legal protection for government interests in geographic domain names, but also with the limited scope of application of the UDRP.[178] Applying the principles elucidated from UDRP decisions on geographic domain names and the rationale of the UDRP, with its dependence upon clearly demonstrable legal rights as a basis for a valid complaint, would provide ICANN with a rational, legally justified method of assessing government claims to geographic names in the DNS as a whole.

OCEANS :: PACIFIC OCEAN

PAGE LAST UPDATED ON FEBRUARY 11, 2016

VIEW **18 PHOTOS OF PACIFIC OCEAN**

Introduction PACIFIC OCEAN

Background:

The Pacific Ocean is the largest of the world's five oceans (followed by the Atlantic Ocean, Indian Ocean, Southern Ocean, and Arctic Ocean). Strategically important access waterways include the La Perouse, Tsugaru, Tsushima, Taiwan, Singapore, and Torres Straits. The decision by the International Hydrographic Organization in the spring of 2000 to delimit a fifth ocean, the Southern Ocean, removed the portion of the Pacific Ocean south of 60 degrees south.

Geography PACIFIC OCEAN

Location:

body of water between the Southern Ocean, Asia, Australia, and the Western Hemisphere

Geographic coordinates:

0 00 N, 160 00 W

Map references:

Political Map of the World

Area:

total: 155.557 million sq km

note: includes Bali Sea, Bering Sea, Bering Strait, Coral Sea, East China Sea, Gulf of Alaska, Gulf of Tonkin, Philippine Sea, Sea of Japan, Sea of Okhotsk, South China Sea, Tasman Sea, and other tributary water bodies

Area - comparative:

about 15 times the size of the US; covers about 28% of the global surface; almost equal to the total land area of the world

Coastline:

135,663 km

Climate:

planetary air pressure systems and resultant wind patterns exhibit remarkable uniformity in the south and east; trade winds and westerly winds are well-developed patterns, modified by seasonal fluctuations; tropical cyclones (hurricanes) may form south of Mexico from June to October and affect Mexico and Central America; continental influences cause climatic uniformity to be much less pronounced in the eastern and western regions at the same latitude in the North Pacific Ocean; the western Pacific is monsoonal - a rainy season occurs during the summer months, when moisture-laden winds blow from the ocean over the land, and a dry season during the winter months, when dry winds blow from the Asian landmass back to the ocean; tropical cyclones (typhoons) may strike southeast and east Asia from May to December

Terrain:

surface currents in the northern Pacific are dominated by a clockwise, warm-water gyre (broad circular system of currents) and in the southern Pacific by a counterclockwise, cool-water gyre; in the northern Pacific, sea ice forms in the Bering Sea and Sea of Okhotsk in winter; in the southern Pacific, sea ice from Antarctica reaches its northernmost extent in October; the ocean floor in the eastern Pacific is dominated by the East Pacific Rise, while the western Pacific is dissected by deep trenches, including the Mariana Trench, which is the world's deepest

Elevation:

mean elevation:

elevation extremes:

lowest point: Challenger Deep in the Mariana Trench -10,924 m

highest point: sea level 0 m

Natural resources:

oil and gas fields, polymetallic nodules, sand and gravel aggregates, placer deposits, fish

Natural hazards:

surrounded by a zone of violent volcanic and earthquake activity sometimes referred to as the "Pacific Ring of Fire"; subject to tropical cyclones (typhoons) in southeast and east Asia from May to December (most frequent from July to October); tropical cyclones (hurricanes) may form south of Mexico and strike Central America and Mexico from June to October (most common in August and September); cyclical El Nino/La Nina phenomenon occurs in the equatorial Pacific, influencing weather in the Western Hemisphere and the western Pacific; ships subject to superstructure icing in extreme north from October to May; persistent fog in the northern Pacific can be a maritime hazard from June to December

Environment - current issues:

endangered marine species include the dugong, sea lion, sea otter, seals, turtles, and whales; oil pollution in Philippine Sea and South China Sea

Geography - note:

the major chokepoints are the Bering Strait, Panama Canal, Luzon Strait, and the Singapore Strait; the Equator divides the Pacific Ocean into the North Pacific Ocean and the South Pacific Ocean; dotted with low coral islands and rugged volcanic islands in the southwestern Pacific Ocean

Government PACIFIC OCEAN

Country name:

etymology: named by Portuguese explorer Ferdinand MAGELLAN during the Spanish circumnavigation of the world in 1521; encountering favorable winds upon reaching the ocean, he called it "Mar Pacifico," which means "peaceful sea" in both Portuguese and Spanish

Economy PACIFIC OCEAN

Economy - overview:

The Pacific Ocean is a major contributor to the world economy and particularly to those nations its waters directly touch. It provides low-cost sea transportation between East and West, extensive fishing grounds, offshore oil and gas fields, minerals, and sand and gravel for the construction industry. In 1996, over 60% of the world's fish catch came from the Pacific Ocean. Exploitation of offshore oil and gas reserves is playing an ever-increasing role in the energy supplies of the US, Australia, NZ, China, and Peru. The high cost of recovering offshore oil and gas, combined with the wide swings in world prices for oil since 1985, has led to fluctuations in new drillings.

Transportation PACIFIC OCEAN

Ports and terminals:

major seaport(s): Bangkok (Thailand), Hong Kong (China), Kao-hsiung (Taiwan), Los Angeles (US), Manila (Philippines), Pusan (South Korea), San Francisco (US), Seattle (US), Shanghai (China), Singapore, Sydney (Australia), Vladivostok (Russia), Wellington (NZ), Yokohama (Japan)

Transportation - note:

the Inside Passage offers protected waters from southeast Alaska to Puget Sound (Washington state); the International Maritime Bureau reports the territorial waters of littoral states and offshore waters in the South China Sea as high risk for piracy and armed robbery against ships accounting for 55% of all attacks in 2014; numerous commercial vessels have been attacked and hijacked both at anchor and while underway; hijacked vessels are often disguised and cargoes stolen; crew and passengers are often held for ransom, murdered, or cast adrift

Transnational Issues PACIFIC OCEAN

Disputes - international:

some maritime disputes (see littoral states)

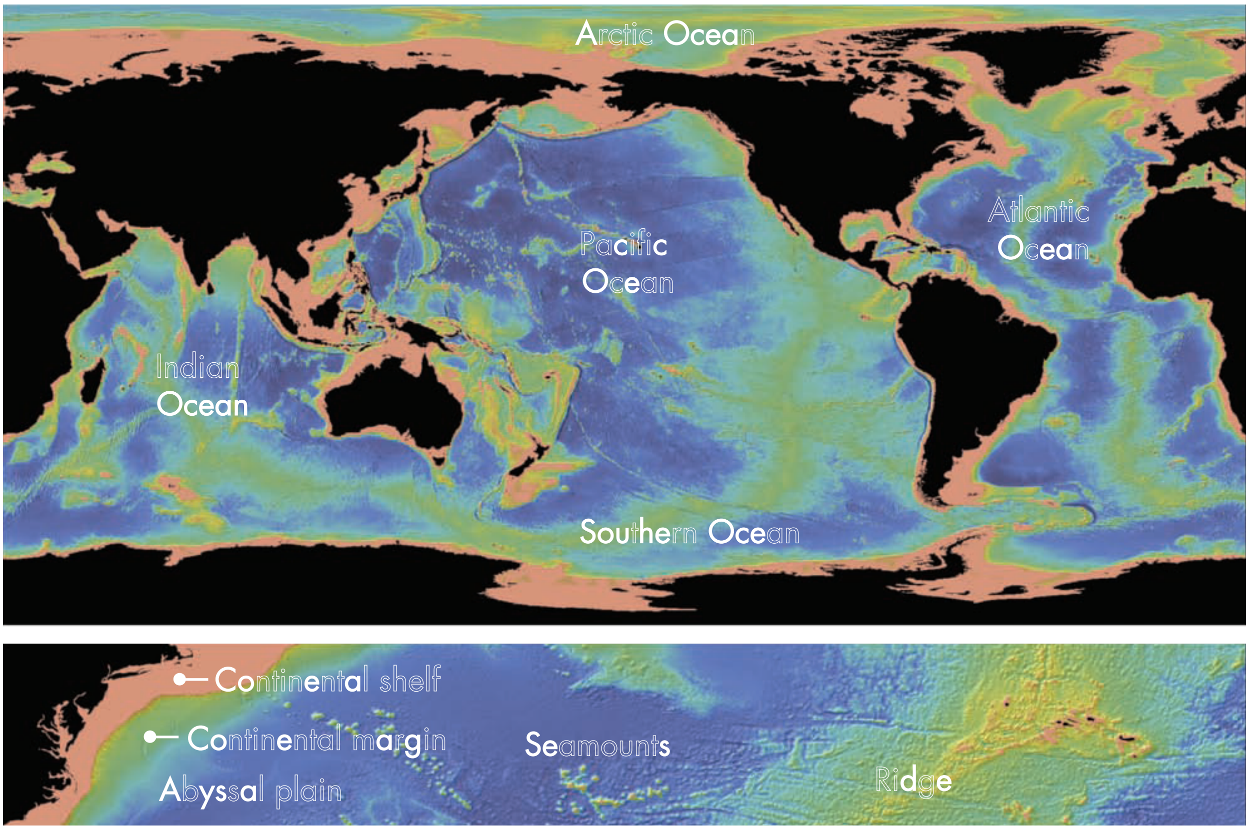
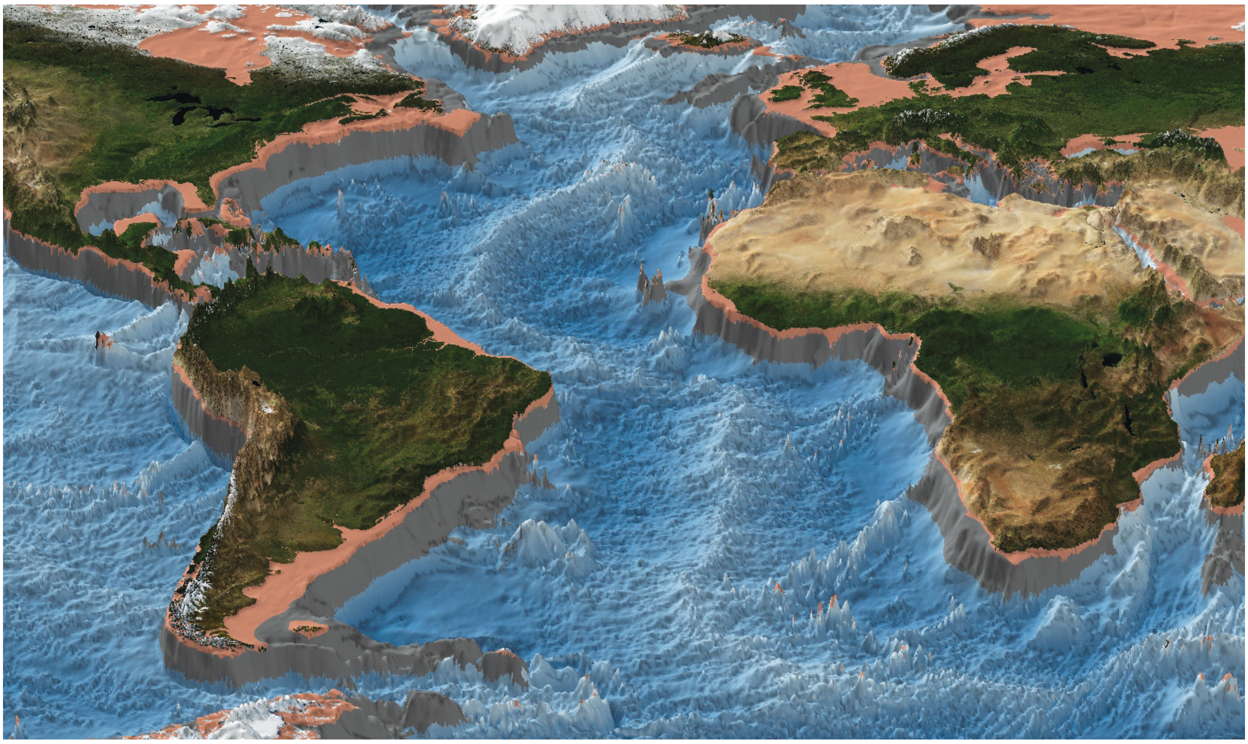
Printed in the United States of America



1. The oceans encompass almost 10 times as much deep sea (averaging 4,000 meters) as shallow shelf (up to 200 meters). Shelves may be as narrow as 5 kilometers (e.g., off California or Chile) or as wide as hundreds of kilometers (e.g., off China or Argentina). Until recently, most human activities, and their impacts, have concentrated on the shallow shelves highlighted in pink around land here. The largest oceans are the Pacific and the Southern, which whirls like a carousel around Antarctica. Earth's Southern Hemisphere is 80 percent water, mostly very deep. Undersea mountain ranges or ridges divide ocean basins, and about 100,000 seamounts higher than 1,000 meters rise from the seafloor.
Image: Census of Marine Life Mapping and Visualization Team



2. Between the shallow pink shelves that extend to a depth of about 200 meters around continents and the blue abyssal plains beneath the deep sea that average about 4,000 meters deep, the gray continental margins slope downward. Their gradient, exaggerated in this rendering, brings great and little-explored biodiversity. The margins also offer access to vast resources of petroleum and natural gas. In the view here, the world's longest mountain range, the Mid-Atlantic Ridge, traverses the ocean from north to south.
Image: Census of Marine Life Mapping and Visualization Team

SUMMARY

In the late 1990s, leading marine scientists shared their concerns that humanity's understanding of what lives in the oceans lagged far behind our desire and need to know. Some emphasized the question, "What kinds of life inhabit the oceans?" They pointed to opportunities to discover new kinds of life and to catalog and estimate the total diversity of life in the vast global ocean. Others asked, "What lives where?" They highlighted establishing addresses of marine life and drawing reliable maps of neighborhoods and travels. Still others asked, "How much of each lives?" and pointed to the human appetite for seafood. Everyone worried about changes in marine life and the need to improve management with sound knowledge.

In the year 2000, the scientists founding the Census of Marine Life converged on a strategy, a worldwide Census to assess and explain the diversity, distribution, and abundance of marine life. The founders organized the Census around three grand questions: What did live in the oceans? What does live in the oceans? What will live in the oceans? They designed a program to explore the limits to knowledge of marine life. They agreed to report in the year 2010.

Delving in archives, setting out on more than 540 expeditions in all ocean realms, and partnering with other organizations and programs, the 2,700 scientists from more than 80 nations who have become the Census community have assembled, augmented, and organized what is known about life in the oceans. They have drawn baselines for measuring changes of marine life after natural changes and human actions. Equally important, the Census has systematically delineated for the first time the unknown ocean.

Many books, papers, Web sites, videos, films, maps, and databases now form and report the Census. The pages here highlight its findings, describe its legacies, and tell how it worked.

Diversity

The Census encountered an unanticipated riot of species, which are the currency of diversity. It upped the estimate of known marine species from about 230,000 to nearly 250,000. Among the millions of specimens collected in both familiar and seldom-explored waters, the Census found more than 6,000 potentially new species and completed formal descriptions of more than 1,200 of them. It found that rare species are common.

With its collective digital archive grown to almost 30 million observations, the Census compiled the first regional and global comparisons of marine species diversity. It helped to create the first comprehensive list of the known marine species, already passing 190,000 in September 2010, and also helped to compose Web pages for more than 80,000 of them in the Encyclopedia of Life.

Applying genetic analysis on an unprecedented scale to a dataset of 35,000 species from widely differing major groupings of marine life, the Census graphed the proximity and distance of relations among distinct species, painting a new picture of the genetic structure of marine diversity. With the genetic analysis often called barcoding, the Census sometimes shrank seeming diversity by revealing that organisms had been mistakenly called separate, but generally its analyses expanded the number of species—and especially the number of kinds of different microbes, including bacteria and archaea.

After all its work, the Census still could not reliably estimate the total number of species, the kinds of life, known and unknown, in the ocean. It could logically extrapolate to at least a million kinds of marine life that earn the rank of species and to tens or even hundreds of millions of kinds of microbes.

Distribution

The Census found living creatures everywhere it looked, even where heat would melt lead, seawater froze to ice, and light and oxygen were lacking. It expanded known habitats and ranges in which life is known to exist. It found that in marine habitats, extreme is normal.

With sound, satellites, and electronics, sometimes carried by marine life itself, the Census tracking of thousands of animals mapped migratory routes of scores of species and charted their meeting places and blue highways across the interconnected ocean. The tracking measured animals' surroundings as they swam and dove and revealed where they succeed and where they die. The Census found temperature zones favored by animals and saw the immigration into new conditions such as melting ice.

Now anyone can see the distribution of a species by entering its name at iobis.org, a Web site that accesses the names and "addresses" of species compiled in the Census's global marine life database.

With the names and addresses of species compiled in the database, the Census found and mapped the places of high and low diversity of marine life, globally. Coastal species showed maximum diversity in the tropical Western Pacific, whereas high diversity of species frequenting the open ocean peaked across broad mid-latitudinal bands in all oceans. In deep water and on the deep-sea floor, the Census discovered patterns of life on ridges, seamounts, abyssal plains, and the margins of continents and defined new provinces and classifications.

The same Census data reveal where explorers have not yet looked, the unknown ocean. For more than 20 percent of the ocean's volume, the Census database still has no records at all, and for vast areas very few.

Abundance

After establishing historical baselines from sightings, catches, and even restaurant menus, the Census documented declining numbers and sizes, too, even within a human generation. In enough cases to encourage conservation, the Census documented the recovery of some species. History shows people began catching marine life long ago, and their extractions are far broader in scope than once thought. Historically, overfishing and habitat destruction lead the ranking of threats to marine life associated with human activities.

With sound, the Census observed tens of millions of fishes assembling swiftly and swimming in coordinated schools as large as Manhattan island, and also saw hosts of animals commuting at regular hours, moving back and forth to the surface from hundreds of meters below.

The Census affirmed that by weight most marine life is microbial, up to 90 percent. The weight of Earth's marine microbes equaled about 35 elephants for every living person.

Analyzing indirect observations from oceangoing vessels since 1899, Census researchers discovered that the food-producing phytoplankton near the surface has declined, globally. The Census maps of the global seafloor showed that the delivery of food in a "snow" from water above controlled the mass of living things on the floor. On the seafloor, the quantity of life peaks toward polar regions, along continental margins where cool currents well up toward the surface, and where equatorial currents diverge. On the deep-sea margins, the Census unexpectedly discovered mats of bacteria and reefs of coral extending hundreds of kilometers.

While patchy evidence from the phytoplankton near the bottom of the food chain and more extensive evidence from large animals at the top of the food chain suggest decline, whether the total weight of life in the ocean is changing remains unknown.

Legacies

At the end of its decade, the Census bequeaths legacies of knowledge, technology, and work habits.

Regarding knowledge, the Census recorded its findings in more than 2,600 papers, many freely accessible online. The Census built the largest repository of data about marine species by compiling observations and adding its own, and then made it a publicly accessible infrastructure for future research, which governments have committed to sustain. The Census drew baselines to help nations and the international Convention on Biological Diversity select areas and strategies for greater protection of marine life. Its baselines will help assess habitat changes such as warming water or damage from oil spills.

Regarding technology, the Census proved new technology, such as DNA barcoding for the identification of marine life. It arrayed microphones from California past Canada to Alaska to pioneer a global ocean tracking network for animals, invented Autonomous Reef Monitoring Structures to standardize global assessment of reef life, and fostered acoustic systems to measure abundances over tens of thousands of square kilometers. Together, these technologies show that the incipient Global Ocean Observing System can observe life as well as water temperature and waves.

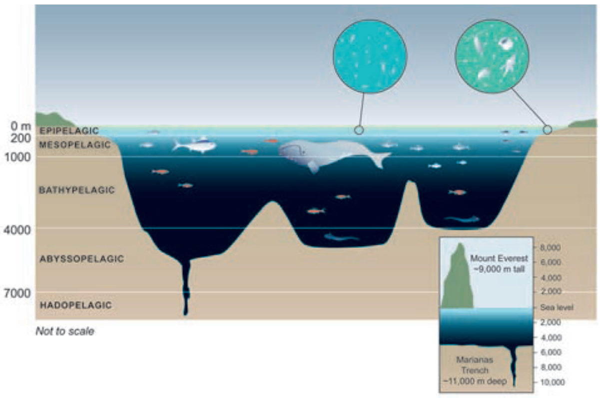
Regarding work habits, the Census brought scientists with different interests from different nations together under one umbrella, to use standard protocols for sampling marine life from the deep sea to the near shore, to speed the adoption of good techniques, to build capacity economically, and to jump start initiatives in marine research. It strengthened partnerships of scholars in the humanities and natural and social sciences to use archival research to build the picture of life in oceans past and assess changing diversity, distribution, and abundance.

As it worked, the Census found that the causes separating the known, unknown, and unknowable about marine life fall into five categories: the invisibility of the lost past, the vast expanse of the oceans, difficulties of assembling knowledge of parts into knowledge of a whole, blinders we put on ourselves by choosing not to learn or spend, and unpredictable disturbances such as tsunamis.

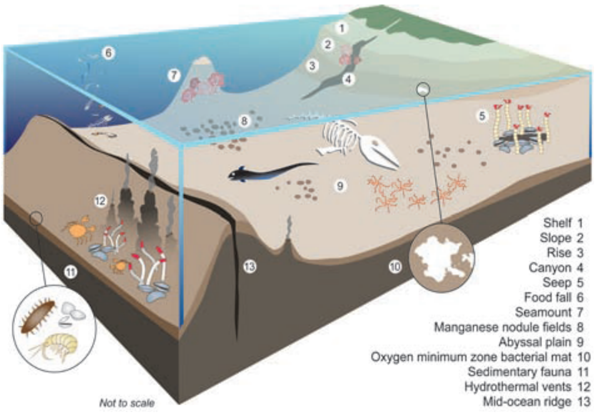
The Census showed that we know less about the small than the large and that generally knowledge is inversely related to size. But some patterns exceed our field of vision, and for these the Census devised "macroscopes," tools to make sense of very large regions or datasets, to overcome limits to knowledge.

The Census encountered an ocean growing more crowded with commerce and transparent through technology. Setting out to draw baselines of the diversity, distribution, and abundance of species, the first Census of Marine Life documented a changing ocean, richer in diversity, more connected through distribution and movements, more impacted by humans, and yet less explored than we had known. The Census has multiplied the qualified experts, developed and spread technologies for discovery and monitoring, improved access to data, and informed decisions about conserving marine species and regions. The legacies of the Census—the baselines of knowledge, the cascade of new technology, the collaboration across borders—promise more benefits for humanity and the oceans.

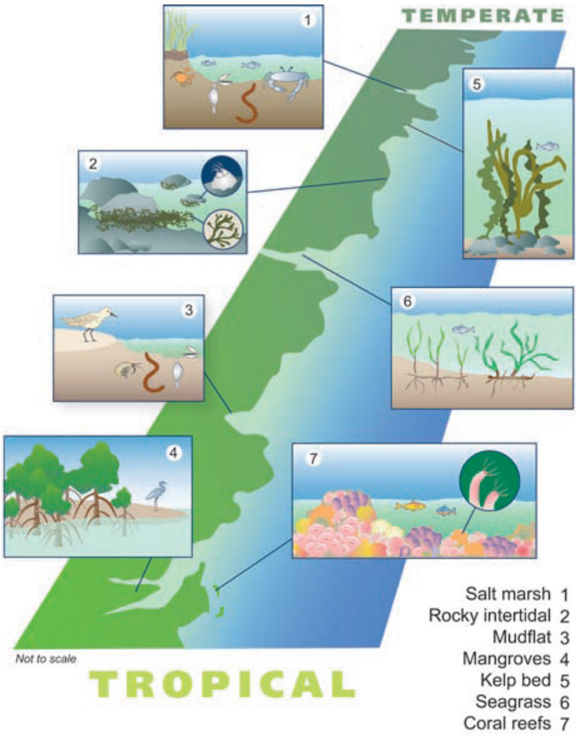
Marine habitats



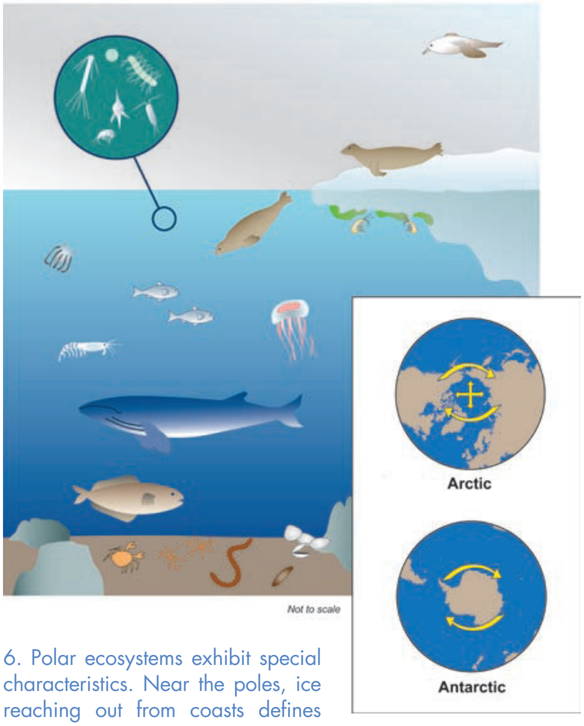
3. In "pelagic" or open ocean ecosystems, differences in light, temperature, salinity, and nutrients determine productivity. Productivity, in turn, limits what kinds of creatures can live there. The prefixes to pelagic in the left of the figure refer to depth zones. *Image: Lianne Dunn*



4. An array of specialized habitats exists on the deep-sea floor, thousands of meters below the surface. The Census standardized datasets to enable comparisons of kinds of life among these specialized habitats. *Image: Lianne Dunn*



5. The Census studied many different coastal habitats from the tropics near the equator up to temperate environments at midlatitudes. Each habitat has unique characteristics and its own suite of species. *Image: Lianne Dunn*



6. Polar ecosystems exhibit special characteristics. Near the poles, ice reaching out from coasts defines seasons and thus defines changes in food and habitat. Land surrounds the waters of the Arctic Ocean, whereas the water of the Southern Ocean surrounds Antarctic land. *Image: Lianne Dunn*

INTRODUCTION

Beginning as it did with the origins of humanity, our use of the oceans proceeded for millennia with a knowledge of ocean life only along coasts and on the surfaces where our boats dared to venture. Visits to new and deeper waters regularly revealed unexpected and unfamiliar life. Now, detailed navigational and seafloor charts and accurate storm forecasts demonstrate growing knowledge of the physical ocean and marine life continues to surprise us. In Australia, explorers encountered a shrimp thought to have gone extinct 50 million years ago. Off Africa's Mauretanian coast, they found relics of cold-water corals extending over 400 kilometers in waters 500 meters deep in one of the world's longest reefs. Near Chile, they found giant mats of microbes covering an area of seafloor about the size of Greece or Nicaragua.

As astonishing discoveries continue and even increase, the oceans grow more crowded and transparent. Along shores, our cities, ports, aquaculture, and windmills increase. Farther offshore, our oil wells, shipping, fisheries, cables, and soon perhaps deep-sea mining spread. The different uses interact, as when shipping ports displace fishing harbors, and oil becomes a greenhouse gas in the atmosphere that acidifies and warms the oceans. Meanwhile, divers and submarines as well as robotic ears and eyes, some carried by animals themselves, render even the dark, deep waters transparent for humans. The crowding requires, and transparency enables, more exploration of marine life to buoy wise policies.

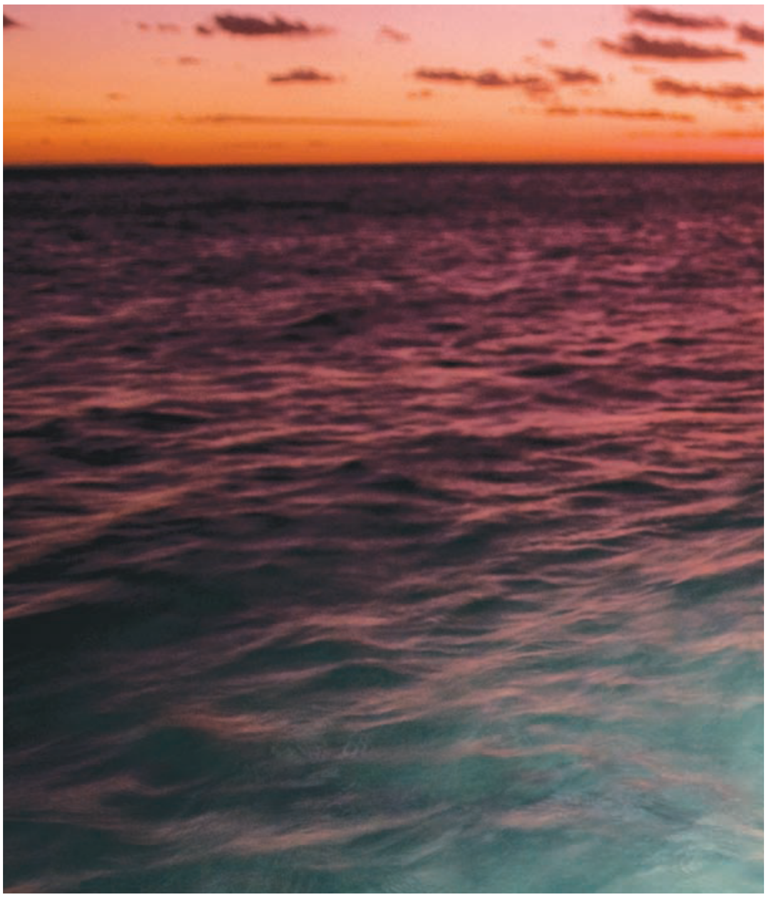
Thus in the year 2000, the Census of Marine Life began its decade-long exploration of life in the global ocean. It sought to assemble and better organize the known, shrink the unknown, and specify what will be very hard to know or even unknowable. Its strategic categories were learning the diversity, distribution, and abundance of marine life from microbes to whales. It engaged thousands of scientists from all continents on hundreds of expeditions and invested hundreds of millions of dollars. It employed divers, nets, submersible vehicles, genetic identification, sonars, electronic and acoustic tagging, listening posts, and communicating satellites. The Census spanned all oceanic realms, from coasts down slopes to the abyss, from the North Pole across tropics to the shores of Antarctica. It followed flying seabirds and collected cores from the seafloor. It ranged from the long past to the future. It systematically compiled information from new discoveries and historical archives and made it freely accessible. Census explorers found life wherever they looked, a riot of species.

This collection of highlights tells who took the Census and lessons from their collaboration during joint explorations and efforts around the world. First, it answers readers' questions about life in the global oceans from the store of knowledge about the oceans, especially new knowledge added to the store during the fruitful decade of the Census.

Overcoming limits to knowledge

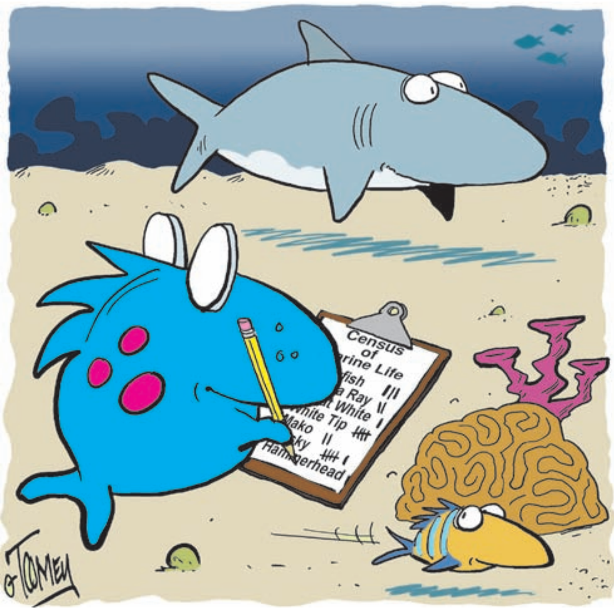
Calling Earth by the name Planet Ocean helps to understand the span of knowledge of the seas stretching around the globe. Humanity is a species that breathes air, which focuses our eyes and lives on Planet Earth. We might better call a globe covered 70 percent by water Planet Ocean, as did Arthur C. Clarke, science fiction author and conceiver of the communications satellite. In fact, more than 80 percent of Earth's Southern Hemisphere is ocean, and 70 percent of the entire ocean is an abyss with a floor averaging 4,000 meters below the sea surface and descending to 10,924 meters at the deepest point. Apart from microbes living in rocks, 99 percent of Earth's biosphere is in or under marine waters. At the outset of the Census, oceanographers estimated that only 5 percent of the ocean had been systematically explored for life.

Faced with a vast unknown, the Census adopted a deliberate strategy to understand the limits to knowledge. Some limits separate the known from the unknown. Experience teaches that money, organization, work, and time can often move unknowns into the province of the known. As the Census steadily discovered new kinds of life, learned where species lived and traveled, and count-



7. Image: Gary Cranitch

ed or weighed the species, it shrank the unknown and enlarged the known. Beyond the unknown and across a dark boundary lies the unknowable about marine life. Wonders of the Internet, submersible vehicles in the deep, and genetics that extract information from a single cell occasionally jump the boundary between unknown and unknowable. Still, much of what we would like to know about the oceans remains very hard to learn.

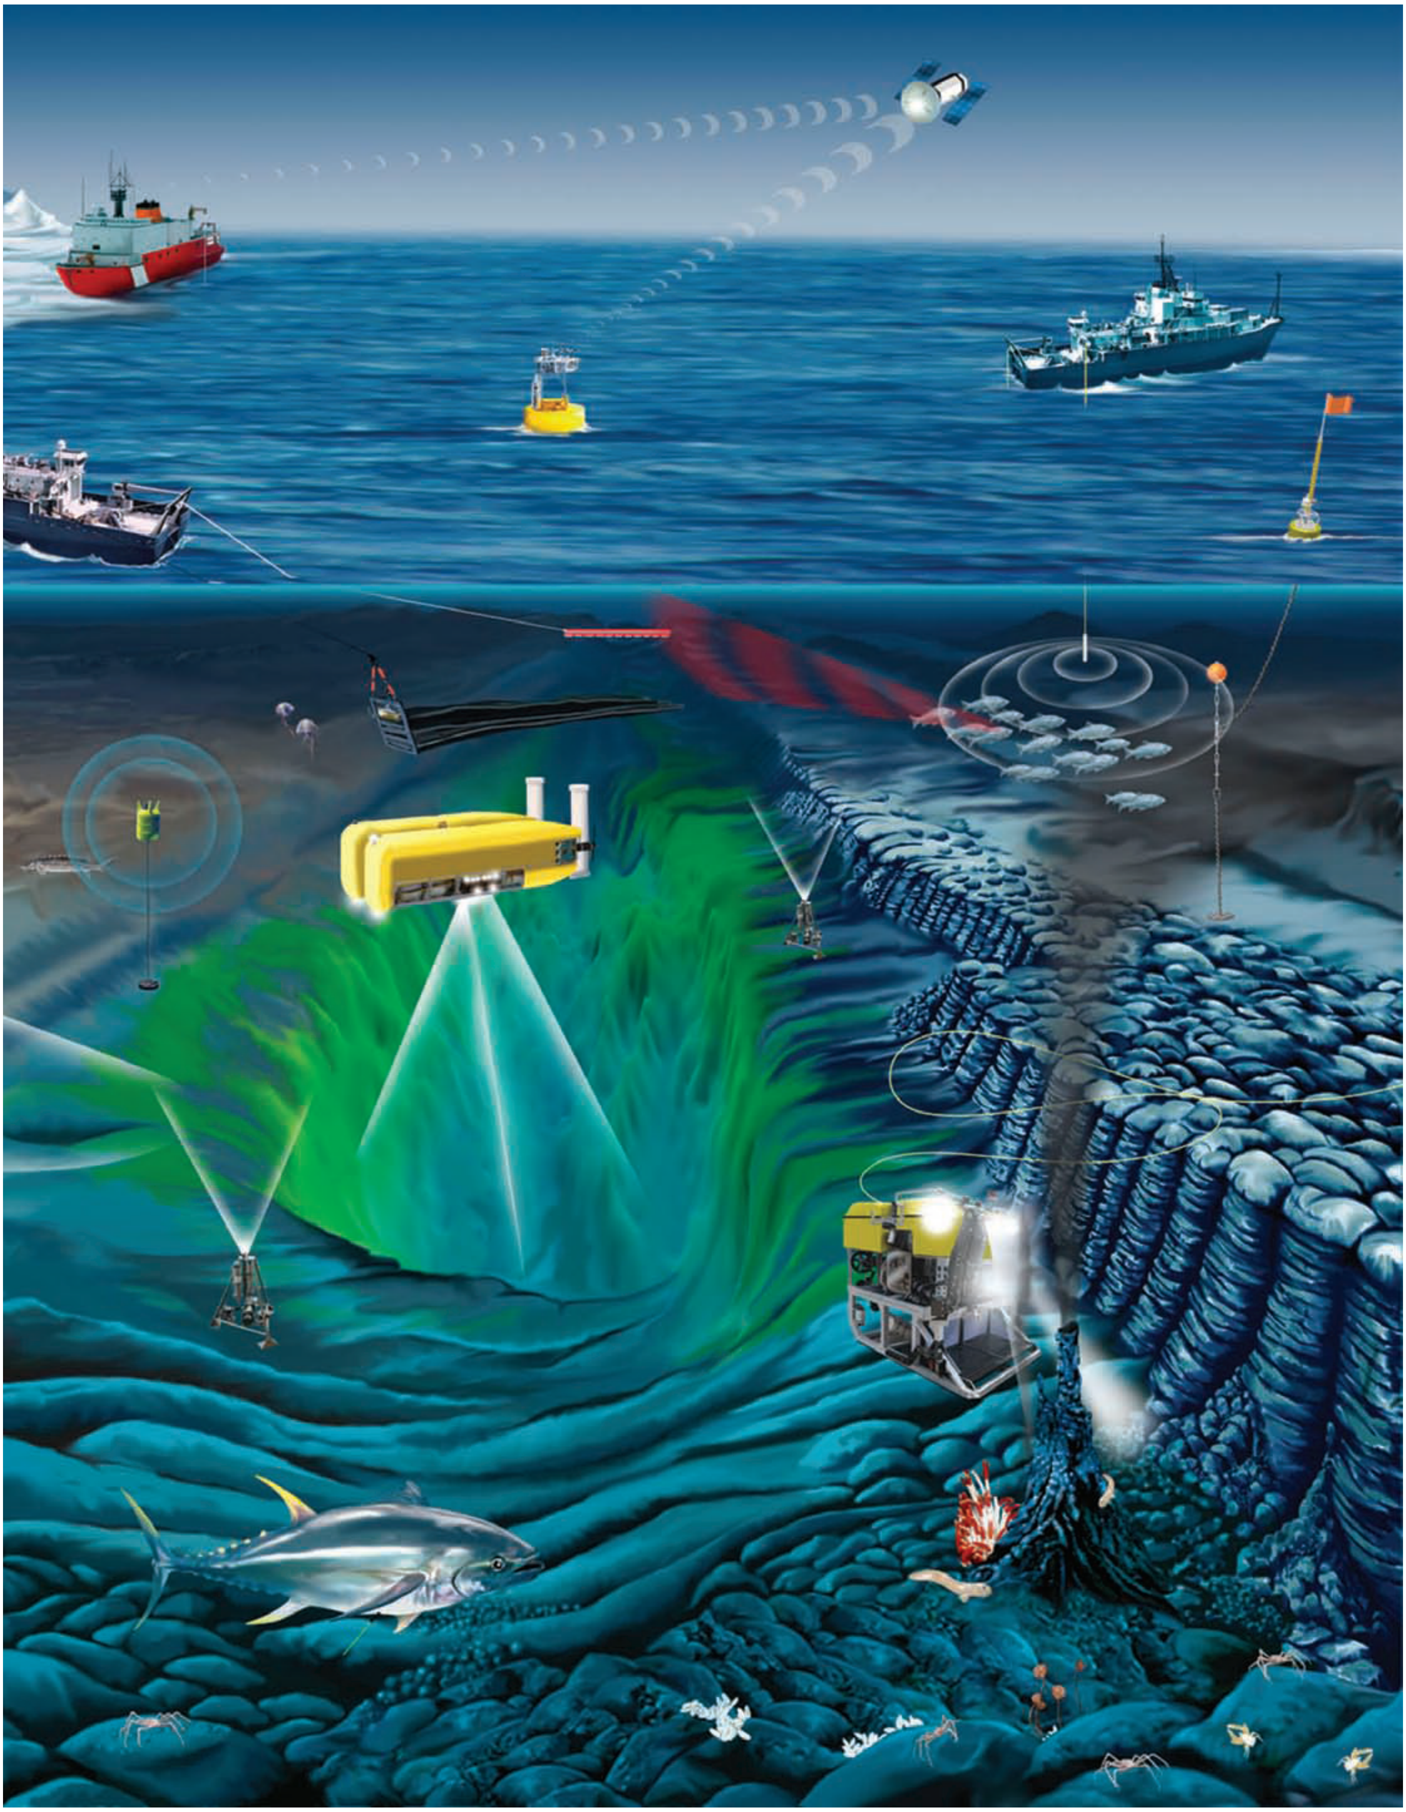


8. The idea of learning everything that lives in the sea plus their addresses and numbers brings smiles to people's faces. Cartoonist Jim Toomey imagined how sea animals might themselves conduct a Census of Marine Life. Fortunately, the opportunity for discovery and the scale of the Census also attracted thousands of scientists from more than 80 nations, who rallied around learning the diversity, distribution, and abundance of marine life in the past, present, and future. *Image: Jim Toomey*

In considering ocean life, the causes that separate the known, unknown, and unknowable are numerous and diverse but fall into five families: the invisibility of the lost past, the vast expanse of the oceans, difficulties of assembling knowledge of parts into knowledge of a whole, blinders we put on ourselves by choosing not to learn or spend, and unpredictable disturbances such as tsunamis. The loss of an archive or extinction of a species makes some of yesterday's marine life unknowable. The immense variety and rapid evolution of microbes may make some of today's marine life unknowable. A lack of experts may keep some kinds of tomorrow's life unknown if not unknowable.

As the Census studied neglected archives and encountered species thought to be extinct, arrayed listening posts for migrating salmon, and employed genetic barcoding to distinguish new species, it penetrated and jumped limits to knowledge. The Census deployed a fleet of new tools for exploration as well as traditional nets, quadrats to frame areas for sampling, and coring devices to retrieve seafloor mud and its residents. Perhaps most powerful was the collective database of the Census, a macroscope that allowed researchers to see patterns that before had been too large to see.

9. Census investigators explored on and beneath polar ice. Their aircraft remotely sensed animals through properties of scattered light. Marine animals themselves carried tags that stored records of their travels and dives and communicated with satellites. Fish carried tags that revealed their migration past acoustic listening lines. Sounds that echoed back to ships portrayed schools of fish assembling, swimming, and commuting up



and down. Standardized frames and structures dropped near shores and on reefs provided information for comparing diversity and abundance. Manned and unmanned undersea vehicles plus divers photographed sea floors and cliffs. Deep submersibles sniffed and videotaped smoking seafloor vents. And nets and dredges still caught specimens, shallow and deep, for closest study. *Image: E. Paul Oberlander*

DIVERSITY

The number of different species of animals, plants, and fungi indicates biological diversity or biodiversity. Just as diversity is considered an attribute of security in financial investment, biologists often use biodiversity as a measure of the health of biological systems. Scientists may elaborate the simple definition of diversity as the number of species, and may calculate indices or zoom in to diversity of genes or out to diversity of the inhabitants of a region. Still, species typically serve as the common currency, and the inventory of species as the capital stock of biodiversity. Species stand at the base of the sequence of taxonomic groups or taxa and make up broader groups, first genus and then family, order, class, and phylum. The inclusive word taxa and its singular number taxon may mean any of the groups in the sequence.

Hence, to accomplish a biological census and compile the needed inventory in its first category, diversity, the Census focused on species. A common definition of species is that of a group of organisms capable of interbreeding and producing fertile offspring of both sexes (except in the case of asexually reproducing species), and separated from other such groups with which interbreeding does not normally happen. The Census compiled tens of millions of species-level observations obtained before and outside the Census and added millions of its own. It very likely discovered more than 6,000 new species and completed, for more than 1,200 of them, the formal descriptions meeting the high standards of the science of systematic biology. The Census even discovered a few species thought extinct. Census data on known and new species and the locations where they were reliably observed are recorded in the Ocean Biogeographic Information System (OBIS), an online, open-access, globally distributed network of systematic, ecological, and environmental information. The Census invented, constructed, and operated OBIS, demonstrating its power for mapping where species lived and traveled as well as graphing the number of described species, a number that rises toward the total number of living species and thus diversity of marine life. OBIS has grown past 28 million records, spanning 120,000 species assembled from nearly 1,000 datasets. Scientists have already analyzed the OBIS data to find global patterns of marine life, while OBIS adds 5 million records per year.

The Census also helped speed compilation of an unprecedented listing of all marine species ever described. The tally of the World Register of Marine Species, the authoritative and comprehensive online list of names of marine organisms, exceeds 190,000 names in early September 2010. And the Census partnered with the Encyclopedia of Life, an online reference source and database, to offer a Web page with vetted content for every marine species. Such pages, infinitely expansible, now cover more than 80,000 marine species. Neither of these online resources existed in 2000.

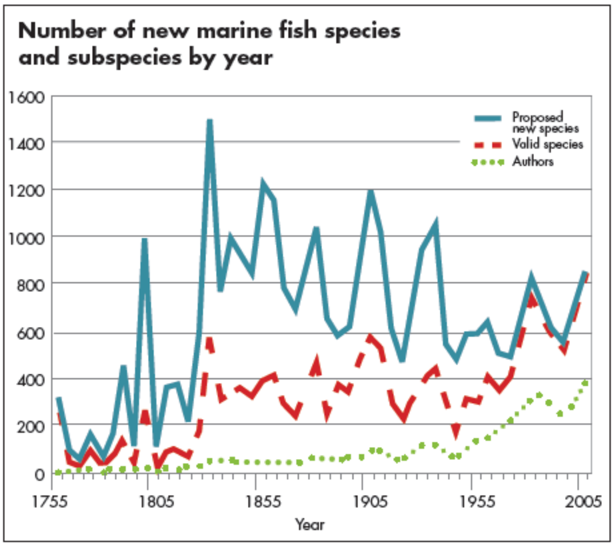
The continuing encounters with new species make it difficult to identify a single Age of Discovery for marine life. A timeline for marine fishes, probably the most studied sea life, shows at least eight peaks of discovery during the past 300 years. Peaks associate with scientific revolutions such as Linnaeus' binomial system for classifying species, great expeditions, heroic careers of individual experts, and technological advances that open new areas for exploration, including deep and cold regions. Increasingly aided by molecular biology and genetics, taxonomists are describing new marine species of fish alone at a rate reaching about 150 per year. Clearly the Age of Discovery continues for marine life, even for fishes, and diversity measured by the number of known species is expanding rather than shrinking.

Indeed, the total yearly addition to the number of all marine species has averaged about 1,650 since the Census began in the year 2000. While crustaceans (452 per year) and mollusks (379 per year) lead the way, the known sponges and echinoderms have been accumulating at yearly rates of 59 and 30, respectively. The best expert estimate of known marine species has risen from 230,000 early in the Census to at least 244,000 in 2010. Over the next few years, as old records are sorted out and new species described, the World Register should reach 250,000 kinds of marine life that have earned the rank of species.

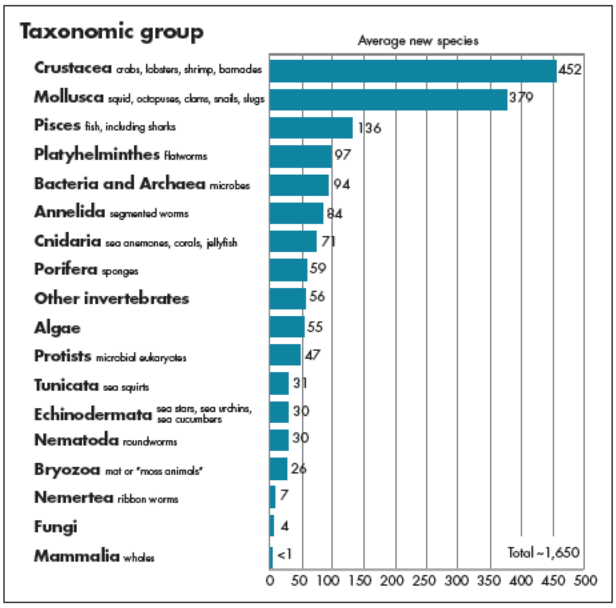
An optimist expects that eventually the total of all species will be found, and an extrapolation of the accumulating list of species holds a clue to what that total species and diversity will be. About 36,000 species of all kinds live in the well-explored European waters, and Census scientists anticipate that more than 40,000 marine European species exist, an addition of 10 percent. Because European waters are probably the world's best known, the proportion of species yet to be discovered may be higher elsewhere. In the Arctic, expected numbers of mollusk, arthropod, and echinoderm species exceed the present numbers by about 40 percent. The accumulating number of valid fish species in the oceans reached 16,754 in February 2010, leaving an estimated 5,000 more to be discovered.

Census researchers tried statistical methods to estimate how many forms of marine life remain to be discovered. Alas, or perhaps wonderfully, the eventual number remains unknown. The upward curve of accumulation of new species for most taxa and regions has yet to bend enough to calculate a firm plateau. Australian experts judged that the 33,000 known species in Australian waters amount to only 10–20 percent of estimated total species. Finding 1,200 species of crabs, about 7 percent of the total known global list of the group, in a few square meters of a single coral reef leads to speculation that reefs alone may provide habitat for 1 million to 2 million marine species.

When the Census began, its founders estimated that 1 million to 10 million marine species might exist. Expert judgment of Census scientists examining knowledge by region and taxa affirms that at least 1 million species of marine life likely exist, and thus at least three species



11. People often feel that everything must already be known, as discoveries grow and libraries accumulate. The continuing discovery of new fish species (and subspecies) demonstrates that the Age of Discovery is not over. The smaller number of species validated than proposed as new species illustrates the thorough evaluation needed before a species is declared truly new. The rising number of authors of species descriptions reflects the growing interest in marine biodiversity. *Source: William N. Eschmeyer and colleagues, 2010.*



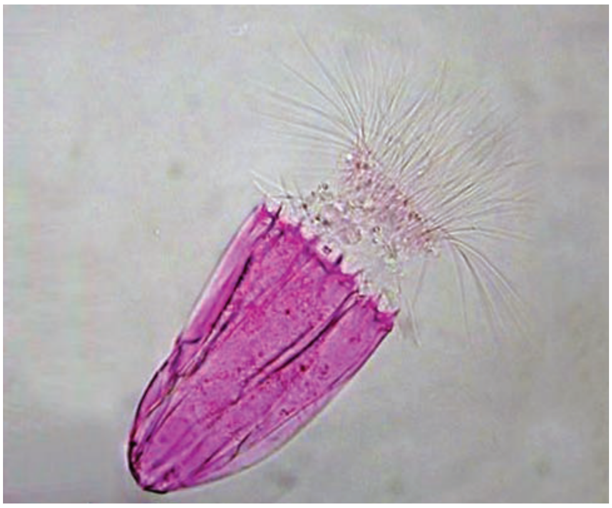
12. An average of about 1,650 new marine species were described each year between 2002 and 2006. Although the numbers of new Mollusca and Crustacea are highest, an average of 156 new species in the well-studied Pisces or fish group astonishes even Census researchers. Census researchers both collected specimens that might be new species and helped collate data worldwide about newly described marine species, including many described from specimens collected before the Census began or on expeditions not flying the Census flag. *Source: Philippe Bouchet and Benoit Fontaine.*

remain to be discovered for each already known. No firm basis exists for an estimate of the upper bound.

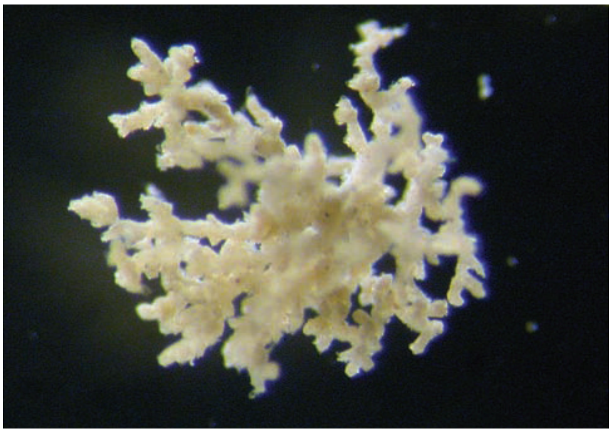
While species are the currency of diversity for animals, plants, and fungi, for most microbes or microorganisms we must speak of kinds or, more technically, phylotypes. Marine microbes include protists, bacteria, and archaea. Like the cells of animals and plants, the cells of protists contain a nucleus, and protists thus belong to the eukaryotes, one of the three basic domains of life. Protists span animal-like protozoa and plant-like algae, and for most protists, we may speak of species. The other two basic domains of life, the bacteria and the archaea, together form the grouping of the prokaryotes. Unlike cells of animals and other eukaryotes, bacterial and archaeal cells do not contain a nucleus.

Microbial cells in the oceans' water column number roughly 100 x 1 billion x 1 billion x 1 billion (10 to the 29th power) and collectively weigh the equivalent of 240 billion African elephants, or 35 elephants of marine microbes per person living on Earth. Although they constitute up to 90 percent of all ocean biomass, most kinds of marine microbes remained hidden until technological marvels, especially fast extraction and sequencing of DNA from large numbers of specimens, revealed their diversity. Even short snippets of DNA can often identify kinds of microbes as well as species of animals and plants. Genetic analysis for identifying plant and animal species is customarily called barcoding because of its analogy to the scannable numbers identifying merchandise in shops. The analogous exercise for microbes is referred to as phylotyping because it relies upon gene sequences that tell about phylogeny or evolutionary relationships to other organisms. From more than 1,200 sites worldwide, Census scientists assembled 18 million DNA sequences of microbial life spanning more than 100 major phyla. Revelations about the microbial world within the single decade of the Census have multiplied estimates of diversity up to 100 times as many microbial genera as previously thought. A single liter of seawater can contain more than 38,000 kinds of bacteria; a gram of sand, between 5,000 and 19,000. Within a particular range of body sizes studied by the Census, 20 million or more types of microbes are likely to exist. Encompassing a wider span of sizes and including parasites and all the microbes that live within marine animals—in the gut of a fish or jelly, for example—up to 1 billion kinds of marine microbes may live in the oceans. Between 100 and 1,000 kinds of microbes may exist for each larger marine species.

The continually rising number of known kinds of life reinforces the conclusion that the Age of Discovery has not ended. Opportunities abound to discover marine species and kinds of marine microbes. We now share some recent discoveries, beginning with a surprise from the Mediterranean, illustrating that the qualities as well as numbers and quantities of biodiversity matter. In the deep Mediterranean, scientists encountered three new species from a little-known group called loriciferans that dwell in seafloor sediment and spend their whole life cycle without oxygen. These loriciferans are the first animals known to thrive without oxygen. They may resemble life forms that thrived during Earth's early history, before oxygen came to abound in the atmosphere and oceans.



13. Anaerobic animals living without oxygen have been imagined by science fiction writers but were not proved to exist on Earth until 2010. In the deep Mediterranean, a Census team found and added three new species to the few known species of the group called loriciferans. Unknown until the 1980s, loriciferans can live their entire lives hidden in sediment on the seafloor without oxygen. The *Nanaloricus cinzia* grows to about 0.3 millimeter long and 0.1 millimeter wide, comparable to the head of a pin. *Image: Roberto Danovaro*



14. The foraminiferan-like protist called Komokiacea were unknown in the deep Southern Ocean. Census explorers uncovered 50 species there, of which 35 were unknown anywhere. The snowflake-like creature in the photograph measures a few millimeters, the size of a flea, and its shell made of sediment grains lends the light beige color. *Image: Andrew J. Gooday*

Like European waters, the Great Barrier Reef and Ningaloo Reef off Australia are much visited. Nevertheless, when Census scientists explored the two locales, they estimated between one-third and one-half of the hundreds of soft corals were new species. Just 22 small heads of dead coral from the Central Pacific contained about 30 percent of the crab diversity of all Europe-

15. This remarkable red worm, between 20 and 30 centimeters long, discovered by scientists investigating the Mid-Atlantic Ridge turns out to belong to a completely new family. In fact, it is not a worm, as they initially thought, but an "enteropneust" that has more in common with vertebrates than with worms. *Image: David Shale*

16. In the inhospitable environment on a vent in the southeast Pacific near Easter Island, Census explorers discovered the yeti crab, *Kiwa hirsuta*. Given a species name for its hirsute appearance, its white, hairy look has prompted the nickname yeti for the abominable snowman, or yeti. The remarkable crab belongs to a new species and new genus and family, too. *Image: Cindy Lee Van Dover*

an seas; nearly half of the species, recognized by DNA barcoding, were found just once and over three-quarters of the species were found in just one location.

To learn what new creatures colonize coral reefs, Census scientists developed Autonomous Reef Monitoring Structures (ARMS). Built of layered plastic, ARMS resemble empty dollhouses and mimic the "nooks and crannies" of a natural reef. When creatures drifted or moved into ARMS on the French Frigate Shoals near Hawaii and scores of other sites, researchers could perform standard surveys contributing to a global picture of reef biodiversity.

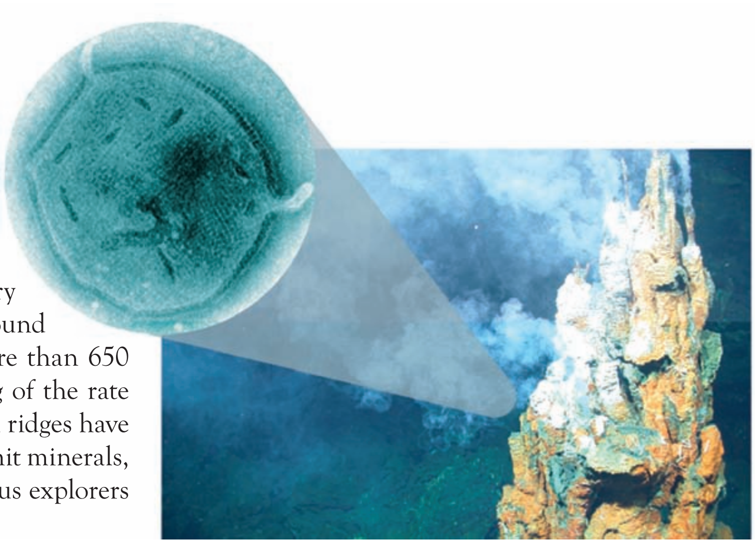
In less familiar waters, unknown species of course also abound. A survey in the Southern Ocean around Antarctica multiplied the number of Antarctic gelatinous zooplankton two to three times. Expense has discouraged sampling, especially in the Southern Ocean below 1,000 meters. During the International Polar Year (2007–2009), however, Census expeditions sampled the abyss, finding more than 700 likely new species among the 1,400 species of invertebrates they sampled. For example, although the protists called Komokiacea were not known to live in the Southern Ocean deep sea, now 50 species are reported, of which 35 were unknown species. Census explorers even found marine life photosynthesizing in the dim light under ice.

In the Ryukyu Trench near Japan, deep-ocean explorers photographed the deepest comb jelly ever recorded. It was attached to the bottom at 6,000 meters below sea level, about two-thirds the height of Mt. Everest (8,848 meters). Even in the well-studied Gulf of Maine, just a few samples in one basin revealed numerous new regional occurrences of species, and expeditions to the less-explored areas such as the slope and seamounts nearest to the Gulf uncovered new species.

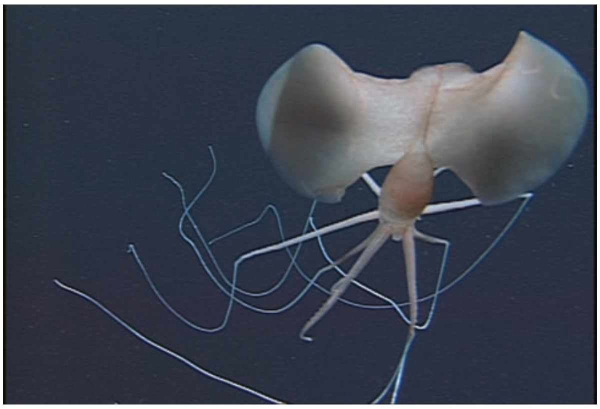
One Census investigation lowered rather than raised diversity, in this case, affecting the diversity of fishes. Because an animal may change shape as it passes through stages of life, the young and old may be mistaken as different species. But its genes will not change, and DNA sequences can reveal that the two stages are the same species. Previously, the alien-like Mirapinnidae (tapetails), Megalomycteridae (bignose fishes), and Cetomimidae (whalefishes) constituted three different families in taxonomy based on their appearance and behavior. Census investigations aided by DNA showed, however, that species assigned to those three families were in fact the larvae, males, and females of one single family, the Cetomimidae.

Census investigators, in a sense, compensated for this "loss" of diversity that existed only because of a taxonomic misunderstanding by discovering many new species, one of them a photogenic and authentic new crab in an inhospitable place, an underwater hydrothermal vent. Hydrothermal vents, some called black smokers, occur along ridges where tectonic plates pulling away from each other make new rock. Cold seawater circulates down through cracks between two plates and heats up as it passes through hot rock. The hot solutions carrying minerals and sulfides emanate from the vents and fuel life in extreme conditions and without photosynthesis. On a vent in the southeast Pacific near Easter Island, Chile, Census explorers discovered the yeti crab, *Kiwa hirsuta*, which is not only a hairy new species, but also a new genus and a new family. Other Census scientists have fully cataloged yeti and its known kin among the squat lobsters in oceans worldwide.

For sports, books of records compile extremes, such as fastest sprint or fastest pitch. The Census established records. The records, beyond attracting the eye, establish the span of marine diversity. Census prospectors of vents located the deepest (5,000 meters), hottest (407°C), northernmost (73° N, Arctic), and southernmost (60° S, Antarctic) “black smoker” hydrothermal vents known so far. Since the discovery of the first one in 1977, scientists have found about 1,000 hot vents and described more than 650 new species from them with no lessening of the rate of discovery. Only 15–20 percent of ocean ridges have been surveyed. Cold vents or seeps also emit minerals, methane, and sulfides, but are cool. Census explorers found 600 new species around seeps.



17. This newly described microbe, a thermoacidophilic archaeon found in a hydrothermal vent deposit from the Eastern Lau Spreading Center in the South Pacific near Fiji, exemplifies the rare biosphere. Wherever Census researchers looked, they found many species in a sample represented by less than one in 10,000 of all individuals, including those that occurred only once. *Microbe image: Anna-Louise Reysenbach and colleagues, 2006. Vent image: Anna-Louise Reysenbach*



18. In waters deeper than 1,000 meters, scientists found a group of large, unusual squids up to 7 meters long and waving large, long fins. They constitute a new family Magnapinnidae, aptly called bigfin squids. *Image: © Monterey Bay Aquarium Research Institute*

Biggest also qualifies as a record and extends diversity. A new giant species of spiny lobster, *Panulirus barbarae,* found off Madagascar weighs 4 kilograms and its main body extends 50 centimeters. Census expeditions found frequent gigantism in Antarctic waters. They collected huge scaly worms, giant crustaceans, sea stars, and sea spiders as big as dinner plates, testifying to longevity in cold conditions where slow growth prevails. Giant *Macroptychaster* sea stars grow up to 60 centimeters across.

Census scientists described large, unusual squids that had recently been discovered around the world in waters deeper than 1,000 meters. Up to 7 meters long, these squids have large fins. Their long, thin arms and tentacles have a strange elbow-like bend near the body. Since their discovery, scientists have found that these squids are adults of the newly described family Magnapinnidae, or bigfin squids.

Just as the too-far or too-deep are rich in new kinds, so too are the too-tiny to see. During an 11-month study in 2007, scientists sequenced the genes of more than 180,000 specimens from the western English Channel alone. The rare was common. One in every 25 readings yielded a new genus of bacteria (7,000 genera in all), quantitatively demonstrating that humans know less about the small than about the large. Many rare species in a sample contradict the generality of a few species predominating. Wherever Census researchers looked, they found many kinds of microbes in a sample represented by less than one in 10,000 of all individuals, including individuals that occur only once. They hypothesized that many kinds, now rare, could become dominant if environmental changes favor them.

Researchers found some marine microbes are everywhere, while others have limited distributions. The rare make up most of the microbial diversity in the oceans. Indeed, rare is common not only for marine microbes but for many taxa and regions.

Rescuing marine life from the category of extinct stands high among the gratifying increases of diversity encountered by Census scientists. They confirmed a contemporary Jurassic “shrimp” thought extinct 50 million years ago in Australian waters. As a record of antiquity, *Neoglyphea neocaledonica,* found on an underwater peak in the Coral Sea, ranks as one of the oldest marine organisms discovered by Census scientists, followed closely by a living fossil found in the Caribbean. *Pholadomya candida* is the only known remaining species of a genus of deep-water clams that flourished worldwide for more than 100 million years from Triassic to Cretaceous times (200 million to 65 million years ago). Thought since the 1800s to be extinct, this living fossil was found at 3 meters depth along Colombia’s Caribbean coast. The discovery also confirmed that the clam lives in shallow water, feeds by filtering suspended material rather than by trapping bottom detritus as previously thought, and provides the opportunity for genetic sequencing of an ancient lineage of bivalves to learn its evolution.

Lifespan as well as antiquity distinguish species. In the Northeast Atlantic, Census scientists discovered a new species of oyster, *Neopycnodonte zibrowii,* that forms reefs on deep cliff sides. Radiocarbon dating revealed that individuals reach 100 to 500 years

19. Species thought to be extinct have been rediscovered. For example, Census scientists found a Jurassic shrimp, *Neoglyphea neocaledonica* (left) thought to have become extinct 50 million years ago, and they also encountered a living Caribbean fossil, *Pholadomya candida* (right), the only remaining species of a genus of deep-water clams that flourished worldwide for more than 100 million years and was thought during the 1800s to have vanished long ago. *Shrimp image: Bertrand Richer de Forges and Joelle Lai. Clam image: Juan Manuel Díaz*

20. Sampling near the shore of the Aleutian Islands (Alaska, USA) in 2008 uncovered a new species of large brown seaweed, the Golden V kelp, *Aureophycus aleuticus,* distinct enough to be assigned to a new genus. This kelp with characteristic V-shaped blades, or "leaves," can grow as long as 3 meters. Even the relatively well known nearshore environment still harbors unknown species. *Image: Max K. Hoberg*

of age, placing them among the longest-lived mollusks yet known. For even more astounding longevity, Census takers at cold seeps found straw-like tube worms, *Escarpia laminata,* a meter long at the sunless seafloor with an estimated age of 600 years.

Large and conspicuous species in relatively well known shallow waters still await discovery. Sampling in the Aleutian Islands (Alaska, USA) in 2008 revealed a new species of large brown seaweed, the Golden V kelp, *Aureophycus aleuticus,* distinct enough to be assigned to a new genus.

Beyond colorful examples of diversity found and refound, Census work—especially the decade-long compilation of occurrence records for marine species in OBIS—allows mapping of the levels of biodiversity in different regions of the oceans and for different taxa, and then analysis of which environments favor diversity. Two major patterns emerged from a global study of 13 taxa from zooplankton to mammals: diversity in the open oceans peaked in mid-latitude or in subtropical "strips" in all oceans, while coastal species were most diverse in tropical areas such as Indonesia, southeast Asia, and the Philippines. Sea surface temperature was the only environmental predictor highly related to diversity across all 13 taxa. An unprecedented review of all known marine biodiversity in 25 regions confirmed the coastal pattern.

While the Census firmly established the major patterns, exceptions are the rule. Some locations with temperatures near freezing had higher diversity than some locations with tropical waters. And some taxa do not always follow the general latitudinal trend of highest diversity in tropical regions. Along rocky shores, echinoderms and gastropods display regional hot spots rather than continuous gradients in diversity, while some seaweeds (macroalgae) peak in diversity (and biomass) at higher latitudes. Much deeper, along the continental margin sloping from the shelf to the abyssal plain, the diversity of bottom dwellers peaks at mid-slope between 2,000 and 3,000 meters deep. Here depth matters more than latitude.

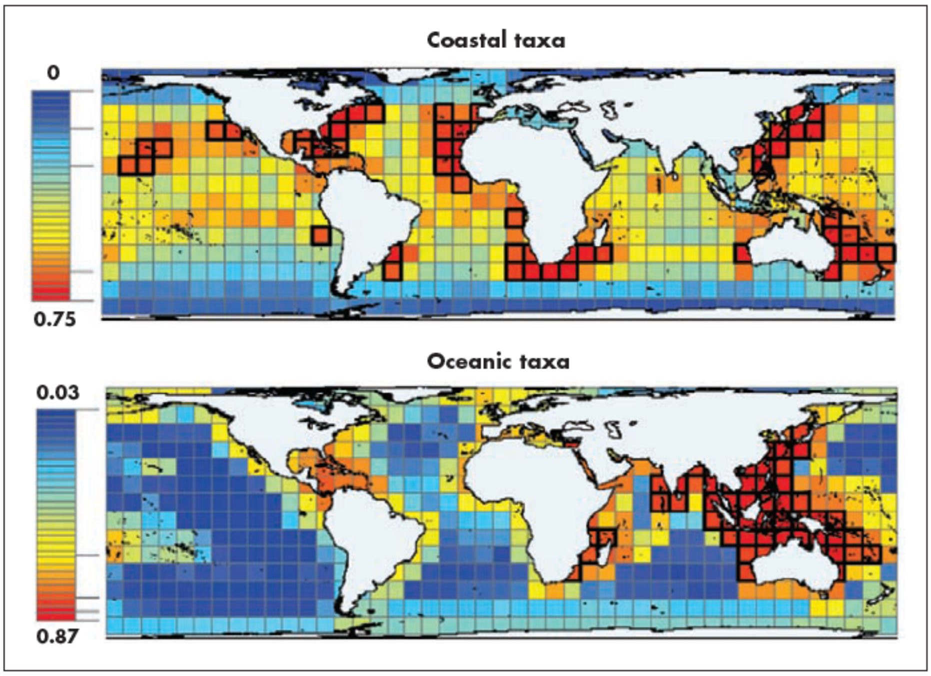
The Census database facilitates creation of comprehensive lists of known species (excluding most microbes) for all regions, whether defined by politics, economics, or geography. The set of studies involving 25 regions extending from Australia, China, and India to the Caribbean, Mediterranean, and Antarctica yielded species lists ranging between about 3,000 in the Canadian Arctic and 4,000 in the Baltic to about 33,000 in species-rich regions such as Australia and Japan. The median region had about 10,000 known species. Crustaceans, mollusks, and fishes are the most numerous in this array and comprise about half of known species diversity.

Census scientists also inventoried astonishing diversity of deep-sea species that have never experienced sunlight. Revealed by deep-towed cameras, autonomous free-swimming robots, and smart nets that open at programmed depths, animals known to thrive in an eternal watery darkness now number 17,650, a diverse collection of species ranging from crabs to shrimp to worms. Most have adapted to diets based on meager droppings from the sunlit layer above, but others live off bacteria that break down oil, sulfur compounds, and methane, the sunken bones of dead whales, and other unlikely foods.

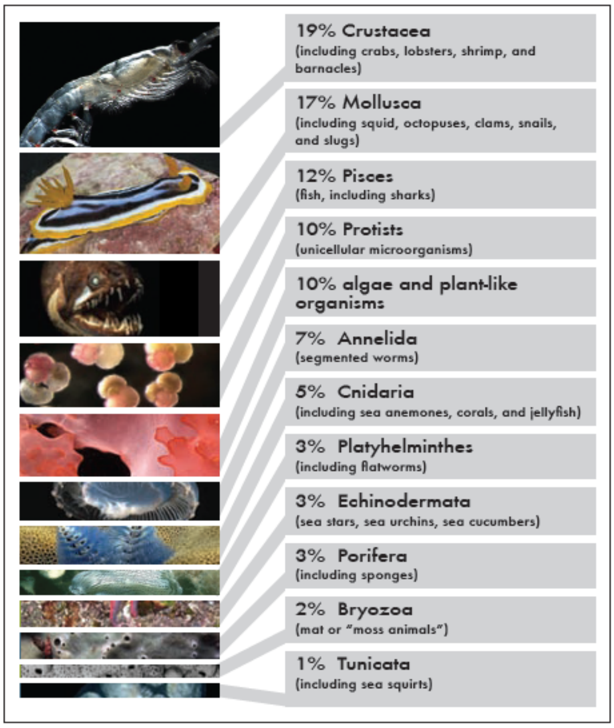
While opening opportunities for discovery, the accumulating mass of data sometimes overwhelms the mind's ability to comprehend. When considering 10,000 species or specimens at one time, DNA again comes in handy. DNA is fundamentally digital. Each nucleotide in a strand of DNA is a thymine, cytosine, adenine, or guanine and can be coded in zeros and ones, or as a colored stripe. A short "barcode" region distinguishes the species to which a specimen, including a fin or tentacle or other fragment of tissue, belongs. This technique was first published in 2003; the fast-growing reference library of marine species with barcodes now tops 35,000 covering more than 20 phyla.

Statistical analysis and graphics help extract meaning and pattern from diversity recorded in large databases. One approach that the Census applied innovatively converts nucleotide sequences of barcode regions into "indicator vectors" and then calculates how closely these vectors resemble each other from the distances among them. Displays of the correlation matrices, dubbed Klee diagrams for their resemblance to the geometric paintings of Paul Klee, graph the separation of species and the intensity of relations among species. A single Klee diagram illuminates the relations and descent of animals of more than 5,000 species in 8 widely separated groups. Colors and distances reveal discontinuities corresponding to species- and higher-level taxonomic divisions. Sponges and bony fishes have the least kinship among eight major phyla, while sea stars (echinoderms) and sharks (elasmobranchs) make surprising neighbors. Klee diagrams also offer colorful "fingerprints" characterizing the diversity of life in different bodies of water. For example, DNA samples from the zooplankton of the Sargasso Sea versus the Celebes Sea make distinct Klee patterns.

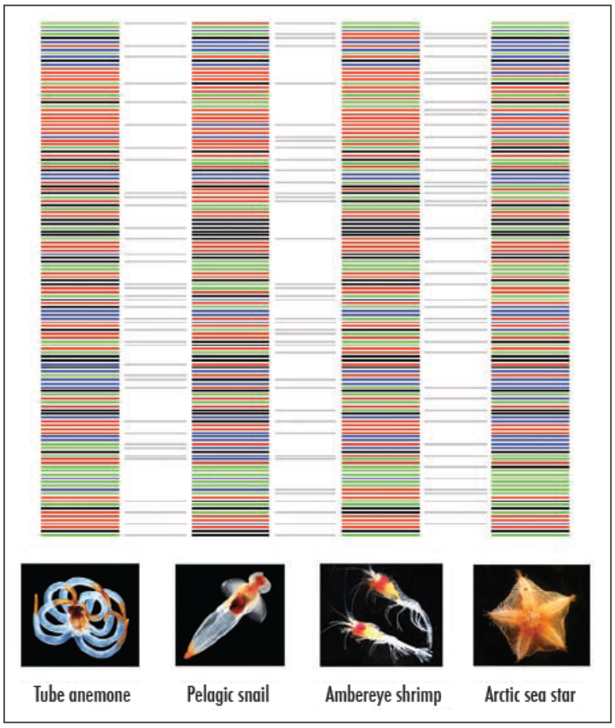
Exploring diversity in all realms of Planet Ocean, Census of Marine Life explorers newly observed millions of specimens. More than 1,200 of the collected specimens are now formally described as new species, while 5,000 more are probably new to science and awaiting description and addition to the marine catalog of diversity. Globally, the collective efforts of all marine biologists drawing on specimens collected over many decades are adding more than 1,600 marine species per year. Partnering with other groups and aggregating information, Census scientists affirmed the probable existence of about 250,000 named, known species and helped to make an authoritative, accessible list of these now approaching 200,000 and to develop Web pages for more than 80,000. They sequenced DNA identifiers for more than 35,000 species that make possible a compact new view of the relatedness of all marine life. Capturing DNA for tens of thousands of kinds of marine microbes, Census researchers estimated that up to a billion exist. While at least a million kinds of life earning the rank of species are estimated to live in the ocean, no firm basis exists for a range or upper limit. Of all the life that survives in the oceans, smaller forms appear to outnumber larger forms by 100 to 1,000 times. The oceans burgeon with discovered and undiscovered diversity.



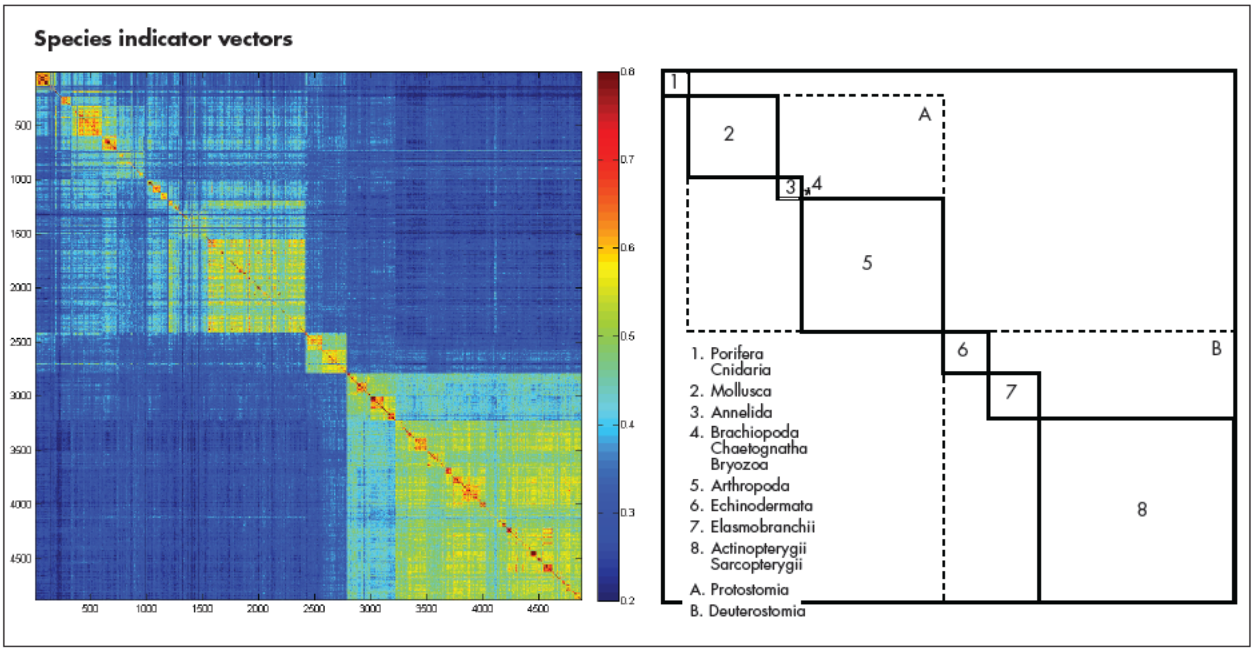
21. Records of 11,000 marine species from tiny zooplankton to sharks and whales assembled in the Ocean Biogeographic Information System of the Census revealed hot spots of species diversity. The diversity of coastal species such as corals and coastal fishes tended to peak around Southeast Asia, whereas the high diversity of open-ocean creatures such as tunas and whales spread more broadly across the mid-latitude oceans. Red indicates areas of high diversity. Horizontal tick marks to the right of the color ramps indicating quartiles of diversity show it takes more diversity in coastal regions to qualify for a high ranking. *Source: Derek P. Tittensor and colleagues, 2010*



22. A census of 25 key oceanic regions rests on information collected during past centuries plus descriptions of thousands of new species during the decade-long Census. Most of the species fall into a dozen groups, including many crustaceans and mollusks, fewer fishes, and only 2 percent other vertebrates. The scarce 2 percent of species that are well-known vertebrates such as whales, seals, and walruses compared with the 98 percent of other creatures in the Census reflects the great diversity of marine life hidden among the other creatures. The regional lists of species set a baseline for measuring changes that humanity and nature will cause. *Images: Russ Hopcroft, Gary Cranitch, Julian Finn, Larry Madin, John Huisman, Katrin Iken, Bernard Picton, and Piotr Kuklinski*



23. Genetic sequences from anemone (*Ceriantharia* sp.), snail (*Clione limacina*), shrimp (*Hymenodora glacialis*), and sea star (*Hymenaster pellucidus*) illustrate the analogy between a sequence of genetic units in the cells of a specimen and the barcodes on items for sale in a supermarket. Each of the four colors represents one of the four nucleotides—cytosine (blue), adenine (green), thymine (red), and guanine (black)—that compose DNA sequences. The gray lines between the colored bars signal genetic differences. The differences among barcodes enable the assignment of a specimen, even a fragment such as a fin or scale, to a species. Specimens of the same species will have identical or almost identical barcodes. *Barcodes: Mark Stoeckle. Images: Cheryl Clarke-Hopcroft, Russ Hopcroft, Bodil Bluhm, and Katrin Iken*



24. Klee diagrams, named for their analogy to the paintings of Paul Klee, display the genetic separation of species and the intensity of relations among species. Blocks of high correlation (red or yellow) on the diagonal reflect affinities within groups of species, corresponding to taxonomic divisions. Each species contributes a line, and a group of closely related species, such as fishes, becomes a group of lines that form a box. Klee diagrams illuminate broad patterns in the genetic structure of biodiversity. The color map depicts correlations for 5,000 marine species from 10 phyla. Elasmobranchii, Actinopterygii, and Sarcopterygii are respectively cartilaginous, ray-finned and lobe-finned taxa of fishes The correlations coalesce into a coherent picture of categories of marine life. *Image: Dirk Steinke*

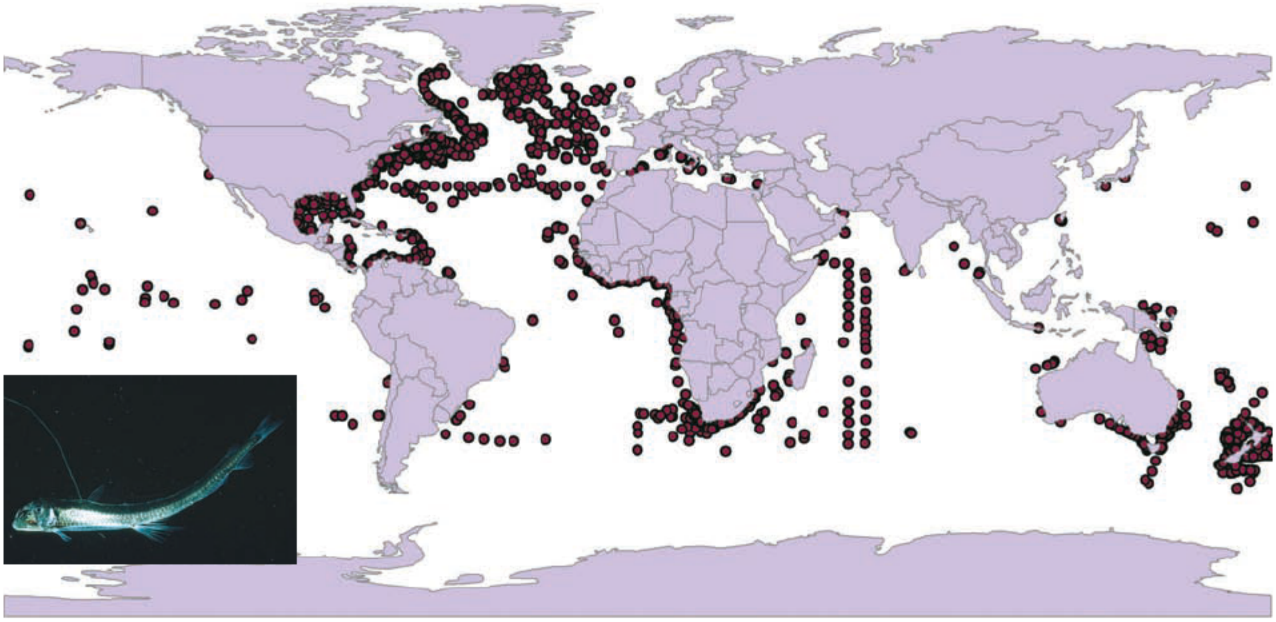
25. *Image: Bodil Bluhm*

DISTRIBUTION

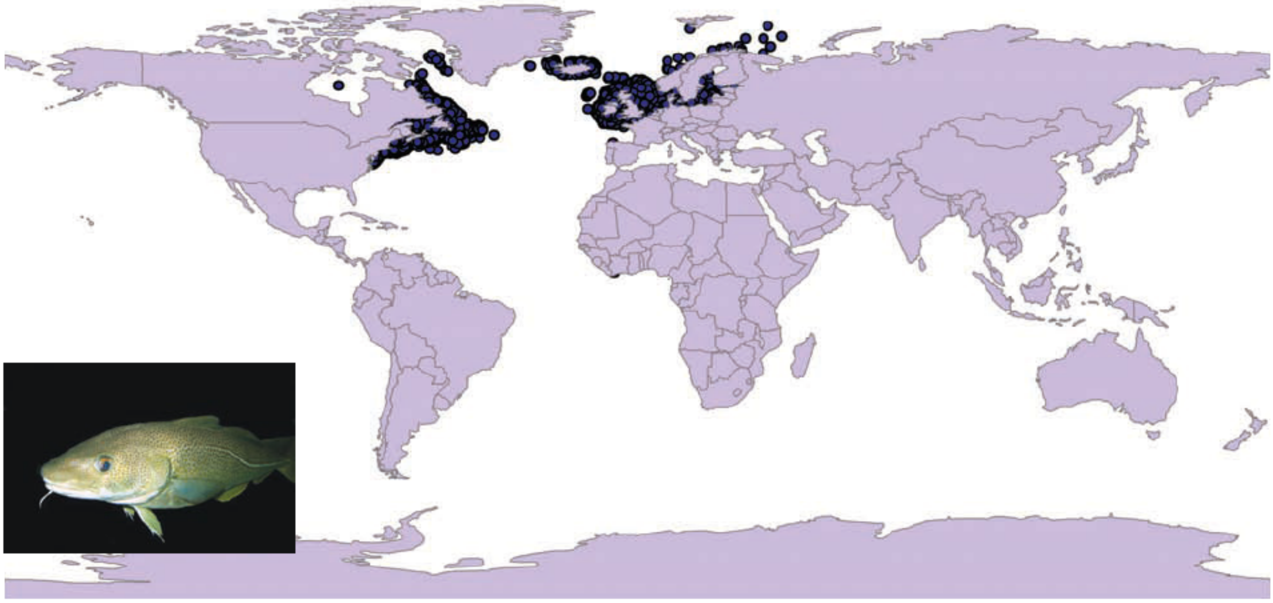
Beyond the kinds or species of life, a census must show the distribution, the addresses and travels, of individuals. Distribution displays where a species is born, eats, and breeds. Congregation shows where it meets its kind and mates. Routes of migration and travel trace the environments where a species prospers, ekes out a living, or merely survives. The distribution maps of a species identify the habitats that will nourish, stress, or starve it.

The millions of OBIS records assembled during the Census decade quickly display where species have been reported. Visiting www.iobis.org and entering the name of a species calls forth a global map of its distribution. Specifying either viperfish or *Chauliodus sloani*, for example, promptly displays its wide range. Entering the Atlantic cod, *Gadus morhua*, maps its narrower range.

Long before a species becomes extinct, circumstances may eliminate it from one of its habitats, an event that its distribution will reveal. Distribution will, of course, reveal elimination or change only if a baseline has been established. For the Gulf of Mexico, 140 taxonomic experts from 80 institutions and 15 countries associated with the Census established the baseline in a book that has been converted into a digital database (www.nbii.gov/portal/server.pt/community/gulf_of_mexico_biodiversity/1950). The data allow anyone to ask how many species of each taxonomic unit live in different sections of the Gulf of Mexico, at what depth, and in what substrate.



26. Entering the URL www.iobis.org accesses the tens of millions of what/where/when records assembled in the global marine life database OBIS. Among fish, the manylight viperfish, *Chauliodus sloani,* whose distribution is shown here in dark red, can be considered the Everyman of the deep ocean. Census data show the fish has been recorded in more than one-quarter of the world's marine waters.
Source: Ocean Biogeographic Information System. Image: Encyclopedia of Life

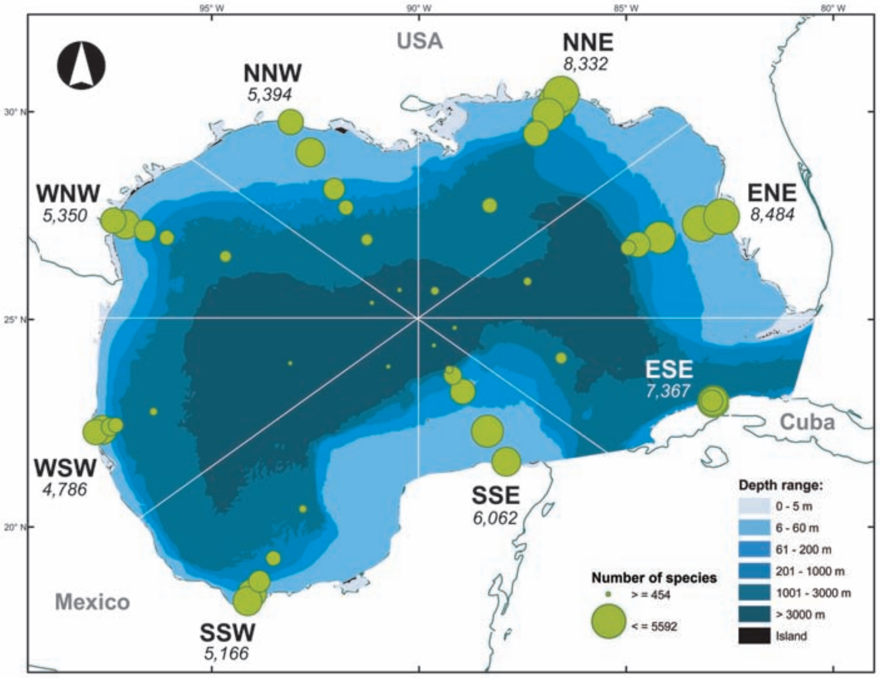


27. Specifying the Atlantic cod, *Gadus morhua,* produces a map of its range, restricted to the North Atlantic and nearby Arctic waters.
Source: Ocean Biogeographic Information System. Image: Encyclopedia of Life

The April 2010 explosion of the Deepwater Horizon rig spilled oil onto the coast, margin, and great depths in the north-northeast octant of the Gulf of Mexico. Decades of survey integrated in the new database set a baseline of 8,332 species in all depths of that octant. Including only major taxonomic units or taxa of animals at all depths in the region of the spill, there are 1,461 mollusks, 604 polychaetes, 1,503 crustaceans, 1,270 fishes, 4 sea turtles, 218 birds, and 29 marine mammal species. Although many species remain to be discovered in the Gulf, the database provides a baseline as of 2009 for assessing the effects of such events as the oil spill and the recovery following its cleanup. The baseline establishes the reference for future measurements.

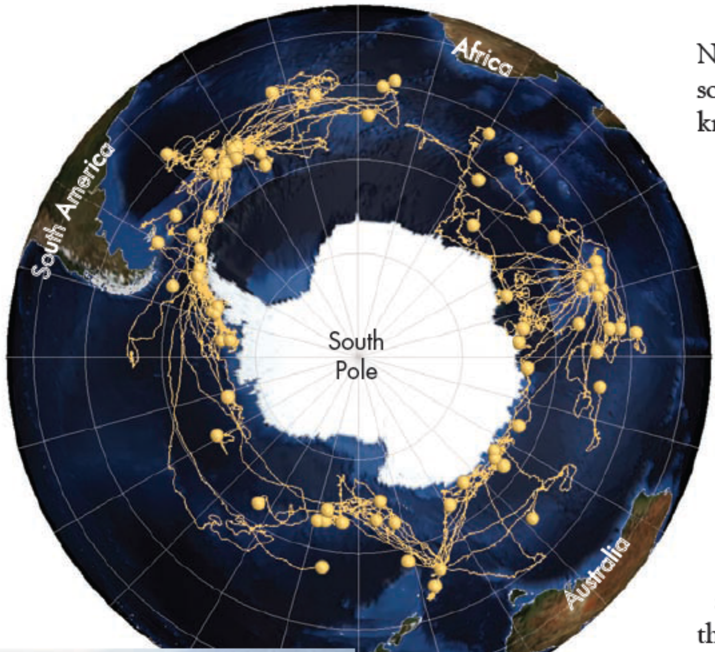
Where marine animals travel, as well as where they live, affects their success. Their travels set records. Sailfish, *Istiophorus albicans* and *Istiophorus platypterus,* swim fast sprints at 110 kilometers per hour. Atlantic bluefin tuna, *Thunnus thynnus,* migrate east to west and west to east across the North Atlantic about 6,000 kilometers between Europe and North America, and Pacific bluefin tuna, *Thunnus orientalis,* make multiple crossings of the Pacific. Equally impressive as marathon swimmers, humpback whales, *Megaptera novaeangliae,* complete annual north–south migrations of more than 8,000 kilometers. Circumnavigating the entire Pacific, a small seabird, sooty shearwater, *Puffinus griseus,* makes a 64,000-kilometer round trip from New Zealand to Japan to Alaska to Chile and back to the Southern Ocean. This trip, averaging about 40 kilometers per hour, marked the longest-ever electronically recorded migration.

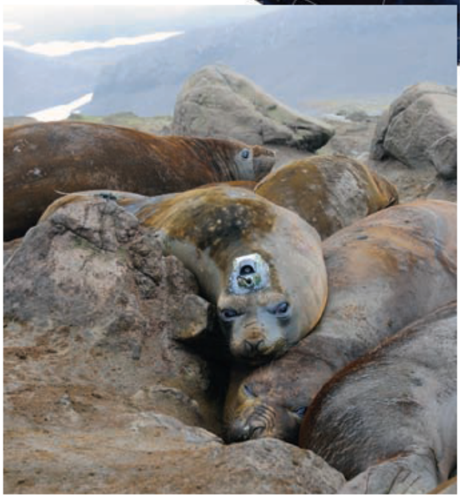
The trials of anadromous fishes as they ascend rivers from the sea for breeding and of their young as they migrate to the sea before returning to their native river exemplify the hazards of travel. Adults going upstream and the young passing down must surmount rapids and fish ladders, and then, escape predators and find food in the ocean. For decades, scientists attached small tags to fish, hoping someone would return them. Some tags were returned, many were lost, and none could tell where a fish had traveled.



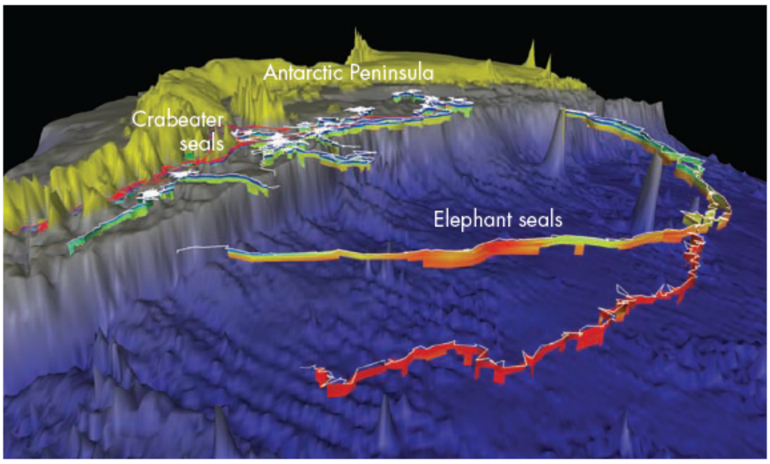
28. A map of marine life establishes a baseline for evaluating the outcome of an oil spill in the Gulf of Mexico. One hundred and forty taxonomic experts from 80 institutions and 15 countries associated with the Harte Research Institute, a Census affiliate, established the baseline of known species in the Gulf of Mexico in 2009 and made it available online shortly thereafter. The data answer graphically how many species of each taxonomic group live in different sections of the Gulf of Mexico, at what depth, and on what substrate. The new database sets a baseline of 8,332 species in the north-northeast sector of the Gulf, where the Deepwater Horizon rig tragedy occurred in 2010.
Image: Harte Research Institute

29. The continental-scale acoustic curtains arrayed by the Census tracked migrations of 18 species, including juvenile Chinook salmon, *Oncorhynchus tshawytscha,* thousands of kilometers along the Pacific coast of North America and in rivers, too. The red spots on the map indicate the curtains through which animals swim, signal their passage, and give clues where and how they survive in the oceans. The orange line shows migration of the salmon the size of a banana spanning 2,500 kilometers in three months. The acoustic curtains also revealed an unexpected, long migration of the threatened green sturgeon, *Acipenser medirostris,* along the continental shelf from U.S. to Canadian waters. A surprising group swam north for the winter. *Image: Pacific Ocean Shelf Tracking Project*





30. Biologging, the use of miniaturized electronic tags to track animals in the world, revealed unknown behaviors, movements, physiology, and environmental preferences of a variety of ocean animals. Biologging has shown that communities of southern elephant seals, *Mirounga leonina,* from different islands surround the harsh environment of Antarctica, demonstrating the principle that animals inhabit even the farthest reaches of the ocean. *Source: Southern Elephant Seals as Oceanographic Samplers (SEaOS) Image: Daniel Costa*



31. Carrying electronic tags that measure location, temperature, depth, and salinity and communicating with satellites as they swam and dove, more than 20 species became auxiliary oceanographers in the Census of Marine Life, reporting the environment that they experienced. The electronic tags on two elephant seals, *Mirounga leonina,* exploring seamounts down to 2,300 meters deep off the Western Antarctic Peninsula reported their paths, and the ribbons of colors on their paths show the temperature and depth measurements that they added to Census data. Seamounts seem to be refueling stations for migratory species. Crabeater seals, *Lobodon carcinophagus,* made tracks closer to shore. *Image: Daniel Costa*

Now acoustics, electronics, and satellites have shifted some of what was unknowable to the provinces of unknown and even known.

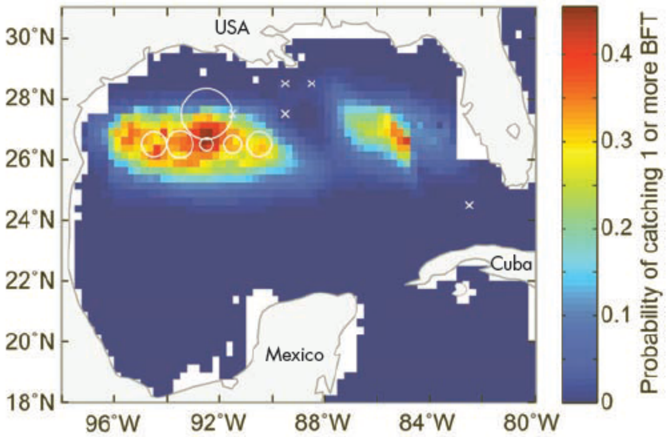
The Census arrayed curtains of acoustic receivers on the seabed to track 18 species of acoustically tagged fish more than 3,000 kilometers from California to Alaska, year-round. The searchable public database from the network now contains more than 9 million detections from more than 16,000 tagged animals of all 18 species. The exercise demonstrated that miniature sonic tags and the curtains listening for them could follow the travels of even small animals, such as a salmon the size of a banana, over long distances and through dissimilar waters. Among the many tracked, two juvenile Chinook salmon, *Oncorhynchus tshawytscha,* survived a 2,500-kilometer trip that took more than three months—from the Rocky Mountain headwaters of the Columbia River to the Pacific Ocean and north along the continental shelf of Canada's British Columbia to the coast of Alaska. The research learned about life cycles, movement, and behavior from the point of view of the fish and showed how the mortality of young salmon is apportioned among the habitats they encounter during their early life.

Where and why animals die in the oceans is one of the master questions for a census, and especially challenging for those that migrate long distances. A survey of 3,500 juvenile salmon suggests that only about one of six survives its first month in the ocean, while between 1/25 and 1/100 will survive two years and return to their native river to spawn. Another way to consider the early marine survival of migrating steelhead, *Oncorhynchus mykiss,* and sockeye salmon, *Oncorhynchus nerka,* is to note that survival per week of travel of a group of fish tracked by the Census ranged between about 40 percent and 80 percent.

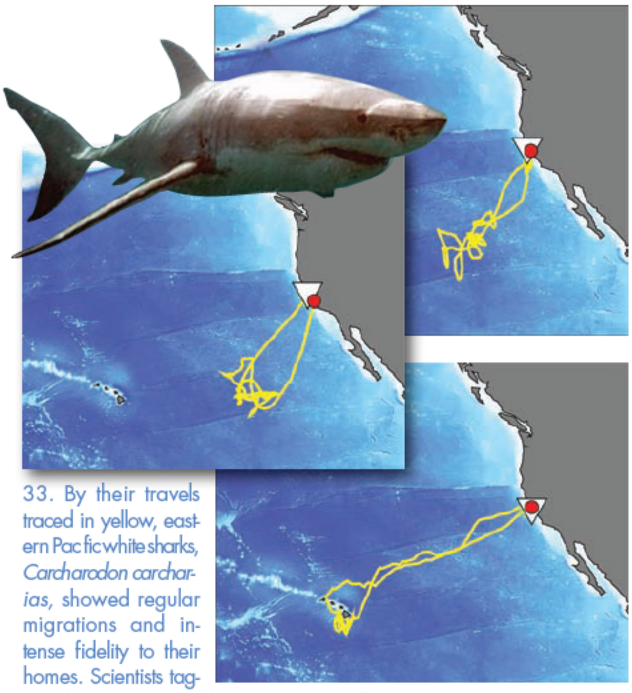
For species less familiar than Pacific salmon, just knowing where and when they travel expands knowledge. In the case of the threatened green sturgeon, *Acipenser medirostris,* the receiver array revealed annual migration along the continental shelf from U.S. to Canadian waters. A surprising group of sturgeon swam north for the winter. Frequent detection of tagged sturgeon allowed estimating an annual survival of 83 percent.

Tracking marine life in the open ocean requires a different method than tracking them through rivers and along narrow and shallow continental shelves suitable for present curtains of listening devices. Satellites now must communicate with the animal's sensors from afar. The Census researchers devised tags to measure water temperature, light, depth, and salinity around a tagged animal and other tags to sense its pulse and body temperature. Light and pressure sensors on tags estimated chlorophyll, and thus phytoplankton abundance and potential productivity of other life. The light sensors allow calculation of longitude and latitude from the hour of sunrise and sunset. So-called biologging now brings together behavior, physiology, and oceanography to show how an animal uses its environment. The animals show us their blue highways and why the highways follow the routes they do.

To record a tuna's location, depth, and body temperature as well as the temperature and light in breeding waters in the Gulf of Mexico, Census scientists tagged 28 Atlantic bluefin tuna, *Thunnus thynnus*, some weighing up to 300 kilograms. The spawning stock for these bluefin has dropped 90 percent in 30 years. Most of the tagged tuna swam near the Florida Straits and in the western Gulf where the continental shelf is steep and surface temperatures are 24 to 27 degrees Celsius.



32. Conservation requires knowledge of mating areas and nurseries. Spawning Atlantic bluefin tuna (BFT), *Thunnus thynnus,* swim along the slopes in the western and eastern Gulf of Mexico. Red and blue colors on the map indicate high and low probabilities of encountering a bluefin when fishing with longlines in the Gulf of Mexico during 2002 and 2005. A long line caught no tuna at the X's on the map. The narrow band of 24° to 27° Celsius where most tuna swam prompts the speculation that a small change in temperature would change the timing and location of spawning. *Source: Steven L. H. Teo and Barbara A. Block, 2010*



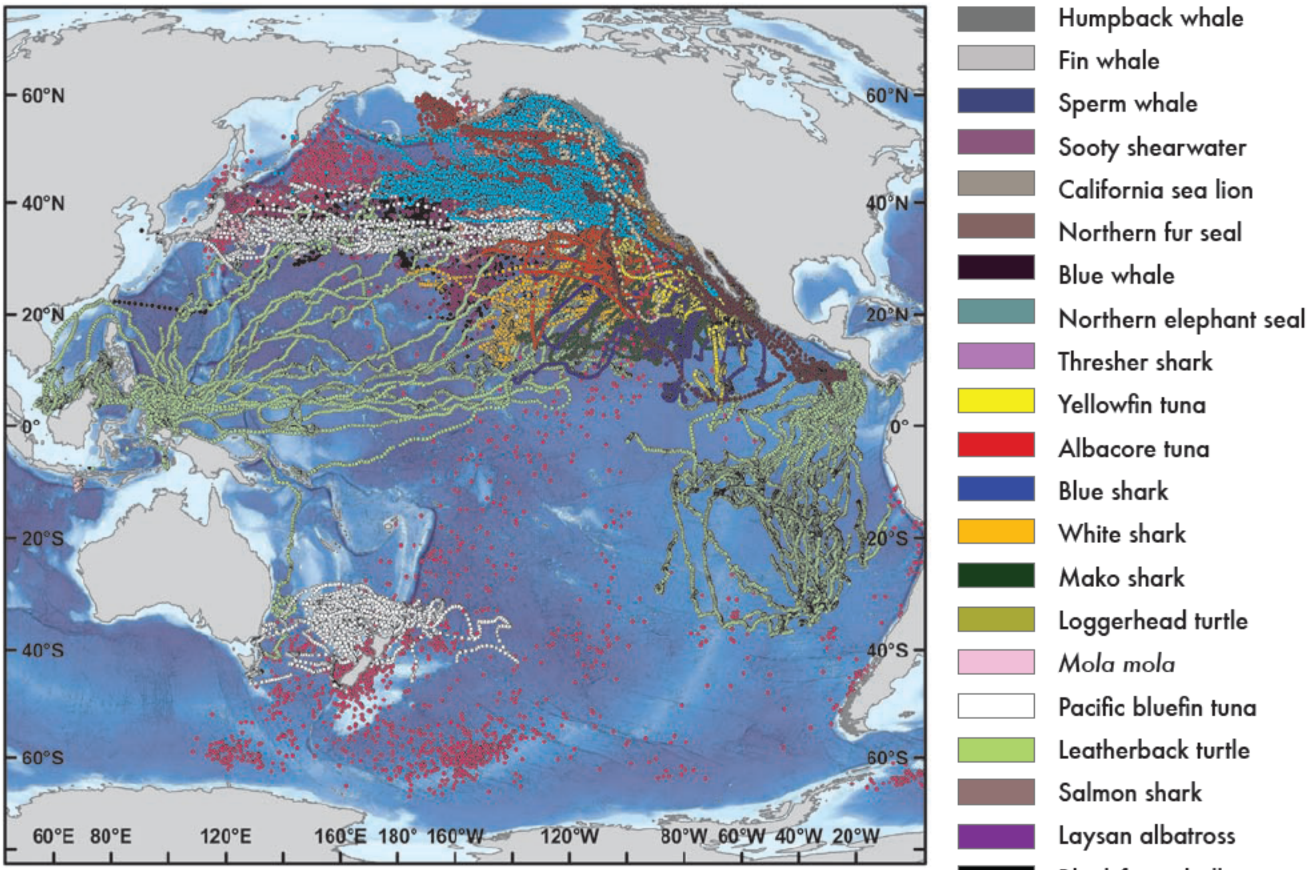
33. By their travels traced in yellow, eastern Pacfic white sharks, *Carcharodon carcharias,* showed regular migrations and intense fidelity to their homes. Scientists tagged them in the triangles, and their satellite tags later popped up in the red circles on the central California shelf. One shark swam to Hawaii, two circled in the White Shark Café halfway to Hawaii. Genetic analysis shows that distinct populations persistently return to the same network of coastal places after oceanic migrations.
Source: Salvador Jorgensen and colleagues, 2010

Combining satellite tagging, passive acoustic monitoring, and genetics, Census trackers found that white sharks, *Carcharodon carcharias,* follow a regular migratory cycle in the eastern Pacific. The sharks migrated from coastal California to a meeting place the Census dubbed the White Shark Café. Visiting the café between Baja California and Hawaii and traveling back, they demonstrated their homing instincts. After journeys of more than 200 days extending to 5,000 kilometers offshore, each shark would return to its precise California address in water about 30 meters deep.

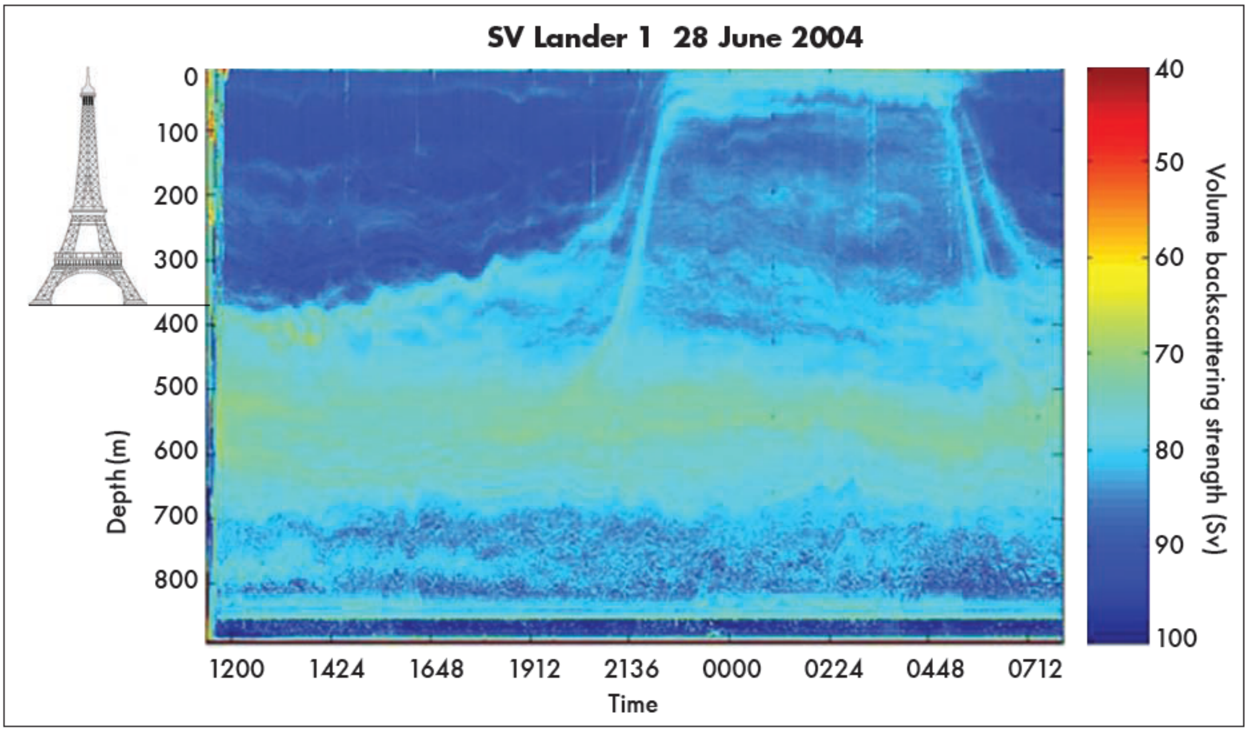
Satellite tracking of leatherback turtles, *Dermochelys coriacea,* in the eastern Pacific during 2004–2007 recorded 12,095 days of travel. During the past two decades, collection of eggs and catching turtles while fishing for other targets has depleted many populations of these turtles by 90 percent. Census tracking located their habitat and migration routes. Combined oceanography and tracking defined the turtles' migration corridor from Costa Rica, across the equator, and into the South Pacific Gyre, a vast region with little food. Consequently, fisheries were closed during the migration, a beginning for conserving the turtles. Further, Census scientists located habitats of female leatherback turtles between nesting periods, when they are endangered by fisheries near the shore and by development on the shoreline. The nearby marine Caletas Wildlife Refuge and improved zoning within the Costa Rican exclusive economic zone are now protecting leatherbacks during this critical phase in their life cycle. The Great Turtle Race Web site created by the Census enabled people to follow the migration of individual turtles and encouraged them to support measures to conserve the animals.

Improved statistical methods pinpointed the locations of tagged animals so closely that other tools could identify behaviors of the animals as they experience their environment. The tools helped show, for example, that male and female grey seals use shelf regions of the northwest Atlantic differently and feed on predictable shallow banks that are restaurants for numerous species.

The sum of tagging and tracking data for a region paints an eye-opening picture of neighborhoods and seaways. While an ocean may look uniform and opaque from an airplane window, underneath the dark blue surface species of tuna and turtles, seals and whales, sharks and squid are each using specific habitats and connecting east and west, north and south, shallow and deep. Evidence from the North Pacific and from the Southern Ocean around Antarctica suggests that every



34. Reports from birds, fish, whales, and other animals carrying small tags reveal highways and neighborhoods of the vast Pacific. Census biologgers followed bluefin tuna, *Thunnus orientalis,* commuting between Japan and California and leatherback turtles, *Dermochelys coriacea,* between Borneo and Mexico. Traveling animals connect all the oceans. *Source: Tagging of Pacific Predators. Image: Blackwell Publishing Ltd.*



35. At dusk in June above the Mid-Atlantic Ridge, scientists encountered a rush hour when animals rise to the surface to feed, as if returning home for supper. Throughout the hours from noon on the left through the night to about 0800 hours on the right, an echo sounder reflected the presence in green of many animals between depths of 400 and 800 meters. During the night from 2100 to 0500 hours, the echoes shown by colors show the upward rush hour, even up to the surface. This daily vertical commute of about 400 meters exceeds the distance from bottom to top of the Eiffel Tower. Spectacular during the summer, the upward commute shrinks during autumn and almost disappears in winter.
Image: Patterns and Processes of the Ecosystems of the Northern Mid-Atlantic project

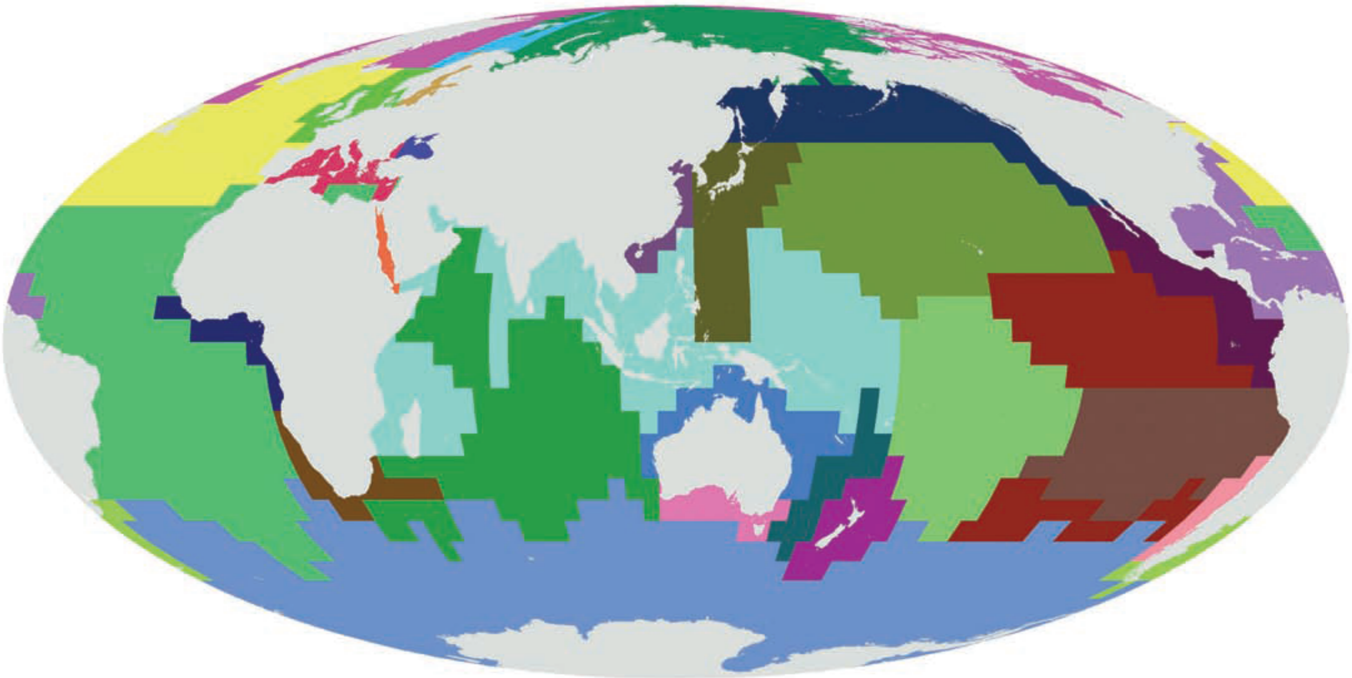
36. Image: Daniel Costa

neighborhood receives visitors from far away. And every species of tagged animal went to unexpected places and did unexpected things, such as white sharks visiting their café or Humboldt squid eating salmon.

In the three-dimensional ocean, living things travel vertically as well as horizontally across maps. Since the 1960s, cameras on animals have logged where they swim or dive. In the Census, tags attached to northern elephant seals, *Mirounga angustirostris,* followed their routine dives down to 600 meters and occasional ones to 1,550 meters. Species that breathe air at the surface often dive to dine. Seals and whales dive from the surface down hundreds or even thousands of meters to find prey with whistling and sonar.

Fishes as well as crustaceans and other invertebrates hide in the dark deep where predators cannot see them, but then surface at night to feed. For fishes and invertebrates, these vertical migrations create a dawn and dusk "rush hour," where predators and prey commute to and from their preferred deep locations. Some move up from 500- to 1,000-meter daytime depths, rising higher than elevators carry humans in the tallest skyscrapers.

Using new types of echo sounders that could sense events fully to the deep ocean floor as well as sonars that looked upward in deep water, the Census observed a summer rush hour when animals rise to the surface to feed as if returning home to supper. The echo sounder moored 1,000 meters below the water near the Mid-Atlantic Ridge recorded fishes and plankton rising about 400 meters at approximately 2100 hours to the zone where sunlight and photosynthesis had produced food. About 0600 hours, they descended to twilit water below.



37. Spanning microscopic plant-like organisms to whales, the Census produced the first all-taxon maps of global marine species using the distributions of more than 65,000 species from the Ocean Biogeographic Information System. Thirty marine biomes summarize the distributions of many species, each biome representing a region with a distinctive fauna and flora. *Image: Mark J. Costello*

Of course, swirling eddies, large and small, combine horizontal and vertical motion. In the mid-Atlantic, Census researchers found communities with scores of species structured by eddies a thousand meters deep and tens of kilometers in diameter. Large waves traveling deep within the ocean also shape the distribution of life. While a layer rich in life between 300 and 800 meters deep had been known since the 1950s, the Census added evidence of other, deeper layers, 1,500 and 2,300 meters down in the Atlantic.

A different question about distribution that has intrigued biologists for decades is whether some animals thrive in both polar regions. While we know that polar bears inhabit only the Arctic and penguins the Antarctic, biologists have wondered about bipolar mollusks, crustaceans, and fishes. Census researchers identified more than 300 species recorded in both Arctic and Antarctic regions. DNA tests, however, revealed considerable differences, and those showed that few, if any, species truly are bipolar.

Finally, "biogeography" summarizes the distribution of life, marine or terrestrial. Census researchers compared the distributions of 65,000 species of marine animals, plants, and protists to produce the first all-taxa map of global marine species diversity. These analyses distinguished 30 biogeographic regions worldwide.

Such classifications tend to represent the near-surface, which is richer in observations, better than the deep sea. Since the middle of the nineteenth century biologists have discovered 27 habitats from the edge of the continental shelf to the deep trenches, including such recently discovered habitats as whale falls, reefs of cold-water corals, and methane seeps. For most habitats, the global area is unknown or roughly estimated. On the global deep-sea floor, areas that have been carefully sampled are no larger than a few football fields. Nevertheless, with available information about species and the environmental context, researchers have recently offered a new geography for the deep water and deep-sea floor. Divided into four depth ranges, it describes 30 provinces in the water column and 38 for the seafloor, as well as 10 provinces for hydrothermal vents.

More than 100,000 seamounts, undersea mountains that do not rise high enough to be islands, interrupt the deep-sea floor. Because not all seamounts are the same, Census scientists set forth an objective classification. The investigators found previously unexplored seamount habitats, for example, areas dominated by brittlestars, that already bore trawl marks and lost fishing gear upon their first scientific discovery, complicating the attempts to assign seamounts to classes.

Deep or shallow, changes in ocean temperatures, currents, and chemistry would redistribute much marine life. Census researchers predict a decline in diversity in a tropical ocean that becomes warmer, and an increase of diversity at latitudes of about 50 to 70 degrees in both hemispheres.

Up, down, and sideways in the connected water of Planet Ocean, marine life travels in search of food and its own kind, without passports and encountering changing temperature, chemicals, and predators. Some swim, some drift, some stay buried in the mud or attached to a rock. Extreme is normal. No longer opaque, the ocean increasingly reveals its traffic patterns and neighborhoods.

38. *Image: François Sarano*

ABUNDANCE

After naming the kinds of marine life and charting their locations, a census must count or weigh their abundance. Rising abundance indicates a species' health, and declining abundance sends a warning long before the tragedy of its extinction. Counting or weighing the abundance of swimming and drifting life in the three dimensions of the interconnected global ocean confronted the Census with difficulties to overcome. Nevertheless with historical archives, calculation of primary production of food, and new technology to scan vast schools of fish, the Census did penetrate the boundary between unknown and known and occasionally jumped into the province of the formerly unknowable.

For a head start to detection of future trends, Census historians reached backward from the present with unearthed records of fossils, fish tales, and taxes on products made from sea life. In some regions, such as the Mediterranean, humans already removed consequential amounts of sea life 2,000 years ago. History shows people began catching marine life long ago, and their extractions were more widespread and affected a broader range of species than once thought.

Indeed, since prehistory, our ancestors collected mollusks for their meat and shells. The Census documented shell deposits, or middens, in the Americas, Africa, Europe, Japan, and Papua New Guinea. Studies of the queen conch, *Strombus gigas,* now a threatened species in the Caribbean, suggest depletion by intense Amerindian exploitation before 1492. From the sixteenth to the nineteenth centuries, the conch populations recovered to face a second depletion in the early 1980s.

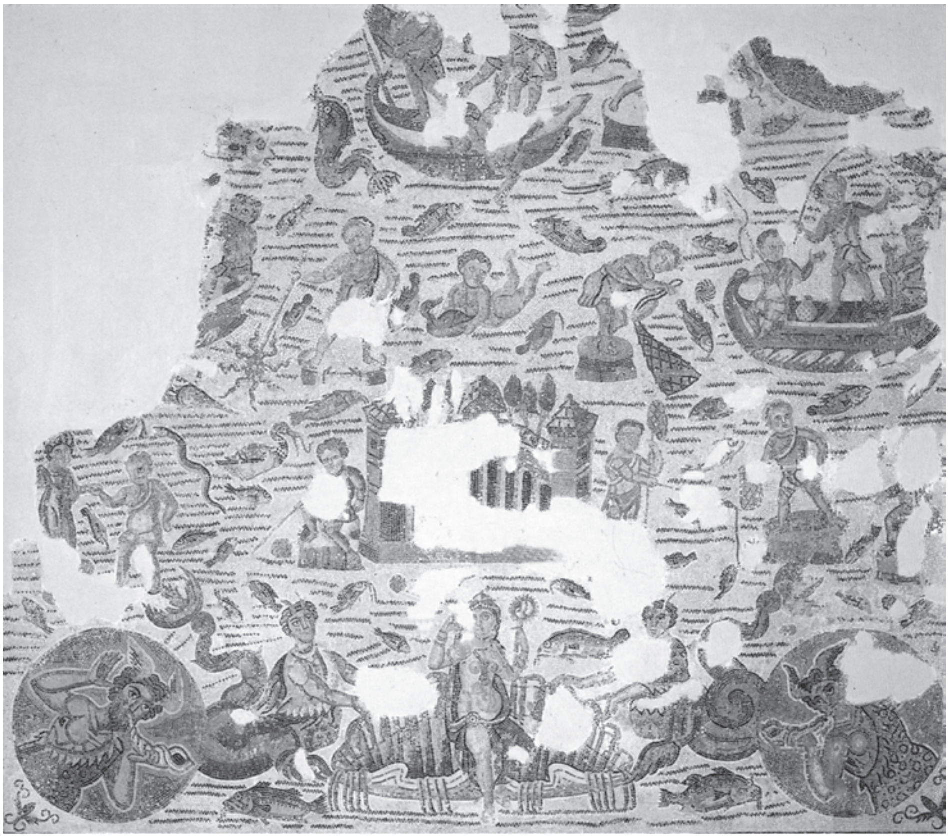
Since written records began accumulating in archives and libraries five to six centuries ago, fish stories have been saved. John Cabot (1450–1498) provided an example when he wrote that fish along the Canadian coast were "so numerous you could walk across the bay on their backs." Others wrote of native Americans spearing salmon migrating upriver from coastal waters. Even though removals were substantial, some large animals remained.

Even where removals were not yet great, abundance fluctuated. The herring caught in Denmark between 1600 and 1800 provide a quantitative clue to changing abundance, fluctuating by a factor of five, probably owing mostly to variations in weather and climate. Variable climate also appears to have changed salmon populations in the Russian High North long ago.

In a later era, the fluctuating Baltic catch of cod, herring, and sprat during the twentieth century provides data to dissect for causes of change. With accompanying observations of climate, nutrients in the water, and predatory marine mammals, scientists can analyze historical records for the causes of the changing populations. Without some understanding of the causes of these former fluctuations, forecasting changes following natural and human perturbations will be difficult and uncertain.

Recreational fishing also provides valuable observations. Recreational fishers often seek large "trophy" fish and take photographs when they catch them. While fishermen are famously nostalgic for times of greater abundance, their nostalgia appears true.

39. In villages along the Italian coast, lobstering was still an integral part of life in the nineteenth century. *Image: Ente Nazionale Italiano per il Turismo*



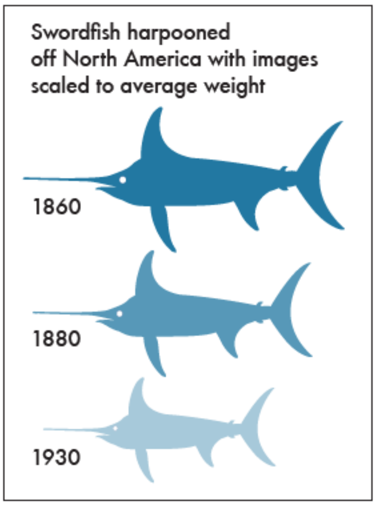
40. A Carthaginian mosaic from the end of the fourth century displays the range of nets, rods, spears, and tridents for catching fish during the Roman era. Thousands of years ago, people caught sea life near the shore and near the surface across wide regions such as the Mediterranean. *Image: "Il mare Com'era"*

41 and 42. While recreational fishing removes much less sea life than commercial fishing, recreational fishers do sample marine life, especially large animals. In 1958, after an excursion on a Key West, Florida (USA) charter boat, a family of recreational fishers displayed their trophies, especially large groupers, subfamily Epinephelinae. In 2007, the size of the fish displayed by the same charter enterprise had plummeted, and the mix of species had changed. *Images: Monroe County Library (left) and Loren McClenachan and colleagues, 2009*

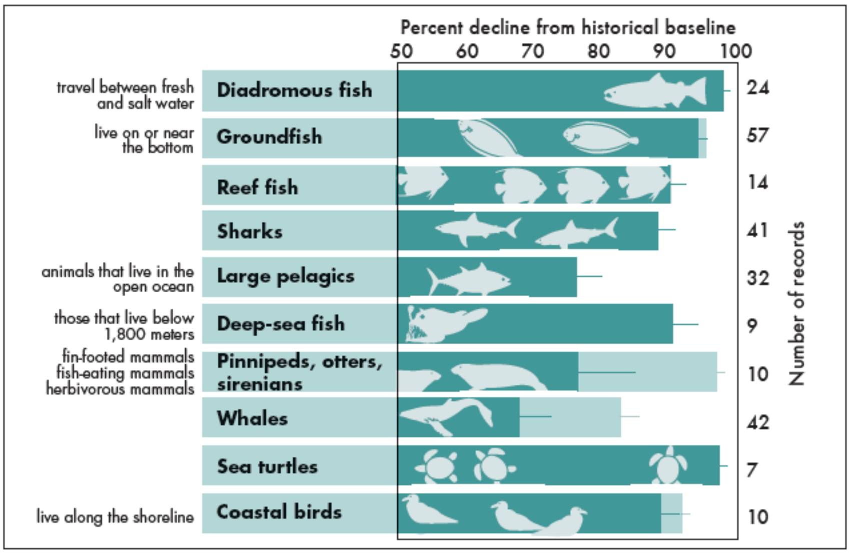
Off the North American coast after the mid-1800s, commercial fishers caught swordfish, *Xiphias gladius,* in numbers varying by a factor of ten. The fish population and the effort expended in fishing raised or lowered the numbers. On the other hand, the average weight of the fish, caught by either harpoons or lines, declined from as much as 270 kilograms in 1860 to near or less than 100 kilograms during the decade of the Census.

To alleviate the historical amnesia of focusing only on trends in the recent 20 to 50 years, Census scientists mined data sources from palaeontological and archaeological evidence to molecular markers, historical records, and fisheries statistics. They established historical baselines for 10 groups of large marine animals to compare with recent abundance. At their low point, the 10 groups had declined by nearly 90 percent on average. Historically, overfishing and habitat destruction lead the ranking of threats to marine life caused by human activities. Since reaching their low point, four groups of species have recovered somewhat. Whales and seals recovered about a fifth. Because the available data are mostly about highly valued, commercially important species, these estimates represent large, exploited species in particular rather than all marine animals. For these valuable animals, the data confirm the feared declines but also offer a few instances of hopeful recovery.

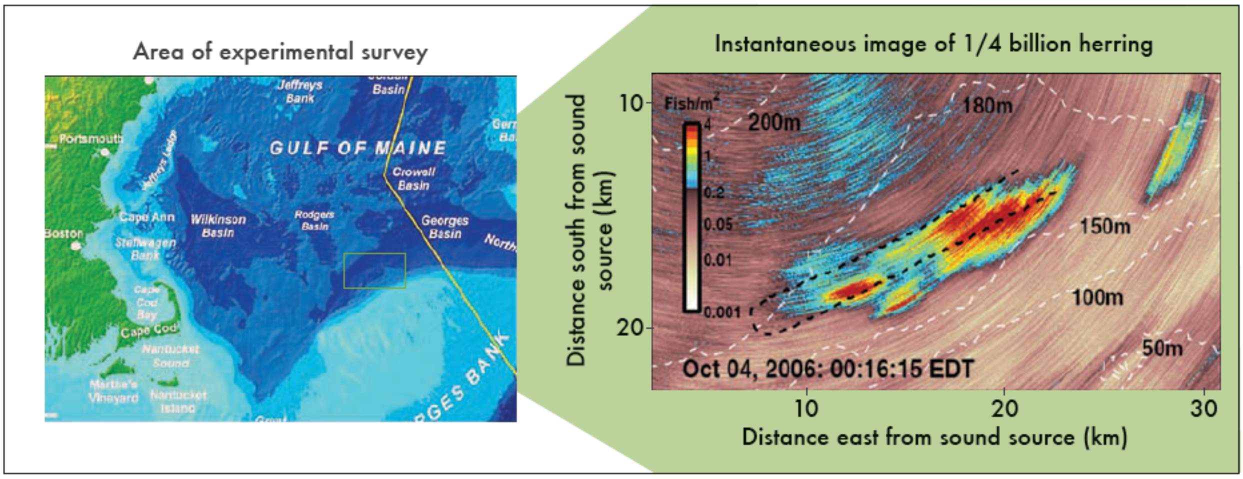
Extractions of target species sometimes cause fast changes, as the trawl fishery off Southeast Australia between 1914 and 1950 demonstrated. First tiger flathead *(Neoplatycephalus richardsoni)* plummeted from early, high catch-rates, and then Ocean leatherjacket *(Nelusetta ayraudi)* and latchet *(Pterygotrigla polyommata),* species



43. From 1860 to the present, the average weight of swordfish, *Xiphias gladius,* caught off the North American coast by either harpoons or lines declined from as much as 270 to near or less than 100 kilograms. A big drop occurred from 1860 to 1930. *Source: Karen Alexander, Brian R. MacKenzie, and William Leavensworth*



44. Dark-shaded bars indicate that the estimated declines in populations of large marine animals from their historical levels average about 90 percent. Nevertheless, some recovery (shown by light-shaded bars) has been achieved by four groups, including seals, whales, birds, and such bottom-dwelling fish species as flounder and sole. These estimates for exploited species in particular, rather than all marine animals, confirm the feared declines and offer a few hopeful instances of recovery. *Source: Heike K. Lotze and Boris Worm, 2009*



45. Census scientists deployed a new acoustic system to track vast fish populations over tens of thousands of square kilometers of sea along the continental shelf. In a snapshot from continuous monitoring along Georges Bank where the Gulf of Maine begins, the new sonar maps tens of millions of Atlantic herring, *Clupea harengus,* maintaining a school formation as large as Manhattan island, sometimes as densely as eight fish per square meter. *Image: Nicholas Makris and Purnima Ratilal*

abundant in the initial years of the fishery, virtually disappeared from catches in later years. In contrast, recoveries tend to be slow. Increases are most marked for species whose exploitation ended at least 100 years ago and species that became protected in the early to mid-twentieth century.

For the valuable and long-lived tuna, historians of the Census examined the boom of catches from 1900 to 1950 that preceded the collapse of once-abundant populations of Atlantic bluefin tuna, *Thunnus thynnus,* off the coast of northern Europe. Dusting off sales records, fishery yearbooks, and other sources, the researchers found majestic bluefins teemed in northern European waters for a few months each summer until an industrialized fishery geared up in the 1920s and literally filled the floors of European market halls with them. Generations ago Atlantic bluefins arrived in the northern waters by the thousands in late June. During the mid-1800s, fishermen welcomed these tuna as partners who pursued garfish into nets set close to shore. Before World War I, the bluefins were rarely captured, and even coastal sightings were exciting events. One 2.7-meter tuna washed up on a German shore in 1903.

After World War I, more boats, know-how, and equipment such as harpoon rifles and hydraulic net lifts helped fishermen increase annual catches from virtually nothing in 1910 to almost 5,500 tons of tuna by 1949. In 1929, Denmark built a tuna cannery. In 1949, Norway had 43 boats pursuing tuna and soon 200 boats. The booming catches helped strip the Atlantic bluefin population in a blink of time—1910 to 1950. The species virtually disappeared from the region in the early 1960s and is still rare today.

Farther up the chain from sea to restaurants, Census scientists found another index of marine abundance. Over 150 years of inflation-adjusted prices from menus, most from American cities such as New York, Boston, and San Francisco, revealed shifting tastes and supplies of lobster, swordfish, abalone, oysters, halibut, haddock, and sole. For example, on San Francisco menus, which started to feature the slow-growing abalone in the 1920s, prices spiked when stocks along the California coast declined in the 1930s and again in the 1950s. Finding 10,000 archived menus that showed date and city expanded the province of the known.

If a form of sea life disappears from a menu, has it disappeared from the oceans? Census researchers struggled with the question of regional or global extinction. A basic statistical problem is to evaluate the role of "false absences," that is, where a species was present in the local community, but not found in recent surveys from that community. The vastness of the oceans makes certainty about extinction hard except for large animals that spend lots of time at or near the surface. The Census developed new methods to adjust for false absences and to compare historical lists of marine species prepared in a largely qualitative way with data from modern quantitative surveys. Application of these methods during the next decade should provide more accurate assessment of marine extinctions. Now, existing information shows many species becoming rare but proves few extinctions.

Beyond inferences from catches, sightings, and calculation, Census scientists observed the abundance of marine life directly. They deployed a new sensor system to track vast fish populations, or shoals, as well as small schools, over tens of thousands of square kilometers of sea along the continental shelf. The shoals are sensed by sonar, which locates objects by bouncing harmless sound waves off them. The low-frequency sonar waves travel farther and return observations with informative signals far less intense than earlier sonar. The new sonar ranges over an expanse of ocean a million times wider than could previously be studied.

The new technology works best along the continental shelf, so the researchers focused on the shelf waters south of Long Island, New York, and over Georges Bank in the Gulf of Maine. When they first started, they were not looking for fish at all—they wanted to see if their device could locate ancient riverbeds under the ocean floor. But when their reconnaissance images did not match the riverbeds, the researchers went back, and determined that they were seeing fish—tens of millions of them. The new sonar images, updated every minute, continuously monitor the size and density of the millions in the shoals and also the shape of the shoals as they change from hour to hour.

With sonar, the Census scientists saw an abrupt daily queuing of tens of millions of Atlantic herring rising from the seafloor. Beginning from small clusters, tens of millions of fish queued across tens of kilometers along the northern flank of Georges Bank in tens of minutes. The rapidity, synchronicity, and regularity with which these long queues of spawning fish assembled showed the pressure on individuals, first to join, and then to conform with large groups. Beginning with a density of less than one fish per square meter, they became as crowded as eight per square meter.

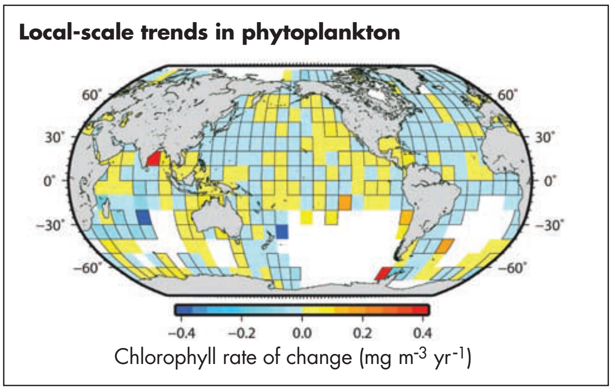
Also exemplifying high abundance, microbial filaments form mats covering an underwater territory of nearly 130,000 square kilometers, about the size of Greece, on an oxygen-starved seafloor off the central and northern coasts of both Chile and Peru. They are among Earth's largest living structures. The massive, diverse microbial community thriving mostly on methane-associated hydrogen sulfide probably represents a living fossil ecosystem of the Proterozoic era 2.5 billion to 650 million years ago, before and during the transition to an oxygenated atmosphere. At mid-depths of the ocean where the mats spread, little oxygen mixes down from the surface or up from the cold, oxygenated water that sinks at the poles and oozes like poured cream along the seafloor to other regions. With so little oxygen, most multicelled life cannot survive. But microbes, such as the large multicellular filamentous ones making up the gigantic mats, can successfully thrive. The largest filaments are about half the width of a human hair and, unlike most bacteria, are visible to the naked eye.

Census explorers found the long bacteria in sulfide seeps at the Galapagos Archipelago, Ecuador, and off the Pacific coasts of Panama and Costa Rica, and speculate that these microbial mats in oxygen-poor layers in the ocean may run from southern Chile to Colombia. Some things are unknown or unknowable because they are too small to see, others because they are too big to see.

Globally, on the deep-sea floor, the Census showed the ubiquitous high abundance of small sea creatures resembling worms (polychaetes, nematodes) and bugs (copepods) as well as localities with high biomass along margins and ridges where methane and sulfur-charged geothermal fluids stream from the seafloor.

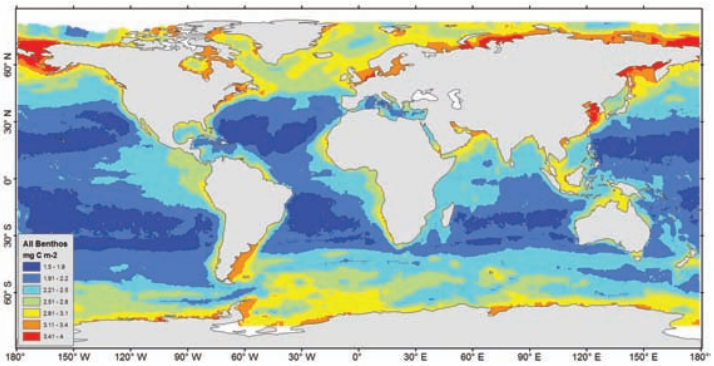
While changes in abundance of particular taxa have been obvious since humans first collected shells along the shore, the question of whether global changes are occurring in all the life that constitutes a trophic level has remained controversial. Most attention has gone to

46. Small life can form large structures. Off Chile, filamentous bacteria of the genus *Thioploca* wove mats covering an area the size of the nation of Greece. Census scientists estimated the mats to weigh about 14 million tons, about one-seventh of the weight of the annual world harvest of commercial fisheries. *Image: Victor A. Gallardo and Carola Espinoza*

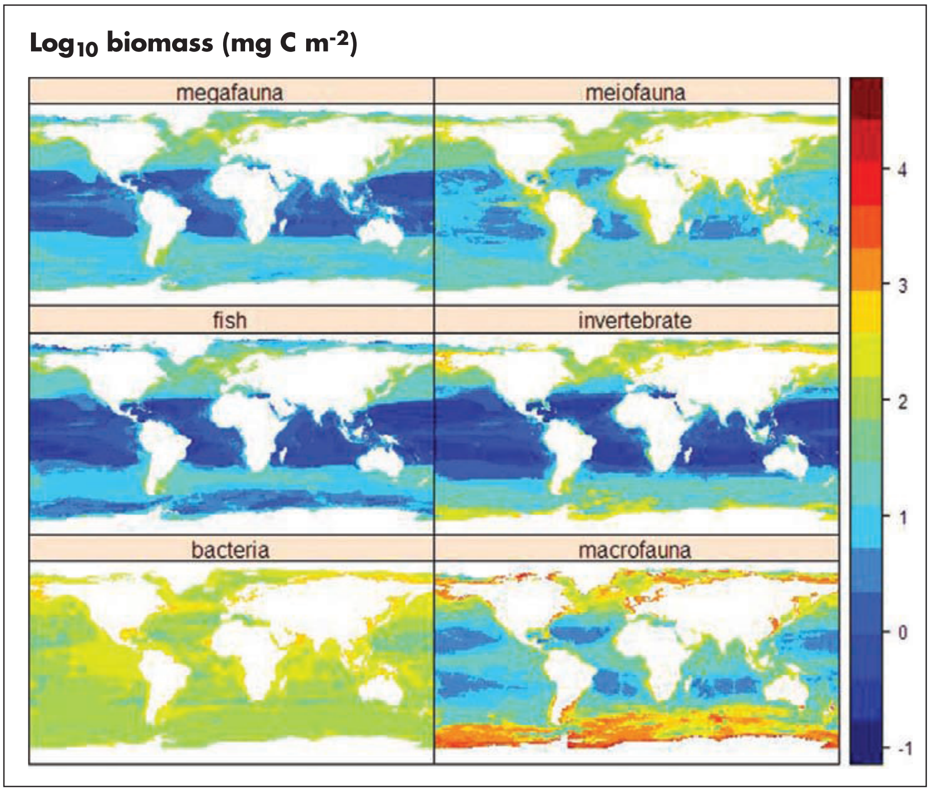


47. Since 1899, phytoplankton chlorophyll measured first by ships and recently by satellites, too, declined in 59 percent of the 364 map cells with sufficient observations for a determination. It increased in the yellow and red cells and declined in the blue. The cells bordered in black experienced statistically significant changes, while white cells had insufficient data. *Source: Daniel G. Boyce and colleagues, 2010*

Estimated seafloor biomass



48. Census scientists used nearly 200 studies to estimate the biomass on the seafloor globally from bacteria through fish and other large animals. The yellow-to-red zones in the map show seafloor biomass reaching 3 to 10 grams of carbon per square meter, or 30 to 100 kilograms per hectare, along several temperate and frigid shores. Carbon typically makes about half of living biomass. This level of carbon accumulation is small compared with the tons accumulated per hectare of land in a forest or even a crop of maize, but still considerable when added over the vast oceans. In general, the tropical seafloor is poor in biomass while the temperate and polar seafloors are rich. *Source: Chih-Lin Wei and Gilbert T. Rowe*



49. A map of the estimated seafloor biomass of bacteria and other kinds of life grouped by size (the small meiofauna that pass through a 0.3-millimeter sieve, the intermediate macrofauna up to 3 centimeters, and the larger megafauna encompassing both invertebrates and fishes) shows that despite the microscopic size of bacteria, their numbers make their mass far greater than the mass of larger and hence clearly visible animals such as fish. Bacteria reach densities of 100 to 1,000 milligrams of carbon per square meter (log$_{10}$ equal 2 or 3) in the tropics and near continents, whereas fish only reach densities of 1 in the tropics and 10 (log$_{10}$ equal 0 or 1) elsewhere. *Source: Chih-Lin Wei and Gilbert T. Rowe*

changes in top predators, such as whale and seal populations, which shrank and now are rebounding. Census researchers examined the other end of the food chain. Is the productivity or biomass of the meadows of the oceans, the phytoplankton that feed upper trophic levels, changing? An initial global study involving Census researchers who used indirect observations from ocean-going vessels since 1899 suggests a patchy but significant global phytoplankton decline.

As noted earlier, up to 90 percent of all the weight of life in the oceans and seafloor mud is microbial. "Pyrotag sequencing," the DNA technique pioneered by Census researchers to ascertain the diversity of bacteria, archaea, and protists, also captures information about relative abundance. Census microbiologists drew diagrams resembling city skylines to show the relative abundance of different kinds of microbes for hundreds of locations. The skylines show a few tall buildings, some of intermediate height, and many low structures that form the "long tail" of the distribution that constitutes the rare biosphere.

Calculation and measurement as well as the history of marine life sighted and caught can be used to estimate abundance as well as extinction and the recovery of some depleted species after intervention. With the exception of such living things as the bacteria in the giant mats off Chile that have an alternative means of synthesizing food, the abundance of life at the bottom of the ocean, the biomass on the seafloor, usually depends on primary food production by photosynthesis in the sunlit water above and its settling to the floor as marine snow. The fall of organic particles largely determines how many thousands of organisms live on a square meter of seafloor and the weight of their biomass.

Census scientists estimated seafloor biomass from primary production, the fall of organic particles, and topography of the seafloor. Primary production concentrates around land where plant nutrients reach the sea. The map of total seafloor biomass which consists about half of carbon, shows its biomass reaching 3 to 10 grams of carbon per square meter or 30 to 100 kilograms per hectare, along several temperate and frigid shores. In turn, calculations can translate the seafloor biomass into estimates of populations of individuals in groups of animals such as fishes and invertebrates and in bacteria. By weight, the populous seafloor bacteria equal about ten times the sum of larger seafloor marine life.

With about a quarter of a million known species and life distributed everywhere in the vast oceans, measuring abundance is finally more difficult than measuring diversity or distribution. In contrast to diversity, which tends to peak in temperate and warmer waters, abundance appears to peak in temperate and cooler waters. Much life, such as the microbial mats, continues to be discovered. Evidence shows that most species entering human commerce decline, often sharply. It remains unknown whether the declines in the few thousand commercially important species have changed the global total biomass of all marine life, but an initial global study suggests a patchy twentieth century decline in the grass of the oceans, the phytoplankton. Overall, we seem to see declining abundance at the top and near the bottom of the food chain, with fishing practices, habitat destruction, and ocean temperatures the most powerful causes. Systematically measuring the abundance of the approximately 250,000 known species and the kinds of microbes as well remains as a task for the next decade. Estimating the abundance of undiscovered species adds mystery and glory to the task.

LEGACIES

The Census imparted urgency to its explorations by setting for itself a life of 10 years, enough time to organize and build to a crescendo in 2010. Much of the worth of such a brief life lies beyond its decade in legacies that go on.

Broadly, three sorts of legacies can already be discerned. Knowledge resting on sound research and recorded with moderation and caution by Census scientists will inform the future. The technology that they invented, improved, and spread will power future discovery. And to the extent that they succeed, they demonstrated work habits—organization and working together—that can make research in future decades more efficient and effective.

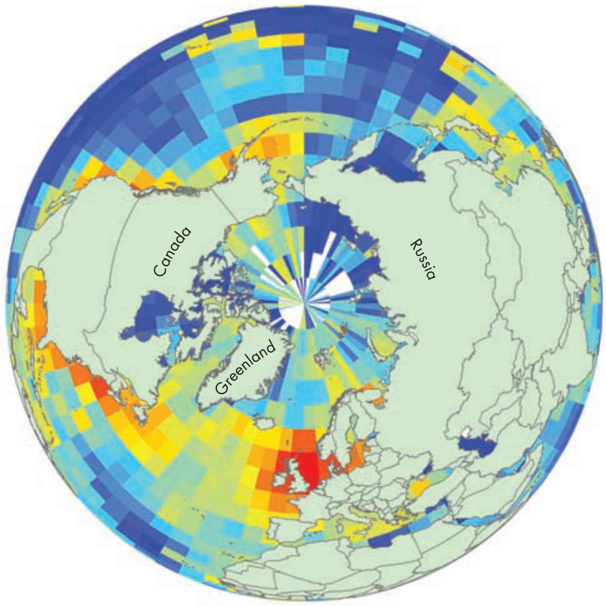
Regarding knowledge, the Census published its results in more than 2,600 scientific papers. Some, the compilation and organization of the known, reveal regional and even global patterns, past and present, and show how marine life fares in different environments and eras. Other papers record new species and many species in new places. They record the travels of marine life and its abundance.

Publicly reported in scientific papers, Census research informs and propels new discovery. Publication of its series of reports in the Public Library of Science and other open-access sites will prove a special legacy because anyone with a computer can read them on the Internet, for free, now and in the future.

With existing data plus its own, the Census built OBIS, the largest archive of data about marine species. In a crescendo of results at the end of the decade, Census scientists proved the power of the globe-encompassing archive to reveal patterns of diversity, distribution, and abundance. Governments have committed to sustain OBIS. By opening OBIS to the public and arranging its continuity and integration with the Encyclopedia of Life and other elements of the "e-Biosphere," the Census created a legacy of infrastructure for future research.

Without reference baselines for today's state of marine life, claims of change due to warmer water and damages from fishing and oil spills can only fuel contention. Similarly, claims of benefits from protection of areas and from regulation of drilling and fishing require proof that the baseline of the present state provides. Selections of marine protected areas by nations and the international Convention on Biological Diversity need baselines. To all these interests, the Census wills a legacy of baselines of marine diversity, distribution, and abundance at the beginning of the twenty-first century.

Technology of an earlier Age of Discovery, such as ships that could span oceans to another hemisphere, continued as legacies to later centuries. Similarly, the Census grants a legacy of barcoding and similar genetic methods for distinguishing species by their DNA sequences, some species too small to see with the naked eye and some cloaked in similar shapes or confused by changing shapes. Going beyond seeing that specimens are different, the Census adds the legacy of a way to chart the closeness or separation among species by correlating their lengthy DNA sequences.



50. The global marine life database built by the Census exposes gaps in our knowledge of the known and unknown. The color spectrum from red to blue ranges from many to few records. Blank areas have no records of reliably indentified marine life. Explorers have yet to explore much of the high Arctic Ocean for life. *Source: Ocean Biogeographic Information System (OBIS)*

As a physically tangible legacy, the Census bequeaths to future generations curtains of microphones that can identify individuals migrating along thousands of kilometers of routes from California past British Columbia in Canada to Alaska. It demonstrates that fish only 20 centimeters long can carry sonic tags to trace their passage through the curtains. Larger animals can carry biologgers that record the temperature, depth, and other environmental properties as they swim and dive and then report the data via satellite.

The Census helped devise and leaves the legacy of a sonic system that detects the formation, abundance, and coordinated swimming of schools of fish extending over tens of thousands of square kilometers. The Census helped motivate nations to build research vessels so quiet they would not disturb animals or interfere with listening and so stable that DNA sequencers could operate aboard.

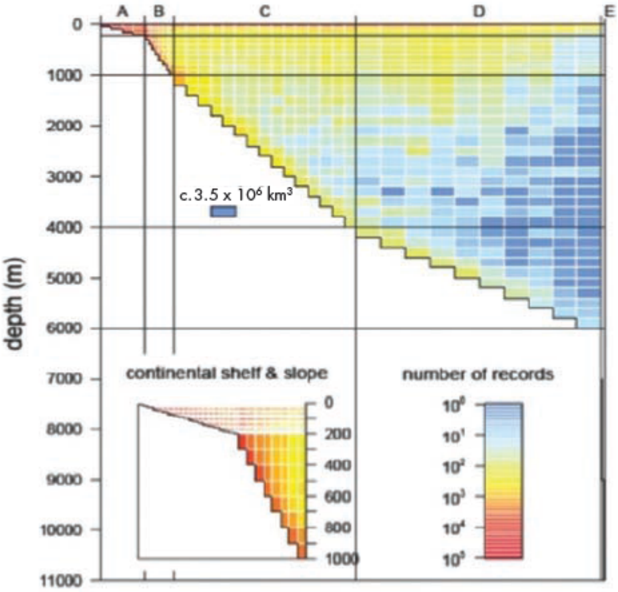
To standardize the global assessment of life on coral reefs and render worldwide analysis of distributions and measurement of change, the Census innovated Autonomous Reef Monitoring Structures. In the same vein, the Census leaves a legacy of standardized methods for appraising marine life near shores and in the deep sea. Taken together, the technologies invented and proven by the Census show that the incipient Global Ocean Observing System, analogous to the system long in operation to monitor the atmosphere, can observe life as well as physical parameters.

Work habits, many good ones, honed during the Census decade will live on and make future global explorations effective. The habit of assembling scientists; choosing a goal like diversity, distribution, and abundance; recruiting more scientists or training new ones; keeping focus on their initial target; and recording their results for all to see—all within a decade—is a legacy for future work. The social networks of experts who span all taxa and oceans and more than 80 nations form a legacy that could speed a second Census and other research programs that societies may value.

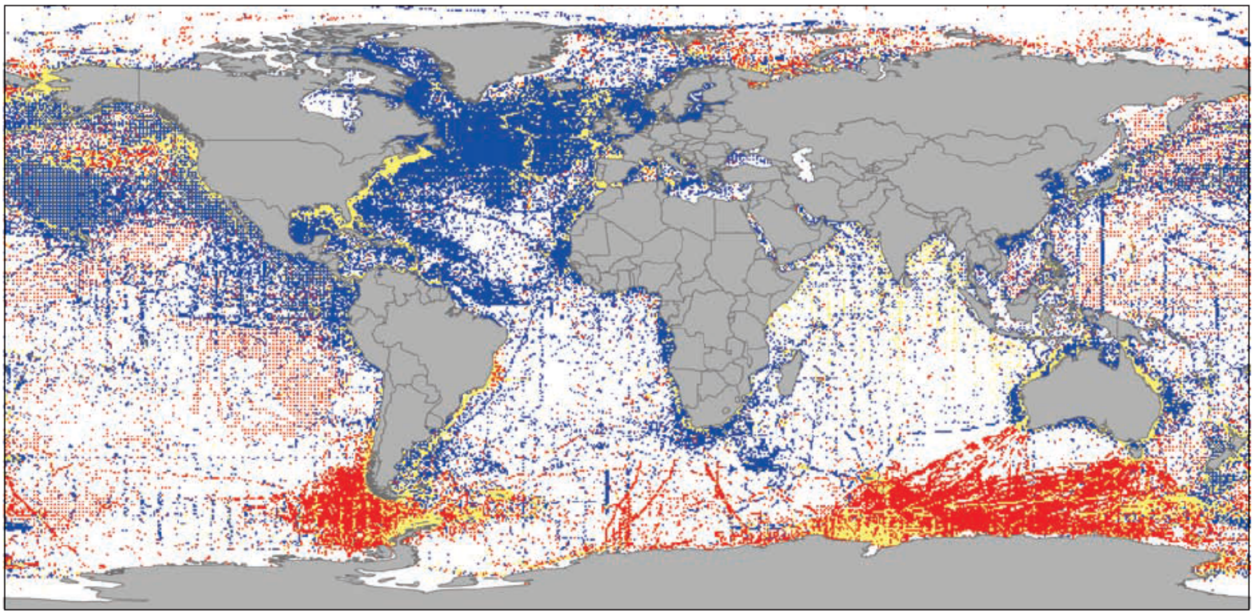
As it worked, the Census sought to establish the habits to identify, systematically, the limits to knowledge and to speak candidly about the unknown and unknowable as well as about what we know. The Census quantified that we know less about the small and showed generally that knowledge is inversely related to size. But some patterns exceed our field of vision, and for these the Census devised macroscopes to overcome limits to knowledge.

The macroscope of OBIS lets everyone see with revolutionary resolution both the known and the unknown ocean. We can see where scientists observed marine life before the Census began and how the Census and other research during the past decade filled in the map. Viewing the density of observations on the surface of the globe shows vast areas in the Eastern Pacific, Southern Ocean, and Arctic, for example, remain almost virgin for exploration for marine life. Viewing a slice of the oceans from the surface to the seafloor beckons explorers to the poorly explored mid-waters.

The Census encountered an ocean growing more crowded with commerce and transparent through technology. Setting out to draw baselines of the diversity, distribution, and abundance of species, the first Census of Marine Life documented a changing ocean, richer in diversity, more connected through distribution and movements, more impacted by humans, and yet less explored than we had known. The Census has multiplied the qualified experts, developed and spread technologies for discovery and monitoring, improved access to data, and informed decisions about conserving marine species and regions. The legacies of the Census—the baselines of knowledge, the cascade of new technology, the collaboration across borders—promise more benefits for humanity and the oceans.



51. OBIS exposes the still-to-be-explored ocean by depth as well as latitude and longitude. On a cross section of the global oceans, the spectrum from red to blue extends from many to few or no records. The records are concentrated near shores and in shallow waters, while the largest habitat on Earth, the vast middle waters, is largely unexplored. *Source: Ocean Biogeographic Information System*



52. A global map of the nearly 30 million OBIS records of 120,000 species from more than 800 datasets shows the known and unknown ocean in half-degree squares by latitude and longitude. In blue areas, the Census has aggregated data from before the Census began and from partner programs and institutions, often assembled by OBIS regional and thematic nodes. Yellow indicates regions with data both from Census partners and from the Census's own expeditions. Red indicates regions with data from Census expeditions where there were no prior data. The records attributable to and supplemented by the Census are numerous in the Southern Ocean, North Pacific, and along the Mid-Atlantic Ridge. Wide regions, such as the Eastern Pacific, remain largely unexplored. *Source: Ocean Biogeographic Information System*

HOW THE CENSUS WORKED

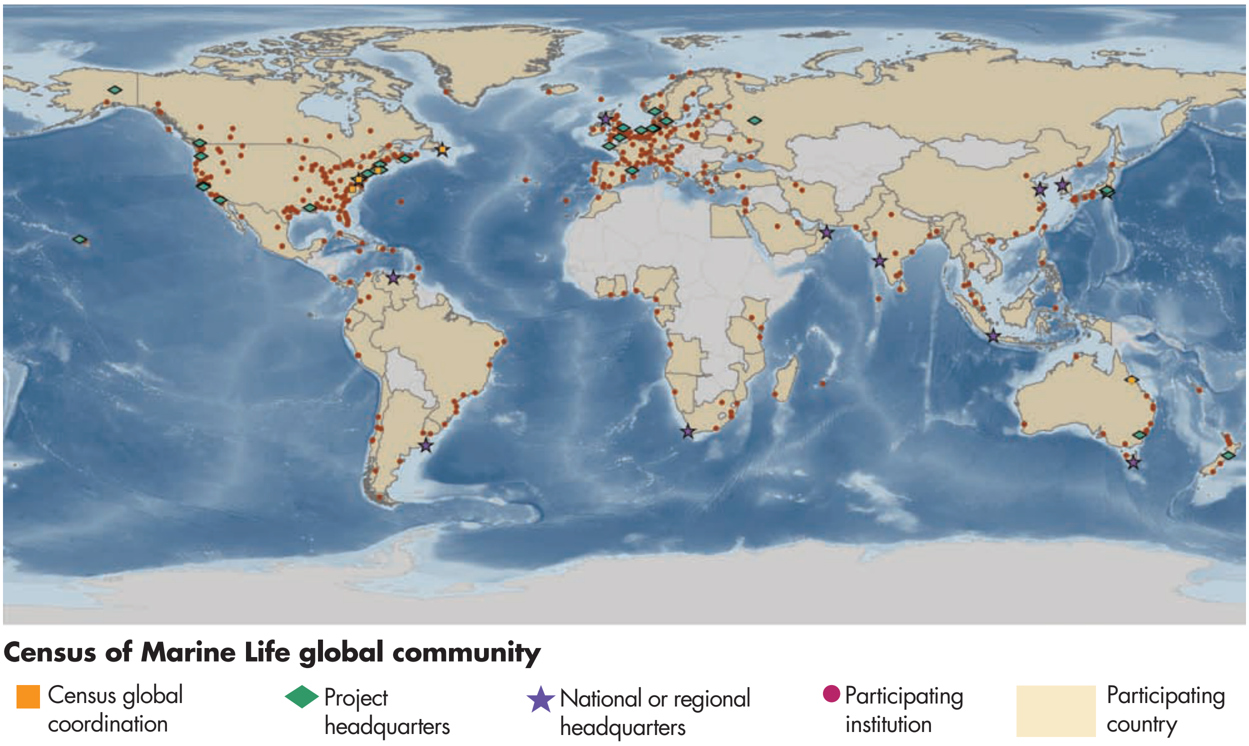
How did the Census work? Agreeing during the 1990s that more was said than done to set a comprehensive and solid foundation of science under the striking scenes and fascinating glimpses beneath the seas, scientists around the globe organized for the first-ever Census of Marine Life. They demonstrated their earnestness by establishing a definite, decadal life for the Census, beginning in the year 2000 and concluding in 2010. They concentrated on learning the diversity (how many different kinds), distribution (where they live), and abundance (how much) of marine life.

To encompass Planet Ocean and engage specialized knowledge about its diverse waters, the Census engaged 2,700 marine scientists from more than 670 laboratories, universities, natural history museums, and aquariums from more than 80 nations and all continents. Three years of discussion and dozens of planning meetings preceded the first expedition flying a Census flag. During the decade, the Census Secretariat at the Consortium for Ocean Leadership in Washington, D.C., coordinated the international network, 66 implementation meetings, and five Census-wide meetings. The Census recognized differing capacities from place to place. Where possible, countries provided ships, funding, and researchers. They gave their intellectual resources, and they opened access to their seas.

Participation grew rapidly in the first half of the decade and continued to grow in the second half. During 9,000 days at sea in more than 540 oceanographic expeditions, Census researchers explored cold, temperate, and tropical seas, from top to bottom and shore to shore. The Scientific Steering Committee of the leaders kept the focus of the Census on global span and on diversity, distribution, and abundance.

Fourteen field projects investigated the major habitats and groups of species in the global ocean to paint a picture of present marine life. Eleven of these projects explored habitats, such as seamounts, vents, and coral reefs. Or they explored regions, such as the Arctic and Southern oceans, the Mid-Atlantic Ridge, or the Gulf of Maine. Three projects surveyed animals, such as the top predator tuna that swim Planet Ocean or small plankton and microbes that drift around the globe.

Two other projects and OBIS completed the roster of Census projects. The first project reconstructed a baseline of past oceans from, for example, old ship logs, monastery records, fish bones, and shell middens. Complementing the reconstruction of the past, another project modeled or projected the effects of variables such as fishing and climate change to anticipate marine life in future oceans. OBIS, the collective data repository, has been described above. National and Regional Implementation Committees provided leadership in 13 regions around the world and extended access to expertise and resources.



Census of Marine Life global community

54. Shading shows the global span of 80 plus nations that participated in the Census of Marine Life. The 2,700 scientists participating came from more than 600 institutions and worked in 14 field projects spanning ocean realms from near shore to abyss and latitudes from poles to tropics. The global span of National and Regional Implementation Committees, headquarters of the field projects, and participating institutions such as museums ensured access to expertise and seas. *Image: Census of Marine Life Mapping and Visualization Team*

Projects affiliated with the Census of Marine Life

The Census extended its reach by affiliation with other projects and programs. It formed a partnership with the National Geographic Society to expand cartographic resources and outreach. The Census Mapping and Visualization Team boosted the creativity and quality of work throughout the program and served as the liaison with National Geographic's cartographers and also with Google Earth, whose ocean layer integrates Census findings.

The Encyclopedia of Life (EOL) is documenting on the Internet all 1.9 million known living species of animals, plants, and fungi. Its infinitely expandable page for each species includes text and also images, graphics, video, and sound. It is compiled from existing databases and from contributions throughout the world. Partnering with EOL, Census scientists helped create Web pages for 80,000 species, which comprise about a third of known marine species. These species in turn come from the master list of another Census partner, the World Register of Marine Species, formed in 2006 to provide in perpetuity an authoritative and comprehensive list of names of marine organisms. A partnership with Aquamaps allows quick creation of standardized distribution maps for species of fishes, marine mammals, and invertebrates in OBIS.

The Census also benefited from the formation in 2004 of the Consortium for the Barcode of Life. The Consortium and the international Barcode of Life initiative aim to offer a reference library of DNA barcodes for more than 500,000 species by the year 2015. The efforts to speed barcodes of marine species operate within the subprograms Marine Barcode of Life Initiative (MarBOL) and Fish Barcode of Life Initiative (FISHBOL), both headquartered at Ontario's University of Guelph.

Affiliated projects and programs added depth and scope to Census work in Australia's Great Barrier Reef, the Gulf of Mexico, the margins of European seas (HERMES, see below), ecosystem functioning (MarBEF), fisheries science (ICES, PICES, and FAO), seas beyond national jurisdiction (IUCN), and global change (IGBP/DIVERSITAS). Cooperation with the Partnership for Observation of the Global Oceans (POGO), the Scientific Committee on Oceanic Research (SCOR) Technology Panel, Scientific Committee on Antarctic Research (SCAR), the Intergovernmental Oceanographic Commission (IOC), and the Group on Earth Observations (GEO) helped integrate the Census with the development of ocean observing systems.

During the final four years of the Census, a Synthesis Group continually integrated results and prepared for the culminating events of the Decade of Discovery. The Synthesis Group worked closely with a Mapping and Visualization Team that provided advice and solved problems for all Census teams and projects.

Census scientists tagged 41 species of animals. The 23,000 animals carrying instruments might be added to the 2,700 humans who participated in the Census.

Between 2000 and 2010, by an accounting that incorporates national expenditures on existing fleets, labs, and staff that collaborated as well as activities that occurred only because of the existence of the Census, the program spent US$650 million. Support came from scores of government agencies as well as private foundations, companies, and individuals. From conception, the Alfred P. Sloan Foundation of New York City provided indispensable core support totaling about US$75 million.

For its expenditure on the Census, the world received a stream of knowledge throughout the decade. Census scientists reported progress in more than 2,600 scientific peer-reviewed publications. The Census strongly favored free, open-access Internet publication, which took off during the latter years of the program. An increasing number of Census papers are appearing in the biodiversity hub of the Public Library of Science, which has also established flexible, growing collections of papers for many Census projects and themes.

Five books added to the reports. At the end of the Census decade in 2010, one book gave the public an overview of insights from the Census, their implications, and a glimpse of marine life still unknown.

- *Discoveries of the Census of Marine Life: Making Ocean Life Count,* Paul V.R. Snelgrove, Cambridge University Press, 2010.

A second book summarized the findings and discoveries of the 17 Census projects for scientists with a chapter from each project.

- *Life in the World's Oceans: Diversity, Distribution, and Abundance,* Edited by Alasdair D. McIntyre, Blackwell Publishing, Ltd., 2010.

A third, extensively illustrated book profiled Census research and findings through early 2009 to a public audience.

- *World Ocean Census,* Darlene Trew Crist, Gail Scowcroft, and James M. Harding, Jr., Firefly Books, UWA Publishing, 2009.

57. Research along the Mid-Atlantic Ridge inspired Norwegian Anne Berg Edvardsen's sculpture *Spikes*. Made of paper and clay and about 40 by 40 centimeters, the sculpture suggests an animal trying to lift itself, maybe to change direction. *Image: Anne Berg Edvardsen*

58. The Census inspired the public to examine marine life, too. *Image: Megan Moews*

59. As marine creatures helped the Census by measuring their environment with electronic tags, so too did their form and color help the Census catch the interest of the public. The incongruity of the hairy Kiwa hirsuta that suggested its nickname yeti crab has broad appeal and prompted many to capture its magic, including skateboarders in search of a wild ride. *Image: Nathalie Roland*

A fourth book presented portraits of about a hundred species.

- *Citizens of the Sea: Wondrous Creatures from the Census of Marine Life,* Nancy Knowlton, National Geographic, 2010.

A fifth book portrayed a major expedition examining life and environment in the middle of the North Atlantic from the surface to the floor of the sea.

- *Life in the Mid Atlantic,* Peter Boyle, Bergen Museum Press, 2009.

These and other books formed part of the Census education and outreach effort, which also included Web sites, video and still photographs, museum exhibits, and other products tailored for a range of audiences and stakeholders. The Census reached out early to artists, including photographers, cinematographers, painters, sculptors, and musicians to invite them to participate in the Census and share their own observations of the marine life the Census encountered. Every Census project designated an education and outreach liaison, and a team based at the University of Rhode Island coordinated the network. The Rhode Island team also took responsibility for popular summaries of initial knowledge in 2003 and highlights in 2004, 2005, 2006, and 2008.

60. In a notably fruitful collaboration, the Census lent support to Galatée Film Productions to photograph the film *Oceans* at 54 locations, globally distributed. Census scientists helped conceive the film and ensure its scientific accuracy, and co-authored with Galatée an illustrated guide with taxonomic information about all the species in the film. In return, Galatée provided still images and more than 400 hours of film for Census researchers to study animal behavior in situ.

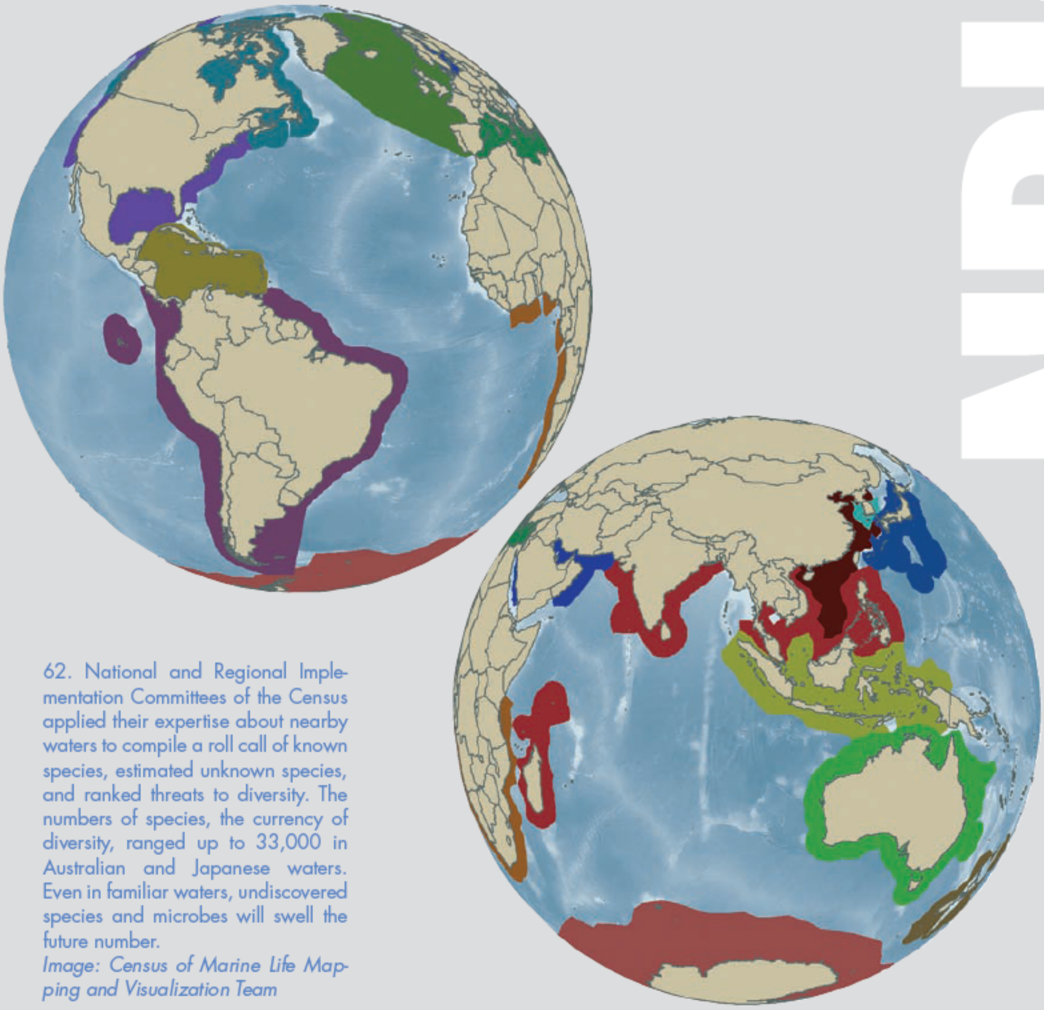
THE CENSUS TEAMS

To inventory life in Planet Ocean, its diversity, distribution, and abundance, the Census had a big job. It had to span all oceanic realms, from coasts down slopes to abyss, from the North Pole across tropics to the shores of Antarctica. It had to encompass giant animals and hidden and almost invisible life, rare individuals and immense schools. It had to range from the long past to the future. It had to compile information from new discoveries and historical archives and make it freely accessible.

National and Regional Implementation Committees began the Census strategy of encompassing the world. Field projects in Arctic and Antarctic seas and along a ridge that connected them ensured exploration from pole to pole. Others explored the vents on ridges, the abyssal plains between ridges and continents, and seamounts that interrupt the plains. Projects explored the continental margins and also the water near shores and reefs. A project in the Gulf of Maine spanned tidal pools, the shelf, and the margins and even touched the nearest seamounts. Other projects examined the ubiquitous microbes, drifting plankton, and swimming top predators that connect the oceans. One project delved into the history of marine life, and another projected its future. A global system made all past and expanding names, addresses, and circumstances of marine life universally available as a baseline for measuring change.

NRICS

National and Regional Implementation Committees extended the reach of the Census of Marine Life globally. Over 360 scientists combined centuries-old information with new Census observations and databases into a roll call of species in representative regions from the Antarctic through temperate and tropical seas to the Arctic. About a fifth of all known, named species were crustaceans, which, with mollusks and fishes, make up half of the roll call. The unprecedented geographical and taxonomic integration showed how collaboration between developed and developing countries expedites discovery.



62. National and Regional Implementation Committees of the Census applied their expertise about nearby waters to compile a roll call of known species, estimated unknown species, and ranked threats to diversity. The numbers of species, the currency of diversity, ranged up to 33,000 in Australian and Japanese waters. Even in familiar waters, undiscovered species and microbes will swell the future number.
Image: Census of Marine Life Mapping and Visualization Team

ArcOD

The **Arctic Ocean Diversity** project established the baseline of marine life in the region. Its search on, in, and under sea ice, in deep basins, and along continental shelves cataloged more than 7,000 animal species, of which at least 70 are new, plus thousands of microbes. Project researchers documented recent northward extensions of ranges of invertebrate and fish species, and a rising ratio of warm- to cold-water species. Making more than 250,000 records accessible online, the project allows measuring changes in Arctic life caused by humanity and natural forces.

CAML

Coordinating 18 research voyages in the widest-ever survey of the region, the **Census of Antarctic Marine Life** project provided the baseline for marine life in the Southern Ocean and then helped establish the monitoring of its change. The project documented more than 16,500 taxa, including hundreds of new species. The researchers identified a single region of seafloor life under the fastest current on the planet, found colonists from deeper water beneath melting ice shelves, and showed how Antarctic waters may incubate new species.

MAR-ECO

The **Patterns and Processes of the Ecosystems of the Northern Mid-Atlantic** project explored marine life along the world's longest mountain range, which rises from the seafloor 4,500 meters deep. The explorers found approximately 1,000 species, from small crustaceans to whales, including at least 30 new species. They found both mid-water animals from deep basins and bottom-living animals along slopes. Abundance generally peaked where cool and warm waters met. Project findings supported protection of areas of the Mid-Atlantic Ridge against harmful bottom fishing totaling 330,000 square kilometers, larger than Italy.

ChEss

The **Biogeography of Deep-Water Chemosynthetic Ecosystems** project explored life at seeps, vents, and whale falls, where fluids cool, hot, corrosively acidic or rich in natural oils nourish marine life. Here, abundant life thrives, fueled by chemical reactions rather than sunlight. Using advanced robots, the project extended the known limits to such life—farther north (72° N) and farther south (60° S), deeper than 4,900 meters and hotter than 407°C. Project scientists described about 200 new species, bringing to more than 1,000 the number of described species known to live without the sun's energy.

84. In the hot and sulfurous water from a vent in the Pacific-Antarctic Ridge in the South Pacific, explorers of vents and seeps found *Kiwa hirsuta* and named it after the goddess of shellfish in Polynesian mythology. Because its hairy appearance suggests the abominable snowman, it has become known as the "yeti crab."
Image: Ifremer/Alexis Fifis

CeDAMar

The **Census of the Diversity of Abyssal Marine Life** project explored the abyssal plains of major ocean basins, particularly the southern Atlantic and the Southern Ocean, described more than 500 new abyssal species from unicellular animals to large squid, investigated the feeding of abyssal organisms, and mapped the distribution of deep-sea life. The project compiled data for establishing protected seafloor outside national jurisdiction and documented that climate change, human debris, and seabed mining affect abyssal life.

CenSeam

The sphere of the **Global Census of Marine Life on Seamounts** project encompassed up to 100,000 seamounts rising 1,000 meters or more from the seafloor. The project discovered new seamounts, species, and communities and found that seamount inhabitants broadly resemble those on adjacent continental slopes. Yet, owing to isolation and slow growth of deep animals, life on seamounts can struggle to recover from disturbances such as fishing. The project's central repository of global seamount data is informing international negotiations about protecting areas in the high seas.

COMARGE

The **Continental Margin Ecosystems on a Worldwide Scale** project explored slopes of all continents during more than 60 expeditions. They found a meager snow of detritus sustained ribbons of life in the mud along slopes and that the greatest diversity occurs at mid-slope. The project found deep-sea coral stretching over 400 kilometers long off Mauretania. Elsewhere, vast mats of microbes lived off seafloor methane. The project documented the sensitivity of continental slopes to global changes and to exploitation of deposits of gas and petroleum.

POST

The **Pacific Ocean Shelf Tracking Project** deployed the first continental-scale array to track marine animals acoustically, and followed juvenile salmon thousands of kilometers from river to ocean, estimated survival of some ocean-migrating salmon stocks, and discovered surprisingly vast migrations of sturgeon across national boundaries. With an expanding library of 16,000 tracks from 18 different species from salmon to jumbo squid, the project built a clearinghouse for sharing telemetry data, contributed to the designation of critical habitat for threatened green sturgeon, and served as a prototype for the global Ocean Tracking Network.

CReefs

The **Census of Coral Reef Ecosystems** project partnered to conduct the largest concerted exploration of life in the world's coral reefs. It discovered thousands of likely new species and familiar species in new places as well as highly diverse unidentified species in tiny samples of dead coral heads. The project developed a standardized tool, the Autonomous Reef Monitoring Structure (ARMS), to compare distributions of species on reefs as well as monitor changes such as warming and acidification. The 600 ARMS now deployed will reveal global patterns in uniform, standardized data.

GoMA

Spanning tidal pools to seamounts, the **Gulf of Maine Area** project assembled more than 4,000 species in a new register and estimated abundance and diversity of microbes. Analyses showed that habitat explains about a third of variation in distribution and abundance of fishes and invertebrates. New sonars created instantaneous, continuous views of species distributions, including the assembling and swirling of shoals of millions of herring. The novel census of a large area helps managers consider not just one species at a time but an entire marine ecosystem.

In the **International Census of Marine Microbes,** microbiologists from 25 countries determined the range of genetic diversity, distribution, and abundance of oceanic microbes. The investigators found diversity at least 10 to 100 times the previous estimate. A liter of seawater contained about 38,000 kinds of bacteria. In more than 1,200 widely distributed marine samples from water, sediment, and around animals, researchers found some microbes live everywhere, while others live in only a few places. They discovered a "rare biosphere" in which rare microbes account for most ocean diversity.

The **Census of Marine Zooplankton** project produced a global view of diversity and distribution of holozooplankton, the animals that drift in ocean currents throughout their lifespan. Researchers collected more than 10,000 samples from every ocean basin. Training 250 new taxonomists, they discovered more than 85 new species, 7 new genera, and 2 new families, many of which are already formally described. They used genetic profiles to develop characteristic fingerprints for all the zooplankton life in any volume of water.

TOPP

The **Tagging of Pacific Predators** project tagged and tracked 4,300 marine predators of 23 species on their journeys. Electronic signals from tags relayed to satellites and on to researchers—and sometimes to the public—displayed animals spanning entire oceans, moving from the poles to the tropics and from continent to continent. Other tags electronically measured and logged characteristics of the surrounding water as the animals swam and dove. Tagged animals frequently migrated along corridors to ocean "hot spots," where many individuals—and multiple species—congregate for extended periods.

HMAP

Studying old and even ancient artifacts and archives, the systematic collaboration between humanities and sciences of the **History of Marine Animal Populations** project found evidence of how humanity and nature change marine life. The utility of the evidence for managing ocean life established the discipline of marine environmental history. Shell jewelry, mosaics, records of taxation on fishing boats, whaling logs, and menus revealed changing marine life and its causes—sometimes storms, sometimes climate, and especially, human harvest of animals and destruction of habitats.

The **Future of Marine Animal Populations** project advanced tools for analyzing data from fishing and scientific surveys to determine changes in diversity, distribution, and abundance. Researchers used the entire Census database to define hot spots of diversity and to estimate undiscovered species. They identified the importance of water temperature in shaping diversity patterns and ways climate change might redistribute marine life. They documented how overexploitation caused rapid population declines and conservation helped recoveries. They uncovered patterns of animal movements that showed where animals tend to concentrate when feeding.

OBIS

The **Ocean Biogeographic Information System** (OBIS), built by the Census, forms the world's largest online repository of spatially referenced marine life data. Its present nearly 30 million records from more than 800 datasets locate species from *Aaptolasma americana* to *Zyzzyzus warreni* in all parts of the world's oceans in an evolving but permanent repository. It identifies diversity hot spots and broad patterns, tracks dispersion of species, and integrates species locations with temperature, salinity, and depth. Online, it instantaneously maps the distribution of specimens of a species.

CENSUS
OF MARINE LIFE

A species first described by Linnaeus in 1758, and a member of a family defined by Charles Darwin in 1852, *Lepas anserifera*, attaches its flexible stalk to floating objects such as driftwood, fishing boats, and plastic bottles. Exemplifying a familiar, cosmopolitan species, the goose barnacle still surprises us with its beauty.

No. 11846

MULTILATERAL

Convention establishing the World Intellectual Property Organization signed at Stockholm on 14 July 1967

Authentic texts: French, English, Spanish and Russian.

Registered by the Director General of the World Intellectual Property Organization, acting on behalf of the Parties, on 30 June 1972.

MULTILATÉRAL

Convention instituant l'Organisation mondiale de la propriété intellectuelle signée à Stockholm le 14 juillet 1967

Textes authentiques : français, anglais, espagnol et russe.

Enregistrée par le Directeur général de l'Organisation mondiale de la propriété intellectuelle, agissant au nom des parties, le 30 juin 1972.

CONVENTION[1] ESTABLISHING THE WORLD INTELLECTUAL PROPERTY ORGANIZATION SIGNED AT STOCKHOLM ON JULY 14, 1967

The Contracting Parties,

Desiring to contribute to better understanding and cooperation among States for their mutual benefit on the basis of respect for their sovereignty and equality,

---

[1] Came into force on 26 April 1970 (see (1) below) in respect of the following States, i.e. three months after those States (ten of which being members of the Paris Union and seven members of the Berne Union(2) having fulfilled the conditions provided for in article 14 (2) (3)) had either signed it without reservation as to ratification, or deposited an instrument of ratification or accession with the Director of the United International Bureaux for the Protection of Intellectual Property (BIRPI), in accordance with article 15 (1):

State	*Date of definitive signature (s) or date of deposit of the instrument of ratification, or accession (a)*	
Ireland*	12 January	1968 *s*
German Democratic Republic**	20 June	1968 *a* (1)
Senegal**	19 September	1968
Union of Soviet Socialist Republics* (4)	4 December	1968
Ukrainian Soviet Socialist Republic (4)	12 February	1969
United Kingdom of Great Britain and Northern Ireland**	26 February	1969
Romania* (5)	28 February	1969
Byelorussian Soviet Socialist Republic (4) (5)	19 March	1969
Spain***	6 June	1969
Israel**	30 July	1969
Sweden**	12 August	1969
Hungary* (4)	18 December	1969
Denmark**	26 January	1970
Switzerland**	26 January	1970

* Member of the Paris Union.

** Member of the Paris Union and of the Berne Union.

*** Member of the Berne Union.

(1) The Governments of the following States have sent communications to the depositary to the effect that they objected to the instrument deposited by the German Democratic Republic: Argentina, Australia, Belgium, Canada, Denmark, Federal Republic of Germany, France, Gabon, Greece, Haiti, Holy See, Iceland, Iran, Ireland, Israel, Japan, Luxembourg, Madagascar, Niger, Portugal, South Africa, Spain, United Kingdom of Great Britain and Northern Ireland and United States of America.

In this connexion, it should be noted that the last action required by article 15 (1) for the purpose of entry into force of the Convention was effected on 26 January 1970 from both the points of view of the States which recognized the validity of the instrument and those which declared that they did not, since Denmark and Switzerland (the tenth and eleventh States members of the Paris Union to do so, taking into account accession by the German Democratic Republic, or the ninth and tenth such States, not taking that accession into account) both deposited their instrument of ratification on that date.

(2) The countries to which the Paris Convention for the Protection of Industrial Property of 20 March 1883 applies, in all texts still in force ("Paris Convention": see note 1, p. 9) form the Union for the Protection of Industrial Property ("Paris Union").

The countries to which the Berne Convention for the Protection of Literary and Artistic Works of 9 September 1886 applies, in all texts still in force ("Berne Convention": see note 2, p. 9), form the Union for the Protection of Literary and Artistic Works ("Berne Union"). In accordance with article 15 (1), if a State is a member of both Unions, it will be counted in both groups.

(3) That is to say, having become a party to the Act of Stockholm of the Paris Convention in its totality or with the sole limitation provided for in article 20, 1, *b*, i, of the said Act, or having become

(continued on page 7)

(Footnote 1 continued from page 5)

a party to the Act of Stockholm of the Berne Convention in its totality or with the sole limitation provided for in article 28, 1, *b*, i of the said Act.

(⁴) With confirmation of the declaration made upon signature.

(⁵) For the texts of the declarations made upon ratification or accession, see p. 104 of this volume.

Subsequently, the Convention came into force in respect of each of the States listed below three months after the date on which they deposited their instrument of ratification or accession with the Director General of the World Intellectual Property Organization (WIPO) (the Director of the United International Bureaux for the Protection of Intellectual Property (BIRPI), before 22 September 1970), in accordance with article 15 (2):

State	*Date of deposit of the instrument of ratification, or accession (a)*	*Date of entry into force*
Australia	10 May 1972*a*	10 August 1972
Bulgaria (¹)	19 February 1970	19 May 1970
Canada	26 March 1970*a*	26 June 1970
Chad	26 June 1970*a*	26 September 1970
Czechoslovakia(²)	22 September 1970*a*	22 December 1970
Federal Republic of Germany (With a declaration to the effect that the ratification shall also apply to *Land Berlin*.) (³)	19 June 1970	19 September 1970
Finland	8 June 1970	8 September 1970
Fiji	11 December 1971*a*	11 March 1971
Jordan	12 April 1972*a*	12 July 1972
Kenya	5 July 1971	5 October 1971
Liechtenstein	21 February 1972	21 May 1972
Malawi	11 March 1970*a*	11 June 1970
Morocco	27 April 1971	27 July 1971
United States of America	25 May 1970	25 August 1970

(¹) With confirmation of the declaration made upon signature.

(²) For the texts of the declarations made upon ratification or accession, see p. 104 of this volume.

(³) Notifications from the States indicated hereafter, objecting to the declaration by the Federal Republic of Germany, were received by the Director General of the World Intellectual Property Organization: Bulgaria, Byelorussian Soviet Socialist Republic, Poland, Ukrainian Soviet Socialist Republic, Union of Soviet Socialist Republics.

Furthermore, the following States deposited with the Director General of the World Intellectual Property Organization (WIPO) (the Director of the United International Bureaux for the Protection of Intellectual Property (BIRPI), before 22 December 1970) in accordance with article 21, paragraph 2 (*a*), of the Convention, a notification to the effect that they desired to exercise the same rights as if they had become a party to the Convention, the said notification to take effect on the date of its receipt:

State	*Date of receipt of the notification*	*State*	*Date of receipt of the notification*
Algeria	24 September 1970	Malta	21 September 1970
Argentina	7 October 1970	Mexico	13 June 1972
Australia*	21 September 1971	Morocco**	14 September 1970
Belgium	20 May 1970	Netherlands	11 September 1970
Brazil	9 June 1970	Niger	24 September 1970
Cameroon	22 September 1970	Norway	22 July 1970
Cuba	15 January 1968	Poland	15 September 1970
Czechoslovakia*	4 August 1970	Portugal	25 August 1970
Dahomey	25 September 1970	South Africa	17 September 1970

Italy	29 April 1970	United Arab Republic	28 September 1970
Ivory Coast	6 August 1970	Upper Volta	18 August 1970
Japan	17 September 1970	Yugoslavia	6 August 1970
Luxembourg	20 March 1970		

* Instrument of accession subsequently deposited; see above.

** Instrument of ratification subsequently deposited; see above.

Desiring, in order to encourage creative activity, to promote the protection of intellectual property throughout the world,

Desiring to modernize and render more efficient the administration of the Unions established in the fields of the protection of industrial property and the protection of literary and artistic works, while fully respecting the independence of each of the Unions,

Agree as follows:

Article 1

ESTABLISHMENT OF THE ORGANIZATION

The World Intellectual Property Organization is hereby established.

Article 2

DEFINITIONS

For the purposes of this Convention:

(i) "Organization" shall mean the World Intellectual Property Organization (WIPO);

(ii) "International Bureau" shall mean the International Bureau of Intellectual Property;

(iii) "Paris Convention" shall mean the Convention for the Protection of Industrial Property signed on March 20, 1883, including any of its revisions;[1]

iv) "Berne Convention" shall mean the Convention for the Protection of Literary and Artistic Works signed on September 9, 1886, including any of its revisions;[2]

(v) "Paris Union" shall mean the International Union established by the Paris Convention;

(vi) "Berne Union" shall mean the International Union established by the Berne Convention;

(vii) "Unions" shall mean the Paris Union, the Special Unions and Agreements established in relation with that Union, the Berne Union, and any other international agreement designed to promote the pro-

---

[2] *British and Foreign State Papers*, vol. 77, p. 22, and vol. 88, p. 36; League of Nations, *Treaty Series*, vol. I, pp. 217 and 243, and vol. CXXIII, p. 233; and United Nations, *Treaty Series*, vol. 331, p. 217.

tection of intellectual property whose administration is assumed by the Organization according to Article 4 (iii);

(viii) "intellectual property" shall include the rights relating to:
- literary, artistic and scientific works,
- performances of performing artists, phonograms, and broadcasts,
- inventions in all fields of human endeavor,
- scientific discoveries,
- industrial designs,
- trademarks, service marks, and commercial names and designations,
- protection against unfair competition,

and all other rights resulting from intellectual activity in the industrial, scientific, literary or artistic fields.

Article 3

OBJECTIVES OF THE ORGANIZATION

The objectives of the Organization are:

(i) to promote the protection of intellectual property throughout the world through cooperation among States and, where appropriate, in collaboration with any other international organization,

(ii) to ensure administrative cooperation among the Unions.

Article 4

FUNCTIONS

In order to attain the objectives described in Article 3, the Organization, through its appropriate organs, and subject to the competence of each of the Unions:

(i) shall promote the development of measures designed to facilitate the efficient protection of intellectual property throughout the world and to harmonize national legislations in this field;

(ii) shall perform the administrative tasks of the Paris Union, the Special Unions established in relation with that Union, and the Berne Union;

(iii) may agree to assume, or participate in, the administration of any other international agreement designed to promote the protection of intellectual property;

(iv) shall encourage the conclusion of international agreements designed to promote the protection of intellectual property;

(v) shall offer its cooperation to States requesting legal-technical assistance in the field of intellectual property;

(vi) shall assemble and disseminate information concerning the protection of intellectual property, carry out and promote studies in this field, and publish the results of such studies;

(vii) shall maintain services facilitating the international protection of intellectual property and, where appropriate, provide for registration in this field and the publication of the data concerning the registrations;

(viii). shall take all other appropriate action.

Article 5

MEMBERSHIP

(1) Membership in the Organization shall be open to any State which is a member of any of the Unions as defined in Article 2 (vii).

(2) Membership in the Organization shall be equally open to any State not a member of any of the Unions, provided that:

(i) it is a member of the United Nations, any of the Specialized Agencies brought into relationship with the United Nations, or the International Atomic Energy Agency, or is a party to the Statute of the International Court of Justice, or

(ii) it is invited by the General Assembly to become a party to this Convention.

Article 6

GENERAL ASSEMBLY

(1) (*a*) These shall be a General Assembly consisting of the States party to this Convention which are members of any of the Unions.

(*b*) The Government of each State shall be represented by one delegate, who may be assisted by alternate delegates, advisors, and experts.

(*c*) The expenses of each delegation shall be borne by the Government which has appointed it.

(2) The General Assembly shall:

(i) appoint the Director General upon nomination by the Coordination Committee;

(ii) review and approve reports of the Director General concerning the Organization and give him all necessary instructions;

(iii) review and approve the reports and activities of the Coordination Committee and give instructions to such Committee;

(iv) adopt the triennial budget of expenses common to the Unions;

(v) approve the measures proposed by the Director General concerning the administration of the international agreements referred to in Article 4 (iii);

(vi) adopt the financial regulations of the Organization;

(vii) determine the working languages of the Secretariat, taking into consideration the practice of the United Nations;

(viii) invite States referred to under Article 5 (2) (ii) to become party to this Convention;

(ix) determine which States not Members of the Organization and which intergovernmental and international non-governmental organizations shall be admitted to its meetings as observers;

(x) exercise such other functions as are appropriate under this Convention.

(3) (*a*) Each State, whether member of one or more Unions, shall have one vote in the General Assembly.

(*b*) One-half of the States members of the General Assembly shall constitute a quorum.

(*c*) Notwithstanding the provisions of subparagraph (*b*), if, in any session, the number of States represented is less than one-half but equal to or more than one-third of the States members of the General Assembly, the General Assembly may make decisions but, with the exception of decisions concerning its own procedure, all such decisions shall take effect only if the following conditions are fulfilled. The International Bureau shall communicate the said decisions to the States members of the General Assembly which were not represented and shall invite them to express in writing their vote or abstention within a period of three months from the date of the communication. If, at the expiration of this period, the number of States having thus expressed their vote or abstention attains the number of States which was lacking for attaining the quorum in the session itself, such decisions shall take effect provided that at the same time the required majority still obtains.

(*d*) Subject to the provisions of subparagraphs (*e*) and (*f*), the General Assembly shall make its decisions by a majority of two-thirds of the votes cast.

(*e*) The approval of measures concerning the administration of international agreements referred to in Article 4 (iii) shall require a majority of three-fourths of the votes cast.

(*f*) The approval of an agreement with the United Nations under Articles 57 and 63 of the Charter of the United Nations shall require a majority of nine-tenths of the votes cast.

(*g*) For the appointment of the Director General (paragraph (2) (i)), the approval of measures proposed by the Director General concerning the administration of international agreements (paragraph (2) (v)), and the transfer of headquarters (Article 10), the required majority must be attained not only in the General Assembly but also in the Assembly of the Paris Union and the Assembly of the Berne Union.

(*h*) Abstentions shall not be considered as votes.

(*i*) A delegate may represent, and vote in the name of, one State only.

(4) (*a*) The General Assembly shall meet once in every third calendar year in ordinary session, upon convocation by the Director General.

(*b*) The General Assembly shall meet in extraordinary session upon convocation by the Director General either at the request of the Coordination Committee or at the request of one-fourth of the States members of the General Assembly.

(*c*) Meetings shall be held at the headquarters of the Organization.

(5) States party to this Convention which are not members of any of the Unions shall be admitted to the meetings of the General Assembly as observers.

(6) The General Assembly shall adopt its own rules of procedure.

Article 7

CONFERENCE

(1) (*a*) There shall be a Conference consisting of the States party to this Convention whether or not they are members of any of the Unions.

(*b*) The Government of each State shall be represented by one delegate, who may be assisted by alternate delegates, advisors, and experts.

(*c*) The expenses of each delegation shall be borne by the Government which has appointed it.

(2) The Conference shall:

(i) discuss matters of general interest in the field of intellectual property and may adopt recommendations relating to such matters, having regard for the competence and autonomy of the Unions;

(ii) adopt the triennial budget of the Conference;

(iii) within the limits of the budget of the Conference, establish the triennial program of legal-technical assistance;

(iv) adopt amendments to this Convention as provided in Article 17;

(v) determine which States not Members of the Organization and which intergovernmental and international non-governmental organizations shall be admitted to its meetings as observers;

(vi) exercise such other functions as are appropriate under this Convention.

(3) (*a*) Each Member State shall have one vote in the Conference.

(*b*) One-third of the Member States shall constitute a quorum.

(*c*) Subject to the provisions of Article 17, the Conference shall make its decisions by a majority of two-thirds of the votes cast.

(*d*) The amounts of the contributions of States party to this Convention not members of any of the Unions shall be fixed by a vote in which only the delegates of such States shall have the right to vote.

(*e*) Abstentions shall not be considered as votes.

(*f*) A delegate may represent, and vote in the name of, one State only.

(4) (*a*) The Conference shall meet in ordinary session, upon convocation by the Director General, during the same period and at the same place as the General Assembly.

(*b*) The Conference shall meet in extraordinary session, upon convocation by the Director General, at the request of the majority of the Member States.

(5) The Conference shall adopt its own rules of procedure.

Article 8

COORDINATION COMMITTEE

(1) (*a*) There shall be a Coordination Committee consisting of the States party to this Convention which are members of the Executive Com-

mittee of the Paris Union, or the Executive Committee of the Berne Union, or both. However, if either of these Executive Committees is composed of more than one-fourth of the number of the countries members of the Assembly which elected it, then such Executive Committee shall designate from among its members the States which will be members of the Coordination Committee, in such a way that their number shall not exceed the one-fourth referred to above, it being understood that the country on the territory of which the Organization has its headquarters shall not be included in the computation of the said one-fourth.

(*b*) The Government of each State member of the Coordination Committee shall be represented by one delegate, who may be assisted by alternate delegates, advisors, and experts.

(*c*) Whenever the Coordination Committee considers either matters of direct interest to the program or budget of the Conference and its agenda, or proposals for the amendment of this Convention which would affect the rights or obligations of States party to this Convention not members of any of the Unions, one-fourth of such States shall participate in the meetings of the Coordination Committee with the same rights as members of that Committee. The Conference shall, at each of its ordinary sessions, designate these States.

(*d*) The expenses of each delegation shall be borne by the Government which has appointed it.

(2) If the other Unions administered by the Organization wish to be represented as such in the Coordination Committee, their representatives must be appointed from among the States members of the Coordination Committee.

(3) The Coordination Committee shall:

(i) give advice to the organs of the Unions, the General Assembly, the Conference, and the Director General, on all administrative, financial and other matters of common interest either to two or more of the Unions, or to one or more of the Unions and the Organization, and in particular on the budget of expenses common to the Unions;

(ii) prepare the draft agenda of the General Assembly;

(iii) prepare the draft agenda and the draft program and budget of the Conference;

(iv) on the basis of the triennial budget of expenses common to the Unions and the triennial budget of the Conference, as well as on the basis of the triennial program of legal technical assistance, establish the corresponding annual budgets and programs;

(v) when the term of office of the Director General is about to expire, or when there is a vacancy in the post of the Director General, nominate a candidate for appointment to such position by the General Assembly; if the General Assembly does not appoint its nominee, the Coordination Committee shall nominate another candidate; this procedure shall be repeated until the latest nominee is appointed by the General Assembly;

(vi) if the post of the Director General becomes vacant between two sessions of the General Assembly, appoint an Acting Director General for the term preceding the assuming of office by the new Director General;

(vii) perform such other functions as are allocated to it under this Convention.

(4) (*a*) The Coordination Committee shall meet once every year in ordinary session, upon convocation by the Director General. It shall normally meet at the headquarters of the Organization.

(*b*) The Coordination Committee shall meet in extraordinary session, upon convocation by the Director General, either on his own initiative, or at the request of its Chairman or one-fourth of its members.

(5) (*a*) Each State, whether a member of one or both of the Executive Committees referred to in paragraph (1) (*a*), shall have one vote in the Coordination Committee.

(*b*) One-half of the members of the Coordination Committee shall constitute a quorum.

(*c*) A delegate may represent, and vote in the name of, one State only.

(6) (*a*) The Coordination Committee shall express its opinions and make its decisions by a simple majority of the votes cast. Abstentions shall not be considered as votes.

(*b*) Even if a simple majority is obtained, any member of the Coordination Committee may, immediately after the vote, request that the votes be the subject of a special recount in the following manner: two separate lists shall be prepared, one containing the names of the States members of the Executive Committee of the Paris Union and the other the names of the States members of the Executive Committee of the Berne Union; the vote of each State shall be inscribed opposite its name in each list in which it appears. Should this special recount indicate that a simple majority has not been obtained in each of those lists, the proposal shall not be considered as carried.

(7) Any State Member of the Organization which is not a member of the Coordination Committee may be represented at the meetings of the Committee by observers having the right to take part in the debates but without the right to vote.

(8) The Coordination Committee shall establish its own rules of procedure.

Article 9

INTERNATIONAL BUREAU

(1) The International Bureau shall be the Secretariat of the Organization.

(2) The International Bureau shall be directed by the Director General, assisted by two or more Deputy Directors General.

(3) The Director General shall be appointed for a fixed term, which shall be not less than six years. He shall be eligible for reappointment for fixed terms. The periods of the initial appointment and possible subsequent appointments, as well as all other conditions of the appointment, shall be fixed by the General Assembly.

(4) (*a*) The Director General shall be the chief executive of the Organization.

(*b*) He shall represent the Organization.

(*c*) He shall report to, and conform to the instructions of, the General Assembly as to the internal and external affairs of the Organization.

(5) The Director General shall prepare the draft programs and budgets and periodical reports on activities. He shall transmit them to the Governments of the interested States and to the competent organs of the Unions and the Organization.

(6) The Director General and any staff member designated by him shall participate, without the right to vote, in all meetings of the General Assembly, the Conference, the Coordination Committee, and any other committee or working group. The Director General or a staff member designated by him shall be *ex officio* secretary of these bodies.

(7) The Director General shall appoint the staff necessary for the efficient performance of the tasks of the International Bureau. He shall appoint the Deputy Directors General after approval by the Coordination Committee. The conditions of employment shall be fixed by the staff regulations to be approved by the Coordination Committee on the proposal of the Director General. The paramount consideration in the employment of

the staff and in the determination of the conditions of service shall be the necessity of securing the highest standards of efficiency, competence, and integrity. Due regard shall be paid to the importance of recruiting the staff on as wide a geographical basis as possible.

(8) The nature of the responsibilities of the Director General and of the staff shall be exclusively international. In the discharge of their duties they shall not seek or receive instructions from any Government or from any authority external to the Organization. They shall refrain from any action which might prejudice their position as international officials. Each Member State undertakes to respect the exclusively international character of the responsibilities of the Director General and the staff, and not to seek to influence them in the discharge of their duties.

Article 10

HEADQUARTERS

(1) The headquarters of the Organization shall be at Geneva.

(2) Its transfer may be decided as provided for in Article 6 (3) (*d*) and (*g*).

Article 11

FINANCES

(1) The Organization shall have two separate budgets: the budget of expenses common to the Unions, and the budget of the Conference.

(2) (*a*) The budget of expenses common to the Unions shall include provision for expenses of interest to several Unions.

(*b*) This budget shall be financed from the following sources:

(i) contributions of the Unions, provided that the amount of the contribution of each Union shall be fixed by the Assembly of that Union, having regard to the interest the Union has in the common expenses;

(ii) charges due for services performed by the International Bureau not in direct relation with any of the Unions or not received for services rendered by the International Bureau in the field of legal-technical assistance;

(iii) sale of, or royalties on, the publications of the International Bureau not directly concerning any of the Unions;

(iv) gifts, bequests, and subventions, given to the Organization, except those referred to in paragraph (3) (*b*) (iv);

(v) rents, interests, and other miscellaneous income, of the Organization.

(3) (*a*) The budget of the Conference shall include provision for the expenses of holding sessions of the Conference and for the cost of the legal-technical assistance program.

(*b*) This budget shall be financed from the following sources:

(i) contributions of States party to this Convention not members of any of the Unions;

(ii) any sums made available to this budget by the Unions, provided that the amount of the sum made available by each Union shall be fixed by the Assembly of that Union and that each Union shall be free to abstain from contributing to the said budget;

(iii) sums received for services rendered by the International Bureau in the field of legal-technical assistance;

(iv) gifts, bequests, and subventions, given to the Organization for the purposes referred to in subparagraph (*a*).

(4) (*a*) For the purpose of establishing its contribution towards the budget of the Conference, each State party to this Convention not member of any of the Unions shall belong to a class, and shall pay its annual contributions on the basis of a number of units fixed as follows:

Class A . . .	10
Class B . . .	3
Class C . . .	1

(*b*) Each such State shall, concurrently with taking action as provided in Article 14 (1), indicate the class to which it wishes to belong. Any such State may change class. If it chooses a lower class, the State must announce it to the Conference at one of its ordinary sessions. Any such change shall take effect at the beginning of the calendar year following the session.

(*c*) The annual contribution of each such State shall be an amount in the same proportion to the total sum to be contributed to the budget of the Conference by all such States as the number of its units is to the total of the units of all the said States.

(*d*) Contributions shall become due on the first of January of each year.

(*e*) If the budget is not adopted before the beginning of a new financial period, the budget shall be at the same level as the budget of the previous year, in accordance with the financial regulations.

(5) Any State party to this Convention not member of any of the Unions which is in arrears in the payment of its financial contributions under the present Article, and any State party to this Convention member of any of the Unions which is in arrears in the payment of its contributions to any of the Unions, shall have no vote in any of the bodies of the Organization of which it is a member, if the amount of its arrears equals or exceeds the amount of the contributions due from it for the preceding two full years. However, any of these bodies may allow such a State to continue to exercise its vote in that body if, and as long as, it is satisfied that the delay in payment arises from exceptional and unavoidable circumstances.

(6) The amount of the fees and charges due for services rendered by the International Bureau in the field of legal technical assistance shall be established, and shall be reported to the Coordination Committee, by the Director General.

(7) The Organization, with the approval of the Coordination Committee, may receive gifts, bequests, and subventions, directly from Governments, public or private institutions, associations or private persons.

(8) (*a*) The Organization shall have a working capital fund which shall be constituted by a single payment made by the Unions and by each State party to this Convention not member of any Union. If the fund becomes insufficient, it shall be increased.

(*b*) The amount of the single payment of each Union and its possible participation in any increase shall be decided by its Assembly.

(*c*) The amount of the single payment of each State party to this Convention not member of any Union and its part in any increase shall be a proportion of the contribution of that State for the year in which the fund is established or the increase decided. The proportion and the terms of payment shall be fixed by the Conference on the proposal of the Director General and after it has heard the advice of the Coordination Committee.

(9) (*a*) In the headquarters agreement concluded with the State on the territory of which the Organization has its headquarters, it shall be provided that, whenever the working capital fund is insufficient, such State shall grant advances. The amount of these advances and the conditions on which they are granted shall be the subject of separate agreements, in each case, between such State and the Organization. As long as it remains under the obligation to grant advances, such State shall have an ex officio seat on the Coordination Committee.

(*b*) The State referred to in subparagraph (*a*) and the Organization shall each have the right to denounce the obligation to grant advances, by written notification. Denunciation shall take effect three years after the end of the year in which it has been notified.

(10) The auditing of the accounts shall be effected by one or more Member States, or by external auditors, as provided in the financial regulations. They shall be designated, with their agreement, by the General Assembly.

Article 12

LEGAL CAPACITY; PRIVILEGES AND IMMUNITIES

(1) The Organization shall enjoy on the territory of each Member State, in conformity with the laws of that State, such legal capacity as may be necessary for the fulfilment of the Organization's objectives and for the exercise of its functions.

(2) The Organization shall conclude a headquarters agreement with the Swiss Confederation and with any other State in which the headquarters may subsequently be located.

(3) The Organization may conclude bilateral or multilateral agreements with the other Member States with a view to the enjoyment by the Organization, its officials, and representatives of all Member States, of such privileges and immunities as may be necessary for the fulfilment of its objectives and for the exercise of its functions.

(4) The Director General may negotiate and, after approval by the Coordination Committee, shall conclude and sign on behalf of the Organization the agreements referred to in paragraphs (2) and (3).

Article 13

RELATIONS WITH OTHER ORGANIZATIONS

(1) The Organization shall, where appropriate, establish working relations and cooperate with other intergovernemental organizations. Any general agreement to such effect entered into with such organizations shall be concluded by the Director General after approval by the Coordination Committee.

(2) The Organization may, on matters within its competence, make suitable arrangements for consultation and cooperation with international non-governmental organizations and, with the consent of the Governments concerned, with national organizations, governmental or non-governmental. Such arrangements shall be made by the Director General after approval by the Coordination Committee.

Article 14

BECOMING PARTY TO THE CONVENTION

(1) States referred to in Article 5 may become party to this Convention and Member of the Organization by:

(i) signature without reservation as to ratification, or

(ii) signature subject to ratification followed by the deposit of an instrument of ratification, or

(iii) deposit of an instrument of accession.

(2) Notwithstanding any other provision of this Convention, a State party to the Paris Convention, the Berne Convention, or both Conventions, may become party to this Convention only if it concurrently ratifies or accedes to, or only after it has ratified or acceded to:

— either the Stockholm Act of the Paris Convention in its entirety or with only the limitation set forth in Article 20 (1) (*b*) (i) thereof,

— or the Stockholm Act of the Berne Convention in its entirety or with only the limitation set forth in Article 28 (1) (*b*) (i) thereof.

(3) Instruments of ratification or accession shall be deposited with the Director General.

Article 15

ENTRY INTO FORCE OF THE CONVENTION

(1) This Convention shall enter into force three months after ten States members of the Paris Union and seven States members of the Berne Union have taken action as provided in Article 14 (1), it being understood that, if a State is a member of both Unions, it will be counted in both groups. On that date, this Convention shall enter into force also in respect of States which, not being members of either of the two Unions, have taken action as provided in Article 14 (1) three months or more prior to that date.

(2) In respect to any other State, this Convention shall enter into force three months after the date on which such State takes action as provided in Article 14 (1).

Article 16

RESERVATIONS

No reservations to this Convention are permitted.

Article 17

AMENDMENTS

(1) Proposals for the amendment of this Convention may be initiated by any Member State, by the Coordination Committee, or by the Director General. Such proposals shall be communicated by the Director General to the Member States at least six months in advance of their consideration by the Conference.

(2) Amendments shall be adopted by the Conference. Whenever amendments would affect the rights and obligations of States party to this Convention not members of any of the Unions, such States shall also vote. On all other amendments proposed, only States party to this Convention members of any Union shall vote. Amendments shall be adopted by a simple majority of the votes cast, provided that the Conference shall vote only on such proposals for amendments as have previously been adopted by the Assembly of the Paris Union and the Assembly of the Berne Union according to the rules applicable in each of them regarding the adoption of amendments to the administrative provisions of their respective Conventions.

(3) Any amendment shall enter into force one month after written notifications of acceptance, effected in accordance with their respective constitutional processes, have been received by the Director General from three-fourths of the States Members of the Organization, entitled to vote on the proposal for amendment pursuant to paragraph (2), at the time the Conference adopted the amendment. Any amendments thus accepted shall bind all the States which are Members of the Organization at the time the amendment enters into force or which become Members at a subsequent date, provided that any amendment increasing the financial obligations of Member States shall bind only those States which have notified their acceptance of such amendment.

Article 18

DENUNCIATION

(1) Any Member State may denounce this Convention by notification addressed to the Director General.

(2) Denunciation shall take effect six months after the day on which the Director General has received the notification.

Article 19

NOTIFICATIONS

The Director General shall notify the Governments of all Member States of:

(i) the date of entry into force of the Convention,

(ii) signatures and deposits of instruments of ratification or accession,

(iii) acceptances of an amendment to this Convention, and the date upon which the amendment enters into force,

(iv) denunciations of this Convention.

Article 20

FINAL PROVISIONS

(1) (*a*) This Convention shall be signed in a single copy in English, French, Russian and Spanish, all texts being equally authentic, and shall be deposited with the Government of Sweden.

(*b*) This Convention shall remain open for signature at Stockholm until January 13, 1968.

(2) Official texts shall be established by the Director General, after consultation with the interested Governments, in German, Italian and Portuguese, and such other languages as the Conference may designate.

(3) The Director General shall transmit two duly certified copies of this Convention and of each amendment adopted by the Conference to the Governments of the States members of the Paris or Berne Unions, to the Government of any other State when it accedes to this Convention, and, on request, to the Government of any other State. The copies of the signed text of the Convention transmitted to the Governments shall be certified by the Government of Sweden.

(4) The Director General shall register this Convention with the Secretariat of the United Nations.

Article 21

TRANSITIONAL PROVISIONS

(1) Until the first Director General assumes office, references in this Convention to the International Bureau or to the Director General shall be deemed to be references to the United International Bureaux for the Protec-

tion of Industrial, Literary and Artistic Property (also called the United International Bureaux for the Protection of Intellectual Property (BIRPI)), or its Director, respectively.

(2) (*a*) States which are members of any of the Unions but which have not become party to this Convention may, for five years from the date of entry into force of this Convention, exercise, if they so desire, the same rights as if they had become party to this Convention. Any State desiring to exercise such rights shall give written notification to this effect to the Director General; this notification shall be effective on the date of its receipt. Such States shall be deemed to be members of the General Assembly and the Conference until the expiration of the said period.

(*b*) Upon expiration of this five-year period, such States shall have no right to vote in the General Assembly, the Conference, and the Coordination Committee.

(*c*) Upon becoming party to this Convention, such States shall regain such right to vote.

(3) (*a*) As long as there are States members of the Paris or Berne Unions which have not become party to this Convention, the International Bureau and the Director General shall also function as the United International Bureaux for the Protection of Industrial, Literary and Artistic Property, and its Director, respectively.

(*b*) The staff in the employment of the said Bureaux on the date of entry into force of this Convention shall, during the transitional period referred to in subparagraph (a), be considered as also employed by the International Bureau.

(4) (*a*) Once all the States members of the Paris Union have become Members of the Organization, the rights, obligations, and property, of the Bureau of that Union shall devolve on the International Bureau of the Organization.

(*b*) Once all the States members of the Berne Union have become Members of the Organization, the rights, obligations, and property, of the Bureau of that Union shall devolve on the International Bureau of the Organization.

IN WITNESS WHEREOF, the undersigned, being duly authorized thereto, have signed this Convention.

DONE at Stockholm, on July 14, 1967.

DECLARATIONS MADE UPON SIGNATURE

BULGARIA

[TRANSLATION[2] — TRADUCTION[3]]

The People's Republic of Bulgaria considers it necessary to stress that the wording of article 5 of the Convention Establishing the World Intellectual Property Organization signed at Stockholm on July 14, 1967, is of a discriminatory nature because it bars a certain number of States from becoming party to that Convention. The article is clearly contrary to the nature of the World Intellectual Property Organization that is

DÉCLARATIONS FAITES LORS DE LA SIGNATURE

BULGARIE

« La République populaire de Bulgarie estime nécessaire de souligner que la rédaction de l'article 5 de la Convention instituant l'Organisation mondiale de la propriété intellectuelle signée à Stockholm le 14 juillet 1967 a un caractère discriminatoire car il exclut la possibilité, pour un certain nombre d'Etats, de devenir parties de cette Convention.

« Cet article est nettement contraire au caractère de l'Organisation mondiale

DECLARATIONS MADE UPON RATIFICATION OR ACCESSION

DÉCLARATIONS FAITES LORS DE LA RATIFICATION OU DE L'ADHÉSION

BYELORUSSIAN SOVIET SOCIALIST REPUBLIC

RÉPUBLIQUE SOCIALISTE SOVIÉTIQUE DE BIÉLORUSSIE

[RUSSIAN TEXT — TEXTE RUSSE]

«Белорусская Советская Социалистическая Республика заявляет, что Конвенция, учреждающая Всемирную организацию интеллектуальной собственности, регулирует вопросы, затрагивающие интересы всех стран, и поэтому она должна быть открыта для участия всех государств в соответствии с принципом их суверенного равенства».

[TRANSLATION][1]

The Byelorussian Soviet Socialist Republic declares that the Convention Establishing the World Intellectual Property Organization regulates questions concerning the interests of all countries; and that is why it must be open to participation of all States, in accordance with the principle of their sovereign equality.

[TRADUCTION][2]

La République socialiste soviétique de Biélorussie déclare que la Convention instituant l'Organisation mondiale de la propriété intellectuelle règle les problèmes qui touchent les intérêts de tous les pays et, par conséquent, cette Convention doit être ouverte à la participation de tous les Etats conformément au principe de leur égalité souveraine.

CZECHOSLOVAKIA

"Contrary to the principle of sovereign equality of States and to the right of all States to participate in General multilateral treaties, article 5 concerning the membership in the organisation deprives certain States of their undeniable right to become parties to a Treaty of general character, concerning matters of legitimate interest of any State which should contribute to the development of friendly relations among nations irrespective of their differing constitutional and social systems."

TCHÉCOSLOVAQUIE

[TRADUCTION[2] — TRANSLATION[1]]

Contrairement au principe de l'égalité souveraine des Etats et au droit de tous les Etats à participer aux traités multilatéraux généraux, l'article 5, relatif à la qualité de membre de l'Organisation, prive certains Etats de leur droit indéniable de devenir parties à un traité de caractère général qui règle les questions présentant un intérêt légitime pour chaque Etat et qui devrait contribuer au développement des relations amicales entre les nations, indépendamment de leurs différences constitutionnelles et de leurs systèmes sociaux.

---

[1] Translation supplied by the World Intellectual Property Organization.

[2] Traduction fournie par l'Organisation mondiale de la propriété intellectuelle.

ROMANIA

[TRANSLATION[1] — TRADUCTION[2]]

The provisions of articles 5 and 14(1) of the Convention Establishing the World Intellectual Property Organization signed at Stockholm on July 14, 1967, are not in accordance with the principle of universality of treaties, by which all States have the right to become parties to multilateral treaties regulating questions of general interest.

ROUMANIE

« Les dispositions des articles 5 et 14.1 de la Convention instituant l'Organisation mondiale de la propriété intellectuelle, signée à Stockholm le 14 juillet 1967, ne sont pas en concordance avec le principe de l'universalité des traités, selon lequel tous les Etats ont le droit de devenir parties aux traités multilatéraux réglementant les questions d'intérêt général. »

ANNEX 1C

AGREEMENT ON TRADE-RELATED ASPECTS OF INTELLECTUAL PROPERTY RIGHTS

AGREEMENT ON TRADE-RELATED ASPECTS OF INTELLECTUAL PROPERTY RIGHTS

Members,

Desiring to reduce distortions and impediments to international trade, and taking into account the need to promote effective and adequate protection of intellectual property rights, and to ensure that measures and procedures to enforce intellectual property rights do not themselves become barriers to legitimate trade;

Recognizing, to this end, the need for new rules and disciplines concerning:

(a) the applicability of the basic principles of GATT 1994 and of relevant international intellectual property agreements or conventions;

(b) the provision of adequate standards and principles concerning the availability, scope and use of trade-related intellectual property rights;

(c) the provision of effective and appropriate means for the enforcement of trade-related intellectual property rights, taking into account differences in national legal systems;

(d) the provision of effective and expeditious procedures for the multilateral prevention and settlement of disputes between governments; and

(e) transitional arrangements aiming at the fullest participation in the results of the negotiations;

Recognizing the need for a multilateral framework of principles, rules and disciplines dealing with international trade in counterfeit goods;

Recognizing that intellectual property rights are private rights;

Recognizing the underlying public policy objectives of national systems for the protection of intellectual property, including developmental and technological objectives;

Recognizing also the special needs of the least-developed country Members in respect of maximum flexibility in the domestic implementation of laws and regulations in order to enable them to create a sound and viable technological base;

Emphasizing the importance of reducing tensions by reaching strengthened commitments to resolve disputes on trade-related intellectual property issues through multilateral procedures;

Desiring to establish a mutually supportive relationship between the WTO and the World Intellectual Property Organization (referred to in this Agreement as "WIPO") as well as other relevant international organizations;

Hereby agree as follows:

PART I

GENERAL PROVISIONS AND BASIC PRINCIPLES

Article 1

Nature and Scope of Obligations

1. Members shall give effect to the provisions of this Agreement. Members may, but shall not be obliged to, implement in their law more extensive protection than is required by this Agreement, provided that such protection does not contravene the provisions of this Agreement. Members shall be free to determine the appropriate method of implementing the provisions of this Agreement within their own legal system and practice.

2. For the purposes of this Agreement, the term "intellectual property" refers to all categories of intellectual property that are the subject of Sections 1 through 7 of Part II.

3. Members shall accord the treatment provided for in this Agreement to the nationals of other Members.[1] In respect of the relevant intellectual property right, the nationals of other Members shall be understood as those natural or legal persons that would meet the criteria for eligibility for protection provided for in the Paris Convention (1967), the Berne Convention (1971), the Rome Convention and the Treaty on Intellectual Property in Respect of Integrated Circuits, were all Members of the WTO members of those conventions.[2] Any Member availing itself of the possibilities provided in paragraph 3 of Article 5 or paragraph 2 of Article 6 of the Rome Convention shall make a notification as foreseen in those provisions to the Council for Trade-Related Aspects of Intellectual Property Rights (the "Council for TRIPS").

Article 2

Intellectual Property Conventions

1. In respect of Parts II, III and IV of this Agreement, Members shall comply with Articles 1 through 12, and Article 19, of the Paris Convention (1967).

2. Nothing in Parts I to IV of this Agreement shall derogate from existing obligations that Members may have to each other under the Paris Convention, the Berne Convention, the Rome Convention and the Treaty on Intellectual Property in Respect of Integrated Circuits.

---

[1] When "nationals" are referred to in this Agreement, they shall be deemed, in the case of a separate customs territory Member of the WTO, to mean persons, natural or legal, who are domiciled or who have a real and effective industrial or commercial establishment in that customs territory.

[2] In this Agreement, "Paris Convention" refers to the Paris Convention for the Protection of Industrial Property; "Paris Convention (1967)" refers to the Stockholm Act of this Convention of 14 July 1967. "Berne Convention" refers to the Berne Convention for the Protection of Literary and Artistic Works; "Berne Convention (1971)" refers to the Paris Act of this Convention of 24 July 1971. "Rome Convention" refers to the International Convention for the Protection of Performers, Producers of Phonograms and Broadcasting Organizations, adopted at Rome on 26 October 1961. "Treaty on Intellectual Property in Respect of Integrated Circuits" (IPIC Treaty) refers to the Treaty on Intellectual Property in Respect of Integrated Circuits, adopted at Washington on 26 May 1989. "WTO Agreement" refers to the Agreement Establishing the WTO.

Article 3

National Treatment

1. Each Member shall accord to the nationals of other Members treatment no less favourable than that it accords to its own nationals with regard to the protection[3] of intellectual property, subject to the exceptions already provided in, respectively, the Paris Convention (1967), the Berne Convention (1971), the Rome Convention or the Treaty on Intellectual Property in Respect of Integrated Circuits. In respect of performers, producers of phonograms and broadcasting organizations, this obligation only applies in respect of the rights provided under this Agreement. Any Member availing itself of the possibilities provided in Article 6 of the Berne Convention (1971) or paragraph 1(b) of Article 16 of the Rome Convention shall make a notification as foreseen in those provisions to the Council for TRIPS.

2. Members may avail themselves of the exceptions permitted under paragraph 1 in relation to judicial and administrative procedures, including the designation of an address for service or the appointment of an agent within the jurisdiction of a Member, only where such exceptions are necessary to secure compliance with laws and regulations which are not inconsistent with the provisions of this Agreement and where such practices are not applied in a manner which would constitute a disguised restriction on trade.

Article 4

Most-Favoured-Nation Treatment

With regard to the protection of intellectual property, any advantage, favour, privilege or immunity granted by a Member to the nationals of any other country shall be accorded immediately and unconditionally to the nationals of all other Members. Exempted from this obligation are any advantage, favour, privilege or immunity accorded by a Member:

(a) deriving from international agreements on judicial assistance or law enforcement of a general nature and not particularly confined to the protection of intellectual property;

(b) granted in accordance with the provisions of the Berne Convention (1971) or the Rome Convention authorizing that the treatment accorded be a function not of national treatment but of the treatment accorded in another country;

(c) in respect of the rights of performers, producers of phonograms and broadcasting organizations not provided under this Agreement;

(d) deriving from international agreements related to the protection of intellectual property which entered into force prior to the entry into force of the WTO Agreement, provided that such agreements are notified to the Council for TRIPS and do not constitute an arbitrary or unjustifiable discrimination against nationals of other Members.

---

[3] For the purposes of Articles 3 and 4, "protection" shall include matters affecting the availability, acquisition, scope, maintenance and enforcement of intellectual property rights as well as those matters affecting the use of intellectual property rights specifically addressed in this Agreement.

Article 5

Multilateral Agreements on Acquisition or Maintenance of Protection

The obligations under Articles 3 and 4 do not apply to procedures provided in multilateral agreements concluded under the auspices of WIPO relating to the acquisition or maintenance of intellectual property rights.

Article 6

Exhaustion

For the purposes of dispute settlement under this Agreement, subject to the provisions of Articles 3 and 4 nothing in this Agreement shall be used to address the issue of the exhaustion of intellectual property rights.

Article 7

Objectives

The protection and enforcement of intellectual property rights should contribute to the promotion of technological innovation and to the transfer and dissemination of technology, to the mutual advantage of producers and users of technological knowledge and in a manner conducive to social and economic welfare, and to a balance of rights and obligations.

Article 8

Principles

1. Members may, in formulating or amending their laws and regulations, adopt measures necessary to protect public health and nutrition, and to promote the public interest in sectors of vital importance to their socio-economic and technological development, provided that such measures are consistent with the provisions of this Agreement.

2. Appropriate measures, provided that they are consistent with the provisions of this Agreement, may be needed to prevent the abuse of intellectual property rights by right holders or the resort to practices which unreasonably restrain trade or adversely affect the international transfer of technology.

PART II

STANDARDS CONCERNING THE AVAILABILITY, SCOPE AND USE OF INTELLECTUAL PROPERTY RIGHTS

SECTION 1: COPYRIGHT AND RELATED RIGHTS

Article 9

Relation to the Berne Convention

1. Members shall comply with Articles 1 through 21 of the Berne Convention (1971) and the Appendix thereto. However, Members shall not have rights or obligations under this Agreement in respect of the rights conferred under Article 6*bis* of that Convention or of the rights derived therefrom.

2. Copyright protection shall extend to expressions and not to ideas, procedures, methods of operation or mathematical concepts as such.

Article 10

Computer Programs and Compilations of Data

1. Computer programs, whether in source or object code, shall be protected as literary works under the Berne Convention (1971).

2. Compilations of data or other material, whether in machine readable or other form, which by reason of the selection or arrangement of their contents constitute intellectual creations shall be protected as such. Such protection, which shall not extend to the data or material itself, shall be without prejudice to any copyright subsisting in the data or material itself.

Article 11

Rental Rights

In respect of at least computer programs and cinematographic works, a Member shall provide authors and their successors in title the right to authorize or to prohibit the commercial rental to the public of originals or copies of their copyright works. A Member shall be excepted from this obligation in respect of cinematographic works unless such rental has led to widespread copying of such works which is materially impairing the exclusive right of reproduction conferred in that Member on authors and their successors in title. In respect of computer programs, this obligation does not apply to rentals where the program itself is not the essential object of the rental.

Article 12

Term of Protection

Whenever the term of protection of a work, other than a photographic work or a work of applied art, is calculated on a basis other than the life of a natural person, such term shall be no less than 50 years from the end of the calendar year of authorized publication, or, failing such authorized publication within 50 years from the making of the work, 50 years from the end of the calendar year of making.

Article 13

Limitations and Exceptions

Members shall confine limitations or exceptions to exclusive rights to certain special cases which do not conflict with a normal exploitation of the work and do not unreasonably prejudice the legitimate interests of the right holder.

Article 14

Protection of Performers, Producers of Phonograms (Sound Recordings) and Broadcasting Organizations

1. In respect of a fixation of their performance on a phonogram, performers shall have the possibility of preventing the following acts when undertaken without their authorization: the fixation of their unfixed performance and the reproduction of such fixation. Performers shall also have the possibility of preventing the following acts when undertaken without their authorization: the broadcasting by wireless means and the communication to the public of their live performance.

2. Producers of phonograms shall enjoy the right to authorize or prohibit the direct or indirect reproduction of their phonograms.

3. Broadcasting organizations shall have the right to prohibit the following acts when undertaken without their authorization: the fixation, the reproduction of fixations, and the rebroadcasting by wireless means of broadcasts, as well as the communication to the public of television broadcasts of the same. Where Members do not grant such rights to broadcasting organizations, they shall provide owners of copyright in the subject matter of broadcasts with the possibility of preventing the above acts, subject to the provisions of the Berne Convention (1971).

4. The provisions of Article 11 in respect of computer programs shall apply *mutatis mutandis* to producers of phonograms and any other right holders in phonograms as determined in a Member's law. If on 15 April 1994 a Member has in force a system of equitable remuneration of right holders in respect of the rental of phonograms, it may maintain such system provided that the commercial rental of phonograms is not giving rise to the material impairment of the exclusive rights of reproduction of right holders.

5. The term of the protection available under this Agreement to performers and producers of phonograms shall last at least until the end of a period of 50 years computed from the end of the calendar year in which the fixation was made or the performance took place. The term of protection granted pursuant to paragraph 3 shall last for at least 20 years from the end of the calendar year in which the broadcast took place.

6. Any Member may, in relation to the rights conferred under paragraphs 1, 2 and 3, provide for conditions, limitations, exceptions and reservations to the extent permitted by the Rome Convention. However, the provisions of Article 18 of the Berne Convention (1971) shall also apply, *mutatis mutandis*, to the rights of performers and producers of phonograms in phonograms.

SECTION 2: TRADEMARKS

Article 15

Protectable Subject Matter

1. Any sign, or any combination of signs, capable of distinguishing the goods or services of one undertaking from those of other undertakings, shall be capable of constituting a trademark. Such signs, in particular words including personal names, letters, numerals, figurative elements and combinations of colours as well as any combination of such signs, shall be eligible for registration as trademarks. Where signs are not inherently capable of distinguishing the relevant goods or services, Members may make registrability depend on distinctiveness acquired through use. Members may require, as a condition of registration, that signs be visually perceptible.

2. Paragraph 1 shall not be understood to prevent a Member from denying registration of a trademark on other grounds, provided that they do not derogate from the provisions of the Paris Convention (1967).

3. Members may make registrability depend on use. However, actual use of a trademark shall not be a condition for filing an application for registration. An application shall not be refused solely on the ground that intended use has not taken place before the expiry of a period of three years from the date of application.

4. The nature of the goods or services to which a trademark is to be applied shall in no case form an obstacle to registration of the trademark.

5. Members shall publish each trademark either before it is registered or promptly after it is registered and shall afford a reasonable opportunity for petitions to cancel the registration. In addition, Members may afford an opportunity for the registration of a trademark to be opposed.

Article 16

Rights Conferred

1. The owner of a registered trademark shall have the exclusive right to prevent all third parties not having the owner's consent from using in the course of trade identical or similar signs for goods or services which are identical or similar to those in respect of which the trademark is registered where such use would result in a likelihood of confusion. In case of the use of an identical sign for identical goods or services, a likelihood of confusion shall be presumed. The rights described above shall not prejudice any existing prior rights, nor shall they affect the possibility of Members making rights available on the basis of use.

2. Article 6*bis* of the Paris Convention (1967) shall apply, *mutatis mutandis*, to services. In determining whether a trademark is well-known, Members shall take account of the knowledge of the trademark in the relevant sector of the public, including knowledge in the Member concerned which has been obtained as a result of the promotion of the trademark.

3. Article 6*bis* of the Paris Convention (1967) shall apply, *mutatis mutandis*, to goods or services which are not similar to those in respect of which a trademark is registered, provided that use of that trademark in relation to those goods or services would indicate a connection between those goods or

services and the owner of the registered trademark and provided that the interests of the owner of the registered trademark are likely to be damaged by such use.

Article 17

Exceptions

Members may provide limited exceptions to the rights conferred by a trademark, such as fair use of descriptive terms, provided that such exceptions take account of the legitimate interests of the owner of the trademark and of third parties.

Article 18

Term of Protection

Initial registration, and each renewal of registration, of a trademark shall be for a term of no less than seven years. The registration of a trademark shall be renewable indefinitely.

Article 19

Requirement of Use

1. If use is required to maintain a registration, the registration may be cancelled only after an uninterrupted period of at least three years of non-use, unless valid reasons based on the existence of obstacles to such use are shown by the trademark owner. Circumstances arising independently of the will of the owner of the trademark which constitute an obstacle to the use of the trademark, such as import restrictions on or other government requirements for goods or services protected by the trademark, shall be recognized as valid reasons for non-use.

2. When subject to the control of its owner, use of a trademark by another person shall be recognized as use of the trademark for the purpose of maintaining the registration.

Article 20

Other Requirements

The use of a trademark in the course of trade shall not be unjustifiably encumbered by special requirements, such as use with another trademark, use in a special form or use in a manner detrimental to its capability to distinguish the goods or services of one undertaking from those of other undertakings. This will not preclude a requirement prescribing the use of the trademark identifying the undertaking producing the goods or services along with, but without linking it to, the trademark distinguishing the specific goods or services in question of that undertaking.

Article 21

Licensing and Assignment

Members may determine conditions on the licensing and assignment of trademarks, it being understood that the compulsory licensing of trademarks shall not be permitted and that the owner of a registered trademark shall have the right to assign the trademark with or without the transfer of the business to which the trademark belongs.

SECTION 3: GEOGRAPHICAL INDICATIONS

Article 22

Protection of Geographical Indications

1. Geographical indications are, for the purposes of this Agreement, indications which identify a good as originating in the territory of a Member, or a region or locality in that territory, where a given quality, reputation or other characteristic of the good is essentially attributable to its geographical origin.

2. In respect of geographical indications, Members shall provide the legal means for interested parties to prevent:

   (a) the use of any means in the designation or presentation of a good that indicates or suggests that the good in question originates in a geographical area other than the true place of origin in a manner which misleads the public as to the geographical origin of the good;

   (b) any use which constitutes an act of unfair competition within the meaning of Article 10*bis* of the Paris Convention (1967).

3. A Member shall, *ex officio* if its legislation so permits or at the request of an interested party, refuse or invalidate the registration of a trademark which contains or consists of a geographical indication with respect to goods not originating in the territory indicated, if use of the indication in the trademark for such goods in that Member is of such a nature as to mislead the public as to the true place of origin.

4. The protection under paragraphs 1, 2 and 3 shall be applicable against a geographical indication which, although literally true as to the territory, region or locality in which the goods originate, falsely represents to the public that the goods originate in another territory.

Article 23

Additional Protection for Geographical Indications for Wines and Spirits

1. Each Member shall provide the legal means for interested parties to prevent use of a geographical indication identifying wines for wines not originating in the place indicated by the geographical indication in question or identifying spirits for spirits not originating in the place indicated by the geographical indication in question, even where the true origin of the goods is indicated or the geographical indication is used in translation or accompanied by expressions such as "kind", "type", "style", "imitation" or the like.[4]

2. The registration of a trademark for wines which contains or consists of a geographical indication identifying wines or for spirits which contains or consists of a geographical indication identifying spirits shall be refused or invalidated, *ex officio* if a Member's legislation so permits or at the request of an interested party, with respect to such wines or spirits not having this origin.

3. In the case of homonymous geographical indications for wines, protection shall be accorded to each indication, subject to the provisions of paragraph 4 of Article 22. Each Member shall determine the practical conditions under which the homonymous indications in question will be differentiated from each other, taking into account the need to ensure equitable treatment of the producers concerned and that consumers are not misled.

4. In order to facilitate the protection of geographical indications for wines, negotiations shall be undertaken in the Council for TRIPS concerning the establishment of a multilateral system of notification and registration of geographical indications for wines eligible for protection in those Members participating in the system.

Article 24

International Negotiations; Exceptions

1. Members agree to enter into negotiations aimed at increasing the protection of individual geographical indications under Article 23. The provisions of paragraphs 4 through 8 below shall not be used by a Member to refuse to conduct negotiations or to conclude bilateral or multilateral agreements. In the context of such negotiations, Members shall be willing to consider the continued applicability of these provisions to individual geographical indications whose use was the subject of such negotiations.

2. The Council for TRIPS shall keep under review the application of the provisions of this Section; the first such review shall take place within two years of the entry into force of the WTO Agreement. Any matter affecting the compliance with the obligations under these provisions may be drawn to the attention of the Council, which, at the request of a Member, shall consult with any Member or Members in respect of such matter in respect of which it has not been possible to find a satisfactory solution through bilateral or plurilateral consultations between the Members concerned. The Council shall take such action as may be agreed to facilitate the operation and further the objectives of this Section.

3. In implementing this Section, a Member shall not diminish the protection of geographical indications that existed in that Member immediately prior to the date of entry into force of the WTO Agreement.

---

[4] Notwithstanding the first sentence of Article 42, Members may, with respect to these obligations, instead provide for enforcement by administrative action.

4. Nothing in this Section shall require a Member to prevent continued and similar use of a particular geographical indication of another Member identifying wines or spirits in connection with goods or services by any of its nationals or domiciliaries who have used that geographical indication in a continuous manner with regard to the same or related goods or services in the territory of that Member either (*a*) for at least 10 years preceding 15 April 1994 or (*b*) in good faith preceding that date.

5. Where a trademark has been applied for or registered in good faith, or where rights to a trademark have been acquired through use in good faith either:

(a) before the date of application of these provisions in that Member as defined in Part VI; or

(b) before the geographical indication is protected in its country of origin;

measures adopted to implement this Section shall not prejudice eligibility for or the validity of the registration of a trademark, or the right to use a trademark, on the basis that such a trademark is identical with, or similar to, a geographical indication.

6. Nothing in this Section shall require a Member to apply its provisions in respect of a geographical indication of any other Member with respect to goods or services for which the relevant indication is identical with the term customary in common language as the common name for such goods or services in the territory of that Member. Nothing in this Section shall require a Member to apply its provisions in respect of a geographical indication of any other Member with respect to products of the vine for which the relevant indication is identical with the customary name of a grape variety existing in the territory of that Member as of the date of entry into force of the WTO Agreement.

7. A Member may provide that any request made under this Section in connection with the use or registration of a trademark must be presented within five years after the adverse use of the protected indication has become generally known in that Member or after the date of registration of the trademark in that Member provided that the trademark has been published by that date, if such date is earlier than the date on which the adverse use became generally known in that Member, provided that the geographical indication is not used or registered in bad faith.

8. The provisions of this Section shall in no way prejudice the right of any person to use, in the course of trade, that person's name or the name of that person's predecessor in business, except where such name is used in such a manner as to mislead the public.

9. There shall be no obligation under this Agreement to protect geographical indications which are not or cease to be protected in their country of origin, or which have fallen into disuse in that country.

SECTION 4: INDUSTRIAL DESIGNS

Article 25

Requirements for Protection

1. Members shall provide for the protection of independently created industrial designs that are new or original. Members may provide that designs are not new or original if they do not significantly differ from known designs or combinations of known design features. Members may provide that such protection shall not extend to designs dictated essentially by technical or functional considerations.

2. Each Member shall ensure that requirements for securing protection for textile designs, in particular in regard to any cost, examination or publication, do not unreasonably impair the opportunity to seek and obtain such protection. Members shall be free to meet this obligation through industrial design law or through copyright law.

Article 26

Protection

1. The owner of a protected industrial design shall have the right to prevent third parties not having the owner's consent from making, selling or importing articles bearing or embodying a design which is a copy, or substantially a copy, of the protected design, when such acts are undertaken for commercial purposes.

2. Members may provide limited exceptions to the protection of industrial designs, provided that such exceptions do not unreasonably conflict with the normal exploitation of protected industrial designs and do not unreasonably prejudice the legitimate interests of the owner of the protected design, taking account of the legitimate interests of third parties.

3. The duration of protection available shall amount to at least 10 years.

SECTION 5: PATENTS

Article 27

Patentable Subject Matter

1. Subject to the provisions of paragraphs 2 and 3, patents shall be available for any inventions, whether products or processes, in all fields of technology, provided that they are new, involve an inventive step and are capable of industrial application.[5] Subject to paragraph 4 of Article 65, paragraph 8 of Article 70 and paragraph 3 of this Article, patents shall be available and patent rights enjoyable without discrimination as to the place of invention, the field of technology and whether products are imported or locally produced.

2. Members may exclude from patentability inventions, the prevention within their territory of the commercial exploitation of which is necessary to protect *ordre public* or morality, including to protect human, animal or plant life or health or to avoid serious prejudice to the environment, provided that such exclusion is not made merely because the exploitation is prohibited by their law.

3. Members may also exclude from patentability:

   (a) diagnostic, therapeutic and surgical methods for the treatment of humans or animals;

   (b) plants and animals other than micro-organisms, and essentially biological processes for the production of plants or animals other than non-biological and microbiological processes. However, Members shall provide for the protection of plant varieties either by patents or by an effective *sui generis* system or by any combination thereof. The

---

[5] For the purposes of this Article, the terms "inventive step" and "capable of industrial application" may be deemed by a Member to be synonymous with the terms "non-obvious" and "useful" respectively.

provisions of this subparagraph shall be reviewed four years after the date of entry into force of the WTO Agreement.

Article 28

Rights Conferred

1. A patent shall confer on its owner the following exclusive rights:

    (a) where the subject matter of a patent is a product, to prevent third parties not having the owner's consent from the acts of: making, using, offering for sale, selling, or importing[6] for these purposes that product;

    (b) where the subject matter of a patent is a process, to prevent third parties not having the owner's consent from the act of using the process, and from the acts of: using, offering for sale, selling, or importing for these purposes at least the product obtained directly by that process.

2. Patent owners shall also have the right to assign, or transfer by succession, the patent and to conclude licensing contracts.

Article 29

Conditions on Patent Applicants

1. Members shall require that an applicant for a patent shall disclose the invention in a manner sufficiently clear and complete for the invention to be carried out by a person skilled in the art and may require the applicant to indicate the best mode for carrying out the invention known to the inventor at the filing date or, where priority is claimed, at the priority date of the application.

2. Members may require an applicant for a patent to provide information concerning the applicant's corresponding foreign applications and grants.

Article 30

Exceptions to Rights Conferred

Members may provide limited exceptions to the exclusive rights conferred by a patent, provided that such exceptions do not unreasonably conflict with a normal exploitation of the patent and do not unreasonably prejudice the legitimate interests of the patent owner, taking account of the legitimate interests of third parties.

---

[6] This right, like all other rights conferred under this Agreement in respect of the use, sale, importation or other distribution of goods, is subject to the provisions of Article 6.

Article 31

Other Use Without Authorization of the Right Holder

Where the law of a Member allows for other use[7] of the subject matter of a patent without the authorization of the right holder, including use by the government or third parties authorized by the government, the following provisions shall be respected:

(a) authorization of such use shall be considered on its individual merits;

(b) such use may only be permitted if, prior to such use, the proposed user has made efforts to obtain authorization from the right holder on reasonable commercial terms and conditions and that such efforts have not been successful within a reasonable period of time. This requirement may be waived by a Member in the case of a national emergency or other circumstances of extreme urgency or in cases of public non-commercial use. In situations of national emergency or other circumstances of extreme urgency, the right holder shall, nevertheless, be notified as soon as reasonably practicable. In the case of public non-commercial use, where the government or contractor, without making a patent search, knows or has demonstrable grounds to know that a valid patent is or will be used by or for the government, the right holder shall be informed promptly;

(c) the scope and duration of such use shall be limited to the purpose for which it was authorized, and in the case of semi-conductor technology shall only be for public non-commercial use or to remedy a practice determined after judicial or administrative process to be anti-competitive;

(d) such use shall be non-exclusive;

(e) such use shall be non-assignable, except with that part of the enterprise or goodwill which enjoys such use;

(f) any such use shall be authorized predominantly for the supply of the domestic market of the Member authorizing such use;

(g) authorization for such use shall be liable, subject to adequate protection of the legitimate interests of the persons so authorized, to be terminated if and when the circumstances which led to it cease to exist and are unlikely to recur. The competent authority shall have the authority to review, upon motivated request, the continued existence of these circumstances;

(h) the right holder shall be paid adequate remuneration in the circumstances of each case, taking into account the economic value of the authorization;

(i) the legal validity of any decision relating to the authorization of such use shall be subject to judicial review or other independent review by a distinct higher authority in that Member;

(j) any decision relating to the remuneration provided in respect of such use shall be subject to judicial review or other independent review by a distinct higher authority in that Member;

---

[7] "Other use" refers to use other than that allowed under Article 30.

(k) Members are not obliged to apply the conditions set forth in subparagraphs (b) and (f) where such use is permitted to remedy a practice determined after judicial or administrative process to be anti-competitive. The need to correct anti-competitive practices may be taken into account in determining the amount of remuneration in such cases. Competent authorities shall have the authority to refuse termination of authorization if and when the conditions which led to such authorization are likely to recur;

(l) where such use is authorized to permit the exploitation of a patent ("the second patent") which cannot be exploited without infringing another patent ("the first patent"), the following additional conditions shall apply:

  (i) the invention claimed in the second patent shall involve an important technical advance of considerable economic significance in relation to the invention claimed in the first patent;

  (ii) the owner of the first patent shall be entitled to a cross-licence on reasonable terms to use the invention claimed in the second patent; and

  (iii) the use authorized in respect of the first patent shall be non-assignable except with the assignment of the second patent.

Article 32

Revocation/Forfeiture

An opportunity for judicial review of any decision to revoke or forfeit a patent shall be available.

Article 33

Term of Protection

The term of protection available shall not end before the expiration of a period of twenty years counted from the filing date.[8]

Article 34

Process Patents: Burden of Proof

1. For the purposes of civil proceedings in respect of the infringement of the rights of the owner referred to in paragraph 1(b) of Article 28, if the subject matter of a patent is a process for obtaining a product, the judicial authorities shall have the authority to order the defendant to prove that the process to obtain an identical product is different from the patented process. Therefore, Members shall provide, in at least one of the following circumstances, that any identical product when produced without the consent of the patent owner shall, in the absence of proof to the contrary, be deemed to have been obtained by the patented process:

---

[8] It is understood that those Members which do not have a system of original grant may provide that the term of protection shall be computed from the filing date in the system of original grant.

(a) if the product obtained by the patented process is new;

(b) if there is a substantial likelihood that the identical product was made by the process and the owner of the patent has been unable through reasonable efforts to determine the process actually used.

2. Any Member shall be free to provide that the burden of proof indicated in paragraph 1 shall be on the alleged infringer only if the condition referred to in subparagraph (a) is fulfilled or only if the condition referred to in subparagraph (b) is fulfilled.

3. In the adduction of proof to the contrary, the legitimate interests of defendants in protecting their manufacturing and business secrets shall be taken into account.

SECTION 6: LAYOUT-DESIGNS (TOPOGRAPHIES) OF INTEGRATED CIRCUITS

Article 35

Relation to the IPIC Treaty

Members agree to provide protection to the layout-designs (topographies) of integrated circuits (referred to in this Agreement as "layout-designs") in accordance with Articles 2 through 7 (other than paragraph 3 of Article 6), Article 12 and paragraph 3 of Article 16 of the Treaty on Intellectual Property in Respect of Integrated Circuits and, in addition, to comply with the following provisions.

Article 36

Scope of the Protection

Subject to the provisions of paragraph 1 of Article 37, Members shall consider unlawful the following acts if performed without the authorization of the right holder:[9] importing, selling, or otherwise distributing for commercial purposes a protected layout-design, an integrated circuit in which a protected layout-design is incorporated, or an article incorporating such an integrated circuit only in so far as it continues to contain an unlawfully reproduced layout-design.

Article 37

Acts Not Requiring the Authorization of the Right Holder

1. Notwithstanding Article 36, no Member shall consider unlawful the performance of any of the acts referred to in that Article in respect of an integrated circuit incorporating an unlawfully reproduced layout-design or any article incorporating such an integrated circuit where the person performing or ordering such acts did not know and had no reasonable ground to know, when acquiring the integrated circuit or article incorporating such an integrated circuit, that it incorporated an unlawfully reproduced layout-design. Members shall provide that, after the time that such person has received sufficient notice that the layout-design was unlawfully reproduced, that person may perform any of the acts with respect to the stock on hand or ordered before such time, but shall be liable to pay to the right holder a sum

---

[9] The term "right holder" in this Section shall be understood as having the same meaning as the term "holder of the right" in the IPIC Treaty.

equivalent to a reasonable royalty such as would be payable under a freely negotiated licence in respect of such a layout-design.

2. The conditions set out in subparagraphs (a) through (k) of Article 31 shall apply *mutatis mutandis* in the event of any non-voluntary licensing of a layout-design or of its use by or for the government without the authorization of the right holder.

Article 38

Term of Protection

1. In Members requiring registration as a condition of protection, the term of protection of layout-designs shall not end before the expiration of a period of 10 years counted from the date of filing an application for registration or from the first commercial exploitation wherever in the world it occurs.

2. In Members not requiring registration as a condition for protection, layout-designs shall be protected for a term of no less than 10 years from the date of the first commercial exploitation wherever in the world it occurs.

3. Notwithstanding paragraphs 1 and 2, a Member may provide that protection shall lapse 15 years after the creation of the layout-design.

SECTION 7: PROTECTION OF UNDISCLOSED INFORMATION

Article 39

1. In the course of ensuring effective protection against unfair competition as provided in Article 10*bis* of the Paris Convention (1967), Members shall protect undisclosed information in accordance with paragraph 2 and data submitted to governments or governmental agencies in accordance with paragraph 3.

2. Natural and legal persons shall have the possibility of preventing information lawfully within their control from being disclosed to, acquired by, or used by others without their consent in a manner contrary to honest commercial practices[10] so long as such information:

   (a) is secret in the sense that it is not, as a body or in the precise configuration and assembly of its components, generally known among or readily accessible to persons within the circles that normally deal with the kind of information in question;

   (b) has commercial value because it is secret; and

   (c) has been subject to reasonable steps under the circumstances, by the person lawfully in control of the information, to keep it secret.

3. Members, when requiring, as a condition of approving the marketing of pharmaceutical or of agricultural chemical products which utilize new chemical entities, the submission of undisclosed test or other data, the origination of which involves a considerable effort, shall protect such data against

---

[10] For the purpose of this provision, "a manner contrary to honest commercial practices" shall mean at least practices such as breach of contract, breach of confidence and inducement to breach, and includes the acquisition of undisclosed information by third parties who knew, or were grossly negligent in failing to know, that such practices were involved in the acquisition.

unfair commercial use. In addition, Members shall protect such data against disclosure, except where necessary to protect the public, or unless steps are taken to ensure that the data are protected against unfair commercial use.

SECTION 8: CONTROL OF ANTI-COMPETITIVE PRACTICES IN CONTRACTUAL LICENCES

Article 40

1. Members agree that some licensing practices or conditions pertaining to intellectual property rights which restrain competition may have adverse effects on trade and may impede the transfer and dissemination of technology.

2. Nothing in this Agreement shall prevent Members from specifying in their legislation licensing practices or conditions that may in particular cases constitute an abuse of intellectual property rights having an adverse effect on competition in the relevant market. As provided above, a Member may adopt, consistently with the other provisions of this Agreement, appropriate measures to prevent or control such practices, which may include for example exclusive grantback conditions, conditions preventing challenges to validity and coercive package licensing, in the light of the relevant laws and regulations of that Member.

3. Each Member shall enter, upon request, into consultations with any other Member which has cause to believe that an intellectual property right owner that is a national or domiciliary of the Member to which the request for consultations has been addressed is undertaking practices in violation of the requesting Member's laws and regulations on the subject matter of this Section, and which wishes to secure compliance with such legislation, without prejudice to any action under the law and to the full freedom of an ultimate decision of either Member. The Member addressed shall accord full and sympathetic consideration to, and shall afford adequate opportunity for, consultations with the requesting Member, and shall cooperate through supply of publicly available non-confidential information of relevance to the matter in question and of other information available to the Member, subject to domestic law and to the conclusion of mutually satisfactory agreements concerning the safeguarding of its confidentiality by the requesting Member.

4. A Member whose nationals or domiciliaries are subject to proceedings in another Member concerning alleged violation of that other Member's laws and regulations on the subject matter of this Section shall, upon request, be granted an opportunity for consultations by the other Member under the same conditions as those foreseen in paragraph 3.

PART III

ENFORCEMENT OF INTELLECTUAL PROPERTY RIGHTS

SECTION 1: GENERAL OBLIGATIONS

Article 41

1. Members shall ensure that enforcement procedures as specified in this Part are available under their law so as to permit effective action against any act of infringement of intellectual property rights covered by this Agreement, including expeditious remedies to prevent infringements and remedies which constitute a deterrent to further infringements. These procedures shall be applied in such a manner as to avoid the creation of barriers to legitimate trade and to provide for safeguards against their abuse.

2. Procedures concerning the enforcement of intellectual property rights shall be fair and equitable. They shall not be unnecessarily complicated or costly, or entail unreasonable time-limits or unwarranted delays.

3. Decisions on the merits of a case shall preferably be in writing and reasoned. They shall be made available at least to the parties to the proceeding without undue delay. Decisions on the merits of a case shall be based only on evidence in respect of which parties were offered the opportunity to be heard.

4. Parties to a proceeding shall have an opportunity for review by a judicial authority of final administrative decisions and, subject to jurisdictional provisions in a Member's law concerning the importance of a case, of at least the legal aspects of initial judicial decisions on the merits of a case. However, there shall be no obligation to provide an opportunity for review of acquittals in criminal cases.

5. It is understood that this Part does not create any obligation to put in place a judicial system for the enforcement of intellectual property rights distinct from that for the enforcement of law in general, nor does it affect the capacity of Members to enforce their law in general. Nothing in this Part creates any obligation with respect to the distribution of resources as between enforcement of intellectual property rights and the enforcement of law in general.

SECTION 2: CIVIL AND ADMINISTRATIVE PROCEDURES AND REMEDIES

Article 42

Fair and Equitable Procedures

Members shall make available to right holders[11] civil judicial procedures concerning the enforcement of any intellectual property right covered by this Agreement. Defendants shall have the right to written notice which is timely and contains sufficient detail, including the basis of the claims. Parties shall be allowed to be represented by independent legal counsel, and procedures shall not impose overly burdensome requirements concerning mandatory personal appearances. All parties to such procedures shall be duly entitled to substantiate their claims and to present all relevant evidence. The procedure shall provide a means to identify and protect confidential information, unless this would be contrary to existing constitutional requirements.

Article 43

Evidence

1. The judicial authorities shall have the authority, where a party has presented reasonably available evidence sufficient to support its claims and has specified evidence relevant to substantiation of its claims which lies in the control of the opposing party, to order that this evidence be produced by the opposing party, subject in appropriate cases to conditions which ensure the protection of confidential information.

2. In cases in which a party to a proceeding voluntarily and without good reason refuses access to, or otherwise does not provide necessary information within a reasonable period, or significantly impedes a procedure relating to an enforcement action, a Member may accord judicial authorities the authority to make preliminary and final determinations, affirmative or negative, on the basis of the information presented to them, including the complaint or the allegation presented by the party adversely affected by the denial of access to information, subject to providing the parties an opportunity to be heard on the allegations or evidence.

Article 44

Injunctions

1. The judicial authorities shall have the authority to order a party to desist from an infringement, *inter alia* to prevent the entry into the channels of commerce in their jurisdiction of imported goods that involve the infringement of an intellectual property right, immediately after customs clearance of such goods. Members are not obliged to accord such authority in respect of protected subject matter acquired or ordered by a person prior to knowing or having reasonable grounds to know that dealing in such subject matter would entail the infringement of an intellectual property right.

2. Notwithstanding the other provisions of this Part and provided that the provisions of Part II specifically addressing use by governments, or by third parties authorized by a government, without the authorization of the right holder are complied with, Members may limit the remedies available against

---

[11] For the purpose of this Part, the term "right holder" includes federations and associations having legal standing to assert such rights.

such use to payment of remuneration in accordance with subparagraph (h) of Article 31. In other cases, the remedies under this Part shall apply or, where these remedies are inconsistent with a Member's law, declaratory judgments and adequate compensation shall be available.

Article 45

Damages

1. The judicial authorities shall have the authority to order the infringer to pay the right holder damages adequate to compensate for the injury the right holder has suffered because of an infringement of that person's intellectual property right by an infringer who knowingly, or with reasonable grounds to know, engaged in infringing activity.

2. The judicial authorities shall also have the authority to order the infringer to pay the right holder expenses, which may include appropriate attorney's fees. In appropriate cases, Members may authorize the judicial authorities to order recovery of profits and/or payment of pre-established damages even where the infringer did not knowingly, or with reasonable grounds to know, engage in infringing activity.

Article 46

Other Remedies

In order to create an effective deterrent to infringement, the judicial authorities shall have the authority to order that goods that they have found to be infringing be, without compensation of any sort, disposed of outside the channels of commerce in such a manner as to avoid any harm caused to the right holder, or, unless this would be contrary to existing constitutional requirements, destroyed. The judicial authorities shall also have the authority to order that materials and implements the predominant use of which has been in the creation of the infringing goods be, without compensation of any sort, disposed of outside the channels of commerce in such a manner as to minimize the risks of further infringements. In considering such requests, the need for proportionality between the seriousness of the infringement and the remedies ordered as well as the interests of third parties shall be taken into account. In regard to counterfeit trademark goods, the simple removal of the trademark unlawfully affixed shall not be sufficient, other than in exceptional cases, to permit release of the goods into the channels of commerce.

Article 47

Right of Information

Members may provide that the judicial authorities shall have the authority, unless this would be out of proportion to the seriousness of the infringement, to order the infringer to inform the right holder of the identity of third persons involved in the production and distribution of the infringing goods or services and of their channels of distribution.

Article 48

Indemnification of the Defendant

1. The judicial authorities shall have the authority to order a party at whose request measures were taken and who has abused enforcement procedures to provide to a party wrongfully enjoined or restrained adequate compensation for the injury suffered because of such abuse. The judicial authorities shall also have the authority to order the applicant to pay the defendant expenses, which may include appropriate attorney's fees.

2. In respect of the administration of any law pertaining to the protection or enforcement of intellectual property rights, Members shall only exempt both public authorities and officials from liability to appropriate remedial measures where actions are taken or intended in good faith in the course of the administration of that law.

Article 49

Administrative Procedures

To the extent that any civil remedy can be ordered as a result of administrative procedures on the merits of a case, such procedures shall conform to principles equivalent in substance to those set forth in this Section.

SECTION 3: PROVISIONAL MEASURES

Article 50

1. The judicial authorities shall have the authority to order prompt and effective provisional measures:

   (a) to prevent an infringement of any intellectual property right from occurring, and in particular to prevent the entry into the channels of commerce in their jurisdiction of goods, including imported goods immediately after customs clearance;

   (b) to preserve relevant evidence in regard to the alleged infringement.

2. The judicial authorities shall have the authority to adopt provisional measures *inaudita altera parte* where appropriate, in particular where any delay is likely to cause irreparable harm to the right holder, or where there is a demonstrable risk of evidence being destroyed.

3. The judicial authorities shall have the authority to require the applicant to provide any reasonably available evidence in order to satisfy themselves with a sufficient degree of certainty that the applicant is the right holder and that the applicant's right is being infringed or that such infringement is imminent, and to order the applicant to provide a security or equivalent assurance sufficient to protect the defendant and to prevent abuse.

4. Where provisional measures have been adopted *inaudita altera parte*, the parties affected shall be given notice, without delay after the execution of the measures at the latest. A review, including a right to be heard, shall take place upon request of the defendant with a view to deciding, within a

reasonable period after the notification of the measures, whether these measures shall be modified, revoked or confirmed.

5. The applicant may be required to supply other information necessary for the identification of the goods concerned by the authority that will execute the provisional measures.

6. Without prejudice to paragraph 4, provisional measures taken on the basis of paragraphs 1 and 2 shall, upon request by the defendant, be revoked or otherwise cease to have effect, if proceedings leading to a decision on the merits of the case are not initiated within a reasonable period, to be determined by the judicial authority ordering the measures where a Member's law so permits or, in the absence of such a determination, not to exceed 20 working days or 31 calendar days, whichever is the longer.

7. Where the provisional measures are revoked or where they lapse due to any act or omission by the applicant, or where it is subsequently found that there has been no infringement or threat of infringement of an intellectual property right, the judicial authorities shall have the authority to order the applicant, upon request of the defendant, to provide the defendant appropriate compensation for any injury caused by these measures.

8. To the extent that any provisional measure can be ordered as a result of administrative procedures, such procedures shall conform to principles equivalent in substance to those set forth in this Section.

SECTION 4: SPECIAL REQUIREMENTS RELATED TO BORDER MEASURES[12]

Article 51

Suspension of Release by Customs Authorities

Members shall, in conformity with the provisions set out below, adopt procedures[13] to enable a right holder, who has valid grounds for suspecting that the importation of counterfeit trademark or pirated copyright goods[14] may take place, to lodge an application in writing with competent authorities, administrative or judicial, for the suspension by the customs authorities of the release into free circulation of such goods. Members may enable such an application to be made in respect of goods which involve other infringements of intellectual property rights, provided that the requirements of this Section are

---

[12] Where a Member has dismantled substantially all controls over movement of goods across its border with another Member with which it forms part of a customs union, it shall not be required to apply the provisions of this Section at that border.

[13] It is understood that there shall be no obligation to apply such procedures to imports of goods put on the market in another country by or with the consent of the right holder, or to goods in transit.

[14] For the purposes of this Agreement:

(a) "counterfeit trademark goods" shall mean any goods, including packaging, bearing without authorization a trademark which is identical to the trademark validly registered in respect of such goods, or which cannot be distinguished in its essential aspects from such a trademark, and which thereby infringes the rights of the owner of the trademark in question under the law of the country of importation;

(b) "pirated copyright goods" shall mean any goods which are copies made without the consent of the right holder or person duly authorized by the right holder in the country of production and which are made directly or indirectly from an article where the making of that copy would have constituted an infringement of a copyright or a related right under the law of the country of importation.

met. Members may also provide for corresponding procedures concerning the suspension by the customs authorities of the release of infringing goods destined for exportation from their territories.

Article 52

Application

Any right holder initiating the procedures under Article 51 shall be required to provide adequate evidence to satisfy the competent authorities that, under the laws of the country of importation, there is *prima facie* an infringement of the right holder's intellectual property right and to supply a sufficiently detailed description of the goods to make them readily recognizable by the customs authorities. The competent authorities shall inform the applicant within a reasonable period whether they have accepted the application and, where determined by the competent authorities, the period for which the customs authorities will take action.

Article 53

Security or Equivalent Assurance

1. The competent authorities shall have the authority to require an applicant to provide a security or equivalent assurance sufficient to protect the defendant and the competent authorities and to prevent abuse. Such security or equivalent assurance shall not unreasonably deter recourse to these procedures.

2. Where pursuant to an application under this Section the release of goods involving industrial designs, patents, layout-designs or undisclosed information into free circulation has been suspended by customs authorities on the basis of a decision other than by a judicial or other independent authority, and the period provided for in Article 55 has expired without the granting of provisional relief by the duly empowered authority, and provided that all other conditions for importation have been complied with, the owner, importer, or consignee of such goods shall be entitled to their release on the posting of a security in an amount sufficient to protect the right holder for any infringement. Payment of such security shall not prejudice any other remedy available to the right holder, it being understood that the security shall be released if the right holder fails to pursue the right of action within a reasonable period of time.

Article 54

Notice of Suspension

The importer and the applicant shall be promptly notified of the suspension of the release of goods according to Article 51.

Article 55

Duration of Suspension

If, within a period not exceeding 10 working days after the applicant has been served notice of the suspension, the customs authorities have not been informed that proceedings leading to a decision on the merits of the case have been initiated by a party other than the defendant, or that the duly empowered authority has taken provisional measures prolonging the suspension of the release of the goods, the goods shall be released, provided that all other conditions for importation or exportation have been complied with; in appropriate cases, this time-limit may be extended by another 10 working days. If proceedings leading to a decision on the merits of the case have been initiated, a review, including a right to be heard, shall take place upon request of the defendant with a view to deciding, within a reasonable period, whether these measures shall be modified, revoked or confirmed. Notwithstanding the above, where the suspension of the release of goods is carried out or continued in accordance with a provisional judicial measure, the provisions of paragraph 6 of Article 50 shall apply.

Article 56

Indemnification of the Importer and of the Owner of the Goods

Relevant authorities shall have the authority to order the applicant to pay the importer, the consignee and the owner of the goods appropriate compensation for any injury caused to them through the wrongful detention of goods or through the detention of goods released pursuant to Article 55.

Article 57

Right of Inspection and Information

Without prejudice to the protection of confidential information, Members shall provide the competent authorities the authority to give the right holder sufficient opportunity to have any goods detained by the customs authorities inspected in order to substantiate the right holder's claims. The competent authorities shall also have authority to give the importer an equivalent opportunity to have any such goods inspected. Where a positive determination has been made on the merits of a case, Members may provide the competent authorities the authority to inform the right holder of the names and addresses of the consignor, the importer and the consignee and of the quantity of the goods in question.

Article 58

Ex Officio Action

Where Members require competent authorities to act upon their own initiative and to suspend the release of goods in respect of which they have acquired *prima facie* evidence that an intellectual property right is being infringed:

(a) the competent authorities may at any time seek from the right holder any information that may assist them to exercise these powers;

(b) the importer and the right holder shall be promptly notified of the suspension. Where the importer has lodged an appeal against the suspension with the competent authorities, the suspension shall be subject to the conditions, *mutatis mutandis*, set out at Article 55;

(c) Members shall only exempt both public authorities and officials from liability to appropriate remedial measures where actions are taken or intended in good faith.

Article 59

Remedies

Without prejudice to other rights of action open to the right holder and subject to the right of the defendant to seek review by a judicial authority, competent authorities shall have the authority to order the destruction or disposal of infringing goods in accordance with the principles set out in Article 46. In regard to counterfeit trademark goods, the authorities shall not allow the re-exportation of the infringing goods in an unaltered state or subject them to a different customs procedure, other than in exceptional circumstances.

Article 60

De Minimis Imports

Members may exclude from the application of the above provisions small quantities of goods of a non-commercial nature contained in travellers' personal luggage or sent in small consignments.

SECTION 5: CRIMINAL PROCEDURES

Article 61

Members shall provide for criminal procedures and penalties to be applied at least in cases of wilful trademark counterfeiting or copyright piracy on a commercial scale. Remedies available shall include imprisonment and/or monetary fines sufficient to provide a deterrent, consistently with the level of penalties applied for crimes of a corresponding gravity. In appropriate cases, remedies available shall also include the seizure, forfeiture and destruction of the infringing goods and of any materials and implements the predominant use of which has been in the commission of the offence. Members may provide for criminal procedures and penalties to be applied in other cases of infringement of intellectual property rights, in particular where they are committed wilfully and on a commercial scale.

PART IV

ACQUISITION AND MAINTENANCE OF INTELLECTUAL PROPERTY RIGHTS AND RELATED *INTER-PARTES* PROCEDURES

Article 62

1. Members may require, as a condition of the acquisition or maintenance of the intellectual property rights provided for under Sections 2 through 6 of Part II, compliance with reasonable procedures and formalities. Such procedures and formalities shall be consistent with the provisions of this Agreement.

2. Where the acquisition of an intellectual property right is subject to the right being granted or registered, Members shall ensure that the procedures for grant or registration, subject to compliance with the substantive conditions for acquisition of the right, permit the granting or registration of the right within a reasonable period of time so as to avoid unwarranted curtailment of the period of protection.

3. Article 4 of the Paris Convention (1967) shall apply *mutatis mutandis* to service marks.

4. Procedures concerning the acquisition or maintenance of intellectual property rights and, where a Member's law provides for such procedures, administrative revocation and *inter partes* procedures such as opposition, revocation and cancellation, shall be governed by the general principles set out in paragraphs 2 and 3 of Article 41.

5. Final administrative decisions in any of the procedures referred to under paragraph 4 shall be subject to review by a judicial or quasi-judicial authority. However, there shall be no obligation to provide an opportunity for such review of decisions in cases of unsuccessful opposition or administrative revocation, provided that the grounds for such procedures can be the subject of invalidation procedures.

PART V

DISPUTE PREVENTION AND SETTLEMENT

Article 63

Transparency

1. Laws and regulations, and final judicial decisions and administrative rulings of general application, made effective by a Member pertaining to the subject matter of this Agreement (the availability, scope, acquisition, enforcement and prevention of the abuse of intellectual property rights) shall be published, or where such publication is not practicable made publicly available, in a national language, in such a manner as to enable governments and right holders to become acquainted with them. Agreements concerning the subject matter of this Agreement which are in force between the government or a governmental agency of a Member and the government or a governmental agency of another Member shall also be published.

2. Members shall notify the laws and regulations referred to in paragraph 1 to the Council for TRIPS in order to assist that Council in its review of the operation of this Agreement. The Council shall attempt to minimize the burden on Members in carrying out this obligation and may decide to waive the obligation to notify such laws and regulations directly to the Council if consultations with WIPO on the establishment of a common register containing these laws and regulations are successful.

The Council shall also consider in this connection any action required regarding notifications pursuant to the obligations under this Agreement stemming from the provisions of Article 6*ter* of the Paris Convention (1967).

3. Each Member shall be prepared to supply, in response to a written request from another Member, information of the sort referred to in paragraph 1. A Member, having reason to believe that a specific judicial decision or administrative ruling or bilateral agreement in the area of intellectual property rights affects its rights under this Agreement, may also request in writing to be given access to or be informed in sufficient detail of such specific judicial decisions or administrative rulings or bilateral agreements.

4. Nothing in paragraphs 1, 2 and 3 shall require Members to disclose confidential information which would impede law enforcement or otherwise be contrary to the public interest or would prejudice the legitimate commercial interests of particular enterprises, public or private.

Article 64

Dispute Settlement

1. The provisions of Articles XXII and XXIII of GATT 1994 as elaborated and applied by the Dispute Settlement Understanding shall apply to consultations and the settlement of disputes under this Agreement except as otherwise specifically provided herein.

2. Subparagraphs 1(b) and 1(c) of Article XXIII of GATT 1994 shall not apply to the settlement of disputes under this Agreement for a period of five years from the date of entry into force of the WTO Agreement.

3. During the time period referred to in paragraph 2, the Council for TRIPS shall examine the scope and modalities for complaints of the type provided for under subparagraphs 1(b) and 1(c) of Article XXIII of GATT 1994 made pursuant to this Agreement, and submit its recommendations to the Ministerial Conference for approval. Any decision of the Ministerial Conference to approve such recommendations or to extend the period in paragraph 2 shall be made only by consensus, and approved recommendations shall be effective for all Members without further formal acceptance process.

PART VI

TRANSITIONAL ARRANGEMENTS

Article 65

Transitional Arrangements

1. Subject to the provisions of paragraphs 2, 3 and 4, no Member shall be obliged to apply the provisions of this Agreement before the expiry of a general period of one year following the date of entry into force of the WTO Agreement.

2. A developing country Member is entitled to delay for a further period of four years the date of application, as defined in paragraph 1, of the provisions of this Agreement other than Articles 3, 4 and 5.

3. Any other Member which is in the process of transformation from a centrally-planned into a market, free-enterprise economy and which is undertaking structural reform of its intellectual property system and facing special problems in the preparation and implementation of intellectual property laws and regulations, may also benefit from a period of delay as foreseen in paragraph 2.

4. To the extent that a developing country Member is obliged by this Agreement to extend product patent protection to areas of technology not so protectable in its territory on the general date of application of this Agreement for that Member, as defined in paragraph 2, it may delay the application of the provisions on product patents of Section 5 of Part II to such areas of technology for an additional period of five years.

5. A Member availing itself of a transitional period under paragraphs 1, 2, 3 or 4 shall ensure that any changes in its laws, regulations and practice made during that period do not result in a lesser degree of consistency with the provisions of this Agreement.

Article 66

Least-Developed Country Members

1. In view of the special needs and requirements of least-developed country Members, their economic, financial and administrative constraints, and their need for flexibility to create a viable technological base, such Members shall not be required to apply the provisions of this Agreement, other than Articles 3, 4 and 5, for a period of 10 years from the date of application as defined under paragraph 1 of Article 65. The Council for TRIPS shall, upon duly motivated request by a least-developed country Member, accord extensions of this period.

2. Developed country Members shall provide incentives to enterprises and institutions in their territories for the purpose of promoting and encouraging technology transfer to least-developed country Members in order to enable them to create a sound and viable technological base.

Article 67

Technical Cooperation

In order to facilitate the implementation of this Agreement, developed country Members shall provide, on request and on mutually agreed terms and conditions, technical and financial cooperation in favour of developing and least-developed country Members. Such cooperation shall include assistance in the preparation of laws and regulations on the protection and enforcement of intellectual property rights as well as on the prevention of their abuse, and shall include support regarding the establishment or reinforcement of domestic offices and agencies relevant to these matters, including the training of personnel.

PART VII

INSTITUTIONAL ARRANGEMENTS; FINAL PROVISIONS

Article 68

Council for Trade-Related Aspects of Intellectual Property Rights

The Council for TRIPS shall monitor the operation of this Agreement and, in particular, Members' compliance with their obligations hereunder, and shall afford Members the opportunity of consulting on matters relating to the trade-related aspects of intellectual property rights. It shall carry out such other responsibilities as assigned to it by the Members, and it shall, in particular, provide any assistance requested by them in the context of dispute settlement procedures. In carrying out its functions, the Council for TRIPS may consult with and seek information from any source it deems appropriate. In consultation with WIPO, the Council shall seek to establish, within one year of its first meeting, appropriate arrangements for cooperation with bodies of that Organization.

Article 69

International Cooperation

Members agree to cooperate with each other with a view to eliminating international trade in goods infringing intellectual property rights. For this purpose, they shall establish and notify contact points in their administrations and be ready to exchange information on trade in infringing goods. They shall, in particular, promote the exchange of information and cooperation between customs authorities with regard to trade in counterfeit trademark goods and pirated copyright goods.

Article 70

Protection of Existing Subject Matter

1. This Agreement does not give rise to obligations in respect of acts which occurred before the date of application of the Agreement for the Member in question.

2. Except as otherwise provided for in this Agreement, this Agreement gives rise to obligations in respect of all subject matter existing at the date of application of this Agreement for the Member in question, and which is protected in that Member on the said date, or which meets or comes subsequently to meet the criteria for protection under the terms of this Agreement. In respect of this paragraph and paragraphs 3 and 4, copyright obligations with respect to existing works shall be solely determined under Article 18 of the Berne Convention (1971), and obligations with respect to the rights of producers of phonograms and performers in existing phonograms shall be determined solely under Article 18 of the Berne Convention (1971) as made applicable under paragraph 6 of Article 14 of this Agreement.

3. There shall be no obligation to restore protection to subject matter which on the date of application of this Agreement for the Member in question has fallen into the public domain.

4. In respect of any acts in respect of specific objects embodying protected subject matter which become infringing under the terms of legislation in conformity with this Agreement, and which were

commenced, or in respect of which a significant investment was made, before the date of acceptance of the WTO Agreement by that Member, any Member may provide for a limitation of the remedies available to the right holder as to the continued performance of such acts after the date of application of this Agreement for that Member. In such cases the Member shall, however, at least provide for the payment of equitable remuneration.

5. A Member is not obliged to apply the provisions of Article 11 and of paragraph 4 of Article 14 with respect to originals or copies purchased prior to the date of application of this Agreement for that Member.

6. Members shall not be required to apply Article 31, or the requirement in paragraph 1 of Article 27 that patent rights shall be enjoyable without discrimination as to the field of technology, to use without the authorization of the right holder where authorization for such use was granted by the government before the date this Agreement became known.

7. In the case of intellectual property rights for which protection is conditional upon registration, applications for protection which are pending on the date of application of this Agreement for the Member in question shall be permitted to be amended to claim any enhanced protection provided under the provisions of this Agreement. Such amendments shall not include new matter.

8. Where a Member does not make available as of the date of entry into force of the WTO Agreement patent protection for pharmaceutical and agricultural chemical products commensurate with its obligations under Article 27, that Member shall:

(a) notwithstanding the provisions of Part VI, provide as from the date of entry into force of the WTO Agreement a means by which applications for patents for such inventions can be filed;

(b) apply to these applications, as of the date of application of this Agreement, the criteria for patentability as laid down in this Agreement as if those criteria were being applied on the date of filing in that Member or, where priority is available and claimed, the priority date of the application; and

(c) provide patent protection in accordance with this Agreement as from the grant of the patent and for the remainder of the patent term, counted from the filing date in accordance with Article 33 of this Agreement, for those of these applications that meet the criteria for protection referred to in subparagraph (b).

9. Where a product is the subject of a patent application in a Member in accordance with paragraph 8(a), exclusive marketing rights shall be granted, notwithstanding the provisions of Part VI, for a period of five years after obtaining marketing approval in that Member or until a product patent is granted or rejected in that Member, whichever period is shorter, provided that, subsequent to the entry into force of the WTO Agreement, a patent application has been filed and a patent granted for that product in another Member and marketing approval obtained in such other Member.

Article 71

Review and Amendment

1. The Council for TRIPS shall review the implementation of this Agreement after the expiration of the transitional period referred to in paragraph 2 of Article 65. The Council shall, having regard to the experience gained in its implementation, review it two years after that date, and at identical intervals

thereafter. The Council may also undertake reviews in the light of any relevant new developments which might warrant modification or amendment of this Agreement.

2. Amendments merely serving the purpose of adjusting to higher levels of protection of intellectual property rights achieved, and in force, in other multilateral agreements and accepted under those agreements by all Members of the WTO may be referred to the Ministerial Conference for action in accordance with paragraph 6 of Article X of the WTO Agreement on the basis of a consensus proposal from the Council for TRIPS.

Article 72

Reservations

Reservations may not be entered in respect of any of the provisions of this Agreement without the consent of the other Members.

Article 73

Security Exceptions

Nothing in this Agreement shall be construed:

(a) to require a Member to furnish any information the disclosure of which it considers contrary to its essential security interests; or

(b) to prevent a Member from taking any action which it considers necessary for the protection of its essential security interests;

(i) relating to fissionable materials or the materials from which they are derived;

(ii) relating to the traffic in arms, ammunition and implements of war and to such traffic in other goods and materials as is carried on directly or indirectly for the purpose of supplying a military establishment;

(iii) taken in time of war or other emergency in international relations; or

(c) to prevent a Member from taking any action in pursuance of its obligations under the United Nations Charter for the maintenance of international peace and security.

WIPO
WORLD INTELLECTUAL PROPERTY ORGANIZATION

Paris Convention for the Protection of Industrial Property

of March 20, 1883,
as revised at Brussels on December 14, 1900,
at Washington on June 2, 1911,
at The Hague on November 6, 1925,
at London on June 2, 1934,
at Lisbon on October 31, 1958,
and at Stockholm on July 14, 1967,
and as amended on September 28, 1979

TABLE OF CONTENTS[1]

Article 1
Establishment of the Union; Scope of Industrial Property[2]

(1) The countries to which this Convention applies constitute a Union for the protection of industrial property.

(2) The protection of industrial property has as its object patents, utility models, industrial designs, trademarks, service marks, trade names, indications of source or appellations of origin, and the repression of unfair competition.

(3) Industrial property shall be understood in the broadest sense and shall apply not only to industry and commerce proper, but likewise to agricultural and extractive industries and to all manufactured or natural products, for example, wines, grain, tobacco leaf, fruit, cattle, minerals, mineral waters, beer, flowers, and flour.

(4) Patents shall include the various kinds of industrial patents recognized by the laws of the countries of the Union, such as patents of importation, patents of improvement, patents and certificates of addition, etc.

Article 2
National Treatment for Nationals of Countries of the Union

(1) Nationals of any country of the Union shall, as regards the protection of industrial property, enjoy in all the other countries of the Union the advantages that their respective laws now grant, or may hereafter grant, to nationals; all without prejudice to the rights specially provided for by this Convention. Consequently, they shall have the same protection as the latter, and the same legal remedy against any infringement of their rights, provided that the conditions and formalities imposed upon nationals are complied with.

(2) However, no requirement as to domicile or establishment in the country where protection is claimed may be imposed upon nationals of countries of the Union for the enjoyment of any industrial property rights.

(3) The provisions of the laws of each of the countries of the Union relating to judicial and administrative procedure and to jurisdiction, and to the designation of an address for service or the appointment of an agent, which may be required by the laws on industrial property are expressly reserved.

Article 3
Same Treatment for Certain Categories of Persons as for Nationals of Countries of the Union

Nationals of countries outside the Union who are domiciled or who have real and effective industrial or commercial establishments in the territory of one of the countries of the Union shall be treated in the same manner as nationals of the countries of the Union.

Article 4
A to I. Patents, Utility Models, Industrial Designs, Marks, Inventors’ Certificates: *Right of Priority*
G. Patents: *Division of the Application*

A.

(1) Any person who has duly filed an application for a patent, or for the registration of a utility model, or of an industrial design, or of a trademark, in one of the countries of the Union, or his successor in title, shall enjoy, for the purpose of filing in the other countries, a right of priority during the periods hereinafter fixed.

(2) Any filing that is equivalent to a regular national filing under the domestic legislation of any country of the Union or under bilateral or multilateral treaties concluded between countries of the Union shall be recognized as giving rise to the right of priority.

(3) By a regular national filing is meant any filing that is adequate to establish the date on which the application was filed in the country concerned, whatever may be the subsequent fate of the application.

B. Consequently, any subsequent filing in any of the other countries of the Union before the expiration of the periods referred to above shall not be invalidated by reason of any acts accomplished in the interval, in particular, another filing, the publication or exploitation of the invention, the putting on sale of copies of the design, or the use of the mark, and such acts cannot give rise to any third-party right or any right of personal possession. Rights acquired by third parties before the date of the first application that serves as the basis for the right of priority are reserved in accordance with the domestic legislation of each country of the Union

C.

(1) The periods of priority referred to above shall be twelve months for patents and utility models, and six months for industrial designs and trademarks.

(2) These periods shall start from the date of filing of the first application; the day of filing shall not be included in the period.

(3) If the last day of the period is an official holiday, or a day when the Office is not open for the filing of applications in the country where protection is claimed, the period shall be extended until the first following working day.

(4) A subsequent application concerning the same subject as a previous first application within the meaning of paragraph (2), above, filed in the same country of the Union shall be considered as the first application, of which the filing date shall be the starting point of the period of priority, if, at the time of filing the subsequent application, the said previous application has been withdrawn, abandoned, or refused, without having been laid open to public inspection and without leaving any rights outstanding, and if it has not yet served as a basis for claiming a right of priority. The previous application may not thereafter serve as a basis for claiming a right of priority.

D.

(1) Any person desiring to take advantage of the priority of a previous filing shall be required to make a declaration indicating the date of such filing and the country in which it was made. Each country shall determine the latest date on which such declaration must be made.

(2) These particulars shall be mentioned in the publications issued by the competent authority, and in particular in the patents and the specifications relating thereto.

(3) The countries of the Union may require any person making a declaration of priority to produce a copy of the application (description, drawings, etc.) previously filed. The copy, certified as correct by the authority which received such application, shall not require any authentication, and may in any case be filed, without fee, at any time within three months of the filing of the subsequent application. They may require it to be accompanied by a certificate from the same authority showing the date of filing, and by a translation.

(4) No other formalities may be required for the declaration of priority at the time of filing the application. Each country of the Union shall determine the consequences of failure to comply with the formalities prescribed by this Article, but such consequences shall in no case go beyond the loss of the right of priority.

(5) Subsequently, further proof may be required.

Any person who avails himself of the priority of a previous application shall be required to specify the number of that application; this number shall be published as provided for by paragraph (2), above.

E.

(1) Where an industrial design is filed in a country by virtue of a right of priority based on the filing of a utility model, the period of priority shall be the same as that fixed for industrial designs.

(2) Furthermore, it is permissible to file a utility model in a country by virtue of a right of priority based on the filing of a patent application, and vice versa.

F. No country of the Union may refuse a priority or a patent application on the ground that the applicant claims multiple priorities, even if they originate in different countries, or on the ground that an application claiming one or more priorities contains one or more elements that were not included in the application or applications whose priority is claimed, provided that, in both cases, there is unity of invention within the meaning of the law of the country.

With respect to the elements not included in the application or applications whose priority is claimed, the filing of the subsequent application shall give rise to a right of priority under ordinary conditions.

G.

(1) If the examination reveals that an application for a patent contains more than one invention, the applicant may divide the application into a certain number of divisional applications and preserve as the date of each the date of the initial application and the benefit of the right of priority, if any.

(2) The applicant may also, on his own initiative, divide a patent application and preserve as the date of each divisional application the date of the initial application and the benefit of the right of priority, if any. Each country of the Union shall have the right to determine the conditions under which such division shall be authorized.

H. Priority may not be refused on the ground that certain elements of the invention for which priority is claimed do not appear among the claims formulated in the application in the country of origin, provided that the application documents as a whole specifically disclose such elements.

I.

(1) Applications for inventors' certificates filed in a country in which applicants have the right to apply at their own option either for a patent or for an inventor's certificate shall give rise to the right of priority provided for by this Article, under the same conditions and with the same effects as applications for patents.

(2) In a country in which applicants have the right to apply at their own option either for a patent or for an inventor's certificate, an applicant for an inventor's certificate shall, in accordance with the provisions of this Article relating to patent applications, enjoy a right of priority based on an application for a patent, a utility model, or an inventor's certificate.

Article 4*bis*
Patents: *Independence of Patents Obtained for the Same Invention in Different Countries*

(1) Patents applied for in the various countries of the Union by nationals of countries of the Union shall be independent of patents obtained for the same invention in other countries, whether members of the Union or not.

(2) The foregoing provision is to be understood in an unrestricted sense, in particular, in the sense that patents applied for during the period of priority are independent, both as regards the grounds for nullity and forfeiture, and as regards their normal duration.

(3) The provision shall apply to all patents existing at the time when it comes into effect.

(4) Similarly, it shall apply, in the case of the accession of new countries, to patents in existence on either side at the time of accession.

(5) Patents obtained with the benefit of priority shall, in the various countries of the Union, have a duration equal to that which they would have, had they been applied for or granted without the benefit of priority.

Article 4*ter*
Patents: *Mention of the Inventor in the Patent*

The inventor shall have the right to be mentioned as such in the patent.

Article 4*quater*
Patents: *Patentability in Case of Restrictions of Sale by Law*

The grant of a patent shall not be refused and a patent shall not be invalidated on the ground that the sale of the patented product or of a product obtained by means of a patented process is subject to restrictions or limitations resulting from the domestic law.

Article 5

A. Patents: *Importation of Articles; Failure to Work or Insufficient Working; Compulsory Licenses*
B. Industrial Designs: *Failure to Work; Importation of Articles*
C. Marks: *Failure to Use; Different Forms; Use by Co-proprietors*
D. Patents, Utility Models, Marks, Industrial Designs: *Marking*

A.

(1) Importation by the patentee into the country where the patent has been granted of articles manufactured in any of the countries of the Union shall not entail forfeiture of the patent.

(2) Each country of the Union shall have the right to take legislative measures providing for the grant of compulsory licenses to prevent the abuses which might result from the exercise of the exclusive rights conferred by the patent, for example, failure to work.

(3) Forfeiture of the patent shall not be provided for except in cases where the grant of compulsory licenses would not have been sufficient to prevent the said abuses. No proceedings for the forfeiture or revocation of a patent may be instituted before the expiration of two years from the grant of the first compulsory license.

(4) A compulsory license may not be applied for on the ground of failure to work or insufficient working before the expiration of a period of four years from the date of filing of the patent application or three years from the date of the grant of the patent, whichever period expires last; it shall be refused if the patentee justifies his inaction by legitimate reasons. Such a compulsory license shall be non-exclusive and shall not be transferable, even in the form of the grant of a sub-license, except with that part of the enterprise or goodwill which exploits such license.

(5) The foregoing provisions shall be applicable, mutatis mutandis, to utility models.

B. The protection of industrial designs shall not, under any circumstance, be subject to any forfeiture, either by reason of failure to work or by reason of the importation of articles corresponding to those which are protected.

C.

(1) If, in any country, use of the registered mark is compulsory, the registration may be cancelled only after a reasonable period, and then only if the person concerned does not justify his inaction.

(2) Use of a trademark by the proprietor in a form differing in elements which do not alter the distinctive character of the mark in the form in which it was registered in one of the countries of the Union shall not entail invalidation of the registration and shall not diminish the protection granted to the mark.

(3) Concurrent use of the same mark on identical or similar goods by industrial or commercial establishments considered as co-proprietors of the mark according to the provisions of the domestic law of the country where protection is claimed shall not prevent registration or diminish in any way the protection granted to the said mark in any country of the Union, provided that such use does not result in misleading the public and is not contrary to the public interest.

D. No indication or mention of the patent, of the utility model, of the registration of the trademark, or of the deposit of the industrial design, shall be required upon the goods as a condition of recognition of the right to protection.

Article 5*bis*

All Industrial Property Rights: *Period of Grace for the Payment of Fees for the Maintenance of Rights*;

Patents: *Restoration*

(1) A period of grace of not less than six months shall be allowed for the payment of the fees prescribed for the maintenance of industrial property rights, subject, if the domestic legislation so provides, to the payment of a surcharge.

(2) The countries of the Union shall have the right to provide for the restoration of patents which have lapsed by reason of non-payment of fees.

Article 5*ter*

Patents: *Patented Devices Forming Part of Vessels, Aircraft, or Land Vehicles*

In any country of the Union the following shall not be considered as infringements of the rights of a patentee:

> (i) the use on board vessels of other countries of the Union of devices forming the subject of his patent in the body of the vessel, in the machinery, tackle, gear and other accessories, when such vessels temporarily or accidentally enter the waters of the said country, provided that such devices are used there exclusively for the needs of the vessel;
>
> (ii) the use of devices forming the subject of the patent in the construction or operation of aircraft or land vehicles of other countries of the Union, or of accessories of such aircraft or land vehicles, when those aircraft or land vehicles temporarily or accidentally enter the said country.

Article 5*quater*

Patents: *Importation of Products Manufactured by a Process Patented in the Importing Country*

When a product is imported into a country of the Union where there exists a patent protecting a process of manufacture of the said product, the patentee shall have all the rights, with regard to the imported product, that are accorded to him by the legislation of the country of importation, on the basis of the process patent, with respect to products manufactured in that country.

Article 5*quinquies*

Industrial Designs

Industrial designs shall be protected in all the countries of the Union.

Article 6

Marks: *Conditions of Registration; Independence of Protection of Same Mark in Different Countries*

(1) The conditions for the filing and registration of trademarks shall be determined in each country of the Union by its domestic legislation.

(2) However, an application for the registration of a mark filed by a national of a country of the Union in any country of the Union may not be refused, nor may a registration be invalidated, on the ground that filing, registration, or renewal, has not been effected in the country of origin.

(3) A mark duly registered in a country of the Union shall be regarded as independent of marks registered in the other countries of the Union, including the country of origin.

Article 6*bis*

Marks: *Well-Known Marks*

(1) The countries of the Union undertake, ex officio if their legislation so permits, or at the request of an interested party, to refuse or to cancel the registration, and to prohibit the use, of a trademark which constitutes a reproduction, an imitation, or a translation, liable to create confusion, of a mark considered by the competent authority of the country of registration or use to be well known in that country as being already the mark of a person entitled to the benefits of this Convention and used for identical or similar goods. These provisions shall also apply when the essential part of the mark constitutes a reproduction of any such well-known mark or an imitation liable to create confusion therewith.

(2) A period of at least five years from the date of registration shall be allowed for requesting the cancellation of such a mark. The countries of the Union may provide for a period within which the prohibition of use must be requested.

(3) No time limit shall be fixed for requesting the cancellation or the prohibition of the use of marks registered or used in bad faith.

Article 6*ter*

Marks: *Prohibitions concerning State Emblems, Official Hallmarks, and Emblems of Intergovernmental Organizations*

(1)

(a) The countries of the Union agree to refuse or to invalidate the registration, and to prohibit by appropriate measures the use, without authorization by the competent authorities, either as trademarks or as elements of trademarks, of armorial bearings, flags, and other State emblems, of the countries of the Union, official signs and hallmarks indicating control and warranty adopted by them, and any imitation from a heraldic point of view.

(b) The provisions of subparagraph *(a)*, above, shall apply equally to armorial bearings, flags, other emblems, abbreviations, and names, of international intergovernmental organizations of which one or more countries of the Union are members, with the exception of armorial bearings, flags, other emblems, abbreviations, and names, that are already the subject of international agreements in force, intended to ensure their protection.

(c) No country of the Union shall be required to apply the provisions of subparagraph *(b)*, above, to the prejudice of the owners of rights acquired in good faith before the entry into force, in that country, of this Convention. The countries of the Union shall not be required to apply the said provisions when the use or registration referred to in subparagraph *(a)*, above, is not of such a nature as to suggest to the public that a connection exists between the organization concerned and the armorial bearings, flags, emblems, abbreviations, and names, or if such use or registration is probably not of such a nature as to mislead the public as to the existence of a connection between the user and the organization.

(2) Prohibition of the use of official signs and hallmarks indicating control and warranty shall apply solely in cases where the marks in which they are incorporated are intended to be used on goods of the same or a similar kind.

(3)

(a) For the application of these provisions, the countries of the Union agree to communicate reciprocally, through the intermediary of the International Bureau, the list of State emblems, and official signs and hallmarks indicating control and warranty, which they desire, or may hereafter desire, to place wholly or within certain limits under the protection of this Article, and all subsequent modifications of such list. Each country of the Union shall in due course make available to the public the lists so communicated. Nevertheless such communication is not obligatory in respect of flags of States.

(b) The provisions of subparagraph *(b)* of paragraph (1) of this Article shall apply only to such armorial bearings, flags, other emblems, abbreviations, and names, of international intergovernmental organizations as the latter have communicated to the countries of the Union through the intermediary of the International Bureau.

(4) Any country of the Union may, within a period of twelve months from the receipt of the notification, transmit its objections, if any, through the intermediary of the International Bureau, to the country or international intergovernmental organization concerned.

(5) In the case of State flags, the measures prescribed by paragraph (1), above, shall apply solely to marks registered after November 6, 1925.

(6) In the case of State emblems other than flags, and of official signs and hallmarks of the countries of the Union, and in the case of armorial bearings, flags, other emblems, abbreviations, and names, of international intergovernmental organizations, these provisions shall apply only to marks registered more than two months after receipt of the communication provided for in paragraph (3), above.

(7) In cases of bad faith, the countries shall have the right to cancel even those marks incorporating State emblems, signs, and hallmarks, which were registered before November 6, 1925.

(8) Nationals of any country who are authorized to make use of the State emblems, signs, and hallmarks, of their country may use them even if they are similar to those of another country.

(9) The countries of the Union undertake to prohibit the unauthorized use in trade of the State armorial bearings of the other countries of the Union, when the use is of such a nature as to be misleading as to the origin of the goods.

(10) The above provisions shall not prevent the countries from exercising the right given in paragraph (3) of Article 6*quinquies*, Section B, to refuse or to invalidate the registration of marks incorporating, without authorization, armorial bearings, flags, other State emblems, or official signs and hallmarks adopted by a country of the Union, as well as the distinctive signs of international intergovernmental organizations referred to in paragraph (1), above.

Article 6*quater*
Marks: *Assignment of Marks*

(1) When, in accordance with the law of a country of the Union, the assignment of a mark is valid only if it takes place at the same time as the transfer of the business or goodwill to which the mark belongs, it shall suffice for the recognition of such validity that the portion of the business or goodwill located in that country be transferred to the assignee, together with the exclusive right to manufacture in the said country, or to sell therein, the goods bearing the mark assigned.

(2) The foregoing provision does not impose upon the countries of the Union any obligation to regard as valid the assignment of any mark the use of which by the assignee would, in fact, be of such a nature as to mislead the public, particularly as regards the origin, nature, or essential qualities, of the goods to which the mark is applied.

Article 6*quinquies*
Marks: *Protection of Marks Registered in One Country of the Union in the Other Countries of the Union*

A.

(1) Every trademark duly registered in the country of origin shall be accepted for filing and protected as is in the other countries of the Union, subject to the reservations indicated in this Article. Such countries may, before proceeding to final registration, require the production of a certificate of registration in the country of origin, issued by the competent authority. No authentication shall be required for this certificate.

(2) Shall be considered the country of origin the country of the Union where the applicant has a real and effective industrial or commercial establishment, or, if he has no such establishment within the Union, the country of the Union where he has his domicile, or, if he has no domicile within the Union but is a national of a country of the Union, the country of which he is a national.

B. Trademarks covered by this Article may be neither denied registration nor invalidated except in the following cases:

(i) when they are of such a nature as to infringe rights acquired by third parties in the country where protection is claimed;

(ii) when they are devoid of any distinctive character, or consist exclusively of signs or indications which may serve, in trade, to designate the kind, quality, quantity, intended purpose, value, place of origin, of the goods, or the time of production, or have become customary in the current language or in the bona fide and established practices of the trade of the country where protection is claimed;

(iii) when they are contrary to morality or public order and, in particular, of such a nature as to deceive the public. It is understood that a mark may not be considered contrary to public order for the sole reason that it does not conform to a provision of the legislation on marks, except if such provision itself relates to public order.

This provision is subject, however, to the application of Article 10*bis*.

C.

(1) In determining whether a mark is eligible for protection, all the factual circumstances must be taken into consideration, particularly the length of time the mark has been in use.

(2) No trademark shall be refused in the other countries of the Union for the sole reason that it differs from the mark protected in the country of origin only in respect of elements that do not alter its distinctive character and do not affect its identity in the form in which it has been registered in the said country of origin.

D. No person may benefit from the provisions of this Article if the mark for which he claims protection is not registered in the country of origin.

E. However, in no case shall the renewal of the registration of the mark in the country of origin involve an obligation to renew the registration in the other countries of the Union in which the mark has been registered.

F. The benefit of priority shall remain unaffected for applications for the registration of marks filed within the period fixed by Article 4, even if registration in the country of origin is effected after the expiration of such period.

Article 6*sexies*
Marks: *Service Marks*

The countries of the Union undertake to protect service marks. They shall not be required to provide for the registration of such marks.

Article 6*septies*
Marks: *Registration in the Name of the Agent or Representative of the Proprietor Without the Latter's Authorization*

(1) If the agent or representative of the person who is the proprietor of a mark in one of the countries of the Union applies, without such proprietor's authorization, for the registration of the mark in his own name, in one or more countries of the Union, the proprietor shall be entitled to oppose the registration applied for or demand its cancellation or, if the law of the country so allows, the assignment in his favor of the said registration, unless such agent or representative justifies his action.

(2) The proprietor of the mark shall, subject to the provisions of paragraph (1), above, be entitled to oppose the use of his mark by his agent or representative if he has not authorized such use.

(3) Domestic legislation may provide an equitable time limit within which the proprietor of a mark must exercise the rights provided for in this Article.

Article 7
Marks: *Nature of the Goods to which the Mark is Applied*

The nature of the goods to which a trademark is to be applied shall in no case form an obstacle to the registration of the mark.

Article 7*bis*
Marks: *Collective Marks*

(1) The countries of the Union undertake to accept for filing and to protect collective marks belonging to associations the existence of which is not contrary to the law of the country of origin, even if such associations do not possess an industrial or commercial establishment.

(2) Each country shall be the judge of the particular conditions under which a collective mark shall be protected and may refuse protection if the mark is contrary to the public interest.

(3) Nevertheless, the protection of these marks shall not be refused to any association the existence of which is not contrary to the law of the country of origin, on the ground that such association is not established in the country where protection is sought or is not constituted according to the law of the latter country.

Article 8
Trade Names

A trade name shall be protected in all the countries of the Union without the obligation of filing or registration, whether or not it forms part of a trademark.

Article 9
Marks, Trade Names: *Seizure, on Importation, etc., of Goods Unlawfully Bearing a Mark or Trade Name*

(1) All goods unlawfully bearing a trademark or trade name shall be seized on importation into those countries of the Union where such mark or trade name is entitled to legal protection.

(2) Seizure shall likewise be effected in the country where the unlawful affixation occurred or in the country into which the goods were imported.

(3) Seizure shall take place at the request of the public prosecutor, or any other competent authority, or any interested party, whether a natural person or a legal entity, in conformity with the domestic legislation of each country.

(4) The authorities shall not be bound to effect seizure of goods in transit.

(5) If the legislation of a country does not permit seizure on importation, seizure shall be replaced by prohibition of importation or by seizure inside the country.

(6) If the legislation of a country permits neither seizure on importation nor prohibition of importation nor seizure inside the country, then, until such time as the legislation is modified accordingly, these measures shall be replaced by the actions and remedies available in such cases to nationals under the law of such country.

Article 10
False Indications: *Seizure, on Importation, etc., of Goods Bearing False Indications as to their Source or the Identity of the Producer*

(1) The provisions of the preceding Article shall apply in cases of direct or indirect use of a false indication of the source of the goods or the identity of the producer, manufacturer, or merchant.

(2) Any producer, manufacturer, or merchant, whether a natural person or a legal entity, engaged in the production or manufacture of or trade in such goods and established either in the locality falsely indicated as the source, or in the region where such locality is situated, or in the country falsely indicated, or in the country where the false indication of source is used, shall in any case be deemed an interested party.

Article 10*bis*
Unfair Competition

(1) The countries of the Union are bound to assure to nationals of such countries effective protection against unfair competition.

(2) Any act of competition contrary to honest practices in industrial or commercial matters constitutes an act of

unfair competition.

(3) The following in particular shall be prohibited:

(i) all acts of such a nature as to create confusion by any means whatever with the establishment, the goods, or the industrial or commercial activities, of a competitor;

(ii) false allegations in the course of trade of such a nature as to discredit the establishment, the goods, or the industrial or commercial activities, of a competitor;

(iii) indications or allegations the use of which in the course of trade is liable to mislead the public as to the nature, the manufacturing process, the characteristics, the suitability for their purpose, or the quantity, of the goods.

Article 10*ter*

Marks, Trade Names, False Indications, Unfair Competition: *Remedies, Right to Sue*

(1) The countries of the Union undertake to assure to nationals of the other countries of the Union appropriate legal remedies effectively to repress all the acts referred to in Articles 9, 10, and 10*bis*.

(2) They undertake, further, to provide measures to permit federations and associations representing interested industrialists, producers, or merchants, provided that the existence of such federations and associations is not contrary to the laws of their countries, to take action in the courts or before the administrative authorities, with a view to the repression of the acts referred to in Articles 9, 10, and 10*bis*, in so far as the law of the country in which protection is claimed allows such action by federations and associations of that country.

Article 11

Inventions, Utility Models, Industrial Designs, Marks: *Temporary Protection at Certain International Exhibitions*

(1) The countries of the Union shall, in conformity with their domestic legislation, grant temporary protection to patentable inventions, utility models, industrial designs, and trademarks, in respect of goods exhibited at official or officially recognized international exhibitions held in the territory of any of them.

(2) Such temporary protection shall not extend the periods provided by Article 4. If, later, the right of priority is invoked, the authorities of any country may provide that the period shall start from the date of introduction of the goods into the exhibition.

(3) Each country may require, as proof of the identity of the article exhibited and of the date of its introduction, such documentary evidence as it considers necessary.

Article 12

Special National Industrial Property Services

(1) Each country of the Union undertakes to establish a special industrial property service and a central office for the communication to the public of patents, utility models, industrial designs, and trademarks.

(2) This service shall publish an official periodical journal. It shall publish regularly:

(a) the names of the proprietors of patents granted, with a brief designation of the inventions patented;

(b) the reproductions of registered trademarks.

Article 13
Assembly of the Union

(1)

(a) The Union shall have an Assembly consisting of those countries of the Union which are bound by Articles 13 to 17.

(b) The Government of each country shall be represented by one delegate, who may be assisted by alternate delegates, advisors, and experts.

(c) The expenses of each delegation shall be borne by the Government which has appointed it.

(2)

(a) The Assembly shall:

(i) deal with all matters concerning the maintenance and development of the Union and the implementation of this Convention;

(ii) give directions concerning the preparation for conferences of revision to the International Bureau of Intellectual Property (hereinafter designated as “the International Bureau”) referred to in the Convention establishing the World Intellectual Property Organization (hereinafter designated as “the Organization”), due account being taken of any comments made by those countries of the Union which are not hound by Articles 13 to 17;

(iii) review and approve the reports and activities of the Director General of the Organization concerning the Union, and give him all necessary instructions concerning matters within the competence of the Union;

(iv) elect the members of the Executive Committee of the Assembly;

(v) review and approve the reports and activities of its Executive Committee, and give instructions to such Committee;

(vi) determine the program and adopt the biennial budget of the Union, and approve its final accounts;

(vii) adopt the financial regulations of the Union;

(viii) establish such committees of experts and working groups as it deems appropriate to achieve the objectives of the Union;

(ix) determine which countries not members of the Union and which intergovernmental and international nongovernmental organizations shall be admitted to its meetings as observers;

(x) adopt amendments to Articles 13 to 17;

(xi) take any other appropriate action designed to further the objectives of the Union;

(xii) perform such other functions as are appropriate under this Convention;

(xiii) subject to its acceptance, exercise such rights as are given to it in the Convention establishing the Organization.

(b) With respect to matters which are of interest also to other Unions administered by the Organization, the Assembly shall make its decisions after having heard the advice of the Coordination Committee of the Organization.

(3)

(a) Subject to the provisions of subparagraph *(b)*, a delegate may represent one country only.

(b) Countries of the Union grouped under the terms of a special agreement in a common office possessing for each of them the character of a special national service of industrial property as referred to in Article 12 may be jointly represented during discussions by one of their number.

(4)

(a) Each country member of the Assembly shall have one vote.

(b) One-half of the countries members of the Assembly shall constitute a quorum.

(c) Notwithstanding the provisions of subparagraph *(b)*, if, in any session, the number of countries represented is less than one-half but equal to or more than one-third of the countries members of the Assembly, the Assembly may make decisions but, with the exception of decisions concerning its own procedure, all such decisions shall take effect only if the conditions, set forth hereinafter are fulfilled. The International Bureau shall communicate the said decisions to the countries members of the Assembly which were not represented and shall invite them to express in writing their vote or abstention within a period of three months from the date of the communication. If, at the expiration of this period, the number of countries having thus expressed their vote or abstention attains the number of countries which was lacking for attaining the quorum in the session itself, such decisions shall take effect provided that at the same time the required majority still obtains.

(d) Subject to the provisions of Article 17(2), the decisions of the Assembly shall require two-thirds of the votes cast.

(e) Abstentions shall not be considered as votes.

(5)

(a) Subject to the provisions of subparagraph *(b)*, a delegate may vote in the name of one country only.

(b) The countries of the Union referred to in paragraph (3)*(b)* shall, as a general rule, endeavor to send their own delegations to the sessions of the Assembly. If, however, for exceptional reasons, any such country cannot send its own delegation, it may give to the delegation of another such country the power to vote in its name, provided that each delegation may vote by proxy for one country only. Such power to vote shall be granted in a document signed by the Head of State or the competent Minister.

(6) Countries of the Union not members of the Assembly shall be admitted to the meetings of the latter as observers.

(7)

(a) The Assembly shall meet once in every second calendar year in ordinary session upon convocation by the Director General and, in the absence of exceptional circumstances, during the same period and at the same place as the General Assembly of the Organization.

(b) The Assembly shall meet in extraordinary session upon convocation by the Director General, at the request of the Executive Committee or at the request of one-fourth of the countries members of the Assembly.

(8) The Assembly shall adopt its own rules of procedure.

Article 14
Executive Committee

(1) The Assembly shall have an Executive Committee.

(2)

(a) The Executive Committee shall consist of countries elected by the Assembly from among countries members of the Assembly. Furthermore, the country on whose territory the Organization has its headquarters shall, subject to the provisions of Article 16(7)*(b)*, have an ex officio seat on the Committee.

(b) The Government of each country member of the Executive Committee shall be represented by one delegate, who may be assisted by alternate delegates, advisors, and experts.

(c) The expenses of each delegation shall be borne by the Government which has appointed it.

(3) The number of countries members of the Executive Committee shall correspond to one-fourth of the number of countries members of the Assembly. In establishing the number of seats to be filled, remainders after division by four shall be disregarded.

(4) In electing the members of the Executive Committee, the Assembly shall have due regard to an equitable geographical distribution and to the need for countries party to the Special Agreements established in relation with the Union to be among the countries constituting the Executive Committee.

(5)

(a) Each member of the Executive Committee shall serve from the close of the session of the Assembly which elected it to the close of the next ordinary session of the Assembly.

(b) Members of the Executive Committee may be re-elected, but only up to a maximum of two-thirds of such members.

(c) The Assembly shall establish the details of the rules governing the election and possible re-election of the members of the Executive Committee.

(6)

(a) The Executive Committee shall:

(i) prepare the draft agenda of the Assembly;

(ii) submit proposals to the Assembly in respect of the draft program and biennial budget of the Union prepared by the Director General;

(iii) *[deleted]*

(iv) submit, with appropriate comments, to the Assembly the periodical reports of the Director General and the yearly audit reports on the accounts;

(v) take all necessary measures to ensure the execution of the program of the Union by the Director General, in accordance with the decisions of the Assembly and having regard to circumstances arising between two ordinary sessions of the Assembly;

(vi) perform such other functions as are allocated to it under this Convention.

(b) With respect to matters which are of interest also to other Unions administered by the Organization, the Executive Committee shall make its decisions after having heard the advice of the Coordination Committee of the Organization.

(7)

(a) The Executive Committee shall meet once a year in ordinary session upon convocation by the Director General, preferably during the same period and at the same place as the Coordination Committee of the Organization.

(b) The Executive Committee shall meet in extraordinary session upon convocation by the Director General, either on his own initiative, or at the request of its Chairman or one-fourth of its members.

(8)

(a) Each country member of the Executive Committee shall have one vote.

(b) One-half of the members of the Executive Committee shall constitute a quorum.

(c) Decisions shall be made by a simple majority of the votes cast.

(d) Abstentions shall not be considered as votes.

(e) A delegate may represent, and vote in the name of, one country only.

(9) Countries of the Union not members of the Executive Committee shall be admitted to its meetings as observers.

(10) The Executive Committee shall adopt its own rules of procedure.

Article 15
International Bureau

(1)

(a) Administrative tasks concerning the Union shall be performed by the International Bureau, which is a continuation of the Bureau of the Union united with the Bureau of the Union established by the International Convention for the Protection of Literary and Artistic Works.

(b) In particular, the International Bureau shall provide the secretariat of the various organs of the Union.

(c) The Director General of the Organization shall be the chief executive of the Union and shall represent the Union.

(2) The International Bureau shall assemble and publish information concerning the protection of industrial property. Each country of the Union shall promptly communicate to the International Bureau all new laws and official texts concerning the protection of industrial property. Furthermore, it shall furnish the International Bureau with all the publications of its industrial property service of direct concern to the protection of industrial property which the International Bureau may find useful in its work.

(3) The International Bureau shall publish a monthly periodical.

(4) The International Bureau shall, on request, furnish any country of the Union with information on matters concerning the protection of industrial property.

(5) The International Bureau shall conduct Studies, and shall provide services, designed to facilitate the protection of industrial property.

(6) The Director General and any staff member designated by him shall participate, without the right to vote, in all meetings of the Assembly, the Executive Committee, and any other committee of experts or working group. The Director General, or a staff member designated by him, shall be ex officio secretary of these bodies.

(7)

(a) The International Bureau shall, in accordance with the directions of the Assembly and in cooperation with the Executive Committee, make the preparations for the conferences of revision of the provisions of the Convention other than Articles 13 to 17.

(b) The International Bureau may consult with intergovernmental and international non-governmental organizations concerning preparations for conferences of revision.

(c) The Director General and persons designated by him shall take part, without the right to vote, in the discussions at these conferences.

(8) The International Bureau shall carry out any other tasks assigned to it.

Article 16
Finances

(1)

(a) The Union shall have a budget.

(b) The budget of the Union shall include the income and expenses proper to the Union, its contribution to the budget of expenses common to the Unions, and, where applicable, the sum made available to the budget of the Conference of the Organization.

(c) Expenses not attributable exclusively to the Union but also to one or more other Unions administered by the Organization shall be considered as expenses common to the Unions. The share of the Union in such common expenses shall be in proportion to the interest the Union has in them.

(2) The budget of the Union shall be established with due regard to the requirements of coordination with the budgets of the other Unions administered by the Organization.

(3) The budget of the Union shall be financed from the following sources:

(i) contributions of the countries of the Union;

(ii) fees and charges due for services rendered by the International Bureau in relation to the Union;

(iii) sale of, or royalties on, the publications of the International Bureau concerning the Union;

(iv) gifts, bequests, and subventions;

(v) rents, interests, and other miscellaneous income.

(4)

(a) For the purpose of establishing its contribution towards the budget, each country of the Union shall belong to a class, and shall pay its annual contributions on the basis of a number of units fixed as follows[3]:

Class I 25

Class II 20

Class III 15

Class IV 10

Class V 5

Class VI 3

Class VII 1

(b) Unless it has already done so, each country shall indicate, concurrently with depositing its instrument of ratification or accession, the class to which it wishes to belong. Any country may change class. If it chooses a lower class, the country must announce such change to the Assembly at one of its ordinary sessions. Any such change shall take effect at the beginning of the calendar year following the said session.

(c) The annual contribution of each country shall be an amount in the same proportion to the total sum to be contributed to the budget of the Union by all countries as the number of its units is to the total of the units of all contributing countries.

(d) Contributions shall become due on the first of January of each year.

(e) A country which is in arrears in the payment of its contributions may not exercise its right to vote in any of the organs of the Union of which it is a member if the amount of its arrears equals or exceeds the amount of the contributions due from it for the preceding two full years. However, any organ of the Union may allow such a country to continue to exercise its right to vote in that organ if, and as long as, it is satisfied that the delay in payment is due to exceptional and unavoidable circumstances.

(f) If the budget is not adopted before the beginning of a new financial period, it shall be at the same level as the budget of the previous year, as provided in the financial regulations.

(5) The amount of the fees and charges due for services rendered by the International Bureau in relation to the Union shall be established, and shall be reported to the Assembly and the Executive Committee, by the Director General.

(6)

(a) The Union shall have a working capital fund which shall be constituted by a single payment made by each country of the Union. If the fund becomes insufficient, the Assembly shall decide to increase it.

(b) The amount of the initial payment of each country to the said fund or of its participation in the increase thereof shall be a proportion of the contribution of that country for the year in which the fund is established or the decision to increase it is made.

(c) The proportion and the terms of payment shall be fixed by the Assembly on the proposal of the Director General and after it has heard the advice of the Coordination Committee of the Organization.

(7)

(a) In the headquarters agreement concluded with the country on the territory of which the Organization has its headquarters, it shall be provided that, whenever the working capital fund is insufficient, such country shall grant advances. The amount of these advances and the conditions on which they are granted shall be the subject of separate agreements, in each case, between such country and the Organization. As long as it remains under the obligation to grant advances, such country shall have an ex officio seat on the Executive Committee.

(b) The country referred to in subparagraph *(a)* and the Organization shall each have the right to denounce the obligation to grant advances, by written notification. Denunciation shall take effect three years after the end of the year in which it has been notified.

(8) The auditing of the accounts shall be effected by one or more of the countries of the Union or by external auditors, as provided in the financial regulations. They shall be designated, with their agreement, by the Assembly.

Article 17
Amendment of Articles 13 to 17

(1) Proposals for the amendment of Articles 13, 14, 15, 16, and the present Article, may be initiated by any country member of the Assembly, by the Executive Committee, or by the Director General. Such proposals shall be communicated by the Director General to the member countries of the Assembly at least six months in advance of their consideration by the Assembly.

(2) Amendments to the Articles referred to in paragraph (1) shall be adopted by the Assembly. Adoption shall require three-fourths of the votes cast, provided that any amendment to Article 13, and to the present paragraph, shall require four-fifths of the votes cast.

(3) Any amendment to the Articles referred to in paragraph (1) shall enter into force one month after written notifications of acceptance, effected in accordance with their respective constitutional processes, have been received by the Director General from three-fourths of the countries members of the Assembly at the time it adopted the amendment. Any amendment to the said Articles thus accepted shall bind all the countries which are members of the Assembly at the time the amendment enters into force, or which become members thereof at a subsequent date, provided that any amendment increasing the financial obligations of countries of the Union shall bind only those countries which have notified their acceptance of such amendment.

Article 18
Revision of Articles 1 to 12 and 18 to 30

(1) This Convention shall be submitted to revision with a view to the introduction of amendments designed to improve the system of the Union.

(2) For that purpose, conferences shall be held successively in one of the countries of the Union among the delegates of the said countries.

(3) Amendments to Articles 13 to 17 are governed by the provisions of Article 17.

Article 19
Special Agreements

It is understood that the countries of the Union reserve the right to make separately between themselves special agreements for the protection of industrial property, in so far as these agreements do not contravene the provisions of this Convention.

Article 20
Ratification or Accession by Countries of the Union; Entry Into Force

(1)

(a) Any country of the Union which has signed this Act may ratify it, and, if it has not signed it, may accede to it. Instruments of ratification and accession shall be deposited with the Director General.

(b) Any country of the Union may declare in its instrument of ratification or accession that its ratification or accession shall not apply:

(i) to Articles 1 to 12, or

(ii) to Articles 13 to 17.

(c) Any country of the Union which, in accordance with subparagraph *(b)*, has excluded from the effects of its ratification or accession one of the two groups of Articles referred to in that subparagraph may at any later time declare that it extends the effects of its ratification or accession to that group of Articles. Such declaration shall be deposited with the Director General.

(2)

(a) Articles 1 to 12 shall enter into force, with respect to the first ten countries of the Union which have deposited instruments of ratification or accession without making the declaration permitted under paragraph (1)*(b)*(i), three months after the deposit of the tenth such instrument of ratification or accession.

(b) Articles 13 to 17 shall enter into force, with respect to the first ten countries of the Union which have deposited instruments of ratification or accession without making the declaration permitted under paragraph (1)*(b)*(ii), three months after the deposit of the tenth such instrument of ratification or accession.

(c) Subject to the initial entry into force, pursuant to the provisions of subparagraphs *(a)* and *(b)*, of each of the two groups of Articles referred to in paragraph (1)*(b)*(i) and (ii), and subject to the provisions of paragraph (1)*(b)*, Articles 1 to 17 shall, with respect to any country of the Union, other than those referred to in subparagraphs *(a)* and *(b)*, which deposits an instrument of ratification or accession or any country of the Union which deposits a declaration pursuant to paragraph (1)*(c)*, enter into force three months after the date of notification by the Director General of such deposit, unless a subsequent date has been indicated in the instrument or declaration deposited. In the latter case, this Act shall enter into force with respect to that country on the date thus indicated.

(3) With respect to any country of the Union which deposits an instrument of ratification or accession, Articles 18 to 30 shall enter into force on the earlier of the dates on which any of the groups of Articles referred to in paragraph (1)*(b)* enters into force with respect to that country pursuant to paragraph (2)*(a)*, *(b)*, or *(c)*.

Article 21
Accession by Countries Outside the Union; Entry Into Force

(1) Any country outside the Union may accede to this Act and thereby become a member of the Union. Instruments of accession shall be deposited with the Director General.

(2)

(a) With respect to any country outside the Union which deposits its instrument of accession one month or more before the date of entry into force of any provisions of the present Act, this Act shall enter into force, unless a subsequent date has been indicated in the instrument of accession, on the date upon which provisions first enter into force pursuant to Article 20(2)*(a)* or *(b)*; provided that:

(i) if Articles 1 to 12 do not enter into force on that date, such country shall, during the interim period before the entry into force of such provisions, and in substitution therefor, be bound by Articles 1 to 12 of the Lisbon Act,

(ii) if Articles 13 to 17 do not enter into force on that date, such country shall, during the interim period before the entry into force of such provisions, and in substitution therefor, be bound by Articles 13 and 14 (3), (4), and (5), of the Lisbon Act.

If a country indicates a subsequent date in its instrument of accession, this Act shall enter into force with respect to that country on the date thus indicated.

(b) With respect to any country outside the Union which deposits its instrument of accession on a date which is subsequent to, or precedes by less than one month, the entry into force of one group of Articles of the present Act, this Act shall, subject to the proviso of subparagraph *(a)*, enter into force three months after the date on

which its accession has been notified by the Director General, unless a subsequent date has been indicated in the instrument of accession. In the latter case, this Act shall enter into force with respect to that country on the date thus indicated.

(3) With respect to any country outside the Union which deposits its instrument Of accession after the date of entry into force of the present Act in its entirety, or less than one month before such date, this Act shall enter into force three months after the date on which its accession has been notified by the Director General, unless a subsequent date has been indicated in the instrument of accession. In the latter case, this Act shall enter into force with respect to that country on the date thus indicated.

Article 22
Consequences of Ratification or Accession

Subject to the possibilities of exceptions provided for in Articles 20(1)*(b)* and 28(2), ratification or accession shall automatically entail acceptance of all the clauses and admission to all the advantages of this Act.

Article 23
Accession to Earlier Acts

After the entry into force of this Act in its entirety, a country may not accede to earlier Acts of this Convention.

Article 24
Territories

(1) Any country may declare in its instrument of ratification or accession, or may inform the Director General by written notification any time thereafter, that this Convention shall be applicable to all or part of those territories, designated in the declaration or notification, for the external relations of which it is responsible.

(2) Any country which has made such a declaration or given such a notification may, at any time, notify the Director General that this Convention shall cease to be applicable to all or part of such territories.

(3)

(a) Any declaration made under paragraph (1) shall take effect on the same date as the ratification or accession in the instrument of which it was included, and any notification given under such paragraph shall take effect three months after its notification by the Director General.

(b) Any notification given under paragraph (2) shall take effect twelve months after its receipt by the Director General.

Article 25
Implementation of the Convention on the Domestic Level

(1) Any country party to this Convention undertakes to adopt, in accordance with its constitution, the measures necessary to ensure the application of this Convention.

(2) It is understood that, at the time a country deposits its instrument of ratification or accession, it will be in a position under its domestic law to give effect to the provisions of this Convention.

Article 26
Denunciation

(1) This Convention shall remain in force without limitation as to time.

(2) Any country may denounce this Act by notification addressed to the Director General. Such denunciation shall constitute also denunciation of all earlier Acts and shall affect only the country making it, the Convention remaining in full force and effect as regards the other countries of the Union.

(3) Denunciation shall take effect one year after the day on which the Director General has received the notification.

(4) The right of denunciation provided by this Article shall not be exercised by any country before the expiration of five years from the date upon which it becomes a member of the Union.

Article 27
Application of Earlier Acts

(1) The present Act shall, as regards the relations between the countries to which it applies, and to the extent that it applies, replace the Convention of Paris of March 20, 1883 and the subsequent Acts of revision.

(2)

> *(a)* As regards the countries to which the present Act does not apply, or does not apply in its entirety, but to which the Lisbon Act of October 31, 1958, applies, the latter shall remain in force in its entirety or to the extent that the present Act does not replace it by virtue of paragraph (1).
>
> *(b)* Similarly, as regards the countries to which neither the present Act, nor portions thereof, nor the Lisbon Act applies, the London Act of June 2, 1934, shall remain in force in its entirety or to the extent that the present Act does not replace it by virtue of paragraph (1).
>
> *(c)* Similarly, as regards the countries to which neither the present Act, nor portions thereof, nor the Lisbon Act, nor the London Act applies, the Hague Act of November 6, 1925, shall remain in force in its entirety or to the extent that the present Act does not replace it by virtue of paragraph (1).

(3) Countries outside the Union which become party to this Act shall apply it with respect to any country of the Union not party to this Act or which, although party to this Act, has made a declaration pursuant to Article 20(1)*(b)*(i). Such countries recognize that the said country of the Union may apply, in its relations with them, the provisions of the most recent Act to which it is party.

Article 28
Disputes

(1) Any dispute between two or more countries of the Union concerning the interpretation or application of this Convention, not settled by negotiation, may, by any one of the countries concerned, be brought before the International Court of Justice by application in conformity with the Statute of the Court, unless the countries concerned agree on some other method of settlement. The country bringing the dispute before the Court shall inform the International Bureau; the International Bureau shall bring the matter to the attention of the other countries of the Union.

(2) Each country may, at the time it signs this Act or deposits its instrument of ratification or accession, declare that it does not consider itself bound by the provisions of paragraph (1). With regard to any dispute between such country and any other country of the Union, the provisions of paragraph (1) shall not apply.

(3) Any country having made a declaration in accordance with the provisions of paragraph (2) may, at any time, withdraw its declaration by notification addressed to the Director General.

Article 29
Signature, Languages, Depositary Functions

(1)

(a) This Act shall be signed in a single copy in the French language and shall be deposited with the Government of Sweden.

(b) Official texts shall be established by the Director General, after consultation with the interested Governments, in the English, German, Italian, Portuguese, Russian and Spanish languages, and such other languages as the Assembly may designate.

(c) In case of differences of opinion on the interpretation of the various texts, the French text shall prevail.

(2) This Act shall remain open for signature at Stockholm until January 13, 1968.

(3) The Director General shall transmit two copies, certified by the Government of Sweden, of the signed text of this Act to the Governments of all countries of the Union and, on request, to the Government of any other country.

(4) The Director General shall register this Act with the Secretariat of the United Nations.

(5) The Director General shall notify the Governments of all countries of the Union of signatures, deposits of instruments of ratification or accession and any declarations included in such instruments or made pursuant to Article 20(1)*(c)*, entry into force of any provisions of this Act, notifications of denunciation, and notifications pursuant to Article 24.

Article 30
Transitional Provisions

(1) Until the first Director General assumes office, references in this Act to the International Bureau of the Organization or to the Director General shall be deemed to be references to the Bureau of the Union or its Director, respectively.

(2) Countries of the Union not bound by Articles 13 to 17 may, until five years after the entry into force of the Convention establishing the Organization, exercise, if they so desire, the rights provided under Articles 13 to 17 of this Act as if they were bound by those Articles. Any country desiring to exercise such rights shall give written notification to that effect to the Director General; such notification shall be effective from the date of its receipt. Such countries shall be deemed to be members of the Assembly until the expiration of the said period.

(3) As long as all the countries of the Union have not become Members of the Organization, the International Bureau of the Organization shall also function as the Bureau of the Union, and the Director General as the Director of the said Bureau.

(4) Once all the countries of the Union have become Members of the Organization, the rights, obligations, and property, of the Bureau of the Union shall devolve on the International Bureau of the Organization.

WIPO

SCT/21/6
ORIGINAL: English
DATE: March 30, 2009

WORLD INTELLECTUAL PROPERTY ORGANIZATION
GENEVA

STANDING COMMITTEE ON THE LAW OF TRADEMARKS, INDUSTRIAL DESIGNS AND GEOGRAPHICAL INDICATIONS

Twenty-First Session
Geneva, June 22 to 26, 2009

PROPOSAL BY JAMAICA

Document prepared by the Secretariat

1. In a communication dated March 30, 2009, the Secretariat received a proposal from Jamaica relating to the Amendment of Article 6*ter* of the Paris Convention for the Protection of Industrial Property for consideration by the Standing Committee on the Law of Trademarks, Industrial Designs and Geographical Indications (SCT), at its twenty-first session to be held in Geneva from June 22 to 26, 2009.

2. The said proposal is annexed to this document.

[Annex follows]

ANNEX

Proposal by Jamaica
to the Standing Committee on the Law of Trademarks, Industrial Designs and Geographical Indications

Article 6*ter*

(1)

(a) **The countries of the Union agree to refuse or to invalidate the registration, and to prohibit by appropriate measures the use, without authorization by the competent authorities, either as trademarks or as elements of trademarks, of armorial bearings, flags, and other State emblems, of the countries of the Union, official signs and hallmarks indicating control and warranty adopted by them, and any imitation from a heraldic point of view.**

(b) The provisions of subparagraph (a), above, shall apply equally to armorial bearings, flags, other emblems, abbreviations, and names, of international intergovernmental organizations of which one or more countries of the Union are members, with the exception of armorial bearings, flags, other emblems, abbreviations, and names, that are already the subject of international agreements in force, intended to ensure their protection.

1. The SCT will recall that during the 1980s, proposals were made to review the Paris Convention in order to broaden the scope of Article 6*ter* to include the protection of country names. The last proposal, regarding a full review of Article 6*ter* for the purpose of possible amendments, was made at a diplomatic conference held in February 1980. At that conference, under the heading of "alternative B", a proposal was placed on the table which recommended that the term "as well as the official names of the countries of the Union" should be included under the category of areas that are to be refused for validation as registered trade marks. This would effectively lead to the expansion of Article 6*ter*(1)(a) to include the protection of country names.

2. Unfortunately, attempts to review Article 6*ter* of the Paris Convention, at the Diplomatic Conference were unsuccessful, due to the rejection of the proposal for the protection of country names by a few States.

3. The rejection of such an inclusion in Article 6*ter*, however, took place against the backdrop of a very different political and socioeconomic reality. Emphasis must be given to the fact that past rejection of the argument to include country names under the protection of Article 6*ter*(1)(a), such as was the case in 1980 (almost 30 years ago), took place under a starkly different international economic order and global trade regime. The widening and deepening of linkages amongst and between countries, as a result of globalization and trade liberalization has facilitated an increase in the trade in goods which carry unauthorized country names.

4. Jamaica is, therefore, proposing to open discussions in the forum of the Standing Committee on the Law of Trademarks, Industrial Designs and Geographical Indications (SCT) for the provision of Article 6*ter* of the Paris Convention to be amended to reflect the protection of these country names, in addition to the other categories of protection already in existence. For this purpose, therefore, Jamaica wishes to revisit elements of the previous proposal made in 1980.

5. Jamaica also wishes to propose the granting of additional protection to a State's identity by way of a further amendment of Article 6*ter* to allow for the protection of country names of the Union to include homonymous sounds of these country names. An example of this would be the official country name "Jamaica" also being protected as "Jah-mey-ka."

6. It should be noted that a discussion concerning the widening of the categories of protection under Article 6*ter* of the Paris Convention to include the protection of country names, must be approached from a holistic point of view having regard to the political, socioeconomic and legal implications of such an amendment, as well as its direct impact on a country's sustainable development and economic survival. In terms to the implications, it is evident that where country names are not protected then the danger of these names becoming generic exists. This has implications not only for the value of private trade marks but on a country's ability to properly protect their Intellectual Property generally, particularly in third countries. Countries like Jamaica that are heavily reliant on their name as a means of marketing suffer greatly when such widespread use of the name without authorization goes unchecked.

7. Based on the foregoing, Jamaica hereby formally requests that the protection of country names be added to the categories under Article 6*ter*(1)(a) of the Paris Convention, and that this matter be included as an agenda item for discussion at the twenty-first session of the Standing Committee on the Law of Trade Marks, Industrial Designs and Geographical Indications, scheduled to be held from June 22 to 26, 2009.

THE RECOGNITION OF RIGHTS AND THE USE OF NAMES IN THE INTERNET DOMAIN NAME SYSTEM

Report
of the
Second WIPO Internet Domain Name Process
http://wipo2.wipo.int

September 3, 2001

The World Intellectual Property Organization (WIPO) is an international intergovernmental organization, which has 177 States as members. The Member States established the Organization as the vehicle for promoting the protection of intellectual property throughout the world.

The Organization provides services both to its Member States and to the individuals and enterprises that are constituents of those States.

The services provided by WIPO to its Member States include the provision of a forum for the development and implementation of intellectual property policies internationally through treaties and other policy instruments.

The services provided to the private sector by WIPO include the administration of procedures for the settlement of intellectual property disputes through the WIPO Arbitration and Mediation Center, and the administration of systems that make it possible to obtain protection for patents, trademarks, industrial designs and geographical indications in different countries through a single international procedure.

The operations of WIPO are financed as to 90 per cent by fees generated by the Organization for the services it renders to the private sector, and as to the remaining 10 per cent by contributions made by the Member States.

EXECUTIVE SUMMARY

The Second WIPO Internet Domain Name Process was initiated at the request of the Member States of WIPO. It follows the first such WIPO Process, which investigated the interface between trademarks and Internet domain names, and recommended the establishment of a uniform dispute-resolution procedure to deal with disputes concerning the bad faith registration and use of trademarks as domain names, or "cybersquatting." The Uniform Domain Name Dispute Resolution Policy (UDRP), which was adopted by the Internet Corporation for Assigned Names and Numbers (ICANN) as a consequence of the first WIPO Process, has proven to be an efficient and cost-effective international mechanism, responsive to the particular circumstances of the domain name system (DNS) as a global addressing system. The WIPO Arbitration and Mediation Center, as a leading provider of services under the UDRP, has received, at the date of publication of this Report, over 3000 complaints under it, of which well over 80% have been resolved.

The Second WIPO Process concerns a range of identifiers other than trademarks and is directed at examining the bad faith and misleading registration and use of those identifiers as domain names. These other identifiers, which form the basis of naming systems used in the real or physical world, are:

- International Nonproprietary Names (INNs) for pharmaceutical substances, a consensus-based naming system used in the health sector to establish generic names for pharmaceutical substances that are free from private rights of property

The international legal framework for the protection of these other identifiers is not as developed as it is for the protection of trademarks. In some cases, for example, geographical indications and trade names, elements of international protection exist, but they do not constitute a complete system that is uniformly applied throughout the world. In other cases, for example, personal names and the names of geographical localities, such as cities, used outside the context of trade in goods, there are no clear elements of an international framework.

The Report finds that there is considerable evidence of the registration and use of the identifiers examined in the Report as domain names by persons who might be considered not to be properly entitled to use the identifiers in question. Moreover, it is clear from the comments received by WIPO in the process leading to the Report that the registration of these identifiers as domain names by such persons offends many sensitivities. For example, many commentators considered that the registration as domain names of the names of eminent political, scientific or religious persons, or the names of countries, cities or indigenous peoples, by parties without any association with the persons, places or peoples concerned, was unacceptable.

The possibility of registering these identifiers as domain names is a consequence of the first-come, first-served, highly automated and efficient nature of the system used for domain name registration, which does not involve any screening of domain name applications. That same system has also allowed the tremendous growth that has taken place in the use of the Internet, while acting as the means of preserving universal connectivity on the Internet.

respect to domain name registries, registrars and registrants, and the more traditional instrument of the treaty. These instruments are not exclusive, but can be used in combination. Thus, the UDRP represents a deployment, through the contractual relations that make up the ICANN system, of established rules relating to trademark protection that have been developed in widely accepted treaties. It will be for the international community to choose not only whether it wishes to make new rules to deal with any of the identifiers examined in this Report, but also how it may wish to develop such rules and implement them.

The specific findings and recommendations made with respect to the various identifiers examined in this Report are:

(i) For *INNs*, which are examined in Chapter Three of the Report, it is recommended that a simple mechanism be established which would protect INNs against identical domain name registrations. The mechanism would allow any interested party to notify WIPO that a domain name registration is identical to an INN, whereupon WIPO would, in conjunction with the World Health Organization (WHO), verify the exact similarity between the domain name and the INN and notify this to ICANN, which would, in turn, notify the registrar with which the registration was made that the domain name registration should be cancelled.

(ii) For the *names and acronyms of IGOs*, which are examined in Chapter Four of the Report, it is recommended that States, as the constituents of IGOs, should work towards the establishment of an administrative dispute-resolution procedure, akin to the UDRP, where an

The sensitivities offended by the registration of personal names as domain names by parties unconnected with the persons in question is recognized, and it is suggested that the international community needs to decide whether it wishes to work towards some means of protection of personal names against their abusive registration as domain names.

(iv) For *geographical identifiers*, which are dealt with in Chapter Six, it is recognized that certain norms exist at the international level which prohibit false and deceptive indications of geographical source on goods and which protect geographical indications, or the names of geographical localities with which goods having particular characteristics derived from that locality are associated. However, these rules apply to trade in goods and may require some adaptation to deal with the perceived range of problems with the misuse of geographical indications in the DNS. Furthermore, the lack of an international agreed list of geographical indications would pose significant problems for the application of the UDRP in this area because of the need to make difficult choices of applicable law. It is suggested that the international framework in this area needs to be further advanced before an adequate solution is available to the misuse of geographical indications in the DNS. As far as other geographical terms are concerned, the Report produces considerable evidence of the widespread registration of the names of countries, places within countries and indigenous peoples as domain names by persons unassociated with the countries, places or peoples. However, these areas are not covered by existing international laws and a decision needs to be taken as to whether such laws ought to be developed.

(v) For *trade names*, which are the subject of Chapter Seven, the situation is similar

1. THE MANDATE AND ITS CONTEXT

1. On June 28, 2000, the Director General of WIPO received a request from 19 of WIPO's Member States to develop, through a consultative process, recommendations on means of dealing with the "bad faith, abusive, misleading or unfair use," within the Internet domain name system (DNS), of identifiers that form the basis of certain naming systems used in the real or non-virtual world.[1] The identifiers specified were:

- — personal names;
- — International Nonproprietary Names (INNs) for pharmaceutical substances;
- — the names of international intergovernmental organizations;
- — geographical indications, geographical terms, or indications of source; and
- — trade names.

The Request was subsequently endorsed by the WIPO General Assembly, the constituent organ of the Member States of WIPO.[2]

2. The Request established three process criteria for WIPO's work:

(i) first, it was specified that "this activity should take full advantage of WIPO's prior work";

(ii) secondly, the activity should "build on existing and ongoing discussions"; and

Paper called for the creation of a new, private, not-for-profit corporation which would be responsible for coordinating certain DNS functions for the benefit of the Internet as a whole. Following the publication of the White Paper, a process occurred which resulted in the formation of the Internet Corporation for Assigned Names and Numbers (ICANN), a not-for-profit corporation established under the laws of the State of California of the United States of America. The by-laws of ICANN and documentation on the various meetings that it has organized and activities that it has carried out are available on ICANN's web site, *www.icann.org*.

4. In response to growing publicity and concern over the interface between domain names and trademarks, and the lack of definition of the relation between these two species of identifiers, the White Paper also addressed certain intellectual property questions. In particular, the White Paper stated that the United States Government would "seek international support to call upon the World Intellectual Property Organization (WIPO) to initiate a balanced and transparent process, which includes the participation of trademark holders and members of the Internet community who are not trademark holders," to develop recommendations on certain aspects of the interface between domain names and trademarks, including "a uniform approach to resolving trademark/domain name disputes involving cyberpiracy."

5. Following the publication of the White Paper, and with the subsequent approval of its Member States,[4] WIPO carried out between July 1998 and April 1999 an extensive and intensive process of consultations directed at developing recommendations on the issues

72 non-governmental organizations representing professional, industry and other special interests, 181 corporations and law firms and 182 individuals.

7. The Report of the WIPO Internet Domain Name Process, *The Management of Internet Names and Addresses: Intellectual Property Issues*,[5] was published on April 30, 1999. The Report contained a series of recommendations. Chief amongst those recommendations was the establishment of a uniform dispute-resolution policy and procedure for resolving disputes over the alleged bad faith and deliberate misuse of trademarks through the registration of domain names in the generic top-level domains (gTLDs) .com, .net and .org.

The Uniform Domain Name Dispute Resolution Policy for gTLDs

8. Following the publication of the Report of the WIPO Internet Domain Name Process and certain consultation procedures in conformity with the by-laws of ICANN, ICANN adopted, in August 1999, a Uniform Domain Name Dispute Resolution Policy (UDRP), which entered into force for the gTLDs .com, .net and .org on December 1, 1999, and January 1, 2000 (the policy was phased-in for registrars over the two dates).

9. The UDRP establishes a dispute-resolution procedure under which a complainant can seek the transfer or cancellation of a domain name registration in .com, .net or .org on the basis that (i) the domain name is identical or confusingly similar to a trademark in which the complainant has rights; (ii) the domain name holder has no rights or legitimate interests in respect of the domain name; and (iii) the domain name has been registered and is being used

11. Between the date of commencement of the UDRP on December 1, 1999, and the end of July 2001, some 4,155 cases had been initiated under the UDRP. Of these, 2821 were filed with the WIPO Arbitration and Mediation Center.

12. The UDRP has proven itself to be an efficient and cost-effective means of resolving disputes over the bad faith and deliberate misuse of trademarks through the registration and use of domain names in the gTLDs. Of the 2821 cases filed the WIPO Arbitration and Mediation Center since the commencement of the UDRP, 88% have been resolved. Filing a case with the WIPO Center costs US$1500 and a decision is normally given within 50 days of the commencement of the procedure.[6] The procedure has attracted widespread international participation, with cases being filed with the WIPO Center by parties from 85 countries.

EXISTING AND ONGOING DISCUSSIONS

13. There are several "existing and ongoing discussions" or developments which may have an impact, directly or indirectly, on the UDRP and on the various issues that WIPO has been requested to address in respect of the interface between domain names and certain identifiers other than trademarks.

UDRP Review

15. The Domain Name Supporting Organization (DNSO) has the responsibility of advising the Board "with respect to policy issues relating to the Domain Name System" (Article VI-B, Section 1 (a)). The scope of such policy issues is presumably not open, but is circumscribed by the Articles of Incorporation of ICANN,[8] which set out the purposes and functions of ICANN (thus, for example, the policy issues would not include taxation or criminal law). The DNSO has two organs, a Names Council, consisting of representatives of various "constituencies," and a General Assembly, consisting of "all interested individuals and entities" (Article VI-B, Section 1(b)).

16. The constituencies of the DNSO Names Council "self-organize" and "determine [their] own criteria for participation" (Article VI-B, Section 3(a)). There are seven constituencies of the DNSO Names Council, namely ccTLD registries; commercial and business entities; gTLD registries; ISP and connectivity providers; non-commercial domain name holders; registrars; and trademark, other intellectual property and anti-counterfeiting interests (Article VI-B, Section 3(b)).

17. The Business Plan for the DNSO Names Council 2001-2002[9] includes two items concerning the UDRP amongst its proposed objectives for the Names Council 2001-2002:

> "*UDRP.*
>
> *a. Review and evaluate the Uniform Dispute Resolution Policy and propose changes for consideration by the ICANN Board.*

ccTLDs

18. In parallel to the Request to WIPO, referred in paragraph 1, above, which led to the publication of this present WIPO Report, WIPO also received from the same 19 Member States a Request "to develop, for the assistance of the administrators in ccTLDs, voluntary guidelines for the development of practices and policies to curb abusive and bad faith registration of protected names, and to resolve related disputes."[10] This second Request was also endorsed by the WIPO General Assembly.[11]

19. The ccTLDs are those top-level domains which bear two letter codes essentially derived from the International Organization for Standardization's (ISO) Standard 3166. In accordance with the second Request addressed to it, WIPO initiated a ccTLD program, which included consultations and an international conference held in Geneva on February 20, 2001. The program led to the publication of the *WIPO ccTLD Best Practices for the Prevention and Resolution of Intellectual Property Disputes*.[12]

20. Twenty-two ccTLDs have now adopted the UDRP within their domains. Those 22 ccTLDs are: .AC (Ascension Island), .AG (Antigua and Barbuda), .AS (American Samoa), .BS (Bahamas), .BZ (Belize), .CY (Cyprus), .EC (Ecuador), .FJ (Fiji), .GT (Guatemala), .LA (Lao People's Democratic Republic), .MX (Mexico), .NA (Namibia), .NU (Nuie), .PA (Panama), .PH (Philippines), .PN (Pitcairn Island), .RO (Romania), .SH (Saint-Helena), .TT (Trinidad and Tobago), .TV (Tuvalu), .VE (Venezuela), and .WS (Western Samoa). To date, 46 cases relating to domain name registrations in the abovementioned

"Internationalized" Domain Names

22. Various efforts are under way in the Internet community to make domain names available in non-Roman or non-ASCII scripts, such as Arabic, Chinese, Cyrillic, Japanese or Korean.

23. The Internet Engineering Task Force (IETF) has established an Internationalized Domain Name (IDN) Working Group, whose goal is "to specify the requirements for internationalized access to domain names and to specify a standards track protocol based on the requirements."[13] According to the charter of the Working Group, a "fundamental requirement in this work is to not disturb the current use and operation of the domain name system, and for the DNS to continue to allow any system anywhere to resolve any domain names." The Working Group has not yet completed its work.

24. VeriSign Global Registry Services (VeriSign GRS), a leading provider of domain name registry services and DNS support to the Internet, has introduced an Internationalized Domain Name Testbed.[14] According to the VeriSign GRS "General Information Paper on Internationalized Domain Name Resolution,"[15] the "VeriSign GRS approach in implementing its testbed is to insure adherence to the Internet Architecture Board (IAB) principle of a single DNS route and continued compliance with the evolving standards under development by the Internationalized Domain Name (IDN) Working Group of the Internet Engineering Task Force (IETF)." The VeriSign GRS Internationalized Domain Name Testbed has commenced the phase of resolution of non-Roman script registrations that have been made under the

group "to identify the various internationalization efforts and the issues they raise, to engage in dialogue with technical experts and other participants in these efforts, and to make appropriate recommendations to the Board."[17] The ICANN IDN Internal Working Group has not completed its work.

26. The UDRP applies to all domain name registrations in the gTLDs .com, .net and .org. If those registrations are effected in non-Roman or non-ASCII script, the UDRP thus applies. The WIPO Arbitration and Mediation Center has already received 15 cases under the UDRP concerning internationalized domain name registrations effected under the VeriSign GRS Internationalized Domain Name Testbed. The cases concerned internationalized domain names in Chinese, Japanese, Norwegian (æ), German (ö) and French (é). Decisions have been given in 7 of the 15 cases filed.

27. The internationalization of domain names is manifestly an immensely important development in the DNS and one which will, inevitably, have intellectual property implications. The problem of conflicting trademarks across different languages and different language scripts is a problem that is already well known to the trademark community, which has a long experience with trademark registrations being effected in the various languages and language scripts used around the world. It may be expected, however, that the introduction of internationalized domain names will introduce certain dimensions to the problem of conflicting identifiers across different languages and language scripts which are additional to those already experienced in respect of conflicting trademark registrations. Those new dimensions are likely to include the evaluation of the importance of phonetic similarity in the

The selection followed a process conducted by ICANN which included the publication of criteria for assessing new TLD proposals, a call for applications, the publication of the non-confidential portions of the 47 applications received, a public comment period and the publication of a report evaluating the applications received.

29. The seven new gTLDs fall into two categories: (i) "unsponsored" TLDs, which are intended to be relatively large and to operate under policies established by "the global Internet Community directly through the ICANN process,"[19] and (ii) "sponsored" TLDs, each of which is intended to be "a specialized TLD that has a sponsoring organization representing the narrower community that is most affected by the TLD."[20] The following table gives details of the name, nature, intended purpose and registry operator of each of the seven new gTLDs.

Table 1

New gTLDs

TLD	Nature	Intended Purpose	Registry Operator
.aero	Sponsored	Air-transport industry	Société internationale de télécommunications aéronautiques, SC (SITA)
.biz	Unsponsored	Businesses	NeuLevel, Inc.
.coop	Sponsored	Cooperatives	National Cooperative

30. The unsponsored TLDs will operate under "Registry Agreements" with ICANN. A common form of basic agreement has been negotiated with each of the four selected unsponsored TLD registry operators. Negotiations for agreements with sponsoring organizations for the three sponsored TLDs are in process.

31. The timetable for the introduction of the new gTLDs has not yet been completed. Two of the new gTLDs have announced dates for the commencement of operations open to the public, namely .info, which will commence on September 19, 2001,[21] and .biz, which will commence on October 1, 2001.[22] The dates for the commencement of operations of the other new gTLDs will be announced in due course. WIPO has been working with the Registries of the new gTLDs to provide advice and assistance concerning appropriate dispute-resolution policies.[23]

32. *Intellectual Property Considerations.* One of the terms of reference of the first WIPO Internet Domain Name Process was to evaluate the effects of adding new gTLDs and related dispute-resolution procedures on trademark and intellectual property holders.[24] The Report of that process concluded that, subject to the implementation of recommendations made in the Report, new gTLDs could be introduced "provided that they are introduced in a slow and controlled manner which takes account of the efficacy of the proposed new practices and procedures in reducing existing problems."[25]

33. All four new unsponsored gTLDs are expected to apply the UDRP. In addition, three of

34. In addition to the UDRP and other dispute-resolution policies that will govern open registry operations, the first two new gTLDs to come online have established procedures aimed at minimizing bad faith abuse of trademark rights during the initial start-up phase of registry operations. .info is implementing a "sunrise" period (from July 25, 2001 to August 28, 2001) during which trademark holders may register their exact trademarks as domain names in .info. The sunrise period will be followed by a period during which a Sunrise Challenge Policy will apply under which a person may challenge a registration made during the sunrise period on the ground that the registration does not conform to the requirements for registration during the sunrise period (for example, the domain name is not identical to the trademark claimed in support of it).[26] Afilias, the Registry operator of .info, has also announced that it will itself initiate challenges in respect of manifestly false registrations of names during the sunrise period.[27] In the case of .biz, the Registry operator, Neulevel, is implementing a procedure whereby a trademark owner may register a claim with respect to the trademarks that it owns. If a domain name registration is made by a third party in respect of the trademarks claimed, the trademark owner which has registered the claim will be notified of the registration. The trademark owner will then have the opportunity to initiate a challenge in respect of the domain name on the ground that the domain name has been registered or is used in bad faith.

35. It is too early in the process of the introduction of the new gTLDs to assess what impact, if any, they will have on intellectual property. The introduction of the new gTLDs will be closely monitored by all and, in particular, from the perspective of intellectual property, with respect to the following issues:

(iii) the response to greater differentiation in the DNS on the part of Internet users, search engines and directory services; and

(iv) the design and inter-relationship between WHOIS services across an extended DNS.

A Unique, Authoritative Root

36. The DNS relies upon a single authoritative root to ensure reliable universal connectivity on the Internet. As stated by the Internet Architecture Board (IAB):

> "*To remain a global network, the Internet requires the existence of a globally unique public name space. The DNS name space is a hierarchical name space derived from a single, globally unique root. This is a technical constraint inherent in the design of the DNS. Therefore it is not technically feasible for there to be more than one root in the public DNS. That one root must be supported by a set of coordinated root servers administered by a unique naming authority.*"[28]

37. Various attempts have been made by operators to establish alternate roots. Certain of these attempts are considered to be benign insofar as they are either purely private, and thus insulated from the public DNS, or experimental and intended not to interfere with the operation of the DNS. Others have been commercially established to support top-level domains to compete with the single root managed by ICANN and may be considered to pose potential threats to the stability and reliability of the DNS.

39. From the intellectual property perspective, alternate roots present the possibility of a loss of cohesion in the application of the UDRP. As described in paragraphs 9 and 10 above, and in Chapter 2 below, the UDRP represents a contractually based system for the implementation of intellectual property policy in the DNS. Intellectual property policy, as expressed in the UDRP, is implemented through registrar accreditation agreements with ICANN and through the contract between the applicant for a domain name registration and the registrar under which the holder of the domain name registration agrees to submit to the uniform dispute-resolution procedure if challenged by a third party. Insofar as alternate roots lie outside the contractual system established by ICANN, the application of the UDRP by operators of alternate roots is not ensured and depends upon their voluntary adoption of the UDRP or a similar policy.[31]

Internet Keywords

40. Internet keywords offer a natural language Web addressing system or a navigational system based on the use of words, without technical prefixes, such as *http://* or *www.*, and without top-level domain suffixes, such as .com, .net or .org. Keywords resolve to URLs and, in some cases, e-mail addresses, usually through the use of the keyword in the browser location bar. While being navigational tools, keywords can also be regarded as virtual identifiers and, as such, have intellectual property implications.

41. Keywords do not constitute a competing rooting system to the DNS, but rather an application layer super-imposed upon the DNS.

44. As keywords systems become increasingly used in web browsers and search engines, the possibility of conflicts between keywords and intellectual property rights is likely to increase. Depending on their evolution, user uptake and the effectiveness of voluntary dispute-resolution procedures applied by providers, the intellectual property dimensions of keywords and other addressing systems super-imposed on the DNS could warrant further study.

THE PROCESS OF CONSULTATIONS IN THE SECOND WIPO INTERNET DOMAIN NAME PROCESS

45. As mentioned in paragraph 2, above, the Request addressed to WIPO, which initiated the process leading to the present Report, called for "a process of consultation with WIPO Members and all interested stakeholders."

46. In order to undertake the requested process of consultation, WIPO adopted procedures modeled on those followed in the first WIPO Internet Domain Name Process. The Second Process thus also comprises three stages and was conducted in English, French and Spanish.

47. The first stage sought greater definition in the issues that were to be addressed in the course of the process, the procedures that were to be used and the timetable that would be followed. To this end, a Request for Comments (WIPO2 RFC-1) was issued on July 10, 2000, with a deadline for receipt of comments by August 15, 2000.

50. Each of the above-mentioned Requests for Comments was published on the web site established for the Second WIPO Internet Domain Name Process (*http://wipo2.wipo.int/process2/index.html*), as well as in paper form. The paper version was also sent to the governments and industrial property offices of each of the 177 Member States of WIPO, and to intergovernmental organizations and non-governmental organizations accredited with observer status at WIPO.

51. In addition to the Internet-based and written consultations, WIPO also organized, throughout the latter part of 2000 and the first of part of 2001, physical meetings in 10 cities throughout the world. Details of the location of those meetings and participation in the meetings are given in Table 2, below.

Table 2

Consultation Meetings Organized

Location	Date(s)	Participation (approx.)
São Paulo, Brazil	August 2 and 3, 2000	41
Chiang Mai, Thailand	August 3 and 4, 2000	58
Amman, Jordan	September 18 to 20, 2000	100
Krakow, Poland	October 25	63

52. In all, throughout this Second WIPO Internet Domain Name Process, written comments on the three Requests for Comments and physical participation at the meetings held were engaged from 51 government agencies of 28 countries, 18 intergovernmental organizations and agencies, 44 non-governmental organizations, 201 corporations and professional firms and 184 individuals. Details of the names of these entities and persons and of their participation in the various stages of the process are set out in Annex I to this Report.

THE SUBMISSION OF THE PRESENT REPORT

53. The Request initiating the Second WIPO Internet Domain Name Process indicated that the "findings and the recommendations [of the Process] should be submitted to the Members of WIPO and for consideration by the Internet Community (including the Internet Corporation for Assigned Names and Numbers)."[37] Accordingly, the present Report will be submitted to the Assemblies of Member States of WIPO at their meeting from September 24 to October 3, 2001, and will be submitted to the Board of ICANN. In addition, the Report will be published on the WIPO web site and distributed widely in paper form.

2. POLICY OPTIONS FOR A GLOBAL MEDIUM

54. The Domain Name System (DNS) has presented a set of problems for intellectual property policy, as well as a set of opportunities, that are perhaps unique in the historical development of the intellectual property system. The problems arise from the spontaneous adaptation of a technical addressing system to functions and purposes beyond those for which it was originally designed. In addition to providing a human friendly, reliable and stable rooting system, the DNS has given rise to identifiers that are used for commercial, cultural, governmental, political and social purposes, both on the Internet itself and in similar contexts beyond the Internet. The opportunities arise from the hierarchical design of the DNS and the set of contractual relations that bind ICANN, registries, registrars and domain name holders in various relationships, thereby providing a means for implementing common terms of policy in those relationships.

55. The Uniform Domain Name Dispute Resolution Policy (UDRP) can be seen as a largely successful use of the opportunities provided by the hierarchical design of the DNS, although it is not without critics. The Second WIPO Internet Domain Name Process involves a series of far-reaching questions, which ultimately relate to the interface between the virtual identifiers that domain names are and identifiers that have a basis in naming systems that have been deployed historically throughout the real or non-virtual world. Some of those naming systems are circumscribed by legal rules and principles (for example, geographical indications or trade names), and some operate within social, cultural and spiritual contexts that contain their own,

development and implementation that are available to the international community should it choose to take action in respect of any possible solutions.

57. In examining the available options for policy development and implementation, it is useful to commence by recalling first, the special features of the environment in which intellectual property policy with respect to domain names applies, and, secondly, the distinction between the application of existing policy and the creation of new policy.

SPECIAL FEATURES OF THE ENVIRONMENT

58. It is widely recognized that the Internet presents special challenges for policy development and implementation. There are four features that are particularly pertinent in the present context.

A Global Medium

59. The Internet is global in several senses. It is accessible from any place in which the appropriate telecommunication facilities exist, with the consequence that the users of the Internet reflect, or potentially reflect, the diversity of the world's population. A domain name registration, whether in a gTLD or a ccTLD, gives a global presence which makes the corresponding online address accessible from anywhere. There are advantages for all in this universal connectivity, which allows the Internet to be a medium for international commerce,

the activity emanates, the location of the server, the location of the computer on which the activity is perceived, the locality of the target audience, the locality of the accidental audience that may perceive or be able to perceive the activity, the territory over which messages travel, and so forth. Sorting out the territorial connections to activity on the Internet is, however, a difficult exercise and the reality is that activity on the Internet is not susceptible to territorial localization in the way in which activity in the non-virtual world is. The absence of territorial localization in this way stands in contrast to the historical basis of political and legal systems in which policy is formulated by governments and parliaments for the territory over which they exercise authority and the ensuing legal rights are limited to, and enforced within, the same territories. Who has authority to make policy for a global space and who has authority to enforce that policy are complicated questions to which there are no easy answers.

Speed of Penetration and of Change

61. The Internet has been characterized by extremely rapid acceptance and adoption. Estimates indicate that the number of users of the Internet has risen from several thousand in August 1981 to 460 million in 2001.[1] This rate of adoption is much quicker than the rate of adoption of the telephone or television.[2]

62. Not only has the rate of adoption of the Internet been exceptionally quick, but also the technologies that it deploys and policies governing the DNS have been in rapid evolution, as Chapter 1 indicates. The distinction between gTLDs and ccTLDs is not as clear as the descriptions of those categories of top-level domains suggest. Language within the DNS is in

Multifunctionality

64. As noted above, the Internet is used by a diverse range of people for a diverse range of purposes. Every adjective that can be used to describe a branch of human activity finds its corresponding noun in activity on the Internet: research, science, technology, commerce, culture, entertainment, leisure, communication, religion, politics, pornography, lunacy and so forth. Making policy for one area so as not to damage the legitimate interests of another area is also a complicated issue.

CREATING -V- APPLYING LAW

65. It is not inappropriate to recall some old distinctions in political and legal theory. In particular, there is a well accepted distinction in theory, even if not always so easily applied in practice, between creating law, a legislative activity, and applying it, an executive activity. Legislation, at least in liberal democracies, is the activity of elected representatives of the constituency to which the legislation applies. The executive function is performed by duly appointed or constituted agencies.

66. The recommendation in the first WIPO Internet Domain Name Process to establish a uniform domain name dispute resolution procedure (UDRP) was essentially an exercise in finding a means to express, in an economically rational and effective way, principles that were widely accepted in national and international laws. There has been history of nearly

legislation than about the efficient application of existing law in a multijurisdictional and cross-territorial space.

67. The Second WIPO Internet Domain Name Process involves more difficult questions where it is as well to remember the distinction between positive law, or what the law is, and normative law, or what the law should be according to opinion gauged to be more or less widespread. From the point of view of positive law, as will be seen in the ensuing chapters, the questions to be addressed in the present Report fall into three categories:

(i) questions on which there is a clear international norm requiring protection of a certain subject matter, but under-developed modalities for the international recognition of the subject matter that is to be protected (with the consequence, that the appreciation of the subject matter to be respected often is left to national law). Into this category fall geographical indications and trade names.

(ii) questions where there are elements of an international framework for the protection of the subject matter, but those elements are incomplete or insufficiently precise. Into this category fall the names and acronyms of international intergovernmental organizations and International Non-proprietary Names (INNs) for pharmaceutical substances.

(iii) questions in respect of which there are no existing international norms, however unjust the absence of such norms might be. Into this category fall personal names, advantage of the positive features of each, as well as to take into account their limitations. If the international community should wish to establish rules with respect to the questions examined in the ensuing chapters of this Report, it would need also to decide on the optimal way in which those rules can be developed and implemented.

Self-Regulation

69. The first model for adopting and implementing intellectual property policy is the self-regulatory model, under which, in the context of the DNS, registries, in cooperation with any supervisory body that may exercise authority over them, develop and adopt rules governing intellectual property protection within the domains for which they are responsible. Those policies can then be implemented through terms in the contractual relationships that govern registrations made in the domains in question. Naturally, the rules in question must conform to applicable law.

70. To a certain extent, self-regulation is already practiced in certain areas of the interface between domain names and intellectual property. The administrators of ccTLDs are not obligated to apply the UDRP. As indicated above (paragraphs 18 to 21), 22 ccTLDs have voluntarily adopted the UDRP. A number of others have, however, chosen to develop their own dispute-resolution mechanisms and charters with respect to the bad faith and deliberate violation of intellectual property rights through domain name registrations, for example, .uk.[3] While the policy that they may adopt may bear a great similarity to the UDRP, it constitutes a self-contained system, which does not permit consolidation of cases concerning similar

71. The *advantages* of self-regulation are relatively swift development and implementation of rules, as well as relatively flexible procedures for modification of rules, where necessary, a particularly desirable feature in the context of a rapidly evolving medium. In addition, rules backed by a dispute-resolution procedure have the great benefit of rapid and effective enforcement through the registry adopting the rules. In the case of ccTLDs, there is also the advantage of greater possibility of adopting specific rules to accommodate local circumstances.

72. The *disadvantages* of self-regulation are the risks of incoherence in policy across a global medium and a global space, with the resultant possibility of conflicting rules, increased compliance costs for users, who may have to conform to a variety of differing rules and systems, and an increased possibility of confusion on the part of users in knowing what is and what is not permissible. Self-regulation also depends for its effect on legislative discipline to restrain the possibility of an increasing number and diversity of national laws applying to regulate various facets of the interface between domain names and intellectual property rights. Legislation relating to aspects of domain names and intellectual property rights exists in the United States of America,[5] is under consideration within the European Union in the form of a proposed Regulation of the European Parliament and of the Council with respect to the proposed top-level domain .eu[6] and has been considered in a number of countries, including Belgium[7] and Italy.[8]

The ICANN Contractual Model

approval of standard terms for contracts between registrars and domain name applicants, the system has the beauty of rapid and effective enforcement (since remedies under the UDRP are limited to what may be technically achieved in the DNS, such as the transfer or cancellation of registration). The model has also the advantage of ensuring coherence in policy application across the generic top-level domain name space. In addition, it makes use of ICANN's specialist expertise in the management of the technical functioning of the DNS, as well as its decision-making processes and instances which have been designed to encourage participation on the part of all interested stakeholders.

75. The *disadvantages* of this model are that ICANN's mandate and focus of activity are the technical coordination, technical management and operational stability of the Internet. ICANN's Articles of Incorporation state, in Article 3, that it shall pursue "the charitable and public purposes of lessening burdens of government and promoting the global public interest in the operational stability of the Internet by (i) coordinating the assignment of Internet technical parameters as needed to maintain universal connectivity on the Internet; (ii) performing and overseeing functions related to the coordination of the Internet Protocol ("IP") address space; (iii) performing and overseeing functions related to the coordination of the Internet Domain Name System ("DNS"), including the development of policies for determining the circumstances under which top-level domains are added to the DNS root server system; (iv) overseeing operation of the authoritative Internet DNS root server system; and (v) engaging in any other related lawful activity in furtherance items (i) through (iv)." In view of these functions and focus, ICANN may see the development of new rules of intellectual property policy, as opposed to the use of the contractual basis of the ICANN

The Treaty

77. The third model is the instrument traditionally used by the international community to create binding rules that limit the inconsistent exercise of national legislative competence, namely the treaty. The treaty is the international equivalent of a national law and the process leading to its adoption is the international equivalent to the national legislative process.

78. The *advantages* of the treaty are the representative nature of the process leading to the treaty's conclusion, which typically includes consultations on the part of national delegations with interested circles in formulating national positions, extensive international negotiations by duly authorized representatives, adoption of the treaty by duly empowered representatives specialized in the subject matter of the treaty and accession to or ratification of the treaty through national consultative and parliamentary or congressional processes. The treaty also has, of course, binding force amongst contracting parties and remains the instrument used by the international community for achieving the uniform application of the rules.

79. The *disadvantages* of the treaty are the length and slowness of the multilateral process for the negotiation of the instrument, which typically requires a number of years that is often incompatible with the speed of response required by the Internet, and the length of time required for the subsequent ratification of the treaty in order to bring it into force across a geographically effective and pertinent area. In addition, once concluded, a treaty is often a relatively inflexible instrument for dealing with areas subject to rapid and radical change, since amendment usually requires time-consuming procedures of consultation and negotiation

congresses of their sovereign rights to consent to the content of an instrument which may become binding on their constituents.

3. INTERNATIONAL NONPROPRIETARY NAMES FOR PHARMACEUTICAL SUBSTANCES (INNs)

81. In common with other areas, the health sector has been affected in a variety of new and fundamental ways by the Internet. Vast amounts of health-related information and products are available through the Internet to a global audience which can retrieve and use them with unprecedented ease and efficiency.[1] The accuracy, reliability and safety of the information and products retrieved are matters of primary interest to public health and safety.

82. Identifiers play an important role with respect to health products, services and information, both on the Internet and in the physical world. In particular, identifiers:

(i) enable health-related information to be located online;
(ii) signal the source of products, services and information; and
(iii) connect producers or suppliers, on the one hand, and consumers, on the other hand, enabling consumers to associate certain consistent characteristics of products or information with the identifiers.

83. The pharmaceutical industry, the medical profession and associated suppliers of medical equipment and services use a variety of identifiers, including trademarks for branded pharmaceutical products, service marks for suppliers of medical services, personal names for physicians and surgeons, traditional names for tradition-based products and remedies and trade names for enterprises providing products and services or for associations grouping

that, in the interests of public safety, a class of identifiers would be established that would be free from appropriation through private rights and available for public use. This system, developed and managed by the World Health Organization (WHO), attributed such public status to a class of identifiers known as "International Nonproprietary Names (INNs)." The system operates on the basis of consensus on the part of public authorities and the private sector.

85. With the arrival of the Internet and DNS, a new opportunity arose for tainting the public status of INNs. By registering an INN as a domain name, the functional capacity of the INN to serve as an address locator and identifier on the Internet could be appropriated and controlled by the domain name holder. No screening system exists to prevent anyone from doing this.

86. The registration of INNs as domain names came to light in the course of the first WIPO Process. The Report of that Process recognized that the issue was outside the scope of the mandate of the first Process, but recommended that serious consideration be given in future to the protection of INNs against registration in the open top-level domains (gTLDs).[2] This recommendation led to the request to WIPO to explore, in the Second WIPO Process, the issues raised in the DNS by the bad faith, abusive, misleading or unfair use of INNs. In addressing this request, the present Chapter describes the operation and policy of the INN system, analyses the comments received in the course of the Second WIPO Process and evaluates the evidence of current problems experienced in the DNS relating to the registration of INNs. It explores policy options for protecting INNs within the DNS and recommends

chloroquine and retinol.[3] INNs are selected by WHO, in coordination with national authorities worldwide, and maintained on a Cumulative List of recommended INNs, now numbering more than 8,000, to which between 120 and 150 new names are added each year.[4]

88. WHO is a specialized agency of the United Nations with 191 Member States and a constitutional responsibility to "develop, establish and promote international standards with respect to biological, pharmaceutical and similar products."[5] WHO has the international mandate to offer recommendations to its Member States on any matter within its competence, including setting norms and standards for pharmaceutical products in international commerce.

89. The INN system was established by a World Health Assembly resolution in 1950,[6] which also provided for the development of a selection procedure for recommended INNs. The procedure for selection of INNs begins with a request, often by a national nomenclature authority or a pharmaceutical company, which is submitted for examination and name selection by the WHO Expert Panel on the International Pharmacopoeia and Pharmaceutical Preparations ('WHO Expert Panel'), made up of representatives of the major national nomenclature committees. The proposed INN is published in *WHO Drug Information* for comment or objection by any interested person over a four-month period. If no objection is raised during that period, the name is published as a recommended INN.

90. To qualify for selection, INNs must be succinct, distinctive in sound and spelling, so as to avoid confusion with other commonly used names, and must be in the public domain and therefore freely available for the sole purpose of identifying the pharmaceutical substance in

92. As a result, there now exists an international consensus among relevant public and private circles on the public policy against the acquisition of proprietary rights in INNs. The policy extends to trademarks and calls for restraints on the part of private health enterprises and public trademark registration authorities not to allow trademark rights to be acquired over INNs. The exact INN itself and the stem of the INN may not be registered as a trademark. In line with the intended status of INNs as generic or common names, manufacturers of pharmaceutical substances are encouraged to use their corporate names together with INNs in marketing products. Thus the use of "[INN] [name of manufacturer]" in the promotion and marketing of products is not considered to offend the policy against acquisition of proprietary rights in INNs.

THE POLICIES UNDERLYING THE INN SYSTEM

93. The prohibition of the acquisition of proprietary rights in INNs is intended to implement three main policy objectives:[7]

(i) The establishment of INNs as unique, globally available, generic names which are free of proprietary rights and, thus, available for use by all for the purpose of identifying pharmaceutical substances. The public status of such names is intended to ensure that no confusion can arise about drugs or their pharmacological activity and properties in international dispensing practice and in communication and exchange of information among health professionals and scientists worldwide.

EVIDENCE OF REGISTRATIONS OF INNs IN THE DNS

94. The registration of an INN as a domain name creates a monopoly of association with that unique address in the domain concerned. While a domain name is not a legal title which confers upon its holder the right to exclude others from using it in other contexts, it is a unique address. As a result, anyone who registers an INN as a domain name occupies a unique space and acquires a singular advantage in associating the website that is accessed through the domain name with the INN. Without any external control over the veracity and reliability of the information relating to the INN, there are risks of confusion posed to health professionals and consumers.[8] As one commentator remarked: "Any use or registration of INNs which would lead the public to confusion as to a pharmaceutical substance or active pharmaceutical ingredient should be restricted."[9]

95. In response to the call for evidence of abusive registrations of domain names, WHO and the European Federation of Pharmaceutical Industries and Associations (EFPIA) have submitted studies of INNs that have been registered as domain names by individuals or pharmaceutical businesses. The studies, set out at Annex V, demonstrate that numerous INNs have already been appropriated in the DNS (e.g., sildenafenil.com, also known as 'viagra', also ampicillin.com, amoxicillin.com, tagamet.com, tetracycline.com, diclofenac.com, diazepam.com and lorazepam.com). These domain names are used for various purposes:s some merely provide information about the pharmaceutical substance, but the majority are proprietary sites registered and used to advertise or sell pharmaceuticals.[10] The WHO comments that such purposes are antithetical to the policy of the INN system, which reserves

ANALYSIS OF COMMENTS AND VIEWS EXPRESSED IN RESPONSE TO THE INTERIM REPORT

96. The Interim Report posed the question whether INNs should be protected in the DNS. A significant majority of commentators to the Second WIPO Process were in favor, or strongly in favor, of the protection of INNs in the DNS.[13] It was largely agreed, in principle, that the integrity of the INN system and the preservation of its underlying policies require that INNs be protected against registration as domain names. Some commentators, however, opposed such protection of INNs on the grounds of free speech, competition policy, health and consumer protection.[14] Certain argued that, for generic words such as INNs, the only fair means of apportionment may be first-come, first-served.[15] A minority of commentators referred to the insufficient evidence of abuse to conclude that INNs did not require protection at this stage.[16] It was also noted that abuse, and consequent risk to patient safety, is most critical in the bad faith use of the domain name and not its registration *per se*.[17] However, these comments do not recognize the damage which is occasioned to the integrity of the INN system, which depends upon consensus compliance, as a consequence of the registration of INNs as domain names. It was for these reasons that the majority of commentators to the Second WIPO Process favored the implementation of some means to protect INNs in the DNS.

97. The Interim Report put forward five issues that required consideration in giving expression to any protection of INNs in the DNS. Each issue is discussed below, with reference to the comments received.

system, the use of an INN is permitted together with the name of a manufacturer of the INN. This possibility was also favored as enabling consumers to locate INNs via their manufacturer.[19] Against this proposal, it was argued that allowing an exception only for the use of the INN together with the name of the manufacturer would enable large pharmaceutical companies to monopolize the flow of information and trade on those drugs.[20] In this respect, however, it is noted that there remain many alternate possibilities for exchange of information and sale of pharmaceuticals online and off, including through use of the INN on a web site itself, that are not precluded by restriction of the registration of an INN as a domain name, with or without the name of the manufacturer.

99. On the issue whether it should be permitted to register INNs together with additional words, such as 'info' or 'usergroup', comments were divided. Several commentators, emphasizing the need for free speech and public information, favored permitting registration of composite names for these purposes.[21] By contrast, WHO remains firmly opposed to permitting the registration of domain names derived from an INN, including the registration of an INN plus any other word, if such registration is misleading or otherwise in 'bad faith', defined by WHO to mean any registration not strictly limited to providing information relating to the pharmaceutical substance, but used for advertising or promotional purposes.[22] This view was supported by other commentators, who identified the potential risk to consumers of confusion caused by such registrations,[23] prompting the European Commission to comment that if composite names including INNs were permitted, then the website should be required to display a standard disclaimer, informing the public that the information on the site was not approved by WHO.[24]

names that are misleadingly similar to trademarks.[25] It should be noted that the policies underlying INNs and trademarks are different: in the case of INNs, the objective of the system is to ensure that the INN can be used freely by all, as well as to preserve a clear identification mechanism for the global health system, whereas in the case of trademarks, the objective of the system is to restrict the use in commerce of the trademark, on similar goods and services, to the single person or entity that owns the trademark. Nevertheless, misleadingly similar variations of either identifier can, in each case and in different ways, interfere with the underlying policy objectives and create confusion as to the nature of the identifier or its source.

101. As discussed above, and in relation to this issue, WHO was firmly opposed to a system of protection that would allow the registration of misleadingly similar, or otherwise bad faith, versions of INNs.[26] It is apparent that such registrations could be effected precisely in order to mislead and confuse consumers and users, or to circumvent any restriction on registration of exact INNs, in contravention of the policies underlying the INN system. A comment, from Mexico, noted that protection of INNs against misleadingly similar domain name registrations was consistent with their national legal system, which prohibits the registration as trademarks of words within a three-letter difference to an INN so as to avoid consumer confusion.[27]

102. A number of commentators opposed the restriction of domain names similar to INNs, noting that there was no evidence to date of deliberate attempts by domain name registrants to mislead consumers.[28] Most of the opposition to any wider protection (beyond protection of the exact INN as a domain name) stemmed from some commentators' apprehension at the

103. The majority of commentators were in favor of extending any protection to INNs in the DNS to cover all the different languages and scripts that are used in the DNS.[30] As noted by WHO, the Cumulative List of INNs is published in seven official languages: Arabic, Chinese, English, French, Latin, Russian and Spanish. A number of commentators remarked that, as the policy objectives of the INN system apply irrespective of language or script, protection should extend beyond such languages, particularly at a ccTLD level, so as to protect INNs in all languages.[31]

- ♣ Fourthly, whether protection should address existing registrations of INNs.

104. This question relates to the treatment of existing registrations of INNs in the event that protection for INNs is introduced in the DNS. The retrospective application of any protective mechanism for INNs raised concerns among some commentators, who questioned whether domain names acquired in good faith could simply be cancelled. Under United States law at least, it was argued that this could amount to a regulatory action requiring reimbursement in accordance with national law.[32] Other commentators noted that cancellation of a registration contract entered into in good faith could amount to a breach of contract that could create problems between registrars and registrants.[33]

105. On the other hand, numerous commentators were in favor of the application of protection for INNs against past, as well as future, domain name registrations.[34] One commentator supported such retrospectivity, provided that protection applied only against bad faith registrations of INNs in the DNS, and did not prejudice rights acquired in good faith.[35]

any grandfather clauses for existing registrations would undermine the integrity of the INN system.

- Fifthly, whether protection for INNs in the DNS should apply to all gTLDs and whether it could appropriately be adopted by the administrators of ccTLDs.

106. The final question relates to the coverage of protection for INNs within the top-level domains. The majority of commentators were in favor of protection of INNs in gTLDs, including those that are open and restricted, existing and future.[36] Although the risk of abusive registrations in restricted gTLDs (.int, .mil., .edu and .gov) is very low, the extension of protection to these domains does not seem to be problematic. With respect to new gTLDs, as noted in paragraph 28 to 31, above, ICANN has approved the introduction of seven new generic top-level domains, four of which (.biz, .info, .name and .pro) are "unsponsored," meaning that they are intended to operate under policies established by "the global Internet Community directly through the ICANN process," and three of which (.aero, .coop and .museum) are "sponsored," meaning that they are each intended to be "a specialized TLD that has a sponsoring organization representing the narrower community that is most affected by the TLD." In respect of the unsponsored new gTLDs, at least two of these will be opened to a large and essentially undifferentiated public. For these, any decision to protect INNs against registrations of domain names should clearly apply. For the other new gTLDs, it may well be that restrictions on persons who may register domain names within them may preclude the registration of INNs as domain names. In that case, there should not be any difficulty in the acceptance by such gTLDs of the extension to them of any decision to protect INNs against

as British Approved Names (BAN), Dénominations communes françaises (DCF), Japanese Adopted Names (JAN) and United States Accepted Names (USAN). Such national name systems are, for the most part, harmonized with the INN Cumulative List. Nevertheless, it is recommended that, in considering the application of the protection of INNs, the ccTLD administrator do so in consultation with the national health authorities in order to ensure appropriate implementation of the policy.

ANALYSIS OF VIEWS EXPRESSED ON MEANS OF IMPLEMENTING PROTECTION

108. The Interim Report proposed for comment three alternate means to give expression to the protection of INNs within the DNS:

(i) an exclusion or blocking mechanism;
(ii) a modified Uniform Dispute Resolution Procedure (UDRP); and
(iii) a notice and take-down procedure.

Exclusion Mechanism

109. The Interim Report proposed consideration of an exclusion mechanism to cancel registrations in all open gTLDs of domain names that exactly matched the INNs on the WHO Cumulative List, and to block any future registrations of such INNs. The exclusion mechanism gained the support of numerous commentators to the Second WIPO Process,

exclusion mechanism could operate through reference to WHO's existing MEDNET service – a publicly available, free, searchable database that allows access and queries to the INN database.[42] The MEDNET database lists INNs with recommended, proposed and alternative medicinal names that, it was suggested, could be utilized by the domain name registration authorities administering an exclusion mechanism.[43]

111. However, despite a general opinion in favor of protection of INNs, the concept of an exclusion met with significant opposition from numerous commentators, suggesting that it could not feasibly be implemented with the consensus of the Internet community. An exclusion mechanism was criticized by one commentator as over-inclusive, because it cancels names that do not threaten public health and safety, and under-inclusive because it does not purge the Web of misinformation about pharmaceuticals.[44] The blunt method of an exclusion mechanism was also criticized as being inconsistent with the policy underlying generic drug names, in that it would result in limitation of free speech and open discussion concerning INNs both in the physical world and online. It was also noted that cancellation of existing domain names through an exclusion process would result in loss without due process for domain name holders.[45] These views reflect a widely prevalent attitude among the Internet community against the implementation of blocking mechanisms within the DNS with respect to any identifiers. Commentators urged WIPO to recommend an alternate means of expressing the protection of INNs in the DNS.

Modified UDRP

commentators who supported the UDRP option for protection of INNs primarily supported the administrative nature of the process, as opposed to an exclusion mechanism. Others, while supporting the principle of protection for INNs, opposed both the UDRP and the exclusion mechanism: "While INNs should be protected against commercial use by one party, this should be effected through some means other than the UDRP, whether it be by treaty process or direct intervention on the part of ICANN."[50]

Notice and Take-down Procedure

113. As noted above, the majority of comments to the Second WIPO Process were strongly in favor of some means to protect INNs in the DNS. Commentators favored a system that would efficiently prevent INNs from being registered as domain names in the gTLDs, if those registrations would have the effect of undermining the INN system and potentially confusing users and health professionals. Any mechanism for protection should not overburden domain name registration authorities, nor require an international intergovernmental organization (WHO) to be unduly subject to a costly dispute-resolution procedure to protect such identifiers in the public interest.

114. Under the proposed notice and take-down procedure, it was suggested that upon notification to WIPO by any interested party, (including, *inter alia*, individuals, consumer groups, manufacturers, medical associations, international organizations and governments), WIPO would verify that the domain name registration matches an entry on the Cumulative List of INNs in any official language, and notify ICANN of this fact. ICANN would then

RECOMMENDATION

116. A clear majority of commentators were in favor of the protection of INNs in the DNS. There were, however, differing views about the means of implementing that protection and, especially, about the extent of protection.

117. In these circumstances, we consider it to be appropriate to recommend the implementation, at this stage, of a very simple mechanism of protection that requires no judgements of similarity or good or bad faith use, but mere clerical verification. We recommend that there should be a prohibition against the registration of exact INNs in any of the official languages of the Cumulative List in the gTLDs, and that any exact INN registered in violation of this prohibition should be subject to cancellation, upon notification by any interested party to WIPO, verification by WIPO, in conjunction with WHO, of the exact similarity of the domain name registration and the INN, notice to ICANN by WIPO, and certification by ICANN to the registrar concerned (with notification to the domain name holder). Consideration could be given to allowing a reasonable transition period for the holder of the registration that is subject to cancellation to migrate to another domain name registration.

118. The world health community, through consensus among relevant public authorities and private circles, have considered it to be appropriate to establish the INN system for the protection of public safety and the promotion of a reliable system of identifiers that can be

119. It is accordingly recommended that:

(i) ICANN's agreements with registries for gTLDs should require the prohibition of the registration of exact INNs in any of the official languages of the Cumulative List as domain names;

(ii) a similar prohibition should be reflected in registration agreements for domain names in the gTLDs;

(iii) any interested party should have the right to serve notice that a domain name registration in a gTLD is identical to an INN and that, upon verification of the exact similarity between the domain name registration and the corresponding INN by WIPO, in conjunction with WHO, notice to ICANN, and certification by ICANN to the registrar concerned, the domain name registration should be cancelled.

121. It is further recommended that administrators of ccTLDs adopt a corresponding policy, in conjunction with their national health authorities.

122. In making the abovementioned recommendations, it is pointed out that the INN system is not supported by an international treaty, but by a resolution of the competent treaty organ of the World Health Organization and by consensus between public authorities and private industry. The effect of our recommendation is, therefore, to encourage ICANN to join the consensus established by the competent public and private authorities whose concern it is to promote public health and safety.

123. We do not recommend, at this stage, any further protection for INNs in the DNS, and, in particular, do not recommend an administrative dispute-resolution procedure in respect of misleading variations of INNs, for the following reasons:

(i) We believe that it is appropriate to commence with the certain and to review the application of the policy in the light of experience.

(ii) There is no convincing evidence of the damaging misuse of INNs through the registration of misleading variations of INNs as domain names. Since the existing policy of the INN system allows the use of the name of a manufacturer with an INN, difficult judgements might be involved in determining what is and what is not misleading in variations of INNs. Reliance upon the content of a web site addressed through a domain name may similarly involve difficult judgements, since content changes constantly.

ICANN of the value of the naming system that has already been established by competent authorities in the health sector. Insofar as the Domain Name Supporting Organization (DNSO) has a responsibility of advising the Board of ICANN "with respect to policy issues relating to the Domain Name System" (see paragraph 15, above), those policy issues presumably are circumscribed by the definition of functions of ICANN set out in its Articles of Incorporation (see paragraph 75, above), which relate to the technical functioning and stability of the DNS. The Names Council of the DNSO has no constituency representing health interests.

124. In recommending that no further measures than the prohibition against the registration of exact INNs as domain names be taken at this stage, the possibility is left open to re-visit the question of such further measures at a later stage in the light of the experience gained with respect to the recommendation made (assuming that it is adopted) and of further evidence to suggest that the integrity of the INN system is damaged through the registration of misleading variations of INNs.

---

[1] Google search engine lists more than 46 million health-related sites, and Yahoo! Shopping offers more than 50,000 listings for sales and purchase of health products. The proposal submitted by the World Health Organization (WHO) for a .health gTLD noted the existence of more than 10,000 health-related sites.

system and applications are refused on the basis of descriptiveness, if a mark is identical or closely similar with a recommended INN.

[42] See *http://mednet.who.int.*

[43] Currently, the MEDNET is available only to WHO 'INN partners', with authorization given through an automated administration process, that ensures privacy using password and authentication systems. However, it is envisaged that different layers of access will be provided in future to authorized users.

[44] See Comment of United States of America, Office of Advocacy, U.S. Small Business Administration (RFC-3 – June 15, 2001). The opposition to an exclusion mechanism was confirmed by numerous other commentators: see Comment of Japan Network Information Centre (JPNIC) (RFC-3 – June 8, 2001), Comment of Pharma Consulting International (RFC-3 – June 14, 2001), Comment of Luis de Barros (RFC-3- June 14, 2001), Comment of Chris Brand (RFC-3 – April 16, 2001), Comment of Michael Froomkin (RFC-3 – June 4, 2001), Comment of Jason Presley (RFC-3 – April 18, 2001), Comment of George Reese (RFC-3 – April 15, 2001).

[45] It was noted that scientific, regulatory, and consumer communities use the generic names to discuss pharmaceuticals' benefits, side effects, testing and regulatory review and progress. (e.g., consumers understand that NutraSweet® is a trademark but 'aspartame' is open for all use). See Comment of Association for Computing Machinery's Internet Governance Project, Electronic Privacy Information Center (RFC-3 – June 15, 2001).

[46] See Comment of International Trademark Association (INTA) (RFC-3 – May 24, 2001), Comment of Nominet UK (RFC-3 – June 14, 2001), Comment of Pharma Consulting International (RFC-3 – June 14, 2001). See also Comment of Fédération internationale des conseils en propriété industrielle (FICPI) (RFC-2 – December 29, 2000), Comment of United States Council for International Business (USCIB) (RFC-2 – December 29, 2000), Comment of Verizon Communications (RFC-2 – December 26, 2000).

[47] The case of *Boehringer Ingelheim Corporation* v. *Kumar Bhatt*, involved the domain names micardis.com, telmisartan.com and meloxicam.com, of which the first reflects a registered trademark of the Complainant pharmaceutical company, and the latter are recommended INNs used by the Complainant to market pharmaceutical products in which they are active ingredients. The Administrative Panel transferred all three names to the Complainant on the basis of its status as trademark owner, as well as patentee and exclusive licensee of products marketed under the INNs. The Respondent, a physician and Internet consultant, argued that his registration of the names was to assist patients and the general public by providing centralized reference sites for medical information, and that 'telmisartan' and 'meloxicam' were generic

intergovernmental organizations. They provide that such entities shall have the capacity to, *inter alia*, institute legal proceedings (Article I and Article II respectively) but shall enjoy immunity from every form of legal process, except insofar as the organization expressly waives such immunity (Article II and Article III respectively).

[50] See Comment of Fédération internationale des conseils en propriété industrielle (FICPI) (RFC-3 – June 14, 2001).

[51] See Comment of World Health Organization (WHO) (RFC-3 – June 7, 2001). An alternative remedy that was favored by some commentators was the transfer of any domain name replicating an INN to WHO, while costs of registration maintenance could be minimized by agreement between the registrars and ICANN. One commentator also suggested that WHO could maintain informational sites at the INN domains; see Comment of Christian Mogensen (RFC-3 – April 16, 2001).

4. NAMES OF INTERNATIONAL INTERGOVERNMENTAL ORGANIZATIONS

125. One of the consequences of increased personal mobility, the networked society, open trading and financial systems and the power of technology has been that issues requiring public sector intervention are increasingly international in character. As a result, international intergovernmental organizations (IGOs) – such as the United Nations Organization (UNO), the Food and Agricultural Organization (FAO), the International Labour Organization (ILO), the International Monetary Fund (IMF), the International Telecommunications Union (ITU), the World Health Organization (WHO), the World Meteorological Organization (WMO) and the World Trade Organization (WTO) – are called upon to play a progressively more important role in multilateral affairs among States and their citizens. The ability of these IGOs to fulfil their respective missions depends on effective communication and dissemination of information about their activities and services.

126. The Internet provides a powerful means for IGOs to present information about and encourage participation in their programs. At the same time, however, the Internet poses a risk that individuals and entities might attempt to capitalize, through unauthorized association, imitation, deception or fraudulent activity, on the standing of these organizations. If an IGO's name or acronym is used on the Internet by unauthorized parties, it may lose its distinctive power of identification, while the public, by virtue of the false associations, may be misled as to the information or products or services offered by the unauthorized party.

127. The Request addressed to WIPO to initiate the Second WIPO Process sought

EXISTING INTERNATIONAL PROTECTION

128. The existing international legal framework contains clearly expressed and widely accepted (through applicable constitutional processes) principles prohibiting the unauthorized commercial use, as trademarks, of the names and acronyms[1] of IGOs.

129. Article 6*ter* of the Paris Convention for the Protection of Industrial Property (the Paris Convention), to which 162 States are party, provides, *inter alia*:

> "(1)(a) The countries of the Union agree to refuse or to invalidate the registration, and to prohibit by appropriate measures the use, without authorization by the competent authorities, either as trademarks or as elements of trademarks, of armorial bearings, flags, and other State emblems, of the countries of the Union, official signs and hallmarks indicating control and warranty adopted by them, and any imitation from a heraldic point of view.
>
> "(b) The provisions of subparagraph (a), above, shall apply equally to . . . abbreviations, and names, of international intergovernmental organizations of which one or more countries of the Union are members, with the exception of . . . abbreviations, and names, that are already the subject of international agreements in force, intended to ensure their protection."[2]

130. Article 6*ter* was introduced into the Paris Convention by the Revision Conference of

131. The Paris Convention, (Article 6*ter* (1)(b)), accordingly prohibits the registration and use of, *inter alia*, the names or abbreviations of IGOs as trademarks or elements of trademarks. The Trademark Law Treaty of 1994 (Article 16) extends the same protection against registration and use with respect to service marks.[4]

132. The entitlement of an IGO to receive protection under these treaties is not automatic. Any name or abbreviation for which an IGO wishes to obtain protection must be communicated to the International Bureau (Secretariat) of WIPO, which will then transmit the communication to the States party to the Paris Convention.[5] The protection available to IGOs under the Paris Convention thus depends entirely upon their submission of a request for communication to WIPO.[6] WIPO maintains a notification list and performs the functions of determining the admissibility of such requests for communication under Article 6*ter* and of forwarding the admissible communications to the States party to the Paris Convention.

133. To date, a total of 91 IGOs have requested protection under Article 6*ter*. Each organization has not requested protection of all of the possible signs or emblems enumerated under Article 6*ter* (e.g., armorial bearings or flags). As a general rule, however, most IGOs that have requested protection have notified their name and abbreviation (in several languages), as well as their principal emblem.[7]

134. In 1992, the Paris Union Assembly (the competent treaty organ of the Paris Convention) adopted a set of "Guidelines for the Interpretation of Article 6*ter*(1)(b) and (3)(b) of the Paris Convention"[8] designed to clarify which IGOs may qualify for protection under the Paris

135. The Guidelines define a "permanent entity" as one that has been established "for an indefinite period of time."[9] The "specified aims" and "rights and obligations" of such a permanent entity are defined by reference, respectively, to subject matters, rights and obligations "which are clearly defined in [the permanent entity's] enabling statutes or charter or in the resolutions or decisions by which it has been established."[10]

136. The Paris Convention foresees that the use of IGOs' insignia may be authorized,[11] and permits States the choice whether to apply a further non-mandatory exception to its prohibitions against trademark registration and use, specifically in respect of the names, abbreviations and other emblems of IGOs. States are not required to apply such prohibitions when the registration or use of the trademark in question:

> (i) "is not of such a nature as to suggest to the public that a connection exists between the organization concerned and the . . . abbreviations, and names," or
>
> (ii) "is probably not of such a nature as to mislead the public as to the existence of a connection between the user and the organization."[12]

Many, but not all, States party to the Convention have enacted the exception in national legislation and, to this extent, there is divergence at the national level in the scope of protection granted to IGOs.[13]

137. The Agreement on Trade-Related Aspects of Intellectual Property Rights

> "The procedures relating to communication of emblems and transmittal of objections under the TRIPS Agreement shall be administered by the International Bureau [of WIPO] in accordance with the procedures applicable under Article 6*ter* of the Paris Convention (1967)."[15]

SCOPE OF EXISTING INTERNATIONAL PROTECTION

138. The scope of existing international protection established by the treaty provisions discussed above may be summarized as follows:

(i) The *registration* and *use*, as trademarks, service marks or elements thereof, of the names and abbreviations of IGOs is prohibited, except where such registration and use is authorized or falls within a permitted exception. Contracting Parties agree to refuse or invalidate any such registration of the names or acronyms of IGOs, and to prohibit their use by appropriate measures.[16] The clear purpose is to ensure that these names and abbreviations remain free of the private proprietary rights. These provisions reflect the public status of IGOs, and seek to avoid any potential for confusion or deception that would interfere with that public status.

(ii) The protection afforded by the treaties is directed against the registration and use of the names and abbreviations of IGOs as *trademarks* or *service marks*. It follows that, to the extent that a domain is the same as the name or acronym of an IGO and *is used as a* acronyms notified accordingly. As noted above, only 91 such organizations received such protection since 1958, when this system was established.

(iv) The protection granted to IGOs under the international treaties is subject to exception, when the registration or use of an IGO's name or abbreviation as a trademark or service mark is not of such a nature to suggest to the public that a connection exists with the organization concerned, or is "probably not of such a nature as to mislead the public as to the existence of a connection between the user and the organization."[17] By analogy, the registration and use by third parties of the names or acronyms of IGOs as domain names might, in countries that recognize this exception, be considered permissible, if the registration and use of the domain name is unlikely to suggest to, or to mislead, the public that a connection with the IGO exists. One commentator noted, for example, that existing domain name registrants should be given the opportunity to defend their registration through the UDRP, on the same grounds set forth in Article 6*ter* (1)(c).[18]

THE *.INT* TOP-LEVEL DOMAIN

139. The .int - for "international" - top-level domain was among the seven initial generic domains established by the Internet Assigned Numbers Authority (IANA), and its use remains restricted to "organizations established by international treaties, or international databases."[19] IANA states that .int is reserved for "organizations established by international treaties between or among national governments" and, in particular, that:

140. It is notable that, from the beginning, special status was accorded within the DNS to international organizations. The restricted .int gTLD serves the dual purposes of (i) designating a space in the DNS for the registration of IGOs' chosen identifiers, and (ii) providing a measure of protection through registration requirements which restrict that space only to those international organizations that qualify (i.e., those that are established by treaty).

141. The .int top-level domain provides some measure of assistance to IGOs within the DNS. Because of the restricted nature of this top-level domain, no individuals, companies or other entities can obtain a domain name registration in .int, let alone register the name or abbreviation of an IGO in that domain. As long as the registration procedures of .int are properly enforced, the .int top-level domain provides a space where Internet users can have confidence that registrations in the domain are genuinely connected with the corresponding organizations. This restricted domain for IGOs has the added advantage of having already been established, and the assistance it offers to IGOs in protecting the authenticity of their virtual identities cannot interfere with any existing rights or interests of domain name registrants in other TLDs. For these reasons, the question was raised in the Second WIPO Process whether adequate protection may already exist in the DNS for international organizations by virtue of the restricted .int gTLD.[22]

142. Commentators throughout the Second WIPO Process revealed a lack of confidence that the existence of the .int domain, of itself, can provide sufficient protection to IGOs against the abuse of their names and acronyms in the DNS, and prevent any consequent deception of

such as .org.[24] The potential for abuse in these open gTLDs is illustrated by the fact that the United Nations Organization has registered 'un.org', whereas 'unitednations.org' has been registered by a private California-based company. As an alternative solution, the World Health Organization has its official site at 'who.int', and users visiting 'who.org' are automatically forwarded to the .int site. It is clear that many users are unaware of the existence or purpose of the .int domain, and considerable promotional work is needed to enhance its recognition. Nevertheless, most commentators strongly supported the enhancement of the visibility and profile of .int, and favored its use consistently and universally by all IGOs.[25]

144. Critically, the protection provided to the names and acronyms of IGOs in the .int top-level domain has a serious deficiency. While restrictions apply to it, they do not apply to other gTLDs. The lack of restrictions in these other domains undermines the efficacy of .int.[26] It is the risk of predatory and parasitical practices in these domains (as well as in the ccTLDs), which raises most concern for IGOs and Internet users in general.[27] The .int domain space assists in determining when a domain name registration is legitimate, but it does not assist in determining when other registrations in the broader gTLD space are fraudulent. For this reason, at this stage, it is recommended that reliance alone upon the .int domain is insufficient. The question thus remains, in the context of the global DNS, how the names and abbreviations of IGOs can most effectively be protected.

ANALYSIS OF COMMENTS AND VIEWS EXPRESSED IN RESPONSE TO THE INTERIM REPORT

including the United Nations (UN), World Health Organization (WHO), World Trade Organization (WTO), Organization for the Prohibition of Chemical Weapons (OPCW) and International Labour Office (ILO), each voiced an unequivocal need for protection in the DNS, and gave evidence of having been "plagued by such infringing or abusive registrations."[29] The IGOs noted that such protection would benefit not just the organizations themselves, but advance the global public interest by protecting Internet users and consumers from deceptive conduct.[30] Some IGOs stated that their names and abbreviations should not be available for registration as domain names by unauthorized third parties, even if the domain name registration is not in bad faith, as such registrations can nevertheless be confusing and misleading to the public, raising questions of authenticity and accuracy as to the source of information provided, and giving rise to the perception that an IGO endorses or approves of the information, service or product being offered through an unrelated web site.[31]

147. The organizations which should qualify for protection was also the subject of comments. Many commentators suggested, in this regard, that at least the names or acronyms of those IGOs that have followed the treaty procedures under the Paris Convention and TRIPS Agreement - and notified accordingly - should be considered for protection in the DNS.[32] These commentators expressed the view that the scope of legal protection which already exists in the physical world for the names and abbreviations of IGOs should be reflected in the DNS. The United Nations (UN) put forward the view that protection should also be extended to the names and acronyms of subsidiary bodies of the UN organizations, such as peacekeeping missions, that are an integral and significant part of the Organization, although they do not qualify as 'permanent entities' in accordance with the Guidelines adopted for the

abuse in the registration of their names or acronyms that had resulted in deception or confusion to the public, and that required constant and resource-wasting vigilance.[35] These organizations expressed concern that unofficial web sites using a domain name that is identical or similar to their name or acronym may contain misleading, inaccurate or prejudicial information about the IGO, while leading the viewer to believe that he or she is visiting the organization's official web site. The UN stated that, in dealing with such instances of abusive registrations, it has been required to constantly monitor the DNS and confront offending registrants one by one, committing substantial time and resources from various sectors of the Organization. The UN described the added complication in resolving these cases through available legal or administrative processes, because these procedures would inappropriately require the waiver of the privileges and immunities that are accorded to IGOs under international law.[36] In this respect, a number of commentators noted the importance of taking into account the customary immunity from legal process and execution that is accorded to IGOs, when implementing any system of protection for identifiers in the DNS.[37]

149. A small minority of commentators felt that the existing protection granted to IGOs through the UDRP procedures, insofar as their names and acronyms may function as trademarks, is adequate.[38] It is notable, however, that no intergovernmental organization has yet filed a claim under the UDRP in respect of its name and acronym, nor can such a procedure accommodate the organizations' privileges and immunities.

150. With regard to the scope of protection to be granted to the names and acronyms of

ANALYSIS OF VIEWS EXPRESSED ON MEANS OF IMPLEMENTING PROTECTION

151. Commentators were most concerned with discussion of the means of implementation of protection. The Interim Report put forward three options in this regard:

(i) Maintenance of the status quo, and reliance on the existing top-level domain, .int, reserved for treaty organizations;
(ii) Establishment of an exclusion mechanism in some or all of the gTLDs for the names only, or for the names and acronyms, of IGOs; and
(iii) Modification of the UDRP to extend to the names and acronyms of IGOs.

In relation to the first option, as discussed above, commentators did not favor maintaining the status quo, as the .int domain, while useful, is not considered sufficient to provide the necessary protection for IGOs in the DNS, nor to reflect the existing protection accorded by international law. Comments were divided on the remaining two options.

Exclusion Mechanism

152. The exclusion mechanism has proven a contentious option with respect to the protection of any identifier in the DNS, including the names and acronyms of IGOs. As discussed in relation to the protection of INNs, the Internet community has strong reservations about the efficacy and desirability of blocking or exclusion mechanisms, and the overreaching effect they may have on users' rights. Some commentators were opposed to any protection by way

Nations Organization, but is also 'one' in Italian, a Fiat car model and a Swiss card game. 'ICC' is both the International Chamber of Commerce and the International Computing Centre. The 'WHO' refers to the World Health Organization, a rock group, and the science fiction character Dr. Who. WIPO itself is registered as a United States trademark in respect of tissues for personal and industrial use.[44] Across the differentiated domain name space, these different entities may coexist: 'SBA' is shared by the United States Small Business Association at 'sba.gov', the Southern Bakers Association at 'sba.org' and the American law firm Smith, Bucklin and Associates at 'sba.com'.[45] There exists a German medical company at 'ilo.com', as well as a Canadian Internet company at 'ilos.net'.[46] An exclusion mechanism that automatically blocked both the names and acronyms of IGOs could jeopardize the existing rights of numerous other users. In this context, it should be noted that the international law protecting the names and acronyms of IGOs is aimed at preventing the registration or use of such identifiers as trademarks, especially in any circumstance where such use could mislead the public as to the source or connection of the user with the IGO. An analogy could usefully be drawn to the DNS, where the objective is not necessarily to deny all uses of acronyms that correspond to IGOs, but to ensure the prohibition of any use that is likely to mislead or otherwise confuse the public.

154. Despite the apparent shortcomings of an exclusion mechanism, many commentators, including IGOs, were in favor of this form of protection, as seemingly the most effective way to recognize the existing legal protection for IGOs in the DNS, without requiring these entities to submit to inappropriate dispute-resolution proceedings.[47] Some commented that such an exclusion should apply to all gTLDs, while others suggested it should be considered

or in addition to an exclusion mechanism.[51] Extending the UDRP to protect the identifiers of IGOs would not require the creation of new law, but merely the reflection in the DNS of existing international legal principles for their protection. The key benefit perceived in the UDRP is that it can be used to target only those names and acronyms of IGOs that are used in bad faith, so as to mislead or confuse the public.[52] Even those commentators in favor of protection for IGOs' names and acronyms noted that, in considering any new measures of protection, adequate consideration needed to be given to the rights of existing, legitimate domain name registrants.[53] A minority of comments were in favor of broader protection for IGOs, such that any unauthorized registration and use of the name or acronym of an IGO should be presumed to be misleading and in bad faith.[54] One commentator proposed a detailed definition of 'bad faith', specifying that the registration of the name or acronym, in whole or in part, must have been unauthorized and intentional, and must be (i) likely to create an impression that the domain name is that of the IGO concerned, or (ii) in relation to a site that contains material or information prejudicial to the interests of the IGO.[55]

156. In opposition to any modification of the UDRP in this context, some commentators stated that the UDRP should apply only to the extent that such names or acronyms of IGOs function as trademarks or service marks.[56] Others opposed any broadening in the scope of disputes that could be decided under the UDRP, arguing that the UDRP is a relatively new process that should be allowed to develop and stabilize before addressing new categories of disputes.[57] Still other commentators raised free speech concerns and contended that the names or acronyms of IGOs should be allowed to be registered as domain names if there is no confusing similarity or misleading content on the site.[58] Finally, there was expressed a

consider submission to the UDRP as an inappropriate compromise of their privileges and immunities.[60] In fact, the UN has stated that it will not submit to a dispute resolution process such as the UDRP, which would subject the Organization to the jurisdiction of national courts.[61] It is recalled, in this respect, that the UDRP as it currently applies to trademarks contains a mutual jurisdiction clause that requires complainants to submit to the compulsory jurisdiction of a designated court of law for the purpose of any challenge to the decision of the administrative decision-maker.[62] Any administrative process to which the IGOs could agree would need to omit such a reference.

RECOMMENDATION

158. The clear majority of commentators favors some form of protection of the names and acronyms of IGOs within the DNS.

159. There is also abundant evidence that abuses of the names and acronyms of IGOs through domain name registrations exist that constitute harmful practices.

160. The protection of the *names* of IGOs raises less complicated and more straightforward questions than the protection of the *acronyms* of IGOs, where necessarily there is far greater scope for the concurrent, good faith use of the same letters as the acronyms of some IGOs in various different contexts and in various different naming systems.

numerous public policies established by the international community and conducive to undermining the credibility and reliability of the DNS.

162. The existing situation with respect to the names and acronyms of IGOs in the DNS is unbalanced. Any person, without any qualification whatsoever, may register the name or acronym of an IGO in an unrestricted gTLD. Furthermore, they can do so immediately and at an insignificant cost. In contrast, the potential damage that can be inflicted with the use of such a registration is of a different order. The pursuit of protection against such harm not only is distractful to the central missions of IGOs and wasteful of their limited resources, but also may involve questionably unnecessary deviation from the standard principle of immunity of IGOs from jurisdiction.

163. We recommend that the current unsatisfactory situation be redressed through balanced action on the part of the international community. The choices of instruments for implementing such action are limited and consist principally of the following:

(i) A system of notification by any interested party of the registration as a domain name of the name or acronym of an IGO benefiting from protection under Article 6*ter* of the Paris Convention, the verification of the exact similarity between the name or acronym of the IGO and the domain name by WIPO (as custodian of the authorized list of notifications under Article 6*ter* of the Paris Convention), notification to ICANN or, directly, to the registrar concerned, and the cancellation of the domain name registration. Such a procedure would, however, appear to be unsatisfactory because (a) its automacity may result in the cancellation

(iii) A modification of the existing UDRP, specifically designed for the bad faith misuse of the names or acronyms of IGOs through domain name registrations. This option, however, is unacceptable because (a) insofar as ICANN, acting on the basis of recommendations from the Domain Name Supporting Organization (DNSO) or the DNSO Names Council, might be considered to be responsible for the introduction of modifications to the UDRP, it and its subsidiary bodies do not have any constituency pertinent to international intergovernmental organizations; and (b) the UDRP contains within its design an unacceptable deviation from the established principle of immunity of IGOs from the jurisdiction of national courts.

(iv) An administrative procedure, similar to the UDRP, but independently developed and managed within the framework of international administrative tribunals. Such an administrative procedure could be available to any IGO to file a complaint that a domain name registration is the same as or misleadingly similar to the name or acronym of the IGO concerned, has been registered in bad faith without legal justification, and is likely to mislead users into believing that there is an association between the holder of the domain name registration and the IGO in question. Like the UDRP, the remedies that might be awarded by a panel under the special administrative procedure should be limited to cancellation or transfer of the domain name registration and should be implemented through the ICANN system (or ccTLD administrators) within the DNS.

164. It is recommended that the names and acronyms of IGOs benefiting from protection *qualifying IGOs to file a complaint that a domain name registration is the same as, or misleadingly similar to, the name or acronym of the IGO, that the registration has been made without legal justification, and that the registration is likely to mislead users into believing that there is an association between the holder of the domain name registration and the IGO in question.*

166. It is recommended that remedies under the special administrative procedure be limited to the cancellation or transfer of the domain name registration and that the results of the procedure be enforced within the DNS through the ICANN system.

167. It is recommended that the special administrative procedure should apply to domain name registrations in all gTLDs and in all ccTLDs. It is recognized that the enforcement of the results of such a procedure within the ccTLDs would require the

the form of a resolution of a competent treaty organ, a memorandum of understanding duly accepted by national authorities or a treaty.

---

[1] The terms “abbreviation” and “acronym” are used interchangeably in this Chapter. An acronym is defined as “a word formed from the initial letters of other words,” such as “WIPO” for the World Intellectual Property Organization. See Concise Oxford Dictionary (10th ed. 1999). An “abbreviation,” the term used in Article 6*ter* of the Paris Convention, is a more inclusive term, which can refer to an acronym or any other means of abridging a word or series of words, such as “int” for international.

[2] The protection under Article 6*ter* does not extend to names, abbreviations and other emblems of intergovernmental organizations that are already the subject of international agreements intended to ensure their protection, such as the Geneva Convention (1949) for the amelioration of the condition of the wounded and sick in armed forces, Article 44 of which protects the emblems of the Red Cross, the words “Red Cross” or “Geneva Cross, and analogous emblems.” The object of this exception is to avoid possible overlap with provisions in other conventions that regulate on this subject. See Stephen P. Ladas, *Patents, Trademarks, and Related Rights: National and International Protection*, vol. II, at 1244 (1975); Prof. J.H.C. Bodenhausen, *Guide to the Application of the Paris Convention for the Protection of Industrial Property*, Article 6*ter*, paragraphs (1) and (2), at 97-98 (BIRPI, 1969).

[3] See Stephen P. Ladas, *Patents, Trademarks, and Related Rights: National and International Protection*, vol. II, at 1244 (1975).

[4] Article 16 of the Trademark Law Treaty (TLT) provides: “Any contracting party shall register service marks and apply to such marks the provisions of the Paris Convention which concern trademarks.”

[5] Article 6*ter* (3)(b). Each State is obligated under Article 6*ter* (1)(3)(a) to “make available to the public the lists so communicated” by WIPO. Any State receiving the communication of a name, emblem or other official sign of an IGO may, within a period of 12 months from the receipt of that communication, transmit its objections, if any, through the intermediary of the International Bureau of WIPO, to the IGO at the request of which the communication was made. (Article 6*ter* (4)).

[6] Article 6*ter* (3)(b) provides:

> “The provisions of subparagraph (b) of paragraph (1) of this Article *shall apply only* to such … abbreviations, and names of international intergovernmental organizations as the latter have communicated to the countries of the Union through the intermediary of the International

---

[Endnote continued from previous page]

[11] By implication, Article 6*ter* (1)(a) refers to "use, without authorization by the competent authorities."

[12] Article 6*ter* (1)(b).

[13] The European Patent Office noted that the national legal provisions enacting Article 6*ter* of the Paris Convention "are sometimes highly divergent in the scope of protection." See Comment of European Patent Office (EPO) (RFC-2 – December 28, 2000).

[14] TRIPS Agreement, Article 63 (2).

[15] WIPO-WTO Agreement, Article 3.

[16] Paris Convention, Article 6*ter* (1)(a).

[17] Paris Convention, Article 6*ter* (1)(c).

[18] See Comment of Asociación Interamericana de la Propiedad Industrial (ASIPI) (RFC-2 - December 26, 2000).

[19] See J. Postel, Request for Comments (RFC) 1591, Network Working Group (March 1994). The six other generic domains are .com, .net, .org, which are unrestricted domains, and .edu, .gov and .mil, which restrict registrations to certain entities, as with .int.

[20] See "The .int Domain: Current Registration Policies," at *http//www.iana.org/int-dom/int.htm* (page last updated April 16, 2000).

[21] The IANA site further indicates that "discussions are underway with a number of organizations regarding the future of the .int domain, including a plan of the International Telecommunications Union (ITU) to assume management of the .int domain. *Id.*, referencing the ITU's plan to assume management of the .int domain, at *http://www.itu.int/net/int.*

5. PERSONAL NAMES

169. Identity is a fundamental attribute of "the inherent dignity of the human person."[1] Many things are important in constituting a person's identity. The personal name is foremost amongst them and assists in creating distinctiveness or individuality, as well as serves as a succinct symbol pregnant with the associations that others have with that person. The importance of personal names to dignity is evident from the dark days of totalitarianism and nazism, when names were only numbers.

170. It has been often pointed out that the power and ubiquity of the technologies of communication and telecommunication have created greater opportunity for invasion of personal space and the use of attributes of personal identity in ways which are not approved by the person concerned. At the same time, these technologies have, in enhancing the visibility of public figures and leading business, sports and entertainment personalities, established the celebrity as a mundane feature of society.

171. The personal name is a difficult subject to treat. There is considerable diversity around the world in the way in which it is formulated and presented. These formulations and presentations (for example, which name, family or given, comes first, or whether the name consists of these two elements at all) are usually the result of the historical and cultural traditions of particular societies. Many sensitivities, including religious, political, historical, cultural and psychological, are touched by the subject of personal names.

173. Because of the diversity of interests affected by the treatment of personal names, the legal principles and policies that can be deployed to protect personal names are similarly diverse and vary, as might be expected, from country to country. These legal principles and policies include the right to publicity or the right to control the commercial use of one's identity, recognized in many States of the United States of America; the tort of unfair competition; the tort of passing-off (conceptually treated, in many cases, as part of the law of unfair competition), recognized generally in common-law countries; and the right to privacy.

174. It has not been possible to review in detail all the legal principles and policies that can be used for the protection of personal names in all of the countries of the world. Nevertheless, it is possible to identify two main interests that underlie particular approaches adopted in a number of countries to the protection of personal names against misuse:

(i) A commonly expressed public policy for the protection of personal names against misuse is economic. This economic policy, in turn, has two bases. The first of those bases is the prevention of unjust enrichment through the unauthorized commercial use of another's identity. As stated by Kalven and quoted by the Supreme Court of the United States of America, "The rationale for [protecting the right of publicity] is the straight-forward one of preventing unjust enrichment by the theft of good will. No social purpose is served by having the defendant get free some aspect of the plaintiff that would have market value and for which he would normally pay."[2] The second basis of the economic interest underlying the protection of personal names against misuse is the prevention of deception and confusion on the part of consumers.

an injunction to restrain the continuation of this assumption, and can in addition claim damages if the act is proved to be wrongful, and moral compensation if this is justified by the nature of the wrong suffered." And in Spain, Section 7.6 of the Law of May 5, 1982,[3] provides that the unpermitted use of one's name, voice or likeness for *advertising or trade* purposes is an invasion of one's *personal* life.

175. The notoriety that attaches to certain persons can, in some countries, establish a basis for protection which is not available to ordinary persons.[4] In other instances, notoriety can be a factor which can influence the extent of damages granted as a result of the wrongful use of the person's name, rather than a ground for establishing a separate form of protection from that available to non-famous persons.

176. In commerce, the protection that is recognized for personal names and other attributes of the personality is usually exploited through the vehicle of contract. Thus, by permitting, under contract (or license), another to use a person's name in association with products or services, the personal name becomes an asset.

177. The status of the personal name as a potential asset may be secured through the registration of a trademark (or service mark). Most national laws, and the Agreement on Trade-Related Aspects of Intellectual Property Rights (the TRIPS Agreement),[5] explicitly recognize that personal names are eligible for registration as trademarks. While personal names are eligible for registration as trademarks, however, like any sign for which trademark registration is sought, they must be distinctive in order to be valid trademarks.

PROTECTION OF PERSONAL NAMES UNDER THE UDRP

179. As mentioned above, personal names may, in appropriate circumstances, be registered as trademarks and, in practice, many are. The protection of personal names as trademarks has provided a basis for the application of the Uniform Domain Name Dispute Resolution Policy (UDRP) to the protection of personal names against deliberate, bad faith registration as domain names in the gTLDs. While a few oppose this application of the UDRP,[6] the clear weight of authority of many decisions is in favor of the application of the UDRP to the protection of personal names when they constitute trademarks. The present section of this Chapter outlines the main trends in this authority. Annex VI to this Report contains an indicative list of UDRP cases involving personal names that have been filed with the WIPO Arbitration and Mediation Center.

180. It is recalled that the UDRP provides that three conditions must be satisfied in order to establish that a domain name registration is abusive and that the complainant is entitled to relief:

(i) the domain name is identical or confusingly similar to a trademark or service mark in which the complainant has rights;

(ii) the registrant of the domain name has no rights or legitimate interests in respect of the domain name; and

(iii) the domain name has been registered and is being used in bad faith.[7]

Trademark or Service Mark Rights

181. The first condition requires that in each case the complainant must demonstrate that the personal name in question is protected as a trademark or service mark, in which that complainant has rights.

182. There have been a number of cases in which a complainant has demonstrated that it meets this requirement by submitting evidence that the personal name in question is registered as a trademark.[8] The UDRP, however, does not require that a complainant must hold rights specifically in a *registered* trademark or service mark. Instead, it provides only that there must be "a trademark or service mark in which the complainant has *rights*," without specifying how these rights are acquired.[9] With this distinction in mind, many decisions under the UDRP have therefore determined that common law or unregistered trademark rights may be asserted by a complainant and will satisfy the first condition of the UDRP.[10] In relation to personal names, in particular, numerous UDRP decisions have relied upon a complainant's demonstration that it holds such common law rights in the disputed name.[11] In making these decisions, panels have given attention to a number of factors, including: (i) the distinctive character or notoriety of the name and the requirement that the domain name must be "identical or confusingly similar" to it, (ii) the relationship between this distinctive character and use of the name in connection with goods or services in commerce, and (iii) the location of the parties and the bearing that this may have on the acquisition of unregistered trademark rights.

personal name in which trademark rights are held and the domain name registration, panels have found that small variations between the two (e.g., such as removing the space between the first and last names), just as in cases involving words or terms other than personal names, are legally insignificant, so long as the registered domain name is "confusingly similar" to the personal name.[15]

184. The location of the parties can be significant for determining whether the complainant has trademark rights.[16] Rule 15(a) of the Rules for Uniform Domain Name Dispute Resolution Policy (the "Rules of Procedure") provides that the panel shall decide a complaint on the basis, *inter alia*, of "…any rules and principles of law that it deems applicable." The applicable law will depend on the facts of the case, including the location of the parties. This Rule has allowed panels the flexibility to deal with disputes between parties with different national affiliations and concerning activity on a global medium. It is also a feature that has enabled complainants to seek protection for their names under trademark law, although they have not registered their names as a trademark or service mark in every country of the world.

The Registrant Has No Rights or Legitimate Interests in the Domain Name

185. The second condition of the UDRP requires that there be no evidence that the domain name registrant has any rights or legitimate interests in the domain name that it has registered. Panels normally review the full record in a case to assess whether a respondent has any rights or interests in the domain name. Based on the distinctiveness of the personal name in question and certain facts indicating that (i) the domain name does not correspond to the

and having registered it under the contact, “The Sade Internet Fan Club,” the respondent “has set out to deliberately associate this service with the Complainant.”[18] In a further case, the panel acknowledged that the respondent’s contention was a serious one and that use of the domain name in question, *montyroberts.net*, was for legitimate non-commercial or fair use purposes.[19] In balancing the rights of the complainant in its mark and the rights of the respondent to freely express its views about the complainant, however, the panel determined that:

> “the rights to express one’s views is not the same as the right to use another’s name to identify one’s self as the source of those views. One may be perfectly free to express his or her views about the quality or characteristics of the reporting of the New York Times or Time Magazine. That does not, however, translate into a right to identify one’s self as the New York Times or Time Magazine.”[20]

186. The panel found that, while the respondent’s primary motive for establishing the web site might have been to criticize the complainant, this did “not insulate Respondent from the fact that it is directly and indirectly offering products for sale on its website, or at websites hyperlinked to its site.”[21]

The Domain Name Has Been Registered and Is Being Used in Bad Faith

187. The third condition that must be satisfied is evidence of bad faith. The UDRP sets forth four non-exhaustive examples of what may be considered “evidence of the registration and

Thus, in one case the panel ruled that, where the domain name was identical to the complainant's professional name but was connected to a *non-commercial* web site expressing criticism of the complainant (operated by a brother-in-law), the case involved alleged defamation and not infringement of a trademark right.[24] Defamation, which goes to the reputation of an individual, does not have any necessary relationship to the commercial and infringing exploitation of a personal name used as a mark.

188. The UDRP has proven to be a useful tool for giving expression to the protection of personal names where trademark rights exist in those personal names, where the domain name holder has no right or legitimate interest and where there is evidence of bad faith in the registration and use of the domain name. However, it by no means affords comprehensive protection to personal names. For a start, the names of many persons, particularly ordinary persons, may have no distinctiveness attached to them, either inherently or as a result of use. Secondly, the names of political figures, religious leaders, scientists and historical persons may never have been used in commerce and, thus, are unlikely to have trademarks associated with them. Nevertheless, many sensitivities may attach to their use.

ANALYSIS OF COMMENTS AND VIEWS EXPRESSED IN RESPONSE TO THE INTERIM REPORT

189. The Interim Report formulated three options with respect to the protection of personal names in the DNS and sought further comment on them. These options were:

(iii) The amended UDRP, as proposed in (ii) above, should be introduced only in the forthcoming new gTLD .name, which is intended to serve individuals and allow them to create their own global digital identity.[25]

190. Since the publication of the Interim Report, the registry of .name has developed an extensive rights protection scheme, including dispute resolution, the essential characteristics of which are reflected in the Appendices to the Registry Agreement which it has entered into with ICANN.[26] Although the procedural and operational details of this scheme remain to be clarified at the time of the publication of this Report, it would appear from those Appendices that the .name protection mechanisms at least are intended to achieve the principal policy objectives underlying the third option proposed in the Interim Report. While only practical experience will demonstrate the effectiveness of those mechanisms, their application in .name will practically implement the third option mentioned above. The comments received on it in response to the Interim Report will not therefore be considered below.

191. The comments received were divided on whether the scope of the UDRP should be broadened to cover personal names that do not qualify as trade or service marks. While a significant number of commentators favored broadening the scope of the UDRP for purposes of protecting personal names,[27] the majority believed that the protection offered by the UDRP in its present form is sufficient and that it should not be expanded to cover personality rights at this time.[28]

192. Those who favor the inclusion of a form of personality right as a basis for formulating a

193. A second argument advanced in support of broadening the scope of the UDRP finds its origin in the discrepancies that exist between national laws of countries relating to unregistered trade or service marks. As is apparent from a review of the case law under the UDRP, many celebrities have not registered their personal names as marks, but have been found by panelists to be owners of unregistered marks, which equally qualify for protection under the UDRP. However, not all countries in the world offer protection to unregistered marks. Persons whose activities, even though clearly commercial in nature, are restricted to countries which protect only registered marks (e.g., China, France or Switzerland, amongst others), and who have not obtained any mark registrations corresponding to their personal names in those countries, would normally not benefit from the UDRP's protection. According to certain commentators, this reveals a bias, built into the UDRP, favoring parties from countries with legal systems protecting unregistered marks, typically (but not exclusively) countries with a common-law tradition. They argue that introducing the personality right as an additional basis for formulating a complaint under the UDRP would be an appropriate and reasonable means of rectifying what they perceive to be a form of discrimination between legal systems which has crept into the current procedure.[30]

194. Those who favor broadening the scope of the UDRP to some form of personality right generally agree that protection should nonetheless be limited to abusive behavior on the part of registrants.[31] Certain of these commentators believe that protection should be offered not only in relation to official personal names, but also to pseudonyms of famous persons (for instance, Kirk Douglas being the pseudonym of Issur Danielovitch Demsky).[32]

personality right" varies from one jurisdiction to another. Commentators who resist expanding the scope of the UDRP to personality rights believe that any attempts to create additional protection under these circumstances will have substantial negative effects. They claim that panelists, faced with a void of harmonized international rules, will be tempted to create new law offering greater protection to personality rights through the UDRP than that which is currently available under national laws. They warn that the UDRP thus would run the risk of developing into an illegitimate source of new and undesired regulation in the personality right arena. Furthermore, they believe that, in light of discrepancies between national laws, decisions granted under the UDRP would often be perceived as unfair, contested and ultimately invalidated at the national level. According to these commentators, this would be detrimental to the long-term credibility and viability of the UDRP as a consensus-based dispute resolution mechanism.[33]

196. Most other arguments advanced against including some form of personality right as a basis for a complaint under the UDRP directly or indirectly flow from the fundamental difficulty set out in the previous paragraph. These arguments often are based on concerns that protecting personality rights under the UDRP would have a chilling effect on free speech and would unlawfully restrict the availability of names in the DNS.[34] Furthermore, several commentators state that it would be exceedingly difficult to devise a uniform standard for determining who is sufficiently famous to benefit from protection and who is not,[35] although other commentators argue that, to the extent the system would focus on abusive behavior, there would not be a need to limit the protection it offers to famous persons.[36] Still others argue that it would be wholly inappropriate to expand the scope of the UDRP, be it the area of

procedure which are unlikely to be in proportion to the magnitude of the problem that is to be addressed.

198. A few commentators have suggested that, if additional protection for personal names is to be incorporated into the UDRP, it should in any event be more narrowly drafted than the proposal reflected in the second option of the Interim Report. These commentators refer to a provision of the United States Anticybersquatting Consumer Protection Act, passed into law in November 1999, as a possible model in this connection.[38] The provision in question provides for a cause of action against "[a]ny person who registers a domain name that consists of the name of another living person, or a name substantially and confusingly similar thereto, without that person's consent, with the specific intent to profit from such name by selling the domain name for financial gain to that person or any third party…".[39]

RECOMMENDATION

199. It is clear that many sensitivities are offended by the unauthorized registration of personal names as domain names. It is clear also that UDRP does not provide solace for all those offended sensitivities, nor was it intended to do so, as originally designed. The result is that there are some perceived injustices. Persons who have gained eminence and respect, but who have not profited from their reputation in commerce, may not avail themselves of the UDRP to protect their personal names against parasitic registrations. The UDRP is thus perceived by some as implementing an excessively materialistic conception of contribution to

201. The most cogent of the arguments against modification of the UDRP is, we believe, the lack of an international norm protecting personal names and the consequent diversity of legal approaches deployed to protect personal names at the national level. We consider that this diversity would place parties and panelists in an international procedure in an untenable position and would jeopardize the credibility and efficiency of the UDRP.

202. It is recommended that no modification be made to the UDRP to accommodate broader protection for personal names than that which currently exists in the UDRP.

203. In making this recommendation, we are conscious of the strength of feeling that the unauthorized, bad faith registration and use of personal names as domain names engenders. We believe, however, that the most appropriate way in which the strength of this feeling should be expressed is through the development of international norms that can provide clear guidance on the intentions and will of the international community.

204. Insofar as ccTLDs are concerned, the lack of international norms is less significant. Clear law at the national level for the protection of personal names against abusive domain name registrations, if it exists, can be applied to registrations in the corresponding ccTLD.

Registration); *Drs Foster & Smith, Inc.* v. *Jaspreet Lalli*, NAF FA0007000095284 (August 21, 2000) (same); *Helen Fielding* v. *Anthony Corbet a/k/a Anthony Corbett*, WIPO Case D2000-1000 (Sept. 25, 2000) (Complainant had registered trademark in fictional character "Bridget Jones"); *Alain Delon Diffusion S.A.* v. *Unimetal Sanayi ve Tic A.S.*, WIPO Case D2000-0989 (October 26, 2000) (the domain name *alaindelon.com* was held to have been registered and used in bad faith and was identical to the personal name, Alain Delon, for which the Complainant held International Trademark Registration); *Laurence Fontaine* v. *Visiotex S.A.*, WIPO Case D2001-0071 (March 26, 2001) (the Panelist found that the domain name *lauresainclair.com* was confusingly similar to the personal name of Complainant which had registered as a trademark LAURE SAINCLAIR); *Isabel Preysler Arrastia* v. *Ediciones Delfín, S.L.*, WIPO Case D2001-0298 (May 31, 2001) (Panel found that the domain name *preysler.com* was confusingly similar to the personal name, Isabel Preysler, for which Complainant held a Spanish Trademark Registration).

[9] See J. T. McCarthy, *McCarthy on Trademarks and Unfair Competition*, Vol. 4, ch. 25, §25:74.2 (2000), indicating that "the reference to a trademark or service mark 'in which the complainant has rights' means that ownership of a *registered* mark is not required – unregistered or common law trademark or service mark rights will suffice" to support a complaint under the UDRP. (Emphasis in original).

[10] One of the earliest decisions to rely on unregistered rights in a trademark was handed down in the consolidated cases of *Bennett Coleman & Co.* v. *Steven S. Lalwani*, WIPO Cases D2000-0014 and D2000-0015 (March 11, 2000). The cases involved a Complainant located in India and a respondent located in the United States of America. The Respondent challenged that there were no trademark registrations for the relevant words in the domain names, *theeconomictimes.com* and *the timesofindia.com*, in the United States and that, in any event, any trademark registrations in India had expired. The Panelist, Professor W.R. Cornish, found first that, given the Internet provides worldwide access, the assessment of the propriety of a domain name registration cannot be confined only to comparisons with trademark registrations and other rights in the country where the web site may be hosted. Secondly, the Panelist relied on the "reputation from actual use" of the words in question to determine that, whether or not the Indian trademarks were registered, the Complainant had trademark rights.

[11] See e.g., *Julia Fiona Roberts* v. *Russell Boyd*, WIPO Case D2000-0210 (May 29, 2000) (holding that the Complainant has common law trademark rights in her name: "The Policy does not require that the Complainant should have rights in a registered trademark or service mark. It is sufficient that the Complainant should satisfy the Administrative Panel that she has rights in common law trademark or sufficient rights to ground action for passing off"); *Jeanette*

[Endnote continued from previous page]

give him trademark or service mark rights for the purpose of the rules); *Rosa Montero Gallo* v. *Galileo Asesores S.L.*, WIPO Case D2001-1649 (January 27, 2001) (Panel found that Complainant was sufficiently famous in association with the services offered in connection with Complainant's personal name to establish the requisite common law trademark right); *José Luis Sampedro Sáez* v. *Galileo Asesores S.L.*, WIPO Case D2000-1650 (January 27, 2001) (same); Lorenzo Silva Amador v. *Galileo Asesores S.L.*, WIPO Case D2000-1697 (January 27, 2001) (same); *Julian Barnes* v. *Old Barn Studios Limited*, WIPO Case D2001-0121 (March 26, 2001) (Panel found that Complainant has common law trademark holding that "Complainant has established that he uses his name in the creation and promotion of his work from which he makes his living. His name identifies his work. His work is ordered and called for under and by reference to his name."); *Louis De Bernieres* v. *Old Barn Studios Limited*, WIPO Case D2001-0122 (March 26, 2001) (same); *Anthony Beevor* v. *Old Barn Studios Limited*, WIPO Case D2001-0123 (March 26, 2001) (same); *Margaret Drabble* v. *Old Barn Studios Limited*, WIPO Case D2001-0209 (March 26, 2001) (same); *George-Marie Glover and George-Marie Glover, LLC* v. *Cherie Pogue*, WIPO Case D2001-0600 (June 11, 2001) (Panel held that Complainant has common law trademark in the name "George-Marie" which has been used in connection with complainant's artistic services for 15 years); See also Report of first WIPO Process, paras. 149-50, at 42-43 (allow "consideration of all legitimate rights and interests of the parties (which are not necessarily reflected in a trademark certificate)").

[12] See e.g., *Julia Fiona Roberts* v. *Russell Boyd*, WIPO Case D2000-0210 (May 29, 2000) (the complainant "is a famous motion picture actress"); *Jeanette Winterson* v. *Mark Hogarth*, WIPO Case D2000-0235 (May 22, 2000) (Complainant is an author who has "achieved international recognition and critical acclaim," writing books and screen plays that have been published in over 21 countries in 18 languages); *Mick Jagger* v. *Denny Hammerton*, NAF Case FA0007000095261 (September 11, 2000) (Complainant has a "famous personal name, 'Mick Jagger,'"); *Helen Folsade Adu p/k/a Sade* v. *Quantum Computer Services, Inc.*, WIPO Case D2000-0794 (September 26, 2000) (Complainant is a world famous singer, songwriter and recording artist known under the stage name "SADE"); *Isabelle Adjani* v. *Second Orbit Communications, Inc.,* WIPO Case D2000-0867 (October 4, 2000) (Panel notes that Complainant has achieved "international recognition and acclaim" as a well-known film actress using her real name, Isabelle Adjani); *CMG Worldwide, Inc.* v. *Naughtya Page*, NAF Case FA0009000095641 (Nov. 8, 2000) (finding that, in relation to the domain names *princessdi.com* and *princessdiana.com*, that Princess Diana, during her life time, was well known as Princess Diana or Princess Di); but cf., *Gordon Sumner, p/k/a Sting* v. *Michael Urvan*, WIPO Case D2000-0596 (July 20, 2000) (held that the personal name Sting was not distinctive, as it "is also

---

[Endnote continued from previous page]

name has come to be recognized by the general public as indicating an association with the Complainant and her activities as an actress); *Mick Jagger* v. *Denny Hammerton*, NAF Case FA0007000095261 (September 11, 2000) ("Complainant presented evidence "of the continuous commercial use ... for more than thirty-five (35) years" of "his famous personal name, 'Mick Jagger,'"); *Helen Folsade Adu p/k/a Sade* v. *Quantum Computer Services, Inc.*, WIPO Case D2000-0794 (September 26, 2000) ("SADE," has been used in connection with sales of records, CDs, CD-ROMS, tickets for concerts and merchandising in many jurisdictions around the world); but cf., *Anne McLellan* v. *Smartcanuk.com*, eResolution Case AF-0303a & AF-0303b (September 25, 2000) (held that Complainant, the most senior Government of Canada official in the Province of Alberta, where both Complainant and Respondent reside, has common law trademark rights in her name, although the decision does not indicate that she has used her name as a mark in commerce).

[15] See e.g., *Harrods Ltd.* v. *Robert Boyd*, WIPO Case D2000-0060 (March 16, 2000) (domain name *dodialfayed.com* was determined to be confusingly similar to the personal name, "Dodi Fayed."); *Steven Rattner* v. *BuyThisDomainName (John Pepin)*, WIPO Case D2000-0402 (July 3, 2000) (Complainant not limited to claiming rights in his full name - small variations in the name are not material).

[16] See *Bennett Coleman & Co.* v. *Steven S. Lalwani*, WIPO Cases D2000-0014 and D2000-0015 (March 11, 2000) (given the Internet provides worldwide access, the assessment of the propriety of a domain name registration cannot be confined only to comparisons with trademark registrations and other rights in the country where the web site may be hosted); see also *Jeanette Winterson* v. *Mark Hogarth*, WIPO Case D2000-0235 (May 22, 2000) ("Since both the Complainant and the Respondent are domiciled in the United Kingdom, … the Panel can look at applicable decisions of English courts"); *Pierre van Hooijdonk* v. *S.B. Tait*, WIPO Case D2000-1068 (Nov. 4, 2000) (Complainant was resident in the Netherlands and the Respondent in the United Kingdom. The Panel makes reference to (i) Complainant's Benelux registered trademark and service mark, (ii) the common law of the United Kingdom, and (iii) the decision of the President of the Amsterdam District Court in *Albert Heijn and 159 other plaintiffs* v. *Name Space* (July 13, 2000), holding that Defendant's registration of 300 "proper names" was unlawful); *Isabelle Adjani* v. *Second Orbit Communications, Inc.,* WIPO Case D2000-0867 (October 4, 2000) ("The Complainant is resident in Switzerland and the Respondents give an address in the United States of America. To the extent that it assists in determining whether the Complainant has met her burden under paragraph 4a(i) of the Policy to establish that she has trademark rights in her name *Isabelle Adjani*, the Panel can look at applicable decision and laws in both countries"); *Estate of Stanley Getz a/k/a Stan Getz* v. *Peter Vogel*, WIPO Case D2000-

6. GEOGRAPHICAL IDENTIFIERS

205. Geographical designations, like many other forms of identifier, also touch a wide variety of interests and sensitivities that range from our most basic territorial instincts to more sophisticated conceptions of market and cultural justice. While the misuse of geographical attributions may offend many feelings, only certain types of such misuse are sanctioned by the law. The present Chapter examines the legal framework that has been developed internationally to regulate the misuse of geographical identifiers; describes the evidence produced in the course of the Second WIPO Internet Domain Name Process on the misuse of geographical identifiers in the domain name system (DNS); analyses the comments submitted in response to the Interim Report; and formulates recommendations on the question which, in the Request initiating the Second WIPO Process, WIPO was asked to address, namely, the "bad faith, abusive, misleading or unfair use" of "geographical indications, geographical terms, or indications of sources."

THE LEGAL PROTECTION OF GEOGRAPHICAL IDENTIFIERS

206. A well-established framework for the prohibition of the misuse of geographical identifiers exists at the international, regional and national levels.

207. The international framework is established in four multilateral treaties: the Paris Convention for the Protection of Industrial Property (the Paris Convention), to which

1

North American Free Trade Agreement, between Canada, Mexico and the United States of America, Decision 486 of the Cartagena Agreement between Bolivia, Columbia, Ecuador, Peru and Venezuela, and the Protocol for the Harmonization of Intellectual Property Provisions in Mercosur, between Argentina, Brazil, Paraguay and Uruguay;[6] and in the European Union, the Council Regulation on the Protection of Geographical Indications and Designations of Origin for Agricultural Products and Foodstuffs and the Council Regulation on the Common Organization of the Market in Wine.

209. At the national level, the foregoing international and regional norms are implemented through a variety of legal approaches, which include *sui generis* or specific legislation, sometimes establishing registration systems, for certain classes of geographical identifiers; protection through collective or certification marks; laws against unfair competition; passing-off; and laws on consumer protection. In many cases, these different legal approaches can be applied cumulatively.

THE MAIN ELEMENTS OF THE INTERNATIONAL FRAMEWORK OF PROTECTION

210. The international framework for the protection of geographical identifiers consists of two elements: (i) a prohibition of false descriptions of the geographical source of goods; and (ii) a more extensive set of rules prohibiting the misuse of one class of geographical source indicators, known as geographical indications.

The seizure should take place at the request of any competent authority or any interested party.[8] Since the name of a geographical place or region is not usually the subject of private rights controlled by a particular party, any "producer, manufacturer, or merchant, whether a natural person or a legal entity, engaged in the production or manufacture of or trade in … goods and established either in the locality falsely indicated as the source, or in the region where such locality is situated, or in the country falsely indicated, or in the country where the false indication of source is used,"[9] is deemed to be an "interested party" given standing to request seizure of the goods in respect of which a false indication of source is directly or indirectly used.

213. Three features of the rule prohibiting the use of false indications of source in Article 10 of the Paris Convention may be noted. First, the rule applies to goods and does not extend to services. Secondly, any *direct* or *indirect* use of the false indication of the source is proscribed. An indirect use could be, for example, the use of an image uniquely associated with one country (such as a picture of the Matterhorn, a well-known Swiss mountain with a particular and easily recognized shape), as opposed to the use of the name for the country. Thirdly, any geographical identifier may form the basis of the use which creates the false indication of source. Article 10(2), in creating standing to request seizure, mentions "locality," "region" and "country." Thus, for example, the indication "made in [locality]," "made in [region]" or "made in [country]" would engage the operation of Article 10, if false.

214. The provisions in the Paris Convention prohibiting false indications of source are incorporated into the TRIPS Agreement.[10]

> "the countries to which this Agreement applies also undertake to prohibit the use, in connection with the sale or display or offering for sale of any goods, of all indications in the nature of publicity capable of deceiving the public as to the source of the goods and appearing on signs, advertisements, invoices, wine lists, business letters or papers, or any other commercial communications."

Geographical Indications

216. The foregoing provisions governing the misuse of false (and deceptive) indications of the geographical source of goods constitute rules of conduct in the trade of goods. They focus on falseness of indication, rather than on the geographical term itself, which is the means by which falseness is indicated.

217. A separate element in the international system governs a particular class of geographical terms, known as geographical indications, which are defined in Article 22.1 of the TRIPS Agreement as:

> "… indications which identify a good as originating in the territory of a Member, or a region or locality in that territory, where a given quality, reputation or other characteristic of the good is essentially attributable to its geographical origin."

In respect of this class of geographical terms, particular rules apply to govern their use. The

218. Further rules prevent unfair competition in respect of geographical indications[13] and provide enhanced protection for geographical indications identifying wines and spirits.[14]

219. The essential difference between the rules relating to geographical indications and those relating to false indications of geographical source is that the former place emphasis on a certain quality attached to a limited class of geographical terms, rather than establishing a rule of market behaviors which may be violated through the false use of any geographical term.

220. It follows that the first question for the application of the framework of rules that apply to geographical indications is the identification of whether a term constitutes a geographical indication. At the national level, this is solved, as mentioned above, in a variety of ways. In some cases, identification is achieved through a registration system, in others preference is given to the registration of the trademark (collective or certification), and in others identification is achieved through recognition in the market or custom sanctioned by legislation or court decisions. At the international level, the question is how these various systems interact. When will one system recognize the geographical indications protected in another? The question is complicated because of custom and use and the foundation of systems of protection for geographical indications in times when international trade, telecommunications and personal mobility were less prevalent. What one system traditionally considers to be specific and distinctive, another system may claim to be generic or descriptive.

221. Various methods are at the disposal of the international community to resolve the

222. The TRIPS Agreement provides for negotiations to be undertaken in the TRIPS Council concerning the establishment of a multilateral system of notification and registration of geographical indications *for wines* eligible for protection in those Members participating in the system.[16] These negotiations have not yet, however, resulted in the establishment of such a system.

EVIDENCE OF THE MISUSE OF GEOGRAPHICAL INDICATIONS IN THE DNS

223. Illustrations of problems experienced in the DNS concerning geographical indications were submitted in response to WIPO2 RFC-2 by entities whose interests, or whose interests they represent, are most affected by the subject matter. These entities include the *Office international de la vigne et du vin (*OIV), an international intergovernmental organization, and the *Institut national des appellations d'origine* (INAO), a French governmental organization charged with the protection of appellations of origin and geographical indications for food and agricultural products.

224. The OIV is an intergovernmental organization with a scientific and technical character, competent in the field of the vine and its derived products. It was created by the International Agreement for the Creation of the *Office international du vin* of November 29, 1924. The Organization has 45 Member States which, together, represent the vast majority of the world's vine planting areas and of the world's wine production and consumption.[17] Already within the framework of the first WIPO Process, the OIV had protested against the "appropriation

> are regulated by the Member States of the OIV and have been communicated to the OIV by them…
>
> … among these domain names, there are a number which are particularly confusing for Internet users and constitute commercial piracy or a misappropriation of notoriety… certain registrations are offered for sale to the highest bidder or are linked to inactive sites, evidencing bad faith…"

225. In addition to this Resolution, the OIV has submitted a study conducted by the *Fédération des syndicats de producteurs de Châteauneuf du Pape* (the Federation of Producers' Associations of Châteauneuf du Pape) covering numerous domain names corresponding to claimed geographical indications and wine varieties. According to the OIV, this study establishes that "a large number of domain names have been registered which correspond to appellations of origin and geographical indications of wine-derived growing products, as well as wine varieties, without there being any relationship between the domain name registrants and the persons who hold rights in these distinctive signs."[19] A representative selection of domain names covered by this study, together with relevant registration data concerning these registrations, has been reproduced in Annex VIII.[20] Similar examples of claimed appellations of origin that have been registered as domain names have been presented by the INAO (see Annex IX).[21]

226. As a complement to the studies presented by the OIV and INAO, we have performed

trademarks and service marks, and which ultimately led to the adoption of the UDRP. As described by OIV and INAO, those practices are the following:

(1) The registration of a domain name corresponding to a claimed geographical indication primarily for the purpose of selling, renting or otherwise transferring the domain name to a third party at a premium.[22]

(2) The use of a domain name corresponding to a claimed geographical indication in connection with a product which does not benefit from the geographical indication, thereby creating a likelihood of confusion as to the quality, other characteristics or reputation of the product.

(3) The use of a domain name corresponding to a claimed geographical indication with a view to attracting Internet users to a website or other on-line location, the contents of which bears no relationship with the geographical indication.[23]

(4) The registration of a domain name corresponding to a claimed geographical indication with a view to preventing others from registering the same name.[24]

228. In light of these practices and their strong resemblance to those that have been observed previously in relation to trademarks and service marks, and taking into account the need to safeguard the interests of legitimate users of geographical indications in the DNS, as well as the interests of consumers, the Interim Report recommended that measures be adopted to

ANALYSIS OF COMMENTS AND VIEWS EXPRESSED IN RESPONSE TO THE INTERIM REPORT

229. In recognition of the significant divergence in views throughout the world on what is to be regarded as a protectable geographical indication, the Interim Report's recommendations focused on attempting to curb only clear-cut cases of abuse of these identifiers, assuming that everyone might agree that manifestly bad faith behavior should be tolerated under no circumstances. The Interim Report proposed that this could be accomplished by broadening the scope of the UDRP to cover geographical indications and indications of source through a revision of the three-pronged test of subparagraph 4(a) of the Policy ("Applicable Disputes"). In view of the essentially collective nature of the rights represented by geographical indications and indications of source, the Interim Report also identified, discussed and proposed options for further reflection on the question of which persons or entities should be deemed to have standing to file a complaint under the proposed revised UDRP and which remedies (transfer or cancellation) should be available under the procedure.

230. A review of the comments submitted in response to the recommendations formulated in the Interim Report reveals continuing disagreement regarding the principle of providing protection in the DNS for geographical indications and indications of source, as well as regarding the form which such protection should take. Several commentators are in favor of the specific proposals contained in the Interim Report.[25] Others, including some representing intellectual property interests,[26] either oppose them, or, at best, consider them premature.[27]

the opinion that an exclusion mechanism for geographical indications would be appropriate, or at least should be given further consideration, in light of ongoing negotiations in the framework of Article 23.4 of the TRIPS Agreement.[29] If protection were to be provided through a revised UDRP, some commentators felt that panels with particular expertise in the subject matter would be needed, in view of its specialized nature and complexity.[30]

232. On the question of who should be deemed to have standing to file complaints under the proposed revised UDRP, the Interim Report presented three options for further consideration: (i) the persons or entities who have standing to enforce these rights in accordance with the law of the country of origin, (ii) governments only, or (iii) the persons or entities who are found to have standing based on the law determined to be applicable to that issue by the panel, in accordance with the ordinary rules of private international law. Most commentators were of the view that the second option would be overly restrictive and favored either the first or last option.[31] As a solution to the standing problem, one commentator proposed that a complainant wishing to avail itself of the proposed revised UDRP could be required to produce a declaration by either the courts or the government of its jurisdiction confirming that it has standing to pursue the complaint in question.[32]

233. In light of the collective nature of the rights concerned, certain commentators proposed the creation of a new remedy for purposes of the proposed revised UDRP which would take the form of a “cancellation + exclusion”. Such a new remedy would serve a dual purpose. On the one hand, it would prevent a prevailing complainant from arrogating to itself a collective right, and, on the other, it would avoid cancelled domain names from being re-

basis for the protection proposed in the Interim Report. In particular, they highlight three specific areas where sufficient uniformity is lacking. First, they argue that the harmonized rules at issue (in particular the TRIPS Agreement) incorporate several qualifications and exceptions to the protection for geographical indications, striking a delicate balance of interests, which would be difficult, if not impossible, to reflect faithfully in the UDRP.[35] Secondly, they state that the legal and administrative mechanisms giving effect at the national level to the internationally harmonized norms vary widely, ranging, as noted above, from *sui generis* registration systems, certification or collective marks, the law on passing-off, unfair competition law and consumer protection legislation.[36] Thirdly, and perhaps most importantly, they claim that there exists no uniform view at the international level of what is to be deemed a protectable geographical indication, and that, consequently, terms which are protectable in some jurisdictions, are freely available in others.[37]

235. The commentators in question conclude that providing protection to geographical indications through the UDRP under this state of incomplete harmonization of the law is doomed to fail. They believe panels would be put in the awkward position of having to take decisions with insufficient guidance available to them, which would lead inevitably to the undesired creation of new law. For the same reasons that are set out in the section of this Report concerning personal names,[38] these commentators are of the view that this would jeopardize the UDRP's long-term viability as an effective dispute resolution system. This risk is considered particularly acute in the area of geographical indications because there has been, for many years now, continuing intense debate internationally between governments on the subject matter.

RECOMMENDATION

237. This is a difficult area on which views are not only divided, but also ardently held. This alone is a cause for reflection about the desirability of introducing a modification dealing with this area to a consensus-based dispute-resolution procedure that is functioning efficiently and cost effectively.

238. It is undeniable that there is widespread evidence of the registration and use of geographical indications and other geographical source identifiers by persons who have no connection whatsoever with the locality to which the identifiers refer. These practices are misleading and harm, first, the integrity of the naming systems in which those geographical identifiers operate and, secondly, the credibility and reliability of the DNS. The question for decision, however, is whether there is a solid and clear basis in existing international law which can be applied so as to prevent erosion of the integrity of geographical indications and enhance the credibility of the DNS.

239. We believe that there are two fundamental problems in endeavoring to apply the existing international legal framework to prevent the bad faith misuse of geographical indications in the DNS.

240. The first problem is that the existing international legal framework for the prohibition of

indications. Such a registration may violate existing standards if it is associated with conduct relating to goods. For example, a domain name registration that is used in relation to an offer of sale of goods may be considered to be a "commercial communication" under Article 3*bis* of the Madrid (Indications of Source) Agreement. If the domain name registration is a geographical identifier and it is false or deceptive, it may, in these circumstances, be considered to violate the prohibition against the use of false indications set out in Article 3*bis* of the Madrid (Indications of Source) Agreement. Additionally, for example, one can imagine various hypothetical uses of domain name registrations with respect to goods which might be considered to constitute violations of the provisions on the protection of geographical indications in the TRIPS Agreement. However, there are many circumstances in which a domain name registration, even though constituting a false or unauthorized use of a geographical indication, may not constitute a violation of existing international rules because there is no relationship between the domain name and goods. Existing rules, therefore, would offer only a partial solution to the problem of what is perceived to be the misuse of geographical indications in the DNS.

241. Secondly, there is a major problem in respect of applicable law because of the different systems that are used, at the national level, to protect geographical indications. For example, suppose that there is a geographical indication recognized and protected as such under the law of country A, but considered to be generic and descriptive under the law of country B.
A resident carrying on business in country B registers, with a registrar based in country B, the geographical indication as a domain name and sells, from the website accessed through that domain name, goods that are available for purchase only by residents in country B. The

example given, it is a simple matter to determine whether there exists a protectable geographical indication.

243. We believe, therefore, that the existing international framework would provide only a partial answer to the perceived problems of false indications of source and geographical indications within the DNS. Furthermore, because of the need to resort to a choice of applicable law to resolve the question of the recognition of the existence of a geographical indication, very complicated questions would be involved in the application of the UDRP in this area. On these questions, international opinion is far from settled, as can be seen from the history of the negotiations with respect to a future Hague Convention on International Jurisdiction and Foreign Judgement in Civil and Commercial Matters.[42] These problems of applicable law could be avoided if a multilaterally agreed list of geographical indications were to be established.

244. It is recommended that no modification be made to the UDRP, at this stage, to permit complaints to be made concerning the registration and use of domain names in violation of the prohibition against false indications of source or the rules relating to the protection of geographical indications.

245. In making this recommendation, it is recognized that there is widespread dissatisfaction

satisfactorily dealing with the interaction of differing systems and levels of protection at the national level and the mutual recognition of geographical indications within those systems.

PREFERENCES AND PROTECTION FOR GEOGRAPHICAL TERMS *PER SE*

246. The foregoing sections of this Chapter discussed the existing international rules with respect to geographical identifiers which relate to the use of geographical terms in connection with goods. A separate issue that has surfaced is the claim for protection for geographical terms *per se* within the DNS, without reference to the use of the domain name in connection with goods or services. The issue centers on entitlement to register and the first-come first-served, automatic and unscreened nature of domain name registration systems. On the one hand, it is argued that the duly constituted authorities with respect to a geographical area, whether a country, state, city or town, should be entitled to register the name of that locality, as well as to prevent any party unassociated with the duly constituted authorities from registering the name. It is argued that the first-come, first-served nature of domain name registration systems exploit the digital divide and disadvantage authorities in countries with less developed infrastructures for the Internet in establishing their own identity in the DNS. Furthermore, it is argued, the fact that domain name registrations can be held by persons unconnected with the geographical locality is misleading to users and may give rise to the unjust enrichment of those persons on the basis of the reputation established by the geographical localities. On the other hand, it is argued that rights have already been acquired within the DNS on the basis of the existing operation of the system and that regulation of this

these issues in the Interim Report; and formulates recommendations. Because of the range and diversity of geographical naming systems, consideration has been limited to only some such systems.

ILLUSTRATIONS OF THE REGISTRATION OF GEOGRAPHICAL TERMS WITHIN THE DNS

249. The illustrations of the registration of geographical terms that follow are grouped into four categories representing names of (i) countries, (ii) ISO 3166 country code elements, (iii) places within countries, and (iv) indigenous peoples. It is recognized that these illustrations are not exhaustive. Furthermore, they are not presented to advocate the position that the registrations at issue are necessarily abusive. The aim is merely to advance discussion in this area by providing some background material and concrete examples of domain registrations incorporating such terms in the currently existing gTLDs.

Country Names

250. There exists an official linguistic publication of the United Nations providing a list of the names of its Member States.[43] The entry for each State includes its usual or "short" name (for example, "Rwanda"), as well as its full or formal name (for example, "the Rwandese Republic"). The usual name is used for all ordinary purposes in the United Nations. The full name, which may also be the same, is used in formal documents such as treaties and formal

(i) The overall majority of country names in Annex XII have been registered by persons or entities that are residing or located in a country that is different from the country whose name is the subject of registration.

(ii) In almost all cases in Annex XII, the registrant is a private person or entity. Only rarely is it a public body or an entity officially recognized by the government of the country whose name has been registered.

(iii) The following activities are conducted under the domain names in Annex XII:

a) No activity (DNS lookup error, under construction, ...);
b) The offering for sale of the domain name in question;
c) The provision of information, products or services that bear no or little relationship with the country in question; and
d) The provision of information regarding the country in question, often on a commercial basis.

253. There are relatively few reports of court decisions or decisions emanating from alternative dispute resolution procedures concerning disputes over the registration of country names as domain names. A complaint regarding the domain name *caymanislands.com* was filed by the Cayman Islands Government with the WIPO Arbitration and Mediation Center under the UDRP, but the case was terminated before a decision was taken on it.[44] There also have been reports regarding the potential filing of a complaint under the UDRP with the

ISO 3166 Country Code Elements

254. The origin of the codes reflecting country top-level domains is the International Organization for Standardization (ISO). ISO, which was established in 1947 as a non-governmental organization, is a worldwide federation of national standards bodies from 137 countries. Its mission is to promote the development of standardization and related activities in the world with a view to facilitating the international exchange of goods and services, and to developing cooperation in the spheres of intellectual, scientific, technological and economic activity.[47] One of ISO's most famous standards is Part 1 of ISO 3166 concerning codes for the representation of names of countries and their subdivisions. Part 1 of ISO 3166 contains two letter country codes (alpha-2 codes; for example, au for Australia) and three letter country codes (alpha-3 codes, for example, aus for Australia). It is on the basis of the alpha-2 codes that the country code top-level domains (ccTLDs) were created by the Internet Authority for Assigned Names and Numbers (IANA) during the late eighties and early nineties.[48] Since the creation of the ccTLDs, registrations in the country domains have flourished, as the use of the Internet has spread throughout the world. It is expected that the importance of the ccTLDs will continue to grow in the future.

255. A phenomenon concerning ccTLDs that merits attention is the registration at the second level in the gTLDs of the country code elements (for example, *uk.com*). Often these domain names are registered by persons or entities in order to make them available to the public for the registration of names at the third level (for example, *company.uk.com*).[49] The implications of such practices are discussed below.

the World Heritage Committee of a list of sites forming part of the cultural and natural heritage falling under the scope of the Convention (the "World Heritage List").[50] Featured on the List are a number of cities that are famous for their cultural or historical importance. Annex XIII contains details of searches of domain name registrations with respect to some of the cities appearing on the World Heritage List.

257. The following observations can be made with respect to the information contained in Annex XIII:

(i) The majority of city names in Annex XIII have been registered by persons or entities that are residing or located in a country that is different from the country in which the city whose name is the subject of registration is located.

(ii) In several cases, the domain name is used as the address of a website providing information concerning the city whose name corresponds to the domain name. Often these sites appear to be operated by private entities on a commercial basis.

(iii) In several cases, the domain name is used as the address of a website providing general information (often in the form of a portal) that bears either no, or no significant relationship, to the cities whose names correspond to the domain name.

(iv) In one case, the domain name is offered for sale.

Grande Instance of Paris, by preliminary injunction of April 3, 2001, ordered that the registration of the domain name *laplagne.com* for purposes of selling it to the holder of the trademark La Plagne (Association Office du Tourisme de La Plagne) constituted a tort.[52] In its decision of March 8, 1996, the Landgericht of Munich (Germany) found that the registration of the domain name *heidelberg.de* constituted an infringement of the rights of the City of Heidelberg. Subsequent to this decision, several court cases have been filed in Germany regarding German city names. Most of the cases in question were decided in favor of the cities.[53] By decision of May 2, 2000, the Federal Court of Switzerland upheld a complaint filed by a semi-official tourist organization regarding the registration of the domain name *berner-oberland.ch*, a region of Switzerland with a reputation for its picturesque landscapes. By decision of May 23, 2000, the Obergericht Luzern upheld a decision of a lower court ordering the holder of the domain name *luzern.ch* to refrain from offering e-mail services under this name, pending resolution of a complaint brought by the City of Lucerne seeking the transfer to it of that domain name by the registrant.

259. Several cases regarding place names within countries also have been filed with the WIPO Arbitration and Mediation Center under the UDRP.[54] Two of these cases that involved city names have received much attention. These two cases concerned the domain names *barcelona.com* and *stmoritz.com*. By decision of August 4, 2000, the complaint regarding *barcelona.com* was upheld and, by decision of August 17, 2000, the complaint regarding *stmoritz.com* was denied.[55] Other more recent such cases filed with WIPO concerned the domain names *lapponia.org/lapponia.net (*complaint granted),[56] *portofhelsinki.com* (complaint denied) [57] *portofhamina.com* (complaint denied),[58] *brisbanecity.com* (complaint

necessarily stand for the proposition that the registration of a city name or the name of a region, as such, is to be deemed abusive.

261. Finally in connection with place names, it may also be noted that several ccTLD administrators have adopted the policy of excluding the names of places in their countries from registration as domain names, at least under certain conditions. This is the case, for instance, for .AU (Australia),[64] .CA (Canada),[65] .CH (Switzerland), .DZ (Algeria),[66] .ES (Spain),[67] .FR (France),[68] .PE (Peru),[69] and .SE (Sweden).[70] Often these exclusions are based on official lists of place names compiled by the Government of the country concerned.[71]

Names of Indigenous Peoples

262. The question of the protection of the intellectual property rights of the world's indigenous peoples has received increasing attention over the last several years.[72] While global trade in the creations and knowledge of indigenous peoples has yielded important returns for some, it is felt by others that such commercial exploitation has not always been in harmony with the rights or expectations of the peoples concerned. In light of this ongoing policy debate, it seems appropriate to consider the incidence of the registration of the names of indigenous peoples as domain names. Annex XIV sets out details concerning domain name registrations of a number of well-known indigenous peoples.

263. The following remarks may be made with respect to the information contained in Annex XIV:

(iii) The activities conducted under the domain names in Annex XIV only rarely are aimed at providing information about the peoples concerned.

(iv) Most activities that are conducted under the domain names in Annex XIV fall under one of the following categories: no activity (DNS lookup error or holding page), general information or portal sites (of widely differing varieties) of a person or entity which does not appear to represent the people, website of company with a (product) name corresponding to the name of the people, and personal website of an individual whose first name corresponds to the name of a people.

(v) In one case in Annex XIV, the domain name is offered for sale.

ANALYSIS OF COMMENTS AND VIEWS EXPRESSED IN RESPONSE TO THE INTERIM REPORT

Country Names and Names of Places Within Countries

264. On these names, the Interim Report presented two options for further consideration. The first option was to maintain the status quo (i.e., not introduce any protective measures), in recognition of the novelty of the subject matter, as well as the tenuous legal grounds for introducing protective measures in this area. The second option attempted to balance the competing interests of countries, domain name registrants and Internet users, by proposing a

265. A review of the comments received on the Interim Report reveals that it has failed to bridge the gap between those who oppose establishing protection for the designations in question[73] and those who favor such protection.[74] While the specific formulation of the proposed new cause of action was well received by some commentators, it is strongly opposed by the most ardent advocates of protection in this area, because it would legitimize conduct which they deem totally unacceptable: the commercial exploitation in the DNS by private parties of country names, assets which they consider the inherent property of sovereign States. The latter view is advocated in particular by one Government which is of the view that all full (or formal) names, as well as all short (or usual names) of countries, should be excluded from registration as domain names.[75] The same Government also advocates the creation of a challenge procedure permitting governments to recuperate such names in all circumstances and irrespective of the use which is being made of them by their registrants, without any possibility of recourse to national courts to obtain the reversal of the decisions emanating from the procedure. According to the Government in question, this protection is particularly important for developing countries, in light of the difficulties they are facing in attempting to bridge the digital divide. The same Government also believes that the protection of country names in the DNS is fully supported by existing international intellectual property law.

266. Those who oppose the protection of country names (as well as the names of places within countries) in the gTLDs advance several arguments in support of their position. Most importantly, they state that there exist no international intellectual property norms protecting country names and names of places within countries and that, in the absence of such norms,

267. Specifically with regard to the protection of country names, some commentators appear not to oppose continued consideration of the issue, but suggest that the ICANN system may not be the appropriate venue for this purpose, because of the likely need to create new rules of law, should protection be desired. References are made by these commentators to treaty processes or other forms of agreement between sovereign States and, in particular, to the Assembly of the Paris Union for the Protection of Industrial Property, the competent organ for the Paris Convention.[80]

ISO 3166 Country Code Elements

268. The Interim Report recommended the exclusion of the ISO 3166 alpha-2 country code elements from registration as domain names in the new gTLDs, in the absence of an agreement to the contrary from the relevant competent authorities. Furthermore, the Interim Report recommended that persons or entities who have registered such codes at the second level in the existing gTLDs and who accept registrations of names under them should take measures to render the UDRP applicable to such lower level registrations.

269. Several commentators favored the exclusion mechanism proposed in the Interim Report for the ISO 3166 alpha-2 country code elements,[81] while others opposed it.[82] Some of the entities offering the possibility of registrations under the codes in the existing gTLDs have expressed a willingness to adopt the UDRP or a similar procedure, as recommended in the Interim Report.[83] Few administrators of ccTLDs submitted comments on the Interim Report's recommendations in this area. Trademark owners have expressed concerns that the exclusion

the Interim Report correspond to similar intellectual property issues relating to traditional knowledge, folklore and symbols in the physical world.[85]

RECOMMENDATION

Country Names and Names of Places Within Countries

271. Prior to considering which protective measures (if any) might be in order in relation to this class of geographical terms, it is necessary first to determine with more precision which concepts are intended to benefit from such protection. As far as countries are concerned, no particular difficulties arise as, apart from a few exceptional cases, it is clear which countries exist and what their names are.[86] However, the term "places within countries" is more vague and therefore requires further elucidation.

272. As the protection of place names within the gTLDs is a novel concept, it is proposed to take a conservative approach and interpret the term, at least at this stage, narrowly. It is therefore recommended that its scope be restricted to those items that are most closely associated with the territorial integrity of the State, namely regions that have received administrative recognition from the State (for example, provinces, departments…) and municipalities (cities, towns, communes...). This interpretation excludes from consideration other items which also might qualify as "places," such as streets, squares, natural, historical or cultural sites, mountains, rivers, lakes and waterways, buildings and edifices, monuments, and

(ii) administratively recognized regions and municipalities within countries.

274. The comments received on the Interim Report's preliminary recommendations on the protection in the gTLDs of country names and the names of administratively recognized regions and municipalities within countries reveal that the concerns of those who are in favor of such protection relate in particular to the names of countries. While many of the arguments that are advanced in support of the protection of country names also can find application in relation to other place names, the present analysis will focus primarily (but not exclusively) on the protection of country names, in light of the concerns and expectations of the commentators. Whether it would be opportune at this stage to create this protection must be considered from both a policy, as well as a legal perspective.

275. *Policy Perspective.* Current registration policies in the open gTLDs allow persons or entities to appropriate for themselves, as domain names, terms with which they otherwise have no, or only a loose, connection, to the exclusion of countries and peoples whose history and culture are deeply and inextricably linked to the terms in question. It should come as no surprise that such registrations are a source of concern for these countries and peoples, particularly if the domain names are exploited commercially or used in a manner that is deemed inappropriate or disrespectful. As the number of gTLDs expand, the value of a registration in any one of them may correspondingly decrease, and it is possible that the problem will become less acute.[87] However, as long as domain names are used as a de facto Internet directory, it is unlikely that the problem will disappear completely, particularly in

much more advantageous position in terms of securing their interests in the DNS than those in countries where the Internet has made little or no penetration. This point of view is underscored by the fact that many of the names of countries whose populations have benefited less from exposure to the Internet appear to have been registered as domain names by parties from countries that are at the forefront of Internet developments.

277. The consideration of the interest of a country or a people in a term with which it has a strong historical and cultural link is one way to approach the problem of the registration of geographical terms as domain names. Another possible approach is to consider whether the manner in which the term is used as a domain name adds value by permitting users to retrieve more efficiently the information that they are seeking on the Internet. Under this approach, any geographical term that is registered as a domain name in order to function as the address of a website that provides information on the territory or location corresponding to the domain name may be deemed to add value, as users generally rely on domain names as a primary means of accessing information on the Internet. However, if a domain name corresponding to a geographical term does not resolve to any site or to a site which does not contain any meaningful information regarding the territory or region concerned, it may be argued that there is no added value, only a waste of resources and a cause of consumer confusion. Taking into account the use to which the domain name is put and the nature of the gTLD in which it is registered in assessing the appropriateness of the registration of a geographical term may be worthwhile also because such use, or the lack thereof, can be an indicator of the true purpose for which the name was registered (for example, speculative intent) .

textual comparison between subparagraphs 1(a) and 1(b) of Article 6*ter* and, on the other hand, the preparatory work for the Geneva Diplomatic Conference on the Revision of the Paris Convention.

279. Article 6*ter* (1)(a) reads as follows:

> "The countries of the Union agree to refuse or invalidate the registration, and to prohibit by appropriate measures the use, without authorization by the competent authorities, either as trademarks or as elements of trademarks, of armorial bearings, flags, and other State emblems, of the countries of the Union, official signs and hallmarks indicating control and warranty adopted by them, and any imitation from a heraldic point of view."

280. Article 6*ter* (1)(b) reads as follows:

> "The provisions of subparagraph (a), above, shall apply equally to armorial bearings, flags, other emblems, abbreviations, *and names*, of international intergovernmental organizations of which one or more countries of the Union are members... ."
> (*Emphasis added*)

281. The fact that subparagraph 1(b) refers explicitly to names of international intergovernmental organizations, while subparagraph 1(a) does not refer to names of countries supports the view that the latter provision does not provide an existing legal basis for the protection of country names in the DNS (*expressio unius exclusio alterius*).

> "As regards Article 6*ter*, after a full discussion, agreement was reached on October 22, 1982, on the text which is reproduced in Annex I to this report and which extends the protection under Article 6*ter* to official names of States. Main Committee I unanimously adopted this text and transmitted it to the Drafting Committee".[93]

283. However, for other reasons, the Diplomatic Conference did not result in a revision of the Paris Convention and Article 6*ter* therefore remained unchanged.

284. In light of the above, the following observations seem in order:

(i) Considering that the States party to the Paris Convention were of the view that Article 6*ter* would need to be amended to offer protection for the official names of countries, the position that Article 6*ter*, in its current unrevised form, covers country names seems difficult to maintain.

(ii) At the time of the Diplomatic Conference, developing countries only sought to obtain protection under Article 6*ter* for the official names of countries (for example, the Republic of South Africa) and not for their usual names (for example, South Africa). However, this statement must be qualified in two respects. First, it may have been possible for countries to notify also their usual names as official names to the International Bureau under the notification procedures foreseen in Article 6*ter*. Secondly, discussions were held at the Diplomatic Conference on the need to offer protection also for the usual names of creation of new intellectual property rights or of enhanced protection of rights in cyberspace compared to the protection that exists in the real world.[94] Furthermore, in considering whether it would be opportune, under these circumstances, to introduce any protective measures for these names and what the nature of those measures might be, account should be taken of the fact that terms in this area are protected in certain jurisdictions but are freely available in others. Due to this lack of harmonization and the resultant differing treatment of the issues at the national level, any protective measures that might be adopted for the gTLDs, and the results that they might produce, run a greater risk of being invalidated, if contested at the national level.

286. Notwithstanding the considerations expressed in the preceding paragraph, we strongly believe that, as a matter of policy, country names and the names of administratively recognized regions and municipalities within countries should be protected against abuse in the gTLDs and the Interim Report set out a proposal intended to achieve that goal. That proposal, which was centered on a definition of abuse aimed at striking a reasonable balance of competing interests between countries, domain name registrants and general Internet users, did not receive sufficient support to be put forward as a final recommendation in the present Report. An important reason for this is that those commentators who are most ardently in favor of the protection of country names are of the view that the mere registration of these names as domain names by private parties constitutes in and of itself an abusive misappropriation of a national asset, irrespective of the use (if any) which may be made of the domain names. Rather than expressing agreement or disagreement with this position, we draw attention to the following fundamental characteristics of the debate, as they have

287. Both points lead us to conclude that we have reached the limits of what can be achieved legitimately through consultation processes, such as the WIPO Internet Domain Name Processes or any similar ICANN processes. In other words, we agree with those commentators who are of the view that this particular question is more appropriately dealt with by governments.

288. It is recommended that the question of the protection in the gTLDs of country names and the names of administratively recognized regions and municipalities be further considered in the appropriate intergovernmental fora, in particular with a view to a discussion on the need for new international rules for the protection of country names.

289. Our reluctance to recommend the introduction of new protective measures for country names in the gTLDs principally stems from the view that the international intellectual property framework offers insufficient basis therefor at the present time. This finding, however, is without prejudice to the situation in the ccTLDs. As explained above, the administrators of many ccTLDs have already foreseen mechanisms to safeguard interests in place names within their domains. In line with the policy objectives outlined above, we generally encourage the introduction of such safeguards, in particular, if they are aimed at

the existing gTLDs and who accept registrations of names under them take measures to ensure that the UDRP applies to such lower level registrations.

291. In connection with the first recommendation, we note that the current version of Appendix K to the Registry Agreements between ICANN and the sponsors and operators of the new gTLDs states that "[a]ll two-character labels shall be initially reserved. The reservation of a two-character label string shall be released to the extent that the Registry Operator reaches agreement with the government and country-code manager, or the ISO 3166 maintenance agency, whichever appropriate. The Registry Operator may also propose release of these reservations based on its implementation of measures to avoid confusion with the corresponding country codes."[95]

Exclusions for ISO 3166 Country Code Elements. A number of factors, highlighted in the comments and reactions received on the Interim Report, have lead us to re-consider our recommendation that the ISO 3166 alpha-2 country code elements should be excluded from registration as domain names in the gTLDs. These factors are as follows:

(i) While, on the Internet, the ISO 3166 codes have been associated in particular with country code top-level domains, in the physical world they find broad application and use throughout a wide variety of industries. This is consistent with the nature and purpose of the standard, which itself states that "[it] provides *universally applicable* coded representations of names of countries ..." and that "[it] is intended for use *in any application* requiring the expression of current country names in coded form." (*Emphasis added*)[96] We

(ii) Certain ISO 3166 country codes correspond to the acronyms of other identifiers, in particular trademarks. Excluding the codes from registration in the DNS would prevent such other identifiers from being registered as domain names without seeming justification.

292. In light of the above considerations, we no longer subscribe to the view that the ISO 3166 country code elements should be excluded from registration in the new gTLDs under all circumstances. Nonetheless, we remain concerned that, depending on the manner in which these codes are registered and used in the DNS, confusion may be created with the ccTLDs. That being the case, we believe that the proper focus should be on the avoidance of confusion with regard to those codes, rather than on an absolute prohibition of their registration and use.

293. If ISO 3166 alpha-2 country code elements are to be registered as domain names in the gTLDs, it is recommended that this be done in a manner that minimizes the potential for confusion with the ccTLDs.

294. The practice of registering ISO 3166 country code elements at the second level in the gTLDs in order to offer to the public the opportunity to register names under them raises questions regarding the application of the UDRP.[97] The current version of the UDRP essentially is aimed at ensuring that names registered at the second level under the gTLDs to which the UDRP applies are not abusive. If they are found to be abusive, the UDRP foresees

who may not have included a submission to the UDRP as a condition for accepting the registration of the name at the third level). Secondly, even if it were found that the UDRP indirectly applies to the third level, enforcement issues nonetheless would persist. The UDRP foresees that the ICANN-accredited registrars must cancel or transfer the name registered at the second level in case a violation of the Policy is found to exist. However, numerous names may be registered under the country code at the third level, only some of which might be abusive. Canceling or transferring the registration at the second level (i.e., the country code) might then be a disproportionate measure, because all the names at the third level (as well as those at any lower levels) would be adversely affected, irrespective of whether they were abusive or not. In view of these considerations, the persons or entities who have registered ISO 3166 country code elements and accept registrations of names under them should take measures to render the UDRP applicable to these registrations and to ensure the proper and prompt implementation of decisions transferring or canceling the registrations resulting from the UDRP. We are encouraged by the fact that certain such entities through comments submitted on the Interim Report have expressed a desire to work toward this goal.[98]

295. With regard to the ISO 3166 alpha-2 code elements, it is recommended that the persons or entities in whose name such codes are registered at the second level in the existing gTLDs and who accept registrations of names under them be encouraged to take measures to render the UDRP applicable to

Names of Indigenous Peoples

296. While the Interim Report provided illustrations of certain domain name registration practices regarding the names of indigenous peoples, it did not propose any specific recommendations in relation to those practices. Few comments were received regarding this topic, but those commentators that addressed the issue, urged further consideration of the matter.[99]

297. We believe that it is too early, at this stage, to formulate any recommendations regarding the protection of the names in question in the DNS. An important reason for this is that the communities who are most affected by the topic (indigenous peoples) have not yet had the opportunity to participate fully in the debate. It is therefore proposed that, for the time being, efforts in this area be focused on sensitizing indigenous peoples to the phenomenon and encouraging them to make their voices heard. This could be achieved through a variety of channels, including WIPO's program of work on intellectual property and genetic resources, traditional knowledge, and folklore.[100]

7. TRADE NAMES

298. A trade name is the designation adopted by a commercial enterprise to describe itself and to distinguish it from other businesses and enterprises. Trade names are also referred to variously as company, corporate, business or firm names, although each of these identifiers may sometimes attract slightly different legal or regulatory conditions. Common examples of familiar trade names are Ericsson, General Motors, Holiday Inn, Lego, Microsoft, Nestlé, Philips, Procter & Gamble and Sony. A trade name may also be registered and separately protected as a trademark, as most of the foregoing examples are.

299. The present Chapter reviews the legal protection of trade names at the international and national levels; analyses the comments received in response to the proposals contained in the Interim Report concerning the protection of trade names against abusive registration and use as domain names; and formulates a recommendation on the treatment of trade names within the DNS.

THE INTERNATIONAL PROTECTION OF TRADE NAMES

300. The Paris Convention for the Protection of Industrial Property (the Paris Convention) establishes a norm requiring the protection of trade names in all States party to the Convention. Article 8 provides as follows:

(iii) The protection must be independent of the protection accorded to trademarks, even if the trade name is also registered as a trademark.

302. The freedom left to States to implement trade name protection at the national level includes, notably, two important areas. The first of those is the definition of what constitutes a trade name and, thus, the conditions that must be satisfied by a designation in order to qualify as a trade name. Various conditions are applied, including the requirement of inherent or acquired distinctiveness, the requirement of use and the requirement of the establishment of reputation or goodwill in the trade name. The second area left to national law is the scope of protection accorded to trade names. Protection is not absolute and is usually defined by reference to one or both of two factors, namely, the field of trade activity in which the trade name is used (thus, for example, the trade name of an enterprise in the field of information technology may only enjoy protection in that particular field); and the geographical area over which the trade name enjoys a reputation (thus, for example, the trade name of a baker's shop may be protected only in the village and commune in which it is found, whereas the trade name of a transnational enterprise may enjoy protection that is commensurate with the geographical area in which that enterprise operates).

NATIONAL PROTECTION OF TRADE NAMES

303. In view of the large scope left to national implementation by Article 8 of the Paris Convention, WIPO conducted, in the course of the Second WIPO Process, a survey of its

to the Second WIPO Process opposed the extension of protection of trade names from the physical world to the DNS.[3] Others, however, took the view that a means of protection for trade names could be established which would recognize the diversity of approaches and still provide protection for this important and valuable form of industrial property.[4] One commentator remarked that, indeed, a failure to protect trade names in the DNS would contravene the international law established by the Paris Convention.[5]

305. As an illustration of the differing treatment accorded to trade names, one commentator noted that in the Scandinavian countries of Denmark, Finland, Norway and Sweden, businesses are protected more commonly through registered trade name protection than through trademark law, and trade names may receive stronger protection than trademarks. This commentator suggested that decisions on disputes between entities that originate from such countries should be determined in light of their local law.[6]

PROTECTION OF TRADE NAMES IN THE DNS

306. National legal systems have developed to accommodate the co-existence of trade names, and enable many businesses to trade in different jurisdictions or in different fields of industry using identical or similar trade names, without conflict. The DNS, at least in the present gTLD space, cannot reflect this plurality, as each domain name is unique and global. Problems may arise for businesses that use their trade names in commerce, and find that the corresponding domain name has been registered by another. In the case of competing claims

action against any use of a trade name that misrepresents the source of the goods or services, or is likely to cause confusion regarding their source. This protection has been extended to the unlawful use of trade names as domain names in the decision *U.S.* v. *Washington Mint, LLC*.[8] In Germany, the courts have found in favor of owners of 'name rights' in cases where the domain name registrant was unable to establish any legitimate interests in the name, in the Düsseldorf Court of Appeal's decision with respect to the domain name "ufa.de", for example.[9] The German courts have readily found against domain name registrants where their use of a commercial name in the DNS is liable to cause confusion or mislead the public,[10] at the same time upholding the rights of domain name registrants who have legitimate rights in the underlying trade name.[11]

308. In the DNS at the level of country-code top-level domains (ccTLDs), many registration authorities impose restrictions on the commercial entities that may register names in their domain, particularly in any second-level domains chartered for commercial use. Many ccTLD administrators require applicants to warrant that their domain name does not infringe the legal or other rights of third parties. However, among respondents to the WIPO trade names questionnaire, a minority of ccTLD administrators require applicants to assert or prove their legitimate right to register a commercial or trade name as a domain name.[12]

309. Evidently there exists no uniform or robust protection for trade names in the DNS. As a result, in the event of abuse, business owners are required either to concede the right to use their trade name online when confronted with its abusive or bad faith registration as a domain name, or else attempt to defend their legal rights through national judicial systems.

evidence of significant abuse of trade names to argue that protection was therefore unnecessary.[13] However one comment from the administrator of .UK estimated that half of the 1,400 disputes handled to date by its Dispute Resolution Service concerned trade names, rather than trademarks or personal names, typically involving small localized businesses and that a "relatively high proportion of those cases show evidence of abusive registration, often as a result of 'board room fall-out', competitors in a narrow geographical area, or an individual warehousing names of businesses in the local area."[14]

311. The majority of commentators to the Second WIPO Process favored the protection of trade names in the DNS through an administrative dispute resolution process that would enable trade name owners to protect the good will and reputation associated with their name against bad faith, abusive, misleading or unfair use as a domain name.[15] Commentators widely recognized that trade names perform the same 'origin function' as trademarks, indicating the source or nature of the business entity they represent, and perform the same investment or advertising function. To the extent that trade names serve an identifying function, like trademarks, there was support for their protection in the DNS, equivalent to that accorded to trademarks.

312. The means of protection favored by most commentators to the Second WIPO Process was the extension of the UDRP, which at present applies only to trademarks and service marks, to cover trade names.[16] It was noted that to the extent that most trade names also function as trademarks, as such, they are already protectable under the UDRP.[17] One commentator noted that extending the UDRP to cover trade names would overcome the

depending on local application of the Paris Convention under national law.[20] This approach could be accommodated, in the context of UDRP, where panelists determine cases in relation to the circumstances of each case and the applicable principles of national law. Some commentators noted that trade names, unlike trademarks, are broadly defined, unregistered and unregulated and that, as a result, their protection in the DNS could compromise individual rights[21] and impact upon small businesses.[22] Commentators also noted that numerous identical trade names may legitimately co-exist in different jurisdictions, in contrast to the unique global presence offered by a domain name.[23] It is noted that, by way of analogy, the co-existence of trademarks in various jurisdictions is currently accommodated under the UDRP by the requirement of a showing of bad faith registration and use of the domain name by the respondent. If a respondent is able to demonstrate a co-existing legitimate use of the name, the complainant's case is not made out, and the respondent retains its use of the domain name.

314. As with other identifiers addressed in this Report, commentators expressed some concern at the retrospective application of any mechanism of protection for trade names, noting that some business owners could be injured as a result.[24] In addition, some commentators remarked that any system instituted to protect trade names in the DNS could be used to hijack names from individuals and smaller enterprises.[25]

315. Most commentators supported the protection of trade names in all existing and new gTLDs, and particularly in ccTLDs, where the national relevance of trade names lends support to their protection.[26] Some commentators noted the potential for differentiation in the

registration (if applicable), evidence of use and established reputation in a particular field of business, use of the domain name in a same or similar field of interest to the trade name, and whether the trade name had acquired secondary meaning.[31] One commentator stated that complainants should be required to prove that their trade name has become distinctive as an indication of source,[32] and to prove their trade name's inherent or acquired distinctiveness by 'clear and convincing evidence'.[33] Some commentators stated that any protection of trade names in the DNS should not extend to generic words,[34] whether or not they had acquired distinctiveness through use.

317. It was also suggested that the current UDRP definition of 'bad faith abusive, misleading or unfair registration and use' in respect of trademarks could simply be adjusted to apply to trade names. [35] As noted by one commentator, the real issue is to determine what constitutes 'abuse' of a trade name: "Any *abuse* of a sign in the scope of the Domain Name System should – as well as in the 'real world' – not be tolerated and therefore be prevented".[36] Proof of bad faith was seen as critical by commentators, in order to prevent reverse domain name hijacking. [37] In this regard, it was also stated that commercial entities should not automatically take precedence over non-commercial entities in relation to the use of trade names as domain names.[38] In any conflict between two entities with legitimate rights in the name, it was noted by one commentator that the matter should be left to a court of competent jurisdiction to decide.[39]

RECOMMENDATION

This national diversity inevitably creates a problem for the choice of applicable law on a global medium. The situation of trade names is, in this respect, akin to that of geographical indications insofar as it would be necessary for a dispute-resolution panel, in the absence of convergent national approaches, to identify the national law that should be applied to determine the existence of a protectable trade name. We do not believe that the law is sufficiently clear on this question, with the consequence that there would be a risk of lack of coherence in decisions, which might engender dissatisfaction and lack of understanding of the procedure.

(ii) The practice in the use of trade names covers a very large range of commercial activity, including very small one-person enterprises operating in very limited geographical areas, as well as very large enterprises operating in global markets. It is certainly the case that very small enterprises operating in limited geographical areas deserve protection for their trade names when the conditions of eligibility for the protection are satisfied. Whether those conditions of eligibility can be identified with precision for disputes in gTLDs on a global medium, however, is problematic. Where a trade name is used in widespread markets, it is often also the subject of trademark protection or satisfies the conditions for protection as an unregistered trademark so as to qualify, in appropriate circumstances, for protection against bad faith, deliberate misuse under the UDRP.

(iii) The UDRP was designed for, and applies to, straight-forward disputes, where there are rights on one side and no rights or legitimate interests on the other side. It was not designed to accommodate disputes involving interests on both sides, which requires a more *the basis of abusive registrations and use of trade names per se.*

320. In the case of ccTLDs, we believe that much greater scope exists for allowing complaints under a dispute-resolution procedure for abusive registrations of trade names. Within the ccTLD, the problem of diversity does not exist in the same way and there is greater scope for applying the relevant national implementation of protection of trade names.

8. THE ROLE OF TECHNICAL MEASURES

321. As described in the first Chapter of this report, the Domain Name System (DNS) is undergoing rapid evolution, as millions of new domain names are registered, currently numbering over 35 million and forecast to exceed 75 million domain names by 2002,[1] new top level domains are added, and new language scripts are sought to be accommodated. In this context, the request addressed to WIPO to initiate the Second WIPO Process also noted that "in undertaking the process, it would be beneficial if any information received or collected concerning technical solutions to domain name collision control was collated for the information of WIPO Members and the Internet community." This Chapter provides a collation of the material received during the course of these consultations, and points to areas of current need, as well as future possibilities in ameliorating conflict in the evolving DNS.

322. At various points in this Report, suggestions had been made about the appropriate fora for the development of new intellectual property law or policy, if such new law or policy is considered to be desirable by the international community. Just as the creation of new law has appropriate fora, the oversight of technical measures and operational questions has an appropriate forum. The management of the operational stability of the DNS falls squarely within the Articles of Incorporation of the Internet Corporation for Assigned Names and Numbers (ICANN). The ensuing analysis of the role of technical measures, therefore, must be understood as a contribution, from the perspective of intellectual property, to questions for which ICANN has responsibility of oversight.

technical data, is not routinely checked for veracity or completeness at the initial stage, and is automatically included in the applicable Whois database. Nor are checks made as a matter of course to ensure that the information is kept up-to-date. Most Whois databases are publicly available online, for real-time searching by all enquirers.

324. The Whois search facilities are used principally by members of the public to determine the identity of domain name registrants and the technical and administrative contacts for the web site hosts. The searches are employed by many users for various legitimate purposes – including by rightsholders to identify and locate possible infringers of their rights in order to enforce those rights, to allow consumers to identify online merchants, to source unsolicited e-mail and to enable law enforcement authorities to investigate illegal activity, including consumer fraud.[2] As first intended, the Whois also provides a crucial resource for network administrators who may need to correct network problems or determine the perpetrators of spam or hacking attacks. In a dispute-resolution context, the availability of accurate Whois data is also vital to ensure that registrants are notified of any legal or administrative UDRP proceedings against them, and thereby to ensure due process. Similarly, rightsholders employing ‘notice and takedown’ provisions under national laws, such as the United States Digital Millenium Copyright Act, depend upon Whois resources to match infringing sites with affiliated service providers for notification purposes.[3] In its multiple capacities, the Whois plays a critical role in the prevention and resolution of conflict in the DNS. At a time when the inscrutability of the Internet is increasingly a cause for concern among consumers, users and their advocates, one commentator remarked that:

COMPREHENSIVE WHOIS SEARCH FACILITIES

326. The Interim Report asked whether the Whois system, as it currently operates, is adequate to fulfil its dispute-prevention function, or whether it should be extended in any of three ways:

(i) to enable Whois searches across any new open gTLDs;
(ii) to enable searches across the Whois databases of all registrars; and
(iii) to enable searches across the Whois databases of all registrars for more than just the exact domain name.

327. Of all the technical issues raised for discussion, the Whois search facilities excited the most forceful comment. The vast majority of commentators were strongly in favor of promoting the integrity of Whois information.[5] To the intellectual property community of rightsholders and consumers, Whois databases are essential for evaluating and protecting intellectual property rights, for combating online copyright piracy and for facilitating the licensed use of copyright materials online.[6]

328. The issue of Whois search capacity is not new – it has been the focus of fierce debate in the course of the first WIPO Process and is now the subject of a survey being conducted by the Domain Names Supporting Organization (DNSO) of ICANN.[7] The first WIPO Process Report recommended that the contact details of all holders of domain names in all open gTLDs should be made publicly available in real time.[8] The Report recommended that, at

329. ICANN's current Registrar Accreditation Agreement requires registrars to make available at least the following information: the domain name, the Internet Protocol address of the primary and secondary nameservers, the corresponding names of those nameservers, the identity of the Registrar involved, the dates of registration and expiry, the name and postal address of the domain name holder, the name, postal address, email address, telephone and fax numbers of the technical and administrative contacts.[11] This information is required to be searchable by simple logical and combined methods, updated promptly, presented in a consistent format, and linked to the registrar or registry's site with nominated contact points to receive any complaints concerning incorrect contact data.[12]

330. Commentators to the WIPO Processes have continued to reiterate the importance of reliable Whois information that is accurate and up-to-date.[13] The Report of the first WIPO Process recommended that domain name registration agreements should contain a term making the provision of inaccurate or unreliable information by the domain name holder, or the failure to update information, a material breach of the registration agreement and a basis for cancellation of the registration by the registration authority, and this has been supported by commentators to the WIPO Processes.[14] In fact, ICANN's Registrar Accreditation Agreement states that the willful provision of false or inaccurate contact data constitutes a material breach of the registration agreement and a basis for its cancellation.[15] ICANN's Statement of Registrar Accreditation Policy requires accredited registrars to provide public access on a real-time basis, such as by way of a Whois service, to the contact details that are required to be provided by a domain name registrant, and to keep such information updated. [16] It is noted that there exist means by which registrars can improve the validity of Whois data, through

332. It is considered essential that the current requirements for free public access to a Whois service should be extended to any new gTLDs.[17] The majority of commentators expressed strong support for such a comprehensive search facility, especially pressing in light of the introduction of new gTLDs.[18] The Intellectual Property Constituency (IPC) of ICANN's Domain Name Supporting Organization (DNSO) proposed criteria that should be required of new gTLD's Whois services, and the methods by which this information could be searched.[19] The IPC recommended that the database information should be searchable by domain name, registrant's name or postal address, contacts' names, NIC handles and Internet Protocol address, and should be required to be kept current and comprehensive. Further, it was stated that searches should not be arbitrarily limited, either in number or in type (e.g., limited only to matches with exact domain names).

333. It is also considered essential that a Whois data facility should be comprehensive, enabling searches across all registrars' databases, including all gTLDs and to the greatest extent possible, as discussed below, the ccTLDs. This need is a consequence of the Shared Registration System introduced by ICANN in early 1999, that has resulted in the accred

STANDING COMMITTEE ON THE LAW OF TRADEMARKS, INDUSTRIAL DESIGNS AND GEOGRAPHICAL INDICATIONS

Twenty-First Session
Geneva, June 22 to 26, 2009

SUBMISSION BY THE RUSSIAN FEDERATION

Document prepared by the Secretariat

1. In a communication dated March 2, 2009, the Secretariat received a submission from the Russian Federation relating to the extension of the effect of Article 6*ter* of the Paris Convention for the Protection of Industrial Property for consideration by the Standing Committee on the Law of Trademarks, Industrial Designs and Geographical Indications (SCT), at its twenty-first session to be held in Geneva from June 22 to 26, 2009.

2. The said submission is contained in Annex I to the present document.

[Annex I follows]

ANNEX I

Submission by the Russian Federation to the Standing Committee on the Law of Trademarks, Industrial Designs and Geographical Indications

1. The proposal of the Delegation of Jamaica, put forward at the twentieth session of the Standing Committee on the Law of Trademarks, Industrial Designs and Geographical Indications (hereinafter, "the SCT"), on the extension of Article 6*ter* of the Paris Convention for the Protection of Industrial Property (hereinafter, "the Paris Convention") to the names of States, is not for the first time being put before WIPO. This issue had already been examined while preparing for and during the Diplomatic Conference for the review of the Paris Convention in 1980.

2. The proposal in question is motivated by the possible benefits which may accrue as a result of providing legal protection for the names of States on the basis of Article 6*ter* of the Paris Convention.

3. As is well known, a basic provision of the Paris Convention contained in paragraph (1)(a) of Article 6*ter*, is that the countries of the Paris Union have come to an agreement to refuse or to invalidate the registration of armorial bearings, flags, and other State emblems and to prohibit by appropriate measures their use, without authorization by the competent authorities, either as trademarks or elements of trademarks.

4. Regardless of the absence in Article 6*ter* of the Paris Convention of a reference to the names of States, the majority of the world's countries have appropriate standards in their national trademark legislation, which allow the issue of protection of these names to be resolved.

5. Thus, in accordance with paragraph 1 of Article 1483 of the Civil Code of the Russian Federation (hereinafter, "the Code"), State registration as trademarks of designations which do not possess distinguishing capacity or which consist solely of elements which characterize goods, including those indicating their place of production or sale, is not permitted.

6. The possibility of rejection of the designations referred to during registration is based on Article 6*quinquies* B(2) of the Paris Convention.

7. In accordance with current Russian legislation, the designation for which registration as a trademark containing the name of a State is claimed, is regarded as an indication as to the place of production or sale of the good. It may be included in the trademark as a non-protectable element, provided two conditions are satisfied.

8. The first condition is that the name of the State must be accurate in relation to the place of manufacture of the good and the place of business of its manufacturer. In the opposite case, the inclusion of this name in the trade mark must be considered false and, consequently, registration of the claimed designation impossible, as contravening paragraph 3(1) of Article 1483 of the Code.

9. The second condition of the inclusion of the name of a State as a non-protectable element in a claimed designation is that such a name must not occupy a dominant position in the claimed designation. When determining whether a non-protectable element occupies a dominant position in the designation, its semantic and/or spatial significance is borne in mind.

10. As evidenced by law-enforcement practice, the significance of a verbal designation which is the name of a State (or of a designation based thereon), even if such a designation does not constitute a major part of the designation, enables a conclusion to be drawn as to its dominant semantic importance.

11. Based on the above, Russian legislation envisages the possibility of providing legal protection for the names of States.

12. With regard to other aspects relating to the proposal of the Delegation of Jamaica on Article 6*ter* of the Paris Convention, these may be discussed as an agenda item on Article 6*ter* of the Paris Convention at the twenty-first session of the SCT.

13. Examples of designations including names of States, in relation to which the provisions of Article 1483 of the Code were applied, are given in Annex II.

[Annex II follows]

ANNEX II

ARtemis OF SWITZERLAND	**Application №2005719567**	Inclusion as a non-protectable element in a trademark of an official name of a State (Switzerland), in which the applicant has its place of business.
patricia of Finland	**Application №2007708407**	Inclusion as a non-protectable element in a trademark of an official name of a State (Finland), in which the applicant has its place of business.
REIJMYRE 18 R 10 SWEDEN	**Application №2006716585**	Inclusion as a non-protectable element in a trademark of an official name of a State (Sweden), in which the applicant has its place of business.
solaris ITALY	**Application №2005706934**	An applicant from Panama requests legal protection of a designation which includes the official name of a State (Italy). Registration of the designation as a trademark is not possible, since it is capable of misleading the consumer regarding the producer and country of origin of the goods.

	**Application №2006706972**	An applicant from Russia requests legal protection of a designation which includes the official name of a State (France). Registration of the designation as a trademark is not possible, since it is capable of misleading the consumer regarding the producer and country of origin of the goods.
	**Application №2008702532**	An applicant from Germany requests legal protection of a designation which includes the official name of a State (Austria). Registration of the designation as a trademark is not possible, since it is capable of misleading the consumer regarding the producer and country of origin of the goods.

STANDING COMMITTEE ON THE LAW OF TRADEMARKS, INDUSTRIAL DESIGNS AND GEOGRAPHICAL INDICATIONS

Twenty-First Session
Geneva, June 22 to 26, 2009

PROPOSAL BY JAMAICA

Document prepared by the Secretariat

1. In a communication dated March 30, 2009, the Secretariat received a proposal from Jamaica relating to the Amendment of Article 6*ter* of the Paris Convention for the Protection of Industrial Property for consideration by the Standing Committee on the Law of Trademarks, Industrial Designs and Geographical Indications (SCT), at its twenty-first session to be held in Geneva from June 22 to 26, 2009.

2. The said proposal is annexed to this document.

[Annex follows]

ANNEX

Proposal by Jamaica
to the Standing Committee on the Law of Trademarks, Industrial Designs and Geographical Indications

Article 6*ter*

(1)

(a) **The countries of the Union agree to refuse or to invalidate the registration, and to prohibit by appropriate measures the use, without authorization by the competent authorities, either as trademarks or as elements of trademarks, of armorial bearings, flags, and other State emblems, of the countries of the Union, official signs and hallmarks indicating control and warranty adopted by them, and any imitation from a heraldic point of view.**

(b) The provisions of subparagraph (a), above, shall apply equally to armorial bearings, flags, other emblems, abbreviations, and names, of international intergovernmental organizations of which one or more countries of the Union are members, with the exception of armorial bearings, flags, other emblems, abbreviations, and names, that are already the subject of international agreements in force, intended to ensure their protection.

1. The SCT will recall that during the 1980s, proposals were made to review the Paris Convention in order to broaden the scope of Article 6*ter* to include the protection of country names. The last proposal, regarding a full review of Article 6*ter* for the purpose of possible amendments, was made at a diplomatic conference held in February 1980. At that conference, under the heading of "alternative B", a proposal was placed on the table which recommended that the term "as well as the official names of the countries of the Union" should be included under the category of areas that are to be refused for validation as registered trade marks. This would effectively lead to the expansion of Article 6*ter*(1)(a) to include the protection of country names.

2. Unfortunately, attempts to review Article 6*ter* of the Paris Convention, at the Diplomatic Conference were unsuccessful, due to the rejection of the proposal for the protection of country names by a few States.

3. The rejection of such an inclusion in Article 6*ter*, however, took place against the backdrop of a very different political and socioeconomic reality. Emphasis must be given to the fact that past rejection of the argument to include country names under the protection of Article 6*ter*(1)(a), such as was the case in 1980 (almost 30 years ago), took place under a starkly different international economic order and global trade regime. The widening and deepening of linkages amongst and between countries, as a result of globalization and trade liberalization has facilitated an increase in the trade in goods which carry unauthorized country names.

4. Jamaica is, therefore, proposing to open discussions in the forum of the Standing Committee on the Law of Trademarks, Industrial Designs and Geographical Indications (SCT) for the provision of Article 6*ter* of the Paris Convention to be amended to reflect the protection of these country names, in addition to the other categories of protection already in existence. For this purpose, therefore, Jamaica wishes to revisit elements of the previous proposal made in 1980.

5. Jamaica also wishes to propose the granting of additional protection to a State's identity by way of a further amendment of Article 6*ter* to allow for the protection of country names of the Union to include homonymous sounds of these country names. An example of this would be the official country name "Jamaica" also being protected as "Jah-mey-ka."

6. It should be noted that a discussion concerning the widening of the categories of protection under Article 6*ter* of the Paris Convention to include the protection of country names, must be approached from a holistic point of view having regard to the political, socioeconomic and legal implications of such an amendment, as well as its direct impact on a country's sustainable development and economic survival. In terms to the implications, it is evident that where country names are not protected then the danger of these names becoming generic exists. This has implications not only for the value of private trade marks but on a country's ability to properly protect their Intellectual Property generally, particularly in third countries. Countries like Jamaica that are heavily reliant on their name as a means of marketing suffer greatly when such widespread use of the name without authorization goes unchecked.

7. Based on the foregoing, Jamaica hereby formally requests that the protection of country names be added to the categories under Article 6*ter*(1)(a) of the Paris Convention, and that this matter be included as an agenda item for discussion at the twenty-first session of the Standing Committee on the Law of Trade Marks, Industrial Designs and Geographical Indications, scheduled to be held from June 22 to 26, 2009.

Standing Committee on the Law of Trademarks, Industrial Designs and Geographical Indications

Thirty-fourth Session
Geneva, November 16 to 18, 2015

REVISED DRAFT REFERENCE DOCUMENT ON THE PROTECTION OF COUNTRY NAMES AGAINST REGISTRATION AND USE AS TRADEMARKS

prepared by the Secretariat

I. INTRODUCTION

1. From its twenty-first to its thirty-third session, held in Geneva from June 22 to 26, 2009, and from March 16 to 20, 2015, respectively, the Standing Committee on the Law of Trademarks, Industrial Designs and Geographical Indications (SCT) considered a number of working documents concerning the Protection of Country Names Against Registration and Use as Trademarks.

4. At the thirty-third session of the SCT, held in Geneva from March 16 to 20, 2015, and with a view to informing the future discussions on this agenda item, the Chair requested the Secretariat to revise the Draft Reference Document on the Protection of Country Names (document SCT/30/4), which had been submitted to the thirty-third session, in order to render it more descriptive of office practices in this area (see document SCT/33/5, paragraph 8).

5. Accordingly, the Secretariat prepared a Revised Draft Reference Document, which was subsequently published on the SCT Forum webpage for comments, and additional submissions were received from the following Member States: Colombia, Georgia, Kazakhstan, Peru, Poland, the Republic of Moldova and Switzerland, as well as from the following Observers: the European Communities Trade Mark Association (ECTA) and the Japan Patent Attorneys Association(JPAA).

6. The present document attempts to articulate in a single reference document the wealth of information provided in the above-mentioned sources. In this document, the expressions "country names" and "names of States" are used interchangeably, as it has been the practice in the relevant SCT document series. Moreover and unless otherwise indicated, the word "trademark" is intended to cover marks that apply both to goods and to services.

II. PRELIMINARY CONSIDERATION

7. It is important to note that, when adopting the Questionnaire, the SCT understood that the expression "names of States" intended to cover the short name of the State or the name that is in common use, which may or may not be the official name, the formal name used in an official diplomatic context, translation and transliteration of the name as well as use of the name in abbreviated form and as an adjective. The SCT also understood that the Questionnaire would not address the issue of non-commercial use of names of States, as such uses appeared to be outside the ambit of trademark law (paragraph 4 of document SCT/23/4).

III. EXCLUSION OF REGISTRATION OF NAMES OF STATES AS TRADEMARKS

8. Generally speaking, the registration of a trademark is based on a formal application filed directly or indirectly with a national or regional trademark registration authority. Like any other sign applied for registration as a trademark, a sign consisting of or containing the name of a State will be examined by the competent authority in light of formal and substantive requirements. The scope of examination by offices and, in particular, the nature of the possible grounds for refusing the application, which are examined by the office or that may be raised in opposition procedures, can vary depending on the applicable law.

for or to the names of all States. Generally, national laws do not contain specific references to an official list of country names, and few of them include additional precisions as to whether protection is given to official names only, or also to common names or abbreviated versions of State names.

11. The Trademark Law of Serbia prohibits the registration of the "name or abbreviation of the name of a country"[2]. The Trademark Law of Albania provides that "a sign is not registered as a trademark if it consists of the name of a State"[3]. In addition, the implementing regulation specifies that this absolute ground for refusal was established because of the lack of distinctive character of country names, and that when other distinctive elements accompany that name, the trademark could be registered, provided that the applicant includes a disclaimer concerning the name of the State.

12. Under the Trademark Law of Cambodia, marks which are identical or similar with, or contain as an element "a name or abbreviation or initials of the name of (…) any State" cannot be registered[4]. This provision is included in the enumeration that corresponds to signs protected under Article 6*ter* of the Paris Convention for the Protection of Industrial Property (hereinafter referred to as "the Paris Convention") and could therefore be considered as a national extension of that provision. Similarly, the Trademark Act of Bangladesh includes country names as an absolute ground of refusal equivalent to that contemplated in the Law of Cambodia[5]. The Trademark Law of Iran (Islamic Republic of) stipulates that a mark cannot be registered if "it is identical with, or is an imitation of, or contains as an element, (…) a name or abbreviation or initials of the name of (…) any State"[6] and the legislation of Oman contains an identical ground[7] for refusal.

13. Under the Trademark Law of the Republic of Moldova and the Regulation on conditions for granting a permission to use the official or historical denominations of the State in marks on products and/or services, as well as on industrial designs, a Government appointed Committee[8], needs to consider and authorize the registration and use as a mark (without exclusive right) of the official or historical name of the State (Republic of Moldova), its short name (Moldova) and translations thereof, used separately or in combination with other verbal or figurative elements. However, the State Agency on Intellectual Property (AGEPI) may authorize physical or legal persons having their domicile or commercial establishment in the Republic of Moldova to use abbreviations or derivatives of the official or historical name of the State, as well the presentation of the official or historical name of the State in a form different than as mentioned.

14. The Delegations of Antigua and Barbuda, Argentina, Belarus, Chile, China, Costa Rica, Ecuador, Georgia and Ukraine[9], quoted in their submissions the legal text containing a ground for refusal which extends the notion of State emblem to country names, and in some cases, short names or abbreviations of those names. Yet, in other member submissions, reference

(b) Excluded from Registration if Considered Lacking Distinctive Character

16. The basic function of a trademark is to distinguish the products or services of one undertaking from those of other undertakings. Hence, the lack of distinctiveness of a trademark prevents it from performing that basic function and the application for registration of a sign which is not distinctive, will regularly be refused. An overwhelming majority of returns to the Questionnaire (94.1 per cent) indicated that names of States were excluded from registration as a trademark if they lacked any distinctive character.

(c) Excluded from Registration if Considered Descriptive

17. In order to be protected, a trademark must be distinctive and among the criteria that make a trademark distinctive is the absence of any descriptive feature. This ground for refusal is invoked by offices in examination, by way of determining whether the signs applied for are indications used to designate the characteristics of the goods or services, or *inter alia*, their place of origin. This is the most commonly used ground for refusal against which the registrability of country names as trademarks is examined, since the interest of the public is that such indications remain available for use by any trader in order to provide information relating to the goods or services sold or offered.

18. For that purpose, various jurisdictions simply prohibit the registration and use of marks that consist of geographical names[13], while others adopt the terminology of Article 6*quinquies* B.2 of the Paris Convention and exclude from registration as trademarks those signs or indications which may serve in trade to designate the geographical origin of goods or services [14]. Although this terminology does not expressly refer to country names, it is interpreted by a number of trademark offices as excluding names of States from registration, at least when the sign applied for is constituted exclusively of the name of the State.

19. According to the quantitative summary of replies to the Questionnaire (Question I(1)(b), Annex II of document SCT/24/6), 95.9 per cent of the responding countries indicated that under the applicable legislation, names of States were excluded from registration as a trademark for goods if they could be considered descriptive of the origin of the goods in respect of which registration was sought.

20. According to the Guidelines for Examination in the Office for Harmonization in the Internal Market (Trade Marks and Designs) (OHIM), descriptive terms can consist of geographical terms, which are described as “every existing name of a place, for example a country, city, lake or river. This list is not exhaustive. Adjectival forms are not sufficiently different from the original geographical term to cause the relevant public to think of something other than that geographical term” [15]. In assessing the registrability of a geographical term as a mark, the assessment is whether the term describes objective characteristics of the goods or services

23. The Trademark Act of the United States of America provides that “a mark which, when used on or in connection with the goods of the applicant is primarily geographically descriptive of them[18]” could be refused registration. Although no specific protection is provided in the law for country names, it should be noted that marks composed of or consisting of geographical signs, including names of States, could be refused if the mark is considered geographically descriptive.

24. In its submission, the Delegation of Germany referred to the Court of Justice of the European Union decision in joint cases C-108/97 and C-109/97, according to which names designating a geographical origin – for example names of countries – as a rule must be kept available for use by other traders[19]. The Delegation noted that any registrations of country names in the trademark register of Germany usually date from a time prior to that judgment.

25. The Delegation of Germany also noted that a geographical name may be registered as a trademark only if there is special evidence that, exceptionally, it is not capable of serving in trade as a reference to the geographical origin of the goods and services concerned. In this context, it is not only the current need to leave the sign free for use by others that should be considered but, based on a realistic prediction, it should also be considered whether it is reasonable to assume that such a need may be expected in the future[20].

26. In some cases however, registration is only granted if the applicant files a disclaimer with the Office. Therefore, the trademark would be accepted as a whole but the name of the State would not be granted protection. In its submission, the Delegation of Jamaica indicated that where the trademark includes as an element the country name, the national Office requires the applicant to include a disclaimer concerning the latter. According to the submission by the Delegation of Belize, the same practice applies in that jurisdiction[21]. In essence, the country name is kept available for other traders, while it can potentially be included in several marks.

27. Another exception to the refusal of the registration of geographically descriptive terms can be found where the Office accepts special evidence that the geographical name in question does not serve in trade to indicate the geographical origin of the goods or services[22]. Similarly, the Examination Guide adopted by the Spanish Patent and Trademark Office (OEPM) specifies that the registration of a geographic designation is not prohibited *per se*, but only to the extent that it constitutes exclusively an indication of origin of the goods or services[23]. Besides, the OEPM Examination Guide clarifies that the exclusion concerning official emblems of Spain does not extend to the denomination “Spain” or the names of other States, which could be protected against appropriation under the general exclusion concerning geographic indications.

28. In its submission, the Delegation of Italy declared that national law does not contain a specific provision concerning the exclusion of country names from registration as trademarks. In such cases, the general principles of trademark law apply. In particular, the law provides that

(d) Excluded from Registration if Considered Misleading

30. In addition to being descriptive, trademarks consisting of or containing country names may also be likely to mislead the public as to the origin of the goods or services. A false representation through a mark that goods or services originate from a particular place may expose that mark to refusal, if in fact the goods or services have no connection with the country name. The boundaries among the terms misleading, deceptive or false are not clearly defined, and there is a degree of overlap in the subject matter that can be characterized as the one or the other.

31. According to the quantitative summary of replies to the Questionnaire (Question I(1)(c), in Annex II of document SCT/24/6), 98.5 per cent of the responding countries indicated that country names were excluded from registration as trademarks if the use of the name of a State could be considered to be misleading as to the origin of the goods and 77.3 per cent said that names of States would be excluded if they could be considered incorrect as to the origin of the products for which registration is sought (Question I(1)(e), in Annex II of document SCT/24/6).

32. The law in certain jurisdictions provides for a universal bar to registrability of geographically misleading signs. For example, European Council Directive 2008/95 provides that trademarks shall not be registered if they are of "such a nature as to deceive the public, for instance as to the nature, quality or geographical origin of the goods or service"[26]. This provision is designed to protect the public, i.e., the consumers of the goods or services offered under the trademark for which registration is sought.

33. Under the Trademark Law of the United States of America, a mark may not be registered if it is "primarily geographically deceptively misdescriptive of the goods or services named in the application"[27]. To support a refusal to register a mark on this ground, it must be shown that: (1) the primary significance of the mark is a generally known geographical location; (2) the goods or services do not originate in the place identified in the mark; (3) purchasers would be likely to believe that the goods or services originate in the geographical place identified in the mark. However, if the mark is remote or obscure, the public is unlikely to make a goods/place or services/place association; and (4) the misrepresentation is a material factor in a significant portion of the relevant consumer's decision to buy the goods or use the services.

34. Under the national laws of several States, geographical terms, or names, as well as abbreviations thereof, cannot be registered as trademarks where such indications are likely to mislead the consumers or create confusion concerning the origin of the goods or services[28]. The terminology used in national law to describe misleading character or likelihood of confusion is not always uniform[29]. In addition, the submissions of two Member States, namely Poland and Ukraine referred to an international standard used by their national Offices to determine the official names of States[30]

37. In some jurisdictions, the exclusion of geographical indicators from registration as trademarks, where those indicators include country names, receive a particular consideration when the application concerns goods such as wines and spirits. In those cases, the trademark registration of signs which include country names is prohibited if the goods (wines and spirits) do not originate in the relevant geographic location[33].

(e) Excluded from Registration if Considered Incorrect

38. Signs that are descriptive or indicative of geographical origin are false or incorrect for products that do not come from the region described or indicated. The returns to the Questionnaire showed that names of States are excluded from registration as a trademark if they can be considered incorrect as to the origin of the products and/or services for which registration is sought in more than three quarters of the cases (77.3 per cent in the case of products and 76.6 per cent in the case of services).

(f) Excluded from Registration for Other Reasons

39. The returns to the Questionnaire showed that in certain jurisdictions (37.3 per cent in the case of goods and 31.8 per cent in the case of services) names of States are excluded from registration as a trademark for reasons other than those mentioned above. The name of a State can be excluded from registration *inter alia* because: it is substantially identical or similar to an earlier trademark; there is a likelihood of confusion with existing signs; it is a common name used in the course of trade; there is an indication of bad faith; the name of the State is a generic term; the name of the State has become customary in the current language or in the honest and established practices of trade; or an earlier trademark, consisting also of the name of a State, acquires distinctive character through use.

40. Additional details were provided in the Member State submissions concerning another ground for refusal, namely when a mark consisting of or containing a country name is considered to be contrary to public order or morality. It is a universally accepted principle that signs which are contrary to public order or morality are excluded from registration as trademarks. The appreciation of whether a particular sign is contrary to public order or morality is regularly subject to cultural and historical representations about the meaning of particular signs. Although it might not be *prim*

PESSÔA, } *Judges,*
FEÏZI-DAÏM BEY, *National Judge.*

JUDGMENT No. 9.

THE CASE OF THE S.S. "LOTUS".

The Government of the French Republic, represented by M. Basdevant, Professor at the Faculty of Law of Paris,

versus

The Government of the Turkish Republic, represented by His Excellency Mahmout Essat Bey, Minister of Justice.

THE COURT,

composed as above,

having heard the observations and conclusions of the Parties,

delivers the following judgment :

Par un compromis signé à Genève le 12 octobre 1926 entre les Gouvernements des Républiques française et turque et déposé au Greffe de la Cour, conformément à l'article 40 du Statut et à l'article 35 du Règlement, le 4 janvier 1927, par les représentants diplomatiques à La Haye desdits Gouvernements, ceux-ci ont soumis à la Cour permanente de Justice internationale la question de compétence judiciaire qui s'est élevée entre eux à la suite de la collision survenue le 2 août 1926 entre les vapeurs *Boz-Kourt* et *Lotus.*

Aux termes du compromis, il incombe à la Cour de statuer sur les questions suivantes :

« 1) La Turquie a-t-elle, contrairement à l'article 15 de la Convention de Lausanne du 24 juillet 1923 relative à l'établissement et à la compétence judiciaire, agi en contradiction des principes du droit international — et si oui, de quels principes — en exerçant, à la suite de la collision survenue le 2 août 1926 en haute mer entre le vapeur français *Lotus* et le vapeur turc *Boz-Kourt* et lors de l'arrivée du navire français à Stamboul, en même temps que contre le capitaine du vapeur turc, des poursuites pénales connexes en vertu de la législation turque, contre le sieur Demons, officier de quart à bord du *Lotus* au moment de la collision, en raison de la perte du *Boz-Kourt* ayant entraîné la mort de huit marins et passagers turcs ?

« 2) En cas de réponse affirmative, quelle réparation pécuniaire, s'il doit en résulter une selon les principes du droit international dans des cas semblables, serait due en faveur du sieur Demons ? »

Donnant suite aux propositions faites d'un commun accord par les Parties dans le compromis conformément aux dispositions de l'article 32 du Règlement, le Président, en vertu de l'article 48 du Statut et des articles 33 et 39 du Règlement, fixa, aux 1er mars et 24 mai 1927, les délais pour le dépôt par chacune des Parties d'un Mémoire et d'un Contre-Mémoire respectivement ; aucun délai ne fut fixé pour le dépôt de répliques, les Parties ayant fait connaître leur intention de n'en pas présenter.

Les Mémoires et Contre-Mémoires furent dûment déposés au Greffe dans les délais fixés et firent l'objet des communications prévues à l'article 43 du Statut.

Au cours des audiences tenues les 2, 3, 6, et 8-10 août 1927, la Cour a entendu, en leurs plaidoiries, réplique et duplique, les agents des Parties, indiqués ci-dessus.

By a special agreement signed at Geneva on October 12th, 1926, between the Governments of the French and Turkish Republics and filed with the Registry of the Court, in accordance with Article 40 of the Statute and Article 35 of the Rules of Court, on January 4th, 1927, by the diplomatic representatives at The Hague of the aforesaid Governments, the latter have submitted to the Permanent Court of International Justice the question of jurisdiction which has arisen between them following upon the collision which occurred on August 2nd, 1926, between the steamships *Boz-Kourt* and *Lotus*.

According to the special agreement, the Court has to decide the following questions :

> "(1) Has Turkey, contrary to Article 15 of the Convention of Lausanne of July 24th, 1923, respecting conditions of residence and business and jurisdiction, acted in conflict with the principles of international law—and if so, what principles—by instituting, following the collision which occurred on August 2nd, 1926, on the high seas between the French steamer *Lotus* and the Turkish steamer *Boz-Kourt* and upon the arrival of the French steamer at Constantinople—as well as against the captain of the Turkish steamship—joint criminal proceedings in pursuance of Turkish law against M. Demons, officer of the watch on board the *Lotus* at the time of the collision, in consequence of the loss of the *Boz-Kourt* having involved the death of eight Turkish sailors and passengers ?
>
> "(2) Should the reply be in the affirmative, what pecuniary reparation is due to M. Demons, provided, according to the principles of international law, reparation should be made in similar cases ?"

Giving effect to the proposals jointly made by the Parties to the special agreement in accordance with the terms of Article 32 of the Rules, the President, under Article 48 of the Statute and Articles 33 and 39 of the Rules, fixed the dates for the filing by each Party of a Case and Counter-Case as March 1st and May 24th, 1927, respectively ; no time was fixed for the submission of replies, as the Parties had expressed the wish that there should not be any.

The Cases and Counter-Cases were duly filed with the Registry by the dates fixed and were communicated to those concerned as provided in Article 43 of the Statute.

In the course of hearings held on August 2nd, 3rd, 6th, and 8th-10th, 1927, the Court has heard the oral pleadings, reply and rejoinder submitted by the above-mentioned Agents for the Parties.

A l'appui de leurs conclusions respectives, les Parties ont soumis à la Cour, en annexes aux pièces de la procédure écrite, certains documents dont le bordereau est reproduit à l'annexe.

Pendant la procédure, les Parties ont eu l'occasion de préciser leurs points de vue respectifs par rapport aux questions soumises à l'appréciation de la Cour. Elles l'ont fait en formulant des conclusions plus ou moins développées, résumant leurs thèses. C'est ainsi que, dans son Mémoire, le Gouvernement français demande qu'il plaise à la Cour :

« Dire et juger que, selon la Convention relative à l'établissement et à la compétence judiciaire signée à Lausanne le 24 juillet 1923 et les règles du droit international, la compétence pour exercer des poursuites pénales contre l'officier de quart d'un navire français, à raison de l'abordage survenu en haute mer entre ce navire et un navire turc, appartient exclusivement aux tribunaux français ;

« Qu'en conséquence, c'est à tort, contrairement à ladite Convention et en contradiction des règles du droit international, que les autorités judiciaires turques ont poursuivi, incarcéré et condamné le sieur Demons, à raison de l'abordage survenu en haute mer entre le *Lotus* et le *Boz-Kourt ;*

« Par suite, fixer l'indemnité pour réparation du préjudice ainsi causé au sieur Demons à six mille livres turques et ordonner que ladite indemnité sera versée par le Gouvernement de la République turque au Gouvernement de la République française. »

De son côté, le Gouvernement turc, dans son Mémoire, demande simplement qu'il plaise à la Cour « statuer en faveur de la compétence judiciaire turque ».

D'autre part, le Gouvernement français a formulé à nouveau, dans son Contre-Mémoire, les conclusions déjà énoncées dans le Mémoire, en en modifiant quelque peu la rédaction, en y introduisant certains éléments nouveaux et en les faisant précéder de considérants qu'il convient de citer *in extenso,* vu qu'ils résument d'une manière brève et précise la thèse du Gouvernement français ; les considérants et les conclusions nouvelles sont ainsi conçus :

« Attendu que la substitution de la compétence des tribunaux turcs à celle des tribunaux consulaires étrangers pour connaître des actions pénales dirigées contre des étrangers a été le résultat du consentement donné par les Puissances à cette substitution dans les Conventions signées à Lausanne le 24 juillet 1923 ;

In support of their respective submissions, the Parties have placed before the Court, as annexes to the documents of the written proceedings, certain documents, a list of which is given in the annex.

In the course of the proceedings, the Parties have had occasion to define the points of view respectively adopted by them in relation to the questions referred to the Court. They have done so by formulating more or less developed conclusions summarizing their arguments. Thus the French Government, in its Case, asks for judgment to the effect that :

"Under the Convention respecting conditions of residence and business and jurisdiction signed at Lausanne on July 24th, 1923, and the principles of international law, jurisdiction to entertain criminal proceedings against the officer of the watch of a French ship, in connection with the collision which occurred on the high seas between that vessel and a Turkish ship, belongs exclusively to the French Courts ;

"Consequently, the Turkish judicial authorities were wrong in prosecuting, imprisoning and convicting M. Demons, in connection with the collision which occurred on the high seas between the *Lotus* and the *Boz-Kourt,* and by so doing acted in a manner contrary to the above-mentioned Convention and to the principles of international law ;

« Accordingly the Court is asked to fix the indemnity in reparation of the injury thus inflicted upon M. Demons at 6,000 Turkish pounds and to order this indemnity to be paid by the Government of the Turkish Republic to the Government of the French Republic."

The Turkish Government, for its part, simply asks the Court in its Case to "give judgment in favour of the jurisdiction of the Turkish Courts".

The French Government, however, has, in its Counter-Case, again formulated the conclusions, already set out in its Case, in a slightly modified form, introducing certain new points preceded by arguments which should be cited in full, seeing that they summarize in a brief and precise manner the point of view taken by the French Government ; the new arguments and conclusions are as follows :

"Whereas the substitution of the jurisdiction of the Turkish Courts for that of the foreign consular courts in criminal proceedings taken against foreigners is the outcome of the consent given by the Powers to this substitution in the Conventions signed at Lausanne on July 24th, 1923 ;

« Que ce consentement, loin d'avoir été donné pour ce qui concerne les actions pénales dirigées contre des étrangers à raison de crimes ou délits commis à l'étranger, a été nettement refusé par les Puissances et notamment par la France ;

« Que ce refus résulte du rejet d'un amendement turc tendant à consacrer cette compétence et des déclarations faites à ce propos ;

« Que, par suite, la Convention de Lausanne du 24 juillet 1923, interprétée à la lumière de ces circonstances et intentions, ne permet pas que les tribunaux turcs connaissent de poursuites pénales contre un Français à raison de crimes ou délits commis hors de Turquie ;

« Au surplus, attendu que selon le droit des gens établi par la pratique des nations civilisées dans leurs rapports mutuels, un État n'est pas en droit, en dehors d'accords spéciaux exprès ou tacites, d'étendre la compétence pénale de ses tribunaux à un crime ou délit commis par un étranger à l'étranger à raison du seul fait qu'un de ses nationaux en a été victime ;

« Attendu que les faits accomplis en haute mer à bord d'un navire de commerce ne sont, en principe, justiciables, au point de vue pénal, que des tribunaux de l'État dont le navire porte le pavillon ;

« Qu'il y a là une conséquence du principe de la liberté des mers et que les États y attachant une importance particulière n'y ont apporté que de rares dérogations ;

« Que, selon le droit existant, la nationalité de la victime n'est pas un motif suffisant de faire échec à cette règle et qu'il en a été jugé ainsi dans l'affaire du *Costa Rica Packet ;*

« Attendu qu'il y a des raisons particulières de maintenir l'application de cette règle en cas d'abordage, raisons tirées notamment du fait que le caractère fautif de l'abordage s'apprécie à la lumière de règlements purement nationaux s'imposant au navire et dont l'exécution doit être surveillée par ses autorités nationales ;

« Que l'abordage ne saurait être localisé sur le navire coulé pour en déduire la compétence des tribunaux du pays de celui-ci, une telle prétention étant en contradiction avec la réalité ;

« Que la prétention d'étendre, pour cause de connexité, la compétence des tribunaux nationaux de l'un des navires à l'action dirigée contre un officier de l'autre navire impliqué dans la collision alors que ces deux navires n'ont pas la même nationalité, ne trouve aucun appui en droit international ;

« Attendu qu'en décider autrement et admettre la compétence des tribunaux turcs pour l'action pénale dirigée contre l'officier de quart du navire français impliqué dans la collision serait introduire une innovation en entière discordance avec des précédents solidement établis ;

"As this consent, far from having been given as regards criminal proceedings against foreigners for crimes or offences committed abroad, has been definitely refused by the Powers and by France in particular ;

"As this refusal follows from the rejection of a Turkish amendment calculated to establish this jurisdiction and from the statements made in this connection ;

"As, accordingly, the Convention of Lausanne of July 24th, 1923, construed in the light of these circumstances and intentions, does not allow the Turkish Courts to take cognizance of criminal proceedings directed against a French citizen for crimes or offences committed outside Turkey ;

"Furthermore, whereas, according to international law as established by the practice of civilized nations, in their relations with each other, a State is not entitled, apart from express or implicit special agreements, to extend the criminal jurisdiction of its courts to include a crime or offence committed by a foreigner abroad solely in consequence of the fact that one of its nationals has been a victim of the crime or offence ;

"Whereas acts performed on the high seas on board a merchant ship are, in principle and from the point of view of criminal proceedings, amenable only to the jurisdiction of the courts of the State whose flag the vessel flies ;

"As that is a consequence of the principle of the freedom of the seas, and as States, attaching especial importance thereto, have rarely departed therefrom ;

"As, according to existing law, the nationality of the victim is not a sufficient ground to override this rule, and seeing that this was held in the case of the *Costa Rica Packet ;*

"Whereas there are special reasons why the application of this rule should be maintained in collision cases, which reasons are mainly connected with the fact that the culpable character of the act causing the collision must be considered in the light of purely national regulations which apply to the ship and the carrying out of which must be controlled by the national authorities ;

"As the collision cannot, in order thus to establish the jurisdiction of the courts of the country to which it belongs, be localized in the vessel sunk, such a contention being contrary to the facts ;

"As the claim to extend the jurisdiction of the courts of the country to which one vessel belongs, on the ground of the "connexity" (*connexité*) of offences, to proceedings against an officer of the other vessel concerned in the collision, when the two vessels are not of the same nationality, has no support in international law ;

"Whereas a contrary decision recognizing the jurisdiction of the Turkish Courts to take cognizance of the criminal proceedings against the officer of the watch of the French ship involved in the collision would amount to introducing an innovation entirely at variance with firmly established precedent ;

« Attendu que le compromis soumet à la Cour la question d'une indemnité à allouer au sieur Demons comme conséquence de la décision rendue par elle sur la première question ;

« Que toutes autres conséquences éventuelles de ladite décision, non soumises à la Cour, sont par là même réservées ;

« Que l'arrestation du sieur Demons, son emprisonnement et sa condamnation étant le fait d'autorités incompétentes selon le droit international, le principe d'une indemnité à son profit et à la charge de la Turquie ne saurait être contesté ;

« Que son incarcération a duré trente-neuf jours, sa mise en liberté sous caution n'ayant été que tardivement accordée contrairement aux dispositions de la Déclaration sur l'administration judiciaire signée à Lausanne le 24 juillet 1923 ;

« Que cette poursuite a été suivie d'une condamnation de nature à causer au sieur Demons un préjudice au moins moral ;

« Que les autorités turques ont, à la veille de sa condamnation et alors qu'il avait subi une détention à peu près égale à la moitié de celle à laquelle il allait être condamné, subordonné sa mise en liberté à un cautionnement de six mille livres turques ;

. . . .

« Dire et juger, tant en l'absence qu'en la présence du Gouvernement de la République turque :

« Que, d'après les règles du droit international et d'après la Convention relative à l'établissement et à la compétence judiciaire signée à Lausanne le 24 juillet 1923, la compétence pour exercer des poursuites pénales contre l'officier de quart d'un navire français, à raison de l'abordage survenu en haute mer entre ce navire et un navire turc, appartient exclusivement aux tribunaux français ;

« Qu'en conséquence, c'est à tort, contrairement aux règles du droit international et à ladite Convention, que les autorités judiciaires turques ont poursuivi, incarcéré et condamné le sieur Demons à raison de l'abordage survenu en haute mer entre le *Lotus* et le *Boz-Kourt ;*

« Par suite, fixer l'indemnité pour réparation du préjudice ainsi causé au sieur Demons à six mille livres turques et ordonner que ladite indemnité sera versée par le Gouvernement de la République turque au Gouvernement de la République française dans le délai d'un mois à compter de la sentence, et ce sans préjudice du remboursement du cautionnement versé par le sieur Demons ;

« Et donner acte au Gouvernement de la République française que toutes autres conséquences éventuelles de la décision rendue, non soumises à la Cour, sont, par là même, réservées. »

Le Gouvernement turc, dans son Contre-Mémoire, se borne à répéter la conclusion de son Mémoire, en la faisant précéder, "Whereas the special agreement submits to the Court the question of an indemnity to be awarded to Monsieur Demons as a consequence of the decision given by it upon the first question ;

"As any other consequences involved by this decision, not having been submitted to the Court, are *ipso facto* reserved ;

"As the arrest, imprisonment and conviction of Monsieur Demons are the acts of authorities having no jurisdiction under international law, the principle of an indemnity enuring to the benefit of Monsieur Demons and chargeable to Turkey, cannot be disputed ;

"As his imprisonment lasted for thirty-nine days, there having been delay in granting his release on bail contrary to the provisions of the Declaration regarding the administration of justice signed at Lausanne on July 24th, 1923 ;

"As his prosecution was followed by a conviction calculated to do Monsieur Demons at least moral damage ;

"As the Turkish authorities, immediately before his conviction, and when he had undergone detention about equal to one half of the period to which he was going to be sentenced, made his release conditional upon bail in 6,000 Turkish pounds ;

. . . .

"Asks for judgment, whether the Government of the Turkish Republic be present or absent, to the effect :

"That, under the rules of international law and the Convention respecting conditions of residence and business and jurisdiction signed at Lausanne on July 24th, 1923, jurisdiction to entertain criminal proceedings against the officer of the watch of a French ship, in connection with the collision which occurred on the high seas between that ship and a Turkish ship, belongs exclusively to the French Courts ;

"That, consequently, the Turkish judicial authorities were wrong in prosecuting, imprisoning and convicting Monsieur Demons, in connection with the collision which occurred on the high seas between the *Lotus* and the *Boz-Kourt*, and by so doing acted in a manner contrary to the principles of international law and to the above-mentioned Convention ;

"Accordingly, the Court is asked to fix the indemnity in reparation of the injury thus inflicted on Monsieur Demons at 6,000 Turkish pounds and to order this indemnity to be paid by the Government of the Turkish Republic to the Government of the French Republic within one month from the date of judgment, without prejudice to the repayment of the bail deposited by Monsieur Demons.

"The Court is also asked to place on record that any other consequences which the decision given might have, not having been submitted to the Court, are *ipso facto* reserved."

The Turkish Government, in its Counter-Case, confines itself to repeating the conclusion of its Case, preceding it, however, by toutefois, d'un court exposé de sa thèse, exposé qu'il convient de reproduire, étant donné qu'il fait contre-partie aux considérants qui précèdent les conclusions du Contre-Mémoire français :

« 1. — L'article 15 de la Convention de Lausanne relative à l'établissement et à la compétence judiciaire réfère entièrement et de façon absolue — sous réserve seulement de l'article 16 — la compétence judiciaire turque aux principes du droit international. Cet article ne saurait supporter la moindre réserve ni la moindre interprétation faite en lui attribuant un sens différent. En conséquence, la Turquie n'a, en vertu de cet article, dans l'emploi de sa compétence judiciaire en toute affaire qui intéresse les étrangers, d'autre souci que de ne pas agir en contradiction des principes du droit international.

« 2. — L'article 6 du Code pénal turc, qui est textuellement emprunté au Code pénal italien, n'est pas, en l'espèce, contraire aux principes du droit international.

« 3. — Les navires en haute mer faisant partie du territoire de la nation dont ils portent le pavillon, et, dans le cas qui nous occupe, le lieu du délit étant le vapeur *Boz-Kourt* battant pavillon turc, la compétence de la Turquie est formelle dans la poursuite exercée comme si le cas s'était produit sur son territoire — ainsi que des faits analogues le démontrent.

« 4. — L'affaire *Boz-Kourt* — *Lotus* étant un cas de « délit connexe », le Code d'instruction criminelle — qui est emprunté à la France — ordonne que l'officier français soit l'objet de poursuites connexes en même temps que l'officier turc, ce que confirment du reste les doctrines et la législation de tous les pays. En conséquence, la Turquie est en droit, à ce point de vue également, d'affirmer sa compétence.

« 5. — Si même l'on considère la question du point de vue de l'abordage seul, aucun principe de droit international d'ordre pénal n'existant pour arrêter la compétence civilement évidente de la Turquie, celle-ci est compétente pour entreprendre des poursuites pénales.

« 6. — La Turquie exerçant une compétence d'ordre essentiel, et les États n'étant d'ailleurs pas, de par les principes du droit international, tenus, dans des cas semblables, de verser des indemnités, il est hors de doute qu'il ne saurait être question, pour le Gouvernement de la République turque, de l'indemnité réclamée dans le Mémoire français, ce Gouvernement étant compétent pour exercer des poursuites contre le citoyen français Demons, qui, par suite d'un abordage, se trouve avoir commis un homicide par imprudence.

« *Plaise à la Cour*, statuer en faveur de la compétence judiciaire turque. »

a short statement of its argument, which statement it will be well to reproduce, since it corresponds to the arguments preceding the conclusions of the French Counter-Case:

"1.—Article 15 of the Convention of Lausanne respecting conditions of residence and business and jurisdiction refers simply and solely, as regards the jurisdiction of the Turkish Courts, to the principles of international law, subject only to the provisions of Article 16. Article 15 cannot be read as supporting any reservation whatever or any construction giving it another meaning. Consequently, Turkey, when exercising jurisdiction in any case concerning foreigners, need, under this article, only take care not to act in a manner contrary to the principles of international law.

"2.—Article 6 of the Turkish Penal Code, which is taken word for word from the Italian Penal Code, is not, as regards the case, contrary to the principles of international law.

"3.—Vessels on the high seas form part of the territory of the nation whose flag they fly, and in the case under consideration, the place where the offence was committed being the S.S. *Boz-Kourt* flying the Turkish flag, Turkey's jurisdiction in the proceedings taken is as clear as if the case had occurred on her territory—as is borne out by analogous cases.

"4.—The *Boz-Kourt—Lotus* case being a case involving "connected" offences (*délits connexes*), the Code of criminal procedure for trial—which is borrowed from France—lays down that the French officer should be prosecuted jointly with and at the same time as the Turkish officer; this, moreover, is confirmed by the doctrines and legislation of all countries. Turkey, therefore, is entitled from this standpoint also to claim jurisdiction.

"5.—Even if the question be considered solely from the point of view of the collision, as no principle of international criminal law exists which would debar Turkey from exercising the jurisdiction which she clearly possesses to entertain an action for damages, that country has jurisdiction to institute criminal proceedings.

"6.—As Turkey is exercising jurisdiction of a fundamental character, and as States are not, according to the principles of international law, under an obligation to pay indemnities in such cases, it is clear that the question of the payment of the indemnity claimed in the French Case does not arise for the Turkish Government, since that Government has jurisdiction to prosecute the French citizen Demons who, as the result of a collision, has been guilty of manslaughter.

"The Court is asked for judgment in favour of the jurisdiction of the Turkish Courts."

Au cours de la procédure orale, l'agent du Gouvernement français s'est borné à renvoyer aux conclusions formulées dans le Contre-Mémoire, en renouvelant simplement la demande de prise d'acte des réserves qui y étaient formulées pour toutes conséquences de l'arrêt futur non soumises à la décision de la Cour ; acte lui est maintenant donné de ces réserves.

De son côté, l'agent du Gouvernement turc s'est abstenu, dans sa plaidoirie et sa duplique, de prendre une conclusion quelconque. Celle qu'il avait libellée dans les pièces par lui présentées au cours de la procédure écrite doit, par conséquent, être considérée comme simplement maintenue.

POINT DE FAIT.

D'après les exposés présentés à la Cour par les agents des Parties dans leurs Mémoires écrits ainsi que dans leurs plaidoiries orales, les faits se trouvant à l'origine de l'affaire sont, de l'accord des Parties, les suivants :

Le 2 août 1926, vers minuit, un abordage s'est produit entre le paquebot français *Lotus*, à destination de Constantinople, et le vapeur charbonnier turc *Boz-Kourt*, en un lieu situé cinq à six milles marins au nord du cap Sigri (Mitylène). Le *Boz-Kourt*, coupé en deux, a sombré, et huit ressortissants turcs se trouvant à son bord ont péri. Après avoir fait toute diligence pour venir à l'aide des naufragés, dont dix ont pu être sauvés, le *Lotus* a continué sa route vers Constantinople, où il est arrivé le 3 août.

Au moment de l'abordage, l'officier de quart à bord du *Lotus* était M. Demons, citoyen français, lieutenant au long cours et premier lieutenant du bord, tandis que les manœuvres du *Boz-Kourt* étaient dirigées par son capitaine, Hassan Bey, qui s'est trouvé parmi les personnes qui ont été sauvées du naufrage.

Dès le 3 août, la police turque procéda, à bord du *Lotus*, à une enquête sur l'abordage ; et le lendemain, 4 août, le commandant du *Lotus* déposa au Consulat général de France son rapport de mer, dont il remit copie au capitaine du port.

Le 5 août, le lieutenant Demons fut invité par les autorités turques à se rendre à terre pour faire une déposition. L'interrogatoire, dont la longueur eut, incidemment, pour effet de retarder le départ du

During the oral proceedings, the Agent of the French Government confined himself to referring to the conclusions submitted in the Counter-Case, simply reiterating his request that the Court should place on record the reservations made therein as regards any consequences of the judgment not submitted to the Court's decision ; these reservations are now duly recorded.

For his part, the Agent for the Turkish Government abstained both in his original speech and in his rejoinder from submitting any conclusion. The one he formulated in the documents filed by him in the written proceedings must therefore be regarded as having been maintained unaltered.

THE FACTS.

According to the statements submitted to the Court by the Parties' Agents in their Cases and in their oral pleadings, the facts in which the affair originated are agreed to be as follows :

On August 2nd, 1926, just before midnight, a collision occurred between the French mail steamer *Lotus*, proceeding to Constantinople, and the Turkish collier *Boz-Kourt*, between five and six nautical miles to the north of Cape Sigri (Mitylene). The *Boz-Kourt*, which was cut in two, sank, and eight Turkish nationals who were on board perished. After having done everything possible to succour the shipwrecked persons, of whom ten were able to be saved, the *Lotus* continued on its course to Constantinople, where it arrived on August 3rd.

At the time of the collision, the officer of the watch on board the *Lotus* was Monsieur Demons, a French citizen, lieutenant in the merchant service and first officer of the ship, whilst the movements of the *Boz-Kourt* were directed by its captain, Hassan Bey, who was one of those saved from the wreck.

As early as August 3rd the Turkish police proceeded to hold an enquiry into the collision on board the *Lotus* ; and on the following day, August 4th, the captain of the *Lotus* handed in his master's report at the French Consulate-General, transmitting a copy to the harbour master.

On August 5th, Lieutenant Demons was requested by the Turkish authorities to go ashore to give evidence. The examination, the length of which incidentally resulted in delaying the departure of

Lotus, aboutit à la mise en arrestation du lieutenant Demons — d'ailleurs sans avis préalable au consul général de France — et de Hassan Bey, entre autres. Cette arrestation, qualifiée par l'agent turc de préventive, aurait eu pour objet d'assurer le cours normal des poursuites pénales intentées, sur plainte des familles des victimes de l'abordage, par le ministère public de Stamboul contre les deux officiers sous l'inculpation d'homicide par imprudence.

La cause fut entendue par la Cour criminelle de Stamboul d'abord le 28 août. A cette occasion, le lieutenant Demons excipa de l'incompétence de la juridiction turque ; la Cour, cependant, se déclara compétente. Lors de la reprise des débats, le 11 septembre, le lieutenant Demons demanda sa mise en liberté sous caution ; il fut donné suite à cette demande le 13 septembre, la caution étant fixée à 6.000 livres turques.

Le 15 septembre, la Cour criminelle rendit sa sentence, dont la teneur n'a pas été communiquée à la Cour par les Parties. Il est cependant constant qu'elle condamnait le lieutenant Demons à quatre-vingt jours de prison et à une amende de 22 livres, Hassan Bey étant condamné à une peine légèrement plus élevée.

Il est également constant que le procureur de la République turque a formé contre cette décision un pourvoi en cassation qui en a suspendu l'exécution ; qu'une décision sur ce pourvoi n'est pas encore intervenue, mais que le compromis du 12 octobre 1926 n'a pas eu pour effet de suspendre « la procédure pénale .... actuellement en cours en Turquie ».

L'action des autorités judiciaires turques à l'égard du lieutenant Demons provoqua aussitôt de nombreuses démarches diplomatiques et autres interventions de la part du Gouvernement français ou de ses représentants en Turquie, visant soit à protester contre l'arrestation du lieutenant Demons, soit à demander sa mise en liberté, soit à obtenir le dessaisissement des tribunaux turcs en faveur de la juridiction française.

A la suite de ces démarches, le Gouvernement de la République turque a déclaré, le 2 septembre 1926, qu'il « ne se refuserait point à ce que le conflit de juridiction soit porté devant la Cour de La Haye ».

the *Lotus*, led to the placing under arrest of Lieutenant Demons—without previous notice being given to the French Consul-General—and Hassan Bey, amongst others. This arrest, which has been characterized by the Turkish Agent as arrest pending trial (*arrestation préventive*), was effected in order to ensure that the criminal prosecution instituted against the two officers, on a charge of manslaughter, by the Public Prosecutor of Stamboul, on the complaint of the families of the victims of the collision, should follow its normal course.

The case was first heard by the Criminal Court of Stamboul on August 28th. On that occasion, Lieutenant Demons submitted that the Turkish Courts had no jurisdiction ; the Court, however, overruled his objection. When the proceedings were resumed on September 11th, Lieutenant Demons demanded his release on bail : this request was complied with on September 13th, the bail being fixed at 6,000 Turkish pounds.

On September 15th, the Criminal Court delivered its judgment, the terms of which have not been communicated to the Court by the Parties. It is, however, common ground, that it sentenced Lieutenant Demons to eighty days' imprisonment and a fine of twenty-two pounds, Hassan Bey being sentenced to a slightly more severe penalty.

It is also common ground between the Parties that the Public Prosecutor of the Turkish Republic entered an appeal against this decision, which had the effect of suspending its execution until a decision upon the appeal had been given ; that such decision has not yet been given ; but that the special agreement of October 12th, 1926, did not have the effect of suspending "the criminal proceedings . . . . now in progress in Turkey".

The action of the Turkish judicial authorities with regard to Lieutenant Demons at once gave rise to many diplomatic representations and other steps on the part of the French Government or its representatives in Turkey, either protesting against the arrest of Lieutenant Demons or demanding his release, or with a view to obtaining the transfer of the case from the Turkish Courts to the French Courts.

As a result of these representations, the Government of the Turkish Republic declared on September 2nd, 1926, that "it would have no objection to the reference of the conflict of jurisdiction to the Court at The Hague".

Le Gouvernement français ayant donné, le 6 du même mois, « son plein agrément à la solution proposée », les deux Gouvernements nommèrent leurs plénipotentiaires en vue de la rédaction du compromis à soumettre à la Cour ; ce compromis fut signé à Genève le 12 octobre 1926, ainsi que cela a été dit ci-dessus, et le dépôt des ratifications eut lieu le 27 décembre suivant.

POINT DE DROIT.

I.

Avant d'aborder l'examen des principes du droit international en contradiction desquels la Turquie aurait agi — et cela contrairement à l'article 15 de la Convention de Lausanne du 24 juillet 1923 relative à l'établissement et à la compétence judiciaire —, il convient de préciser, à la lumière de la procédure, tant écrite qu'orale, la situation telle qu'elle résulte du compromis. En effet, la Cour ayant été saisie de la présente affaire au moyen de la notification d'un compromis conclu par les Parties en cause, c'est dans les termes de ce compromis plutôt que dans les conclusions des Parties qu'elle doit rechercher quels sont les points précis sur lesquels il lui appartient de se prononcer. A cet égard, il y a lieu de constater ce qui suit :

1. — La collision, survenue le 2 août 1926, entre le vapeur *Lotus*, battant pavillon français, et le vapeur *Boz-Kourt*, battant pavillon turc, a eu lieu en haute mer : la juridiction territoriale d'un État quelconque, autre que la France et la Turquie, n'entre donc pas en jeu.

2. — La violation éventuelle des principes du droit international aurait consisté dans l'exercice de poursuites pénales contre le lieutenant Demons. Il ne s'agit donc pas d'un acte particulier de ces poursuites — tel que l'ouverture d'une instruction criminelle, l'arrestation, la détention préventive ou le jugement rendu par la Cour criminelle de Stamboul —, mais bien du fait de l'exercice de la juridiction pénale turque comme tel. C'est pourquoi les thèses avancées par les Parties dans les deux phases de la procédure ont

The French Government having, on the 6th of the same month, given "its full consent to the proposed solution", the two Governments appointed their plenipotentiaries with a view to the drawing up of the special agreement to be submitted to the Court; this special agreement was signed at Geneva on October 12th, 1926, as stated above, and the ratifications were deposited on December 27th, 1926.

THE LAW.

I.

Before approaching the consideration of the principles of international law contrary to which Turkey is alleged to have acted—thereby infringing the terms of Article 15 of the Convention of Lausanne of July 24th, 1923, respecting conditions of residence and business and jurisdiction—, it is necessary to define, in the light of the written and oral proceedings, the position resulting from the special agreement. For, the Court having obtained cognizance of the present case by notification of a special agreement concluded between the Parties in the case, it is rather to the terms of this agreement than to the submissions of the Parties that the Court must have recourse in establishing the precise points which it has to decide. In this respect the following observations should be made:

1.—The collision which occurred on August 2nd, 1926, between the S.S. *Lotus*, flying the French flag, and the S.S. *Boz-Kourt*, flying the Turkish flag, took place on the high seas: the territorial jurisdiction of any State other than France and Turkey therefore does not enter into account.

2.—The violation, if any, of the principles of international law would have consisted in the taking of criminal proceedings against Lieutenant Demons. It is not therefore a question relating to any particular step in these proceedings—such as his being put to trial, his arrest, his detention pending trial or the judgment given by the Criminal Court of Stamboul—but of the very fact of the Turkish Courts exercising criminal jurisdiction. That is why the arguments put forward by the Parties in both phases of trait exclusivement à la question de savoir si la Turquie a, ou n'a pas, d'après les principes du droit international, compétence pour exercer des poursuites en l'espèce.

Les Parties sont d'accord pour reconnaître que la Cour n'est pas appelée à examiner la conformité des poursuites avec la loi turque ; elle n'a donc pas à examiner si, indépendamment de la question de la compétence même, les dispositions de la législation turque invoquées par les autorités turques étaient réellement applicables en l'espèce, ou si la manière dont les poursuites contre le lieutenant Demons ont été conduites pourrait constituer un déni de justice et à ce titre une violation du droit international. Les débats ont roulé exclusivement sur l'existence ou l'inexistence de la compétence pénale en l'espèce.

3. — Les poursuites pénales ont eu lieu en raison de la perte du *Boz-Kourt* ayant entraîné la mort de huit marins et passagers turcs. Il est évident, d'une part, que cette conséquence de la collision constitue un élément essentiel pour l'institution des poursuites pénales en question ; d'autre part, il résulte des allégations des deux Parties qu'aucune intention criminelle n'a été imputée ni à l'un ni à l'autre des officiers responsables des manœuvres des deux vapeurs ; on est, par conséquent, en présence de poursuites pénales pour homicide par imprudence ou négligence. Le Gouvernement français soutient que les infractions aux règlements de navigation relèvent exclusivement de la juridiction de l'État du pavillon ; mais il ne soutient pas qu'un abordage entre deux navires ne puisse donner lieu également aux sanctions de droit pénal commun prévues pour le cas d'homicide. Les précédents invoqués par lui et ayant trait à des cas d'abordage supposent tous la possibilité de poursuites pénales en vue de pareilles sanctions, la contestation ne portant que sur la compétence — concurrente ou exclusive — qu'un autre État pourrait réclamer à cet égard. Ainsi qu'il a déjà été remarqué, la Cour n'a pas à examiner la légalité des poursuites d'après le droit turc ; les questions de droit pénal relatives au bien-fondé des poursuites et, partant, à l'existence d'un *nexus causalis* entre les actes du lieutenant Demons et la perte de huit ressortissants turcs, n'entrent pas en ligne de compte pour la Cour. Il ne résulte du reste pas de la documentation soumise à la Cour dans quelles conditions précises ces personnes ont péri ; toutefois, il n'est pas douteux que leur mort puisse être considérée comme suite directe de l'abordage,

the proceedings relate exclusively to the question whether Turkey has or has not, according to the principles of international law, jurisdiction to prosecute in this case.

The Parties agree that the Court has not to consider whether the prosecution was in conformity with Turkish law ; it need not therefore consider whether, apart from the actual question of jurisdiction, the provisions of Turkish law cited by Turkish authorities were really applicable in this case, or whether the manner in which the proceedings against Lieutenant Demons were conducted might constitute a denial of justice, and accordingly, a violation of international law. The discussions have borne exclusively upon the question whether criminal jurisdiction does or does not exist in this case.

3.—The prosecution was instituted because the loss of the *Boz-Kourt* involved the death of eight Turkish sailors and passengers. It is clear, in the first place, that this result of the collision constitutes a factor essential for the institution of the criminal proceedings in question ; secondly, it follows from the statements of the two Parties that no criminal intention has been imputed to either of the officers responsible for navigating the two vessels ; it is therefore a case of prosecution for involuntary manslaughter. The French Government maintains that breaches of navigation regulations fall exclusively within the jurisdiction of the State under whose flag the vessel sails ; but it does not argue that a collision between two vessels cannot also bring into operation the sanctions which apply to criminal law in cases of manslaughter. The precedents cited by it and relating to collision cases all assume the possibility of criminal proceedings with a view to the infliction of such sanctions, the dispute being confined to the question of jurisdiction—concurrent or exclusive—which another State might claim in this respect. As has already been observed, the Court has not to consider the lawfulness of the prosecution under Turkish law ; questions of criminal law relating to the justification of the prosecution and consequently to the existence of a *nexus causalis* between the actions of Lieutenant Demons and the loss of eight Turkish nationals are not relevant to the issue so far as the Court is concerned. Moreover, the exact conditions in which these persons perished do not appear from the documents submitted to the Court ; nevertheless, there is no doubt that their death may be regarded as the direct et il n'a pas non plus été allégué de la part du Gouvernement français que cette relation entre cause et effet ne puisse exister.

4. — Des poursuites pénales connexes ont eu lieu en même temps contre le lieutenant Demons et contre le capitaine du vapeur turc. En ce qui concerne la notion de connexité, l'agent du Gouvernement turc, dans les conclusions de son Contre-Mémoire, a renvoyé au Code d'instruction criminelle turc, dont les dispositions seraient empruntées au Code français correspondant. Or, le droit français connaît, entre autres, la connexité par unité du temps et du lieu. Donc, en l'espèce, la Cour interprète la notion en question dans ce sens que les poursuites contre le capitaine du vapeur turc pour lesquelles la compétence turque n'est pas contestée, et celles qui ont été dirigées contre le lieutenant Demons, ont été considérées par les autorités turques, au point de vue de l'instruction de l'affaire, comme une unité, étant donné que la collision des deux vapeurs constitue un ensemble de faits dont l'appréciation, au point de vue du droit pénal turc, devait être confiée à la même juridiction.

5. — Les poursuites pénales ont eu lieu en vertu de la législation turque. Le compromis n'indique pas quelles dispositions de cette législation — soit une, soit plusieurs — entrent en ligne de compte. Aucun document n'a été soumis à la Cour qui permettrait de savoir sur la base de quel article du Code pénal turc les poursuites ont été exercées ; cependant, le Gouvernement français déclare que la Cour criminelle a fondé sa compétence sur l'article 6 du Code pénal turc, et, loin de contredire cette allégation, la Turquie, dans les conclusions de son Contre-Mémoire, affirme la conformité de cet article avec les principes du droit international. Il ne résulte pas de la procédure si les poursuites auraient été instituées uniquement sur la base dudit article.

L'article 6 du Code pénal turc a la teneur suivante dans la loi n° 765, du 1^er^ mars 1926 (Journal officiel, n° 320, du 13 mars 1926) :

> « L'étranger qui, hors les cas prévus par l'article 4, commet à l'étranger, au préjudice de la Turquie ou d'un Turc, un délit pour lequel la loi turque prononce une peine restrictive de la liberté dont le minimum ne soit pas inférieur à une année,

outcome of the collision, and the French Government has not contended that this relation of cause and effect cannot exist.

4.—Lieutenant Demons and the captain of the Turkish steamship were prosecuted jointly and simultaneously. In regard to the conception of "connexity" of offences (*connexité*), the Turkish Agent in the submissions of his Counter-Case has referred to the Turkish Code of criminal procedure for trial, the provisions of which are said to have been taken from the corresponding French Code. Now in French law, amongst other factors, coincidence of time and place may give rise to "connexity" (*connexité*). In this case, therefore, the Court interprets this conception as meaning that the proceedings against the captain of the Turkish vessel in regard to which the jurisdiction of the Turkish Courts is not disputed, and the proceedings against Lieutenant Demons, have been regarded by the Turkish authorities, from the point of view of the investigation of the case, as one and the same prosecution, since the collision of the two steamers constitutes a complex of facts the consideration of which should, from the standpoint of Turkish criminal law, be entrusted to the same court.

5.—The prosecution was instituted in pursuance of Turkish legislation. The special agreement does not indicate what clause or clauses of that legislation apply. No document has been submitted to the Court indicating on what article of the Turkish Penal Code the prosecution was based ; the French Government however declares that the Criminal Court claimed jurisdiction under Article 6 of the Turkish Penal Code, and far from denying this statement, Turkey, in the submissions of her Counter-Case, contends that that article is in conformity with the principles of international law. It does not appear from the proceedings whether the prosecution was instituted solely on the basis of that article.

Article 6 of the Turkish Penal Code, Law No. 765 of March 1st, 1926 (Official Gazette No. 320 of March 13th, 1926), runs as follows:

[*Translation.*]

> "Any foreigner who, apart from the cases contemplated by Article 4, commits an offence abroad to the prejudice of Turkey or of a Turkish subject, for which offence Turkish law prescribes a penalty involving loss of freedom for a

est puni, d'après le Code pénal turc, pourvu qu'il soit arrêté en Turquie. Mais la peine est diminuée d'un tiers et, au lieu de la peine de mort, on applique vingt ans de prison lourde.

« Toutefois, dans ce cas, les poursuites n'ont lieu qu'à la requête du ministre de la Justice ou sur la plainte de la Partie lésée.

« Si le délit a été commis au préjudice d'un autre étranger, le coupable est puni, à la requête du ministre de la Justice, suivant les dispositions édictées au premier alinéa du présent article, pourvu toutefois :

« 1) qu'il s'agisse d'un fait pour lequel la loi turque prononce une peine restrictive de la liberté, dont le minimum ne soit pas inférieur à trois ans ;

« 2) qu'il n'existe pas de traité d'extradition ou que l'extradition n'ait été acceptée ni par le gouvernement du lieu dans lequel l'inculpé a commis le délit, ni par le gouvernement de sa patrie. »

Même si la Cour doit admettre que les autorités turques aient cru devoir baser les poursuites contre le lieutenant Demons sur l'article 6 précité, la question à elle soumise n'est pas celle de la compatibilité dudit article avec les principes du droit international ; elle est plus générale. La Cour est appelée à constater si, oui ou non, les principes du droit international s'opposent à ce que la Turquie, en vertu de sa législation, exerce des poursuites pénales contre le lieutenant Demons. Ni la conformité de l'article 6, comme tel, avec les principes du droit international, ni l'application de cet article par les autorités turques, ne forment l'objet du litige ; c'est le fait même de l'institution des poursuites qui est considéré par la France comme étant en contradiction avec lesdits principes. Ainsi, le Gouvernement français a protesté d'emblée contre l'arrestation, indépendamment de la question de savoir quelle disposition de sa législation la Turquie invoquerait pour la justifier. Les arguments avancés par le Gouvernement français au cours de la procédure et fondés sur les principes qui, selon lui, devraient régir la navigation en haute mer, démontrent qu'il contesterait à la Turquie la compétence pour les poursuites contre le lieutenant Demons, même si elles se fondaient sur une disposition du Code pénal autre que l'article 6, en prenant, par exemple, comme point de départ, que le délit en question devrait être considéré, à cause de ses effets, comme ayant été commis sur le territoire turc même.

minimum period of not less than one year, shall be punished in accordance with the Turkish Penal Code provided that he is arrested in Turkey. The penalty shall however be reduced by one third and instead of the death penalty, twenty years of penal servitude shall be awarded.

"Nevertheless, in such cases, the prosecution will only be instituted at the request of the Minister of Justice or on the complaint of the injured Party.

"If the offence committed injures another foreigner, the guilty person shall be punished at the request of the Minister of Justice, in accordance with the provisions set out in the first paragraph of this article, provided however that:

"(1) the article in question is one for which Turkish law prescribes a penalty involving loss of freedom for a minimum period of three years;

"(2) there is no extradition treaty or that extradition has not been accepted either by the government of the locality where the guilty person has committed the offence or by the government of his own country."

Even if the Court must hold that the Turkish authorities had seen fit to base the prosecution of Lieutenant Demons upon the above-mentioned Article 6, the question submitted to the Court is not whether that article is compatible with the principles of international law; it is more general. The Court is asked to state whether or not the principles of international law prevent Turkey from instituting criminal proceedings against Lieutenant Demons under Turkish law. Neither the conformity of Article 6 in itself with the principles of international law nor the application of that article by the Turkish authorities constitutes the point at issue; it is the very fact of the institution of proceedings which is held by France to be contrary to those principles. Thus the French Government at once protested against his arrest, quite independently of the question as to what clause of her legislation was relied upon by Turkey to justify it. The arguments put forward by the French Government in the course of the proceedings and based on the principles which, in its contention, should govern navigation on the high seas, show that it would dispute Turkey's jurisdiction to prosecute Lieutenant Demons, even if that prosecution were based on a clause of the Turkish Penal Code other than Article 6, assuming for instance that the offence in question should be regarded, by reason of its consequences, to have been actually committed on Turkish territory.

II.

Après avoir établi la situation résultant du compromis, la Cour doit maintenant vérifier quels sont les principes du droit international avec lesquels les poursuites contre le lieutenant Demons pourraient éventuellement se trouver en contradiction.

C'est l'article 15 de la Convention de Lausanne du 24 juillet 1923, relative à l'établissement et à la compétence judiciaire, qui renvoie les Parties contractantes aux principes du droit international pour la délimitation de leurs compétences judiciaires respectives.

Cette clause a la teneur suivante :

> « En toutes matières, sous réserve de l'article 16, les questions de compétence judiciaire seront, dans les rapports entre la Turquie et les autres Puissances contractantes, réglées conformément aux principes du droit international. »

Le Gouvernement français soutient que le sens du terme « principes du droit international » dans ledit article devrait être recherché à la lumière de la genèse de la Convention précitée. Il allègue à cet effet qu'au cours des travaux préparatoires, le Gouvernement turc, par un amendement à l'article pertinent d'un projet de texte, a prétendu étendre sa compétence aux crimes commis dans le territoire d'un tiers État, pourvu que, en conformité avec les lois de la Turquie, ces crimes fussent sous la juridiction des tribunaux turcs. Cet amendement, à propos duquel les représentants de la France et de l'Italie ont fait des réserves, a été formellement repoussé par celui de la Grande-Bretagne ; et, la question ayant été depuis renvoyée au Comité de rédaction, celui-ci s'est limité, dans sa version du projet, à déclarer que la compétence judiciaire serait réglée d'accord avec les principes du droit international. Le Gouvernement français déduit de ces faits que le procès intenté contre le lieutenant Demons est contraire à la pensée qui a dirigé l'élaboration de la Convention de Lausanne.

La Cour doit rappeler dans cet ordre d'idées ce qu'elle a dit dans certains de ses arrêts et avis précédents, savoir qu'il n'y a pas lieu de tenir compte des travaux préparatoires si le texte d'une convention est en lui-même suffisamment clair. Or, la Cour estime que le sens des mots « principes du droit international » ne peut, selon leur usage général, signifier autre chose que le droit international tel qu'il est en vigueur entre toutes les nations faisant partie de la

II.

Having determined the position resulting from the terms of the special agreement, the Court must now ascertain which were the principles of international law that the prosecution of Lieutenant Demons could conceivably be said to contravene.

It is Article 15 of the Convention of Lausanne of July 24th, 1923, respecting conditions of residence and business and jurisdiction, which refers the contracting Parties to the principles of international law as regards the delimitation of their respective jurisdiction.

This clause is as follows :

> "Subject to the provisions of Article 16, all questions of jurisdiction shall, as between Turkey and the other contracting Powers, be decided in accordance with the principles of international law."

The French Government maintains that the meaning of the expression "principles of international law" in this article should be sought in the light of the evolution of the Convention. Thus it states that during the preparatory work, the Turkish Government, by means of an amendment to the relevant article of a draft for the Convention, sought to extend its jurisdiction to crimes committed in the territory of a third State, provided that, under Turkish law, such crimes were within the jurisdiction of Turkish Courts. This amendment, in regard to which the representatives of France and Italy made reservations, was definitely rejected by the British representative ; and the question having been subsequently referred to the Drafting Committee, the latter confined itself in its version of the draft to a declaration to the effect that questions of jurisdiction should be decided in accordance with the principles of international law. The French Government deduces from these facts that the prosecution of Demons is contrary to the intention which guided the preparation of the Convention of Lausanne.

The Court must recall in this connection what it has said in some of its preceding judgments and opinions, namely, that there is no occasion to have regard to preparatory work if the text of a convention is sufficiently clear in itself. Now the Court considers that the words "principles of international law", as ordinarily used, can only mean international law as it is applied between all nations belonging to the community of States. This interpretation communauté internationale. Cette interprétation se trouve soulignée par le contexte de l'article même qui dit que les principes du droit international déterminent entre les Parties contractantes les compétences judiciaires — du reste, non seulement pénales mais aussi civiles —, sauf la seule exception visée par l'article 16. En outre, le préambule de la Convention dit que les Hautes Parties contractantes ont en vue un règlement, conformément « au droit des gens moderne », et l'article 28 du Traité de paix de Lausanne, auquel la Convention en question est annexée, stipule l'abolition complète du régime des Capitulations « à tous points de vue ». Dans ces conditions, il n'est pas possible — sauf en vertu d'un texte précis — d'interpréter le terme « principes du droit international » autrement que comme signifiant les principes en vigueur entre toutes les nations indépendantes et qui, partant, s'appliquent au même titre à toutes les Parties contractantes.

Du reste, les travaux préparatoires de la Convention sur l'établissement et la compétence judiciaire ne fourniraient aucun élément de nature à écarter l'interprétation qu'imposent les termes mêmes de l'article 15. Il est vrai que les représentants de la France, de la Grande-Bretagne et de l'Italie ont repoussé l'amendement turc dont il a déjà été fait mention. Mais seul le délégué britannique — d'ailleurs en harmonie avec le droit intérieur de son pays qui consacre le principe de la territorialité en matière de juridiction pénale — a exposé les raisons de son opposition à l'amendement turc ; les motifs des réserves française et italienne, ainsi que ceux qui ont fait exclure du projet élaboré par le Comité de rédaction toute spécification de l'étendue de la juridiction pénale vis-à-vis des étrangers, sont inconnus et auraient pu n'avoir aucun rapport avec les raisons que la France invoque maintenant.

Il convient d'ajouter à ces observations que le texte primitif de l'article pertinent, lequel texte limitait la juridiction turque aux crimes commis en Turquie même, a été aussi mis de côté par le Comité de rédaction ; ce fait pourrait, au même titre, porter à croire que la pensée des rédacteurs de la Convention a été de ne restreindre aucunement cette juridiction.

Les deux propositions opposées tendant à définir d'une manière déterminée le champ d'application des lois pénales turques ayant été écartées, la formule finalement adoptée d'un commun accord dans l'article 15 ne peut viser que les principes du droit international général sur les compétences judiciaires.

is borne out by the context of the article itself which says that the principles of international law are to determine questions of jurisdiction—not only criminal but also civil—between the contracting Parties, subject only to the exception provided for in Article 16. Again, the preamble of the Convention says that the High Contracting Parties are desirous of effecting a settlement in accordance "with modern international law", and Article 28 of the Treaty of Peace of Lausanne, to which the Convention in question is annexed, decrees the complete abolition of the Capitulations "in every respect". In these circumstances it is impossible—except in pursuance of a definite stipulation—to construe the expression "principles of international law" otherwise than as meaning the principles which are in force between all independent nations and which therefore apply equally to all the contracting Parties.

Moreover, the records of the preparation of the Convention respecting conditions of residence and business and jurisdiction would not furnish anything calculated to overrule the construction indicated by the actual terms of Article 15. It is true that the representatives of France, Great Britain and Italy rejected the Turkish amendment already mentioned. But only the British delegate—and this conformably to British municipal law which maintains the territorial principle in regard to criminal jurisdiction—stated the reasons for his opposition to the Turkish amendment ; the reasons for the French and Italian reservations and for the omission from the draft prepared by the Drafting Committee of any definition of the scope of the criminal jurisdiction in respect of foreigners, are unknown and might have been unconnected with the arguments now advanced by France.

It should be added to these observations that the original draft of the relevant article, which limited Turkish jurisdiction to crimes committed in Turkey itself, was also discarded by the Drafting Committee ; this circumstance might with equal justification give the impression that the intention of the framers of the Convention was not to limit this jurisdiction in any way.

The two opposing proposals designed to determine definitely the area of application of Turkish criminal law having thus been discarded, the wording ultimately adopted by common consent for Article 15 can only refer to the principles of general international law relating to jurisdiction.

III.

La Cour, appelée à examiner s'il y a des règles de droit international qui auraient été violées par l'exercice de poursuites pénales, en vertu de la législation turque, contre le lieutenant Demons, se trouve placée en premier lieu devant une question de principe, question qui, en effet, s'est révélée comme fondamentale dans les Mémoires, Contre-Mémoires et plaidoiries des deux Parties. Le Gouvernement français soutient la thèse suivant laquelle les tribunaux turcs, pour être compétents, devraient pouvoir se fonder sur un titre de compétence que le droit international reconnaîtrait en faveur de la Turquie. Par contre, le Gouvernement turc se place au point de vue selon lequel l'article 15 admettrait la compétence judiciaire de la Turquie partout où cette compétence ne se heurterait pas à un principe du droit international.

Ce dernier point de vue semble être conforme au compromis même, dont le numéro 1 demande à la Cour de dire si la Turquie a agi en contradiction des principes du droit international et quels seraient — dans l'affirmative — ces principes. Il ne s'agit donc pas, selon le compromis, de préciser les principes qui permettraient à la Turquie d'exercer les poursuites pénales, mais de formuler les principes qui éventuellement auraient été violés par ces poursuites.

Cette manière de poser la question est commandée également par la nature même et les conditions actuelles du droit international.

Le droit international régit les rapports entre des États indépendants. Les règles de droit liant les États procèdent donc de la volonté de ceux-ci, volonté manifestée dans des conventions ou dans des usages acceptés généralement comme consacrant des principes de droit et établis en vue de régler la co-existence de ces communautés indépendantes ou en vue de la poursuite de buts communs. Les limitations de l'indépendance des États ne se présument donc pas.

Or, la limitation primordiale qu'impose le droit international à l'État est celle d'exclure — sauf l'existence d'une règle permissive contraire — tout exercice de sa puissance sur le territoire d'un autre État. Dans ce sens, la juridiction est certainement territoriale ; elle ne pourrait être exercée hors du territoire, sinon en vertu d'une

III.

The Court, having to consider whether there are any rules of international law which may have been violated by the prosecution in pursuance of Turkish law of Lieutenant Demons, is confronted in the first place by a question of principle which, in the written and oral arguments of the two Parties, has proved to be a fundamental one. The French Government contends that the Turkish Courts, in order to have jurisdiction, should be able to point to some title to jurisdiction recognized by international law in favour of Turkey. On the other hand, the Turkish Government takes the view that Article 15 allows Turkey jurisdiction whenever such jurisdiction does not come into conflict with a principle of international law.

The latter view seems to be in conformity with the special agreement itself, No. 1 of which asks the Court to say whether Turkey has acted contrary to the principles of international law and, if so, what principles. According to the special agreement, therefore, it is not a question of stating principles which would permit Turkey to take criminal proceedings, but of formulating the principles, if any, which might have been violated by such proceedings.

This way of stating the question is also dictated by the very nature and existing conditions of international law.

International law governs relations between independent States. The rules of law binding upon States therefore emanate from their own free will as expressed in conventions or by usages generally accepted as expressing principles of law and established in order to regulate the relations between these co-existing independent communities or with a view to the achievement of common aims. Restrictions upon the independence of States cannot therefore be presumed.

Now the first and foremost restriction imposed by international law upon a State is that—failing the existence of a permissive rule to the contrary—it may not exercise its power in any form in the territory of another State. In this sense jurisdiction is certainly territorial; it cannot be exercised by a State outside its territory règle permissive découlant du droit international coutumier ou d'une convention.

Mais il ne s'ensuit pas que le droit international défend à un État d'exercer, dans son propre territoire, sa juridiction dans toute affaire où il s'agit de faits qui se sont passés à l'étranger et où il ne peut s'appuyer sur une règle permissive du droit international. Pareille thèse ne saurait être soutenue que si le droit international défendait, d'une manière générale, aux États d'atteindre par leurs lois et de soumettre à la juridiction de leurs tribunaux des personnes, des biens et des actes hors du territoire, et si, par dérogation à cette règle générale prohibitive, il permettait aux États de ce faire dans des cas spécialement déterminés. Or, tel n'est certainement pas l'état actuel du droit international. Loin de défendre d'une manière générale aux États d'étendre leurs lois et leur juridiction à des personnes, des biens et des actes hors du territoire, il leur laisse, à cet égard, une large liberté, qui n'est limitée que dans quelques cas par des règles prohibitives ; pour les autres cas, chaque État reste libre d'adopter les principes qu'il juge les meilleurs et les plus convenables.

C'est cette liberté que le droit international laisse aux États, qui explique la variété des règles qu'ils ont pu adopter sans opposition ou réclamations de la part des autres États ; c'est en vue d'apporter un remède aux inconvénients qui dérivent de pareille variété qu'on s'efforce, depuis des années, en Europe aussi bien qu'en Amérique, d'élaborer des conventions, dont l'effet serait justement de restreindre la liberté que le droit international laisse actuellement aux États dans cette matière, en comblant ainsi des lacunes de compétences ou en faisant disparaître des concurrences de compétences résultant de la diversité des principes adoptés dans les différents États.

Dans ces conditions, tout ce qu'on peut demander à un État, c'est de ne pas dépasser les limites que le droit international trace à sa compétence ; en deçà de ces limites, le titre à la juridiction qu'il exerce se trouve dans sa souveraineté.

Il dérive de ce qui précède que la thèse du Gouvernement français, d'après laquelle la Turquie devrait, dans chaque cas, se prévaloir d'une règle du droit international l'autorisant à exercer sa juridiction, est en opposition avec le droit international général, auquel renvoie l'article 15 de la Convention de Lausanne. Pareille thèse, qui, vu les termes dudit article 15 et l'interprétation que la except by virtue of a permissive rule derived from international custom or from a convention.

It does not, however, follow that international law prohibits a State from exercising jurisdiction in its own territory, in respect of any case which relates to acts which have taken place abroad, and in which it cannot rely on some permissive rule of international law. Such a view would only be tenable if international law contained a general prohibition to States to extend the application of their laws and the jurisdiction of their courts to persons, property and acts outside their territory, and if, as an exception to this general prohibition, it allowed States to do so in certain specific cases. But this is certainly not the case under international law as it stands at present. Far from laying down a general prohibition to the effect that States may not extend the application of their laws and the jurisdiction of their courts to persons, property and acts outside their territory, it leaves them in this respect a wide measure of discretion which is only limited in certain cases by prohibitive rules; as regards other cases, every State remains free to adopt the principles which it regards as best and most suitable.

This discretion left to States by international law explains the great variety of rules which they have been able to adopt without objections or complaints on the part of other States; it is in order to remedy the difficulties resulting from such variety that efforts have been made for many years past, both in Europe and America, to prepare conventions the effect of which would be precisely to limit the discretion at present left to States in this respect by international law, thus making good the existing lacunæ in respect of jurisdiction or removing the conflicting jurisdictions arising from the diversity of the principles adopted by the various States.

In these circumstances, all that can be required of a State is that it should not overstep the limits which international law places upon its jurisdiction; within these limits, its title to exercise jurisdiction rests in its sovereignty.

It follows from the foregoing that the contention of the French Government to the effect that Turkey must in each case be able to cite a rule of international law authorizing her to exercise jurisdiction, is opposed to the generally accepted international law to which Article 15 of the Convention of Lausanne refers. Having regard to the terms of Article 15 and to the construction which

Cour vient de lui donner, s'appliquerait en matière civile aussi bien que pénale et avec une réciprocité parfaite dans les rapports entre la Turquie et les autres Parties contractantes, aurait pratiquement le résultat de paralyser dans bien des cas l'activité des tribunaux, faute de la possibilité d'invoquer une règle universellement admise, sur laquelle l'exercice de la juridiction pourrait s'appuyer.

*

Toutefois, il y a lieu de se demander si les considérations qui précèdent valent réellement pour la matière pénale, ou si ce domaine est régi par un principe différent, qui pourrait s'expliquer par le lien étroit qui a longtemps existé entre la suprême juridiction pénale et la notion d'État, ainsi que par l'importance particulière que possède la juridiction pénale pour la personnalité humaine.

S'il est vrai que le principe de la territorialité du droit pénal est à la base de toutes les législations, il n'en est pas moins vrai que toutes ou presque toutes ces législations étendent leur action à des délits commis hors du territoire ; et cela d'après des systèmes qui changent d'État à État. La territorialité du droit pénal n'est donc pas un principe absolu du droit international et ne se confond aucunement avec la souveraineté territoriale.

Cette situation peut être envisagée de deux manières différentes, correspondant aux points de vue auxquels les Parties se sont respectivement placées. Selon l'un de ces systèmes, le principe de la liberté, en vertu duquel chaque État peut régler sa législation selon sa convenance tant que, ce faisant, il ne se heurte pas à une limitation imposée par le droit international, s'appliquerait également dans le domaine de la législation gouvernant l'étendue de la compétence judiciaire en matière pénale. Selon l'autre système, le caractère exclusivement territorial de la législation en cette matière constituerait un principe qui exclurait *ipso facto*, sauf exceptions expresses, le droit pour les États d'étendre au delà de leurs frontières la juridiction pénale de leurs tribunaux ; les exceptions en question, qui comprennent, par exemple, la juridiction extraterritoriale sur les propres ressortissants et celle relative aux crimes contre la sûreté de l'État, reposeraient, dès lors, sur des règles permissives spéciales faisant partie du droit international.

the Court has just placed upon it, this contention would apply in regard to civil as well as to criminal cases, and would be applicable on conditions of absolute reciprocity as between Turkey and the other contracting Parties ; in practice, it would therefore in many cases result in paralyzing the action of the courts, owing to the impossibility of citing a universally accepted rule on which to support the exercise of their jurisdiction.

*

Nevertheless, it has to be seen whether the foregoing considerations really apply as regards criminal jurisdiction, or whether this jurisdiction is governed by a different principle: this might be the outcome of the close connection which for a long time existed between the conception of supreme criminal jurisdiction and that of a State, and also by the especial importance of criminal jurisdiction from the point of view of the individual.

Though it is true that in all systems of law the principle of the territorial character of criminal law is fundamental, it is equally true that all or nearly all these systems of law extend their action to offences committed outside the territory of the State which adopts them, and they do so in ways which vary from State to State. The territoriality of criminal law, therefore, is not an absolute principle of international law and by no means coincides with territorial sovereignty.

This situation may be considered from two different standpoints corresponding to the points of view respectively taken up by the Parties. According to one of these standpoints, the principle of freedom, in virtue of which each State may regulate its legislation at its discretion, provided that in so doing it does not come in conflict with a restriction imposed by international law, would also apply as regards law governing the scope of jurisdiction in criminal cases. According to the other standpoint, the exclusively territorial character of law relating to this domain constitutes a principle which, except as otherwise expressly provided, would, *ipso facto,* prevent States from extending the criminal jurisdiction of their courts beyond their frontiers ; the exceptions in question, which include for instance extraterritorial jurisdiction over nationals and over crimes directed against public safety, would therefore rest on special permissive rules forming part of international law.

Si l'on se place, pour les besoins de la démonstration, au point de vue du dernier de ces systèmes, on doit reconnaître que son exactitude dépend, faute d'une règle conventionnelle, de l'existence d'une coutume ayant force de droit par laquelle il serait consacré. Il en est de même en ce qui concerne l'applicabilité du système en question — à le supposer reconnu comme bien-fondé — au cas d'espèce. Il s'ensuit que, même à ce point de vue, avant de rechercher s'il y a éventuellement une règle du droit international permettant expressément à la Turquie d'instituer des poursuites contre un étranger pour un délit qu'il aurait commis hors la Turquie, il faudrait commencer par démontrer en même temps le bien-fondé du système et son applicabilité à l'espèce. Or, la première de ces démonstrations doit consister, ainsi qu'on vient de le voir, précisément dans la preuve de l'existence d'un principe du droit international limitant la liberté des États en matière de législation pénale.

Par conséquent, que l'on adopte l'un ou l'autre des deux systèmes exposés ci-dessus, on aboutit, dans le cas d'espèce, au même résultat : la nécessité de rechercher si, *oui ou non*, le droit international comporte un principe en vertu duquel il aurait été interdit à la Turquie d'exercer, dans les circonstances de ce cas, des poursuites pénales contre le lieutenant Demons. Et, dans les deux hypothèses également, la recherche doit se faire au moyen d'un examen de précédents présentant une analogie étroite avec le cas d'espèce ; car c'est seulement dans les précédents de cette nature que pourrait se manifester, le cas échéant, l'existence d'un principe général applicable à l'espèce. En effet, si, par exemple, on trouvait que, selon la pratique des États, la compétence de l'État du pavillon n'est pas consacrée comme exclusive par le droit international pour le cas d'abordage en haute mer, il ne serait pas nécessaire de rechercher l'existence éventuelle d'une règle restrictive plus générale ; car, par rapport à cette règle — à supposer qu'elle existât —, l'absence constatée d'une prohibition visant le cas d'abordage en haute mer prendrait l'aspect d'une règle permissive spéciale.

La Cour doit donc, en tout état de cause, examiner s'il existe, oui ou non, une règle de droit international limitant la liberté des États d'étendre la juridiction pénale de leurs tribunaux à une situation réunissant les circonstances du cas d'espèce.

Adopting, for the purposes of the argument, the standpoint of the latter of these two systems, it must be recognized that, in the absence of a treaty provision, its correctness depends upon whether there is a custom having the force of law establishing it. The same is true as regards the applicability of this system—assuming it to have been recognized as sound—in the particular case. It follows that, even from this point of view, before ascertaining whether there may be a rule of international law expressly allowing Turkey to prosecute a foreigner for an offence committed by him outside Turkey, it is necessary to begin by establishing both that the system is well-founded and that it is applicable in the particular case. Now, in order to establish the first of these points, one must, as has just been seen, prove the existence of a principle of international law restricting the discretion of States as regards criminal legislation.

Consequently, whichever of the two systems described above be adopted, the same result will be arrived at in this particular case: the necessity of ascertaining whether or not under international law there is a principle which would have prohibited Turkey, in the circumstances of the case before the Court, from prosecuting Lieutenant Demons. And moreover, on either hypothesis, this must be ascertained by examining precedents offering a close analogy to the case under consideration; for it is only from precedents of this nature that the existence of a general principle applicable to the particular case may appear. For if it were found, for example, that, according to the practice of States, the jurisdiction of the State whose flag was flown was not established by international law as exclusive with regard to collision cases on the high seas, it would not be necessary to ascertain whether there were a more general restriction; since, as regards that restriction—supposing that it existed—the fact that it had been established that there was no prohibition in respect of collision on the high seas would be tantamount to a special permissive rule.

The Court therefore must, in any event, ascertain whether or not there exists a rule of international law limiting the freedom of States to extend the criminal jurisdiction of their courts to a situation uniting the circumstances of the present case.

IV.

La Cour procède maintenant à cette recherche : Y a-t-il dans le droit international général, auquel renvoie l'article 15 de la Convention de Lausanne, une règle qui défende à la Turquie d'exercer des poursuites pénales contre le lieutenant Demons ?

A cet effet, elle examinera, en premier lieu, la valeur des allégations faites par le Gouvernement français, sans toutefois omettre de prendre en considération d'autres aspects possibles du problème, qui pourraient démontrer l'existence de la règle restrictive applicable en l'espèce.

Les arguments invoqués par le Gouvernement français, autres que ceux qui ont été discutés ci-dessus, se réduisent, en somme, aux trois suivants :

1) Le droit international ne permettrait pas à un État de poursuivre les délits commis par les étrangers à l'étranger, en raison seulement de la nationalité de la victime ; et tel serait le cas en l'espèce, car le délit devrait être considéré comme ayant été commis à bord du navire français.

2) Le droit international reconnaîtrait la compétence exclusive de l'État du pavillon pour tout ce qui se passe à bord du navire dans la haute mer.

3) Enfin, ce principe s'imposerait avec une force toute particulière lorsqu'il s'agit d'un fait d'abordage.

* * *

En ce qui concerne le premier argument, la Cour croit devoir rappeler tout d'abord que son examen se borne strictement à la situation d'espèce, car c'est seulement à l'égard de cette situation que sa décision est demandée.

Comme il a été constaté ci-dessus, les éléments caractéristiques de la situation de fait sont les suivants : il s'agit d'une collision en haute mer, entre deux navires de pavillons différents, sur l'un desquels se trouvait un des prétendus auteurs du délit, tandis que les victimes se trouvaient sur l'autre.

Ceci posé, la Cour ne croit pas nécessaire d'examiner la thèse d'après laquelle un État ne pourrait punir les délits commis à l'étranger par un étranger en raison seulement de la nationalité

IV.

The Court will now proceed to ascertain whether general international law, to which Article 15 of the Convention of Lausanne refers, contains a rule prohibiting Turkey from prosecuting Lieutenant Demons.

For this purpose, it will in the first place examine the value of the arguments advanced by the French Government, without however omitting to take into account other possible aspects of the problem, which might show the existence of a restrictive rule applicable in this case.

The arguments advanced by the French Government, other than those considered above, are, in substance, the three following :

(1) International law does not allow a State to take proceedings with regard to offences committed by foreigners abroad, simply by reason of the nationality of the victim ; and such is the situation in the present case because the offence must be regarded as having been committed on board the French vessel.

(2) International law recognizes the exclusive jurisdiction of the State whose flag is flown as regards everything which occurs on board a ship on the high seas.

(3) Lastly, this principle is especially applicable in a collision case.

* * *

As regards the first argument, the Court feels obliged in the first place to recall that its examination is strictly confined to the specific situation in the present case, for it is only in regard to this situation that its decision is asked for.

As has already been observed, the characteristic features of the situation of fact are as follows : there has been a collision on the high seas between two vessels flying different flags, on one of which was one of the persons alleged to be guilty of the offence, whilst the victims were on board the other.

This being so, the Court does not think it necessary to consider the contention that a State cannot punish offences committed abroad by a foreigner simply by reason of the nationality of the de la victime. Car cette thèse ne vise que le cas où la nationalité de la victime est le seul critère sur lequel se fonde la juridiction pénale de l'État. Même si la thèse en général était exacte — et la Cour fait toutes réserves à cet égard —, elle ne saurait être invoquée en l'espèce que si le droit international défendait à la Turquie de tenir compte du fait que les effets du délit se sont produits sur le navire turc et, partant, dans un lieu assimilé au territoire turc dans lequel l'application du droit pénal turc ne peut être contestée, même par rapport aux délits qui y ont été commis par des étrangers. Or, pareille règle du droit international n'existe pas. Aucun argument, d'où il résulterait que les États se reconnaissent obligés, l'un envers l'autre, de tenir compte seulement du lieu où se trouve l'auteur du délit au moment du délit, n'est venu à la connaissance de la Cour. Par contre, il est constant que les tribunaux de beaucoup de pays, même de pays qui donnent à leur législation pénale un caractère strictement territorial, interprètent la loi pénale dans ce sens que les délits dont les auteurs, au moment de l'acte délictueux, se trouvent sur le territoire d'un autre État, doivent néanmoins être considérés comme ayant été commis sur le territoire national, si c'est là que s'est produit un des éléments constitutifs du délit et surtout ses effets. La jurisprudence française a admis, elle aussi, par rapport à des situations diverses, cette manière d'interpréter le principe de la territorialité. D'autre part, la Cour n'a pas connaissance de cas dans lesquels des gouvernements auraient protesté contre le fait qu'une loi pénale contiendrait une règle à cet effet ou que les tribunaux d'un pays auraient interprété leur législation pénale dans ce sens. Par conséquent, du moment que les effets du délit se sont produits sur le navire turc, il est impossible de soutenir qu'il y ait une règle de droit international qui défendrait à la Turquie d'exercer des poursuites pénales contre le lieutenant Demons en raison du fait que l'auteur du délit se trouvait sur le navire français. Puisque, ainsi qu'il a été précédemment constaté, le compromis ne vise pas l'article de la législation turque en vertu duquel les poursuites pénales ont été exercées, mais seulement la contradiction éventuelle entre les poursuites et les principes du droit international, rien ne s'oppose à ce que la Cour se borne à relever que, dans l'espèce, les poursuites pénales peuvent être justifiées aussi au point de vue du principe dit de la territorialité.

victim. For this contention only relates to the case where the nationality of the victim is the only criterion on which the criminal jurisdiction of the State is based. Even if that argument were correct generally speaking—and in regard to this the Court reserves its opinion—it could only be used in the present case if international law forbade Turkey to take into consideration the fact that the offence produced its effects on the Turkish vessel and consequently in a place assimilated to Turkish territory in which the application of Turkish criminal law cannot be challenged, even in regard to offences committed there by foreigners. But no such rule of international law exists. No argument has come to the knowledge of the Court from which it could be deduced that States recognize themselves to be under an obligation towards each other only to have regard to the place where the author of the offence happens to be at the time of the offence. On the contrary, it is certain that the courts of many countries, even of countries which have given their criminal legislation a strictly territorial character, interpret criminal law in the sense that offences, the authors of which at the moment of commission are in the territory of another State, are nevertheless to be regarded as having been committed in the national territory, if one of the constituent elements of the offence, and more especially its effects, have taken place there. French courts have, in regard to a variety of situations, given decisions sanctioning this way of interpreting the territorial principle. Again, the Court does not know of any cases in which governments have protested against the fact that the criminal law of some country contained a rule to this effect or that the courts of a country construed their criminal law in this sense. Consequently, once it is admitted that the effects of the offence were produced on the Turkish vessel, it becomes impossible to hold that there is a rule of international law which prohibits Turkey from prosecuting Lieutenant Demons because of the fact that the author of the offence was on board the French ship. Since, as has already been observed, the special agreement does not deal with the provision of Turkish law under which the prosecution was instituted, but only with the question whether the prosecution should be regarded as contrary to the principles of international law, there is no reason preventing the Court from confining itself to observing that, in this case, a prosecution may also be justified from the point of view of the so-called territorial principle.

Cependant, même si la Cour avait à examiner la compatibilité de l'article 6 du Code pénal turc avec le droit international, et si elle estimait que la nationalité de la victime n'était pas en tout état de cause une base suffisante pour la compétence pénale de l'État dont la victime est un ressortissant, elle arriverait au même résultat pour les raisons qui viennent d'être exposées. Car, quand bien même l'article 6 eût été jugé incompatible avec les principes du droit international, comme il eût pu se faire que les poursuites intentées eussent été fondées sur une autre disposition législative turque, qui, elle, ne serait pas incompatible avec lesdits principes, il en résulte que, du seul fait de la non-conformité éventuelle auxdits principes de l'article 6, l'on ne saurait conclure à la non-conformité des poursuites elles-mêmes. Le fait que les autorités judiciaires auraient commis une erreur dans le choix de la disposition légale, applicable en l'espèce et compatible avec le droit international, ne concerne que le droit interne et ne pourrait intéresser le droit international que dans la mesure où une règle conventionnelle ou la possibilité d'un déni de justice entreraient en ligne de compte.

On a cherché à faire valoir que le délit d'homicide par imprudence ne saurait être localisé dans le lieu où l'effet mortel se produit ; car cet effet n'est pas voulu, et l'on ne saurait dire qu'il y ait intention délictueuse dirigée, dans la pensée du délinquant, vers le territoire où l'effet mortel se produit. Contre cette thèse on pourrait faire observer que l'effet a une importance toute particulière dans les délits tels que l'homicide par imprudence, qui sont punis justement en considération de leur effet plutôt que de la condition subjective du délinquant. Mais la Cour ne se croit pas appelée à examiner cette question, qui est une question d'interprétation de la loi pénale turque. Il lui suffit de constater que rien n'a été allégué et rien n'a pu être trouvé d'où il résulterait que le droit international aurait établi une règle imposant aux États pareille interprétation de la notion du délit d'homicide par imprudence.

* * *

Le second argument invoqué par le Gouvernement français est le principe d'après lequel l'État du pavillon posséderait une compétence exclusive sur tout ce qui se passe à bord d'un navire marchand en haute mer.

Nevertheless, even if the Court had to consider whether Article 6 of the Turkish Penal Code was compatible with international law, and if it held that the nationality of the victim did not in all circumstances constitute a sufficient basis for the exercise of criminal jurisdiction by the State of which the victim was a national, the Court would arrive at the same conclusion for the reasons just set out. For even were Article 6 to be held incompatible with the principles of international law, since the prosecution might have been based on another provision of Turkish law which would not have been contrary to any principle of international law, it follows that it would be impossible to deduce from the mere fact that Article 6 was not in conformity with those principles, that the prosecution itself was contrary to them. The fact that the judicial authorities may have committed an error in their choice of the legal provision applicable to the particular case and compatible with international law only concerns municipal law and can only affect international law in so far as a treaty provision enters into account, or the possibility of a denial of justice arises.

It has been sought to argue that the offence of manslaughter cannot be localized at the spot where the mortal effect is felt ; for the effect is not intentional and it cannot be said that there is, in the mind of the delinquent, any culpable intent directed towards the territory where the mortal effect is produced. In reply to this argument it might be observed that the effect is a factor of outstanding importance in offences such as manslaughter, which are punished precisely in consideration of their effects rather than of the subjective intention of the delinquent. But the Court does not feel called upon to consider this question, which is one of interpretation of Turkish criminal law. It will suffice to observe that no argument has been put forward and nothing has been found from which it would follow that international law has established a rule imposing on States this reading of the conception of the offence of manslaughter.

* * *

The second argument put forward by the French Government is the principle that the State whose flag is flown has exclusive jurisdiction over everything which occurs on board a merchant ship on the high seas.

Il est certainement vrai que — en dehors des cas particuliers déterminés par le droit international — les navires en haute mer ne sont soumis à d'autre autorité qu'à celle de l'État dont ils portent le pavillon. En vertu du principe de la liberté de la mer, c'est-à-dire de l'absence de toute souveraineté territoriale en haute mer, aucun État ne peut y exercer des actes de juridiction quelconques sur des navires étrangers. C'est ainsi que, si un navire de guerre se trouvant sur les lieux où se produit un abordage entre un navire battant son pavillon et un navire étranger, envoyait à bord de ce dernier un officier pour y faire des constatations ou y recueillir des témoignages, cet acte serait sans doute contraire au droit international.

Mais il n'en dérive aucunement qu'un État ne puisse jamais, dans son propre territoire, exercer une juridiction sur des actes qui se sont passés à bord d'un navire étranger en haute mer. Le principe de la liberté de la mer a pour conséquence que le navire en haute mer est assimilé au territoire de l'État dont il porte le pavillon, car, comme dans le territoire, cet État y fait valoir son autorité, et aucun autre État ne peut y exercer la sienne. Tout ce qu'on peut dire est que, en vertu du principe de la liberté de la mer, un navire est placé dans la même situation que le territoire de l'État ; mais rien ne vient à l'appui de la prétention selon laquelle les droits qu'a l'État du pavillon peuvent aller au delà des droits qu'il exerce dans son territoire proprement dit. Il s'ensuit que ce qui se passe à bord d'un navire en haute mer doit être regardé comme s'étant passé dans le territoire de l'État dont le navire porte le pavillon. Si donc un acte délictueux commis sur un navire en haute mer produit ses effets sur un navire portant un autre pavillon ou sur un territoire étranger, il y a lieu d'appliquer les mêmes principes que s'il s'agissait de deux territoires d'États différents, et partant de constater qu'aucune règle de droit international ne défend à l'État dont relève le navire où les effets du délit se sont manifestés, de considérer ce délit comme s'il avait été commis dans son territoire et d'exercer des poursuites pénales contre le délinquant.

Cette conclusion ne saurait être tenue en échec que s'il était démontré qu'il y a une règle de droit international coutumier qui, dépassant le principe susénoncé, consacrerait la compétence exclusive de l'État du pavillon. Le Gouvernement français s'est efforcé de démontrer l'existence d'une pareille règle en ayant recours à la doctrine, aux précédents de la jurisprudence nationale

It is certainly true that—apart from certain special cases which are defined by international law—vessels on the high seas are subject to no authority except that of the State whose flag they fly. In virtue of the principle of the freedom of the seas, that is to say, the absence of any territorial sovereignty upon the high seas, no State may exercise any kind of jurisdiction over foreign vessels upon them. Thus, if a war vessel, happening to be at the spot where a collision occurs between a vessel flying its flag and a foreign vessel, were to send on board the latter an officer to make investigations or to take evidence, such an act would undoubtedly be contrary to international law.

But it by no means follows that a State can never in its own territory exercise jurisdiction over acts which have occurred on board a foreign ship on the high seas. A corollary of the principle of the freedom of the seas is that a ship on the high seas is assimilated to the territory of the State the flag of which it flies, for, just as in its own territory, that State exercises its authority upon it, and no other State may do so. All that can be said is that by virtue of the principle of the freedom of the seas, a ship is placed in the same position as national territory ; but there is nothing to support the claim according to which the rights of the State under whose flag the vessel sails may go farther than the rights which it exercises within its territory properly so called. It follows that what occurs on board a vessel on the high seas must be regarded as if it occurred on the territory of the State whose flag the ship flies. If, therefore, a guilty act committed on the high seas produces its effects on a vessel flying another flag or in foreign territory, the same principles must be applied as if the territories of two different States were concerned, and the conclusion must therefore be drawn that there is no rule of international law prohibiting the State to which the ship on which the effects of the offence have taken place belongs, from regarding the offence as having been committed in its territory and prosecuting, accordingly, the delinquent.

This conclusion could only be overcome if it were shown that there was a rule of customary international law which, going further than the principle stated above, established the exclusive jurisdiction of the State whose flag was flown. The French Government has endeavoured to prove the existence of such a rule, having recourse for this purpose to the teachings of publicists, to decisions et internationale, et surtout à des conventions qui, en même temps qu'elles dérogent au principe de la liberté de la mer, en permettant aux navires de guerre ou de police d'un État d'exercer une surveillance plus ou moins étendue sur les navires de commerce d'un autre État, réservent la juridiction aux tribunaux de l'État dont le navire poursuivi porte le pavillon.

De l'avis de la Cour, cette démonstration n'est pas concluante.

Tout d'abord, en ce qui concerne la doctrine, et quelle que puisse être par ailleurs sa valeur lorsqu'il s'agit de constater l'existence d'une règle de droit coutumier, il est certainement vrai que tous ou presque tous les auteurs enseignent que les navires en pleine mer sont soumis exclusivement à la juridiction de l'État du pavillon. Mais ce qui importe est la signification qu'ils attachent à ce principe ; or, il n'apparaît pas que, généralement, les auteurs donnent à ce principe une portée différente et plus large que celle qui a été exposée ci-dessus et qui revient à dire que la juridiction de l'État sur les navires en haute mer a la même étendue que sa juridiction dans son propre territoire. Par contre, il ne manque pas d'auteurs qui, ayant examiné de près la question spéciale de savoir si un État peut poursuivre des délits commis à bord d'un navire étranger en haute mer, arrivent à la conclusion ferme que ces délits doivent être considérés comme s'ils avaient été commis dans le territoire de l'État dont le navire porte le pavillon, et que, partant, les règles générales de chaque législation concernant les délits commis à l'étranger leur sont applicables.

Quant aux précédents, il convient d'observer en premier lieu que, réserve faite pour les cas d'abordage dont il sera parlé plus loin, aucun n'a trait à des délits qui auraient intéressé deux navires battant le pavillon de deux États différents, et que, partant, ils ne sauraient avoir beaucoup d'importance dans l'affaire qui est devant la Cour. Le cas du *Costa Rica Packet* ne fait pas exception, car la pirogue sur laquelle les actes de déprédation avaient eu lieu était à la dérive sans pavillon ni équipage, et cette circonstance n'a pas été sans exercer une influence, peut-être décisive, sur la conclusion à laquelle l'arbitre est arrivé.

Par contre, il ne manque pas de cas dans lesquels un État a fait valoir son droit de poursuivre un délit commis à bord d'un navire étranger et qu'il regardait comme punissable d'après sa législation. C'est ainsi que la Grande-Bretagne a refusé aux États-of municipal and international tribunals, and especially to conventions which, whilst creating exceptions to the principle of the freedom of the seas by permitting the war and police vessels of a State to exercise a more or less extensive control over the merchant vessels of another State, reserve jurisdiction to the courts of the country whose flag is flown by the vessel proceeded against.

In the Court's opinion, the existence of such a rule has not been conclusively proved.

In the first place, as regards teachings of publicists, and apart from the question as to what their value may be from the point of view of establishing the existence of a rule of customary law, it is no doubt true that all or nearly all writers teach that ships on the high seas are subject exclusively to the jurisdiction of the State whose flag they fly. But the important point is the significance attached by them to this principle; now it does not appear that in general, writers bestow upon this principle a scope differing from or wider than that explained above and which is equivalent to saying that the jurisdiction of a State over vessels on the high seas is the same in extent as its jurisdiction in its own territory. On the other hand, there is no lack of writers who, upon a close study of the special question whether a State can prosecute for offences committed on board a foreign ship on the high seas, definitely come to the conclusion that such offences must be regarded as if they had been committed in the territory of the State whose flag the ship flies, and that consequently the general rules of each legal system in regard to offences committed abroad are applicable.

In regard to precedents, it should first be observed that, leaving aside the collision cases which will be alluded to later, none of them relates to offences affecting two ships flying the flags of two different countries, and that consequently they are not of much importance in the case before the Court. The case of the *Costa Rica Packet* is no exception, for the prauw on which the alleged depredations took place was adrift without flag or crew, and this circumstance certainly influenced, perhaps decisively, the conclusion arrived at by the arbitrator.

On the other hand, there is no lack of cases in which a State has claimed a right to prosecute for an offence, committed on board a foreign ship, which it regarded as punishable under its legislation. Thus Great Britain refused the request of the United

Unis l'extradition de John Anderson, matelot anglais, qui avait commis un homicide à bord d'un navire américain, en alléguant qu'elle ne contestait pas la juridiction des États-Unis, mais qu'elle avait le droit d'exercer la sienne concurremment. Ce précédent, auquel d'autres pourraient être ajoutés, est pertinent, malgré la nationalité britannique d'Anderson, pour démontrer que le principe de la juridiction exclusive du pays du pavillon n'est pas universellement admis.

Les cas dans lesquels la compétence exclusive de l'État du pavillon a été reconnue, semblent être plutôt des cas dans lesquels l'État étranger n'était intéressé qu'au titre de la nationalité de la victime, titre que la législation de cet État même ou la jurisprudence de ses tribunaux ne regardaient pas comme suffisant pour autoriser la poursuite d'un délit commis par un étranger à l'étranger.

Pour ce qui a trait enfin aux conventions qui réservent expressément la juridiction exclusive de l'État du pavillon, il n'est pas absolument certain que cette réserve doive être regardée comme le maintien du droit commun plutôt que comme la contre-partie de la compétence extraordinaire que ces conventions reconnaissent aux navires d'État d'un pays déterminé à l'égard des navires d'un autre pays en haute mer. A part cela, il y a lieu d'observer que dans ces conventions, il s'agit de faits d'un caractère particulier, étroitement liés avec la police des mers, tels que traite des esclaves, endommagement de câbles sous-marins, pêche, etc., et non de délits de droit commun. Surtout, il y a lieu de rappeler que les délits prévus par les conventions dont il s'agit ne mettent en jeu qu'un seul navire ; on ne saurait donc en tirer aucune conclusion à l'égard de faits qui mettent en présence deux navires et, partant, deux juridictions d'États différents.

La Cour arrive donc à la conclusion que le second argument invoqué par le Gouvernement français, pas plus que le premier, ne conduit à admettre l'existence d'une règle de droit international, qui aurait défendu à la Turquie d'exercer des poursuites pénales contre le lieutenant Demons.

* * *

Il ne reste plus alors qu'à examiner le troisième argument allégué par le Gouvernement français et à rechercher si une règle

States for the extradition of John Anderson, a British seaman who had committed homicide on board an American vessel, stating that she did not dispute the jurisdiction of the United States but that she was entitled to exercise hers concurrently. This case, to which others might be added, is relevant in spite of Anderson's British nationality, in order to show that the principle of the exclusive jurisdiction of the country whose flag the vessel flies is not universally accepted.

The cases in which the exclusive jurisdiction of the State whose flag was flown has been recognized would seem rather to have been cases in which the foreign State was interested only by reason of the nationality of the victim, and in which, according to the legislation of that State itself or the practice of its courts, that ground was not regarded as sufficient to authorize prosecution for an offence committed abroad by a foreigner.

Finally, as regards conventions expressly reserving jurisdiction exclusively to the State whose flag is flown, it is not absolutely certain that this stipulation is to be regarded as expressing a general principle of law rather than as corresponding to the extraordinary jurisdiction which these conventions confer on the state-owned ships of a particular country in respect of ships of another country on the high seas. Apart from that, it should be observed that these conventions relate to matters of a particular kind, closely connected with the policing of the seas, such as the slave trade, damage to submarine cables, fisheries, etc., and not to common-law offences. Above all it should be pointed out that the offences contemplated by the conventions in question only concern a single ship ; it is impossible therefore to make any deduction from them in regard to matters which concern two ships and consequently the jurisdiction of two different States.

The Court therefore has arrived at the conclusion that the second argument put forward by the French Government does not, any more than the first, establish the existence of a rule of international law prohibiting Turkey from prosecuting Lieutenant Demons.

* * *

It only remains to examine the third argument advanced by the French Government and to ascertain whether a rule specially spéciale aux cas d'abordage serait formée, d'après laquelle les poursuites pénales seraient du ressort exclusif de l'État du pavillon.

Dans cet ordre d'idées, l'agent du Gouvernement français a appelé l'attention de la Cour sur le fait que les questions de compétence en matière d'abordage, si fréquentes devant les juridictions civiles, ne se rencontrent que très rarement dans la jurisprudence des tribunaux répressifs. Il en déduit que, en fait, la poursuite pénale ne se présente que devant les tribunaux de l'État du pavillon et qu'il y aurait là la preuve d'un consentement tacite des États et, partant, l'expression du droit international positif en matière d'abordage.

De l'avis de la Cour, cette conclusion n'est pas fondée. Même si la rareté des décisions judiciaires que l'on peut trouver dans les recueils de jurisprudence était une preuve suffisante du fait invoqué par l'agent du Gouvernement français, il en résulterait simplement que les États se sont souvent abstenus, en fait, d'exercer des poursuites pénales, et non qu'ils se reconnaissent obligés de ce faire ; or, c'est seulement si l'abstention était motivée par la conscience d'un devoir de s'abstenir que l'on pourrait parler de coutume internationale. Le fait allégué ne permet pas de conclure que les États aient été conscients de pareil devoir ; par contre, comme on le verra tout à l'heure, il y a d'autres circonstances qui sont de nature à persuader du contraire.

A la connaissance de la Cour, il n'y a pas de décisions de tribunaux internationaux en cette matière ; mais on a cité quelques décisions de tribunaux nationaux. Sans rechercher quelle valeur on pourrait attribuer à des jugements de tribunaux nationaux lorsqu'il s'agit d'établir l'existence d'une règle de droit international, il suffira de constater que les décisions alléguées sont à l'appui tantôt d'une opinion, tantôt de l'autre. Si le cas de l'*Ortigia* — *Oncle-Joseph* devant la Cour d'Aix et celui du *Franconia* — *Strathclyde* devant la Cour anglaise des *Crown Cases Reserved* ont pu être invoqués par le Gouvernement français comme étant en faveur de la compétence exclusive de l'État du pavillon, par contre, le cas de l'*Ortigia* — *Oncle-Joseph* devant les tribunaux italiens et celui de l'*Ekbatana* — *West-Hinder* devant les tribunaux belges ont été cités à l'appui de la thèse contraire.

De longues discussions ont eu lieu entre les Parties quant à l'importance de chacune de ces décisions, pour les détails desquelles applying to collision cases has grown up, according to which criminal proceedings regarding such cases come exclusively within the jurisdiction of the State whose flag is flown.

In this connection, the Agent for the French Government has drawn the Court's attention to the fact that questions of jurisdiction in collision cases, which frequently arise before civil courts, are but rarely encountered in the practice of criminal courts. He deduces from this that, in practice, prosecutions only occur before the courts of the State whose flag is flown and that that circumstance is proof of a tacit consent on the part of States and, consequently, shows what positive international law is in collision cases.

In the Court's opinion, this conclusion is not warranted. Even if the rarity of the judicial decisions to be found among the reported cases were sufficient to prove in point of fact the circumstance alleged by the Agent for the French Government, it would merely show that States had often, in practice, abstained from instituting criminal proceedings, and not that they recognized themselves as being obliged to do so ; for only if such abstention were based on their being conscious of having a duty to abstain would it be possible to speak of an international custom. The alleged fact does not allow one to infer that States have been conscious of having such a duty ; on the other hand, as will presently be seen, there are other circumstances calculated to show that the contrary is true.

So far as the Court is aware there are no decisions of international tribunals in this matter ; but some decisions of municipal courts have been cited. Without pausing to consider the value to be attributed to the judgments of municipal courts in connection with the establishment of the existence of a rule of international law, it will suffice to observe that the decisions quoted sometimes support one view and sometimes the other. Whilst the French Government have been able to cite the *Ortigia—Oncle-Joseph* case before the Court of Aix and the *Franconia—Strathclyde* case before the British Court for Crown Cases Reserved, as being in favour of the exclusive jurisdiction of the State whose flag is flown, on the other hand the *Ortigia—Oncle-Joseph* case before the Italian Courts and the *Ekbatana—West-Hinder* case before the Belgian Courts have been cited in support of the opposing contention.

Lengthy discussions have taken place between the Parties as to the importance of each of these decisions as regards the details la Cour se borne à renvoyer aux Mémoires et Contre-Mémoires des Parties. La Cour ne croit pas nécessaire de s'y attarder. Il lui suffit de constater que, la jurisprudence nationale étant ainsi partagée, il n'est guère possible d'y voir un indice de l'existence de la règle restrictive de droit international, qui seule pourrait servir de fondement à la thèse du Gouvernement français.

En revanche, la Cour croit devoir souligner le fait qu'il n'apparaît pas que les États intéressés se soient opposés aux poursuites pénales relatives à des cas d'abordage devant les tribunaux d'un pays autre que celui du pavillon ou qu'ils aient avancé des protestations : leur conduite ne semble guère avoir été différente de celle qu'ils tiennent dans tous les cas de juridictions concurrentes. Cette circonstance va directement à l'encontre de l'existence du consentement tacite des États en faveur de la compétence exclusive de l'État du pavillon, que l'agent du Gouvernement français a cru pouvoir déduire de la rareté des questions de compétence devant les tribunaux répressifs. Il ne semble guère probable, et il ne serait pas conforme à la pratique internationale, que le Gouvernement français dans le cas de l'*Ortigia — Oncle-Joseph* et le Gouvernement allemand dans celui de l'*Ekbatana — West-Hinder* eussent omis de protester contre l'exercice de la juridiction pénale de la part des tribunaux italiens et belges, si vraiment ils avaient pensé qu'il y avait là une violation du droit international.

Quant à l'affaire du *Franconia* (R. v. Keyn 1877, L. R. 2 Ex. Div. 63), sur laquelle l'agent du Gouvernement français s'est particulièrement appuyé, il convient d'observer que la partie de la décision qui est le plus étroitement reliée au cas présent, est la partie qui a trait à la localisation du délit sur le navire abordeur.

Or, quelle que soit, par ailleurs, la valeur de la thèse adoptée par la majorité des juges sur ce point précis, il ne semble guère douteux que si, dans l'esprit de ces juges, elle découlait d'une règle de droit international, leur conception de ce droit, particulière à la jurisprudence anglaise, est loin d'être généralement admise, même dans les pays de *common law*. Cette manière de voir semble d'ailleurs confirmée par le fait que le point de vue auquel s'est placée la majorité des juges en ce qui a trait à la localisation d'un délit dont l'auteur se trouve dans le territoire d'un État et dont les of which the Court confines itself to a reference to the Cases and Counter-Cases of the Parties. The Court does not think it necessary to stop to consider them. It will suffice to observe that, as municipal jurisprudence is thus divided, it is hardly possible to see in it an indication of the existence of the restrictive rule of international law which alone could serve as a basis for the contention of the French Government.

On the other hand, the Court feels called upon to lay stress upon the fact that it does not appear that the States concerned have objected to criminal proceedings in respect of collision cases before the courts of a country other than that the flag of which was flown, or that they have made protests : their conduct does not appear to have differed appreciably from that observed by them in all cases of concurrent jurisdiction. This fact is directly opposed to the existence of a tacit consent on the part of States to the exclusive jurisdiction of the State whose flag is flown, such as the Agent for the French Government has thought it possible to deduce from the infrequency of questions of jurisdiction before criminal courts. It seems hardly probable, and it would not be in accordance with international practice, that the French Government in the *Ortigia—Oncle-Joseph* case and the German Government in the *Ekbatana—West-Hinder* case would have omitted to protest against the exercise of criminal jurisdiction by the Italian and Belgian Courts, if they had really thought that this was a violation of international law.

As regards the *Franconia* case (R. v. Keyn 1877, L. R. 2 Ex. Div. 63) upon which the Agent for the French Government has particularly relied, it should be observed that the part of the decision which bears the closest relation to the present case is the part relating to the localization of the offence on the vessel responsible for the collision.

But, whatever the value of the opinion expressed by the majority of the judges on this particular point may be in other respects, there would seem to be no doubt that if, in the minds of these judges, it was based on a rule of international law, their conception of that law, peculiar to English jurisprudence, is far from being generally accepted even in common-law countries. This view seems moreover to be borne out by the fact that the standpoint taken by the majority of the judges in regard to the localization of an offence, the author of which is situated in the territory of one effets se réalisent dans un autre État, a été abandonné dans des décisions anglaises plus récentes (R. v. Nillins, 1884, 53 L. J. 157; R. v. Godfrey, L. R. 1923, 1 K. B. 24). Cette évolution de la jurisprudence anglaise vient à l'appui de la thèse d'après laquelle le droit international laisse toute liberté aux États sous ce rapport.

A l'appui de la thèse d'après laquelle la compétence pénale dans les cas d'abordage appartiendrait exclusivement à l'État du pavillon, on a fait valoir qu'il s'agit de l'observation des règlements nationaux de chaque marine, et que la sanction efficace ne consiste pas autant à infliger au capitaine quelques mois de prison qu'à lui retirer son brevet de capitaine, c'est-à-dire le commandement du navire.

A cet égard, la Cour doit souligner que les poursuites ont lieu pour un délit de droit commun et non pour une infraction disciplinaire. Ni la nécessité de tenir compte d'un règlement administratif (même en laissant de côté la circonstance qu'il s'agit de règlements uniformes adoptés par les États à la suite d'une conférence internationale), ni l'impossibilité d'appliquer certaines sanctions disciplinaires, ne sauraient empêcher l'application de la loi pénale et des mesures répressives pénales.

La conclusion à laquelle la Cour arrive est donc qu'il n'existe pas de règle de droit international, relative aux cas d'abordage, qui réserverait les poursuites pénales à la compétence exclusive de l'État du pavillon.

Cette conclusion s'explique d'ailleurs assez facilement si l'on tient compte de la manière dont l'abordage met en présence deux juridictions d'États différents.

Le délit pour lequel le lieutenant Demons semble avoir été poursuivi serait un acte ayant sa manifestation initiale — négligence ou imprudence — à bord du *Lotus*, tandis que ses effets se sont produits sur le *Boz-Kourt*. Entre ces deux éléments, il y a une indivisibilité juridique absolue, à tel point que, une fois ces éléments séparés, le délit n'existe plus. Ni la compétence exclusive de l'un ou de l'autre État, ni la compétence de l'un et de l'autre limitée aux faits qui se sont passés sur le navire respectif, ne semblent de nature à satisfaire aux exigences de la justice et à une protection efficace des intérêts des deux États. Il n'est que naturel que chacun puisse exercer sa juridiction et que cette juridiction s'étende au fait

State whilst its effects are produced in another State, has been abandoned in more recent English decisions (R. v. Nillins, 1884, 53 L. J. 157; R. v. Godfrey, L. R. 1923, 1 K. B. 24). This development of English case-law tends to support the view that international law leaves States a free hand in this respect.

In support of the theory in accordance with which criminal jurisdiction in collision cases would exclusively belong to the State of the flag flown by the ship, it has been contended that it is a question of the observance of the national regulations of each merchant marine and that effective punishment does not consist so much in the infliction of some months' imprisonment upon the captain as in the cancellation of his certificate as master, that is to say, in depriving him of the command of his ship.

In regard to this, the Court must observe that in the present case a prosecution was instituted for an offence at criminal law and not for a breach of discipline. Neither the necessity of taking administrative regulations into account (even ignoring the circumstance that it is a question of uniform regulations adopted by States as a result of an international conference) nor the impossibility of applying certain disciplinary penalties can prevent the application of criminal law and of penal measures of repression.

The conclusion at which the Court has therefore arrived is that there is no rule of international law in regard to collision cases to the effect that criminal proceedings are exclusively within the jurisdiction of the State whose flag is flown.

This conclusion moreover is easily explained if the manner in which the collision brings the jurisdiction of two different countries into play be considered.

The offence for which Lieutenant Demons appears to have been prosecuted was an act—of negligence or imprudence—having its origin on board the *Lotus*, whilst its effects made themselves felt on board the *Boz-Kourt*. These two elements are, legally, entirely inseparable, so much so that their separation renders the offence non-existent. Neither the exclusive jurisdiction of either State, nor the limitations of the jurisdiction of each to the occurrences which took place on the respective ships would appear calculated to satisfy the requirements of justice and effectively to protect the interests of the two States. It is only natural that each should be able to exercise jurisdiction and to do so in respect tout entier. On est donc en présence d'un cas de juridictions concurrentes.

* * *

La Cour, étant arrivée à la conclusion que les arguments invoqués par le Gouvernement français, ou bien ne sont pas pertinents en l'espèce, ou bien ne démontrent pas l'existence d'un principe du droit international qui excluerait la compétence de la Turquie d'entreprendre les poursuites en fait exercées contre le lieutenant Demons, constate que, dans l'accomplissement de sa tâche de connaître elle-même le droit international, elle ne s'est pas bornée à cet examen, mais a étendu ses recherches à tous précédents, doctrines et faits qui lui étaient accessibles et qui auraient, le cas échéant, pu révéler l'existence d'un des principes du droit international visés par le compromis. Ces recherches n'ont pas abouti à un résultat affirmatif. Il y a donc lieu de constater qu'aucun principe de droit international, dans le sens de l'article 15 de la Convention de Lausanne du 24 juillet 1923, ne s'oppose à l'exercice des poursuites pénales dont il s'agit. En conséquence, la Turquie, en intentant, en vertu de la liberté que le droit international laisse à tout État souverain, les poursuites pénales en question, n'a pu, en l'absence de pareils principes, agir en contradiction des principes du droit international aux termes du compromis.

La Cour constate enfin qu'elle n'a pas besoin de s'occuper de la question de savoir si le fait que les poursuites pénales dirigées contre le lieutenant Demons étaient connexes à celles contre le capitaine du *Boz-Kourt* serait de nature à justifier l'extension de la juridiction turque. Cette question ne se serait posée qu'au cas où la Cour serait arrivée à la conclusion qu'une règle de droit international défendait à la Turquie d'exercer des poursuites pénales contre le lieutenant Demons, car alors seulement il y aurait eu lieu de se demander si ladite règle pouvait être tenue en échec par le fait de la connexité.

of the incident as a whole. It is therefore a case of concurrent jurisdiction.

* * *

The Court, having arrived at the conclusion that the arguments advanced by the French Government either are irrelevant to the issue or do not establish the existence of a principle of international law precluding Turkey from instituting the prosecution which was in fact brought against Lieutenant Demons, observes that in the fulfilment of its task of itself ascertaining what the international law is, it has not confined itself to a consideration of the arguments put forward, but has included in its researches all precedents, teachings and facts to which it had access and which might possibly have revealed the existence of one of the principles of international law contemplated in the special agreement. The result of these researches has not been to establish the existence of any such principle. It must therefore be held that there is no principle of international law, within the meaning of Article 15 of the Convention of Lausanne of July 24th, 1923, which precludes the institution of the criminal proceedings under consideration. Consequently, Turkey, by instituting, in virtue of the discretion which international law leaves to every sovereign State, the criminal proceedings in question, has not, in the absence of such principles, acted in a manner contrary to the principles of international law within the meaning of the special agreement.

In the last place the Court observes that there is no need for it to consider the question whether the fact that the prosecution of Lieutenant Demons was "joint" (*connexe*) with that of the captain of the *Boz-Kourt* would be calculated to justify an extension of Turkish jurisdiction. This question would only have arisen if the Court had arrived at the conclusion that there was a rule of international law prohibiting Turkey from prosecuting Lieutenant Demons; for only in that case would it have been necessary to ask whether that rule might be overridden by the fact of the "connexity" (*connexité*) of the offences.

V.

Ayant ainsi répondu négativement à la première question posée par le compromis, la Cour n'a pas à s'occuper de la seconde question, relative à la réparation pécuniaire qui, éventuellement, aurait pu être due en faveur du lieutenant Demons.

PAR CES MOTIFS,

La Cour,

jugeant contradictoirement,
décide, les voix étant également partagées, par la voix prépondérante du Président :

1) qu'en exerçant, à la suite de la collision survenue le 2 août 1926 en haute mer entre le vapeur français *Lotus* et le vapeur turc *Boz-Kourt,* et lors de l'arrivée du navire français à Stamboul, des poursuites pénales en vertu de la législation turque contre le lieutenant Demons, officier de quart à bord du *Lotus* au moment de la collision, en raison de la perte du *Boz-Kourt* ayant entraîné la mort de huit ressortissants turcs, la Turquie n'a pas, contrairement à l'article 15 de la Convention de Lausanne du 24 juillet 1923 relative à l'établissement et à la compétence judiciaire, agi en contradiction des principes du droit international ;

2) que, dès lors, il n'y a pas lieu de statuer sur la question de la réparation pécuniaire qui aurait éventuellement été due en faveur du lieutenant Demons au cas où la Turquie, en intentant des poursuites contre cet officier ainsi qu'il a été dit ci-dessus, aurait agi en contradiction des principes du droit international.

Le présent arrêt ayant été rédigé en français, conformément aux dispositions de l'article 39, premier alinéa, deuxième phrase, du Statut de la Cour, une traduction en anglais y est jointe.

V.

Having thus answered the first question submitted by the special agreement in the negative, the Court need not consider the second question, regarding the pecuniary reparation which might have been due to Lieutenant Demons.

FOR THESE REASONS,

The Court,

having heard both Parties,
gives, by the President's casting vote—the votes being equally divided—, judgment to the effect

(1) that, following the collision which occurred on August 2nd, 1926, on the high seas between the French steamship *Lotus* and the Turkish steamship *Boz-Kourt*, and upon the arrival of the French ship at Stamboul, and in consequence of the loss of the *Boz-Kourt* having involved the death of eight Turkish nationals, Turkey, by instituting criminal proceedings in pursuance of Turkish law against Lieutenant Demons, officer of the watch on board the *Lotus* at the time of the collision, has not acted in conflict with the principles of international law, contrary to Article 15 of the Convention of Lausanne of July 24th, 1923, respecting conditions of residence and business and jurisdiction ;

(2) that, consequently, there is no occasion to give judgment on the question of the pecuniary reparation which might have been due to Lieutenant Demons if Turkey, by prosecuting him as above stated, had acted in a manner contrary to the principles of international law.

This judgment having been drawn up in French in accordance with the terms of Article 39, paragraph 1, second sentence, of the Statute of the Court, an English translation is attached thereto.

Fait au Palais de la Paix, à La Haye, le sept septembre mil neuf cent vingt-sept, en trois exemplaires, dont l'un restera déposé aux archives de la Cour et dont les autres seront transmis aux agents des Gouvernements parties en cause respectivement.

Le Président :

(*Signé*) MAX HUBER.

Le Greffier :

(*Signé*) Å. HAMMARSKJÖLD.

MM. Loder, ancien Président, Weiss, Vice-Président, et lord Finlay, MM. Nyholm et Altamira, juges, déclarant ne pas pouvoir se rallier à l'arrêt rendu par la Cour et se prévalant du droit que leur confère l'article 57 du Statut, ont joint audit arrêt les exposés suivants de leur opinion individuelle.

M. Moore, dont l'opinion diffère de l'arrêt uniquement en raison des rapports entre les poursuites pénales visées en l'espèce et l'article 6 du Code pénal turc, a également joint l'exposé de son opinion individuelle.

(*Paraphé*) M. H.

(*Paraphé*) Å. H.

Done at the Peace Palace, The Hague, this seventh day of September, nineteen hundred and twenty-seven, in three copies, one of which is to be placed in the archives of the Court, and the others to be transmitted to the Agents of the respective Parties.

Lisbon Agreement for the Protection of Appellations of Origin and their International Registration

of October 31, 1958,
as revised at Stockholm on July 14, 1967,
and as amended on September 28, 1979

Article 1

[Establishment of a Special Union; Protection of Appellations of Origin Registered at the International Bureau][1]

(1) The countries to which this Agreement applies constitute a Special Union within the framework of the Union for the Protection of Industrial Property.

(2) They undertake to protect on their territories, in accordance with the terms of this Agreement, the appellations of origin of products of the other countries of the Special Union, recognized and protected as such in the country of origin and registered at the International Bureau of Intellectual Property (hereinafter designated as “the International Bureau” or “the Bureau”) referred to in the Convention establishing the World Intellectual Property Organization (hereinafter designated as “the Organization”).

Article 2

[Definition of Notions of Appellation of Origin and Country of Origin]

(1) In this Agreement, “appellation of origin” means the geographical denomination of a country, region, or locality, which serves to designate a product originating therein, the quality or characteristics of which are due exclusively or essentially to the geographical environment, including natural and human factors.

(2) The country of origin is the country whose name, or the country in which is situated the region or locality whose name, constitutes the appellation of origin which has given the product its reputation.

---

[1] Articles have been given titles to facilitate their identification. There are no titles in the signed French text. The title of Article 6 has been modified, compared to the previous edition.

Article 3

[Content of Protection]

Protection shall be ensured against any usurpation or imitation, even if the true origin of the product is indicated or if the appellation is used in translated form or accompanied by terms such as “kind,” “type,” “make,” “imitation”, or the like.

Article 4

[Protection by virtue of Other Texts]

The provisions of this Agreement shall in no way exclude the protection already granted to appellations of origin in each of the countries of the Special Union by virtue of other international instruments, such as the Paris Convention of March 20, 1883, for the Protection of Industrial Property and its subsequent revisions, and the Madrid Agreement of April 14, 1891, for the Repression of False or Deceptive Indications of Source on Goods and its subsequent revisions, or by virtue of national legislation or court decisions.

Article 5

[International Registration; Refusal; Notifications;
Use Tolerated for a Fixed Period]

(1) The registration of appellations of origin shall be effected with the International Bureau, at the request of the Authorities of the countries of the Special Union, in the name of any natural persons or legal entities, public or private, having, according to their national legislation, the right to use such appellations.

(2) The International Bureau shall, without delay, notify the Authorities of the various countries of the Special Union of such registrations, and shall publish them in a periodical.

(3) The Authority of any country may declare that it cannot ensure the protection of an appellation of origin whose registration has been notified to it, but only in so far as its declaration is notified to the International Bureau, together with an indication of the grounds therefor, within a period of one year from the receipt of the notification of registration, and provided that such declaration is not detrimental, in the country concerned, to the other forms of protection of the appellation which the owner thereof may be entitled to claim under Article 4, above.

(4) Such declaration may not be opposed by the Authorities of the countries of the Union after the expiration of the period of one year provided for in the foregoing paragraph.

(5) The International Bureau shall, as soon as possible, notify the Authority of the country of origin of any declaration made under the terms of paragraph (3) by the Authority of another country. The interested party, when informed by his national Authority of the declaration made by another country, may resort, in that other country, to all the judicial and administrative remedies open to the nationals of that country.

(6) If an appellation which has been granted protection in a given country pursuant to notification of its international registration has already been used by third parties in that country from a date prior to such notification, the competent Authority of the said country shall have the right to grant to such third parties a period not exceeding two years to terminate such use, on condition that it advise the International Bureau accordingly during the three months following the expiration of the period of one year provided for in paragraph (3), above.

Article 6

[Shield Against Becoming Generic]

An appellation which has been granted protection in one of the countries of the Special Union pursuant to the procedure under Article 5 cannot, in that country, be deemed to have become generic, as long as it is protected as an appellation of origin in the country of origin.

Article 7

[Period of Validity of Registration; Fee]

(1) Registration effected with the International Bureau in conformity with Article 5 shall ensure, without renewal, protection for the whole of the period referred to in the foregoing Article.

(2) A single fee shall be paid for the registration of each appellation of origin.

Article 8

[Legal Proceedings]

Legal action required for ensuring the protection of appellations of origin may be taken in each of the countries of the Special Union under the provisions of the national legislation:

1. at the instance of the competent Authority or at the request of the public Prosecutor;

2. by any interested party, whether a natural person or a legal entity, whether public or private.

Article 9

[Assembly of the Special Union]

(1) (a) The Special Union shall have an Assembly consisting of those countries which have ratified or acceded to this Act.

(b) The Government of each country shall be represented by one delegate, who may be assisted by alternate delegates, advisors, and experts.

(c) The expenses of each delegation shall be borne by the Government which has appointed it.

(2) (a) The Assembly shall:

(i) deal with all matters concerning the maintenance and development of the Special Union and the implementation of this Agreement;

(ii) give directions to the International Bureau concerning the preparation for revision conferences, due account being taken of any comments made by those countries of the Special Union which have not ratified or acceded to this Act;

(iii) modify the Regulations, including the fixation of the amount of the fee referred to in Article 7(2) and other fees relating to international registration;

(iv) review and approve the reports and activities of the Director General of the Organization (hereinafter designated as “the Director General”) concerning the Special Union, and give him all necessary instructions concerning matters within the competence of the Special Union;

(v) determine the program and adopt the biennial budget of the Special Union, and approve its final accounts;

(vi) adopt the financial regulations of the Special Union;

(vii) establish such committees of experts and working groups as it may deem necessary to achieve the objectives of the Special Union;

(viii) determine which countries not members of the Special Union and which intergovernmental and international non-governmental organizations shall be admitted to its meetings as observers;

(ix) adopt amendments to Articles 9 to 12;

(x) take any other appropriate action designed to further the objectives of the Special Union;

(xi) perform such other functions as are appropriate under this Agreement.

(b) With respect to matters which are of interest also to other Unions administered by the Organization, the Assembly shall make its decisions after having heard the advice of the Coordination Committee of the Organization.

(3) (a) Each country member of the Assembly shall have one vote.

(b) One-half of the countries members of the Assembly shall constitute a quorum.

(c) Notwithstanding the provisions of subparagraph (b), if, in any session, the number of countries represented is less than one half but equal to or more than one-third of the countries members of the Assembly, the Assembly may make decisions but, with the exception of decisions concerning its own procedure, all such decisions shall take effect only if the conditions set forth hereinafter are fulfilled. The International Bureau shall communicate the said decisions to the countries members of the Assembly which were not represented and shall invite them to express in writing their vote or abstention within a period of three months from the date of the communication. If, at the expiration of this period, the number of countries having thus expressed their vote or abstention attains the number of countries which was lacking for attaining the quorum in the session itself, such decisions shall take effect provided that at the same time the required majority still obtains.

(d) Subject to the provisions of Article 12(2), the decisions of the Assembly shall require two-thirds of the votes cast.

(e) Abstentions shall not be considered as votes.

(f) A delegate may represent, and vote in the name of, one country only.

(g) Countries of the Special Union not members of the Assembly shall be admitted to the meetings of the latter as observers.

(4) (a) The Assembly shall meet once in every second calendar year in ordinary session upon convocation by the Director General and, in the absence of exceptional circumstances, during the same period and at the same place as the General Assembly of the Organization.

(b) The Assembly shall meet in extraordinary session upon convocation by the Director General, at the request of one-fourth of the countries members of the Assembly.

(c) The agenda of each session shall be prepared by the Director General.

(5) The Assembly shall adopt its own rules of procedure.

Article 10

[International Bureau]

(1) (a) International registration and related duties, as well as all other administrative tasks concerning the Special Union, shall be performed by the International Bureau.

(b) In particular, the International Bureau shall prepare the meetings and provide the secretariat of the Assembly and of such committees of experts and working groups as may have been established by the Assembly.

(c) The Director General shall be the chief executive of the Special Union and shall represent the Special Union.

(2) The Director General and any staff member designated by him shall participate, without the right to vote, in all meetings of the Assembly and of such committees of experts or working groups as may have been established by the Assembly. The Director General, or a staff member designated by him, shall be *ex officio* secretary of those bodies.

(3) (a) The International Bureau shall, in accordance with the directions of the Assembly, make the preparations for the conferences to revise the provisions of the Agreement other than Articles 9 to 12.

(b) The International Bureau may consult with intergovernmental and international non-governmental organizations concerning preparations for revision conferences.

(c) The Director General and persons designated by him shall take part, without the right to vote, in the discussions at those conferences.

(4) The International Bureau shall carry out any other tasks assigned to it.

Article 11

[Finances]

(1) (a) The Special Union shall have a budget.

(b) The budget of the Special Union shall include the income and expenses specific to the Special Union, its contribution to the budget of expenses common to the Unions, and, where applicable, the sum made available to the budget of the Conference of the Organization.

(c) Expenses not attributable exclusively to the Special Union but also to one or more other Unions administered by the Organization shall be considered as expenses common to the Unions. The share of the Special Union in such common expenses shall be in proportion to the interest the Special Union has in them.

(2) The budget of the Special Union shall be established with due regard to the requirements of coordination with the budgets of the other Unions administered by the Organization.

(3) The budget of the Special Union shall be financed from the following sources:

(i) international registration fees collected under Article 7(2) and fees and charges due for other services rendered by the International Bureau in relation to the Special Union;

(ii) proceeds from the sale of, or royalties on, the publications of the International Bureau concerning the Special Union;

(iii) gifts, bequests, and subventions;

(iv) rents, interest, and other miscellaneous income;

(v) contributions of the countries of the Special Union, if and to the extent to which receipts from the sources indicated in items (i) to (iv) do not suffice to cover the expenses of the Special Union.

(4) (a) The amount of the fee referred to in Article 7(2) shall be fixed by the Assembly on the proposal of the Director General.

(b) The amount of the said fee shall be so fixed that the revenue of the Special Union should, under normal circumstances, be sufficient to cover the expenses of the International Bureau for maintaining the international registration service, without requiring payment of the contributions referred to in paragraph (3)(v), above.

(5) (a) For the purpose of establishing its contribution referred to in paragraph (3)(v), each country of the Special Union shall belong to the same class as it belongs to in the Paris Union for the Protection of Industrial Property, and shall pay its annual contributions on the basis of the same number of units as is fixed for that class in that Union.

(b) The annual contribution of each country of the Special Union shall be an amount in the same proportion to the total sum to be contributed to the annual budget of the Special Union by all countries as the number of the units of the class to which it belongs is to the total of the units of all contributing countries.

(c) The date on which contributions are to be paid shall be fixed by the Assembly.

(d) A country which is in arrears in the payment of its contributions may not exercise its right to vote in any of the organs of the Special Union if the amount of its arrears equals or exceeds the amount of the contributions due from it for the preceding two full years. However, such a country may be allowed to continue to exercise its right to vote in that organ if, and as long as, the latter is satisfied that the delay in payment is due to exceptional and unavoidable circumstances.

(e) If the budget is not adopted before the beginning of a new financial period, it shall be at the same level as the budget of the previous year, as provided in the financial regulations.

(6) Subject to the provisions of paragraph (4)(a), the amount of fees and charges due for other services rendered by the International Bureau in relation to the Special Union shall be established, and shall be reported to the Assembly, by the Director General.

(7) (a) The Special Union shall have a working capital fund which shall be constituted by a single payment made by each country of the Special Union. If the fund becomes insufficient, the Assembly shall decide to increase it.

(b) The amount of the initial payment of each country to the said fund or of its participation in the increase thereof shall be a proportion of the contribution of that country as a member of the Paris Union for the Protection of Industrial Property to the budget of the said Union for the year in which the fund is established or the decision to increase it is made.

(c) The proportion and the terms of payment shall be fixed by the Assembly on the proposal of the Director General and after it has heard the advice of the Coordination Committee of the Organization.

(8) (a) In the headquarters agreement concluded with the country on the territory of which the Organization has its headquarters, it shall be provided that, whenever the working capital fund is insufficient, such country shall grant advances. The amount of those advances and the conditions on which they are granted shall be the subject of separate agreements, in each case, between such country and the Organization.

(b) The country referred to in subparagraph (a) and the Organization shall each have the right to denounce the obligation to grant advances, by written notification. Denunciation shall take effect three years after the end of the year in which it has been notified.

(9) The auditing of the accounts shall be effected by one or more of the countries of the Special Union or by external auditors, as provided in the financial regulations. They shall be designated, with their agreement, by the Assembly.

Article 12

[Amendment of Articles 9 to 12]

(1) Proposals for the amendment of Articles 9, 10, 11, and the present Article, may be initiated by any country member of the Assembly, or by the Director General. Such proposals shall be communicated by the Director General to the member countries of the Assembly at least six months in advance of their consideration by the Assembly.

(2) Amendments to the Articles referred to in paragraph (1) shall be adopted by the Assembly. Adoption shall require three-fourths of the votes cast, provided that any amendment to Article 9, and to the present paragraph, shall require
four-fifths of the votes cast.

(3) Any amendment to the Articles referred to in paragraph (1) shall enter into force one month after written notifications of acceptance, effected in accordance with their respective constitutional processes, have been received by the Director General from three-fourths of the countries members of the Assembly at the time it adopted the amendment. Any amendment to the said Articles thus accepted shall bind all the countries which are members of the Assembly at the time the amendment enters into force, or which become members thereof at a subsequent date, provided that any amendment increasing the financial obligations of countries of the Special Union shall bind only those countries which have notified their acceptance of such amendment.

Article 13

[Regulations; Revision]

(1) The details for carrying out this Agreement are fixed in the Regulations.

(2) This Agreement may be revised by conferences held between the delegates of the countries of the Special Union.

Article 14

[Ratification and Accession; Entry into Force; Reference to Article 24 of Paris Convention (Territories); Accession to the Act of 1958]

(1) Any country of the Special Union which has signed this Act may ratify it, and, if it has not signed it, may accede to it.

(2) (a) Any country outside the Special Union, which is party to the Paris Convention for the Protection of Industrial Property, may accede to this Act and thereby become a member of the Special Union.

(b) Notification of accession shall, of itself, ensure, in the territory of the acceding country, the benefits of the foregoing provisions to appellations of origin which, at the time of accession, are the subject of international registration.

(c) However, any country acceding to this Agreement may, within a period of one year, declare in regard to which appellations of origin, already registered at the International Bureau, it wishes to exercise the right provided for in Article 5(3).

(3) Instruments of ratification and accession shall be deposited with the Director General.

(4) The provisions of Article 24 of the Paris Convention for the Protection of Industrial Property shall apply to this Agreement.

(5) (a) With respect to the first five countries which have deposited their instruments of ratification or accession, this Act shall enter into force three months after the deposit of the fifth such instrument.

(b) With respect to any other country, this Act shall enter into force three months after the date on which its ratification or accession has been notified by the Director General, unless a subsequent date has been indicated in the instrument of ratification or accession. In the latter case, this Act shall enter into force with respect to that country on the date thus indicated.

(6) Ratification or accession shall automatically entail acceptance of all the clauses and admission to all the advantages of this Act.

(7) After the entry into force of this Act, a country may accede to the original Act of October 31, 1958, of this Agreement only in conjunction with ratification of, or accession to, this Act.

Article 15

[Duration of the Agreement; Denunciation]

(1) This Agreement shall remain in force as long as five countries at least are party to it.

(2) Any country may denounce this Act by notification addressed to the Director General. Such denunciation shall constitute also denunciation of the original Act of October 31, 1958, of this Agreement and shall affect only the country making it, the Agreement remaining in full force and effect as regards the other countries of the Special Union.

(3) Denunciation shall take effect one year after the day on which the Director General has received the notification.

(4) The right of denunciation provided for by this Article shall not be exercised by any country before the expiration of five years from the date upon which it becomes a member of the Special Union.

Article 16

[Applicable Acts]

(1) (a) This Act shall, as regards the relations between the countries of the Special Union by which it has been ratified or acceded to, replace the original Act of October 31, 1958.

(b) However, any country of the Special Union which has ratified or acceded to this Act shall be bound by the original Act of October 31, 1958, as regards its relations with countries of the Special Union which have not ratified or acceded to this Act.

(2) Countries outside the Special Union which become party to this Act shall apply it to international registrations of appellations of origin effected at the International Bureau at the request of the Authority of any country of the Special Union not party to this Act, provided that such registrations satisfy, with respect to the said countries, the requirements of this Act. With regard to international registrations effected at the International Bureau at the request of the Authorities of the said countries outside the Special Union which become party to this Act, such countries recognize that the aforesaid country of the Special Union may demand compliance with the requirements of the original Act of October 31, 1958.

Article 17
[Signature, Languages, Depository Functions]

(1) (a) This Act shall be signed in a single copy in the French language and shall be deposited with the Government of Sweden.

(b) Official texts shall be established by the Director General, after consultation with the interested Governments, in such other languages as the Assembly may designate.

(2) This Act shall remain open for signature at Stockholm until January 13, 1968.

(3) The Director General shall transmit two copies, certified by the Government of Sweden, of the signed text of this Act to the Governments of all countries of the Special Union and, on request, to the Government of any other country.

(4) The Director General shall register this Act with the Secretariat of the United Nations.

(5) The Director General shall notify the Governments of all countries of the Special Union of signatures, deposits of instruments of ratification or accession, entry into force of any provisions of this Act, denunciations, and declarations pursuant to Article 14(2)(c) and (4).

Article 18
[Transitional Provisions]

(1) Until the first Director General assumes office, references in this Act to the International Bureau of the Organization or to the Director General shall be construed as references to the Bureau of the Union established by the Paris Convention for the Protection of Industrial Property or its Director, respectively.

(2) Countries of the Special Union not having ratified or acceded to this Act may, until five years after the entry into force of the Convention establishing the Organization, exercise, if they so desire, the rights provided for under Articles 9 to 12 of this Act as if they were bound by those Articles. Any country desiring to exercise such rights shall give written notification to that effect to the Director General; such notification shall be effective from the date of its receipt. Such countries shall be deemed to be members of the Assembly until the expiration of the said period.

Guide to the Application of the Paris Convention for the Protection of Industrial Property as revised at Stockholm in 1967

I. INTRODUCTORY OBSERVATIONS

The number of States party to the Paris Convention for the Protection of Industrial Property has increased rapidly in recent years : on January 1, 1963, 51 States had acceded to the Convention ; on January 1, 1968, this number had risen to 79. A further increase may be expected in the near future, as many States are known to be studying or preparing their accession to the Convention. In view of these facts many more governments, national administrations or courts, practitioners, inventors, and industrial or commercial enterprises will have to apply, or may request the application of, the Convention than ever before. It has therefore appeared useful to establish a concise Guide, briefly commenting upon the principal provisions of the Convention and indicating replies to the main questions which may arise from day to day in relation to its application.

Since the International Bureau, which is entrusted with the administration of the Convention, is not competent to determine how it should be interpreted, the views expressed in this Guide are only those of the author. The International Bureau has limited its role to the publication of the Guide in view of its presumed usefulness.

The purpose of the Guide is to deal in a very simple manner with the principal questions relating to the application of the Convention.

For that reason, theoretical considerations have been omitted, other literature is only occasionally mentioned, and national legislations and case law are cited only as examples. Another reason for these latter limitations is that the author's knowledge of languages is unfortunately limited, so that laws, administrative or judicial decisions and legal studies not published in any language known to him will probably have escaped him. In these circumstances, a certain lack of balance would exist if much attention were given to publications in one language and none to equally important publications in another.

The Guide comments on the Paris Convention as revised at Stockholm in 1967. The Stockholm text is not yet in force at the time of publication of the Guide, but it will no doubt soon become the text of the Convention adhered to by many countries. Since, moreover, with one exception (addition of Article 4 I(1) and (2)), the Stockholm text of the Convention differs from the preceding Lisbon text only in the administrative and final clauses (Artices 13 to 30), the Stockholm text seemed to constitute an appropriate basis for a commentary. This commentary is based on the official text of the Convention in English,[1] established in application of Article 29(1)*(b)* of the Convention, a text which presents some differences as to form with the former official English translation of the Lisbon text.

The Guide, after briefly sketching the history and the principal rules of the Convention, comments upon each of its articles and paragraphs separately.

---

[1] See *I.P.*, 1968, p. 122.

II. HISTORY AND PRINCIPAL RULES OF THE CONVENTION

The Convention was drafted, after preparatory work in 1873 and 1878, at a Diplomatic Conference in Paris in 1880, signed, with an additional Final Protocol, by 11 States[1] at a similar Conference in 1883 and ratified by these States in 1884.[2] It entered into force one month after the deposit of the instruments of ratification, on July 7, 1884.

The Convention specified that the contracting States constituted themselves into a *Union* for the protection of industrial property, a legal construction the consequences of which will be examined hereinafter.

From the start, the Convention (Article 14) provided for periodical Conferences of Revision with a view to the introduction of amendments designed to improve its system. Such Conferences were held in Rome in 1886, in Madrid in 1890 and 1891, in Brussels in 1897 and 1900, and in Washington in 1911, but since none of the adopted texts is still binding on any of the member States they need not be commented upon as such. Further revisions of the Convention took place at The Hague in 1925, at London in 1934, at Lisbon in 1958 and at Stockholm in 1967. All these last-mentioned texts are, or will soon be, in force between some member States; the relations between States bound by different texts will be examined below.

In discussing the articles and paragraphs of the Convention hereinafter, the development of each provision will be traced throughout the different revisions of the Convention, in order to facilitate further study of the background of each provision in the Acts of each Revision

---

[1] Belgium, Brazil, France, Guatemala, Italy, Netherlands, Portugal, Salvador, Serbia, Spain and Switzerland.

[2] At the same time instruments of accession were deposited by Ecuador, Tunisia and the United Kingdom

Conference.[1] Where, in many cases, special reference is made to the history of a provision of the Convention, the purpose is to indicate the questions which were before the Conference or Conferences which established the provision, and to illustrate or clarify its meaning.

As to the *principal rules* of the Convention, a distinction must be made between four different categories of rules which it contains :

1. First, the Convention contains provisions of *international public law* regulating *rights and obligations of the member States* and establishing the *organs of the Union* created by the Convention, as well as provisions of an *administrative character.* Examples of this category are :

Article 6*ter*(3) and (4), requiring or allowing the member States—and international organizations of which at least one of these States is a member—to make certain communications concerning emblems, etc., to be excluded from registration and use as trademarks ;

Article 12, which requires the member States to establish a national industrial property service which will issue certain publications (cf. also Article 4 D(2)) ;

Article 13, which establishes an Assembly consisting of the member States, and deals with the composition, the powers and duties of the Assembly, and its voting procedure ;

Article 14, establishing an Executive Committee, again with provisions as to its composition, powers, etc ;

Article 15, regulating the functioning of the International Bureau, which will perform the administrative tasks concerning the Union established by the Convention ;

Article 16, regarding finances, that is, the budget of the Union, the contributions of the member States, etc ;

Articles 17 and 18, concerning the amendment of Articles 13 to 17 and revision of the other Articles of the Convention ;

Article 19, envisaging the possibility of special agreements between the member States, which must not, however, contravene the provisions of the Convention ;

Article 20, concerning ratification of and accession to the Convention by countries already members of the Union, that is, countries party to an earlier Act of the Convention ;

---

[1] With respect to the Revision Conference of Stockholm in 1967, references will be limited to those documents of the Conference which, at the time of writing this Guide, were already published; this was not the case as far as the complete Acts of the Conference of Stockholm are concerned.

Article 21, regarding accession by countries outside the Union ;
Article 22, dealing with the consequences of ratification or accession ;
Articles 23 and 27, regarding the relationship with earlier Acts of the Convention ;
Article 24, regulating the possibility of applying the Convention to dependent territories ;
Article 26, concerning the duration and denunciation of the Convention ;
Article 28, relating to disputes between member States concerning the interpretation or application of the Convention ;
Article 29, concerning signature of the Convention, languages and depositary functions ;
Article 30, containing transitional provisions.

2. Secondly, the Convention contains provisions which *require* or *permit* the member States to *legislate* within the field of industrial property.

In this category the following provisions may be mentioned :

Article 4 D(1), (3), (4) and (5), requiring or allowing member States to regulate certain details concerning the right of priority ;
Article 4 G(2), second sentence, containing a similar rule regarding the division of patent applications ;
Article 5 A(2), granting member States the right to legislate against abuses which might result from the exercise of the exclusive rights conferred by a patent ;
Article 5*bis*(2), granting member States the right to provide for the restoration of patents which have lapsed by reason of non-payment of fees ;
Article 6*bis*(2), second sentence, enabling member States to provide a period within which the prohibition must be sought of use by a third party, not made in bad faith, of a mark similar to a well-known mark ;
Article 6*septies*(3), enabling member States to provide an equitable time limit for the exercise of certain rights of the proprietor of a mark against his agent or representative ;
Article 10*bis*(1), requiring member States to assure effective protection against unfair competition ;
Article 10*ter*, obliging member States to provide legal remedies effectively to repress certain unlawful acts concerning trademarks, trade names, false indications of the source of goods or of the

identity of the producer, manufacturer or merchant, and unfair competition ;[1]

Article 11, requiring member States to grant temporary protection to patentable inventions, utility models, industrial designs and trademarks, in respect of goods exhibited at official or officially recognized international exhibitions held in the territory of any of them ; and, finally,

Article 25, containing the *general principle* that any country party to the Convention undertakes to adopt, in accordance with its constitution, the measures necessary to ensure the application of the Convention, and specifying that a country acceding to the Convention must be in a position under its domestic law to give effect to the provisions of the Convention.

3. A third category of provisions of the Convention relates to *substantive law* in the field of industrial property regarding *rights and obligations of private parties*, but only to the extent of *requiring the domestic law* of the member States to be applied to these parties.

Under this category comes the very important basic rule of the Convention, that nationals of each member State shall, as regards the protection of industrial property, enjoy in all other member States the advantages that their respective laws grant, or may grant in the future, to nationals of these latter member States (Article 2). Nationals of non-member States who are domiciled or who have real and effective industrial or commercial establishments in the territory of one of the countries of the Union must be treated in the same manner as nationals of the countries of the Union (Article 3).

This is called the principle of "*national treatment*," or "*assimilation with nationals*," a principle which means that, in the field of industrial property as defined by the Convention, each member State must apply to nationals of other member States (and those assimilated to such nationals by Article 3) the *same treatment as it gives to its own nationals*, without being allowed to require reciprocity. The idea of the Convention is that such reciprocity is sufficiently assured by the obligations involved in adherence to the Convention.

Other, more special, provisions by which the Convention requires the application of domestic legislation are Article 9(3), concerning

---

[1] In contrast, Article 9(6) does not create any obligation for member States to legislate according to the preceding paragraphs of that Article: it merely has the character of an invitation which does not even create a moral obligation. Cf. *Actes de La Haye*, pp. 470, 525, 545.

seizure of goods unlawfully bearing a trademark or trade name, and Article 9(6), regarding other actions and remedies available in such cases, both provisions being equally applicable to false indications of source, etc. (cf. Article 10(1)).

With respect to those provisions of the Convention which require the application of the domestic law of member States, the question arises whether private parties may *directly claim* the application of domestic laws by the administrative and judicial authorities of the countries concerned, *by virtue of the provisions of the Convention*, or whether these latter provisions only create *obligations for member States*, whose *domestic laws* would then have to make special provision for "*national treatment*" of nationals of other member States in order to make these laws applicable in such cases.

This is the well-known question whether the cited provisions of the Convention are or are not "*self-executing*." The answer depends on two further questions: first, whether the constitution or constitutional system of the State concerned permits provisions of an international Convention to be "self-executing," that is, directly applicable to private parties without further intervention by the national legislation or possibly even against differing provisions of such legislation, and, secondly, whether the provisions of the international Convention concerned are so drafted as to permit such direct application to private parties. The first question will be discussed below; as to the second, there can be no doubt that the provisions of the Convention cited above may, and therefore must, be directly applied in countries which admit this possibility.

4. Finally, a fourth category of provisions of the Convention contains *rules of substantive law* regarding *rights and obligations of private parties*, rules however which do not merely refer to the application of domestic laws, but the contents of which may *directly govern the situation at issue*.

Here again the question arises whether these provisions *will*, in any given case, directly govern the situation at issue, that is, be considered as "self-executing," or whether national legislation is necessary to implement such provisions.

As has been observed above, this depends in the first place on the constitutional system of each member State.[1]

---

[1] Cf. *Actes de Washington*, p. 269; *Actes de La Haye*, pp. 223/4.

In some countries, for example, France, the Soviet Union, the United States, the Netherlands and many others, the constitution or constitutional system permits administrative and judicial authorities to apply directly to private parties the provisions of an international treaty, if these provisions are worded in such a way as to make such direct application possible (" self-executing " provisions).[1] In these countries the provisions of the Convention which are considered "self-executing" may be applied and must be applied without any further intervention by the national legislator.

In other countries, for example, the United Kingdom, Norway, Sweden and several others, the provisions of an international treaty can bind only the *State* and are never applicable to private parties without first having been embodied in domestic legislation. In these countries the provisions of the Convention cannot be " self-executing " ; although they may, even without being binding, *influence* an administrative or judicial decision concerning domestic law, they can only become *binding* by application of Article 25 of the Convention, that is, when the country concerned introduces the rules of the Convention into its domestic law.

Whatever the constitutional system of the member States, the provisions of the Convention of the fourth category referred to above constitute a very important *body of common rules* regarding the protection of industrial property, rules which, either directly, or indirectly through the intermediary of national legislation, have to be respected and applied by all member States.

What remains to be decided in countries which admit the possibility of self-executing provisions of a convention is whether the provisions concerned are so worded *as to permit direct application.*

Provisions of this type are to be found, for example, in the definition of industrial property in Article 1, the right of priority regulated in Article 4, the independence of patents (Article 4*bis*), the right of the inventor to be mentioned in the patent (Article 4*ter*), the limitation of the possibilities of refusal and annulment of patents (Article 4*quater*), the regulation of the obligation to exploit patents, trademarks, etc. (Article 5, with the exception of paragraph A(2)), the period of grace for the payment of maintenance fees (Article 5*bis*(1)), the exemption, under certain circumstances, of ships, aircraft, land vehicles, etc., from infringement of patents (Article 5*ter*), the rights of the patentee of a

---

[1] In some of these States the provisions of an international treaty overrule provisions of domestic law, even if the latter are of later date; in other States the later of both types of provisions prevails.

process of manufacture (Article 5*quater*), the conditions of registration and independence of trademarks (Article 6), the assignment of marks (Article 6*quater*), the protection of registered trademarks in other countries (Article 6*quinquies*), the registration of marks by agents, etc. (Article 6*septies*), the exclusion of all consideration of the nature of goods as a bar to the possible registration of a trademark for such goods (Article 7), the provision concerning the protection of trade names (Article 8), the recognition of interest in pursuing false indications of source, etc. (Article 10(2)), the designation of acts of unfair competition (Article 10*bis*(2) and (3)).[1]

Although these common rules regarding the protection of industrial property given in the Convention are of great importance, it should be noted, nevertheless, that their scope is limited and they leave *considerable freedom to the member States* to legislate on questions of industrial property according to their interests or preferences.

In the field of patents, for example, the Convention leaves the member States entirely free to establish the criteria for patentability, to decide whether patent applications should or should not be examined in order to determine, before a patent is granted, whether these criteria have been met, whether the patent should be granted to the first inventor or to the first applicant for a patent, or whether patents should be granted for products only, for processes only, or for both, and in which fields of industry and for what term.[2] With one exception (Article 5*quater*), the Convention does not specify either the acts of third parties against which a patent should protect the patentee, etc.

In the field of trademarks, the Convention does not prescribe whether the right to a trademark will be acquired either through registration or through use, or both. It also leaves the member States free to decide to what extent they desire to submit applications for registration of a trademark to examination. Neither is the scope of protection of a trademark defined in the Convention, except in a few special cases (Articles 6*bis*, 6*quinquies* and 6*septies*).

Other cases in which the Convention leaves the member States free to legislate will be examined below.

Another aspect of the considerable freedom left by the Convention to the domestic law of the member States is that such laws may grant

---

[1] In the case of other provisions, for example, Articles 5*quinquies*, 6*bis*, 6*ter*, 5*sexies*, 7*bis*, their self-executing character is questionable. This will be discussed when these Articles are commented upon separately. Articles 9(1) to (5) and 10(1) are not self-executing because of Article 9(6).

[2] Cf. *Actes de La Haye*, p. 536.

a *more extensive protection* of industrial property than is prescribed in the Convention.[1]

For example, the member States may also grant "national treatment," that is, the treatment accorded to nationals in their national legislation, or certain rights provided in the Convention, such as the right of priority, to persons other than those entitled to such treatment by virtue of the Convention, namely, persons who are neither nationals of any country of the Union (Article 2), nor domiciled or established therein (Article 3). The member States may also improve the protection of industrial property prescribed in the Convention, for example, by protecting well-known trademarks (Article 6*bis*) against identical or similar marks for entirely different goods.

However, there is a limit to this freedom to enlarge the protection of industrial property prescribed in the Convention in that more extensive protection must not prejudice the rights granted by the Convention. This could be the case, for example, if a member State would grant to nationals of certain countries priority rights for longer periods than those of Article 4 C(1) of the Convention.

---

[1] Cf. *Actes de Paris*, I, p. 131 .

III. COMMENTARY ON THE ARTICLES OF THE CONVENTION

ARTICLE 1, paragraph (1)*(a)*

(1) The countries *(b)* **to which this Convention** *(c)* **applies** *(d)* **constitute a Union** *(e)* **for the protection of industrial property** *(f)***.**

(a) The original text of the Convention of 1883 enumerated the States whose Governments declared that they constituted themselves into a Union for the protection of industrial property. These States were thereafter referred to in the Convention as " contracting States," " States of the Union " or " High Contracting Parties." This terminology was changed at the Revision Conference of Washington in 1911 where, in view of the diversity obtaining in the internal constitution of the contracting parties and the terminology adopted in this respect by similar Conventions,[1] Article 1 of the Convention was worded : " The contracting *countries* constitute themselves into a Union for the protection of industrial property." This text was further modified by the Revision Conference in London in 1934.[2]

(b) As indicated above, the Convention no longer speaks of " contracting *States* " but of " *countries* to which this Convention applies." As was observed at the Revision Conference of London in 1934,[3] the latter expression could also cover the extension of the scope of the Convention to colonies, etc., which, generally speaking, were not " States." This problem, however, was taken care of by what was then

---

[2] *Actes de Londres*, pp. 166/7 (proposal), 340 (report of First Sub-Committee), 448 (report of Drafting Committee), 510 (adoption in Second Plenary Session).

[3] *Ibidem*, p. 166.

Article 16*bis* of the Convention (now, in modified form, Article 24 of the Stockholm text). The main reason for changing the expression " States " into " countries " was probably to enable countries not fully autonomous, such as several British " dominions " and French " protectorates," to claim the status of " country to which the Convention applies " and thus exert the right to vote in revision Conferences.[1]

These phenomena have now disappeared and, in view of the generally accepted rule of international public law according to which only *States* (apart from intergovernmental organizations) have the capacity to conclude treaties,[2] there is no reason to believe that " countries " in the Convention means anything other than " States. "[3]

This question is of some importance because the Convention does not provide any procedure for the admission of new members to the Union. Each member State being therefore its own judge in the matter, it is possible that existing members may not acknowledge the status of a " State " to an entity that newly accedes, and may therefore refuse to recognize its membership.[4]

(c) The Paris Convention, as revised since 1883, is in reality a *series of Conventions* embodied in the successive texts established at the Revision Conferences. However, this series of Conventions, called " Acts " (of the same Convention) since the Revision Conference of Washington in 1911, has constituted and maintained *one and the same Union.* Therefore, in the sentence " to which this Convention applies " the words " this Convention " must be interpreted as meaning " this Convention in whatever text is still in force. "

(d) The Convention *applies* to countries by virtue of their ratification after signature (Article 20) or of their accession (Articles 20 and 21). It applies also to territories for the external relations of which a member country is responsible, by virtue of a declaration or notification made pursuant to Article 24.

---

[1] Cf. *Actes de Washington*, pp. 221/2. See also ROUBIER: *Le droit de la propriété industrielle*, I, pp. 247/9.

[2] Cf. Report of the International Law Commission (U.N. doc. No. 9 (A/6309/ Rev. 1)) pp. 20/25; MCNAIR: *The Law of Treaties*, 1961, p. 35; SØRENSEN: *The Manual of Public International Law*, 1968, pp. 177/82.

[3] See also document S/3 prepared for the Revision Conference of Stockholm, p. 18, paragraph 53.

[4] This situation has arisen and was dealt with by various countries in various ways, when in 1956 the German Democratic Republic declared that it regarded as applicable, upon its territory, several treaties, particularly the Paris Convention (Cf. *P.I.*, 1956, pp. 21, 41, 153, 169), and again in 1964 when the same Republic acceded to the Lisbon Act of that Convention (*I.P.*, 1964, p. 254; 1967, p. 75).

The Convention *ceases to apply* to countries after their denunciation of it (Article 26), and to dependent territories after a notification to that effect (Article 24(2)). It will also cease to apply when a country, after having been part of a member country or having been a territory as indicated above, obtains its independence as a State. According to prevailing opinion in the field of international law,[1] in such cases the new sovereign State is no longer bound by treaties applying to it in its former dependent status, unless it expressly accedes to those treaties. For this subject, see further the commentary on Article 21.

(e) The countries to which the Convention (in whatever text is still in force) applies constitute a *Union* for the protection of industrial property. This is more than a declaration of principle : it has important legal effects.

In the first place, in creating a Union, the Paris Convention has not merely remained a treaty establishing rights and obligations for its member States and, wherever permitted by the constitutions of these States (cf. Chapter II.4, above), also for private parties, but has established a legal entity in international law[2] with certain organs to carry out its objectives.[3] One of the effects of this legal construction is that the Union forms a single entity from the administrative point of view : there is only one budget and one set of accounts, and there is no separate administration for each separate Act of the Convention, although the member countries pay their contributions on the basis of these different Acts.

Secondly, the character of the Union is such that a State acceding to the most recent Act of the Convention becomes bound with respect to all member States of the Union, even those which have not yet acceded to the most recent Act (Article 27(3)).[4] Similarly, denunciation of the

---

[2] Cf. PLAISANT: *Traité de droit conventionnel international concernant la propriété industrielle*, 1949, pp. 33/4, 68/70; ROUBIER: *Le droit de la propriété industrielle*, I, 1952, pp. 225 *et seq.*, 237 *et seq.*; BOGUSLAWSKI: *Internationale Rechtsprobleme des Erfindungswesens*, 1963, p. 61; TROLLER: *Die mehrseitigen völkerrechtlichen Verträge im internationalen gewerblichen Rechtsschutz und Urheberrecht*, 1965, pp. 180/1; MIOSGA: *Internationaler Marken- und Herkunftsschutz*, 1967, pp. 9/10.

[3] These organs are: the Assembly of the Union (Article 13), its Executive Committee (Article 14), the International Bureau (Article 15), the Conferences of Revision (Article 18(2)) and the International Court of Justice (Article 28).

[4] Cf. Report of Main Committee IV of the Intellectual Property Conference of Stockholm, *I.P.*, 1967, p. 222, paragraphs 16, 17.

most recent Act of the Convention is deemed to constitute also denunciation of all earlier Acts (Article 26(2)). Thus, a State can only enter and leave the Union as a whole. This is important because the nationals of such State, and those assimilated to these nationals, may thus require (or, in the case of denunciation, no longer require) the application of the Convention in all member States of the Union. For these questions, see further the commentary on Article 27.

(f) The Paris Convention has constituted a Union *for the protection of industrial property.* This subject is defined in the following paragraphs (2) to (4) of Article 1, but some general observations may be made here, before proceeding to the commentary on these paragraphs.

The term " industrial property " is a traditional but not entirely exact denomination for certain exclusive rights, resembling property rights, regarding creative ideas or distinguishing signs or designations in the industrial or commercial field, supplemented by certain rules against unfair behaviour in the same field.[1] The term is inexact because " industrial property " presents no more than an analogy with normal property; further, because it covers more than industrial subjects only; and, finally, because the rules against unfair behaviour are not necessarily related to property at all.

The definition and delimitation of the notion of industrial property in the Paris Convention is not merely of theoretical interest. The question has been discussed, for example, whether or not the protection of new varieties of plants, now the subject of a separate Convention signed in Paris on December 21, 1961, or inventors' certificates, now mentioned in Article 4 I of the Paris Convention, come under the definition of industrial property. If the answer is in the affirmative,[2] this means that the member States, or such member States as will interpret the Convention in this way, will be bound, as regards the subjects mentioned, to assimilate the treatment of nationals of the other member States (and those assimilated to such nationals by Article 3 of the Convention) to that accorded to their own nationals, and to apply to these subjects the relevant rules of the Convention, without

---

[1] *Actes de La Haye*, pp. 534/5.

[2] A question left open in Article 4(5) of the Convention for the Protection of New Varieties of Plants, and solved in the affirmative in the case of inventors' certificates in Article 4 I of the Paris Convention, as revised at Stockholm in 1967.

being entitled to require reciprocity of protection for the same subjects.[1]

ARTICLE 1, paragraph (2)[(a)]

(2) The protection of industrial property has as its object *(b)* **patents** *(c)*, **utility models** *(d)*, **industrial designs** *(e)*, **trademarks** *(f)*, **service marks** *(g)*, **trade names** *(h)*, **indications of source** *(i)* **or appellations of origin** *(j)*, **and the repression of unfair competition** *(k)*.

(a) The earlier Acts of the Paris Convention, although they mentioned several subjects of industrial property, did not contain a definition of this notion as such. This definition was introduced at the Revision Conference of The Hague in 1925.[2] It was afterwards modified only as to form, except that at the Revision Conference of Lisbon in 1958 the subject of service marks was added to the definition.[3]

(b) When, according to the definition given, the protection of industrial property has as its object certain legal phenomena, the question arises whether under the Convention the member States are bound to provide for the protection of or to regulate *all* these phenomena. This question will be discussed below when some comments have been given on the different subjects.

(c) Although paragraph (4) of the Article under consideration gives an enumeration of the different kinds of patents covered by the Convention, the said instrument does not contain any definition of what a " patent " *is*. On this question, as in the case of the other subjects (utility models, etc.) enumerated in the provision under consideration, the countries of the Union are free to define in their national legislation the subject indicated, to which the Convention will then apply. If, as has been observed above, under a given national law patents are granted also for varieties of plants the Convention will apply to these patents.

---

[1] Cf. Chapter II.3 and II.4, above. See also the reverse situation in Belgium, where industrial designs were declared excluded from the protection of industrial property: Cour de Cassation, 20/12/1954, *Ing. Conseil*, 1955, p. 35, and the criticism of this decision by LADAS, *ibidem*, p. 141.

[2] *Actes de La Haye*, pp. 332 (proposal of France), 410/2 (report of First Sub-Committee), 534/5 (report of Drafting Committee), 572 (adoption in Second Plenary Session).

[3] *Actes de Lisbonne*, pp. 624, 626/7 (proposals of U.S.A. and Sweden), 628/33 (discussion in Third Committee), 755/7 (report of Third Committee), 634 (discussion in General Committee), 99 (adoption in Second Plenary Session), 114 (General Report).

The descriptions of the subjects given below represent only what is commonly understood by these subjects and they are merely given to illustrate the probable scope of the Convention. For this purpose, a *patent* can be described as an exclusive right to apply an industrial invention.

(d) Utility models, recognized only in a few countries,[1] can be described as second-class patents. They embody an exclusive right destined to cover industrial innovations of lesser importance than patentable inventions, with possible restrictions as to the kind of innovations to which they apply. The exclusive right granted in this form is normally of shorter duration than that of a patent.

(e) Industrial designs may be described as consisting of those ornamental aspects or elements of a useful article, including its two-dimensional or three-dimensional features of shape and surface, which make up the appearance of the article.[2] The proprietor of such industrial design will usually, under existing legislations, have the exclusive right to make, sell and use articles embodying such design.

(f) A trademark is usually defined as a sign serving to distinguish the *goods* of one enterprise from those of other enterprises. The proprietor of a trademark generally has the exclusive right to use the trademark, or variations of it, for the same or similar goods.

(g) A service mark is a sign serving to distinguish the *services* of one enterprise from those of other enterprises. The right to a service mark[3] is analogous to that of a trademark.

---

[1] Cf., for example, the legislation of the member States: Federal Republic of Germany (*Gebrauchsmustergesetz,* 2/1/1968), Italy (Decree No. 1411 of 25/8/1940), Japan (Utility Model Law No. 123 of 1959), Poland (Inventions Act, 31/5/1962), Portugal (Industrial Property Act, 24/8/1940), Spain (Industrial Property Statute, 26/7/1929 as amended).

[2] Cf. Bills Nos. 450, 1237 and 3366 introduced in the House of Representatives of the 89th Congress of the United States of America.

[3] So far, only a limited number of member States have legislated on service marks, for example, Algeria (Ordinance, 19/3/1966), Canada (Act relating to Trade Marks and Unfair Competition, 14/5/1953), Denmark (Trademarks Act, 11/6/1959), Finland (Trademarks Act, 10/1/1964), France (Act of 31/12/1964), Israel (Trademarks Ordinance, 1938, amended 4/3/1965), Italy (Trademarks Act of 21/6/1942, amended 24/12/1959), Monaco (Law 608 of 20/6/1955), Norway (Trademarks Act, 3/3/1961), Philippines (Trademarks Act No. 166 of 20/6/1947), Rumania (Law on Trademarks and Service Marks, 29/12/1967), Sweden (Trademarks Act, 2/12/1960), Uruguay (Decree of 28/9/1967), U.S.S.R. (Statute on Trademarks, 23/6/1962, amended 31/3/1967), U.S.A. (Trademarks Act, 5/7/1946, as amended), Yugoslavia (Law on Trademarks and Service Marks, 4/11/1961).

(h) The trade name is a notion interpreted in differing ways in existing legislations. It can generally, however, be defined as being the name or designation identifying the enterprise of a natural or legal person. The trade name will usually be protected against certain unlawful acts of third parties.

(i) Indications of source are generally understood to include all expressions or signs used to indicate that a product or service originates in a given country or group of countries, region or locality.[1] False or misleading use of such indications is usually prohibited.

(j) An appellation of origin may be defined as the geographical name of a country, region or locality which serves to designate a product originating therein, the quality or characteristics of which are due exclusively or essentially to the geographical environment, including natural and human factors.[2] The word " or " in the text of the Convention, introduced at a time when the terminology was more fluid,[3] is no longer quite correct. Appellations of origin are now considered to be a *species* of the *genus* " indications of source," characterized by their relationship with quality or characteristics derived from the source.[4] Some countries have extensive laws to protect their appellations of origin against misuse.

(k) The repression of unfair competition is included in the protection of industrial property, because in many cases infringement of industrial property rights, such as the right to a trademark or a trade name, or the misuse of an indication of source or an appellation of origin, will at the same time be an act of unfair competition. However, the Convention (Article 10*bis*(2) and (3)) also states the general rule

---

[2] Cf. the Lisbon Agreement, of 1958, for the Protection of Appellations of Origin and their International Registration, revised at Stockholm in 1967.

[3] *Actes de La Haye*, p. 535.

[4] Cf. DEVLÉTIAN: " La protection des appellations d'origine et des indications de provenance, " *P.I.*, 1956, pp. 225, 250; 1957, pp. 17, 35, 58 (English translation in *I.P.Q.*, April 1957, p. 6) and " The Protection of Appellations of Origin and Indications of Source, " *I.P.*, 1968, p. 107; MASCAREÑAS: " Les indications de provenance et les appellations d'origine," *P.I.*, 1959, p. 252. The Revision Conference of Lisbon in 1958 did not accept a proposal to adopt this distinction in the provision under examination, but only because one country thought the actual text sufficient to cover all practical cases: *Actes de Lisbonne*, pp. 771/5.

that any act of competition contrary to honest practices in industrial or commercial matters constitutes an act of unfair competition, and gives examples of such acts.

A question which was reserved above is whether the States party to the Paris Convention, committed to the protection of industrial property (Article 1(1)), are bound to protect or regulate *all* subjects indicated in the definition. The answer to this question is in the negative, because at the Revision Conference of The Hague, where the definition of industrial property was introduced into the Convention, it was expressly stated that the enumeration of industrial property rights would *not* oblige the member States to legislate on *all* the specific rights enumerated.[1]

However, this statement has not completely exhausted the question in view of other provisions in the Convention. Protection of several subjects of industrial property has been expressly prescribed in the Convention, namely, industrial designs (Article 5*quinquies*), service marks (Article 6*sexies*), collective marks (Article 7*bis*), trade names (Articles 8, 9, 10*ter*), indications of source (Articles 10, 10*ter*); and protection against unfair competition (Articles 10*bis* and 10*ter*) is also mandatory, as well as the temporary protection of certain subjects exhibited at international exhibitions (Article 11). Moreover, attention must be directed to Article 25 of the Convention. If a State accedes to the Convention without providing, in its domestic law, for any protection for *important subjects of industrial property,* such as *patents* or *trademarks,* it will not be in a position to give effect to substantial parts of the Convention dealing especially with these subjects, and will therefore probably be considered to have implemented the Convention insufficiently in its domestic law. This opinion seems reasonable, because the reciprocity of protection which is supposed to exist in application of the principle of " national treatment " under the Convention (cf. Chapter II.3, above) would not then exist with respect to the important subjects indicated.

ARTICLE 1, paragraph (3)*(a)*

(3) Industrial property shall be understood in the broadest sense and shall apply *(b)* **not only to industry and commerce proper, but likewise to agricultural and extractive industries and to all manu-**

---

[1] *Actes de La Haye,* pp. 410/1 (report of First Sub-Committee), 534 (report of Drafting Committee). See also *Actes de Washington,* pp. 245/6, 248.

factured or natural products, for example, wines, grain, tobacco leaf, fruit, cattle, minerals, mineral waters, beer, flowers, and flour.

(a) Some parts of this provision figured already under paragraph 1 of the Final Protocol established as an integral part of the original text of the Convention of 1883.[1] They were, with minor modifications, maintained in the Protocol until after the Revision Conference of Washington in 1911. The provision, with further modifications, was introduced into the text of the Convention itself at the Revision Conference of The Hague in 1925 [2] and was given the form it still has today at the following Revision Conference of London in 1934.[3]

(b) The meaning of the provision is not that *all* subjects of industrial property indicated in paragraph (2) of Article 1, such as patents, trademarks, etc., shall apply to *all* activities and products mentioned in paragraph (3). There is therefore no obligation for the member States to grant patents for wine, cattle or fruit, or to protect trademarks with respect to minerals.[4] The purpose of the provision is merely to avoid *excluding* from the protection of industrial property activities or products which would otherwise run the risk of not being assimilated to those of industry proper.[5] The various industrial property rights will, however, be applied to those activities and products only in so far as appropriate.

ARTICLE 1, paragraph (4)*(a)*

(4) Patents shall include *(b)* **the various kinds of industrial patents recognized by the laws of the countries of the Union, such as patents of importation** *(c)*, **patents of improvement** *(d)*, **patents and certificates of addition** *(e)*, **etc.**

(a) This provision was already substantially included under paragraph 2 of the Final Protocol which formed an integral part of

the original text of the Convention of 1883.[1] It remained in the Protocol, after modification, until after the Revision Conference of Washington in 1911 and was introduced, again after modification, into the text of the Convention itself at the Revision Conference of The Hague in 1925.[2] It underwent only slight changes as to form at subsequent Revision Conferences.

(b) As has been observed above, a patent may be defined as an exclusive right to apply an industrial invention. Several countries, however, recognize in their national laws different kinds of patents.[3]

The purpose of the provision is to ensure that all these kinds of patents will be included in the application of the Convention, both with respect to the "national treatment" to be granted in each member State to nationals of other member States and persons assimilated to these nationals, and with regard to the rules provided by the Convention itself. The different kinds of patents indicated as examples are:

(c) Patents of importation (sometimes also called patents of introduction, confirmation or revalidation).[4] These patents are generally patents of relatively short duration granted for an invention which has already been patented in a foreign country and which therefore has lost its novelty, but which is nevertheless protected by a patent of importation in the expectation that the patentee will exploit the invention in the country concerned.

(d) Patents of improvement[5] granted for improvements of an invention, generally with special provisions as to duration and the payment of maintenance fees.

(e) Patents or certificates of addition[6] granted in a similar way for additions to an invention which are not necessarily also improvements.

---

[2] *Actes de La Haye*, pp. 332 (proposal of France), 410/2 (report of First Sub-Committee), 534/6 (report of Drafting Committee), 572 (adoption in Second Plenary Session).

[3] Cf. " Les différents genres de brevets d'invention, " *P.I.*, 1945, pp. 26, 41, 47, 135.

[4] Cf., for example, the legislations of the member States: Argentina (Patents Law No. 111, 1864), Belgium (Patents Law of 24/5/1854), Iran (Act of 23/6/1931), Spain (Industrial Property Statute of 26/7/1929, as amended), Uruguay (Patent Act No. 10,089 of 12/12/1941). Furthermore, a certain number of British and former British colonies have a system of confirmation or registration of British patents.

[5] Patents of improvement are available in several member States, for example, Belgium, Mexico, Uruguay.

[6] Patents or certificates of addition are available under almost all patent legislations.

ARTICLE 2, paragraph (1)(a)

(1) Nationals *(b)* **of any country of the Union shall, as regards the protection of industrial property** *(c)*, **enjoy in all the other countries of the Union the advantages** *(d)* **that their respective laws** *(e)* **now grant, or may hereafter grant, to nationals ; all without prejudice to the rights specially provided for by this Convention** *(f)*. **Consequently** *(g)*, **they shall have the same protection as the latter, and the same legal remedy against any infringement of their rights, provided that the conditions and formalities imposed upon nationals are complied with.**

(a) The principle of "*national treatment*" or "*assimilation with nationals*" embodied in this provision, which can be considered one of the basic rules of the Convention,[1] was already included in the original text of 1883.[2] At the Revision Conference of The Hague in 1925 the final part of the first sentence : "without prejudice, etc.," was added.[3]

(b) The provision applies to *nationals* of the countries of the Union.

In deciding the question who are such nationals, account has to be taken of the fact that the Convention can also apply to *legal persons or entities*,[4] so that a distinction must be made between the nationality of *natural* and *legal* persons, respectively.

With respect to *natural* persons, nationality is a quality accorded or withdrawn by the legislation of the State whose nationality is claimed. Therefore it is only the legislation of that State which can define the said nationality and which must be applied also in other countries where it is invoked.

With respect to *legal* persons, the question is more complicated because generally no "nationality" as such is granted to legal persons by existing legislations. Where these legal persons are the States themselves, or State enterprises, or other bodies of *public status*, it

---

[1] This was particularly underlined when the principle was attacked at the Revision Conference of The Hague in 1925. Cf. *Actes de La Haye*, pp. 333 (proposal of U.S.A.), 413/5 (report of First Sub-Committee).

[2] *Actes de Paris*, I, pp. 26 (proposal), 33/47, 124/6 (discussions and adoption).

[3] *Actes de La Haye*, pp. 222/5 (proposal), 333 (observations), 413/5 (report of First Sub-Committee), 517 (report of General Committee), 536/7 (report of Drafting Committee), 572 (adoption in Second Plenary Session).

[4] This was unanimously agreed by the Revision Conference at Brussels in 1900: *Actes de Bruxelles*, pp. 196/7 (Third Plenary Session).

would be logical to accord to them the nationality of their country. With regard to corporate bodies of *private status*, such as companies and associations, the authorities of the countries where application of the Convention is sought will have to decide on the criterion of " nationality " which they will employ. This " nationality " can be made dependent upon the law according to which these legal persons have been constituted, or upon the law of their actual headquarters, or even on other criteria.[1] Such law will also decide whether a legal person or entity really exists.

If, by virtue of Article 24, the Convention has been made applicable to territories for the external relations of which a State is responsible, the " nationality " of inhabitants of such territories, even if not the same as that of the State concerned, may be accepted as a basis for application of the Convention. This is reasonable because otherwise application of the Convention to these territories would be only unilateral.

Several other questions may arise with respect to the criterion of nationality, particularly the following:

When does a person have to have the nationality of one of the countries of the Union in order to be able to claim application of the Convention ? Generally this will be the moment at which he claims such application with respect to an application for or the right to a subject of industrial property.[2]

What happens when a person has *more than one nationality* ? He will be considered a national of a country of the Union whenever this is justified by one of his nationalities.

Another possibility is that *several persons together* claim application of the Convention on the basis of nationality, for example, when they are co-applicants for, or co-owners of, an industrial property right, whereas, in fact, these persons are not all nationals of a country of the Union. In such case, application of the Convention cannot be claimed because the member States are not obliged to apply it to a person who is not entitled to benefit therefrom.[3]

---

[1] Cf. VON DER HEYDTE: *Völkerrecht*, I, 1958, p. 265; BATIFFOL: *Traité élémentaire de droit international privé*, 1959, paragraphs 192/198; SØRENSEN: *Manual of Public International Law*, 1968, p. 480.

[2] For the particular case of the right of priority, see observation *(b)* on Article 4 A(1), below.

[3] At the Conference of Paris the Chairman expressed a contrary view regarding a trade name belonging jointly to a national and a non-national of a country of the Union *(Actes de Paris*, p. 100*)*, but this has remained an isolated opinion.

(c) The rule of assimilation with nationals applies to the *protection of industrial property* as defined in Article 1 and therefore to all subjects indicated in that Article.

(d) The *advantages* which the nationals of the countries of the Union may claim in any other member country consist in the application, without any discrimination, of the national law as applied to nationals of the country itself. As has already been observed above, under Chapter II.3, this means that no reciprocity of protection can be required by the States party to the Convention. At the Revision Conference of The Hague in 1925, it was pointed out by the United States delegation that this system might lead to inequality of protection under the Convention since, for example, the United States grants patents of a comparatively long duration, without annual maintenance fees and without an obligation to exploit a patent, whereas other member States have more restrictive rules. Notwithstanding these difficulties, the system of "national treatment" embodied in the Convention was found acceptable, the more so because the national legislation of the member States is tending towards greater harmonization.[1]

(e) According to the text of the provision under examination, nationals of any country of the Union must enjoy in all the other countries of the Union the advantages that their respective *laws* grant to nationals of these countries. What is the meaning of " laws " in this sentence ? [2] The addition of the phrase, " without prejudice to the rights specially provided for by this Convention," makes it clear that " laws " does not include the application of the Convention itself, wherever such direct application is possible. The word " laws " must therefore be interpreted as meaning " national laws," not including international treaties, unless and in so far, of course, as such treaties have been incorporated in the national law. It is therefore possible for countries of the Union to conclude between themselves, or with other States, treaties the application of which is available only to nationals (and assimilated persons) of a limited number of countries. Bilateral treaties are an example in point, and also some of the Special

---

[1] Cf. *Actes de La Haye*, pp. 413/5.

[2] This subject has been discussed particularly with respect to a Draft Convention on a European Patent Law. See, for example: LADAS: *I.P.*, 1962, p. 23; FRAYNE: *I.P.*, 1962, p. 126; COLAS: *I.P.*, 1963, p. 48; ULMER: *I.P.*, 1963, p. 51; LADD: *I.P.*, 1963, p. 124; CHAVANNE: *Revue trimestrielle de droit commercial*, 1963, p. 505; VANDER HAEGHEN and EVRARD: *Ing. Conseil*, 1965, p. 1.

Agreements concluded in application of Article 19 of the Convention.[1] Only where the provisions of such treaty would entirely *replace* the national laws of the member States, so that important subjects of industrial property would no longer be dealt with by national legislation and therefore nationals of other countries of the Union would not have access to these provisions, could it be considered that the Convention was insufficiently implemented in the national law in view of Article 25 of the Convention.[2]

(f) " National treatment " is not all that can be claimed under the Convention because, as has been pointed out above under Chapter II.4, the Convention also contains a number of *common rules* which have to be respected by the member States. As has been explained, the effect of these common rules in the member States will vary according to their constitutions or constitutional systems. In countries where the possibility of " self-executing " treaty provisions is recognized, nationals of other countries of the Union may directly claim application of the self-executing provisions of the Convention by the administrative and judicial authorities. Examples of such self-executing provisions have been given above and will be further examined below. In countries where the self-executing character of treaty provisions is not accepted, there is no possibility of direct application of the provisions of the Convention by the administrative and judicial authorities, but these countries are bound to introduce such provisions into their domestic law (Article 25 of the Convention), so that they will come under the rule of national treatment.[3]

The question has been raised whether nationals of a country of the Union will be able to claim application of the Convention also *in their own country.* This question is of no importance with respect to the rule of " *national treatment* " because nationals of a country will enjoy such treatment in their own country anyhow. The question remains, however, whether, in these conditions, nationals can also claim application in their own country of *the common rules of the Convention* in so far as they are accepted as " self-executing " when these rules have not been incorporated in the national law. The provision under examination only states that nationals of a country of the Union can

---

[1] Cf. Articles 1(2) and 2 of the Madrid Agreement concerning the International Registration of Trademarks, revised at Nice in 1957, and Article 1 of the Hague Agreement concerning the International Deposit of Industrial Designs, revised at London in 1934.

[2] See above *ad* Article 1(2), final part of observation *(k)*.

[3] Cf. *Actes de La Haye*, p. 536.

claim application of national laws and of the Convention " in all the *other* countries " of the Union. This is logical, because the Convention is an international instrument destined to govern international situations. The protection of a national in his own country depends on the domestic legislation of that country and such national will therefore not be able to claim application of the Convention in his own country unless its legislation entitles him to do so.[1]

(g) The sentence beginning with the word " Consequently " explains the consequence of the rule in the first sentence of the provision. It is self-explanatory.

ARTICLE 2, paragraph (2)*(a)*

(2) However *(b)*, no requirement as to domicile or establishment in the country where protection is claimed may be imposed upon nationals of countries of the Union for the enjoyment of any industrial property rights *(c)*.

(a) This provision was introduced into the Convention at the Revision Conference of Washington in 1911.[2] It has not been substantially modified since.

(b) The word " however " was added to the text at the Revision Conference of The Hague in 1925 in order to indicate that the provision restricts the rule of paragraph (1) of the Article.[3] Even when the conditions imposed upon nationals of a country include the stipulation that *those nationals* can claim protection of certain industrial property rights only if they are domiciled or established in the country, this same stipulation cannot be imposed upon *nationals of other countries* of the Union.[4]

(c) For nationals of the countries of the Union, the question where they are domiciled or established is irrelevant. The fact that no

establishment in the country where protection is claimed may be required does not however diminish the possibility of an obligation to exploit certain industrial property rights in such country.[1]

ARTICLE 2, paragraph (3)(a)

(3) The provisions of the laws of each of the countries of the Union relating to judicial and administrative procedure *(b)* **and to jurisdiction** *(c)*, **and to the designation of an address for service or the appointment of an agent** *(d)*, **which may be required by the laws on industrial property are expressly reserved.**

(a) Parts of this provision were already introduced under paragraph 3 in the Final Protocol which formed an integral part of the original Convention of 1883.[2] The provision was enlarged in the Final Protocol adopted at the Revision Conference of Washington in 1911,[3] and was introduced into the Convention itself at the Revision Conference of The Hague in 1925.[4] Since then it has been changed only as to form.

(b) An example of a permissible discrimination against nationals of other countries of the Union as to procedure is the obligation to deposit a "*cautio judicatum solvi.*" [5]

(c) An example of a permissible discrimination as to jurisdiction is the right to sue a national of another country in a court of the country where the plaintiff is domiciled or established.

(d) In the same category of procedural questions is the obligation, imposed by the legislation of several countries upon persons not domiciled or established in the country, to elect an address for service or to appoint an agent in order to facilitate procedural matters. Such obligation may be imposed upon nationals of the countries of the Union.

[5] Cf. in France: Cour de Lyon, 13/5/1957, *Ann.*, 1958, p. 175.

ARTICLE 3[(a)]

Nationals *(b)* of countries outside the Union who are domiciled *(c)* or who have real and effective industrial establishments *(d)* in the territory of one of the countries of the Union shall be treated in the same manner *(e)* as nationals of the countries of the Union.

(a) This provision appeared already in essence in the original text of the Convention of 1883.[1] The words " real and effective " were added in the Additional Act to the Convention, adopted by the Revision Conference of Brussels in 1900.[2] Since then the provision has been changed only as to form.

(b) For the criterion of *nationality,* see above at Article 2, paragraph (1), observation *(b).* The effect of speaking in Article 3 of " nationals " is that only *nationals* of countries outside the Union who also fulfil the further conditions indicated in the Article may claim application of the Convention, and not persons without such nationality fulfilling the same further conditions. However, the member States are free to grant the same protection also to such non-nationals, and they may wish to do so as the wording of the provision would seem unnecessarily narrow.

(c) With respect to the notion of *domicile,* a distinction has again to be made between *natural* and *legal persons.*

With respect to *natural* persons, the word " domicile " can have different meanings depending on national legislation. Under some of these legislations a natural person can obtain " domicile " only by virtue of an official authorization ; other legislations interpret " domicile " as more or less equivalent to residence.

It is generally believed[3] that the Convention has not sought, by using the expression " domicile," to indicate a legal situation, but rather a *more or less permanent situation of fact.* The purpose of the provision under consideration would thus be to admit to the benefits of the Convention foreign nationals *residing* in a country of the Union.

---

[1] *Actes de Paris,* I, pp. 129/32, 137/8.

[2] *Actes de Bruxelles,* pp. 163/4 (proposal of France), 196/200 (discussion in Third Plenary Session), 311 (discussion and adoption in Ninth Plenary Session).

[3] Cf. LADAS: *The International Protection of Industrial Property,* pp. 187/8; ROUBIER: *Le droit de la propriété industrielle,* I, pp. 268/9.

With respect to *legal* persons, their "*domicile*" can be considered, according to the same principles, to be the place of their actual headquarters.

Domicile in a country of the Union does not enable the person who is domiciled there to claim application of the Convention in the country itself. This is so because he has to be treated in the same manner as nationals of countries of the Union and these nationals can claim application of the Convention only in the *other* countries of the Union. The protection of persons domiciled in the country itself will depend on the domestic legislation of that country.

(d) A further ground on which nationals of countries outside the Union may claim application of the Convention exists when they have a *real and effective industrial or commercial establishment* in one of the countries of the Union. The words "*industrial or commercial establishment*" will, if necessary, be interpreted by the administrative or judicial authorities of the country where application of the Convention is claimed. The words "*real and effective*" were added in the Additional Act to the Convention adopted by the Revision Conference of Brussels in 1897-1900.[1] The purpose of this addition was to avoid abusive claims to application of the Convention. The question whether an establishment is real and effective, and not a faked or ephemeral one, will again be determined by the administrative or judicial authorities of the country in which application of the Convention is claimed.[2] In the country itself where the real and effective industrial or commercial establishment exists, its protection will depend, for the same reasons as given above with regard to the criterion of domicile, on the domestic legislation.

(e) The prescribed treatment "*in the same manner*" means that persons who are entitled to benefit from Article 3 of the Convention enjoy, as do nationals of the countries of the Union, "*national treatment*" in other countries, without prejudice to the *rights specially provided for by the Convention*. Whether these latter rights will directly apply depends on the question whether their "self-executing" character is recognized in the country concerned.

---

[1] *Actes de Bruxelles*, pp. 196/200, 311.

[2] Cf. in U.S.A.: Commissioner of Patents, 21/5/1963, 138 *U.S.P.Q.* 316 (1963).

ARTICLE 4, Section A(1)*(a)*

A(1) Any person *(b)* who has duly filed *(c)* an application *(d)* for a patent *(e)*, or for the registration of a utility model, or of an industrial design, or of a trademark *(f)*, in one of the countries of the Union *(g)*, or his successor in title *(h)*, shall enjoy, for the purpose of filing *(i)* in the other countries, a right of priority *(j)* during the periods hereinafter fixed *(k)*.

(a) The right of priority, which is one of the important elements of the Convention,[1] was already incorporated in the original text of 1883.[2] The extension of the priority right to utility models and to successors in title of the original applicant was introduced at the Revision Conference of Washington in 1911.[3] A clause which submitted the exercise of the right of priority to the rights of third parties was eliminated at the Revision Conference of London in 1934.[4]

(b) The term " any person " must be interpreted within the context of the rules of the Convention which define the persons capable of benefiting therefrom. The term thus means all persons entitled to claim application of the Convention according to Articles 2 and 3, that is, nationals of a country of the Union and nationals of countries outside the Union who are domiciled or have real and effective industrial or commercial establishments in the territory of one of the countries of the Union. This interpretation is confirmed by the discussion of the provision at the Conference of Paris, where the Convention was originally concluded.[5] A similar interpretation was later given to the extension of the provision to successors in title (see, below, observation *(h)*).

National legislation may, however, go further and grant a similar right of prority also to other persons.[6] It may also allow the nationals

---

[4] *Actes de Londres*, pp. 167/72 (proposals), 248/50 (observations), 356/61 (report of Second Sub-Committee), 449/52 (report of Drafting Committee), 511/3 (discussion and adoption in Second Plenary Session).

[5] *Actes de Paris*, pp. 99, 128/32, 137/8.

[6] Cf. VANDER HAEGHEN: *Ing. Conseil*, 1965, p. 269.

of the country itself to claim priority there, based on an earlier foreign application.

The conditions as to the competence of persons to claim the right of priority under the Convention must be fulfilled both at the time of the application on which the right of priority is based and at the time when the right is invoked, but not necessarily during the whole period of priority. A national of a country of the Union may, for example, assign the right of priority to a person who is not at that time, but afterwards becomes, a national of such country before claiming the priority right, or he may assign this right first to a non-national of a Union country, who subsequently assigns the right to a national of such country ; in such cases the priority right can be validly claimed.

(c) The right of priority can be based only on an application *duly filed* in one of the countries of the Union. The definition of what is understood by a regular national filing is given in paragraphs A(2) and (3) of the Article, which will be commented upon below.

(d) The right of priority can further be based only on the *first* application for the subject concerned in a country of the Union. This principle, designed to avoid a chain of successive claims of priority for the same subject, is not stated in the provision under consideration itself, but it follows from Article 4 C(2), where it is said that the period of priority starts from the date of filing of the *first* application, and from Article 4 C(4), where, under exceptional circumstances, a subsequent application is considered to be " the *first* application, of which the filing date shall be the starting point of the period of priority." It is therefore not possible, after filing an application for a patent or for the registration of a trademark, etc., in one country of the Union, to base a right of priority on a later application for the same subject in the same or in another such country.[1] However, an earlier filing in a country not belonging to the Union will not count.

(e) The right of priority is granted for applications for patents and other subjects of industrial property, as enumerated, with the addition of inventors' certificates referred to in Article 4 I. Some of these subjects may be interrelated in the exercise of the right of priority (see Article 4 E(1) and (2), and again Article 4 I).

---

[1] Cf. in Netherlands: Patent Office (Division of Appeals), 5/10/1960, *G.R.U.R. Int.*, 1961, p. 291.

(f) At the Revision Conference of Lisbon in 1958 the words " service marks " were inserted after " trademarks " in the enumeration of subjects of industrial property contained in Article 1(2). The same words were not inserted in the provision under consideration and the said Revision Conference refused generally to assimilate " service marks " to " trademarks."[1] This means that member States are under no obligation to grant a right of priority for service marks although they are free to do so if they wish.

(g) The right of priority can be based only on a first application filed *in a country of the Union.*[2] This means that, when an application has been filed in a country before its accession to the Convention becomes effective (cf. Article 21), no right of priority can be claimed for such application under the Convention. Conversely, in a country newly acceding to the Convention, no right of priority can be claimed under the Convention based on applications filed in other countries before the new accession took effect, because at the time of such applications the newly acceding country was not yet one of the " other countries " (of the Union).[3] National legislation may, however, adopt a more lenient system.[4]

(h) The right of priority may also be invoked by the " *successor in title* " of the person who has filed the first application. This provision was added at the Revision Conference of Washington in 1911, where it was stated that such successor in title must be capable of benefiting from the Convention according to Articles 2 and 3.[5]

The right of priority may be transferred to a successor in title independently of the transfer or non-transfer of the first application on which it is based, and which can therefore remain with the original applicant or be transferred to a third person.[6] The right of priority based on a first application can also be transferred independently for

---

[1] *Actes de Lisbonne*, pp. 624 (proposal of U.S.A.), 628/33 (discussion in Third Committee), 755/7 (report of Third Committee).

[2] Or a first application which is equivalent to a regular national filing under a bilateral or multilateral treaty concluded between countries of the Union (see, below, observation *(d)* on Article 4, Section A(2)).

[3] See for U.S.S.R.: communication of Goscommittee, referred to in *G.R.U.R. Int.*, 1966, *Fortl. Ber.*, 1677/66.

[4] Cf. SCHRICKER: " Die Inanspruchnahme der Unionspriorität bei Beitritt neuer Verbandsländer, " *G.R.U.R. Int.*, 1966, p. 373.

[5] *Actes de Washington*, p. 275.

[6] Cf. in France: Tribunal de Grande Instance de Valence, 16/2/1962, *Ann.*, 1963, p. 313.

one or more countries of the Union. It remains an independent right until, during the period of its duration, it is used as the basis for an application in one or more countries of the Union, in which case it becomes an accessory of such application.[1]

(i) The *subsequent* filing must concern *the same subject* as the *first* filing on which the right of priority is based. This means that in the case of patents, utility models or inventors' certificates it must concern the same invention or innovation, in the case of industrial designs, the same design, and in the case of trademarks, the same trademark for the same goods. However, while preserving the identity of the subject, the right of priority can in some cases be claimed to obtain a different form of protection (see Sections E(1) and (2) and I(1) and (2) of Article 4). Moreover, with regard to patents, special rules concerning the identity of the subject are given in Sections F, G and H of Article 4. These provisions will be commented upon below.

(j) The *consequences* of the right of priority are set out in Article 4 B. See the commentary on that provision.

(k) The *periods* of priority are regulated in Article 4 C(1) to (3), which will be commented upon below.

ARTICLE 4, Section A(2)*(a)*

(2) Any filing that is equivalent to a regular national filing *(b)* under the domestic legislation *(c)* of any country of the Union or under bilateral or multilateral treaties concluded between countries of the Union *(d)* shall be recognized as giving rise to the right of priority.

(a) According to paragraph (1) of Article 4 the right of priority can be claimed only by a person who has *duly filed* an application for a patent, etc., in one of the countries of the Union. Several questions have arisen as to what is to be understood by "duly filed." Is it necessary that such filing only be correct as to form or also valid as to substance, so that a patent, etc., can be granted on it? Does it matter whether the application once filed is later withdrawn, abandoned, or rejected, etc.?[2] Attempts to solve these questions were made by

---

[1] Cf. MATHÉLY: "Paris Convention — Special Questions concerning Patents and Trademarks," *BIRPI Lecture Course*, 1965, pp. 25/7.

[2] See LADAS: *The International Protection of Industrial Property*, pp. 272/5.

introducing paragraph (2) of the Article at the Revision Conference of London in 1934,[1] and by the further introduction of paragraph (3) at the Revision Conference of Lisbon in 1958.[2]

(b) What is meant by a "regular national filing" is further defined in paragraph (3) of the Article under consideration. See below.

(c) The paragraph under consideration states the principle that the question whether a regular national filing exists depends in the first place on the domestic legislation of the country of the Union where the first application is made.

(d) Since the domestic legislation of the country of the Union where the first application is made decides what a regular national filing is, it is conceivable that the said legislation attributes that quality also to a filing in another country or a filing according to an international treaty to which such country is a party. The latter situation would occur according to the Hague Agreement concerning the International Deposit of Industrial Designs of 1925, revised at London in 1934, because Article 4(4) of that Agreement states that the right of priority established by Article 4 of the Paris Convention will be guaranteed to every design which has been the subject of an *international* deposit, without requiring compliance with any of the formalities specified in the latter Article. This is, of course, binding on the member States of the Hague Agreement, but would it also oblige *other* countries, parties to the Paris Convention but *not* to the Hague Agreement, to acknowledge a priority right based on such international deposit or filing? A provision establishing such obligation was introduced at the Revision Conference of London in 1934.[3]

ARTICLE 4, Section A(3)*(a)*

(3) By a regular national filing is meant any filing that is adequate to establish the date on which the application was filed in the country concerned *(b)*, **whatever may be the subsequent fate of the application** *(c)*.

---

[1] *Actes de Londres*, pp. 248, 256 (proposals of Switzerland, Germany and Netherlands), 361/2 (report of Second Sub-Committee), 450 (report of Drafting Committee) 512 (discussion and adoption in Second Plenary Session).

[2] *Actes de Lisbonne*, pp. 311/26, 111.

[3] See footnote 1.

(a) The question what is to be understood by "duly filed" not having been entirely solved by the introduction of paragraph (2) in Article 4, the Revision Conference of Lisbon in 1958 decided to introduce a further definition in paragraph (3). The proposal to that effect was extensively discussed and adopted in a modified form.[1]

(b) During the discussions at the Lisbon Conference it was made clear that a regular national filing exists when, according to the domestic legislation of the country in which the filing took place, the application filed is correct *only as to form* and, even when it is incomplete or incorrect as to form, if it is sufficient to establish the *date* on which the application was filed.

(c) It was also made clear during the discussions at the Lisbon Conference that the subsequent fate of the first application on which the right of priority is based cannot prejudice this right. It therefore subsists when the first application is withdrawn, abandoned or rejected. It even exists when it pertains to an invention which is excluded from patentability in the country where the application was filed.[2]

ARTICLE 4, Section B*(a)*

B. Consequently, any subsequent filing *(b)* in any of the other countries of the Union before the expiration of the periods referred to above *(c)* shall not be invalidated by reason of any acts accomplished in the interval *(d)*, in particular, another filing *(e)*, the publication or exploitation of the invention *(f)*, the putting on sale of copies of the design *(g)*, or the use of the mark *(h)*, and such acts cannot give rise to any third-party right or any right of personal possession *(i)*. Rights acquired by third parties before the date of the first application that serves as the basis for the right of priority are reserved in accordance with the domestic legislation of each country of the Union *(j)*.

(a) This provision explaining the effect of the right of priority was, up to the words "and such acts cannot" etc., already included in essence in the original text of the Convention of 1883.[3] However, at

---

[1] *Actes de Lisbonne*, pp. 311/2 (proposal), 312/7 (observations), 317/25 (discussion in Second Committee), 522/3 (report of Second Committee), 111 (adoption in Second Plenary Session), 114 (General Report).

[2] *Ibidem*, p. 311.

[3] *Actes de Paris*, I, pp. 26/27 (proposal), 47/52, 60/1, 128, 138 (discussions and adoption).

that time the first paragraph of the Article contained a very important reservation in that it stated that the enjoyment of the priority right was " subject to the rights of third parties." At the Revision Conference of London in 1934 this clause was eliminated from Section A(1) and, instead, the final part of Section B, starting with the words " and such acts cannot " etc., and including a new second sentence, was added.[1]

(b) For the meaning of " subsequent filing " see, above, observation *(i)* regarding Article 4, Section A(1).

(c) The periods of priority are referred to in Article 4, Section A(1), but are regulated in Section C(1), (2) and (3), to be examined below.

(d) The provision states that a subsequent filing during the period of the priority right shall not be " invalidated " by any acts accomplished during such period. However, after the deletion of the reservation of third-party rights at the Revision Conference of London in 1934 the scope of the right of priority has become even wider : it means that the effect of the subsequent filing must not be less than it would have been had that filing been effected at the time of the first filing in another country of the Union on which the right of priority is based.[2] How this end is achieved depends on the domestic legislation of the country in which the right of priority is claimed. However, some *examples* of the effect of the right of priority are indicated in the provision under consideration.

(e) One of the examples of the effect of the right of priority is that another *filing* of an application for the same subject (patent, registration of utility model, design or trademark) during the period of priority cannot invalidate the subsequent filing for which the right of priority is claimed. In case of conflict, the first-mentioned filing will be rejected by the examining Office or invalidated by the courts.

(f) Nor will the *publication* or *exploitation* of the invention, whether by the person who filed the first application for a patent or by third parties,[3] during the period of the priority right, invalidate or

---

[1] *Actes de Londres*, pp. 167/72 (proposal), 248/50 (observations), 356/61 (report of Second Sub-Committee), 449/52 (report of Drafting Committee), 511/13 (discussion and adoption in Second Plenary Session).

[2] *Actes de Lisbonne*, p. 311; see also in Federal Republic of Germany: Bundesgerichtshof, 25/11/1965, *G.R.U.R. Int.*, 1966, p. 382.

[3] *Actes de La Haye*, p. 225.

prejudice the subsequent filing for which the right of priority is claimed ; particularly, it will neither destroy the novelty of the invention nor diminish the inventive step embodied in it, as considered at the date of the first application on which the right of priority is based.

(g) The same is true for the putting on sale, during the period of priority, of copies of a design for which the right of priority is claimed, or, for that matter, for any other form of publication of such design during the priority period : such acts will neither destroy the novelty nor diminish the originality of a design which was novel or original at the date of the first application for its registration on which the right of priority is based.

(h) In the case of trademarks, the *use* of a mark, in countries where such use in itself has a legal effect, during the period of priority, cannot effect the validity of an application for registration of the mark for which priority is claimed, nor diminish the scope of its protection. As has been observed above, the same is true for a filing of an application for registration of the same mark during the priority period.

(i) The importance of the right of priority granted by the Convention was limited as long as rights of third parties originating in the priority period were expressly reserved. This reservation was generally interpreted as, for example, enabling third parties who had worked an invention during the priority period or who had obtained knowledge of the invention during that period to use or to continue to use it even in the face of a patent granted on the basis of a priority right.[1] The reservation was abolished by the Revision Conference of London in 1934, which replaced it by a sentence with the opposite effect: acts accomplished during the period of the priority right "cannot give rise to *any* third-party right or *any* right of personal possession."

(j) Since the right of priority comes into being only at the date of the first regular national filing in a country of the Union, it cannot affect rights of third parties acquired under national laws *before* such first filing. This has always been the intention of those drafting the Convention and, in order to render the situation absolutely clear, a provision to that effect was added at the Revision Conference of London in 1934.[2] Whether such rights acquired in one of the countries

---

[1] See LADAS: *The International Protection of Industrial Property*, pp. 308 *et seq.*

[2] *Actes de Londres*, pp. 167/72 (proposal), 248/50 (observations), 356/61 (report of Second Sub-Committee), 449/52 (report of Drafting Committee), 512/3 (discussion and adoption in Second Plenary Session).

of the Union will also have any effect in the other member States will depend on the domestic legislation of the latter.

ARTICLE 4, Section C(1), (2) and (3)*(a)*

C(1) The periods of priority referred to above shall be twelve months for patents and utility models, and six months for industrial designs and trademarks *(b)***.**

(2) These periods shall start from the date of filing of the first application *(c)* **; the day of filing shall not be included in the period** *(d)***.**

(3) If the last day of the period is an official holiday, or a day when the Office is not open for the filing of applications in the country where protection is claimed, the period shall be extended until the first following working day *(e)***.**

(a) These provisions regulate the different periods of duration of the right of priority for the various subjects for which this right may be claimed. In the original text of the Convention of 1883 these periods were six months for patents and three months for industrial designs and trademarks, with an extra month in any of these cases for applications coming from overseas countries. No further regulation of the priority periods was then provided for in the Convention, so that the computation of these periods was left to the member States. Gradually, in the subsequent Revision Conferences, the periods of the duration of the priority right were extended and further rules were given. At the Revision Conference of Brussels in 1900 the priority period for patents was fixed at twelve months and for industrial designs and trademarks at four months, the extra month for overseas applications being abolished. At the Revision Conference of Washington in 1911 these periods were not changed, but the benefit of the right of priority was extended to utility models, with the same period as for patents. Proposals to extend the priority period to twelve months also for industrial designs and trademarks were rejected.[1] At the Revision Conference of The Hague in 1925 the periods of priority for designs and trademarks were fixed at six months, and the additional provisions

---

[1] *Actes de Washington*, pp. 91 (proposal of Germany), 95 (proposal of France), 275 (report of Sub-Committee), 307 (report to Plenary Committee), 247 (discussion in Third Plenary Session).

of paragraphs (2) and (3) were added.[1] The regulation thus obtained was not substantially changed at the later Revision Conferences of London in 1934 and Lisbon in 1958 : proposals to extend the period of duration of the priority right for trademarks made at these Conferences[2] were not accepted.

(b) The periods of priority must strike a balance between the interests, on the one hand, of the applicant for an industrial property right, who should be allowed to organize the international extension of such right in the countries of the Union during an adequate period, enjoying a priority as from his first filing date, and the interests, on the other hand, of third parties, who should not be confronted with too extensive periods of priority during which rights they might wish to acquire for the same subjects cannot be validly obtained. The periods adopted in the provision under consideration may be considered to strike such a balance, because they have not been changed since 1925.

(c) The question whether an application is the *first* application for the subject concerned is relatively easy to solve for trademarks, industrial designs, and, to a lesser extent, utility models. It may give rise to difficulties with regard to patent applications, where the decisive factor will be in which application the invention is disclosed for the first time,[3] as specified by Article 4 H. See, below, the commentary on that provision.

(d) This provision, added at the Revision Conference of The Hague in 1925, is self-explanatory.

(e) This provision, added in substance at the Revision Conference of The Hague and improved by the Revision Conference of London in 1934,[4] is also self-explanatory.

---

[4] *Actes de Londres*, pp. 364 (proposal of Netherlands and report of Second Sub-Committee), 452/3 (report of Drafting Committee).

ARTICLE 4, Section C(4)*(a)*

(4) A subsequent application *(b)* **concerning the same subject** *(c)* **as a previous first application within the meaning of paragraph (2), above, filed in the same country of the Union, shall be considered as the first application, of which the filing date shall be the starting point of the period of priority** *(d)*, **if, at the time of filing the subsequent application, the said previous application has been withdrawn, abandoned, or refused, without having been laid open to public inspection and without leaving any rights outstanding, and if it has not yet served as a basis for claiming a right of priority** *(e)*. **The previous application may not thereafter serve as a basis for claiming a right of priority** *(f)*.

(a) This paragraph, dealing with the exceptional circumstances in which a subsequent application for the subject concerned (patent, registration of utility model, industrial design or trademark) may be considered the *first* application, on which the right of priority is based, was introduced into the Convention at the Revision Conference of Lisbon in 1958.[1]

(b) Why did the Lisbon Conference accept that, under certain circumstances, a subsequent application may serve as a basis for a priority right whereas, in principle, only a *first* application in one of the countries of the Union can serve that purpose (cf., above, observation *(d)* on Article 4, Section A(1))? The reason is that it frequently happens in the case of patents (and possibly also utility models), and may also happen in the case of designs and trademarks, that the first application, made in a hurry because the acquisition of the right concerned, as well as the right of priority, will frequently depend on when the application is filed, does not adequately represent the applicant's intentions. Failing a special provision regulating this matter the applicant would be unable to replace his application by a better one without losing the right of priority, because the said application would not be the *first* concerning the same subject and therefore could not be recognized as a basis for the priority right. In order to eliminate this difficulty the paragraph under consideration allows, *under certain precise conditions*, a subsequent application to replace the first application for the purpose of claiming the priority right.

---

[1] *Actes de Lisbonne*, pp. 327/8 (proposal), 329/32 (observations), 332/9 (discussion in Second Committee), 523/4 (report of Second Committee), 99 (adoption in Second Plenary Session), 114/5 (General Report).

(c) See observation *(i)* on Article 4 A(1), above.

(d) The filing date which will be considered the starting point of the period of priority will be the date of *subsequent* application, the first application being disregarded under the conditions indicated in the provision.

(e) In order that the subsequent application may be considered the first application, the following conditions have to be fulfilled with respect to the previous first application filed *for the same subject* in *the same country :*

the previous application must, *before* the subsequent application is filed, have been *withdrawn, abandoned* or *refused* ;
the previous application must *not* have been *laid open to public inspection* ;
the previous application must *not leave any rights outstanding* ;
the previous application must *not yet* have served *as a basis for claiming a right of priority,* either in the same or in any other country.

If any of these conditions is not fulfilled, the country of the Union in which priority is claimed on the basis of the subsequent application will refuse to recognize this priority.

Furthermore, the replacement of a previous application by a subsequent application will not be accepted if in the period between these applications *another* application has been filed for the same subject by the same applicant in the same or another country of the Union.[1] This is so because in such cases the subsequent application, at the time of its filing, cannot be considered as being the first.

(f) After the replacement of a previous application by a subsequent application as a basis for the right of priority, priority may no longer be recognized in any country of the Union on the basis of the previous application.

ARTICLE 4, Section D*(a)*

D(1) Any person desiring to take advantage of the priority of a previous filing shall be required *(b)* to make a declaration *(c)* indicating the date of such filing and the country in which it was made *(d)*. Each country shall determine the latest date on which such declaration must be made *(e)*.

---

[1] *Actes de Lisbonne*, p. 333.

(2) These particulars shall be mentioned in the publications issued by the competent authority, and in particular in the patents and the specifications relating thereto *(f)*.

(3) The countries of the Union may require *(g)* **any person making a declaration of priority to produce a copy of the application (description, drawings, etc.) previously filed. The copy, certified as correct by the authority which received such application, shall not require any authentication, and may in any case be filed, without fee, at any time within three months of the filing of the subsequent application. They may require it to be accompanied by a certificate from the same authority showing the date of filing, and by a translation** *(h)*.

(4) No other formalities may be required *(i)* **for the declaration of priority at the time of filing the application** *(j)*. **Each country of the Union shall determine the consequences of failure to comply with the formalities prescribed by this Article, but such consequences shall in no case go beyond the loss of the right of priority** *(k)*.

(5) Subsequently *(l)*, **further proof may be required.**

Any person who avails himself of the priority of a previous application shall be required to specify the number of that application ; this number shall be published as provided for by paragraph (2), above *(m)*.

(a) The original text of the Convention of 1883 did not contain any rules regarding the questions when and how the right of priority may be claimed. This was unsatisfactory because national legislation could then allow priority to be claimed at a late stage, for example, when the nullity of a patent or of a trademark registration was alleged in court. The claim of priority could thus come as a surprise to third parties, who could not have known of its existence and who had acted accordingly. Furthermore, many different systems could and did exist for claiming the right of priority in the countries of the Union.[1]

At the Revision Conference of Washington in 1911 the essence of the provisions regulating when and how the right of priority may be claimed was introduced into the Convention.[2] Relatively minor

---

[1] See LADAS: *The International Protection of Industrial Property*, p. 286.

[2] *Actes de Washington*, pp. 45/6, 227 (proposals), 91, 95, 115 (observations), 275/6 (report of Sub-Committee) 307/8 (report to Plenary Committee), 248 (adoption in Third Plenary Session).

improvements were adopted by the following Revision Conferences of The Hague in 1925,[1] of London in 1934[2] and of Lisbon in 1958.[3]

(b) Some of the formal requirements for the claiming of the right of priority are *mandatory* for the member States, because it is necessary that third parties be informed of such claims in time (cf. paragraph (2) of the provision under examination). The member States are therefore not allowed to depart from these requirements. If they are not fulfilled, the priority cannot be considered validly claimed.

(c) The form of the declaration may be prescribed by the national legislation of the country concerned.

(d) The mandatory formal requirements for the claiming of the right of priority are the indication of the *date* of the previous filing on which the claim of priority is based, and of the *country* in which such filing was made. The Revision Conference of Lisbon in 1958 added to these requirements the indication of the *number* of the previous application, but in another context and not necessarily with the same consequences (cf. observation *(m)* below).

In countries where applications, or at least claims of priority, are not examined as to substance, the indication of the above particulars may suffice; they will be noted and published without examining whether they are justified, a question which only the courts can decide later. Other countries may wish to prescribe more formalities—cf. paragraph (3) of the provision under consideration—in order to be able to examine priority claims as to substance, for example, with respect to the question whether the application on which the claim of priority is based was the *first* application for the subject concerned, or as regards the *identity of subject* between the first and the subsequent applications.

(e) It is mandatory for all member States to determine the latest date on which the declaration containing the above particulars

---

[1] *Actes de La Haye*, pp. 230/1, 233 (proposal), 336 (observations), 428/9 (report of Second Sub-Committee), 518 (report of General Committee), 538/9 (report of Drafting Committee), 572 (adoption in Second Plenary Session).

[2] *Actes de Londres*, pp. 251/2 (proposals), 365/6 (report of Second Sub-Committee), 453/4 (report of Drafting Committee), 513 (discussion and adoption in Second Plenary Session).

[3] *Actes de Lisbonne*, pp. 460/1 (proposal), 465/70 (observations), 471/79 (discussion in Second Committee), 532/3 (report of Second Committee), 99 (adoption in Second Plenary Session), 115 (General Report).

concerning a previous filing on which a claim of priority is based must be made. They may prescribe that such declaration must be made *together* with the filing of the application for which priority is claimed. They may also allow such declaration to be made later, within a certain period after the filing of the latter application, if they wish thus to facilitate the claiming of the right of priority. However, the period for making the declaration after the filing of the subsequent application must be so fixed that the country concerned can comply with the obligation to publish the particulars contained in the declaration in due time, according to paragraph (2) of the provision under examination.

(f) It is recalled that the right of priority provided by the Convention applies not only to patent applications but also to applications for registration of a utility model, an industrial design or a trademark (Article 4, paragraph A(1)). In all publications regarding these applications issued by the competent authorities of the member States, the required particulars concerning the right of priority must be mentioned, in order that third parties can be informed of them as soon as possible. Lack of such *publication* will not, however, invalidate the right of priority.[1]

(g) As has been pointed out in observation *(d)* above, the member States *may* prescribe for the claiming of the right of priority formalities other than a mere declaration containing certain particulars. These possible additional formalities are enumerated in paragraph (3) of the provision under consideration. They may consist in the *production of a copy* of the previous application on which the claim of priority is based, *certified as correct* by the authority with which this first application was filed, and, if required, also in the production of a *certificate* from the same authority showing the *date of filing*, and a *translation*. Details concerning these requirements may be fixed by national legislation. However, such legislation must respect the further requirements in the provision under consideration, namely, that *no authentication* of the certified copy of the original application shall be required and that a *minimum*[2] *term of three months* after the filing of the subsequent application must be granted for the filing of such copy, *without fee*. For the filing of such copy *after* this minimum term, a fee may be prescribed.[3]

---

[1] *Actes de Washington*, p. 307.

[2] *Actes de La Haye*, pp. 429, 538; *Actes de Londres*, p. 513.

[3] *Actes de Londres*, p. 513.

(h) The translation which the national legislation of the country in which priority is claimed may require will naturally be a translation into the official language, or one of the official languages, of that country.

(i) This provision, limiting the formalities which may be required, is again mandatory for the member States, in order to facilitate the claiming of the priority right.

(j) Since paragraphs (1) and (3) of the provision under consideration allow for the filing of documents at a later stage than that of the filing of the application for which the right of priority is claimed, the words " at the time of filing " must be interpreted as meaning during the period of filing when the priority right can be claimed and documentation related to it can be produced. At a later stage—cf. paragraph (5), first sentence, of the provision under examination—for example, when the nullity is alleged of a right or registration already granted with acknowledgement of the right of priority, further proof of the existence of the latter right may be required,[1] for example, regarding the identity of the subject of the first and subsequent applications.

(k) This provision deals only with the consequences of failure to comply with the *formalities* prescribed by the Article under consideration. It must be interpreted as referring not only to the mandatory but also to the permissive formalities. The consequences of failure to comply with these formalities will be determined by national legislation,[2] but may not go beyond the *loss of the right of priority.* Therefore, the absence of compliance with these formalities will not, *as such,* result in the loss of the right to the patent, utility model, industrial design or trademark involved. However, the loss of such right may occur as a *consequence* of the loss of the right of priority, if, for example, without the latter the former has been anticipated by publication of the invention or by registration or use of the trademark by a third party, etc.

The provision under examination does not concern objections to the claiming of priority other than failure to comply with *formalities,* such as, for example, the objection that such claim is not based on a *first* application in one of the countries of the Union or that there is

---

[1] *Actes de Washington,* pp. 307/8.

[2] Cf. in France: Cour de Paris, 10/1/1967, *Ann.* 1967, p. 23.

no identity of subject between the applications on the basis of which and for which priority is claimed. Member States are free to determine in their national legislation the consequences of these objections to a claim of priority.[1]

(l) See observation *(j)* above.

(m) The second sentence of paragraph (5) of the provision under consideration was added at the Revision Conference of Lisbon in 1958, in order to supplement the information to be given regarding claims for priority rights.[2] Although the indication of the *number* of the previous application on which the claim for the right of priority is based completes the particulars to be given in the declaration required by paragraph (1) of the provision under discussion and has to be included in the publication prescribed in paragraph (2), the obligation to indicate such number has not been included in paragraph (1). The reason is that such indication is not always possible, and the absence of or an error in the indication of the number should not, under national legislation, automatically lead to a loss of the priority right.[3]

ARTICLE 4, Section E*(a)*

E(1) Where an industrial design is filed in a country by virtue of a right of priority based on the filing of a utility model *(b)***, the period of priority shall be the same as that fixed for industrial designs** *(c)***.**

(2) Furthermore, it is permissible to file a utility model in a country by virtue of a right of priority based on the filing of a patent application, and vice versa *(d)***.**

(a) The Convention did not deal with utility models until the Revision Conference of Washington in 1911, when this notion was introduced in Articles 2, 4 A and C, 11 and 12, while the Final Protocol

---

[1] Cf. SCHRICKER: " Fragen der Unionspriorität im Patentrecht, " *G.R.U.R. Int.*, 1967, p. 85 (English translation in *I.P.*, 1967, p. 113).

[2] *Actes de Lisbonne*, pp. 460/1.

[3] *Ibidem*, pp. 465 (observation of Federal Republic of Germany), 471, 478, 532.

contained what is now Article 4 E(1).[1] The entire provision now under E was added to the Convention itself by the Revision Conference of The Hague in 1925.[2] Since then it has been modified only as to form.

(b) It will rarely happen that an industrial design and a utility model concern the same subject because, in principle, the first concerns ornamental aspects of an industrial article whereas the latter relates to its technical novelty. However, since it is a matter for national legislation to define these subjects, cases of overlapping may occur. In such cases, on condition that the identity of the subject is preserved, the right of priority can be claimed to obtain a different form of protection. The provision under consideration deals only with the case where the *first* application is filed for a *utility model* and afterwards, on the basis of this application, priority is claimed for an application in respect of an *industrial design*. The reverse case is not mentioned, but can be taken to be included.[3]

(c) In the case regulated by the provision, the period of priority will be that fixed for industrial designs, which is six months. In view of Section C(1) of the Article under consideration the same period of priority will prevail in the reverse case, where the first application is filed in respect of an industrial design, on the basis of which priority is claimed for a utility model.[4]

(d) This provision is self-explanatory.[5] The period of priority does not present any problem here since it is the same for patents and utility models (twelve months).

ARTICLE 4, Section F[(a)]

F. No country of the Union may refuse a priority or a patent application on the ground that the applicant claims multiple

[3] *Ibidem*, pp. 231, 233, 429/30, 495, 518. See also in Federal Republic of Germany: Bundespatentgericht 10/11/1967, *G.R.U.R. Int.*, 1968, p. 204.

[4] Cf. in Federal Republic of Germany: Bundespatentgericht 10/11/1967, *G.R.U.R. Int.*, 1968, p. 206.

[5] Cf. for its history: *Actes de La Haye*, pp. 231/2.

priorities *(b)*, even if they originate in different countries *(c)*, or on the ground that an application claiming one or more priorities contains one or more elements that were not included in the application or applications whose priority is claimed *(d)*, provided that, in both cases, there is unity of invention within the meaning of the law of the country *(e)*.

With respect to the elements not included in the application or applications whose priority is claimed, the filing of the subsequent application shall give rise to a right of priority under ordinary conditions *(f)*.

(a) This Section and also the following Sections G and H do not deal with the right of priority regarding *all* subjects of industrial property enumerated in Section A of the Article under consideration, but only with the priority right regarding applications for *patents.*[1] Section F is concerned with the subjects of *multiple* and *partial* priorities,[2] whereas Section G regulates the question of *dividing applications* for which priority may be claimed. Some parts of these provisions were introduced into the Convention at the Revision Conference of The Hague in 1925.[3] At the following Revision Conferences of London in 1934 and of Lisbon in 1958 the subjects concerned were more clearly separated and their regulation was improved (see, below, observation *(a)* on Section G).

(b) It frequently happens that an invention is not immediately complete, so that, even after a patent application has been filed for it, improvements or additions are found which are made the subject of other patent applications. The Convention makes it possible to claim, *in one and the same later application in other countries of the Union*, separate (multiple) priorities for the different parts of the invention, based on the various first applications made in respect of each of those parts, provided, of course, that these various applications

---

[1] This does not mean that the member States may not apply the same principles to other subjects of industrial property, for example, in recognizing multiple or partial priorities in case of collective filings of industrial designs or of the same trademark for different goods, but they are under no obligation to do so.

[2] Cf. SCHRICKER: " Fragen der Unionspriorität im Patentrecht, " *G.R.U.R. Int.*, 1967, p. 85 (English translation in *I.P.*, 1967, p. 113).

[3] *Actes de La Haye*, pp. 337 (proposal of France), 430 (report of Second Sub-Committee), 518/9 (report of General Committee), 539 (report of Drafting Committee), 572 (adoption in Second Plenary Session).

are filed within the term of priority counted from the first application. For the question of unity of invention, see under observation *(e)* below.

(c) According to an addition introduced into the provision at the Revision Conference of Lisbon in 1958,[1] the above procedure is even possible when the first applications in respect of different parts of the invention are filed in different countries.

(d) A second addition made to the provision under examination at the Revision Conference of Lisbon in 1958[2] concerns the possibility of *partial* priorities. It frequently happens that, after a first application for a patent has been filed, subsequent applications in respect of the same invention for which the priority of the first application is claimed contain elements of the invention which were not present in the first application and for which either no separate patent application has been filed in time to claim multiple priorities or no separate patent application will be filed at all (for example, because the added elements do not, in themselves, have an inventive character). Under the Convention, such additions in later applications will not prevent priority from being recognized for those other elements of the invention which were already present in the first application. It is also possible to combine multiple with partial priorities, if multiple priorities are claimed on the basis of separate first applications in respect of different parts of an invention to which, in the later application for which these priorities are claimed, new elements are also added for which no priority is claimed.

The elements added to an invention for which no priority is claimed in a later application, because they were not contained in any first application, may, of course, create a new priority right on the basis of the application in which they were introduced for the first time. The second sentence of the paragraph under examination makes this clear.[3]

(e) Many national patent legislations provide that a patent application may concern only one invention. These provisions must also be observed in the case of multiple and partial priorities. If, according

---

[1] *Actes de Lisbonne*, pp. 342/3 (proposals of Belgium and Netherlands), 345/6, 348 (discussion in Second Committee), 524/5 (report of Second Committee), 100 (adoption in Second Plenary Session), 115 (General Report).

[2] *Ibidem*, pp. 340/4 (proposal and observations), 345/8 (discussion in Second Committee), 524/5 (report of Second Committee), 100 (adoption in Second Plenary Session), 115 (General Report).

[3] *Ibidem*, pp. 346/8.

to the law of the country in which priority is claimed, there is no unity of invention in an application for which multiple and/or partial priorities are claimed, the application may be divided according to Section G of the Article under consideration or, if it is not so divided, it may be refused.

(f) See, above, the final observation under *(d)*.

ARTICLE 4, Section G*(a)*

G(1) If the examination *(b)* **reveals that an application for a patent contains more than one invention** *(c)*, **the applicant may divide the application into a certain number of divisional applications and preserve as the date of each the date of the initial application and the benefit of the right of priority, if any** *(d)*.

(2) The applicant may also, on his own initiative *(e)*, **divide a patent application and preserve as the date of each divisional application the date of the initial application and the benefit of the right of priority, if any. Each country of the Union shall have the right to determine the conditions under which such division shall be authorized** *(f)*.

(a) As has been observed already—see observation *(a)* regarding Section F of Article 4—the principle of paragraph (1) of this provision concerning the possibility of *dividing patent applications*[1] was introduced into the Convention at the Revision Conference of The Hague in 1925.[2] At the Revision Conference of London in 1934 the text of this paragraph was separated from what is now Section F, and improved,[3] whereas paragraph (2) was added at the Revision Conference of Lisbon in 1958.[4]

---

[2] *Actes de La Haye*, pp. 337 (proposal of France), 430 (report of Second Sub-Committee), 518/9 (report of General Committee), 539 (report of Drafting Committee), 572 (adoption in Second Plenary Session).

[3] *Actes de Londres*, pp. 170, 173 (proposal), 255 (observations), 367/9 (report of Second Sub-Committee), 454/5 (report of Drafting Committee), 513/4 (adoption in Second Plenary Session).

[4] *Actes de Lisbonne*, pp. 501 (proposal of U.K.), 502/5 (discussion in Second Committee), 534 (report of Second Committee), 100 (adoption in Second Plenary Session), 115 (General Report).

(b) This provision will apply only in countries where the examination of patent applications makes it possible to ascertain whether such applications contain more than one invention. This will probably not be the case in countries where patent applications are examined only as to form.

(c) According to the authentic French text of the Convention, which prevails over translations (Article 29(1)(c)), the provision is applicable in all cases where the examination reveals that an application for a patent is "*complexe.*" In the official English text of the Convention the word "*complexe*" has been translated by "contains more than one invention." This is not quite accurate, because it may happen that, according to the legislation of the country of examination, a patent application is considered "complex" for reasons other than lack of unity of invention,[1] for example, because it contains a forbidden combination of claims for manufacture and use of the same invention. In such cases, the provision under consideration will also apply, although its use in cases where the application contains more than one invention will probably be much more frequent.

(d) When the examination has revealed complexity of the application, the applicant may divide it into a certain number of divisional applications with the consequences attached to such division specified in the provision under examination. The provision is placed in Article 4 concerning the right of priority and normally priority rights will be involved in, and preserved notwithstanding, division of a patent application. However, the words "of the right of priority, if any" show that the provision will also apply if no priority right is claimed.

(e) This provision, concerning the possibility open to the applicant to divide his patent application *on his own initiative*, without previous examination having revealed any complexity in it, was introduced into the Convention at the Revision Conference of Lisbon in 1958. The provision is a broad one: it includes division of patent applications for reasons other than complexity or lack of unity of invention;[2] it also includes cases where no priority is claimed—see, above, under observation *(d)*—and it will also apply in countries where patents are examined only as to form.[3] Of course, after division of a patent

---

[1] *Actes de La Haye*, p. 337: the French proposal, which originated the provision, aimed at complexity *within* unity of invention, namely, because of multiple priorities.

[2] *Actes de Lisbonne*, pp. 503/4.

[3] *Ibidem*, p. 504.

application the separated parts must each satisfy the legal conditions for the granting of a patent, in order that such patent may be granted.

(f) The possibility of dividing patent applications on the initiative of the applicant having been accepted by the Convention, the conditions of the exercise of such right—for example, a term within which it must be exercised—are left to be determined by national legislation.[1]

ARTICLE 4, Section H*(a)*

H. Priority may not be refused on the ground that certain elements of the invention *(b)* for which priority is claimed do not appear among the claims *(c)* formulated in the application in the country of origin, provided that the application documents as a whole specifically disclose such elements *(d)*.

(a) This provision was introduced into the Convention at the Revision Conference of London in 1934.[2]

(b) Although the provision under examination does not explicitly state that it applies only to cases where priority is claimed with regard to applications for *patents*, the word " invention " makes it clear that this is nevertheless the scope of the provision. The reasons for special treatment of applications for patents in this respect are the following :

As has been observed above—observation *(i)* regarding Article 4 A(1)—the exercise of the priority right requires *identity of subject* between the first application on which the right of priority is based and the subsequent application for which such right is claimed. Such identity of subject is easy to preserve and to establish with respect to applications for the registration of industrial designs, trademarks, and, to a lesser extent, also utility models. The identity of subject is more difficult to preserve and to establish with respect to patent applications, because domestic laws differ widely concerning what may or may not be patented (for example, products and processes of manufacture or of application in various technological fields), and regarding the drawing up of a description of the invention and claims. It is therefore

---

[1] Cf. in Federal Republic of Germany: Bundespatentgericht, 25/7/1967, *G.R.U.R. Int.*, 1968, p. 132.

[2] *Actes de Londres*, pp. 170/3 (proposal), 255/6 (observations), 369/70 (report of Second Sub-Committee), 455 (report of Drafting Committee), 514 (adoption in Second Plenary Session).

frequently necessary, when a first patent application has been filed for an invention and priority is to be claimed for subsequent applications in other countries, to adapt such subsequent applications in those countries to their national requirements. It would be unjust if in such cases the right of priority were lost. Therefore some flexibility is given to the requirement of identity of subject in the case of patent applications.[1]

(c) Most domestic laws require that the subject for which protection by a patent is claimed must be defined in the patent application in one or more claims, but in some countries these claims have to be very specific, whereas in others the indication of the principles of the invention suffices. In view of these differences the right of priority must be recognized even for elements of the invention which do *not* appear in the *claims* of the application on which the right of priority is based.

(d) It will suffice for the claiming of the right of priority in a subsequent patent application if the elements of the invention for which priority is claimed are specifically disclosed in the documents of the previous application *as a whole* (including the description of the invention, drawings (if any), charts, etc.). The administrative or judicial authorities of the country where priority is claimed will determine whether this condition is fulfilled.[2]

The provision under consideration must, however, work in two directions. On the one hand, priority will be recognized on the basis of a previous application for all elements of the invention specifically disclosed in that application *as a whole*. On the other hand, if an even earlier application *as a whole* has already specifically disclosed these elements, that application will be considered the *first* application and priority cannot be recognized on the basis of the application mentioned earlier.

ARTICLE 4, Section I*(a)*

I(1) Applications for inventors' certificates *(b)* **filed in a country in which applicants have the right to apply at their own option either for a patent or for an inventor's certificate** *(c)* **shall give rise to the**

---

[1] *Actes de Londres*, pp. 171, 455.

[2] *Ibidem*, p. 455. See also ZUTRAUEN: " Zur Frage der Identität zwischen Vor- und Nachanmeldung bei Beanspruchung der Unionspriorität," *G.R.U.R. Int.*, 1960, p. 498.

right of priority provided for by this Article, under the same conditions and with the same effects as applications for patents *(d)*.

(2) In a country in which applicants have the right to apply at their own option either for a patent or for an inventor's certificate, an applicant for an inventor's certificate shall, in accordance with the provisions of this Article relating to patent applications, enjoy a right of priority based on an application for a patent, a utility model, or an inventor's certificate *(e)*.

(a) This Section was added to the Convention at the Revision Conference of Stockholm in 1967. The addition was motivated by the fact that the domestic legislations of several member States of the Union [1] have made it possible to obtain, for an invention, at the option of the applicant, *either a patent or an inventor's certificate*, the latter being a legal document under which the right of exploitation of the invention belongs to the State, whereas the inventor obtains a right to a remuneration from the State.

The purpose of the provision is to put applicants for inventors' certificates in those countries of the Union whose laws make provision for the grant of such certificates as an alternative to the grant of patents in the same position in respect of priority rights under Article 4 of the Convention as applicants for patents.[2]

(b) The countries of the Union are free to define in their national legislation what they understand by " inventors' certificates."

(c) It is believed that inventors' certificates are *generally* less useful than patents to non-nationals of a country who are not established or domiciled there,[3] so that countries which granted *only* inventors' certificates, and *not patents*, for inventions would not give sufficient reciprocity of protection to nationals of other countries which, for their part, granted *patents* to the nationals of the countries first mentioned. Therefore, the provision under consideration, granting priority rights to applications for inventors' certificates, applies *only* to such applications filed in a country in which applicants have the

---

[1] Cf. BIRPI publication, *Study Group on Certificates of Authorship*, containing surveys of the legislation of Bulgaria, Poland, Rumania and U.S.S.R., 1964.

[2] Cf. Report of Main Committee III of the Intellectual Property Conference of Stockholm, *I.P.*, 1967, p. 217, paragraph 4.

[3] See MAST: " Die Einführung der Erfinderscheine in die Pariser Verbandsübereinkunft, " *G.R.U.R. Int.*, 1967, p. 462.

right to apply *at their own option either* for a patent *or* for an inventor's certificate.

(d) In the above case, applications for inventors' certificates will give rise to a right of priority under the same conditions and with the same effect as applications for patents, which means that on the basis of a first application for an inventor's certificate priority may be claimed for patent applications in respect of the same subject in other countries of the Union. All provisions of Article 4 A, B, C, D, E(2), F, G and H will apply in such a situation.

(e) Paragraph (2) of the provision under consideration considers the reverse situation, namely, the possibility of claiming priority *in* a country where applicants have the right to apply at their own option either for a patent or for an inventor's certificate. If such an applicant applies for a *patent*, claiming priority on the basis of a first application in another country for a patent or an inventor's certificate, the situation is already covered by the foregoing Sections A to I(1). If, however, the application for which priority is claimed is made for an *inventor's certificate*, the provisicn under examination ensures that the applicant may claim priority on the basis of a first application, made in another country of the Union, for a patent, a utility model (cf. Section E(2)) or an inventor's certificate.

With respect to countries which would only grant inventors' certificates, and not patents, for inventions, neither of the provisions of Section I would be applicable : applications for inventors' certificates filed in such countries would enjoy no priority right in other countries of the Union, and it would not be possible to claim for such applications a priority based on a first filing in other countries.

ARTICLE 4*bis*(*a*)

(1) Patents *(b)* **applied for in the various countries of the Union by nationals of countries of the Union** *(c)* **shall be independent of patents obtained for the same invention** *(d)* **in other countries, whether members of the Union or not** *(e)***.**

(2) The foregoing provision is to be understood in an unrestricted sense, in particular, in the sense that patents applied for during the period of priority *(f)* **are independent, both as regards the grounds for nullity and forfeiture, and as regards their normal duration** *(g)***.**

(3) The provision shall apply to all patents existing at the time when it comes into effect *(h)***.**

(4) Similarly, it shall apply, in the case of the accession of new countries, to patents in existence on either side at the time of accession *(i)***.**

(5) Patents obtained with the benefit of priority shall, in the various countries of the Union, have a duration equal to that which they would have, had they been applied for or granted without the benefit of priority *(j)***.**

(a) The principle of the mutual independence of patents obtained for the same invention in the various countries of the Union, as embodied in paragraphs (1), (3) and (4) of this Article, was introduced into the Additional Act to the Convention adopted at the Revision Conference of Brussels in 1900.[1] The Revision Conferences of Washington in 1911 and of London in 1934 added paragraphs (2) and (5), respectively.[2]

(b) A distinction must be made between, on the one hand, "normal" patents, which will include patents of improvement and patents or certificates of addition, and, on the other hand, patents which are "abnormal" in so far as they are *only* granted *on the basis*

---

[1] *Actes de Bruxelles*, pp. 41/2 (proposal), 181/3, 311, 331/3 (discussions and adoption in Plenary Session).

[2] *Actes de Washington*, pp. 47, 228 (proposals), 222 (observation), 276/7 (report of Committee), 249/51, 259/60 (discussions and adoption in Third and Fourth Plenary Sessions); *Actes de Londres*, pp. 257/8 (proposals), 370 (Report of Second Sub-Committee), 455/6 (report of Drafting Committee), 514 (discussion and adoption in Second Plenary Session).

of an existing foreign patent. Such patents (see, above, observation *(c)* on Article 1, paragraph (4)) are called "patents of importation," "introduction," "confirmation" or "revalidation." These patents are granted, in the countries which make them available, for inventions which have lost their novelty at the time of the patent application and can therefore no longer be patented normally. They are granted, nevertheless, *on the basis of an existing foreign patent* and in anticipation of the *exploitation of the invention in the country in which the patent of importation is granted.* In such cases, the duration of the patent of importation may be made dependent on the duration of a foreign patent which is the basis of the grant of the patent of importation.[1]

(c) To these nationals are assimilated the persons entitled to the benefits of the Convention by virtue of Article 3.

(d) Independence is prescribed only for patents obtained for "the same invention." However, for patents not obtained for the same invention, independence will of course apply *a fortiori.*

(e) The provision obliges the member States of the Union to consider their patents independent of other patents for the same invention, even if those patents are granted in non-member States.

(f) The sense of this provision is that *even* patents applied for during the period of priority, and for which priority is recognized, will be independent of the patent granted on the application which is the basis of the priority claim. With respect to patents which are not applied for during the period of priority or for which no priority is claimed, the same rule will apply in view of paragraph (1) of the Article under consideration.[2]

(g) The independence of patents granted for the same invention concerns their normal duration as well as the possibilities of earlier termination. Such possibilities exist not only in cases of forfeiture or nullity but also if prescribed fees for the maintenance of a patent are not paid.

---

[1] Cf. *Actes de Washington,* pp. 249/51, 259.

[2] Some confusion seems to have existed on this subject during the Revision Conference of Washington in 1911, at which only patents of importation were the real issue.

(h) This provision is a transitory clause which has lost its meaning, because all patents existing at the time when the provision took effect (September 14, 1901)[1] have meanwhile expired.

(i) This provision is self-explanatory.

(j) The purpose of this provision, added to the Article under consideration by the Revision Conference of London in 1934,[2] is to make it clear that the duration of patents granted with the benefit of the right of priority may not be calculated from a different date from that of the starting point for the duration of patents for which no priority is recognized.

---

[1] Cf. Article 3 of the Additional Act of Brussels, 1900, and *Actes de Washington*, pp. 13/4.

[2] *Actes de Londres*, pp. 257/8 (proposals of France, Germany, U.S.A. and several other countries), 370 (report of Second Sub-Committee), 455/6 (report of Drafting Committee), 514 (discussion and adoption in Second Plenary Session).

ARTICLE 4*ter*

The inventor shall have the right to be mentioned as such in the patent(*a*)(*b*)**.**

(a) This provision, concerning what is commonly called the " moral right " of the inventor to be named as such in the patents granted for his invention in all countries of the Union, was introduced into the Convention at the Revision Conference of London in 1934.[1]

(b) The procedure for the exercise of this right of the inventor will be regulated by the member States in their national legislation. Since the inventor has only the *right* to be mentioned in the patent, he can waive this right, unless national legislation prescribes otherwise. The original proposals for the provision contained a clause according to which any contract contrary to the provision would be null and void, but this clause was not accepted. This question is therefore a matter for national legislation.

---

[1] *Actes de Londres*, pp. 259/60 (proposals of Denmark, Mexico, Netherlands and several other countries), 370/3 (report of Second Sub-Committee), 456 (report of Drafting Committee), 514 (discussion and adoption in Second Plenary Session).

ARTICLE 4*quater*[(a)(b)]

The grant of a patent shall not be refused and a patent shall not be invalidated on the ground that the sale of the patented product or of a product obtained by means of a patented process *(c)* is subject to restrictions or limitations *(d)* resulting from the domestic law.

(a) This provision was added to the Convention at the Revision Conference of Lisbon in 1958.[1]

(b) The provision was proposed for the following reasons. It sometimes happens that an invention leads to the manufacture of a product which does not conform to the requirements of the national law of a country as to, for example, security or quality. In other cases the manufacture or sale of such product is restricted, because the State concerned has granted a monopoly or an exclusive concession for such manufacture or sale to an organization of public or private law.[2] It would, however, be unjust to refuse or invalidate patents concerning such inventions. In cases of the first category, the invention may show that the requirements of the law prohibiting the sale of certain products are obsolete, in which case the law may be modified or repealed, which will then allow the application of the invention. In the second case, a patent is justified since the holder of the monopoly may obtain a contractual or a compulsory license for the exploitation of the invention. The provision under examination therefore prescribes that patents may not be refused or invalidated in such cases.

(c) The provision refers only to cases where the *sale* of the *patented product* or of a product obtained by means of a patented process is restricted or limited by national legislation, and not to the case where the *manufacture* of such product or the application of a *patented process itself* is subject to analogous restrictions or limitations. It is therefore a matter for national legislation to regulate this latter situation. It would seem reasonable to adopt for these latter cases the same solution as for the cases referred to in the provision.

---

[1] *Actes de Lisbonne*, pp. 508/9 (proposals of Denmark, Netherlands and several other countries), 510/3 (discussion in Second and General Committees), 534/5 (report of Second Committee), 100 (adoption in Second Plenary Session), 115 (General Report).

[2] Cf. in Austria: Patentamt (Division of Appeals), 21/10/1960, *Oesterreichisches Patentblatt*, 1961, p. 46; *G.R.U.R. Int.*, 1961, p. 483.

(d) The provision deals with cases where the sale of a product is subject to *restrictions* or *limitations* resulting from the domestic law of the country concerned. The question whether a total *prohibition* of such sale also comes under the provision is left open, but should, in view of the purpose of the provision, be answered affirmatively. In all cases, refusal or invalidation of a patent must remain possible if the invention concerned is *contrary to public order or morality*. This may not, however, be accepted merely because the exploitation of the invention is prohibited or restricted by law or regulation, but only when it is contrary to the basic legal or social concepts of the country concerned.

ARTICLE 5, Section A(a)

A(1) Importation by the patentee *(b)* **into the country where the patent has been granted of articles manufactured** *(c)* **in any of the countries of the Union** *(d)* **shall not entail forfeiture of the patent** *(e)*.

(2) Each country of the Union shall have the right to take legislative measures providing for the grant of compulsory licenses *(f)* **to prevent the abuses which might result from the exercise of the exclusive rights conferred by the patent** *(g)*, **for example, failure to work** *(h)*.

(3) Forfeiture of the patent *(i)* **shall not be provided for except in cases where the grant of compulsory licenses would not have been sufficient to prevent the said abuses** *(j)*. **No proceedings for the forfeiture or revocation of a patent may be instituted before the expiration of two years from the grant of the first compulsory license** *(k)*.

(4) A compulsory license may not be applied for on the ground of failure to work or insufficient working *(l)* **before the expiration of a period of four years from the date of filing of the patent application or three years from the date of the grant of the patent, whichever period expires last** *(m)*; **it shall be refused if the patentee justifies his inaction by legitimate reasons** *(n)*. **Such a compulsory license shall be non-exclusive and shall not be transferable, even in the form of the grant of a sub-license, except with that part of the enterprise or goodwill which exploits such license** *(o)*.

(5) The foregoing provisions shall be applicable, mutatis mutandis, to utility models *(p)*.

(a) Paragraph (1) of this Section, concerning *importation of patented articles*, was introduced into the original text of the Convention of 1883.[1] It has not been modified since except for minor changes as to form.

Paragraphs (2), (3) and (4) of the Section deal with *the obligation to work a patent* in the country where it is granted,[2] and more generally with the *abuses* which might result from the exercise of the exclusive

---

[1] *Actes de Paris*, I, pp. 27 (proposal for Article 4), 56/8, 64/70, 132 (discussions and adoption).

[2] Cf. for this subject, AKERMAN: *L'obligation d'exploiter et la licence obligatoire en matière de brevets d'invention*, 1936.

right conferred by the patent. The original text of the Convention of 1883 only contained a provision stating that in the case of importation of patented articles (paragraph 1) the patentee remained under the obligation to exploit his patent in accordance with the laws of the country into which he introduced the patented articles. The Revision Conference of Brussels in 1900 added a more general provision concerning the non-working of a patent: Article 2 of the Additional Act adopted in Brussels.[1] This regulation was elaborated further by the following Revision Conferences of Washington (1911), The Hague (1925), London (1934) and Lisbon (1958). At the Conference of The Hague the provision was enlarged to include the regulation of legislative measures intended to prevent the abuses which might result from the exclusive rights conferred by the patent, abuses of which failure to work was cited as an example.[2] On the other hand, that Conference, and also the following Conferences of London and Lisbon, reduced the possibilities of legislative measures and sanctions in these cases.[3]

Originally, doubts existed[4] as to whether the provisions regulating these matters could be considered "self-executing"—in countries which admit such a possibility (see Chapter II.3 and II.4, above)—that is, whether interested parties could directly, even in the absence of or notwithstanding differing national legislation, invoke these provisions before the administrative or judicial authorities of the countries concerned. Paragraph (2) of the Section under consideration is still a provision which merely gives a right to legislate to the member States and therefore has no "self-executing" character. On the other hand, paragraphs (1), (3) and (4), especially after the Revision Conferences of London (1934) and Lisbon (1958), are clearly so worded as to be "self-executing"—in countries which admit such a possibility.[5]

Conseil*, 1958, p. 172; in Italy: Court of Appeals of Turin, 15/10/1965, *G.R.U.R. Int.*, 1967, p. 361 (German translation).

[5] Cf. in France: Cour de Cassation, cited in preceding footnote.

Paragraph (5) of the Section under consideration was added at the Revision Conference of London in 1934.[1]

(b) This provision concerning *importation of patented articles by the patentee* into the country where the patent is granted was introduced into the Convention at a time when the question whether such importation could entail forfeiture of the patent was a hotly debated issue. As national legislations have since become less severe on importation of patented articles as such, the issue has lost much of its importance. The provision is rather narrowly worded and leaves the member States free to regulate the importation of patented articles by other means and in other circumstances than those referred to in the provision.

(c) " *Articles manufactured* " must mean " articles manufactured according to the patent " and will include both categories mentioned in Article 4*quater*, namely, articles which are themselves the subject of the patent and articles manufactured by means of a patented process.

(d) The provision applies only in the case of importation of articles *manufactured* in *any of the countries of the Union* and not if these articles are *manufactured elsewhere* and *imported from one of those countries.*

(e) The provision stipulates only that importation as indicated shall not entail *forfeiture of the patent.* However, the expression " forfeiture " is not used in all countries of the Union. In view of the purpose of the provision, it must apply to all measures terminating a patent on the ground of importation of patented articles by the patentee, independently of the question whether such measures are called forfeiture, repeal, revocation or annulment.

(f) It would seem, with respect to the prevention of the abuses indicated in this provision, that national legislation can only take legislative measures providing for the grant of *compulsory licences.* This, however is not true, because paragraph (3) makes it clear that *forfeiture* of the patent is another measure which may be provided for. The order in which those measures may apply is prescribed in paragraphs (3) and (4).

(g) The provision concerning the *abuses which might result from the exercise of the exclusive rights conferred by the patent* relates to a

---

[1] *Actes de Londres*, pp. 379/80 (proposal of Poland), 459/60 (report of Drafting Committee), 515 (adoption in Second Plenary Session).

very important question of patent law. Although patents, even apart from their exploitation, are considered beneficial to industry, as they publish inventions which may inspire other inventions, and fall into the public domain after the expiration of their term, it is believed in many countries that, in order to be fully justified, patents should also be *used* for *working the patented invention in the country where the patent is granted*, and not merely as an exclusive right to prevent others from doing so or to control importation. On the other hand, immediate exploitation of the same invention in all countries where patents are granted for the invention is generally impossible, so that the patentee must be given sufficient time to organize exploitation, be it by himself or by licensees, in the countries concerned.

The provision under examination aims at striking a balance between the said considerations. It gives the member States the right to legislate against the *abuses* which might result from the exercise of the exclusive rights conferred by the patent, for example, failure to work, but on condition that the provisions of paragraphs (3) and (4) of the Article are respected.

The provision in paragraph (2), and therefore also the provisions of paragraphs (3) and (4) which prescribe rules for its application, do *not* deal with *measures other than those whose purpose is to prevent the abuses referred to.* The member States are therefore free to provide analogous or different measures, for example, compulsory licenses on conditions other than those indicated in paragraph (4), in *other cases* where *the public interest is deemed to require such measures.*[1] This may be the case when patents concern vital interests of the country in the fields of military security or public health or in the case of so-called " dependent patents," [2] etc. In such cases the rules of paragraphs (3) and (4) of the provision under consideration do not apply, so that the member States have freedom to legislate.

In cases where the provision under consideration does apply, namely, when national legislation is aiming at preventing the *abuses which might result from the exercise of the exclusive rights conferred by the patent*, the rules given in paragraphs (3) and (4) are mandatory for the member States and may—in countries which admit this possibility—be directly invoked by interested parties.

---

[1] Cf. in United Kingdom: House of Lords, 11/3/1954, 71 *R.P.C.* 169 (1954). Cf. also the discussion of this question in the *Actes de Lisbonne*, pp. 393/5, 407/10, 421/2.

[2] " Dependent patents " are patents which cannot be exploited without applying at the same time an earlier patent, or a patent based on an earlier application or priority.

Among the abuses referred to, *failure to work the patented invention*—which failure, according to paragraph (4), includes *insufficient* working—is cited as an example. Other examples of such abuses may exist in cases where the owner of the patent, although working the patent in the country concerned, refuses to grant licenses on reasonable terms and thereby hampers industrial development, or does not supply the national market with sufficient quantities of the patented product, or demands excessive prices for such product.[1] The member States are free to define these, and other, abuses.[2]

(h) The member States are also free to define what they understand by "*failure to work*." Normally, working a patent will be understood to mean working it *industrially*, namely, by *manufacture* of the patented product, or *industrial application* of a patented process. Thus, importation or sale of the patented article, or of the article manufactured by a patented process, will not normally be regarded as "working" the patent.

The member States are equally free to decide whether legislative measures will be taken already in the case of failure to work a patent in the country concerned, or only if such failure to work occurs in a larger territory comprising one or more other countries.[3]

(i) Paragraph (3) of the Section under consideration is the first of the two paragraphs (3) and (4) which contain *mandatory requirements* concerning the contents of the legislative measures allowed by paragraph (2). Paragraph (3) concerns measures provided to prevent *all abuses* which might result from the exercise of the exclusive rights conferred by the patent; paragraph (4), on the contrary, applies only to compulsory licenses *on the ground of failure to work or insufficient working*.[4]

For the expression "forfeiture," see the observation under *(e)* above; the interpretation given there is confirmed by the second sentence of paragraph (3) of the Section under consideration.

(j) The first mandatory requirement for the *forfeiture* of a patent is that such forfeiture, *on the ground of the said abuses*, may be made

---

[1] *Actes de La Haye*, p. 434.

[2] *Actes de Londres*, p. 174.

[3] See, for example, Article 5 of the Treaty between Germany and Switzerland of 13/4/1892, amended 26/5/1902, Blum-Pedrazzini, *Das schweizerische Patentrecht*, II, p. 609, and Article 136 of the Draft Treaty regarding a European Patent.

[4] *Actes de Lisbonne*, pp. 416/7, 527, 116.

possible by the national legislation of member States only in cases where the *grant of compulsory licenses is not sufficient* to prevent the said abuses. In view of the second sentence of the same paragraph, this means that after the grant of one or more compulsory licenses it must be considered whether these, or further, compulsory licenses will not suffice to correct the said abuses.

(k) A second mandatory requirement for the forfeiture of a patent on the ground of the said abuses is that *no proceedings for such forfeiture may be instituted* before the expiration of two years from the *grant* of the *first compulsory license.* Forfeiture of a patent is therefore a subsidiary measure, only possible after at least one compulsory license has been granted and the decision has been made that the grant of compulsory licenses is not sufficient to prevent the said abuses.

These provisions make it clear that, in countries whose legislation does not provide for compulsory licenses, *forfeiture of a patent on the ground of the said abuses* will not be possible.[1]

(l) As has been observed above, this provision applies only to compulsory licenses applied for in cases of *failure to work or insufficient working of a patent* and not in cases of other abuses of the exclusive right.[2]

(m) The periods prescribed take into account the different patent laws of the member States, which may provide for the grant of patents with or without previous examination of the patent application as to substance. In countries without such examination it is quite likely that a patent will be granted within the first year after filing the application. In order to give the applicant more time to organize the exploitation of his patent, a compulsory license can then only be applied for after four years have expired from the filing of the application. However, if, for example, because of the time involved in examining the application as to substance, the patent is granted more than one year after the filing of the application, a compulsory license cannot be applied for until three years have expired from the grant of the patent.

After expiration of the period which expires last, a compulsory license on the ground of failure to work or insufficient working may be allowed ; it may also be allowed later on during the life of the patent and even after a period during which the patent has been

---

[1] Cf. in France: Cour de Cassation (Chambres réunies), 16/11/1966, *Ann.*, 1967, p. 117.

[2] *Actes de Lisbonne*, pp. 416/7, 527, 116.

worked in the country, if such working has stopped or has become insufficient.

(n) A compulsory license on the ground of failure to work or insufficient working must be *refused* if the patentee *justifies his inaction by legitimate reasons.* Such reasons may be based on the existence of legal, economic or technical obstacles to exploitation, or more intensive exploitation, of the patent in the country. The competent authorities of the country concerned will decide on this question.[1]

(o) This provision, added at the Revision Conference of Lisbon in 1958, tends to prevent the grantee of a compulsory license on the ground of failure to work or insufficient working from obtaining a stronger position than is warranted by the purpose of the license, namely, to provide the possibility of working the patent in the country concerned. National legislation may determine how a compulsory license may be transferred together with the enterprise or part of the enterprise or goodwill which exploits such license.

(p) This provision, added by the Revision Conference of London in 1934,[2] extends the application of the preceding provisions to utility models. Such application will probably be rare in view of the relatively short duration of utility models and their limited importance.

ARTICLE 5, Section B*(a)*

B. The protection of industrial designs shall not, under any circumstance, be subject to any forfeiture *(b)*, either by reason of failure to work *(c)* or by reason of the importation of articles corresponding to those which are protected *(d)*.

(a) This provision concerns *industrial designs* only. It was introduced into the Convention, as regards forfeiture of protection by reason of importation of articles corresponding to the design, at the Revision Conference of The Hague in 1925.[3] It was completed as regards failure to work, at the Revision Conference of London in 1934.[4]

---

[1] Cf. *Actes de Bruxelles*, pp. 316/7, 322/3, 325/6, 387/8.

[2] *Actes de Londres*, pp. 379/80 (proposal of Poland), 459/60 (report of Drafting Committee), 515 (adoption in Second Plenary Session).

[3] *Actes de La Haye*, pp. 339 (proposals of Germany and several other countries), 497/8 (discussion in Sixth Sub-Committee), 519/20 (report of General Committee), 540/1 (report of Drafting Committee), 576 (adoption in Second Plenary Session).

[4] *Actes de Londres*, pp. 175/6, 179 (proposal), 263/4 (observations), 380 (report of Second Sub-Committee), 460 (report of Drafting Committee), 515 (adoption in Second Plenary Session).

(b) As has already been observed above—see observations *(e)* and *(j)* on Article 5 A—the expression "forfeiture" must be deemed to include other measures which would terminate the protection of a design on the grounds referred to whatever their name, such as repeal, revocation or annulment.

(c) *Failure to work* a design in a member State may not cause forfeiture of the protection of the design. Member States are, however, free to provide in their national legislation for compulsory licenses in case of failure to work.[1] They are also free to define what they understand by "failure to work." "Work" will normally be understood as meaning the *manufacture* of products representing or incorporating the design.

(d) With respect to *importation of articles* corresponding to the design in a country where the design is protected, the provision has a wider scope than the corresponding provision concerning patents (Section A(1)). In the case of designs, no such importation whatsoever may cause forfeiture, independently of the questions whether the importation is made by the owner of the right to the design or by others, and whether such importation occurs after manufacture of the articles in one of the countries of the Union or elsewhere.

ARTICLE 5, Section C*(a)*

C(1) If, in any country, use of the registered mark is compulsory *(b)*, the registration may be cancelled *(c)* only after a reasonable period *(d)*, and then only if the person concerned does not justify his inaction *(e)*.

(2) Use of a trademark by the proprietor *(f)* in a form differing in elements which do not alter the distinctive character of the mark in the form in which it was registered in one of the countries of the Union *(g)* shall not entail invalidation of the registration *(h)* and shall not diminish the protection granted to the mark *(i)*.

(3) Concurrent use *(j)* of the same mark on identical or similar goods by industrial or commercial establishments considered as co-proprietors of the mark according to the provisions of the domestic law of the country where protection is claimed *(k)* shall not prevent

---

[1] Cf. *Actes de Londres*, pp. 380, 460, 515.

registration or diminish in any way the protection granted to the said mark in any country of the Union *(l)*, **provided that such use does not result in misleading the public and is not contrary to the public interest** *(m)*.

(a) This Section concerns various questions related to the *use of trademarks*. Paragraph (1) of the Section under consideration was introduced into the Convention at the Revision Conference of The Hague in 1925 ;[1] paragraphs (2) and (3) were added at the Revision Conference of London in 1934.[2]

Although it would be reasonable to apply these provisions also to *service marks*, there is no obligation to do so, because the said provisions existed in the Convention before the introduction of service marks by the Revision Conference of Lisbon in 1958, and the latter Conference refused to assimilate service marks to trademarks throughout the Convention.[3]

(b) The *working of a patent* in a country may be in the public interest but this is not necessarily true with respect to the *use of a trademark* in such country, because it is, in principle, a matter of indifference whether goods are sold under a certain trademark or not. Nevertheless, many countries require in their national legislation that trademarks be used, in order to prevent the trademark register becoming clogged with unused marks which preclude the valid registration of identical or similar marks which are used or intended to be used. Thus, *the use of a registered trademark* is often prescribed under national legislation ; use of the mark is then generally understood as meaning the sale of goods bearing such mark.[4]

However, as in the case of patents, the proprietor of the trademark registration must be given reasonable time and opportunity to use his mark in several countries before his registrations of the mark are exposed to sanctions on the ground of non-use. The paragraph under consideration contains provisions to that effect.

---

[1] *Actes de La Haye*, pp. 338/9 (proposals of Germany, U.K. and other countries), 439/42 (report of Third Sub-Committee), 520 (report of General Committee), 541 (report of Drafting Committee), 576 (adoption in Second Plenary Session).

[2] *Actes de Londres*, pp. 178/9, 281 (proposals), 264/5 (observations), 386/90 (report of Third Sub-Committee), 460/1 (report of Drafting Committee), 515 (adoption in Second Plenary Session).

[3] *Actes de Lisbonne*, pp. 624 (proposal of U.S.A.), 628/33 (discussion in Third Committee), 755/7 (report of Third Committee).

[4] Cf. *Actes de La Haye*, pp. 441/2, 541.

(c) The provision only stipulates the conditions under which, on the ground of non-use of a *registered* mark, the *registration may be cancelled*. It is, therefore, of limited importance in countries where, according to the national legislation, the *right* to a trademark originates from the (first) use of it and is independent of registration. In such cases *this right* could lapse on the ground of non-use, although the provision under examination would prevent the *registration* from being cancelled.[1]

(d) National legislation may define what is meant by a reasonable period, and if this is not done the competent authorities of the country concerned will determine what is a reasonable period in any given case.

(e) Cancellation of a trademark registration on the ground of non-use of the trademark in the country concerned will be possible only if the proprietor of the registration does not justify his inaction. National legislation may define this further, failing which the competent authorities will decide on any alleged justification. Justification will normally be possible if legal or economic conditions have prevented the use of the mark in a given country, for example, if the importation of certain products has been prohibited, or prevented by war, or if there was no market for such products.

(f) This paragraph, which allows the use of a trademark in a *form* that is not essentially different from that in which it has been registered, applies only to such use when it is made by the *proprietor* of the mark. It will be reasonable to apply it also in cases of legitimate use of a mark by persons other than the proprietor, particularly by his licensees.

(g) The provision deals with the use of a mark in a form which is different from that in which it has been registered *in one of the countries of the Union*. The purpose of the provision is to allow for unessential differences between the form of the mark as it is registered and the form in which it is used, for example, in cases of adaptation or translation of certain elements for such use.[2] It applies also to similar differences in the form of the mark as used in the country of its original registration. The differences in form must *not alter the*

---

[1] Cf. in Netherlands: Supreme Court, 5/1/1940, *Bijblad bij de Industriële Eigendom*, 1940, p. 124.

[2] Cf. *Actes de Londres*, p. 178.

distinctive character of the mark. The competent authorities of the country in which the mark is used in a different form will determine whether this requirement has been complied with.[1]

(h) The said differences of form will not entail *invalidation of the registration,* which is self-explanatory.

(i) Neither will the said differences of form *diminish the protection granted to the mark,* which means not only that the mark, in the form in which it is registered, cannot be considered as not being used in view of Article 5, Section C(1), but also that, as regards possible infringement by marks of third parties, it must be considered as having been used in its original form. Whether the different form in which the mark is actually used enters also into consideration depends on the national legislation of the country concerned.

(j) This provision unfortunately does not deal with the type of concurrent legitimate use of a mark by several enterprises which in most countries is by far the most important, namely, concurrent use of a mark by licensor and licensee.[2] An attempt to cover this subject, made at the Revision Conference of Lisbon in 1958, failed.[3]

(k) As it stands, the provision has a very narrow scope because it covers only the situation where concurrent use of the same mark on identical or similar goods is made by enterprises which are considered *co-proprietors of the mark* according to the domestic law of the country where protection of the mark is claimed. The provision is intended to eliminate difficulties which have occurred, with regard to this question, under the national legislation of some countries,[4] but it is of little importance to many other countries.

(l) The provision prescribes that, in the case of the concurrent use referred to, the registration of the mark will not be prevented and its protection will not be diminished. This latter stipulation must be deemed to include the requirement that a registration may not be invalidated on the said ground.

---

[1] Cf. in France: Tribunal civil de Marseille, 14/12/1954, *Ann.*, 1955, p. 43.

[2] Cf. HEYDT: "Gleichzeitige Benutzung derselben Marke durch mehrere Personen und Marken von Inhabern ohne Geschäftsbetrieb," *G.R.U.R. Int.*, 1958, p. 457; TOTH: "L'emploi simultané de la marque," *P.I.*, 1961, p. 241; BEIER: "Die gemeinschaftliche Benutzung von Warenzeichen in konventionsrechtlicher Sicht," in *Die Warenzeichenlizenz*, 1963, p. 555.

[3] *Actes de Lisbonne*, pp. 544/64, 746/50.

[4] *Actes de Londres*, p. 460.

(m) National legislations are free to define this proviso further, failing which the competent authorities of the country concerned will decide whether the provision will not apply because the concurrent use of a mark results in misleading the public or is contrary to the public interest. Such cases may occur if the concurrent use of the mark would mislead the public as to the source of the goods sold under the same trademark or if the quality of such goods, concurrently sold by co-proprietors of the mark, were different. See also, for a possible conflict with *the public interest*, observation *(i)* on Article 7*bis* below.

ARTICLE 5, Section D*(a)*

D. No indication or mention of the patent, of the utility model, of the registration of the trademark, or of the deposit of the industrial design *(b)*, **shall be required upon the goods as a condition of recognition of the right to protection** *(c)*.

(a) This provision, as far as it concerns industrial designs, was introduced into the Convention by the Revision Conference of The Hague in 1925.[1] It was extended to other industrial property rights by the Revision Conference of London in 1934.[2]

(b) An indication or mention on a product, to the effect that the product is protected by a patent, utility model or the registration of a design, or that a mark which the product carries is protected by registration, may be useful in order to inform third parties of the protection and thereby to warn them against infringement of the right concerned. Several countries, therefore, prescribe such indication or mention, at least for some of the subjects of industrial property referred to.

(c) However, the presence of such indication or mention may not be made a *condition* of the *right to protection*, because this would penalize the owner of the right too severely for the omission of the

---

[1] *Actes de La Haye*, pp. 339 (proposal of Germany), 496/7 (report of Sixth Sub-Committee), 520 (report of General Committee), 540/1 (report of Drafting Committee), 576 (discussion and adoption in Second Plenary Session).

[2] *Actes de Londres*, pp. 176/8, 179 (proposal), 265 (observations), 380 (report of Second Sub-Committee), 461 (report of Drafting Committee), 515 (adoption in Second Plenary Session).

indication or mention. Member States are free, however, to provide in their national legislation for other consequences of the omission of such indication or mention. They may, for example, make such omission a criminal misdemeanor or prescribe that in the case of such omission—and although recognition of the right to protection still obtains—damages for infringement can be claimed only if it is proved that the infringer was aware of the right, notwithstanding the omission of any indication or mention.[1]

---

[1] *Actes de La Haye*, pp. 496/7.

ARTICLE 5*bis*[(a)]

(1) A period of grace of not less than six months *(b)* shall be allowed for the payment of the fees prescribed for the maintenance *(c)* of industrial property rights, subject, if the domestic legislation so provides, to the payment of a surcharge.

(2) The countries of the Union shall have the right to provide for the restoration of patents *(d)* which have lapsed by reason of non-payment of fees.

(a) The first paragraph of this Article was introduced into the Convention by the Revision Conference of The Hague in 1925, but the minimum term prescribed for the period of grace was then three months.[1] This minimum term was extended to six months by the Revision Conference of Lisbon in 1958.[2]

The second paragraph of the Article was introduced in a different form by the Revision Conference of The Hague.[3] It was modified by the Revision Conference of Lisbon.[4]

(b) In many countries the *maintenance of certain industrial property rights* is subject to the payment of fees, which are generally annual. In order not to penalize the owner of the right by immediate forfeiture in the event of a delay in the payment of such fees, the provision under consideration grants a period of grace for such payments. This period of grace is of six months' duration, unless the national legislation of the country concerned grants a longer period. During the period of grace the industrial property right concerned must be considered to remain provisionally in force.[5] If the fee is not paid during this period, the right will lapse. National legislations are free to determine that in such case the right will lapse retroactively, namely, as from the date on which the fee was due.

---

[1] *Actes de La Haye*, pp. 338, 354 (proposals of U.S.A. and U.K.), 434/5 (report of Second Sub-Committee), 520/1 (report of General Committee), 541 (report of Drafting Committee), 576/7 (discussion and adoption in Second Plenary Session).

[2] *Actes de Lisbonne*, pp. 426/7 (proposal), 427/435 (observations), 436/46 (discussion in Second Committee), 529/531 (report of Second Committee), 101 (adoption in Second Plenary Session), 116 (General Report).

[3] See footnote 1.

[4] See footnote 2.

[5] Cf. *Actes de Lisbonne*, pp. 440/1.

(c) The provision under examination concerns only the payment of fees prescribed for the *maintenance* of industrial property rights. It does not apply to payments due for the *acquisition* of the right.[1] Neither is there any obligation to apply the provision to payments due not for *maintenance* but for *renewal* of an industrial property right.

(d) Whereas paragraph (1) of the Article under consideration regulates the period of grace allowed for the payment of fees for the maintenance of *all* industrial property rights, paragraph (2) concerns *patents* only, in cases where they *have already lapsed* by reason of non-payment of fees (for example, maintenance fees, if these fees have not been paid in time or during the period of grace). According to the text adopted at the Revision Conference of The Hague in 1925, the member States undertook, in the case of patents, either to increase the period of grace—then normally fixed at three months—to six months, or to provide for the *restoration of a patent* which had lapsed by reason of non-payment of fees. The first part of this alternative was superseded by the general extension of the period of grace to six months at the Revision Conference of Lisbon in 1958. In view of profound differences of opinion on the subject,[2] the latter Conference replaced the second part of the alternative by a mere recognition of the *right of the member States to legislate* on the subject of the restoration of patents which have lapsed because of non-payment of fees.

---

[1] *Actes de La Haye*, p. 576; *Actes de Lisbonne*, p. 426.

[2] *Actes de Lisbonne*, pp. 427/46.

ARTICLE *5ter(a)*

In any country of the Union the following shall not be considered as infringements of the rights of a patentee *(b)*:

1. **the use *(c)* on board vessels *(d)* of other countries of the Union *(e)* of devices *(f)* forming the subject of his patent in the body of the vessel *(g)*, in the machinery, tackle, gear and other accessories *(h)*, when such vessels temporarily or accidentally *(i)* enter the waters *(j)* of the said country, provided that such devices are used there exclusively for the needs of the vessel *(k)*;**
2. **the use of devices forming the subject of the patent in the construction or operation *(l)* of aircraft or land vehicles *(m)* of other countries of the Union, or of accessories of such aircraft or land vehicles, when those aircraft or land vehicles temporarily or accidentally enter the said country.**

(a) This Article concerns *patents* only. It was introduced into the Convention by the Revision Conference of The Hague in 1925[1] and has not been changed since, except for some minor modifications as to form.

(b) The Article provides for certain limitations on the exclusive rights conferred by a patent in cases where the full exercise of such rights would cause too much prejudice to the public interest in maintaining freedom of transport. Its effect is, in principle, that if ships, aircraft or land vehicles temporarily visit foreign countries, their owners are not required to obtain licenses on patents in force in these countries in order to avoid infringing such patents.

(c) The provision under consideration covers only the *use* of patented devices and will therefore not apply to the *manufacture* of articles on board vessels, etc., nor to the *sale* to the public of patented products or products obtained by a patented process.[2]

---

[1] *Actes de La Haye*, pp. 339 (proposal of France), 435/6 (report of Second Sub-Committee), 521 (report of General Committee), 541/2 (report of Drafting Committee), 577 (adoption in Second Plenary Session).

[2] *Ibidem*, pp. 435, 541/2.

(d) The national authorities of the member States will be free to interpret the meaning of " vessels, " an expression which will probably not include floating islands for purposes of drilling, etc.

(e) In each country of the Union the provision will apply only to vessels *of other countries of the Union,* that is, vessels carrying the flag of such countries, and not to vessels of the country itself, even if such vessels have a home port elsewhere and enter the country only temporarily or accidentally.

(f) A *device* may be the subject of a patent either because it is patented itself or because a patented process is used to operate it.

(g) Freedom to use patents applies in the first place to such use in the *body of the vessel itself.*

(h) This freedom includes the use of a patented invention in *accessories of the vessel,* of which machinery, tackle and gear are given as examples. These accessories include instruments for navigation, loading and unloading, and possibly many others depending on the character of the vessel. See observation *(k)* below.

(i) Freedom of use applies only if vessels enter the waters of a foreign country *temporarily* or *accidentally.* Temporary entrance will include periodical entrances.[1] Accidental entrance may be caused by inadvertence or shipwreck. In the latter case, a ship will not infringe patents even if its presence in foreign waters is not temporary.

(j) The *waters* of a foreign country include its territorial waters and all inland waterways and harbours, including docks.

(k) Freedom of use is limited to use of patented devices *exclusively for the needs of the vessel.* These needs may vary considerably, because a hospital ship, a ship for scientific exploration, a warship, and a passenger ship have obviously very different needs. The provision would however not apply if, for example, a ship's tackle were used to move goods from one warehouse to another.

(l) The second paragraph of the provision under consideration does not concern vessels but *aircraft* and *land vehicles.* It applies to the use of devices which are the subject of a patent, in the *construction*

---

[1] *Actes de La Haye,* p. 435.

or *operation* of such aircraft or land vehicles or their accessories. The use of objects aboard which do not relate to such construction or operation will therefore not be exempted from patent infringement.

(m) The national authorities of the member States will interpret the meaning of aircraft and land vehicles in case any doubt arises on these subjects.

ARTICLE 5*quater*(*a*)

When a product is imported into a country of the Union where there exists a patent protecting a process of manufacture of the said product, the patentee shall have all the rights, with regard to the imported product, that are accorded to him by the legislation of the country of importation, on the basis of the process patent, with respect to products manufactured in that country *(b)*.

(a) This Article was introduced into the Convention at the Revision Conference of Lisbon in 1958.[1] Before that Conference the Convention left complete freedom to the member States to define in their national legislation the acts of third parties by which a patent would be infringed. At the Conference of Lisbon it was proposed to change this situation rather drastically by stipulating in the Convention that a patent, granted for a process of manufacture, would be infringed by the importation, sale or use of products obtained by such process in another country. This proposal was not accepted and the adopted Article has a considerably narrower scope.

(b) The legislation of several countries stipulates that, if a patent is granted only for a process, such patent extends its effect to products obtained, or directly obtained, by such process, which means that *not only the application of the process* but also, and independently, *the sale and use of its products will constitute patent infringement.* The provision under consideration prescribes that, when a country has adopted this system, all rights granted by its legislation, on the basis of the process patent, with respect to products manufactured according to the patented process in the country itself, must also apply in the case of *importation* of such products if they are manufactured according to the said process in another country, even if that process is not patented in the said other country.

ARTICLE 5*quinquies*(a)

Industrial designs shall be protected in all the countries of the Union *(b)*.

(a) This Article was introduced into the Convention at the Revision Conference of Lisbon in 1958.[1] The proposals submitted to that Conference in this respect were ambitious, as they contained not only an obligation to protect industrial designs but also a definition of such designs, a provision concerning the appreciation of their novelty and a requirement as to the minimum duration of their protection. The last three proposals were not accepted, so that these questions continue to be left to the national legislations of the member States.

(b) All that was inserted in the Convention was the mere obligation for member States to *protect industrial designs*. Nothing is said about the means of providing such protection, so that countries may comply with the provision not only through special legislation for the protection of designs, but also through the grant of such protection, for example, in their laws on copyright[2] or their provisions against unfair competition. What is necessary, but at the same time sufficient, is that, whenever the competent authorities of a member State define or recognize an object as being an "industrial design," for example, in view of its registration as such in the country itself or internationally,[3] protection in some form be given to it.

In these circumstances, and since the provision under consideration does not (only) oblige the member States to legislate, but can be deemed to be addressed also to the judicial authorities of these States, the provision may be considered "self-executing"[4]—in countries which admit this possibility—with the result that interested parties can directly invoke the provision in court.

[4] See Chapter II.4 above.

ARTICLE 6*(a)*

(1) The conditions for the filing and registration of trademarks shall be determined in each country of the Union by its domestic legislation *(b)*.

(2) However, an application for the registration of a mark filed by a national of a country of the Union *(c)* **in any country of the Union may not be refused, nor may a registration be invalidated, on the ground that filing, registration, or renewal, has not been effected in the country of origin** *(d)*.

(3) A mark duly registered in a country of the Union shall be regarded as independent of marks registered in the other countries of the Union, including the country of origin *(e)*.

(a) The original Convention of 1883 contained two principles with respect to the registration of trademarks, one—in Article 6—stating that every trademark duly filed in the country of origin, as defined in that Article, had to be accepted for filing and protected in its original form in the other countries of the Union, and the other—in paragraph 4 of the Final Protocol—stating that the above provision was an exception which concerned only the form of the mark, whereas normally each State should apply its domestic law to filings of trademarks.[1] Thus, the general rule of the Convention was *the application of national laws regarding all trademark registrations* in the countries concerned and the Convention did not *oblige* the applicant first to file his trademark in the country of origin in order to have it accepted also in the other countries of the Union. However, if the applicant *had* made such filing, the Convention gave him the *right* to demand acceptance and protection of his mark in its original form in the other countries. These provisions were modified by the Revision Conferences of Washington (1911), The Hague (1925), and London (1934), but it became gradually less clear what the relationship was between the principle of independence of filings and registrations of the same trademark in various countries—independence which was denied by the national legislation of several countries[2]— and the *exceptional situation* in which, on the basis of an existing *registration* in the *country of origin*, acceptance and protection of the mark in its original form may be claimed in the other countries of

---

[1] *Actes de Paris*, I, pp. 70/9, 132/5, 138/42; II, pp. 24/33.

[2] Cf. LADAS: *The International Protection of Industrial Property*, p. 541.

the Union. In order put an end to this confusion, the Revision Conference of Lisbon in 1958 decided[1] to spread the above regulations over two articles : Article 6, which would establish the normal situation of independence of trademark filings and registrations in the countries of the Union, and Article 6*quinquies*, which would regulate the exceptional situation referred to above. Consequently, Article 6, which, prior to the Conference of Lisbon, contained a large part of the subject now regulated by Article 6*quinquies*, now concerns only the principle of independence of trademarks and can be compared with Article 4*bis* dealing with the same subject in respect of patents.

(b) The principle stated in paragraph (1) means, in other words, that with respect to the filing and registration of trademarks the applicant may claim " national treatment " according to Articles 2 and 3 of the Convention. The provision speaks only of trademarks and not of service marks but, since in view of Articles 1, 2 and 3 service marks will also come under the rule of national treatment, they will be treated in the same way.

(c) The expression " national of a country of the Union " must, in view of Article 3 of the Convention, be deemed to include also the nationals of countries outside the Union who may claim the application of the Convention according to Article 3.

(d) The filing and registration of a trademark in each country will be independent of analogous acts regarding the same trademark in other countries, even such acts in the country of origin of the trademark as defined in Article 6*quinquies* A(2). This means that no filing, registration or renewal of the mark in any country other than that of the filing concerned may be required, except, of course, for the acknowledgement of a right of priority, on the basis of a first filing, according to Article 4. The exceptional situation, where a *registration* in the country of origin is *invoked* in order to claim application of Article 6*quinquies*, is reserved for that Article.

(e) *Once registered* in a country of the Union a trademark *remains* independent and is unaffected by the fate of similar registrations in other countries, including the country of origin.

---

[1] *Actes de Lisbonne*, pp. 578/9, 581/2 (proposals), 582/99 (observations), 601/2, 616/7 (discussion in Third Committee), 750/5 (report of Third Committee), 617/20 (discussion in General Committee), 101, 106 (adoption in Second Plenary Session), 117/8 (General Report).

ARTICLE 6*bis*(*a*)

(1) The countries of the Union undertake *(b)*, **ex officio if their legislation so permits, or at the request of an interested party, to refuse or to cancel the registration, and to prohibit the use, of a trademark** *(c)* **which constitutes a reproduction, an imitation, or a translation, liable to create confusion** *(d)*, **of a mark** *(e)* **considered by the competent authority of the country of registration or use to be well known** *(f)* **in that country as being already the mark of a person entitled to the benefits of this Convention** *(g)* **and used for identical or similar goods** *(h)*. **These provisions shall also apply when the essential part of the mark constitutes a reproduction of any such well-known mark or an imitation liable to create confusion therewith** *(i)*.

(2) A period of at least five years from the date of registration shall be allowed for requesting the cancellation of such a mark *(j)*. **The countries of the Union may provide for a period within which the prohibition of use must be requested** *(k)*.

(3) No time limit shall be fixed for requesting the cancellation or the prohibition of the use of marks registered or used in bad faith *(l)*.

(a) This Article was introduced into the Convention by the Revision Conference of The Hague in 1925.[1] It was modified by the Revision Conferences of London in 1934[2] and of Lisbon in 1958.[3] At the latter Conference the Article was very thoroughly discussed and its application, which formerly concerned only the refusal or cancellation of the *registration* of a mark conflicting with a mark which is well known in the country concerned, was then extended to a prohibition of the *use* of the mark first mentioned.

(b) One of the questions which arises with respect to this Article is whether it may be considered " self-executing "—in countries which

[2] *Actes de Londres*, pp. 187 (proposal), 275/6 (observations), 398/400 (report of Third Sub-Committee), 464 (report of Drafting Committee), 516 (adoption in Second Plenary Session).

[3] *Actes de Lisbonne*, pp. 637/40 (proposals), 640/56 (observations), 656/66 (discussion in Third Committee), 757/9 (report of Third Committee), 666/8 (discussion in General Committee), 101/2 (adoption in Second Plenary Session), 117 (General Report).

admit such possibility—with the result that interested parties may directly claim its application by the administrative or judicial authorities of the country concerned. This question gives rise to the following observations:

On the one hand, in stipulating that " the countries of the Union undertake, etc." the Article is drafted differently from many other Articles of the Convention, which directly refer to rights or obligations of interested parties (for example, Articles 2, 3, 4, 4*ter*, 5*bis*, 5*ter*, 5*quater*, 6, 6*septies*, 8), or directly regulate a situation at issue (for example, Articles 4*bis*, 5 A(1), (3) to (5), B, C, D, 6*quater*, 6*quinquies*, 7). Nor, on the other hand, does Article 6*bis* refer only to an undertaking by the countries of the Union to *legislate* on a particular matter, as is the case, for example, with Articles 10*ter* and 11. Therefore, and although the Article leaves certain liberties to national legislations (paragraph (1) : " *if* their legislation so permits " ; paragraph (2) : " a period of *at least* five years... shall be allowed..."; " The countries of the Union *may* provide for a period, etc."), it cannot be deemed *only* to oblige the member States to *legislate* on the subject concerned, but may be considered to contain an undertaking also on behalf of the administrative and judicial authorities of these States, which—if compatible with their constitutional systems—must then give effect to the provisions of the Article at the request of interested parties.

(c) The provision under consideration refers only to *trademarks* and *not to service marks*. The member States are therefore not obliged to apply it to service marks, but are free to do so in analogous situations.

(d) The purpose of the provision under consideration is to avoid the registration and use of a trademark, liable to create *confusion* with *another* mark already *well known in the country of such registration or use*, although the latter well-known mark is not, or not yet, protected in that country by a registration which would normally prevent the registration or use of the conflicting mark.[1] This exceptional protection of a well-known mark has been deemed to be justified because the registration or use of a confusingly similar mark will in most cases amount to an act of unfair competition,[2] and may also be considered

---

[1] Cf. LADAS: " International Protection of Well-known Trademarks, " *Trademark Reporter*, 1951, p. 661; TROLLER: " La marque de haute renommée, " *P.I.*, 1953, p. 73; BLUM: " La marque de haute renommée, " *P.I.*, 1954, p. 110.

[2] *Actes de La Haye*, p. 455.

prejudicial to the interests of those who will be misled.[1] *Whether* a trademark will be liable to create confusion with a well-known mark will be determined by the competent authority of the country concerned, and in so doing the said authority will have to consider the question from the viewpoint of the consumers of the goods to which the marks are applied.[2] The provision specifies that such confusion may occur in cases of *reproduction, imitation* or *translation* of the well-known mark, or even—see final sentence of paragraph (1)—if only an *essential part of a mark* constitutes a reproduction or confusing imitation of the well-known mark.

(e) The word "mark" in itself would not exclude the extension of the envisaged protection also to well-known *service marks*, but the words at the end of the first sentence of paragraph (1), "used for identical or similar *goods*," make it clear that only well-known *trademarks* are covered by the provision. The member States are, however, free to apply the same rules also to service marks in analogous circumstances.

(f) A trademark may be *well known* in a country before its registration there and, in view of the possible repercussions of publicity in other countries,[3] even before it is *used* in such country. *Whether* a trademark is well known in a country will be determined by its competent administrative or judical authorities. The Revision Conference of Lisbon in 1958 rejected a proposal according to which *use* of a well-known mark in the country in which its protection is claimed would *not* be necessary for such protection.[4] This means that a member State is not *obliged* to protect well-known trademarks which have not been used on its territory, but it will be free to do so.[5] In view of the vote taken at the Lisbon Conference,[6] the great majority of the member States will probably adopt this attitude.

(g) A well-known trademark will, naturally, only be protected by the Article under consideration if it belongs to a person entitled to the

[6] The above proposal was rejected at the Lisbon Conference by 2 countries only, while 25 approved it: *Actes de Lisbonne*, pp. 666/7.

benefits of the Convention, that is, to a natural or legal person who may claim the application of the Convention according to Articles 2 or 3.[1] The provision under examination, however, goes further than that when it states that, in order to be protected, the mark must be considered *well known* in the country concerned " *as being already the mark of* " *such person.* The history of the provision [2] shows, however, that it will be sufficient if the mark concerned is well known *in commerce* in the country concerned as a mark belonging to a certain enterprise, without its being necessary that it also be known that such enterprise is entitled to the benefits of the Convention. Nor is it necessary—and it is therefore not necessary to prove—that the person who has applied for or obtained a conflicting registration or who uses a conflicting mark possessed such knowledge.

(h) The protection of well-known marks, according to the provision under examination, applies only with respect to other marks filed, registered or used for *identical or similar goods.* Whether this condition is fulfilled will be determined by the administrative or judicial authorities of the country in which protection is claimed.[3]

(i) See observation *(d)* above *in fine.*

(j) In order to give the owner of a well-known trademark sufficient time to react to the registration of a conflicting mark, this provision specifies that he must have a period of at least five years during which he may request the cancellation of such registration. This minimum period was three years until the Revision Conference of Lisbon in 1958. The words " at least " indicate that the fixation of the period is left, on condition that it may not be shorter than five years, to the national legislation or to decisions of the administrative or judicial authorities of the member States.[4]

(k) The member States are free also to provide for a period within which the prohibition of *use* of the conflicting mark must be requested, but no minimum is indicated for this period.

[1] *Actes de La Haye*, pp. 456, 543; *Actes de Lisbonne*, p. 637.

[2] *Actes de La Haye*, p. 543.

[3] Cf. in France: Cour de Riom, 1/4/57, *Ann.*, 1959, p. 32, Cour de Paris, 8/12/1962, *Ann.*, 1963, p. 147 with note by DUSOLIER. The question whether, at least for a certain category of marks of high renown, protection should not be extended to non-similar goods was discussed at the Revision Conference of Lisbon, but without giving positive results: *Actes de Lisbonne*, pp. 660/4, 705/24; see also MIOSGA: *Internationaler Marken- und Herkunftsschutz*, pp. 49/50, referring to further literature.

[4] *Actes de Lisbonne*, pp.665, 758.

(l) The administrative or judicial authorities of the country in which the protection of a well-known mark is requested will determine whether the conflicting mark is registered or used *in bad faith,* in which case no time limit for action will prevail. Bad faith will normally exist when the person who registers or uses the conflicting mark knew of the well-known mark and presumably intended to profit from the possible confusion between that mark and the one he has registered or used.

ARTICLE 6*ter*, paragraphs (1) and (2)*(a)*

(1)(a) The countries of the Union agree *(b)* **to refuse or to invalidate the registration, and to prohibit by appropriate measures the use, without authorization by the competent authorities** *(c)*, **either as trademarks or as elements of trademarks** *(d)*, **of armorial bearings, flags, and other State emblems** *(e)*, **of the countries of the Union** *(f)*, **official signs and hallmarks indicating control and warranty** *(g)* **adopted by them** *(h)*, **and any imitation from a heraldic point of view** *(i)*.

(b) The provisions of subparagraph (a), above, shall apply equally to armorial bearings, flags, other emblems, abbreviations, and names, of international intergovernmental organizations *(j)* **of which one or more countries of the Union are members, with the exception of armorial bearings, flags, other emblems, abbreviations, and names, that are already the subject of international agreements in force, intended to ensure their protection** *(k)*.

(c) No country of the Union shall be required to apply the provisions of subparagraph (b), above, to the prejudice of the owners of rights acquired in good faith before the entry into force, in that country, of this Convention *(l)*. **The countries of the Union shall not be required to apply the said provisions when the use or registration referred to in subparagraph (a), above, is not of such a nature as to suggest to the public that a connection exists between the organization concerned and the armorial bearings, flags, emblems, abbreviations, and names, or if such use or registration is probably not of such a nature as to mislead the public as to the existence of a connection between the user and the organization** *(m)*.

(2) Prohibition of the use of official signs and hallmarks indicating control and warranty shall apply solely in cases where the marks in which they are incorporated are intended to be used on goods of the same or a similar kind *(n)*.

(a) Although some parts of what is now paragraph (10) of this Article were introduced into the Final Protocol which formed an integral part of the original Convention of 1883 and were maintained, in amended form, in the Final Protocol by the Revision Conference of Washington in 1911,[1] this was only in the context of what was then

---

[1] Cf. the history of the Article in *Actes de Lisbonne*, pp. 127 *et seq.*

Article 6 of the Convention (now, in modified form, Article *6quinquies*). Article *6ter* as such was introduced into the Convention by the Revision Conference of The Hague in 1925.[1] It underwent some minor modifications as to form at the Revision Conference of London in 1934 [2] and was more thoroughly revised by the Revision Conference of Lisbon in 1958,[3] where, inter alia, paragraphs (1)*(b)* and *(c)* were inserted and several other important changes were made.

(b) The Article concerns *trademarks*, but its purpose is not to regulate their *protection as subjects of industrial property* but rather to *exclude them from becoming such subjects* in certain circumstances.

Here, again, the question arises whether this Article may be considered " self-executing "—in countries which admit such possibility—with the result that interested parties (States, international intergovernmental organizations and possibly third parties interested in suppressing trademarks which would violate the provisions of the Article) may directly claim its application by the administrative or judicial authorities of the country concerned, or whether legislation in such country is necessary to implement the Article. Its situation in this respect is analogous to that of Article *6bis*, examined above (see observation *(b)* on that Article) : countries which admit such possibility may be deemed to have agreed to the application of the Article also by their administrative and judicial authorities, so that in these countries the Article is "self-executing."[4]

(c) The competent authorities here referred to are those of the country whose emblems, official signs and hallmarks are involved. These authorities may allow the use of such emblems, signs or hallmarks in certain trademarks, probably of their own nationals. See also, for the effect of such authorization, paragraph (8) of the Article.

(d) The Article under consideration concerns *trademarks* only and not *service marks*. The member States are therefore not obliged

---

[2] *Actes de Londres*, pp. 188/9 (proposal), 276/7 (observations), 400 (report of Third Sub-Committee), 465/6 (report of Drafting Committee), 516 (adoption in Second Plenary Session).

[3] *Actes de Lisbonne*, pp. 127/33 (proposals), 134/9 (observations), 139/45 (discussion in First Committee), 295/8 (report of First Committee), 145/7 (discussion in General Committee), 102/3 (adoption in Second Plenary Session), 117 (General Report).

[4] Cf. LADAS: *The International Protection of Industrial Property*, p. 566.

to apply the Article also to service marks, but they are free to apply analogous rules to those marks and will probably do so in view of the purpose of the Article.

(e) The objective of the provision under consideration is to exclude the registration and use of trademarks which are identical or present a certain similarity to *State emblems*, an expression which, in view of the word "other," includes[1] *armorial bearings* and *flags* of the State concerned. The reasons for this are[2] that such registration or use would violate the right of the State to control the use of symbols of its sovereignty and furthermore might mislead the public with respect to the origin of goods to which such marks would be applied. It was the intention of the Revision Conference of The Hague in 1925 to include also in the protection of State emblems the escutcheons of reigning Houses,[3] as well as emblems of States included in a Federation which was a member of the Union.[4] Not included, however, are emblems of lower public bodies, such as provinces or municipalities, of member States.[5]

Whether in these conditions an emblem is a State emblem will be determined by the authorities of the country in which its protection is claimed.

(f) The protection given to State emblems is limited to such emblems *of the countries of the Union*.[6] Extension of the application of the Article under consideration to emblems of non-member States is impossible in view of paragraph (3) of the Article, but member States are free to protect such other emblems by other appropriate means, for example, by considering their incorporation in trademarks to be contrary to public order.

(g) Official signs and hallmarks indicating control and warranty exist in several States with respect to precious metals or products such as butter, cheese, meat, etc.

(h) The official signs and hallmarks indicating control and warranty are protected by the provision under consideration only if

---

[1] Also when this expression is used alone, for example, in paragraphs (7) and (8 of the Article.

[2] *Actes de La Haye*, pp. 243/4.

[3] *Ibidem*, pp. 459, 464, 544.

[4] *Ibidem*, pp. 343/4, 464, 544.

[5] *Ibidem*, p. 245.

[6] *Actes de Lisbonne*, p. 140.

they are adopted *by a member State itself*, and not in the case of their adoption by a lower public body or an organization of public law in such State.

(i) State emblems and official signs and hallmarks, covered by the provision under examination, are protected not only against registration and use of trademarks which are identical to them or incorporate them as elements thereof, but also against the inclusion in such trademarks of any *imitation of them* " *from a heraldic point of view*." The imitation thus forbidden has a narrower scope than the imitation which would normally be considered unacceptable between trademarks. The reason for this is that State emblems frequently contain symbols which are in themselves common, such as a lion, a bear, the sun, etc., and which it must be possible freely to adopt in trademarks, *unless* the imitation of the emblem concerns the *heraldic characteristics which distinguish one emblem from another*.[1] The member States are however free to grant wider protection to State emblems.[2]

(j) The Revision Conference of Lisbon in 1958 extended—with some limitations which will be commented upon below—the application of the Article under consideration not only to armorial bearings, flags and other emblems but also to names, and abbreviations of such names, of *intergovernmental organizations* of which one or more of the countries of the Union are members.[3] Examples of abbreviations of such names are: ALALC, BIRPI, CERN, EFTA, FAO, ILO, Interfund, OAMPI, UNO, Unesco, WHO, UPU, etc.

(k) The Revision Conference of Lisbon in 1958 excepted from protection under this Article the emblems, names and abbreviations of intergovernmental organizations which are *already the subject of international agreements in force, intended to ensure their protection*. The purpose of this exception was not explained,[4] but it is probably intended to avoid double, and possibly conflicting, protection in cases where the emblems and name of an organization are already protected by a Convention, such as the Geneva Convention for the amelioration of the condition of the wounded and sick in armed forces, of August 12,

[4] *Actes de Lisbonne*, pp. 142 (proposal of U.S.A.), 143 (vote in First Committee).

1949, Article 44 of which protects the emblem of the Red Cross on a white ground, the words "Red Cross" or "Geneva Cross," and analogous emblems.

(l) A second exception to the protection of emblems, names and abbreviations of intergovernmental organizations, for which provision is made in this Article, is not mandatory, but member States are free not to grant the said protection to the prejudice of owners of rights in trademarks *acquired in good faith before the entry into force, in the country concerned, of the Convention* containing this provision, that is, the Convention as revised at Lisbon or Stockholm.[1] It will probably be necessary for such rights to have been acquired *in the country concerned*, and not merely elsewhere, for this exception to apply. Further rules regarding entry into force of the protection are given in paragraphs (5), (6) and (7) of the Article under consideration.

(m) A third exception to the protection of emblems, names and abbreviations of intergovernmental organizations is again not mandatory but may be made at the discretion of the member States. No such State shall be required to grant the said protection when the use or registration of the trademark against which the protection is invoked does not suggest a *connection* between the mark which contains the emblem, etc., and the organization concerned, or when such use or registration will probably *not mislead the public* as to the existence of a connection between the user and the organization.[2] It follows *a contrario* from this provision that in the case of incorporation in trademarks of emblems *not* of intergovernmental organizations but of *States* (paragraph (1)*(a)* of the Article) no such limitation of the application of the Article is possible, so that the protection of these latter emblems is *absolute* and may *not* depend on suggestions of any connection between the trademark and the emblem. The protection of State *armorial bearings* is even further enlarged by paragraph (9) of this Article, which will be commented upon below.

(n) This provision contains another limitation with respect to the protection of *official signs and hallmarks* of States, *indicating control and warranty*. Such protection will apply only in cases where the marks in which they are incorporated are intended to be used on goods *of the same kind as or a similar kind to* the goods to which the official

---

[1] *Actes de Lisbonne*, p. 142 (proposal of U.S.A.), 143 (vote in First Committee).

[2] *Ibidem.*

signs or hallmarks apply.[1] Whether this is the case is a question which will be determined by the competent authorities of the country in which the protection is claimed.

ARTICLE 6*ter*, paragraphs (3) and (4)*(a)*

(3)(a) For the application of these provisions, the countries of the Union agree to communicate reciprocally, through the intermediary of the International Bureau, the list of State emblems, and official signs and hallmarks indicating control and warranty, which they desire, or may hereafter desire, to place wholly or within certain limits under the protection of this Article, and all subsequent modifications of such list *(b)*. **Each country of the Union shall in due course make available to the public the lists so communicated** *(c)*.

Nevertheless, such communication is not obligatory in respect of flags of States *(d)*.

(b) The provisions of subparagraph (b) of paragraph (1) of this Article shall apply only to such armorial bearings, flags, other emblems, abbreviations, and names, of international intergovernmental organizations as the latter have communicated to the countries of the Union through the intermediary of the International Bureau *(e)*.

(4) Any country of the Union may, within a period of twelve months from the receipt of the notification, transmit its objections, if any, through the intermediary of the International Bureau, to the country or international intergovernmental organization concerned *(f)*.

(a) These provisions, in so far as State emblems, official signs and hallmarks are concerned, were introduced into the Convention by the Revision Conference of The Hague in 1925.[2] The Revision Conference of Lisbon in 1958 excepted State *flags* from the obligation of communication and added the provision (3)*(b)* concerning the emblems, etc., of *intergovernmental organizations*.[3]

---

[2] *Ibidem*, pp. 247 (proposal), 344/5 (observations), 460/2, 464 (report of Third Sub-Comimttee), 523/5 (report of General Committee), 544/5 (report of Drafting Committee), 577 (adoption in Second Plenary Session).

[3] *Actes de Lisbonne*, pp. 132/3 (proposal), 143/5 (discussion in First Committee), 295/8 (report of First Committee), 102/3 (adoption in Second Plenary Session), 117 (General Report).

(b) The State emblems, official signs and hallmarks for which the member States wish to obtain protection will be communicated to the International Bureau, which will then transmit these communications to the other member States. The same procedure will be followed in the case of modifications of the lists of emblems, etc., so communicated ; for example, when a member State withdraws its claim to the protection of any of these emblems, etc., or replaces one or more by others. The wording of the provision under consideration is less stringent than that of the analogous provision in subparagraph *(b)* regarding the communication of emblems, etc., of *intergovernmental organizations*. In the latter case it is clear that the protection *depends* on such communication, whereas in the former case such communication is only prescribed by agreement between the States. However, the situation in the former case is further regulated by paragraph (6) of this Article.

(c) At one stage during the Revision Conference of The Hague it was intended that the member States should *publish* the lists of emblems, etc., which would be the subject of protection. However, in order to avoid the costs of such publication, this obligation was changed to an obligation to *make these lists available to the public*, that is, to deposit them for public inspection.[1] Several States, nevertheless, do publish these lists. Originally, the International Bureau also intended to publish them [2] but, in fact, apart from communicating them to the member States, it only keeps them available for public inspection.

(d) Since the Revision Conference of Lisbon in 1958, the *flags* of States are *exempt* from any communication, probably because these flags are considered to be sufficiently well known.[3] The member States are, however, free also to communicate their flags if they so desire.

(e) As has already been observed, the protection of emblems, names and abbreviations of *intergovernmental organizations* is *dependent upon their communication*. See, further, paragraph (6) of this Article.

(f) The member States may, within a period of twelve months, notify their objections to the protection claimed. These objections

---

[1] *Actes de La Haye*, pp. 523/4.

[2] *Ibidem*, p. 524.

[3] *Actes de Lisbonne*, pp. 141, 143/4, 147.

may, for example, be based on the consideration that the subject for which protection is claimed is not an *emblem* of the *State* or *intergovernmental organization*, or is not an *official sign or hallmark* of the *State* indicating *control and warranty*, or that the emblem is already an *emblem of the country itself* or has been communicated as *that of another country*, or that it has fallen *into the public domain* in the country concerned.

The International Bureau will notify such objections to the State or intergovernmental organization whose emblems, etc., are involved. No special procedure is provided for resolving differences of opinion concerning these objections,[1] but disputes may be settled according to Article 28 of the Convention, if that Article applies between the member States concerned. As long as the objection stands, the State which has made it will not be obliged to protect the emblems, etc., concerned.

ARTICLE 6*ter*, paragraphs (5), (6) and (7)[a][b]

(5) In the case of State flags, the measures prescribed by paragraph (1), above, shall apply solely to marks registered after November 6, 1925.

(6) In the case of State emblems other than flags, and of official signs and hallmarks of the countries of the Union, and in the case of armorial bearings, flags, other emblems, abbreviations, and names, of international intergovernmental organizations, these provisions shall apply only to marks registered more than two months after receipt of the communication provided for in paragraph (3), above.

(7) In cases of bad faith, the countries shall have the right to cancel even those marks incorporating State emblems, signs, and hallmarks, which were registered before November 6, 1925.

(a) As to the moment from which the provisions of the Article have to be complied with, the Revision Conference of The Hague in 1925 had introduced a distinction between well-known State emblems and State emblems which are not well known.[2] This distinction was

---

[1] Cf. *Actes de La Haye*, pp. 344/5 (proposal of U.K.), 462.

[2] *Ibidem*, pp. 465 (discussion in Third Sub-Committee), 523/5 (report of General Committee), 544/5 (report of Drafting Committee), 577 (adoption in Second Plenary Session).

abolished by the Revision Conference of Lisbon in 1958,[1] but in view of the text established at that time other distinctions have to be observed.

(b) The general principle underlying the provisions now being considered is to avoid retroactivity.[2] In this respect a distinction has to be made between, on the one hand, *flags of States* and, on the other hand, *State emblems* other than flags, *official signs and hallmarks*, and *emblems, including flags, names and abbreviations of intergovernmental organizations.* In the case of the first category, the protection under this provision will apply only to marks registered after November 6, 1925, that is, the date of the signature of the text of the Convention as revised at The Hague. In the case of the second category, the protection will apply only to marks registered more than two months after receipt of the communication of the International Bureau. It is recalled that, according to the first sentence of paragraph (1)*(c)* of this Article, the member States are, moreover, not obliged to grant protection, with respect to emblems, etc., of intergovernmental organizations, to the prejudice of rights acquired in good faith before the entry into force, in the country concerned, of the Lisbon or Stockholm texts of the Convention, even if the trademarks for which these rights were acquired are *registered* more than two months after receipt of the communication of the claim of protection.

A general exception is made in cases of *bad faith*, where the member States even have the right to annul marks registered before November 6, 1925, which incorporate *State emblems, signs* and *hallmarks.* Bad faith will probably be held to exist if the trademark has been registered in the knowledge that it incorporated the emblem, sign or hallmark concerned.

ARTICLE 6*ter*, paragraphs (8), (9) and (10)*(a)*

(8) Nationals of any country who are authorized to make use of the State emblems, signs, and hallmarks, of their country may use them even if they are similar to those of another country *(b)*.

(9) The countries of the Union undertake to prohibit the unauthorized use in trade of the State armorial bearings of the other countries

---

[1] *Actes de Lisbonne*, pp. 145, 147.

[2] *Actes de La Haye*, pp. 462/3, 465/6, 524, 544. In this respect it was admitted that, if a trademark was already registered before a certain date, its renewal after such date would not be assimilated to a new registration: *ibidem*, p. 544.

of the Union, when the use is of such a nature as to be misleading as to the origin of the goods *(c)*.

(10) The above provisions shall not prevent the countries from exercising the right given in paragraph (3) of Article 6*quinquies*, Section B, to refuse or to invalidate the registration of marks incorporating, without authorization, armorial bearings, flags, other State emblems, or official signs and hallmarks adopted by a country of the Union, as well as the distinctive signs of international intergovernmental organizations referred to in paragraph (1), above *(d)*.

(a) The last three paragraphs of Article 6*ter* date from the Revision Conference of The Hague in 1928, where the Article was first introduced into the Convention.[1] The Revision Conference of Lisbon in 1958 changed these paragraphs in several respects, in particular by eliminating the word "decorations" from paragraph (10) and adding the signs of intergovernment organizations to that paragraph.[2]

(b) This paragraph is self-explanatory.

(c) This provision extends the protection of the Article to *other uses* of *State armorial bearings than their use in trademarks*, which latter use is the subject of paragraph (1). The provision under consideration prescribes that any *unauthorized use in trade* of State armorial bearings will be prohibited if the use is of such a nature as to be misleading as to the origin of the goods.[3] This gives a wider protection to State armorial bearings: for example, when they are used as mere decorations and not as trademarks.

(d) Paragraph (10) of the Article under consideration maintains a reservation which had already been made in the Final Protocol forming an integral part of the original Convention of 1883. The reservation relates to the application of what was then Article 6 and is now Article 6*quinquies* of the Convention. The provision states that, apart from their *obligations* under Article 6*ter*, the member States *remain free* to refuse or invalidate the registration of marks incorporating the emblems, etc., referred to, in cases where Article 6*quinquies* is invoked, if such marks are considered to be contrary to morality or public order and, in particular, of such a nature as to deceive the public (Article 6*quinquies*, Section B, paragraph (3)).

ARTICLE *6quater(a)*

(1) When, in accordance with the law of a country of the Union *(b)*, the assignment of a mark *(c)* is valid only if it takes place at the same time as the transfer of the business or goodwill to which the mark belongs, it shall suffice for the recognition of such validity that the portion of the business or goodwill *(d)* located in that country be transferred to the assignee, together with the exclusive right to manufacture in the said country, or to sell therein, the goods bearing the mark assigned *(e)*.

(2) The foregoing provision does not impose upon the countries of the Union any obligation to regard as valid the assignment of any mark the use of which by the assignee would, in fact, be of such a nature as to mislead the public, particularly as regards the origin, nature, or essential qualities, of the goods to which the mark is applied *(f)*.

(a) This Article was introduced into the Convention by the Revision Conference of London in 1934.[1] Since then it has undergone only minor changes as to form.

(b) In view of the independence of the rights which may be acquired in the same trademark in different countries, as recognized by Article 6, it is frequently felt desirable that these rights should also be transferred or assigned independently for each country. Such transfers or assignments will be governed by the normal rules of international private law.[2] There are, however, important differences in the national legislation of the various countries regarding the assignment of trademarks in that many of these legislations allow such assignment without simultaneous or corresponding transfer of the enterprise to which the trademark belongs, while others make the validity of the assignment dependent on the simultaneous or corresponding transfer of such enterprise.[3] Some countries have even interpreted the requirement of the corresponding transfer of the enterprise as

---

[1] *Actes de Londres*, pp. 189/91 (proposal), 277/9 (observations), 400/5 (report of Third Sub-Committee), 466/7 (report of Drafting Committee), 517 (discussion and adoption in Second Plenary Session).

[2] Cf. in Federal Republic of Germany: Bundesgerichtshof, 21/10/1964, *G.R.U.R. Int.*, 1965, p. 504.

[3] Cf. MARTIN-ACHARD: *La cession libre de la marque*, 1946; D. REIMER: "La cession libre de la marque," *P.I.*, 1954, pp. 162, 181.

necessitating the transfer of the *entire* enterprise, even if parts of it are located in countries other than that for which the assignment of the trademark is envisaged. In these cases it might not be possible to assign independently the same trademark belonging to the enterprise in these other countries because the entire enterprise would have to be transferred with the first assignment.

The provision under consideration refers to the laws of countries of the Union of the latter type. The principle underlying the provision prescribes that the member States will be free to require, for the validity of the assignment of a trademark, the simultaneous transfer of the enterprise to which such trademark belongs, but that such requirement will not extend to parts of the enterprise which are located in other countries.

(c) The word " assignment " may be interpreted as also including other means of transfer if regulated by the national law concerned. The word " mark " in itself would permit the extension of the application of the provision also to service marks, but the final words of paragraph (1), and also of paragraph (2), exclude this interpretation. Member States are therefore not obliged to apply the provision by analogy to service marks, but they are free to do so and will probably adopt this attitude in view of the purpose of the provision.

(d) The words " business or goodwill " refer to a distinction which was made when the Article under consideration was introduced into the Convention.[1] The enterprise which owns a trademark in a given country may have its *business*, in the sense of an industrial or commercial establishment, in that country, or it may have this material basis of its activities elsewhere but possess *goodwill* in the country concerned in the form of a circle of customers. In these respective cases the assignment of the trademark will be valid if the portion of the business *or* the goodwill located in the country concerned is transferred together with the trademark.

(e) The final words of the provision under consideration simply mean that in the envisaged situation the *exclusive right to the trademark* with respect to the goods concerned must be assigned together with the portion of the business or goodwill located in the country, if the assignment is to be considered valid. Thus, the assignor would not be entitled in that country to continue to use the mark himself, in so far as it has been assigned, nor to assign or license it to third parties.

---

[1] *Actes de Londres*, p. 190.

(f) Paragraph (2) of this Article leaves the member States free not to regard as valid the assignment of a trademark with the relevant part of the enterprise, if the use of such mark by the assignee would be of such a nature as to mislead the public, particularly as regards important features of the goods to which the mark is applied. This freedom may be exercised, for example,[1] if a trademark is assigned for part only of the goods to which it is applied, and if these goods are similar to other goods for which the mark is not assigned. In such cases the public may be misled as to the origin or essential qualities of similar goods to which the assignor and assignee will apply the same trademark, independently.

[1] *Actes de Londres*, p. 517.

ARTICLE 6*quinquies*, Section A[(a)]

A(1) Every trademark *(b)* **duly registered** *(c)* **in the country of origin** *(d)* **shall be accepted for filing and protected as is** *(e)* **in the other countries of the Union, subject to the reservations indicated in this Article** *(f)*. **Such countries may, before proceeding to final registration, require the production of a certificate of registration in the country of origin, issued by the competent authority. No authentication shall be required for this certificate** *(g)*.

(2) Shall be considered the country of origin *(h)* **the country of the Union where the applicant has a real and effective industrial or commercial establishment** *(i)*, **or, if he has no such establishment within the Union, the country of the Union where he has his domicile** *(j)*, **or, if he has no domicile within the Union but is a national of a country of the Union, the country of which he is a national** *(k)*.

(a) Parts of this Article were already included in Article 6 of the original Convention of 1883 and explained under paragraph 4 of the Final Protocol forming part of the Convention.[1] The original Article 6 was modified on various points by the Revision Conferences of Washington (1911),[2] The Hague (1925)[3] and London (1934).[4] As has been observed above—see observation *(a)* regarding Article 6—the Revision Conference of Lisbon (1958)[5] adopted a new Article 6, embodying the principle of the independence of trademark filings and registrations in the countries of the Union, and transferred a considerable part of the former contents of Article 6, with several modifications, to the new Article 6*quinquies*, now under examination.

[4] *Actes de Londres*, pp. 179/87 (proposal), 267/74 (observations), 390/8 (report of Third Sub-Committee), 461/4 (report of Drafting Committee), 516 (discussion and adoption in Second Plenary Session).

[5] *Actes de Lisbonne*, pp. 565/82 (proposals), 582/99 (observations), 600/16 (discussion in Third Committee), 751/5 (report of Third Committee), 617/20 (discussion in General Committee), 106 (adoption in Second Plenary Session), 117/8 (General Report).

(b) As mentioned above—see observation *(a)* regarding Article 6—Article 6*quinquies* concerns *an exceptional situation*. The normal rules of the Convention, embodied in Articles 6, 2 and 3, are that the member States will determine the conditions for filing and registration of trademarks in their domestic legislation (Article 6), and that foreign applicants for registration who are entitled to the benefits of the Convention under Articles 2 or 3 may claim the application of such domestic legislation under the rule of " *national treatment* " (Article 2). However, this simple system would not take sufficient account, on the one hand, of some important differences in the domestic legislation of the member States regarding the registration of trademarks, and, on the other hand, of the interest of both owners of trademarks and the public in having the same trademark apply to the same goods in various countries. Differences in domestic legislation would prevent this uniform application of the same trademark to the extent that the legislation of some countries admits, and that of others does not admit, trademarks consisting of simple numbers or letters, surnames or geographical names, words written or not written in a certain language or script, three-dimensional objects,[1] musical notes indicating tunes,[2] etc. In order to diminish the impact of these differences on the registration of trademarks, the provision under consideration states *the principle* that a trademark *duly registered in the country of origin* shall be accepted for filing and protected *as is* in *the other countries of the Union*, subject to further rules given in the Article. The member States which do not allow the provisions of the Convention to have any " self-executing " character are obliged to embody this principle in their domestic laws. In the other member States, application of this provision may be directly claimed in the—exceptional—cases where normal application of the domestic legislation would *not* allow the registration of a trademark which is already registered in the country of origin. In such cases, the applicant may *avail himself of this latter registration* and may claim *more than national treatment* according to the domestic legislation concerned : he may claim the *application of the special rules* of Article 6*quinquies*.

In view of the fact that the Revision Conference of Lisbon in 1958, which introduced service marks into the Convention, refused to assimilate service marks to trademarks generally throughout the

---

[1] To be distinguished from pictures of such objects, which pictures as such, if complying with the conditions of the law concerned, will be registrable in the same way as other pictures.

[2] To be distinguished from such notes in the form of a picture, in which case the picture, and not the tune indicated by the notes, is the subject of the registration.

Convention,[1] the use of the word *trademark* in this Article indicates that the member States are not *obliged* to apply the provision under examination *also to service marks*. They are however free to do so if they so desire.

(c) The first condition for the application of the provision under consideration is that the trademark concerned should be *duly registered* in the country of origin. The mere proper filing—and even less the mere *use*—of the mark in the country of origin is therefore not sufficient: such filing—in any country of the Union—may be sufficient for the claiming of the right of priority according to Article 4 (see the reference to this possibility in Article 6*quinquies*, Section F), but not for the claiming of the application of Article 6*quinquies*. *Evidence* of registration in the country of origin may be required according to the second sentence of the provision under consideration.

(d) The second condition for the application of the provision under consideration is that the trademark concerned must be properly registered *in the country of origin*, as defined in paragraph (2) of the provision. This definition will be examined below, but it may be observed here that, for the application of the Article, previous registration in a *country of origin, as defined*, is prescribed in order to prevent the applicant from freely choosing a country in which such registration would be particularly easy to obtain.

(e) A trademark which fulfills the above conditions will be accepted and protected *as is*—in the authentic French text of the Convention, " *telle quelle* "—in the other countries of the Union, subject to further rules given in the Article under consideration. The meaning of the words " *telle quelle*," considered as indicating the scope within which the provision must be applied, has given rise to abundant legal studies and case law.[2]

---

[1] *Actes de Lisbonne*, pp. 624 (proposal of U.S.A.), 628/33 (discussion in Third Committee), 755/7 (report of Third Committee).

[2] Cf., for example: " A propos de l'Article 6 de la Convention d'Union, " *P.I.*, 1950, p. 110; MASSON: *La protection " telle quelle " des marques de fabrique et de commerce selon l'article 6 de la Convention d'Union de Paris du 20 mars 1883*, 1956; FAVART: *La marque " telle quelle " et l'interprétation de l'article 6 de la Convention d'Union; Etudes sur la propriété industrielle, littéraire, artistique, Mélanges Marcel Plaisant*, 1958, p. 71; MUNZINGER: " Rückwirkungen des " telle quelle "-Prinzips auf das nationale Markenrecht, " *G.R.U.R. Int.*, 1958, p. 464; EDRICH: *Die Klausel " telle quelle " und ihre Ausgestaltung in der Rechtsprechung der Vertragsländer der Pariser Union*, 1962; " Les restrictions nationales à l'application de l'article 6*quinquies* de la Convention d'Union de Paris (marque " telle quelle "), " *R.I.P.I.A.*, 1966, p. 220.

The history of the provision shows a clear situation at the start. In the original Convention of 1883 Article 6 was worded : " Every trademark duly filed in the country of origin shall be accepted for filing and protected in its original form (in French, "*telle quelle*") in the other countries of the Union." The Final Protocol, which, according to paragraph 7 thereof, was considered an integral part of the Convention, explained the above provision, in paragraph 4, as follows :

" Paragraph 1 of Article 6 should be understood in the sense that no trademark may be excluded from protection in one of the States of the Union for the sole reason that it does not comply, *with regard to the signs of which it is composed*, with the conditions of the laws of that State, provided it complies on this point with the laws of the country of origin and that it has been properly filed there. Subject to this exception, *which only concerns the form of the mark*, and subject to the provision of the other Articles of the Convention, each State shall apply its domestic law " (emphasis added).

At the Revision Conference of Washington in 1911, the basis for the application of the provision was changed from prior *filing* in the country of origin to prior *registration* in such country, but this does not concern the *scope* of the application of the Article. On this question it was proposed to omit the relevant provision in the Final Protocol and to introduce into the Convention itself the rule that the provision would apply to a trademark " with regard to the signs of which it is composed."[1] No objection was raised to this proposal by the member States and, although finally the provision of the Protocol was omitted without the introduction of a corresponding provision in the Convention itself, it is not possible to conclude from this decision that agreement was reached regarding a different scope of application of the provision.[2] On the contrary, reservations made in the Second Plenary Session of the Washington Conference made it clear that the provision continued to concern only the *signs of which a trademark is composed*—only visual signs were then considered—and that the member States were not obliged to interpret what a " trademark " *is* otherwise than according to their domestic legislation.[3]

This leads to the following conclusions :

Whenever a trademark is duly registered in the country of origin, the other countries of the Union are *obliged to accept and protect it,*

---

[1] *Actes de Washington*, pp. 50/1.

[2] *Ibidem*, pp. 92/3, 95/6, 107, 110/1, 113, 224 (observations), 308/9 (report to Plenary Committee), 252/3 (discussion in Third Plenary Session).

[3] *Ibidem*, pp. 252/3. See also *Actes de Lisbonne*, pp. 568, 573/6, 600/1.

even if, as regards *its form*, that is, *with regard to the signs of which it is composed*, such trademark does not comply with the requirements of the domestic legislation, *subject* to the additional rules, *particularly the grounds for refusal or invalidation of any mark, considered on its individual merits*, established in the Article.[1] This rule will therefore apply to trademarks consisting of numbers, letters, surnames,[2] geographical names, words written or not written in a certain language or script, and other signs of which the trademark is composed.

The member States are, however, *not* obliged *to interpret the notion of a trademark* in a manner which differs from that of their national legislation. If therefore a three-dimensional object as such, or a " signature tune," is registered as a trademark in the country of origin but is not considered a " trademark " in another country, this latter country is not obliged to register and protect these subjects.[3] Member States are equally free, regardless of Article 6*quinquies*, to apply to trademark applications other provisions of their domestic law not concerning the signs of which a trademark is composed, such as a requirement of previous use of the mark,[4] or the condition that the applicant must possess an industrial or commercial enterprise.[5]

(f) The obligation to accept a trademark duly registered in the country of origin " as is," that is, with regard to the signs of which it is composed, is subject to the reservations indicated in the Article under consideration (Sections B and C). These reservations consist of grounds for refusal or invalidation, *indicated in a limitative enumeration*. The same grounds—but others also—may apply to a trademark which is *not* covered by the Article, either because it is not found to have been duly registered in the country of origin, or because objections to its registration are not related to the signs of which it is composed.

(g) The last two sentences of the provision under consideration relate to the evidence which countries may require as to the registration

---

[1] Cf. in Italy: Corte di Cassazione, 18/3/1958, *G.R.U.R. Int.*, 1958, p. 580 (German translation), holding also that the protection does not apply to trademarks which are merely *used* in the country where protection is claimed.

[3] See, for a wider interpretation, in Federal Republic of Germany: Bundespatentgericht, 29/4/1965, *G.R.U.R. Int.*, 1965, p. 508.

[4] Cf. in U.S.A.: Commissioner of Patents, 20/3/1963, 137 *U.S.P.Q.* 69 (1963).

[5] Cf. in opposite sense in Austria: Patent Office (Division of Appeals), 29/11/1961, *G.R.U.R. Int.*, 1963, p. 107. See also, however, with respect to collective marks, Article 7*bis*(1) *in fine*.

of a trademark in the country of origin. They are self-explanatory and may be compared with analogous provisions concerning the claim of a priority right according to Article 4 D(3) of the Convention.

(h) The definition of the *country of origin* is important because *only* trademarks duly registered *in such country* are covered by the Article under consideration. The reason is that the exceptional protection provided for trademarks by this Article has been considered justified only when the registration on which the protection is based is made in a country to which the owner of the trademark is in some way related and not in a country freely chosen by him because its legislation has made such registration particularly easy. The original text of the Convention of 1883 even defined the country of origin as being primarily the country in which the applicant has his *principal* establishment. The Revision Conferences of Washington in 1911 and The Hague in 1925 enlarged this provision so that it is now possible for all persons who are entitled to invoke the benefits of the Convention under Articles 2 and 3 also to claim the application of the Article under consideration. The provision, as it now stands, applies the same criteria of nationality, domicile, or establishment, as adopted in Articles 2 and 3, but it establishes a different order of priority among these criteria.

(i) Primarily, the country of origin is considered to be the country where the applicant has a *real and effective industrial or commercial establishment*. It is no longer necessary for this establishment to be his *principal* establishment. The expressions used in the provision are identical to those used in Article 3 of the Convention and must be interpreted in the same way (see, above, observation *(d)* on Article 3).

(j) Only when the applicant has no establishment as above *in a country of the Union* (he may have it elsewhere) will the country of origin be the country where the applicant has his *domicile*. This expression is again the same as that used in Article 3 and must be interpreted in the same way (see, above, observation *(c)* on Article 3).

(k) Only if the applicant has *neither* an establishment as aforesaid *nor* a domicile in one of the countries of the Union will the country of origin be the country of which he is a *national* (see, for the criterion of nationality, observation *(b)* on Article 2, paragraph (1)).

The effect of the order of priority of the criteria for the country of origin is that, if the applicant has an establishment in a country of the

Union, he cannot claim application of the Article under consideration for a trademark registered in a country where he has no such establishment. Similary, if a person has no establishment in a country of the Union, but is domiciled in such country, he can claim the application of the Article only for trademarks registered in the latter country. And if he has neither establishment nor domicile in the territory of the Union, only a trademark registration in the country of which he is a national will entitle him to the application of the Article.

ARTICLE *6quinquies*, Sections B and C*(a)*

B. Trademarks covered by this Article *(b)* may be neither denied registration nor invalidated except in the following cases *(c)*:

1. **when they are of such a nature as to infringe rights acquired by third parties in the country where protection is claimed *(d)*;**
2. **when they are devoid of any distinctive character *(e)*, or consist exclusively of signs or indications which may serve, in trade, to designate the kind, quality, quantity, intended purpose, value, place of origin, of the goods, or the time of production *(f)*, or have become customary in the current language or in the bona fide and established practices of the trade of the country where protection is claimed *(g)*;**
3. **when they are contrary to morality or public order *(h)* and, in particular, of such a nature as to deceive the public *(i)*. It is understood that a mark may not be considered contrary to public order for the sole reason that it does not conform to a provision of the legislation on marks, except if such provision itself relates to public order *(j)*.**

This provision is subject, however, to the application of Article 10*bis* *(k)*.

C(1) In determining whether a mark is eligible for protection *(l)*, all the factual circumstances must be taken into consideration, particularly the length of time the mark has been in use *(m)*.

(2) No trademark shall be refused in the other countries of the Union for the sole reason that it differs from the mark protected in the country of origin only in respect of elements that do not alter its distinctive character and do not affect its identity in the form in which it has been registered in the said country of origin *(n)*.

(a) In the original Convention of 1883, the only ground for refusal or invalidation of the registration of trademarks covered by the Article under consideration was contained in the rule (then paragraph 4 of Article 6) that filing may be refused if the object for which it is requested is considered contrary to morality or public order.[1] The Revision Conference of Washington (1911) considerably extended the grounds for refusal or invalidation [2] and the following Revision Conferences of The Hague (1925), London (1934) and Lisbon (1958) further developed these grounds.[3]

(b) "*Trademarks covered by this Article*" are those trademarks which are *duly registered* in the *country of origin* and which, *with regard to the signs of which they are composed*, must be accepted for filing and protected, subject to the provisions now to be examined.

(c) The revision of this provision at the Lisbon Conference in 1958 made it even clearer than before that the grounds for refusal or invalidation of registration, indicated in the provision, are *limitative* [4] (on the understanding, of course, that other provisions of the Convention, such as Articles 5 C(1), 6*bis*, 6*ter*, and 6*septies*, must be applied as well). The member States are therefore not free to apply *other* grounds for refusal or invalidation of the registration of *trademarks covered by the Article*. The sole task of the competent authorities of these States is to determine whether any of the given grounds for refusal or invalidation applies.

(d) The first permitted ground for refusal or invalidation of a trademark covered by the Article exists when such mark infringes *rights of third parties* acquired *in the country where protection is claimed.*

[3] *Actes de La Haye*, pp. 241, 245/6 (proposal), 340/1 (observations), 445/50 (report of Third Sub-Committee), 521/2 (report of General Committee), 542/3 (report of Drafting Committee), 577 (discussion and adoption in Second Plenary Session); *Actes de Londres*, pp. 183/6 (proposal), 269/72 (observations,) 393/6 (report of Third Sub-Committee), 462/3 (report of Drafting Committee), 516 (adoption in Second Plenary Session); *Actes de Lisbonne*, pp. 569/71, 576/8, 580/1 (proposal), 582/99 (observations), 601/2, 603/6 (discussion in Third Committee), 752/5 (report of Third Committee), 618 (discussion in General Committee), 106 (adoption in Second Plenary Session), 118 (General Report).

[4] *Actes de Lisbonne*, pp. 603, 610, 614, 618, 619.

These rights can be either rights in *trademarks* already protected in the country concerned, or other rights, for example, the right to a *trade name* or a *copyright*, if a trademark consisting of a picture or of invented words would infringe such right. The provision under consideration may also be applied if a trademark would infringe a person's *right of privacy*, for example, when it contains, without his authorization, his name or portrait.

(e) The second permitted ground for refusal or invalidation of trademarks covered by the Article consists of three possibilities : it applies to any trademark which, in the country where protection is claimed, is (1) *devoid of any distinctive character*, or (2) *descriptive*, or (3) a *generic name*. That these three possibilities have to be considered separately was shown by the Revision Conferences of The Hague (1925) and London (1934), where proposals to merge them to a certain extent failed.[1]

In all three possibilities the trademark has to be considered *on its individual merits :* in view of the main rule of the Article it is not possible, if a trademark is duly registered in the country of origin, to refuse its registration or protection merely because it consists of a surname, or a geographical name, or numbers or letters, as such, but it may still be found that such mark, *considered on its individual merits*, is devoid of distinctive character, or is purely descriptive, for example, of geographical origin, or is a generic name, or—see observation *(i)* below—is misdescriptive or misleading and therefore contrary to public order.

In these circumstances registration or protection of a trademark may, in the first place, be refused, if such mark, considered on its individual merits, is *devoid of any distinctive character*, for example, when it is too simple (a single star, crown or letter) or too complicated (giving the impression of being an adornment or decoration of the goods concerned, or of being merely a slogan consisting of a recommendation to buy or use such goods), or when the sign in question is already in general use, or when it does not consist *exclusively* of a description or a generic name but, even with the addition of other elements, cannot distinguish the goods of one enterprise from those of other enterprises.

(f) Registration may also be refused or invalidated if the trademark concerned is *purely descriptive*, that is, consists *exclusively* of

---

[1] *Actes de La Haye*, pp. 241, 246, 446/7; *Actes de Londres*, pp. 183/4, 186, 393/4.

indications which may serve, in the country where protection is claimed, *to designate particulars of the goods concerned* as indicated in the provision. Even where a description as such is not known to the general public, and therefore the trademark is not devoid of any distinctive character, its registration may be refused or invalidated because descriptions must remain in the public domain. It should be observed that signs and indications under this provision may include not only written descriptions but also descriptions in the form of pictures.

(g) Registration may also be refused or invalidated if the trademark concerned consists of a *generic name*, that is, a *customary designation of the goods concerned*, in the country where protection is claimed. This has to be determined according to the bona fide and established practices of the trade in such country.

(h) The third permissible ground for refusal or invalidation of trademarks covered by the Article exists when such mark, considered on its individual merits, is *contrary to morality or public order*, again as considered in the country where protection is claimed.[1] A mark contrary to morality would, for example, be a mark containing an obscene picture. A mark contrary to public order would be a mark contrary to the basic legal or social concepts of the country concerned. Examples of such marks could be a mark containing a religious symbol, or a mark containing the emblem of a forbidden political party, or the emblem of a public body, even if such latter emblem were not protected by Article 6*ter* of the Convention (see paragraph (10) of that Article and, above, observation *(d)* regarding that paragraph).

(i) The Revision Conference of London in 1934 added to this provision, as a special category of trademarks contrary to morality or public order, those trademarks which are *of such a nature as to deceive the public.* The purpose of this addition[2] was to enable the member States to refuse or invalidate trademarks containing suggestions that the goods concerned possessed non-existing qualities, or unjustified references to rewards or to protection by a patent, etc. The provision will also apply to trademarks containing misleading indications of geographical origin.[3]

[1] Cf. EGGER: " La protection de la marque ' telle quelle ' et l'ordre public," *Schw. Mitt.*, 1960, p. 38.

[2] *Actes de Londres*, pp. 184/5.

[3] Cf. in Switzerland: Bundesgericht, 11/2/1963, *G.R.U.R. Int.*, 1963, p. 609.

(j) The Final Protocol which formed an integral part of the Convention as revised by the Conference of Washington in 1911 had already specified that the mere fact that a trademark *does not conform to a provision of the law* of the country where its protection is claimed is not sufficient reason to consider it *contrary to public order*, except if such provision itself relates to public order.[1] This provision was transferred to the Convention itself by the Revision Conference of The Hague in 1925.[2] The need for such a provision is evident, because if a member State could refuse or invalidate a trademark registration on the ground of public order, merely because it did not conform to its domestic legislation, the purpose of the Article under consideration, which is to enable applicants to claim, if necessary, more than normal national treatment (see, above, observation *(b)* on Section A(1) of the Article), would be entirely defeated.

(k) The last sentence of the provision under discussion was added by the Revision Conference of Lisbon in 1958[3] after analogous proposals had failed at the preceding Revision Conferences of the Hague (1925) and London (1934). The sentence enables member States to refuse or invalidate the registration of a trademark if, for reasons other than those already mentioned in the Article—for example, infringement of the rights of third parties or deceptive character of the mark—its registration would *constitute an act of unfair competition*. This, for example, could be the case if the mark, in reproducing the picture of a well-known building which is the seat of a competitor, would be liable to cause confusion with that establishment, or if the mark contained a discrediting comparison with the goods of one or more competitors.[4]

(l) After the Revision Conference of The Hague in 1925 and until the Revision Conference of Lisbon in 1958, the Article under consideration contained a provision whereby, *in order to determine the distinctive character of a mark*, all factual circumstances, particularly the length of time the mark has been in use, must be taken into account. The Revision Conference of Lisbon gave a more general scope to this principle by applying it to *the determination of the question whether*

[1] *Actes de Washington*, pp. 297/8, 253.

[2] *Actes de La Haye*, pp. 246, 447, 542.

[3] *Actes de Lisbonne*, pp. 590, 594 (proposals of Netherlands and Switzerland), 604/5, 610, 613, 614, 618/20 (discussions in Third Committee and General Committee), 753, 755 (report of Third Committee), 106 (adoption in Second Plenary Session), 118 (General Report).

[4] *Actes de Londres*, p. 185.

a mark is eligible for protection, that is, to all possibilities of refusal or invalidation of marks covered by Article *6quinquies*, Section B.[1]

(m) The *factual circumstances* may, for example, show that, during a long period of simultaneous use, two not very dissimilar trademarks have nevertheless not caused any confusion, so that registration of one of them will not infringe the rights in the other. Or the circumstances may show that a trademark which originally was not distinctive has, in the long run, through use, acquired a "*secondary meaning*" which makes it distinctive. Or, again, the circumstances may show that a mark which seems to contain a deceptive suggestion has not, in fact, led to any deception and may therefore be held not to be of such a nature as to deceive the public.

The competent authorities of the country in which protection of the mark is claimed may draw conclusions of this kind also from circumstances which have arisen in other countries.[2]

(n) Paragraph (2) of the provision under consideration was added to the Convention by the Revision Conference of London in 1934.[3] The provision presents an analogy with Article 5, Section C(2), examined above (see, in particular, observation *(g)* on that paragraph). This latter provision states that the *use* of a trademark by the proprietor in a form which is not essentially different from that in which it has been *registered* in *one of the countries of the Union* shall not diminish the *protection* of the mark. The provision now being considered applies the same principle to the situation where, *on the basis of a prior registration in the country of origin, registration* of the trademark *as is* is sought in *other countries of the Union*. Unessential differences between the trademark as registered in the country of origin and as filed in the country where protection is claimed will not diminish the obligation of registration in the latter country. Nor may such differences lead to invalidation of the registration, although this is not explicitly stated in the provision. Unessential differences in this respect are those which consist of elements that do not alter the distinctive character of the mark and do not affect its identity in the form in

which it has been registered in the country of origin. Examples of such differences could be the adaptation or translation of certain elements of a trademark with a view to its registration in countries other than the country of origin. The competent authorities of the country in which protection of the mark is claimed will determine whether such differences are unessential.

ARTICLE *6quinquies*, Sections D, E and F*(a)*

D. No person may benefit from the provisions of this Article if the mark for which he claims protection is not registered in the country of origin *(b)*.

E. However, in no case shall the renewal of the registration of the mark in the country of origin involve an obligation to renew the registration in the other countries of the Union in which the mark has been registered *(c)*.

F. The benefit of priority shall remain unaffected for applications for the registration of marks filed within the period fixed by Article 4, even if registration in the country of origin is effected after the expiration of such period *(d)*.

(a) The first two of these Sections concern the dependence of trademark registrations obtained under this Article on the registration in the country of origin. Section D was introduced by the Revision Conference of Lisbon (1958),[1] to replace another provision adopted by the Revision Conference of London (1934).[2] Section E dates from the Revision Conference of The Hague (1925).[3] Section F, also introduced into the Convention by the Revision Conference of The Hague,[4]

concerns the relationship between the rules of Article 6*quinquies* and those of Article 4, regarding the right of priority.

(b) There has frequently been regrettable confusion with respect to the question of the *dependence or independence* of registrations of the same trademark in various countries of the Union. The reason for this confusion is that insufficient distinction has been made between the situation, on the one hand, where such a trademark is registered in various countries *under the normal rule of " national treatment "* of applications, and the *exceptional situation*, on the other hand, where a trademark, *duly registered in the country of origin*, has to be accepted *as is* in the other countries of the Union if it does not comply, with regard to the signs of which it is composed, with the domestic legislation of such countries. The Revision Conference of Lisbon in 1958 arrived at a clear distinction between these situations, for the first of which the *complete independence* of trademark registrations was then recognized in Article 6, whereas for the second, exceptional situation, regulated in Article 6*quinquies*, the opposite rule was adopted,[1] providing for the *complete dependence* of registrations upon the registration in the country of origin. This means that if, on the basis of a registration in the country of origin, protection is claimed for a trademark, with respect to the signs of which it is composed, notwithstanding the domestic legislation of the country concerned, such registration may *still be refused*, or *cancelled*, or that *protection* may be refused, if the *registration in the country of origin has meanwhile been cancelled, annulled, withdrawn, or has lapsed for any other reason.*

(c) Section E refers to the situation where the registration of a trademark in the country of origin and another registration based on the former, in application of the Article under consideration, do not have the same duration.[2] If the duration in the country of origin is shorter, and the registration in that country is not renewed, the registration based on it in another country may be cancelled (see, above, observation *(b)*). If, however, the registration in the country of origin is renewed in time, that fact will not necessitate renewal of a corresponding registration in another country if the normal duration of the latter registration has not yet expired. If, on the contrary, the registration in the country of origin expires later than the corresponding registrations

---

[1] *Actes de Lisbonne*, pp. 602/3, 613, 614/6, 617/8, 750, 753/5, 106, 118.

[2] *Ibidem*, p. 608.

in other countries, these latter registrations will have to be renewed independently before renewal in the country of origin.

(d) The application of Article *6quinquies* does not affect the right of priority recognized by Article 4. The relationship between these Articles is the following :

On the basis of the *first filing* of an application for the registration of a trademark in *any* country of the Union, *a right of priority* is recognized by Article 4 for the purpose of similar filings, within six months, in the other countries. For that right of priority, it is immaterial whether or not the first filing leads to a registration in the country where it has been effected (Article 4 A(3)).

If, however, a first, *or any other*, filing in the *country of origin* as defined in Article *6quinquies* A(2) leads to *registration* in such country, the trademark *must, without any limit of time, be accepted for filing and protected* as is in the other countries of the Union, but the recognition of a right of priority for its registration depends on Article 4.

These rules will normally operate separately but may be combined if a *first* filing *in the country of origin* is followed, *within six months*, by one or more similar filings in other countries of the Union, and if the first filing leads to a *proper registration* in the country of origin *before* a decision is taken about acceptance of the filings in the other countries. In such cases, the trademark has to be accepted *as is*, in view of Article *6quinquies*, and a *right of priority, as of the date of first filing*, will be recognized for its registration, by virtue of Article 4.

ARTICLE 6*sexies*(*a*)

The countries of the Union undertake to protect service marks *(b)*. **They shall not be required to provide for the registration of such marks** *(c)*.

(a) This Article was introduced into the Convention by the Revision Conference of Lisbon in 1958.[1] As observed above, that Conference did not accept a more ambitious proposal to assimilate service marks to trademarks throughout the Convention.[2] What has been adopted is an obligation to protect service marks but not also to register them.

(b) According to the provision under consideration, the member States " undertake to protect service marks." [3] This raises the question whether the member States are obliged to *legislate* on the matter or whether the provision introduces a direct obligation to protect the subject concerned, with the result that—in countries which admit such possibility—the provision may be considered " self-executing " and therefore interested parties may directly claim its application by the competent authorities of the country concerned. (See, above, with respect to analogous questions, observation *(b)* on Article 5*quinquies*, observation *(b)* on Article 6*bis*, and observation *(b)* on Article 6*ter*.)

In the case of Article 6*sexies*, the discussions at the Lisbon Conference made it clear that the provision would *not* oblige the member States to legislate expressly on the subject of service marks, so that these States would comply with the provision not only when they introduce special measures for the protection of service marks into their legislation, but also when they grant such protection by other means, for example, in their laws against unfair competition.[4]

---

[1] *Actes de Lisbonne*, pp. 624, 626/7 (proposals of U.S.A. and Sweden), 628/33 (discussion in Third Committee), 755/7 (report of Third Committee), 634/6 (discussion in General Committee), 99, 103 (adoption in Second Plenary Session), 114, 118 (General Report).

[2] *Ibidem*, pp. 624 (proposal of U.S.A.), 628/33 (discussion in Third Committee), 755/7 (report of Third Committee).

[3] See, for the notion of service marks, observation *(g)* on Article 1, paragraph (2), above, and further, MASCAREÑAS: " La marque de service," *P.I.*, 1959, p. 137 (English translation in *I.P.Q.*, July 1960, p. 10); FROSCHMAIER: *Der Schutz von Dienstleistungszeichen*, 1959; DUSOLIER: " La marque de service, " *R.I.P.I.A.*, 1965, p. 181.

[4] *Actes de Lisbonne*, pp. 633, 634, 635, 756/7, 118.

Thus, the provision under consideration does not contain an obligation to legislate, but it does contain an *obligation to protect*, which must be deemed to be an obligation to be complied with by the competent authorities of the member States. Therefore the provision must be considered " self-executing "—in countries which admit this possibility—with the result that interested parties may directly claim the protection of service marks by the competent authorities of the country concerned by all legal means available.

(c) Since the member States will not be obliged to legislate on the protection of service marks, it is logical that they should not have to provide for the registration of such marks, particularly as registration may only be possible on the basis of special legislation.

ARTICLE 6*septies*(*a*)

(1) If the agent or representative *(b)* **of the person who is the proprietor of a mark in one of the countries of the Union** *(c)* **applies, without such proprietor's authorization** *(d)*, **for the registration of the mark in his own name, in one or more countries of the Union** *(e)*, **the proprietor shall be entitled to oppose the registration applied for** *(f)* **or demand its cancellation** *(g)* **or, if the law of the country so allows, the assignment in his favor of the said registration** *(h)*, **unless such agent or representative justifies his action** *(i)*.

(2) The proprietor of the mark shall, subject to the provisions of paragraph (1), above *(j)*, **be entitled to oppose the use of his mark by his agent or representative if he has not authorized such use** *(k)*.

(3) Domestic legislation may provide an equitable time limit within which the proprietor of a mark must exercise the rights provided for in this Article *(l)*.

(a) This Article was introduced into the Convention by the Revision Conference of Lisbon in 1958.[1]

(b) The Article under consideration deals with a special situation, namely, the relationship between the *proprietor of a mark* and *his agent or representative* regarding *registration or use of the mark by the latter*. In many cases such relationship will be adequately regulated by contract, but in other cases a contract will not exist or it will be silent or inadequate on the subject. It will sometimes be in the interest also of the proprietor of the mark if his agent or representative in a given country, on his own initiative, takes the necessary measures to protect the mark by registration and by using it in view of possible user requirements, but grave difficulties may then arise with respect to the exclusive right to use the mark, or once the relationship between the parties is terminated.

If the application of the provision under consideration is requested in a country of the Union, the competent authorities of such country will first have to determine whether the person who has applied for registration of the mark in his own name in that country *can be*

---

[1] *Actes de Lisbonne*, pp. 680/2 (proposal), 682/6 (observations), 687/92 (discussion in Third Committee), 760/1 (report of Third Committee), 692/3 (discussion in General Committee), 103/4 (adoption in Second Plenary Session), 118 (General Report).

considered to be the agent or representative of the proprietor of the mark in one of the countries of the Union. In view of the purpose of the provision the above wording will probably not be interpreted in a narrow legal sense, so that the provision will also be applied to those who have acted as distributors of goods bearing the mark and who have applied for registration of that mark in their own name.[1]

Although there is no reference to service marks in the history of the provision, the adoption of the word " mark, " at the time when service marks were introduced into the Convention, will allow the provision to be applied not only to *trademarks* but also to *service marks.*

(c) A second question to be examined by the authorities of the country in which application of the provision under consideration is requested is whether registration of the mark has been applied for by an agent or representative " *of the person who is the proprietor of a mark in one of the countries of the Union.*"

Since there is no reference to any country of origin, as defined, for example, in Article 6*quinquies*, Section A(2), the provision applies when the person concerned is the proprietor of the mark in *any* country of the Union, including the country in which the agent or representative has applied for or obtained the registration of the mark.[2] The latter situation may arise if the country concerned does not carry out an examination of applications for registration as to possible conflicts with existing registrations, or if such country allows the property in a mark to be acquired merely by first use.

A person who is the proprietor of a mark in one of the countries of the Union may request application of the provision even if somebody else, and not he, is the proprietor of the mark in other countries, on condition, however, that it is *his* agent or representative who has applied for registration of the mark.

The question *whether* a person is the *proprietor* of the mark in a country of the Union will have to be decided according to the domestic legislation of that country.

(d) The provision under consideration applies only when the agent or representative has applied for registration of the mark *without*

---

[1] *Actes de Lisbonne*, p. 690. However, the introduction of the words " or client " after " representative " was rejected by the Conference of Lisbon, because the expression " client " was considered too vague: *Actes de Lisbonne*, pp. 690/1, 760.

[2] *Ibidem*, pp. 688/9, 760.

the authorization of the proprietor. In the event of authorization, the relevant contract will have to regulate the situation, particularly regarding the case of termination of the relationship between the parties.

(e) The provision under consideration is applicable when the agent or representative of the proprietor of the mark in a country of the Union *applies for the registration of the mark, in his own name,* in one of *the countries of the Union.* In view of the purpose of the provision, it may be applied also when the mark in respect of which registration is applied for by the agent or representative is *not identical* but *similar* to the mark of the proprietor concerned.[1]

(f) It depends on the domestic legislation of the country where the application of the provision under examination is sought whether the registration of the mark applied for by the agent or representative may be *opposed* by the proprietor or whether the latter may only—or also—demand its *cancellation* after registration.

(g) Since the possibility of *opposing* an application for registration under the conditions referred to in the provision may be limited to the period before registration, it is particularly important that the proprietor be allowed to *demand the cancellation of such registration.*

(h) A third possibility open to the proprietor of the mark, if the law of the country concerned so allows, is to demand the *assignment in his favor* of the registration obtained by the agent or representative. Such assignment may place the proprietor of the mark in a better position than if he has first to obtain the cancellation of the registration by the agent or representative and then replace that registration by one in his own name, because by means of an assignment he acquires a registration on the basis of an earlier application, which may be important with respect to rights of third parties.

(i) The Lisbon Conference intended to make the rule in this provision not too rigid[2] by allowing for the possibility that the *agent or representative may justify his application for registration of the mark.* Such justification would, for example, be possible if the proprietor of the mark had caused his agent or representative to

---

[1] *Actes de Lisbonne,* p. 681.

[2] *Ibidem,* pp. 689, 691, 760.

believe that he, the proprietor, had abandoned the mark or was not interested in obtaining rights in it in the country concerned.

(j) One of the further rights conferred on the proprietor of a mark in a country of the Union is the right to oppose the unauthorized *use* of the mark by his agent or representative. This right is given subject to the provisions of paragraph (1) of the Article under consideration: the right exists only in the same conditions as the rights given to the proprietor in paragraph (1) and with a similar possibility for the agent or representative to justify his unauthorized use of the mark.

(k) The right to *oppose* the *unauthorized use* of the mark by the agent or representative is *independent* of the question whether such agent or representative has applied for *registration* of such mark or has obtained such registration.

(l) In order to avoid unduly prolonging situations which are legally uncertain, the member States may provide *an equitable time limit* within which the proprietor of a mark must exercise the rights provided for in the Article under consideration. There is no such time limit in countries which do not prescribe any.

It was understood during the Lisbon Conference[1] that, when a mark registered or used by an agent or representative is *well known* in the country concerned, Article 6*bis* of the Convention may also be applied.

---

[1] *Actes de Lisbonne*, pp. 691, 761.

ARTICLE 7(a)

The nature of the goods to which a trademark is to be applied shall in no case form an obstacle to the registration of the mark *(b)*.

(a) This Article already appeared in the original text of the Convention of 1883, although it then referred to the filing and not to the registration of a trademark.[1] The provision was modified in this latter respect by the Revision Conference of The Hague.[2]

(b) The Article under consideration can be compared, to a certain extent, to Article 4*quater* of the Convention regarding patents. The purpose of these Articles is to make the protection of industrial property independent of the question whether goods in respect of which such protection would apply may or may not be sold in the country concerned. For example, the situation in which a trademark is intended to be used on a pharmaceutical product which has not as such been approved by the competent authorities of a country, and whose sale is consequently not allowed, must not lead to a refusal to register the trademark, because it is of interest to the proprietor to secure his rights in the eventuality that the sale of his product may be permitted later on.[3] The Article under consideration would also apply when the use of trademarks is prohibited for any category of goods or when the sale of goods is subject to a monopoly or a concession.

The Article under consideration has a rather narrow scope, as became clear when attempts failed at the Revision Conference of Lisbon in 1958 to give it a wider application, namely, to extend it to *renewals* of registrations and to the *duration of the exclusive right to use* the trademark.[4]

ARTICLE 7*bis*[(a)]

(1) The countries of the Union undertake *(b)* **to accept for filing and to protect collective marks** *(c)* **belonging to associations** *(d)* **the existence of which is not contrary to the law of the country of origin** *(e)*, **even if such associations do not possess an industrial or commercial establishment** *(f)*.

(2) Each country shall be the judge of the particular conditions *(g)* **under which a collective mark shall be protected and may refuse protection** *(h)* **if the mark is contrary to the public interest** *(i)*.

(3) Nevertheless, the protection *(j)* **of these marks shall not be refused to any association the existence of which is not contrary to the law of the country of origin** *(k)*, **on the ground that such association is not established in the country where protection is sought** *(l)* **or is not constituted according to the law of the latter country** *(m)*.

(a) The main parts of this Article concerning collective marks were introduced into the Convention by the Revision Conference of Washington in 1911.[1] The Article was further elaborated by the Revision Conference of London in 1934.[2]

(b) In view of the wording of the Article, which refers to an "*undertaking of the countries of the Union*," the question again arises whether this Article may be considered "self-executing"—in countries which admit such possibility—with the result that interested parties may directly claim its application by the administrative or judicial authorities of the country concerned. The position of the Article in this respect is analogous to that of Article 6*bis* and reference may therefore be made to observation *(b)* regarding that Article. Here again the conclusion must be that the Article contains an undertaking also on the part of the administrative and judicial authorities of member States which admit this possibility, so that these authorities must directly give effect to the provisions of the Article at the request of interested parties.

---

[1] *Actes de Washington*, pp. 51/2, 230/1 (proposals), 93, 96, 107, 223 (observations), 304/5 (report of Sub-Committee), 309 (report to Plenary Committee), 253/4 (discussion and adoption in Third Plenary Session).

[2] *Actes de Londres*, pp. 193/5 (proposal), 281/3 (observations), 407/9 (report of Third Sub-Committee), 467 (report of Drafting Committee), 517 (discussion and adoption in Second Plenary Session).

This means, for example, that when the domestic legislation of such countries does not contain special provisions on the registration and protection of collective marks the authorities of those countries are, nevertheless, obliged to register and protect such marks. If, on the other hand, a member State has such special legislation, it will be applied to foreign collective marks by virtue of Articles 2 and 3 of the Convention, taking into account the further regulation given in the Article under consideration.

(c) The Article under consideration concerns "*collective marks.*"[1] These marks are not defined in the same way by the various national legislations, but they can roughly be said to be signs which serve not to distinguish the goods or services of one enterprise from those of other enterprises, but to distinguish the *geographical origin* or *other common characteristics* of goods or services of *different enterprises* which *use the collective mark under the control of its owner.* These marks generally imply a certain guarantee of quality.

The member States are obliged to accept such marks for registration and to grant protection to them according to the rules given in the Article under consideration.

(d) The Article covers only collective marks "*belonging to associations,*" which will generally be associations of manufacturers or sellers of goods produced in a certain country or region or having certain common characteristics or qualities. Collective marks of States or other public bodies are not covered by the provision. A proposal to enlarge it in this respect was not accepted by the Revision Conference of London in 1934.[2] However, collective marks of States and other public bodies will frequently be protected by virtue of the rule of "national treatment" embodied in Article 2 of the Convention, and those of States—if these marks are at the same time official State signs or hallmarks indicating control and warranty—also by Article 6*ter.*

(e) Collective marks of associations will be covered by the provision under consideration only when the existence of such associations is "*not contrary to the law of the country of origin.*" What is to be understood by the country of origin is not clear. Since there is no reference, in this respect, to the definition of country of origin in Article 6*quinquies*, Section A(2), and since in view of the final words of

---

[1] Cf. PAHUD: *La marque collective en Suisse et à l'étranger,* 1938; EGGER: "A propos de la marque collective," *Schw. Mitt.*, 1962, p. 100.

[2] *Actes de Londres*, pp. 193/4, 409, 467, 517.

Article 7*bis*(1) the first criterion in that definition would not necessarily apply, it is probable that "country of origin" in Article 7*bis* does not mean the country of origin *of the mark* according to Article 6*quinquies*, Section A(2), but means the country of origin of the *association concerned*.[1]

In order that the provision be applicable, *the existence* of the association to which the collective mark belongs must *not be contrary to the law of the country of origin*. This provision again is not very clear, but it probably means that the association concerned does not have to *prove* that it *conforms* to the legislation of its country of origin, but that registration and protection of its collective mark may be *refused* if the *existence* of such association is found to be *contrary* to such legislation.

(f) It follows already from Article 2(2) of the Convention that, with respect to the rule of "national treatment," no *domicile or establishment in the country where protection is claimed* may be required. The last words of the provision under consideration add the further stipulation that, for the registration and protection of *collective marks belonging to associations*, such associations may not even be required to possess an industrial or commercial establishment *anywhere*. In other words, these associations, without possessing any industrial or commercial establishment themselves, may only *control* the *use* of a collective mark *by others*. These other parties will then possess the establishments for the goods or services of which the collective mark will be used.

(g) The member States are free to establish or apply the *particular conditions under which they will agree to protect collective marks*, which conditions will then apply both to national marks and to those covered by the Convention. This may be done either by the adoption of general regulations on the matter or by decisions regarding each collective mark whose protection is sought.[2] The conditions for protection may relate to the character of the associations which claim protection [3] and may, for example, preclude that such associations themselves possess an industrial or commercial establishment; [4] the

---

[1] Cf. TROLLER: *Die mehrseitigen völkerrechtlichen Verträge im internationalen gewerblichen Rechtsschutz und Urheberrecht*, p. 55.

[2] *Actes de Washington*, p. 309.

[4] *Actes de Londres*, pp. 408, 517.

conditions may also relate to the character of the collective mark and the guarantee given by the association concerned as to the proper use of the mark.[1] Member States are, for example, also free to prohibit the assignment of collective marks.[2]

(h) The words " protected " and " protection " must, in view of the opening words of the preceding paragraph, be deemed to include also the *acceptance of a collective mark for filing* and its registration.[3]

(i) The member States may, in particular, refuse protection of a collective mark if it is *contrary to the public interest.* The *public interest* (see also Article 5 C(3) *in fine*) should not be confused with *public order* as referred to in Article 6*quinquies*, Section B(3). The latter expression refers to basic legal or social concepts of the country concerned. The public interest is a much wider notion and relates to the interest of the public in finding the common characteristics of certain goods or services indicated by a collective mark,[4] generally suggesting a guarantee of quality. If acceptance of the mark would be against such public interest, its registration and protection may be refused.

(j) Here, again, the word " protection " must be deemed to include acceptance for filing and registration.

(k) This part of paragraph (3) merely repeats what has already been said in paragraph (1), but the words which follow give more precision to the provision.

(l) If the existence of the association claiming protection of a collective mark is not contrary to the law of the country of origin, refusal of registration and protection of such mark will not be possible on the *ground that the association is not established in the country where protection is sought.* This rule is in conformity with the general rule given in Article 2(2) of the Convention.

(m) Nor will refusal of a collective mark be possible on the ground that the association claiming protection is not constituted *according to the law of the country where protection is sought.*

ARTICLE 8[(a)]

A trade name *(b)* shall be protected *(c)* in all the countries of the Union without the obligation of filing or registration *(d)*, whether or not it forms part of a trademark *(e)*.

(a) This Article was already included in the original text of the Convention of 1883.[1] The Revision Conference of The Hague in 1925 modified the wording on one point in order to achieve more conformity with other provisions of the Convention.[2]

(b) As has been observed above—see observation *(h)* on Article 1, paragraph (2)—the conception of what a "trade name" is varies in the different countries of the Union.[3] Whether a name for which protection is sought is or is not a "trade name" is a question of qualification which has to be resolved in the country where such protection is sought.

Although the Article under consideration is generally worded, the protection of a trade name, by virtue of this Article, can be claimed only by a person who is entitled to the benefits of the Convention according to Articles 2 or 3.[4]

(c) The Article under consideration prescribes that a trade name should be *protected*,[5] but it does not specify how such protection must be given (see also, however, Articles 9 and 10*ter*). The member States are free to regulate such protection either by special legislation or by legislation against unfair competition or by other appropriate means. The protection will generally be given against unlawful acts of third parties consisting, for example, of use of the same or a confusingly similar trade name or of a mark similar to the trade name, if such use is liable to cause confusion among the public. Countries are free to

[3] See "Protection du nom commercial en France et en divers autres pays," *R.I.P.I.A.*, 1962, p. 145.

[4] *Actes de Paris*, I, pp. 98/100, 143.

[5] Cf. CONTE: "La protection du nom commercial et l'article 8 de la Convention d'Union," *P.I.*, 1931, p. 200; SAINT-GAL: "Protection du nom commercial sur le plan international," *R.I.P.I.A.*, 1962, p. 189; 1964, p. 92; and "Der internationale Schutz des Handelsnamens," *G.R.U.R. Int.*, 1964, p. 289.

prescribe special measures in cases of use of homonymous surnames as trade names.

The protection given to a foreign trade name must, in view of the principle of national treatment embodied in Article 2 of the Convention, be equal to the protection afforded to national trade names.[1] If, however, a country grants different protection to trade names which are registered in the country and to other national trade names not so registered, it will not be obliged to grant to foreign trade names, not registered in the country concerned, more protection than to unregistered national trade names.[2] If, in any country, the likelihood of confusion among the public is a criterion for the protection of a trade name against other trade names or marks, such a country may require that a foreign trade name, in order to be protected, should be used or have become known to some extent in the country, because otherwise the likelihood of confusion would not exist.[3]

(d) A trade name will be protected, according to the Article under consideration, *without any obligation of filing or registration,* which means that, in the country where its protection is claimed, filing or registration of the trade name may be required neither in that country nor in any other country, particularly in the country of origin of the trade name, even if registration is mandatory there.

If the legislation of a country subjects the protection of *national* trade names to registration, the provision under discussion will mean a derogation from such obligation in favor of *foreign* trade names. This is a situation similar to that which may exist with respect to Article 2(2) (see, above, observation *(b)* on that provision).

(e) The protection of a trade name, according to the Article under consideration, must be independent of the questions whether the trade name serves also as, or is part of, a *trademark,* and whether such trademark is also protected. If, for example, a trademark containing a trade name is abandoned and falls into the public domain, the protection of the trade name will not be affected.[4]

[4] *Actes de Paris*, I, p.97.

ARTICLE 9[(a)]

(1) All goods unlawfully bearing a trademark or trade name shall be seized on importation into those countries of the Union where such mark or trade name is entitled to legal protection *(b)*.

(2) Seizure shall likewise be effected in the country where the unlawful affixation occurred or in the country into which the goods were imported *(c)*.

(3) Seizure shall take place at the request of the public prosecutor, or any other competent authority, or any interested party, whether a natural person or a legal entity, in conformity with the domestic legislation of each country *(d)*.

(4) The authorities shall not be bound to effect seizure of goods in transit *(e)*.

(5) If the legislation of a country does not permit seizure on importation, seizure shall be replaced by prohibition of importation or by seizure inside the country *(f)*.

(6) If the legislation of a country permits neither seizure on importation nor prohibition of importation nor seizure inside the country, then, until such time as the legislation is modified accordingly *(g)*, **these measures shall be replaced by the actions and remedies available in such cases to nationals under the law of such country.**

(a) Parts of this Article were already included in the original text of the Convention of 1883.[1] Additional paragraphs were introduced by the Additional Act, adopted by the Revision Conference of Brussels in 1900[2] and, with further modifications, by the Revision Conference of Washington in 1911.[3] The Revision Conference of The Hague in 1925 adopted several further modifications.[4]

---

[1] *Actes de Paris*, I, pp. 27 (proposal for Article 6), 79/89, 91/7, 142/3 (discussions and adoption).

[2] *Actes de Bruxelles*, pp. 45/6 (proposal), 246/9, 255/6, 311/2 (discussions and adoption).

[3] *Actes de Washington*, pp. 97 (proposal of France), 302/3 (report of Committee), 309 (report to Plenary Committee), 254/5 (discussion and adoption in Third Plenary Session).

[4] *Actes de La Haye*, pp. 249/50 (proposal), 346 (observations), 469/70 (report of Fourth Sub-Committee), 525 (report of General Committee), 545/6 (report of Drafting Committee), 577 (adoption in Second Plenary Session).

(b) Although in some cases the Convention prescribes measures to be taken in the event of certain infringements of industrial property rights (see Articles 5*quater*, 6*bis*, 6*septies*), it generally leaves the question of the *sanctions or remedies to be provided against infringements* to the domestic legislation of the member States. Attempts made to *prescribe* in the Convention certain sanctions in the case of *importation* of goods unlawfully bearing a *trademark* or a *trade name* protected in the country of importation have proved to be too ambitious. The present wording of the Article under examination, although in appearance very stringent in paragraphs (1), (2), (3) and (5), adds in reality little to the general rule embodied in Articles 2 and 3 of the Convention which ensures to persons entitled to the benefits of the Convention " *national treatment* " in all member States, including sanctions and remedies in the case of infringement of their industrial property rights.

This is the effect of the Article under consideration, because, after prescribing, in cases of violation of rights in a trademark or a trade name, *seizure on importation* of goods bearing such trademark or trade name, or *prohibition* of such importation, or *seizure inside the country,* it adds in paragraph (6) that countries which do not permit such measures may *replace* them *by the actions or remedies available in such cases to nationals under the law of such country.* Thus, the rule of national treatment will apply to sanctions and remedies with respect to infringement of rights in trademarks and trade names, and will be considered sufficient.

In these circumstances, the importance of the Article under consideration lies solely in the fact that it suggests a series of measures considered desirable in order to protect rights in trademarks and trade names, and that, *if* national legislations adopt such measures, the Article underlines their mandatory application in cases where the Convention applies.[1]

The implementation of paragraph (1) of the Article is left entirely to the national legislation and administrative or legal procedures of the country concerned.

(c) Paragraph (2) of the Article indicates that, if the national legislations concerned so provide, seizure of goods unlawfully bearing a trademark or a trade name will be effected in the country where these signs are affixed on such goods as well as in the country of importation.

---

[1] *Actes de Washington.* pp. 302/3, 309. See also in France: Cour de Paris, 29/6/1962, *Ann.*, 1965, p. 201.

(d) The domestic legislation of the country concerned will determine at whose request seizure will take place. The words " a natural person or a legal entity " do not by themselves imply an obligation to admit requests by federations or associations of interested persons [1] (see, for this question, Article 10*ter*(2)).

(e) This provision is self-explanatory.

(f) This provision is also self-explanatory.

(g) The words " until such time as the legislation is modified accordingly " were added to this provision by the Revision Conference of The Hague in 1925. It was expressly understood that these words were to be interpreted as a *mere invitation* to member States to adopt legislation according to the preceding paragraphs of the Article under examination, but that this invitation would not create any obligation, not even a moral one.[2]

---

[1] *Actes de La Haye*, pp. 470, 545.

[2] *Ibidem*, pp. 470, 525, 545.

ARTICLE 10*(a)*

(1) The provisions of the preceding Article shall apply *(b)* **in cases of direct or indirect use** *(c)* **of a false indication of the source of the goods** *(d)* **or the identity of the producer, manufacturer, or merchant** *(e)*.

(2) Any producer, manufacturer, or merchant, whether a natural person or a legal entity, engaged in the production or manufacture of or trade in such goods and established either in the locality falsely indicated as the source, or in the region where such locality is situated, or in the country falsely indicated, or in the country where the false indication of source is used, shall in any case be deemed an interested party *(f)*.

(a) The principal elements of this Article were already included in the original text of the Convention of 1883,[1] but then the provision applied only to goods which falsely bore, as an indication of source, the name of a specified locality and when such indication was joined to a trade name of a fictitious character or used with fraudulent intention. The second paragraph of the Article also had a more limited scope than it has now. The Revision Conferences of Brussels (1900),[2] Washington (1910),[3] The Hague (1925),[4] London (1934),[5] and Lisbon (1958),[6] all modified the Article on several points, but only the Lisbon Conference succeeded in giving it a much wider scope than it had before. It now applies to *all direct or indirect uses* of a *false indication of the source of goods*, irrespective of whether such indication is the name of a specified locality or country or is joined to a

[3] *Actes de Washington*, pp. 97, 104 (proposals of France and U.K.), 302/3 (report of Committee), 310 (report to Plenary Committee), 254/5 (adoption in Third Plenary Session).

[4] *Actes de La Haye*, pp. 250/2 (proposal), 347/8 (observations), 470/2 (report of Fourth Sub-Committee), 525 (report of General Committee), 546 (report of Drafting Committee), 577/8 (discussion and adoption in Second Plenary Session).

[5] *Actes de Londres*, pp. 195/7 (proposal), 283/7 (observations), 411/7 (report of Fourth Sub-Committee), 468/9 (report of Drafting Committee), 517/9 (discussion and adoption in Second Plenary Session).

[6] *Actes de Lisbonne*, pp. 776/9 (proposal), 779/84 (observations), 784/7 (discussion in Fourth Committee), 850/2 (report of Fourth Committee), 788 (discussion in General Committee), 104 (adoption in Second Plenary Session), 118 (General Report).

trade name of a fictitious character or used with fraudulent intention. The provision also extends to any direct or indirect use of a *false indication of the identity of the producer, manufacturer or merchant of goods* and is in this respect of the same kind as the provisions of Article 10*bis* concerning the repression of unfair competition.[1]

(b) As has been observed above—see observation *(b)* on Article 9—application of the provisions of the preceding Article 9 means that also in the case of false indications of source or of the identity of the producer, etc., *the domestic legislation of the country where protection is sought will apply,* and *if* such legislation provides for seizure on importation of goods bearing such false indications, or other measures as indicated in Article 9, application of such measures will be mandatory in cases covered by the Article under consideration.

(c) *Direct* use of a false indication of source is made when such indication is made in so many words; *indirect* use of such indication is made, for example, when goods are delivered without any indication of source after false publicity has been made as to such source, or when the indication of source is made by a picture suggesting such source.

(d) Since the revision of the Article under examination by the Conference of Lisbon in 1958, it no longer applies *only* to the false indication, as the source of goods, *of the name of a specified locality or country,* that is, to a false indication of *geographical source.* The provision will therefore also apply in cases where the source of goods is falsely indicated otherwise than geographically, for example, as handicraft products (see also Article 10*bis*(3), subparagraph 3). However, the provision will probably continue to be applied mainly to *false indications of geographical source,* including *appellations of origin.* See, for these notions, observations *(i)* and *(j)* on Article 1, paragraph (2), above, and the Special Agreements of Madrid (1891) and Lisbon (1958) referred to in those observations.

One of the difficulties with indications of source and appellations of origin is that what is considered to be an indication of source or appellation of origin in one or more countries is sometimes considered in other countries to be a generic name, not limited to products of a certain source or origin.[2] It was explained at the Lisbon

---

[1] See BEIER: "Täuschende Reklame und Schutz der geographischen Herkunftsangaben," *G.R.U.R. Int.*, 1966, p. 197.

[2] Examples given at the Conference of Paris in 1880 were "*eau de Cologne,*" "*cuir de Russie*" and "*velours d'Utrecht*"; cf: *Actes de Paris*, I, p. 88.

Conference[1] that legislation or judicial decisions in the country where protection is sought would have to solve the said difficulty.

(e) Since the revision of this provision at the Lisbon Conference in 1958, the provision is also applicable to cases of direct or indirect use of a false indication *of the identity of the producer, manufacturer or merchant.* As has been observed above—see observation *(b)*—this means that also in such cases the domestic legislation of the member States will apply, and *if* such legislation prescribes seizure on importation of goods bearing such false indications, or other measures as indicated in Article 9, application of the said measures will be mandatory in cases covered by the Article under consideration.

The domestic legislation of the member States will probably deal with the prohibition of false indications of the identity of the producer, manufacturer or merchant as particular cases of the repression of unfair competition. It may give special attention to cases of homonymous surnames.[2]

(f) Paragraph (2) of the Article under consideration relates to cases where a *locality,* a *region* or a *country* is falsely indicated as the source of goods, and therefore applies only to false *geographical* indications. The difficulty in these cases is that a geographical indication is generally not privately owned, so that, contrary to the situation which prevails regarding trademarks, trade names and false indications of identity, there is no owner or other person obviously competent to object to the use of false geographical indications. The provision under examination establishes such competence by recognizing as interested parties any producer, manufacturer or merchant engaged in the production or manufacture of or trade in the goods concerned and established *either* in the locality or country *falsely indicated* or in the region where such locality is situated, *or* in the country where the false indication of source is *used.* It is clear that the first category of such producers, etc., is directly interested because they may be harmed by the false indication of the locality, region or country where they are established ; the second category of producers, etc., can be deemed to be indirectly interested because the use of a false indication of source in any country can be considered an act of unfair competition.

---

[1] *Actes de Lisbonne,* p. 778.

[2] *Ibidem,* p. 786.

It has been felt that producers, etc., of the latter category could probably intervene more rapidly.[1]

The provision of paragraph (2) of this Article is so worded that it must, in countries which admit this possibility, be directly applied by the competent administrative and judicial authorities ; in other words, it is " self-executing."

---

[1] *Actes de Londres*, pp. 416/7 (proposal of Cuba), 468/9.

ARTICLE 10*bis*(*a*)

(1) The countries of the Union are bound *(b)* **to assure to nationals of such countries effective protection against unfair competition** *(c)*.

(2) Any act of competition contrary to honest practices in industrial or commercial matters constitutes an act of unfair competition *(d)*.

(3) The following in particular shall be prohibited *(e)* **:**

1. **all acts of such a nature as to create confusion by any means whatever with the establishment, the goods, or the industrial or commercial activities, of a competitor** *(f)* **;**
2. **false allegations in the course of trade of such a nature as to discredit the establishment, the goods, or the industrial or commercial activities, of a competitor** *(g)* **;**
3. **indications or allegations the use of which in the course of trade is liable to mislead the public as to the nature, the manufacturing process, the characteristics, the suitability for their purpose, or the quantity, of the goods** *(h)*.

(a) The original Convention of 1883 did not contain any specific provision concerning the repression of unfair competition. In view of the fact that such repression was not even enumerated amongst the subjects of industrial property concerning which "national treatment" must be granted to persons entitled to the benefits of the Convention, the Additional Act, adopted by the Revision Conference of Brussels in 1900, introduced the latter principle with respect to unfair competition in a newly inserted Article 10*bis*.[1] The Revision Conference of Washington in 1911 went a step further, in introducing into the said Article the obligation for all member States to assure to nationals of the Union effective protection against unfair competition.[2] This obligation was strengthened, and a definition and examples of acts of unfair competition were included in the Article by the Revision

[2] *Actes de Washington*, pp. 53 (proposal), 105, 224 (observations), 305 (report of Committee), 310 (report to Plenary Committee), 255 (discussion and adoption in Third Plenary Session).

Conference of The Hague in 1925.[1] The Revision Conference of London in 1934 improved these provisions,[2] and the Revision Conference of Lisbon in 1958 added a further example of acts of unfair competition (paragraph (3)3).[3]

(b) Paragraph (1) of the Article under consideration, on the one hand, and paragraphs (2) and (3), on the other hand, are of a different character.

Paragraph (1) merely contains an *obligation for the member States* by virtue of which they are bound to assure to nationals of the (other) countries of the Union—and those assimilated to them under Article 3—effective protection against unfair competition.

In most countries, it will hardly be possible to assure *effective* protection against unfair competition by means other than *legislation*, but it was admitted at several Revision Conferences[4] that member States are not obliged to introduce *special* legislation to this effect if their existing general legislation—for example, provisions of civil law directed against torts, or principles of common law—suffices to assure effective protection against unfair competition.

On the other hand, paragraphs (2) and (3) of the Article under consideration contain, *in a directly applicable form*, a *definition* of what an act of unfair competition *is* and *examples* of such acts which *must, in particular, be prohibited.* These provisions are so worded that they must be considered " self-executing," in countries which admit this possibility, and must therefore be directly applied by the judicial or administrative authorities of the country where protection against unfair competition is sought.[5] Further observations on these subjects follow below.

(c) The various countries of the Union have different concepts of what is to be understood by "*unfair competition.*" Several acts are considered to be acts of unfair competition in one or more countries, but not—or only in special circumstances—in other countries.[1] In giving effective protection against unfair competition, each country may itself determine which acts come under this category, provided, however, that paragraphs (2) and (3) of the Article under consideration are complied with.

(d) The provision defines acts of unfair competition as *any act of competition contrary to honest practices in industrial or commercial matters.*

What is to be understood by "*competition*" will be determined in each country according to its own concepts : countries may extend the notion of acts of unfair competition to acts which are not competitive in a narrow sense, that is, within the same branch of industry or trade, but which unduly profit from a reputation established in another branch of industry or trade and thereby weaken such reputation.[2]

Any act of competition will have to be considered unfair if it is contrary to *honest practices in industrial or commercial matters.*[3] This criterion is not limited to honest practices existing in the country where protection against unfair competition is sought. The judicial or administrative authorities of such country will therefore also have to take into account honest practices established in international trade.

If a judicial or administrative authority of the country where protection is sought finds that an act complained of is contrary to honest practices in industrial or commercial matters, it will be obliged to hold such act to be an act of unfair competition and to apply the sanctions and remedies provided by its national law. A wide variety of acts may correspond to the above criterion.[4]

[3] Cf. in Italy: Corte di Cassazione, 31/7/1957, *G.R.U.R. Int.*, 1958, p. 535 (No. 1837) (German abstract).

[4] Cf. the literature cited in footnote 1, above, and, further, BIRPI's *Model Law for Developing Countries on Marks, Trade Names, and Acts of Unfair Competition*, 1967, p.78. See also, for example, in Austria: Oberster Gerichtshof, 9/10/1957, *G.R.U.R. Int.*, 1959, p. 397.

(e) Paragraph (3) of the Article under consideration gives *examples* of acts which are particularly to be regarded as acts of unfair competition and must therefore be prohibited. This provision again contains *common legislation* for all countries of the Union [1] and must either be accepted as part of their domestic legislation or be directly applied by their judicial or administrative authorities. The enumeration of examples given of acts of unfair competition is not limitative and constitutes only a minimum.[2]

(f) The first example given of acts which must be regarded as acts of unfair competition relates to all acts of such a nature as to create *confusion* by any means whatever with the *establishment*, the *goods*, or the *industrial or commercial activities*, of a *competitor*. Such confusion can be created by the use of identical or similar trademarks or trade names and will then frequently be prohibited by special legislation concerning those subjects. If this is not the case, acts creating confusion by those means must be prohibited as acts of unfair competition. This is also true for other means by which similar confusion can be created, such as the form of packages, titles of publicity,[3] references to the seat or other particulars of an enterprise,[4] etc. It is immaterial whether those acts are committed in good faith, although good faith may have an influence on the sanctions to be applied.[5]

(g) The second example of acts which must be regarded as acts of unfair competition relates to *false allegations* in the *course of trade* of such a nature as to *discredit* the *establishment*, the *goods*, or the *industrial or commercial activities*, of a *competitor*. The mere fact of discrediting a competitor by untrue allegations which would discredit his business, goods or services, even without injurious intention on the part of the person making the allegations, is sufficient for the application of this provision.[6] It has been left to the domestic legislation or case law of each country to decide whether, and under what circumstances, discrediting allegations which are not strictly *untrue* may also constitute acts of unfair competition.[7]

[5] *Actes de La Haye*, pp. 476/7, 581.

[6] *Ibidem*, p. 477

[7] *Actes de Londres*, p. 418.

(h) The third example of acts of unfair competition concerns *misleading allegations* but, this time, not particularly regarding the goods *of a competitor*—such allegations being generally covered by the preceding item 2—but concerning the *goods of the person who makes the allegations.* The provision under examination applies to all *indications or allegations* the use of which, *in the course of trade,* is liable to *mislead the public* as to the *nature,* the *manufacturing process,* the *characteristics,* the *suitability for their purpose,* or the *quantity,* of the goods concerned. It does not relate to similar indications or allegations as to the *origin* or *source* of the goods[1] or the *identity of the producer,* his *establishment* or his *industrial or commercial activities.* As to such acts, in so far as they are not covered by Article 10 of the Convention,[2] national legislations or case law will determine whether they are acts contrary to honest practices in industrial or commercial matters and for that reason must be deemed to be acts of unfair competition.

[1] *Actes de Lisbonne,* pp. 726, 790.

[2] *Ibidem,* p. 789.

ARTICLE 10*ter*(a)

(1) The countries of the Union undertake to assure to nationals of the other countries of the Union appropriate legal remedies effectively to repress all the acts referred to in Articles 9, 10, and 10*bis*(b).

(2) They undertake, further, to provide measures to permit federations and associations representing interested industrialists, producers, or merchants, provided that the existence of such federations and associations is not contrary to the laws of their countries, to take action in the courts or before the administrative authorities, with a view to the repression of the acts referred to in Articles 9, 10, and 10*bis*, in so far as the law of the country in which protection is claimed allows such action by federations and associations of that country *(c)*.

(a) This Article was introduced into the Convention by the Revision Conference of The Hague in 1925.[1] Its wording was slightly modified by the Revision Conference of London in 1934.[2]

(b) Paragraph (1) of the Article contains an *obligation for the member States* to assure to nationals of the other countries of the Union—and those assimilated to such nationals by Article 3—appropriate *legal remedies* effectively to repress all the acts referred to in Articles 9, 10 and 10*bis*.. This can only be understood as an obligation for member States to introduce, complete or maintain *legislation* effectively repressing *(i)* the trade in goods unlawfully bearing a trademark or a trade name which is entitled to protection in the country concerned, *(ii)* the use of false indications of the source of goods or of the identity of the producer, manufacturer or merchant, and *(iii)* acts of unfair competition. The last obligation (under *(iii)*) is also expressed in Article 10*bis*(1), to which provision the paragraph under consideration only adds that *appropriate legal remedies* must be provided. With respect to the first two obligations (under *(i)* and *(ii)*), the paragraph under consideration reinforces Article 9(6), which is

---

[1] *Actes de La Haye*, pp. 252/5 (proposal concerning Article 10*bis*), 349/51 (observations), 478/80 (report of Fourth Sub-Committee), 525/6 (report of General Committee), 547 (report of Drafting Committee), 581 (discussion and adoption in Second Plenary Session).

[2] *Actes de Londres*, pp. 422 (proposal of U.K. and report of Fourth Sub-Committee), 470 (report of Drafting Committee), 519 (adoption in Second Plenary Session).

applicable also to Article 10, because it specifies that the actions and remedies available in these cases must be *effective.*

At the Revision Conference of The Hague it was understood that national legislation, in providing for effective repression of the acts referred to, may make a difference between provisions allowing claims for damages and those providing for injunctions against the incriminated acts. Whereas it would be possible not to grant damages with respect to acts committed in good faith, the same would not apply to injunctions.[1]

(c) Paragraph (2) of the Article under consideration again contains an "*undertaking*" *by the member States.* Although this word is also used in Articles 6*bis*, 6*sexies* and 7*bis* of the Convention, the context in which it is used here is different. According to the Articles referred to in the previous sentence, the member States undertake to refuse, cancel, protect, or accept certain things, which may be interpreted in countries which admit such a possibility as imposing direct obligations upon the administrative or judicial authorities of such countries. According to the paragraph under consideration, however, the member States undertake *to provide measures to permit,* etc., which can only be understood as referring to *legislation.*

The object of such legislation must be to permit *federations and associations,* representing *interested industrialists, producers or merchants,* to take action when acts referred to in Articles 9, 10 and 10*bis* are committed. Two provisos are attached to the admission of such competence on the part of federations and associations: first, their existence must not be contrary to the laws of their countries (cf. observation *(e)* on Article 7*bis*,[2] and, secondly, their action may be permitted only to the extent to which the law of the country in which protection is sought allows such action by federations and associations of that country.

[2] Cf. in Italy: Tribunale di Milano, 11/1/1964, *G.R.U.R. Int.,* 1965, p. 253 (German translation).

ARTICLE 11*(a)*

(1) The countries of the Union shall, in conformity with their lomestic legislation *(b)*, **grant temporary protection** *(c)* **to patentable nventions, utility models, industrial designs, and trademarks** *(d)*, **in espect of goods exhibited at official or officially recognized interna-ional exhibitions** *(e)* **held in the territory of any of them** *(f)*.

(2) Such temporary protection shall not extend the periods rovided by Article 4. If, later, the right of priority is invoked, the uthorities of any country may provide that the period shall start rom the date of introduction of the goods into the exhibition *(g)*.

(3) Each country may require, as proof of the identity of the rticle exhibited and of the date of its introduction, such documentary vidence as it considers necessary *(h)*.

(a) Since lack or inadequacy of protection of industrial property t international exhibitions was one of the reasons which promoted e conclusion of the Convention,[1] it is natural that the principle of uch protection should already have been included in the original text f the Convention of 1883.[2] It was then the intention to oblige the ember States to take the necessary legislative measures to that effect ut to leave them free in determining the ways and means of achieving is end.[3] These principles were confirmed at the Revision Conference f Brussels in 1900,[4] where the words " in conformity with the domestic w of each country " were introduced into the Article by the Addi-onal Protocol adopted at that Conference. At the Revision Confer-nce of The Hague in 1925 ambitious proposals were made to insert much more detailed regulation of the subject in the Article, but it nly proved possible to add the provisions of paragraphs (2) and (3).[5]

(b) The Article under consideration still contains only an *obligation r the member States* to *establish and maintain legislation* in order

[3] *Ibidem*, I, pp. 105/7.

[4] *Actes de Bruxelles*, pp. 47/8 (proposal), 185/6 (discussion), 312 (adoption).

[5] *Actes de La Haye*, pp. 255/62 (proposal), 351/2 (observations), 436/7 (report of cond Sub-Committee), 526 (report of General Committee), 547 (report of Drafting ommittee), 581 (adoption in Second Plenary Session).

temporarily to protect the enumerated subjects of industrial property in respect of goods exhibited at certain exhibitions. It leaves the domestic legislation of a member State free to choose the means for offering such protection.

(c) Temporary protection, by domestic legislation, of the enumerated subjects of industrial property may be provided by various means. Such legislation may, for example, grant *a right of priority,* more or less similar to that recognized in Article 4 of the Convention, to applications for protection of exhibited subjects. Such right will apply during a certain period from the day on which the subject concerned was introduced at the exhibition. Such protection by a right of priority is temporary because it will expire if, or in so far as, the right is not exercised within the prescribed period. It is also possible, for example, in the case of exhibited patentable inventions, to make provision for temporary protection by other means, namely, by prescribing that, during a certain period, such exhibition will not *destroy the novelty of the invention* and that the person who exhibits the invention will also be protected against *usurpation* of his invention by *third parties.* Still another possibility of protection consists in the recognition of a right of prior use in favor of the exhibitor as against possible rights acquired by third parties.

(d) The subjects of industrial property which, according to the provision under consideration, are to be protected are *patentable inventions, utility models, industrial designs and trademarks.* The provision is silent on other subjects of industrial property, such as service marks and trade names. There is therefore no *obligation* for member States to grant temporary protection to these subjects also, but they are free to do so if they wish.

(e) The provision under examination applies only to temporary protection of inventions, etc., in respect of goods exhibited at *official or officially recognized exhibitions.*[1] The question whether this condition is fulfilled will be determined by the administrative or judicial

---

[1] A definition of an "official or officially recognized exhibition" is given in the Convention concerning International Exhibitions, signed in Paris on November 22, 1928. This definition, however, cannot be applied to the Article under consideration because the purpose of this Article, on the one hand, and that of the Convention referred to, on the other hand, are quite different.

authorities of the country where temporary protection is sought. As will be observed under *(f)*, below, this is not necessarily the same country as that in which the exhibition is held.

The authorities referred to above will probably deem an exhibition to be *official* if it is *organized* by a State or other public authority, and will consider it *officially recognized* if it has been *recognized* as such by a State or other public authority. Moreover, the exhibition has to be *international*, which means that it must include the exhibition of goods coming from foreign countries.

Since these definitions leave a certain amount of uncertainty, some member States notify the International Bureau of the exhibitions in respect of which they desire the provision to be applied, after which the Bureau publishes these notifications. Other countries advertise their official or officially recognized international exhibitions in an official Gazette. Such notifications and publications, although not binding upon the authorities of a country where protection according to the provision is sought, provide a basis for their decisions.

Member States are, of course, free to grant in their domestic legislation temporary protection with respect also to exhibitions other than those envisaged in the provision under consideration.

(f) In their domestic legislation the member States must not only grant temporary protection with respect to international exhibitions *in their own territory* but must extend such protection to *all exhibitions, as defined, held in the territory of any other member State.* This means that the temporary protection provided by such legislation may be claimed by persons entitled to the benefits of the Convention, not only with regard to goods exhibited, under the conditions prescribed, in the country itself but also regarding goods exhibited, under the conditions prescribed, in other countries of the Union.

(g) Paragraph (2) of the Article under consideration deals with the relationship between the temporary protection to be granted according to this Article and the *right of priority granted by Article 4 of the Convention.* Particularly if the temporary protection envisaged is given in the form of another right of priority—see observation *(c)* above—the question arises whether such right and the right of priority granted by Article 4 of the Convention may be cumulated. Such cumulation would mean, for example, that an interested party could first, within the period of priority starting from the date of exhibition, file an application for protection of the subject concerned with priority in one country of the Union and then, on the basis of this first applica-

tion, apply, within a new period of priority granted under Article 4, for protection in the other countries, with *priority as from the exhibition.*

The first sentence of the provision now being considered implies that such cumulation of priorities cannot be claimed, in that it states that the periods of priority provided by Article 4 shall not be extended. However, the second sentence of this provision leaves a certain amount of freedom[1] to the authorities of the country where protection and priority are claimed. If the exhibition of a subject precedes a first application for protection of such subject, the period of priority under Article 4 *may, without being extended,* be counted as *starting* from the date of introduction of the goods into the exhibition.

(h) In order to apply its domestic legislation regarding temporary protection of certain subjects exhibited at international exhibitions as described, each country may require proof, both as to the *identity of the article exhibited* and as to the *date of its introduction at the exhibition,*[2] in whatever form of documentary evidence it considers necessary. Such documentary evidence may, for example, consist of a certificate relating to both of the points referred to above and issued by the competent authorities of the exhibition concerned or of the country where it was held.

---

[1] *Actes de La Haye,* p. 526.

[2] *Ibidem,* p. 437.

ARTICLE 12*(a)*

(1) Each country of the Union undertakes to establish a special industrial property service and a central office *(b)* for the communication to the public of patents, utility models, industrial designs, and trademarks *(c)*.

(2) This service shall publish an official periodical journal *(d)*. It shall publish regularly:

- **(a) the names of the proprietors of patents granted, with a brief designation of the inventions patented;**
- **(b) the reproductions of registered trademarks *(e)*.**

(a) The first paragraph of this Article was already included in essence in the original text of the Convention of 1883.[1] The Final Protocol, which formed an integral part of that Convention, made an addition to this, under paragraph 5, to the effect that the activities of the special industrial property service would include, as far as possible, the publication, in each member State, of an official periodical journal.[2] The Revision Conference of Washington in 1911 added utility models to the subjects to be communicated to the public and transferred the provision from the Protocol to the Convention itself.[3] The Revision Conference of The Hague in 1925 rendered the publication of an official periodical journal mandatory,[4] and the Revision Conference of London in 1934 specified the subjects which are to be published regularly.[5]

(b) As the protection of industrial property, and particularly its international protection, can obviously not operate without *national administrations* which *register* the rights concerned and *communicate these rights to the public*, the Convention obliges each member State to establish such administration *in a central office*. As is shown by

---

[1] *Actes de Paris*, I, pp. 27/8 (proposal), 108, 145 (adoption).

[2] *Ibidem*, pp. 151/2.

[3] *Actes de Washington*, pp. 55 (proposal), 97, 224 (observations), 310 (report to Plenary Committee), 255 (adoption in Third Plenary Session).

[4] *Actes de La Haye*, p. 263 (proposal), 353 (observation), 415/6 (report of First Sub-Committee), 526 (report of General Committee), 547/8 (report of Drafting Committee), 581 (adoption in Second Plenary Session).

[5] *Actes de Londres*, pp. 198/9 (proposal), 344/5 (report of First Sub-Committee), 470/1 (report of Drafting Committee), 519 (adoption in Second Plenary Session).

Article 13(3)*(b)* of the Convention, member States may also conclude special agreements establishing a *common* office possessing for each of them the character of a special national service of industrial property. An example of such common office is the *African and Malagasy Industrial Property Office*, established at Yaoundé (Cameroon) by virtue of an Agreement between the participating States, dated September 13, 1962.

(c) The administration envisaged by the Article under consideration must be established for the *communication to the public* of *patents, utility models, industrial designs* and *trademarks.* No mention is made of other subjects of industrial property so that member States are free to decide whether, and how, those subjects should also be communicated to the public.

(d) The publication of an *official periodical journal* by each national administration, made mandatory by the Revision Conference of The Hague in 1925, provides the most practical way of communicating to the public the granting of industrial property rights.

(e) Each national administration must, in particular, publish regularly the *essential data* concerning the most important subjects of industrial property, namely, *patents* and *trademarks.* These data are the names of proprietors of patents granted, with a brief designation of the inventions patented, and reproductions of registered trademarks. It must also publish data concerning any right of priority claimed (cf. Article 4 D(2) and (5)).

The administrations may, and usually do, publish many more data, such as *dates* of grant or registration, dates of applications, analogous data with respect to *utility models, industrial designs, service marks,* and application of Article 6*ter* of the Convention (cf. Article 6*ter* (3)*(a)*), etc.

ARTICLE 13(a)

(1)(a) The Union shall have an Assembly *(b)* consisting of those countries of the Union which are bound by Articles 13 to 17(c).

(b) The Government of each country shall be represented by one delegate, who may be assisted by alternate delegates, advisors, and experts.

(c) The expenses of each delegation shall be borne by the Government which has appointed it.

(2)(a) The Assembly shall:

(i) deal with all matters concerning the maintenance and development of the Union and the implementation of this Convention *(d)*;

(ii) give directions concerning the preparation for conferences of revision *(e)* to the International Bureau of Intellectual Property (hereinafter designated as "the International Bureau" referred to in the Convention establishing the World Intellectual Property Organization (hereinafter designated as "the Organization" *(f)*), due account being taken of any comments made by those countries of the Union which are not bound by Articles 13 to 17 *(g)*;

(iii) review and approve the reports and activities of the Director General of the Organization concerning the Union, and give him all necessary instructions concerning matters within the competence of the Union *(h)*;

(iv) elect the members of the Executive Committee of the Assembly;

(v) review and approve the reports and activities of its Executive Committee, and give instructions to such Committee;

(vi) determine the program and adopt the triennial budget of the Union, and approve its final accounts *(i)*;

(vii) adopt the financial regulations of the Union *(j)*;

(viii) establish such committees of experts and working groups as it deems appropriate to achieve the objectives of the Union;

(ix) determine which countries not members of the Union and which intergovernmental and international non-governmental organizations shall be admitted to its meetings as observers;

(x) adopt amendments to Articles 13 to 17 *(k)*;

(xi) take any other appropriate action designed to further the objectives of the Union;

(xii) perform such other functions as are appropriate under this Convention *(l)*;

(xiii) subject to its acceptance, exercise such rights as are given to it in the Convention establishing the Organization *(m)*.

(b) With respect to matters which are of interest also to other Unions administered by the Organization, the Assembly shall make its decisions after having heard the advice of the Coordination Committee of the Organization *(n)*.

(3)(a) Subject to the provisions of subparagraph (b), a delegate may represent one country only.

(b) Countries of the Union grouped under the terms of a special agreement in a common office possessing for each of them the character of a special national service of industrial property as referred to in Article 12 may be jointly represented during discussions by one of their number *(o)*.

(4)(a) Each country member of the Assembly shall have one vote.

(b) One-half of the countries members of the Assembly shall constitute a quorum.

(c) Notwithstanding the provisions of subparagraph (b), if, in any session, the number of countries represented is less than one-half but equal to or more than one-third of the countries members of the Assembly, the Assembly may make decisions but, with the exception of decisions concerning its own procedure, all such decisions shall take effect only if the conditions set forth hereinafter are fulfilled. The International Bureau shall communicate the said decisions to the countries members of the Assembly which were not represented and shall invite them to express in writing their vote or abstention within a period of three months from the date of the communication. If, at the expiration of this period, the number of countries having thus expressed their vote or abstention attains the number of countries which was lacking for attaining the quorum in the session itself, such decisions shall take effect provided that at the same time the required majority still obtains *(p)*.

(d) Subject to the provisions of Article 17(2), the decisions of the Assembly shall require two-thirds of the votes cast.

(e) Abstentions shall not be considered as votes.

(5)(a) Subject to the provisions of subparagraph (b), a delegate may vote in the name of one country only.

(b) The countries of the Union referred to in paragraph (3)(b) shall, as a general rule, endeavor to send their own delegations to the sessions of the Assembly. If, however, for exceptional reasons, any such country cannot send its own delegation, it may give to the delegation of another such country the power to vote in its name, provided that each delegation may vote by proxy for one country only. Such power to vote shall be granted in a document signed by the Head of State or the competent Minister *(q)*.

(6) Countries of the Union not members of the Assembly shall be admitted to the meetings of the latter as observers.

(7)(a) The Assembly shall meet once in every third calendar year in ordinary session upon convocation by the Director General and, in the absence of exceptional circumstances, during the same period and at the same place as the General Assembly of the Organization *(r)*.

(b) The Assembly shall meet in extraordinary session upon convocation by the Director General, at the request of the Executive Committee or at the request of one-fourth of the countries members of the Assembly.

(8) The Assembly shall adopt its own rules of procedure.

(a) As has been observed above in Chapter II.1, Article 13 and the following Articles are among those Articles of the Convention which contain provisions of international public law regulating rights and obligations of the member States and establishing the organs of the Union created by the Convention, as well as provisions of an administrative character. Although parts of these Articles and even some of them in their entirety existed already in former texts of the Convention,[1] this latter part of the Convention was entirely rearranged at the Revision Conference of Stockholm in 1967, while many important new provisions were added on the same occasion.

This part of the Convention, which can be considered of an administrative character in a very broad sense, differs from the preceding part in other respects as well. In the first place, the latter

---

[1] See, for a comparison between the Lisbon text of the Convention and the proposals for the Stockholm Conference, proposals which were to a large extent accepted: document S/3 prepared for the Stockholm Conference, pp. 14/6.

part of the Convention contains very detailed rules and therefore necessitates fewer comments; many of its provisions are self-explanatory. Secondly, the administrative part of the Convention cannot be fully understood without considering at the same time another Convention, concluded simultaneously with the revision of the Paris Convention at Stockholm in 1967, namely, the Convention of July 14, 1967, establishing the *World Intellectual Property Organization*.[1]

This new Convention and the Paris Convention are to a large extent independent of each other, and States may—with one important exception: see Article 14(2) of the WIPO Convention—accede to or withdraw from one of these Conventions without acceding to or withdrawing from the other. Nevertheless, both Conventions refer to each other on several points and are destined to complete each other. It is therefore necessary to explain briefly the *objectives and structure of the World Intellectual Property Organization* before commenting upon the administrative provisions of the Paris Convention.[2]

The objectives of the World Intellectual Property Organization are (see Articles 3 and 2 of the WIPO Convention):

(i) to promote the protection of *intellectual property* throughout the world through cooperation among States and, where appropriate, in collaboration with any other international organization (*intellectual property* includes *industrial property as defined in Article 1 of the Paris Convention* as well as copyright and related subjects);

(ii) to ensure administrative cooperation *among the Unions* (these Unions being *the Union established by the Paris Convention*, the Unions and Agreements established in relation with that Union (cf. Article 19 of the Paris Convention), the Berne Union, established by the Convention of September 9, 1886, for the Protection of Literary and Artistic Works, and any other international agreement designed to promote the protection of intellectual property and administered by WIPO).

Membership in WIPO is open to any State which is a *member of any of those Unions*, and also to any State not a member of any of those Unions, provided that:

(i) it is a member of the United Nations, any of the Specialized Agencies brought into relationship with the United Nations, or the

---

[1] Hereinafter frequently referred to as " WIPO. " See the text of this Convention in *I.P.*, 1967, p. 155.

[2] Cf. KRIEGER and ROGGE: " Die neue Verwaltungsstruktur der Pariser und Berner Union und die neue Weltorganisation für geistiges Eigentum, " *G.R.U.R. Int.*, 1967, pp. 462 *et seq.*

International Atomic Energy Agency, or is a party to the Statute of the International Court of Justice, or

(ii) it is invited by the General Assembly of WIPO to become a party to the Convention establishing that Organization.

WIPO has several organs : in the first place, a *General Assembly* consisting of the States party to the WIPO Convention *which are also members of any of the Unions*, for example, the *Paris Union*, and, furthermore, a *Conference* consisting of all States party to the WIPO Convention *whether or not they are members of any of the Unions.*

The *General Assembly* is the supreme organ of the Organization, the *Conference* having a more limited task, confined principally to discussing matters of general interest in the field of intellectual property, in view of which it may adopt recommendations, having regard to the competence and autonomy of the Unions, and to establishing a program of legal-technical assistance in the field of intellectual property to States or organizations.

WIPO also has a *Coordination Committee* consisting of the States party to the WIPO Convention which are members of the *Executive Committee of the Paris Union* (see, below, Article 14 of the Paris Convention), or of the Executive Committee of the Berne Union, or both. One of the tasks of the Coordination Committee is to give advice to the *organs of the Unions*, the General Assembly, the Conference, etc., on all administrative, financial and other matters of *common interest either to two or more of the Unions*, or to *one or more of the Unions and the Organization*, and in particular on the budget of *expenses common to the Unions* (see, below, observation *(d)* on Article 16).

In order to attain its objectives, WIPO will have to fulfil several functions, for example, the promotion of measures designed to *facilitate the efficient protection of intellectual property throughout the world* and to *harmonize national legislation in this field*, and the *performance of the administrative tasks of the Paris Union and other Unions.* To this end the Organization will have a *Secretariat* which is called the *International Bureau of Intellectual Property* and which is a continuation of the United Bureaux of the Paris and Berne Unions, known under the name of BIRPI. The International Bureau will be directed by a Director General.

WIPO will have *two separate budgets* : the budget of expenses *common to the Unions*, and the budget of the *Conference*. The *budget of expenses common to the Unions* will include provision for expenses of interest to several Unions ; it will be financed, inter alia, from *contributions of the Unions* which will be fixed *by the Assembly of* *each Union*, having regard to the interest the Union has in the common expenses. The *budget of the Conference* will include provision for the expenses of the Conference and for the cost of the legal-technical assistance program; it will be financed, inter alia, from contributions of Member States of WIPO who are not members of any Union and from sums made available to that budget *by the Unions*, according to autonomous decisions taken by the *Assembly of each Union*.

Under transitional provisions in the WIPO Convention it is provided that, until the first Director General of the Organization assumes office, references made in that Convention to the International Bureau or to its Director General shall be deemed to be references to BIRPI, or its Director, respectively.

It will be clear from the foregoing observations that the Paris Convention and the WIPO Convention are, in several respects, interrelated. Further references to this relationship will be made in the following comments on the administrative provisions of the Paris Convention.

(b) Until the Revision Conference of Lisbon in 1958 the Paris Convention had no organ in which the member States were represented, except in the form of the Revision Conferences (Article 14(1),(2), (3) and (4) of the Act of Washington (1911), already partly in existence in earlier texts and unchanged by the Revision Conferences of The Hague (1925), London (1934) and Lisbon (1958)). Such Revision Conferences were comparatively rare and were held at irregular intervals. The Revision Conference of Lisbon provided in Article 14(5) that, during the interval between Revision Conferences, *Conferences of Representatives of all the countries of the Union* would meet every three years, or more frequently. Only limited powers, however, were given to these Conferences of Representatives, as they could only *(i)* "*draw up a report* on the foreseeable expenditure of the International Bureau for each three-year period to come," *(ii)* "*consider* questions relating to the protection and development of the Union," and *(iii)* modify, by unanimous decision and on condition that they meet as Conferences of Plenipotentiaries, the maximum annual amount of the expenditure of the International Bureau. Apart from this latter point, no powers of *decision* were given to the Conference of Representatives, because control of the organization, operation and expenditure of the International Bureau was entrusted to the Government of the Swiss Confederation (Article 13(1) and (10) of the Lisbon Act of the Convention, provisions which had already been substantially included in all earlier Acts).

The Revision Conference of Stockholm in 1967 entirely changed this system by establishing an *Assembly* of the Union as its supreme organ in which are vested all policy-making and controlling powers (see Articles 13(2), 14(2)*(a)*, 16(6), 17(1) and (2)).[1]

(c) As the Revision Conference of Stockholm dealt with two entirely different subjects, namely, on the one hand, the introduction into the Convention of provisions (Article 4 I(1) and (2)) concerning the right of priority with respect to inventors' certificates and, on the other hand, a thorough revision of the administrative provisions of the Convention, it decided to give the member States the opportunity to accept only one of these parts of the revision, or one of these parts earlier than the other. This was done because the acceptance of each of these parts in any member State could depend on different considerations and might require different legal procedures. In view of this fact, Article 20(1) of the Stockholm Act specifies that any country which is already a member of the Union may, when ratifying the Stockholm Act or acceding to it, declare in the relevant diplomatic instrument that its ratification or accession will *not* apply :

(*i*) to Articles 1 to 12 (including the newly introduced Article 4 I(1) and (2)), or

(*ii*) to Articles 13 to 17 (containing the revised administrative system).

Only member States which have *not* excluded *Articles 13 to 17* from their acceptance of the Stockholm Act and which therefore are *bound* by the revised administrative provisions will be *members of the newly created Assembly*. The other member States of the Union which are *not* (yet) bound by the revised administrative provisions will be admitted to the meetings of the Assembly as observers (Article 13(6)), whereas States not members of the Union *may* only be admitted as observers (Article 13(2)*(a)*(ix)) . However, a transitional provision (Article 30(2)) attenuates this system by allowing member States of the Union, not (yet) bound by the administrative provisions of Articles 13 to 17 of the Stockholm Act, to exercise, if they so desire and until five years after the entry into force of the WIPO Convention, the rights provided under the said Articles 13 to 17 as if they were bound by those Articles, which means, inter alia, that under those conditions and during that period they are deemed to be members of the Assembly.

---

[1] Cf. also Report of Main Committee IV of the Stockholm Conference, *I.P.*, 1967, p. 220, paragraph 7.

It should be observed that, according to Article 21, States *which have not yet been members of the Union until they accede to the Stockholm Act* may *not* exclude any part of that Act from their accession. Those States will therefore, upon accession, always be bound by the revised administrative provisions and automatically become members of the Assembly.

(d) This provision vests all policy-making powers concerning the Union in the Assembly. The reference to " implementation " of the Convention is not intended to refer to its application by the legislature, government, or courts of a member State, because the Assembly cannot have any jurisdiction on these subjects with regard to sovereign States, but rather to its implementation by the Secretariat and other organs of the Union.[1]

(e) One of the aims of the Paris Convention is continuously to improve its system of international protection of industrial property by submitting the Convention, from time to time, to revision (see Article 18). Since the Revision Conference of Washington in 1911, and until the Stockholm Conference of 1967, the preparation of such revision conferences was entrusted to the Administration of the country in which the Conference was to be held, with the assistance of the International Bureau (paragraph (3) of Article 14 of the texts of Washington, The Hague, London and Lisbon). This system placed a heavy burden on the Administration of the host country of a revision conference and did not give all member States an equal influence on the preparation of a revision conference. Moreover, it made agreement between the member States at a revision conference difficult to achieve as the program of revision was submitted to member States only for written comments and was not further discussed before the opening of the Conference.[2]

The Revision Conference of Stockholm in 1967 changed this system and entrusted the *Assembly of the Union* with the task of giving *directions* concerning the preparation for conferences of revision *to the Secretariat.* Thus, the preparations for conferences of revision will be directed collectively by the member States. Cooperation between the Secretariat and the Executive Committee (Article 15(7)*(a)*) and committees of experts or working groups of delegates of member

---

[1] Cf. document S/3 prepared for the Stockholm Conference, p. 20, paragraph 56.

[2] Cf. document S/3 prepared for the Stockholm Conference, pp. 10/11, paragraph 28, p. 20, paragraph 57.

States and interested international organizations may further contribute to the adequate preparation of conferences of revision (see Article 13(2)*(a)*(viii) and Article 15(7)*(a)* and *(b)*).

(f) The original text of the Paris Convention of 1883 had already established an international office under the name of International Bureau of the Union for the Protection of Industrial Property, which was entrusted with administrative tasks concerning the Union (Article 13 of the Paris Convention and Article 6 of its Final Protocol). This Bureau was later united with the corresponding Bureau of the Union for the Protection of Literary and Artistic Works and these united Bureaux were known under the common designation of BIRPI.

The Revision Conference of Stockholm in 1967 replaced the said organ by a newly created *International Bureau of Intellectual Property,* which will be the Secretariat of WIPO. As has been observed already, this International Bureau will be a continuation of BIRPI (Article 15(1)*(a)*). See also the transitional provisions of Article 30(1), (3) and (4).

(g) Since revisions of the Convention concern *all* its member States, and not only those which, having accepted the new administrative provisions, are bound by Articles 13 to 17, it is prescribed that in the preparation of revision conferences *due account must be taken* of any *comments made by member States which are not (yet) bound* by these Articles.

It has been observed already that the International Bureau, in making preparations for revision conferences will cooperate with the Executive Committee and may also consult with intergovernmental and international non-governmental organizations (Article 15(7)*(b)*). This will no doubt happen frequently since past experience has shown that collaboration with international organizations, especially of private interested circles, may have considerable influence on the development of the international protection of industrial property.

(h) This provision entrusts the Assembly with control over the Secretariat as far as its activities relate to the Paris Union.

(i) According to this provision, the Assembly has the power to determine and control the program, budget and final accounts of the Union. Since the Assembly will normally meet only once in every third calendar year (Article 13(7)*(a)*), the budget to be approved by it will be triennial. Within the limits of the program and this triennial budget, yearly budgets and programs will be prepared by the Secretariat and

approved by the Executive Committe, and the latter will also report on the yearly accounts (Article 14(6)(iii) and (iv)). This Committee will be controlled by the Assembly, by virtue of Article 13(2)*(a)*(v).

(j) Financial regulations adopted by the Assembly may contain details regarding the budget, reports and accounts, and all other matters concerning the financial administration of the Union.

(k) Prior to the Revision Conference of Stockholm, only *revision conferences* could modify the provisions of the Convention and, according to established practice, only by *unanimous vote* of the member States participating in such conference (see, below, ad Article 18). This system was considered too cumbersome for the revision of *administrative provisions* which would not affect private interests and only to a limited extent the interests of the member States.[1] In view of this, the Revision Conference of Stockholm introduced a distinction between, on the one hand, *revisions* of the Convention with respect to provisions of substantive law and regarding acceptance or denunciation of the Convention by States, its entry into force, disputes between States, etc., and, on the other hand, *amendments* of the *administrative provisions of Articles 13 to 17. Revisions* continue to be within the exclusive competence of *revision conferences* specially convened to that effect (Article 18), whereas *amendments* may be adopted by a simplified procedure for which competence is given to the *Assembly* (Article 17).

(l) This provision indicates that the Assembly may also exercise functions other than those expressly referred to in the preceding subparagraphs. For example, according to Article 14(5)*(c)* the Assembly will establish the details of the rules governing the election and possible re-election of the members of the Executive Committee.

(m) As has already been mentioned above under observation *(b)*, the Revision Conference of Stockholm envisaged a close relationship between the Paris Convention and the WIPO Convention, both of which Conventions are destined to complement each other. One of the aspects of this relationship is that *in the WIPO Convention* certain rights have been given to *the Assembly of the Paris Union* (see, for example, Article 6(3)*(g)*, Article 11(2)*(b)*(i), (3)*(b)*(ii) and (8)*(b)*, and

---

[1] See document S/3 prepared for the Stockholm Conference, p. 40, paragraph 119.

Article 17(2), of the WIPO Convention). The provision under consideration refers to these regulations.

(n) Several matters to be dealt with by organs of the Paris Union will be of interest also to other Unions, since the Secretariat, headquarters and items of expenditure will be common (see, below, Article 16). In those cases, the Assembly will make its decisions after having taken the advice of the *Coordination Committee,* which has been referred to above as one of the organs of WIPO. After this advice is taken, the decision remains with the Assembly, as the sovereign organ of the Union.

(o) This provision takes into account the special situation of member States which have concluded an agreement by virtue of which a *common office* replaces the *national* offices or services of industrial property, as referred to in Article 12. An example of such common office exists in the *African and Malagasy Industrial Property Office,* established at Yaoundé (Cameroon) by virtue of an Agreement between the participating States, dated September 13, 1962 (see, above, observation *(b)* on Article 12).

States party to such agreement may, in derogation of the general rule that a delegate may represent only one State (Article 13(1)*(b)* and (3)*(a)*), be jointly represented, during *discussions* in the *Assembly,* by one and the same delegate. With respect to *voting,* however, a stricter rule is given in Article 13(5)*(b)* (see observation *(q)* below).

(p) Although one-half of the countries members of the Assembly (and which have voting powers according to Article 13(5)*(a)* and *(b)*) will constitute the quorum necessary for making decisions, special rules are given for reaching decisions in cases where this quorum is not attained. These rules, although complicated, seem nevertheless self-explanatory. If necessary, they will be further elaborated in the rules of procedure which the Assembly will establish according to Article 13(8).[1]

(q) This provision contains a special rule for *voting* by member States grouped under a special agreement in a *common office* possessing for each of them the character of a national office or service of industrial property, a situation which was referred to above

---

[1] Cf. Report of Main Committee IV of the Stockholm Conference, *I.P.,* 1967, p. 220, paragraph 9.

under observation *(o)*. Each delegation of such State may vote by proxy for *one* other such State. This system was adopted as a compromise in view, on the one hand, of the generally accepted practice that each delegation to an Assembly may vote only for its own country and, on the other hand, of the difficulty for member States which do not have national offices of industrial property, but only a common office, to be always adequately represented at the meetings of the Assembly.

(r) This provision again derives from the intention that the administrative operations of the Paris Union and of WIPO will complement each other.

ARTICLE 14*(a)*

(1) The Assembly shall have an Executive Committee *(b)*.

(2)(a) The Executive Committee shall consist of countries elected by the Assembly from among countries members of the Assembly *(c)*. Furthermore, the country on whose territory the Organization has its headquarters shall, subject to the provisions of Article 16(7)(b), have an ex officio seat on the Committee *(d)*.

(b) The Government of each country member of the Executive Committee shall be represented by one delegate, who may be assisted by alternate delegates, advisors, and experts.

(c) The expenses of each delegation shall be borne by the Government which has appointed it.

(3) The number of countries members of the Executive Committee shall correspond to one-fourth of the number of countries members of the Assembly. In establishing the number of seats to be filled, remainders after division by four shall be disregarded.

(4) In electing the members of the Executive Committee, the Assembly shall have due regard to an equitable geographical distribution and to the need for countries party to the Special Agreements established in relation with the Union to be among the countries constituting the Executive Committee *(e)*.

(5)(a) Each member of the Executive Committee shall serve from the close of the session of the Assembly which elected it to the close of the next ordinary session of the Assembly.

(b) Members of the Executive Committee may be re-elected but only up to a maximum of two-thirds of such members *(f)*.

(c) The Assembly shall establish the details of the rules governing the election and possible re-election of the members of the Executive Committee *(g)*.

(6)(a) The Executive Committee shall *(h)*:

(i) prepare the draft agenda of the Assembly;

(ii) submit proposals to the Assembly in respect of the draft program and triennial budget of the Union prepared by the Director General;

(iii) approve, within the limits of the program and the triennial budget, the specific yearly budgets and programs prepared by the Director General ;

(iv) submit, with appropriate comments, to the Assembly, the periodical reports of the Director General and the yearly audit reports on the accounts ;

(v) take all necessary measures to ensure the execution of the program of the Union by the Director General, in accordance with the decisions of the Assembly and having regard to circumstances arising between two ordinary sessions of the Assembly ;

(vi) perform such other functions as are allocated to it under this Convention *(i)*.

(b) With respect to matters which are of interest also to other Unions administered by the Organization, the Executive Committee shall make its decisions after having heard the advice of the Coordination Committee of the Organization *(j)*.

(7)(a) The Executive Committee shall meet once a year in ordinary session upon convocation by the Director General, preferably during the same period and at the same place as the Coordination Committee of the Organization *(k)*.

(b) The Executive Committee shall meet in extraordinary session upon convocation by the Director General, either on his own initiative, or at the request of its Chairman or one-fourth of its members.

(8)(a) Each country member of the Executive Committee shall have one vote.

(b) One-half of the members of the Executive Committee shall constitute a quorum *(l)*.

(c) Decisions shall be made by a simple majority of the votes cast.

(d) Abstentions shall not be considered as votes.

(e) A delegate may represent, and vote in the name of, one country only *(m)*.

(9) Countries of the Union not members of the Executive Committee shall be admitted to its meetings as observers *(n)*.

(10) The Executive Committee shall adopt its own rules of procedure.

(a) This Article was introduced into the Convention by the Revision Conference of Stockholm in 1967.

(b) Until the Revision Conference of Stockholm the Paris Convention did not contain any provision concerning an Executive Committee. The Conference of Representatives of all countries of the Paris Union, referred to above under observation *(b)* on Article 13, had set up an Executive Committee, according to rules of procedure which it had established, but since no powers were given to that Committee in the Convention and the powers of the Conference of Representatives itself were very limited, the said Committee could only exercise advisory functions.

The Revision Conference of Stockholm established an Executive Committee and described its functions in the Convention. Since the Assembly of the Union is too large a body to be convened frequently, the Executive Committee is envisaged as a smaller organ of the Union, which will *prepare meetings of the Assembly* (Article 14(6)*(a)*(i) and (ii)), establish, within the limits of the program and triennial budget set up by the Assembly, *yearly budgets and programs*, and *report on the yearly accounts* (Article 14(6)*(a)*(iii) and (iv)) and take all necessary *measures to ensure the execution of the program* (Article 14(6)*(a)*(v)). As has been observed already, the Executive Committee will be controlled by the Assembly, by virtue of Article 13(2)*(a)*(v).

(c) The Executive Committee will consist of countries elected *by the Assembly* from among *countries members of the Assembly*. These countries will include countries which have not yet accepted the new administrative system set up by the Stockholm Conference in Articles 13 to 17 of the Convention, but which have given the notification provided for in Article 30(2) and are therefore deemed to be members of the Assembly. However, these latter countries are deemed to be members of the Assembly only until the expiration of a period of five years after the entry into force of the WIPO Convention. If after the expiration of this period they are still not bound by Articles 13 to 17 of the Stockholm text, these countries will cease to be members of the Executive Committee.[1] This will, of course, also be the case for countries which denounce the Convention, when such denunciation takes effect according to Article 26(3).

(d) Article 15 of the Stockholm text of the Convention provides that administrative tasks concerning the Union will be performed by the *International Bureau*, which is the *Secretariat of WIPO* (see Article 13(2)*(a)*(ii) of the Paris Convention and Article 9 of the WIPO Conven-

---

[1] See document S/3 prepared for the Stockholm Conference, p. 58, paragraph 175.

tion). According to Article 10 of the WIPO Convention, the headquarters of the Organization, and therefore of the International Bureau, will be in Geneva (Switzerland), unless transferred to another city. The WIPO Convention also prescribes that a headquarters agreement will be concluded with the State on the territory of which the Organization has its headquarters and that such agreement will provide that, when the envisaged working capital fund of the Organization is insufficient, that State will grant advances to the Organization. Parallel provisions have been included in Article 16(7) of the Paris Convention with respect to possible *advances to the Union.* It is logical that a country which undertakes to grant *advances* to the Union, if necessary, should be permitted, as long as this obligation stands, to *participate permanently in the Executive Committee of the Union,* the Committee which deals with *budget and financial management.*[1] This is assured by the second sentence of Article 14(2)*(a),* now under consideration, in relation with Article 16(7)*(a)* and *(b).*

(e) This provision prescribes that the Assembly, in *electing the members of the Executive Committee,* must have due regard to two requirements. One is that those members should represent an *equitable geographical distribution,* which is self-explanatory. The other requirement is that *countries party to the Special Agreements* established in relation with the Union should be among the countries constituting the Executive Committee.

With respect to this latter requirement, reference must be made to Article 19 of the Paris Convention, which allows the member States " to make separately between themselves special agreements for the protection of industrial property, in so far as these agreements do not contravene the provisions of this Convention."

Such agreements have been concluded but it is necessary to distinguish between different categories.

One category consists of the Agreements *prepared by the International Bureau of the Paris Union,* which have been concluded and revised in the same way, and frequently at the same Conferences, as the Paris Convention itself, and which are *administered by the International Bureau.* Several of these Agreements have already been referred to above. They are respectively: the Madrid Agreement, of 1891, concerning the International Registration of Marks, revised at Brussels (1900), Washington (1911), The Hague (1925), London

---

[1] See document S/3 prepared for the Stockholm Conference, p. 38, paragraph 114.

(1934), Nice (1957) and Stockholm (1967); the Madrid Agreement, of 1891, for the Repression of False or Deceptive Indications of Source on Goods, revised at Washington (1911), The Hague (1925), London (1934) and Lisbon (1958), with its Additional Act of Stockholm (1967); the Hague Agreement, of 1925, concerning the International Deposit of Industrial Designs, revised at London (1934) and The Hague (1960),[1] with its Additional Act of Monaco (1961) and Complementary Act of Stockholm (1967); the Nice Agreement, of 1957, concerning the International Classification of Goods and Services for the Purposes of the Registration of Marks, revised at Stockholm (1967); and the Lisbon Agreement, of 1958, for the Protection of Appellations of Origin and their International Registration,[2] revised at Stockholm (1967).

A second category of the special agreements referred to above consists of agreements made under the auspices of and administered by international organizations other than the Paris Union and its Bureau. Agreements of this type have been elaborated, for example, by the Council of Europe in the form of a European Convention, dated December 13, 1953, relating to the Formalities Required for Patent Applications, a European Convention, dated December 19, 1954, on the International Classification of Patents for Invention, and a Convention, dated November 27, 1963, on the Unification of Certain Points of Substantive Law on Patents for Invention,[3] all of which Conventions expressly refer to what was then Article 15 and is now Article 19 of the Paris Convention, cited above.

Other examples of this type of agreement are the Agreement of June 6, 1947, establishing the International Patent Institute in The Hague (Netherlands), and the Agreement of September 13, 1962, regarding the creation of an African and Malagasy Industrial Property Office, which has already been referred to several times above. Although at the time of the signature of this latter Agreement the participating States were not yet members or had not yet confirmed their membership of the Paris Union, they undertook in the Agreement to adhere to that Union and, in view of this, express reference was made to Article 15 (now 19) of the Paris Convention.

A third category of the special agreements referred to in Article 19 of the Paris Convention consists of bilateral agreements between States regarding or including subjects of industrial property. Such agreements

---

[1] The revised text of The Hague (1960) has not yet entered into force.

[2] See, for the texts revised or established at Stockholm in 1967, *I.P.*, 1967, pp. 290, 291, 298, 335, 339.

[3] This Convention has not yet entered into force.

are frequent. They may form part of general treaties of commerce or concern special subjects, such as the protection of appellations of origin.[1]

There can be no doubt that the provision of Article 14(4) of the Paris Convention, now under consideration and providing for representation in the Executive Committee of *countries party to the Special Agreements established in relation with the Union*, refers only to the first category of such agreements, because the administration of the others is entirely independent of the organs of the Paris Union.

(f) Article 14(5)*(a)* prescribes that each member of the Executive Committee will serve—unless, of course, it withdraws from the Committee, or in cases as described above under observation *(c) in fine*—for the period between the close of two successive ordinary sessions of the Assembly, that is, for a period of roughly three years. According to Article 14(5)*(b)*, all members of the Executive Committee may be re-elected, but only up to a maximum of two-thirds of such members. This rule assures a minimum rotation in the membership of the Executive Committee and is intended to afford an opportunity to every member of the Assembly to serve on the Executive Committee. The Assembly is not bound to renew more than one-third of the Executive Committee, but it may wish to do so. On the other hand, the rule which specifies that members of the Executive Committee may be re-elected up to the given maximum of two-thirds of the members means that re-election of a country is possible not only once but any number of times, so that countries whose presence on the Executive Committee is considered particularly desirable may serve for any appropriate period of time.

(g) The Assembly will establish the details of the rules governing the election and possible re-election of the members of the Executive Committee. The possible contents of such rules were indicated during the Stockholm Conference.[2]

(h) The main tasks of the Executive Committee have already been summarized above under observation *(b)*. They are self-explanatory.

---

[1] Cf. DEVLÉTIAN: *I.P.*, 1968, pp. 110/1; KRIEGER: "Zur Auslegung der zweiseitigen Abkommen über den Schutz geographischer Bezeichnungen," *G.R.U.R. Int.*, 1964, p. 499, and "Der deutsch-schweizerische Vertrag über den Schutz von Herkunftsangaben und anderen geographischen Bezeichnungen," *G.R.U.R. Int.*, 1967, p. 334.

[2] See document S/3 prepared for the Stockholm Conference, p. 26, paragraph 83*(c)*.

(i) Other functions allocated to the Executive Committee are, for example, cooperation with the International Bureau in the preparation for revision conferences (Article 15(7)*(a)*), and the right to propose amendments to Articles 13 to 17 (Article 17(1)).

(j) This provision parallels Article 13(2)*(b)* regarding the Assembly. See observation *(n)* on that Article.

(k) This provision parallels Article 13(7)*(a)* regarding the Assembly. See observation *(r)* on that Article.

(l) The quorum necessary for making valid decisions is the same as that of the Assembly, namely, one-half of the members. Since the Executive Committee is much smaller than the Assembly it is considered more probable that this quorum will be reached in every meeting of the Committee. Special rules for obtaining decisions in cases where the quorum is not reached, like those given for the Assembly (Article 13(4)*(c)*), are therefore not provided for the Executive Committee.

(m) For the same reasons, namely, that the Executive Committee is much smaller than the Assembly, no special rules are given, regarding meetings of the Committee, for representation or voting in the name of more than one country by one delegation (see, for the Assembly, Article 13(3)*(b)* and (5)*(b)*).

(n) All countries of the Union, even if they are not (yet) members of the Assembly, will be admitted to the meetings of the Executive Committee as observers. There is no provision for the admittance to those meetings of countries which are not members of the Union or of intergovernmental or international non-governmental organizations (see, for the Assembly, Article 13(2)*(a)*(ix)).

ARTICLE 15*(a)*

(1)(a) Administrative tasks *(b)* concerning the Union shall be performed by the International Bureau, which is a continuation of the Bureau of the Union united with the Bureau of the Union established by the International Convention for the Protection of Literary and Artistic Works.

(b) In particular, the International Bureau shall provide the secretariat of the various organs of the Union *(c)*.

(c) The Director General of the Organization shall be the chief executive of the Union and shall represent the Union *(d)*.

(2) The International Bureau shall assemble and publish information concerning the protection of industrial property *(e)*. Each country of the Union shall promptly communicate to the International Bureau all new laws and official texts concerning the protection of industrial property. Furthermore, it shall furnish the International Bureau with all the publications of its industrial property service of direct concern to the protection of industrial property which the International Bureau may find useful in its work *(f)*.

(3) The International Bureau shall publish a monthly periodical *(g)*.

(4) The International Bureau shall, on request, furnish any country of the Union with information on matters concerning the protection of industrial property *(h)*.

(5) The International Bureau shall conduct studies, and shall provide services, designed to facilitate the protection of industrial property *(i)*.

(6) The Director General and any staff member designated by him shall participate, without the right to vote, in all meetings of the Assembly, the Executive Committee, and any other committee of experts or working group. The Director General, or a staff member designated by him, shall be ex officio secretary of these bodies.

(7)(a) The International Bureau shall, in accordance with the directions of the Assembly and in cooperation with the Executive Committee, make the preparations for the conferences of revision of the provisions of the Convention other than Articles 13 to 17 *(j)*.

(b) The International Bureau may consult with intergovernmental and international non-governmental organizations concerning preparations for conferences of revision *(k)*.

(c) The Director General and persons designated by him shall take part, without the right to vote, in the discussions at these conferences *(l)*.

(8) The International Bureau shall carry out any other tasks assigned to it.

(a) As has been observed above—see observation *(f)* on Article 13—the original Convention of 1883 had already established an international office under the name of *International Bureau of the Union for the Protection of Industrial Property,* which was entrusted with *administrative tasks concerning the Union.* This Bureau was later united with the corresponding Bureau of the Union for the Protection of Literary and Artistic Works, and these united Bureaux became known under the common designation of BIRPI.

The Revision Conference of Stockholm in 1967 replaced the said organ by a newly created *International Bureau of Intellectual Property,* which will be the *Secretariat of WIPO,* the said International Bureau being a continuation of BIRPI (see Article 15(1)*(a)* and Article 13(2)*(a)*(ii), and also the transitional provisions in Article 30(1), (3) and (4) of the Paris Convention as revised at Stockholm).

(b) The *administrative tasks* to be carried out by the International Bureau are specified in the Convention. They do not substantially differ from the tasks which BIRPI had to perform under former Acts of the Convention.[1] However, several provisions have been made more precise, while the question of languages to be used by the International Bureau, which was formerly regulated in the Convention (see Article 13(2)*(a)* and *(b)* of the Lisbon text as compared with Article 13(2) of the London text), is now left to be decided by the *General Assembly of WIPO,* which will take into consideration the practice of the United Nations (Article 6(2)(vii) of the WIPO Convention).

(c) The International Bureau will act, in particular, as a *secretariat,* not only of WIPO (Article 9(1) of the WIPO Convention) but also of the *various organs of the Paris Union.* These organs are the Assembly,

---

[1] See Report of Main Committee IV of the Stockholm Conference, *I.P.*, 1967, p. 221, paragraph 11.

the Executive Committee, and all committees of experts and working groups which may be established by the Assembly according to Article 13(2)*(a)*(viii).

(d) Since the International Bureau will be the Secretariat of the Union, its head, namely, the Director General of WIPO, will also be the chief executive of the Union and have competence to represent it.

(e) Already, under the original Convention of 1883, the International Bureau was entrusted with the task of *centralizing information* of every kind relating to the protection of industrial property. Originally, the Bureau was obliged only to *distribute* this information, in the form of general statistics, to the *national Administrations*, but the Revision Conference of The Hague in 1925 replaced this obligation by one to *publish* such information. This obligation was maintained in later texts and was not changed by the Revision Conference of Stockholm in 1967.

(f) The Revision Conference of Stockholm, however, complemented the obligations of the International Bureau by placing the member States under *corresponding obligations*. These latter obligations are twofold : in the first place, each member State will have to communicate to the International Bureau all its *new laws* and *official texts* concerning the protection of industrial property. Secondly, it will furnish the International Bureau with *all the publications of its industrial property service*, but only in so far as these publications are of direct concern to the *protection of industrial property* and if the *International Bureau finds them useful in its work*. Thus, for example, a guide for visitors to a national office, or information as to the availability of inventions, furnished by that office to the domestic industry of the country concerned, would not come under this provision. The International Bureau may, however, always indicate its interest in receiving publications of the national offices of direct concern to *the protection of industrial property*.

(g) The International Bureau at present publishes similar monthly periodicals in English and French : *Industrial Property* and *La Propriété industrielle ;* and also a quarterly periodical in Spanish : *La Propiedad Intelectual*.

Originally, and until the Revision Conference of Stockholm in 1967, the Convention provided for the furnishing of free copies of the periodicals and other publications of the International Bureau to each member State, in proportion to its financial contribution to the Union (see Article 13(4) of the Lisbon text of 1958). The Revision Conference of Stockholm has left this question to be decided by the Assembly.

(h) This provision obliges the International Bureau to give, on request, *information to member States*, that is, to their Governments or industrial property Offices, on *matters concerning the protection of industrial property*. Such information may, for example, concern legislation or administrative practices in other member States. It may also concern the application of the Convention in the States concerned. It may not, however, take a position in controversies regarding the interpretation or application of the Convention in other member States, unless on their request, because the International Bureau is not qualified to pronounce on such questions. *Disputes between member States* concerning the interpretation or application of the Convention may be brought before the *International Court of Justice*, according to Article 28.

The International Bureau will not be obliged to give information other than to member States.

(i) Studies of this type are made with a view to improving the international protection of industrial property, for example, by establishing a Patent Cooperation Treaty (PCT).[1] They are also made with a view to examining and, if possible, improving the protection of industrial property in various parts of the world and are in that case frequently organized in congresses, seminars, symposia or committees of experts.[2]

Services, as referred to, are provided by putting at the disposal of the public a library specializing in the field of industrial property and related subjects. They may, for example, also be organized in the form of a "World Patent Index."[3] Other services are performed by the International Bureau by virtue of a number of Special Agreements as referred to above under observation *(e)* on Article 14.

---

[3] *Ibidem*, 1964, p. 209; 1965, p. 75; 1966, p. 58.

(j) One of the important tasks of the International Bureau is the *preparation of conferences for the revision of the Convention* (Article 18). As has been observed above—see observation *(e)* on Article 13—the Bureau will carry out this task *in accordance with the directions of the Assembly* and *in cooperation with the Executive Committee.*

(k) In carrying out the above task, the International Bureau may also consult *with intergovernmental and international non-governmental organizations.* As has already been observed, such consultations have been of great value in the past and will, no doubt, therefore be frequent.

(l) This provision was already introduced in substance into the Convention by the Revision Conference of Washington in 1911. The Revision Conference of Stockholm in 1967 enlarged its scope by including the possibility for the Director General to designate other persons to take part in revision conferences ; such persons will generally be members of the staff of the International Bureau (see also Article 15(6)) but may also be advisors from outside that Bureau.

ARTICLE 16(a)

(1)(a) The Union shall have a budget *(b)*.

(b) The budget of the Union shall include the income *(c)* and expenses proper to the Union, its contribution to the budget of expenses common to the Unions, and, where applicable, the sum made available to the budget of the Conference of the Organization *(d)*.

(c) Expenses not attributable exclusively to the Union but also to one or more other Unions administered by the Organization shall be considered as expenses common to the Unions. The share of the Union in such common expenses shall be in proportion to the interest the Union has in them.

(2) The budget of the Union shall be established with due regard to the requirements of coordination with the budgets of the other Unions administered by the Organization *(e)*.

(3) The budget of the Union shall be financed from the following sources *(f)*:

(i) contributions of the countries of the Union ;
(ii) fees and charges due for services rendered by the International Bureau in relation to the Union ;
(iii) sale of, or royalties on, the publications of the International Bureau concerning the Union ;
(iv) gifts, bequests, and subventions ;
(v) rents, interests, and other miscellaneous income.

(4)(a) For the purpose of establishing its contribution towards the budget, each country of the Union shall belong to a class *(g)*, and shall pay its annual contributions on the basis of a number of units fixed as follows :

Class I	25
Class II	20
Class III	15
Class IV	10
Class V	5
Class VI	3
Class VII	1

(b) Unless it has already done so, each country shall indicate, concurrently with depositing its instrument of ratification or accession, the class to which it wishes to belong. Any country may change class. If it chooses a lower class, the country must announce such change to the Assembly at one of its ordinary sessions. Any such change shall take effect at the beginning of the calendar year following the said session *(h)*.

(c) The annual contribution of each country shall be an amount in the same proportion to the total sum to be contributed to the budget of the Union by all countries as the number of its units is to the total of the units of all contributing countries *(i)*.

(d) Contributions shall become due on the first of January of each year.

(e) A country which is in arrears in the payment of its contributions may not exercise its right to vote in any of the organs of the Union of which it is a member if the amount of its arrears equals or exceeds the amount of the contributions due from it for the preceding two full years. However, any organ of the Union may allow such a country to continue to exercise its right to vote in that organ if, and as long as, it is satisfied that the delay in payment is due to exceptional and unavoidable circumstances *(j)*.

(f) If the budget is not adopted before the beginning of a new financial period, it shall be at the same level as the budget of the previous year, as provided in the financial regulations *(k)*.

(5) The amount of the fees and charges due for services rendered by the International Bureau in relation to the Union shall be established, and shall be reported to the Assembly and the Executive Committee, by the Director General *(l)*.

(6)(a) The Union shall have a working capital fund which shall be constituted by a single payment made by each country of the Union. If the fund becomes insufficient, the Assembly shall decide to increase it *(m)*.

(b) The amount of the initial payment of each country to the said fund or of its participation in the increase thereof shall be a proportion of the contribution of that country for the year in which the fund is established or the decision to increase it is made.

(c) The proportion and the terms of payment shall be fixed by the Assembly on the proposal of the Director General and after it has heard the advice of the Coordination Committee of the Organization.

(7)(a) In the headquarters agreement concluded with the country on the territory of which the Organization has its headquarters, it

shall be provided that, whenever the working capital fund is insufficient, such country shall grant advances. The amount of these advances and the conditions on which they are granted shall be the subject of separate agreements, in each case, between such country and the Organization. As long as it remains under the obligation to grant advances, such country shall have an ex officio seat on the Executive Committee *(n)*.

(b) The country referred to in subparagraph (a) and the Organization shall each have the right to denounce the obligation to grant advances, by written notification. Denunciation shall take effect three years after the end of the year in which it has been notified.

(8) The auditing of the accounts shall be effected by one or more of the countries of the Union or by external auditors, as provided in the financial regulations. They shall be designated, with their agreement, by the Assembly *(o)*.

(a) This Article, introduced into the Convention by the Revision Conference of Stockholm, has established provisions regarding the *finances of the Union* which differ from the former provisions, although it has maintained, in a modified form, some parts of the Article 13 of former texts.

The old provisions prescribed (see Article 13(6) and (7) of the Lisbon text) that the expenditure of the Union would be borne by the countries of the Union in common, according to certain rules (*ibidem*, paragraphs (8) and (9)). It was then provided that this expenditure would *not exceed certain fixed sums* (Article 13(6) and (7) and Article 14(5)*(b)* of the Lisbon text; the sum indicated in Article 13(6) of the Lisbon text was modified by a unanimous decision of the Conference of Representatives of the countries of the Paris Union, made in Stockholm in 1967).[1] It was further provided (Article 13(10) and (11) of the Lisbon text) that the Government of the Swiss Confederation would supervise the expenditure of the International Bureau and its accounts, and that the annual account of that Bureau would merely be communicated to the other national Administrations.

The establishment of a budget was not prescribed in the former system, although a budget was, in fact, prepared in order to facilitate the supervision of the expenditure by the Swiss Government and also (Article 14(5)*(a)* of the Lisbon text) in order to enable the Conference

---

[1] Cf. *I.P.*, 1968, p. 21.

of Representatives, in its three-yearly meetings, to draw up a report on the foreseeable expenditure of the International Bureau for each three-year period to come.

This system was replaced at the Revision Conference of Stockholm in 1967 by a more flexible one, under which *no fixed ceiling for expenses* that can be changed only by a unanimous vote of a Conference of Plenipotentiaries of the member States is established, *but triennial and yearly budgets* will be adopted by *organs formed by the member States* (Assembly: Article 13(2)*(a)*(vi), and Executive Committee: Article 14(6)*(a)*(iii) of the Stockholm text). This important change in the financial system of the Union has been supplemented by many other new provisions, some of which are again closely related to WIPO, established by the Stockholm Conference simultaneously with the revision of the Paris Convention.

(b) It is now prescribed in the Convention that the Paris Union *will have a budget* which, as already observed, is *triennial* and *yearly*. The Convention also indicates the *sources* from which the budget will be *financed* (Article 16(3)) and the *items of expenditure* which will be included in the budget (Article 16(1)*(b)*). The budget of the Union will be fixed autonomously by its organs,[1] but due regard must be given to the requirements of coordination with the budgets of the other Unions administered by WIPO (see observations *(d)* and *(e)*, below).

(c) The *income of the Union*, to be included in the budget, will derive from sources indicated in Article 16(3).

(d) The *expenses* to be included in the budget are of three different categories, owing to the envisaged relationship between the Paris Union and WIPO (see also, above, observation *(a)* on Article 13):

first, the budget will include the *expenses proper to the Union*;

secondly, it will include a contribution by the Union to *the budget of expenses common to the Unions* (see Article 11(2), particularly *(b)*(i) of the WIPO Convention);

thirdly, it *may* also include a sum made available to the budget of the *Conference of WIPO* (see Article 11(3), particularly *(b)*(ii) of the WIPO Convention).

Expenses proper to the Union will be the expenses involved in the performance by the Secretariat of tasks exclusively related to the Paris

---

[1] Report of Main Committee IV of the Stockholm Conference, *I.P.*, 1967, p. 221, paragraph 12.

Union, for example, studies and services regarding the Union, the preparation of revision conferences, etc.

Expenses common to the Unions are defined in Article 16(1)*(c)*. These are expenses incurred by the Secretariat not only in the sole interest of the Paris Union but also in the interest of other Unions administered by it, such as the salary of the Director General and several other staff members, expenses relating to common services, such as those regarding finances, personnel, translation, typing, etc., and the maintenance of the headquarters building. The share of the Union in such common expenses will be in proportion to the interest the Union has in them. This share will be fixed according to a procedure prescribed in the WIPO Convention, which provides that a *triennial budget of expenses common to the Unions* will be established by the General Assembly (Article 6(2)(iv) of the WIPO Convention) and *annual budgets* by the Coordination Committee (*ibidem*, Article 8(3)(iv)), whereas the Coordination Committee will give advice to the organs of the Unions on all administrative, financial or other matters of common interest either to two or more Unions or to one or more of the Unions and the Organization, and *in particular on the budget of expenses common to the Unions* (*ibidem*, Article 8(3)(i)). Since the members of the Executive Committee of the Paris Union are ex officio members of the Coordination Committee (Article 8(1)*(a)* of the WIPO Convention) no difficulties can be expected regarding these questions. However, the WIPO Convention also prescribes (Article 11(2)*(a)*(i)) that the contributions of the Unions, and consequently also those of the Paris Union, can only be *fixed* by the *Assembly of that Union*, having regard to the interest the Union has in the common expenses (see also Article 16(1)*(c)*, second sentence, of the Paris Convention).

A contribution by the Paris Union *to the budget of the Conference* of WIPO will also be included in the budget of the Paris Union, *if and when the Assembly of the Paris Union so decides* (Article 11(3)*(b)*(ii) of the WIPO Convention corresponding to the final part of Article 16(1)*(b)* of the Paris Convention).

(e) As has been observed above, the Assembly of the Union is autonomous in establishing its triennial budget and the share in the common expenses of the Unions to be included in it. Within the limits of this triennial budget and under the control of the Assembly (Article 13(2)*(a)*(v)), the Executive Committee has a similar competence with respect to the yearly budgets (Article 14(6)*(a)*(ii)). Article 16(2), now under consideration, contains the instruction that the budget of the Union must be established with due regard to the requirements of

coordination with the budgets of the other Unions administered by WIPO. The advice of the Coordination Committee of WIPO, referred to above, will be necessary to achieve this end.

(f) The sources of income of the Union are largely self-explanatory. See, for the contributions of the member States, the following remarks under *(g)*, *(h)* and *(i)*. See further, for the fees and charges for services rendered by the International Bureau in relation to the Union, Article 16(5), which should be compared to Article 11(2)*(b)*(ii) of the WIPO Convention.

(g) The system whereby, in order to determine the contribution of each member State towards the expenses of the Union, *the member States are divided into classes* was already included in the original Convention of 1883 (paragraph 6 of the Final Protocol which formed an integral part of the Convention). Newly acceding countries therefore had to choose the class in which they wished to be placed and the rule was incorporated in the Convention by the Revision Conference of Washington in 1911.

That system was maintained until the Revision Conference of Stockholm in 1967, which modified it to some extent.

The principal modification is that the number of classes is no longer six but seven, which means that a seventh class has been added. This was done in order to give a fairer representation of the relative contributive power of more and less developed countries: under the texts in force from Washington (1911) to Lisbon (1958), the highest contribution was only 8 1/3 times larger than the lowest contribution; by virtue of the Stockholm revision, it will be 25 times larger.[1]

(h) The Revision Conference of Stockholm maintained the system allowing complete freedom to each member State to choose the class in which it wishes to be placed, and, if it so desires, to modify its choice later. In addition, however, the Stockholm Act provides that, if a member State wishes to choose a *lower* class for its contributions than it has chosen before, it must announce such change to the Assembly at one of its ordinary, three-yearly, sessions, in which case the change will not take effect until the beginning of the calendar year following the said session. This provision has been made because otherwise the other member States would be obliged to pay a higher share (since each lowering of class by a member State automatically leads to an

---

[1] See document S/3 prepared for the Stockholm Conference, p. 36, paragraph 107.

increase in the share of the other member States) than contemplated when the last three-yearly budget was adopted.[1]

(i) This provision contains the rule for the calculation of the proportion of the contribution of each member State to the total of the contributions of all of those States. Although the rule is different in wording, it maintains the former system (Article 13(8) of the Lisbon text).

(j) This provision, introduced by the Revision Conference of Stockholm in 1967, establishes a rule under which certain *arrears in the payment of contributions* (arrears to the amount of the contributions due for the preceding two full years or more) will deprive *a member State of its voting rights* in any of the organs of the Union of which it is a member. This incentive to make prompt payment of contributions was considered necessary because it would be unfair to rely on advances payable under Article 16(7)*(a)* in order to make up for deficiencies in payment by other States. Naturally, once the arrears are paid, the right of the State concerned to vote will automatically revive.

However, the provision adds that the organ concerned (Assembly, Executive Committee) may make exceptions to the rule if, and so long as, it is satisfied that the delay in payment is due to exceptional and unavoidable circumstances.

(k) Especially with regard to the Assembly, where the quorum or the required majority of votes (Article 13(4)*(b)*, *(c)* and *(d)*) may not always be reached, difficulties may arise when the budget is not adopted before the beginning of the period to which it must be applied. Since in such case the operations of the Union cannot be allowed to be interrupted, the Revision Conference of Stockholm adopted a rule whereby, in those circumstances, the level of the budget will be the same as that of the year immediately preceding. The financial regulations of the Union (Article 13(2)*(a)*(vii)) will elaborate further on this provision.

(l) One of the Union's possible sources of income will be the *fees and charges due for services* rendered by the International Bureau in relation to the Union (see observation *(f)* above). The Director General of the International Bureau will establish the amount of such fees and

---

[1] See document S/3 prepared for the Stockholm Conference, p. 36, paragraph 108.

charges but will report on them to the Assembly and the Executive Committee, so that these bodies, if they so desire, may express an opinion or give instructions (Article 13(2)*(a)*(iii) and Article 14(6)*(a)*(iv)).

(m) Another of the innovations made by the Revision Conference of Stockholm in 1967 is a provision for establishing a *working capital fund* (see also Article 11(8) of the WIPO Convention). This is a fund, constituted in principle by one-time contributions of the member States and intended to enable the International Bureau to operate during the short period between the time when the normal contributions are due (Article 16(4)*(d)*) and that at which their payment is, in fact, received. The provisions relating to this working capital fund are self-explanatory.

(n) Since the working capital fund may, in certain circumstances, be insufficient to enable the International Bureau to continue its operations within the limits of the established budgets and program, the Revision Conference of Stockholm also adopted provisions which continue, in a modified form, the former system (see Article 13(10) of the Lisbon text) under which the member State in whose territory the International Bureau is established will grant the necessary advances to the latter. The provision to this effect parallels Article 11(9) of the WIPO Convention. As already observed—see observation *(d)* on Article 14—the above State, which agrees to grant advances to the Union, must be in a position to be fully informed of all financial matters concerning the Union, and will therefore have an ex officio seat on the Executive Committe (Article 14(2)*(a)*). As follows from the following subparagraph *(b)* of the provision under consideration, the obligation to grant advances may be denounced, but such denunciation will not take effect until three years after the end of the year in which it has been notified. This means that during the latter period the Assembly will meet in ordinary session and may take the necessary measures—for example, deciding to increase the working capital fund.

(o) Under the texts preceding the Revision Conference of Stockholm in 1967, the auditing of the accounts of the International Bureau was organized by the Swiss Government, which supervised those accounts (Article 13(10) of the Lisbon text). Since, under the Stockholm text, the Swiss Government will no longer perform this task of supervision, provision is made for the auditing of the accounts to be effected either by one or more member States, willing to do so,

or by external auditors (a professional accountant firm), designated by the Assembly.[1] The details of this procedure will be regulated by the financial regulations of the Union (see also Article 11(10) of the WIPO Convention).

---

[1] See document S/3 prepared for the Stockholm Conference, p. 38, paragraph 115.

ARTICLE 17*(a)*

(1) Proposals for the amendment of Articles 13, 14, 15, 16, and the present Article *(b)*, **may be initiated by any country member of the Assembly, by the Executive Committee, or by the Director General. Such proposals shall be communicated by the Director General to the member countries of the Assembly at least six months in advance of their consideration by the Assembly.**

(2) Amendments to the Articles referred to in paragraph (1) shall be adopted by the Assembly *(c)*. **Adoption shall require three-fourths of the votes cast, provided that any amendment to Article 13, and to the present paragraph, shall require four-fifths of the votes cast** *(d)*.

(3) Any amendment to the Articles referred to in paragraph (1) shall enter into force one month after written notifications of acceptance, effected in accordance with their respective constitutional processes, have been received by the Director General from three-fourths of the countries members of the Assembly at the time it adopted the amendment *(e)*. **Any amendment to the said Articles thus accepted shall bind all the countries which are members of the Assembly at the time the amendment enters into force, or which become members thereof at a subsequent date, provided that any amendment increasing the financial obligations of countries of the Union shall bind only those countries which have notified their acceptance of such amendment** *(f)*.

(a) This Article was introduced into the Convention by the Revision Conference of Stockholm in 1967. As has been observed above—see observation *(k)* on Article 13—prior to the Stockholm Conference all modifications of the Convention depended on unanimous decisions of revision conferences, expressly convened to that end (Article 14 of the Lisbon text, which was, in part, already included in the original text of the Convention of 1883). The Stockholm Conference changed this system by establishing a distinction between, on the one hand, *amendments* to the *administrative provisions of Articles 13 to 17 of the Convention* and *revisions* of the Convention with respect to all its *other provisions*. Article 17, now under consideration, deals with the first subject; Article 18, with the second. The differences are mainly the following :[1]

---

[1] See document S/3 prepared for the Stockholm Conference, p. 40, paragraph 118.

Amendments are discussed in and adopted by the *Assembly*, which consists *only of the States bound by Articles 13 to 17 of the Convention or deemed to be members of the Assembly* under Article 30(2); the adoption of amendments requires a *qualified majority*, but after such adoption and acceptance they will *bind all members of the Assembly*, except that amendments increasing financial obligations will bind only States which have accepted these amendments.

Revisions, on the other hand, are discussed in and adopted by *revision conferences consisting of all countries of the Union*, even if they are not yet bound by the most recent text of the Convention which is the subject of the revision; their adoption requires *unanimity* and they will bind *only States which have ratified* the revised Convention or have *acceded to it*.

The reason for having a special procedure for amendments is that the system regarding revision has been considered too cumbersome for the modification of purely administrative provisions of the Convention.

(b) The special procedure for amendments applies only to Articles 13 to 17 of the Convention, which are, indeed, of a purely administrative character. The procedure for the initiation of amendments is self-explanatory.

(c) The *Assembly* is competent to adopt amendments and it is not even required to take account of the views of member States of the Unions which are not members of the Assembly (cf., on the contrary, for revisions, Article 13(2)*(a)*(ii) *in fine*); this is because these latter States have no direct interest in administrative provisions by which they are not bound. However, since the said States are admitted as observers to the Assembly (Article 13(6)), their views may be heard nevertheless.

(d) Whereas the decisions of the Assembly will normally require a *majority of two-thirds* of the votes cast (Article 13(4)*(d)*), more substantial qualified majorities are required for the adoption of amendments. Article 13, regulating the powers of the Assembly, has been considered the cornerstone of the administrative system of the Convention. Amendments to that Article therefore require four-fifths of the votes cast. In order that amendment of the Article concerning amendments may not too easily change this majority, the same majority is required for amendments to Article 17(2). Amendments to Articles 14, 15, 16 and 17(1) and (3) will require a three-fourths majority.

(e) Once adopted by the required majority, any amendment will still have to enter into force. This will require *notifications of*

acceptance of such amendment by the States *members of the Assembly at the time it adopted the amendment,* irrespective of whether those States have voted on the amendment and, if so, irrespective of whether they voted for or against it. When such notifications have been received from *three-fourths of the members of the Assembly* (even if the majority required for adoption of the amendment was four-fifths) the amendment will enter into force one month after receipt.

(f) Any amendment thus accepted will—with one exception—bind *all States which are or will become members of the Assembly.* The only exception is that, whenever any amendment increases the financial obligations of member States, it will bind only those States which have notified their acceptance of such amendment. This provision does not apply to States which newly accede to the Union, because for such States there is no question of an *increase* of *existing* financial obligations: in acceding to the Union they will have to accept the financial obligations as they stand.

ARTICLE 18[(a)]

(1) This Convention shall be submitted to revision with a view to the introduction of amendments designed to improve the system of the Union *(b)*.

(2) For that purpose, conferences shall be held successively in one of the countries of the Union among the delegates of the said countries *(c)*.

(3) Amendments to Articles 13 to 17 are governed by the provisions of Article 17 *(d)*.

(a) Paragraphs (1) and (2) of this Article were already included in the original text of the Convention of 1883 (Article 14).[1] They underwent only minor changes as to form during the subsequent Revision Conferences.

Paragraph (3) of the Article, added by the Revision Conference of Stockholm in 1967, is a reminder of the distinction made by that Conference between *amendments* to Articles 13 to 17 and *revision* by way of amendments of other provisions of the Convention (see, above, observation *(a)* on Article 17).

(b) The member States will be free to decide which amendments will, in fact, improve the system of the Union. Another question, however, is what majority will be required to make such decisions. Although the Convention does not explicitly state this principle, it was considered by the various Revision Conferences[2] that a *unanimous vote* of all States participating in such Conferences—abstentions not being considered as votes (see also Articles 13(4)*(e)* and 14(8)*(d)* of

---

[2] See *Actes de la Conférence de Rome*, 1886, pp. 86/7 (the revision then adopted never entered into force); *Actes de La Haye*, pp. 428, 437; *Actes de Londres*, pp. 164/5, 294 (proposal of Mexico), 351/2 (discussion and vote in First Sub-Committee); *Actes de Lisbonne*, pp. 564, 668, 703/4, 731; Document S/3 prepared for the Stockholm Conference, p. 10, paragraph 27*(a)*, p. 40, paragraphs 118(ii), 119. See also LADAS: *The International Protection of Industrial Property*, p. 128; ROUBIER: *Le droit de la propriété industrielle*, I, p. 257; TROLLER: *Die mehrseitigen völkerrechtlichen Verträge im internationalen gewerblichen Rechtsschutz und Urheberrecht*, p. 195; RONGA: " La règle de l'unanimité pour la révision des Conventions de Paris et de Berne, " *R.I.D.A.*, XXXIII (Oct. 1961), p. 3.

the Stockholm text)—was necessary for revision of all the provisions of the Convention (under the Stockholm text, with the exception of Articles 13 to 17: see Article 17). This established rule must be considered binding on the Union until changed by a contrary provision adopted under the same rule.

(c) The delegates of member States participating in a revision conference must be duly empowered, according to their national constitutions or laws, to discuss and vote a revision of the Convention. The special rules for representation and voting *in the Assembly*, given in Article 13(3)*(b)* and (5)*(b)*, will not apply *to revision conferences*. See, for the *preparation* of revision conferences, Article 13(2)*(a)*(ii) and Article 15(7)*(a)* and *(b)*.

(d) As has been observed already under *(a)*, this paragraph is a reminder of the separate rules which govern *amendments* to Articles 13 to 17 of the Convention and *revision* of its other Articles, respectively.

ARTICLE 19*(a)*

It is understood that the countries of the Union reserve the right to make separately between themselves *(b)* **special agreements** *(c)* **for the protection of industrial property, in so far as these agreements do not contravene the provisions of this Convention** *(d)*.

(a) This Article appeared already in the original text of the Convention of 1883.[1] Since then it has undergone only slight changes as to form.

(b) The member States of the Union may make special agreements for the protection of industrial property either bilaterally or in the form of multilateral treaties. It has already been observed above—observation *(e)* on Article 2, paragraph (1)—that the application of such bilateral or multilateral treaties may be limited to nationals (and persons assimilated to such nationals) of the States concluding such treaties.

(c) The most important of the Special Agreements concluded under the Paris Convention have been enumerated above under observation *(e)* on Article 14. Several other Agreements have been or are being made, such as the Agreement Establishing an International Classification for Industrial Designs,[2] signed at Locarno on October 8, 1968, and a Patent Cooperation Treaty,[3] in course of preparation.

(d) It has already been observed above—see Chapter II.4 *in fine*—that the Convention leaves much freedom to its member States to legislate in the field of industrial property on points not covered by the Convention. Similar freedom exists with respect to the concluding of special agreements between member States.

[2] See *I.P.*, 1964, p. 255; 1966, p. 103.

[3] *Ibidem*, 1967, pp. 58, 161, 301.

ARTICLE 20(a)

(1)(a) Any country of the Union *(b)* which has signed this Act may ratify it, and, if it has not signed it, may accede to it *(c)*. Instruments of ratification and accession shall be deposited with the Director General *(d)*.

(b) Any country of the Union may declare in its instrument of ratification or accession that its ratification or accession shall not apply *(e)*:

(i) to Articles 1 to 12, or
(ii) to Articles 13 to 17.

(c) Any country of the Union which, in accordance with subparagraph (b), has excluded from the effects of its ratification or accession one of the two groups of Articles referred to in that subparagraph may at any later time declare that it extends the effects of its ratification or accession to that group of Articles. Such declaration shall be deposited with the Director General *(f)*.

(2)(a) Articles 1 to 12 shall enter into force *(g)*, with respect to the first ten countries of the Union which have deposited instruments of ratification or accession without making the declaration permitted under paragraph (1)(b)(i), three months after the deposit of the tenth such instrument of ratification or accession.

(b) Articles 13 to 17 shall enter into force, with respect to the first ten countries of the Union which have deposited instruments of ratification or accession without making the declaration permitted under paragraph (1)(b)(ii), three months after the deposit of the tenth such instrument of ratification or accession.

(c) Subject to the initial entry into force, pursuant to the provisions of subparagraphs (a) and (b), of each of the two groups of Articles referred to in paragraph (1)(b)(i) and (ii), and subject to the provisions of paragraph (1)(b), Articles 1 to 17 shall, with respect to any country of the Union, other than those referred to in subparagraphs (a) and (b), which deposits an instrument of ratification or accession or any country of the Union which deposits a declaration pursuant to paragraph (1)(c), enter into force three months after the date of notification by the Director General of such deposit, unless a subsequent date has been indicated in the instrument or declaration deposited. In the latter case, this Act shall enter into force with respect to that country on the date thus indicated.

(3) With respect to any country of the Union which deposits an instrument of ratification or accession, Articles 18 to 30 shall enter into force on the earlier of the dates on which any of the groups of Articles referred to in paragraph (1)(b) enters into force with respect to that country pursuant to paragraph (2)(a), (b), or (c).

(a) Provisions concerning *ratification* of the Convention and *accession* to it, and its *entry into force*, have existed in the Convention from its origin.[1] They have been completed and modified by the successive revision conferences and were thoroughly changed by the Revision Conference of Stockholm in 1967, in view of the amendments to the administrative provisions of the Convention accepted on that occasion.

(b) With respect to the question *how a State may become a party to the Convention* as revised at Stockholm in 1967, a distinction must be made between States which, because of their acceptance of one or more of the earlier Acts of the Convention, are already *members of the Union* and States which are *not such members*. The situation regarding the first category of States is dealt with in Article 20, that of the second category in Article 21.

The principal reasons for this distinction are the following:[2]

As the Stockholm Conference was a conference of *revision* of the Convention, only States already party to the Convention could participate in it with voting powers and only such States could *sign* the revised Convention. For those member States there are therefore two possibilities: if they have signed the Convention as revised at Stockholm, they may ratify it, and, if they have not signed it, they may accede to it. On the other hand, non-member States, which cannot have signed the revised Convention, may only accede to it.

Furthermore, for reasons already indicated above—see observation *(c)* on Article 13—States already members of the Union may, when ratifying the Stockholm Act or acceding to it, declare that such ratification or accession will *not* apply to *a certain group of Articles* (Article 20*(b)* and *(c)* and observations *(e)* and *(f)* below). This possibility of limited accession is not open to States which were not members of the Union until they acceded to the Stockholm Act, because it was considered that such States would have to accept the Convention, as revised at Stockholm, as a whole.

---

[1] Cf. Articles 16, 18 and 19 of the original text of the Convention of 1883.

[2] Cf. document S/3 prepared for the Stockholm Conference, p. 44, paragraph 131.

Thirdly, again because the text established at Stockholm was the result of a *revision* of the existing Convention, the number of ratifications and accessions required for entry into force of the Stockholm Act takes into account only ratifications and accessions *of States already members of the Union*, and not accessions of new member States.

(c) The distinction between *ratification* by a State which has signed an international convention and *accession* by a State which has not done so is customary in international public law.

(d) Under former texts of the Convention, and until the Revision Conference of Stockholm in 1967, the function of *depositary* for ratifications and accessions was entrusted to and fulfilled by the Government of the Swiss Confederation, which also exercised the supervision over the International Bureau. The Stockholm Conference did not prolong the special functions of the Government of the Swiss Confederation as such (as distinguished from the special situation of the State in which WIPO has its headquarters: see Article 14(2)*(a)* and Article 16(7)) and therefore transferred the function of depositary to the Director General of WIPO, who is at the same time the chief executive of the Paris Union (see Article 15(1)*(c)* and also the transitional provision of Article 30(1)).[1]

(e) As has been observed above—observation *(c)* on Article 13—the Revision Conference of Stockholm in 1967 dealt with *two entirely different subjects*, namely, on the one hand, the introduction into the Convention of provisions concerning the right of priority with respect to inventors' certificates (Article 4 I(1) and (2)) and, on the other hand, a thorough revision of the administrative provisions of the Convention. As the acceptance of each of these parts of the revised Convention in any member State may depend on different considerations and may require different legal procedures, it was decided to give member States the opportunity to accept *only one of these parts of the revision*, or *one of these parts earlier than the other.*

Member States may therefore *exclude* from their ratification or accession, at least until further notice, *either Articles 1 to 12* of the Stockholm Act (which include the newly introduced Article 4 I(1)

---

[1] See, for the functions of the depositary of an international treaty: Summary of the Practice of the Secretary-General as depositary of multilateral agreements, U.N. document St/Leg/7, 1959.

and (2) but are otherwise, except for small differences in the English translation, identical with the same Articles of the preceding Lisbon Act), *or Articles 13 to 17* (which contain the revised administrative system).

A member State which *excludes* from its ratification or accession *Articles 1 to 12 of the Stockholm Act* will be *bound by the new administrative provisions*, whereas, as far as the substantive provisions are concerned, it will continue to be bound by Articles 1 to 12 of that earlier Act, or those earlier Acts, by which it has been bound before its (partial) acceptance of the Stockholm Act;[1] it will, finally, also be bound by Articles 18 to 30 of the Stockholm Act containing final clauses (see Article 20(3)). If, on the contrary, a member State *excludes* from its ratification or accession *Articles 13 to 17 of the Stockholm Act*, it will be bound only by the new substantive provisions of Articles 1 to 12 (including the provisions of Article 4 I(1) and (2)) and by the final clauses of Articles 18 to 30 (Article 20(3)). As far as the purely administrative provisions are concerned, such State will continue to be bound by Article 13 of the former Acts.[2]

(f) This provision permits a member State, at any time after its original ratification of or accession to the Stockholm Act, to declare that it extends the effects of its ratification or accession to the group of Articles which it had excluded from its earlier ratification or accession. The effect will be that such State will then become bound by the Stockholm Act in its entirety.

(g) Paragraphs (2) and (3) of Article 20 deal with the *entry into force* of the Stockholm Act of the Convention. The rules governing such entry into force are more complicated than they were in earlier texts of the Convention owing to the possibility given to member States to exclude certain groups of Articles of the Stockholm Act from their ratification or accession. Simply stated, the rules governing the entry into force are the following :

Both the *substantive clauses* of *Articles 1 to 12* of the Stockholm Act *and* its *new administrative clauses* in Articles 13 to 17 will—as the case may be, *separately*—enter into force *three months* after the deposit of the *tenth* instrument of ratification or accession by a member State not excluding the relevant group of Articles from such ratification or accession (Article 20(2)*(a)* and *(b)*). Such entry into force

---

[1] See document S/3 prepared for the Stockholm Conference, p. 46, paragraph 134.

[2] *Ibidem*, p. 46, paragraph 135.

will bind only member States which have not excluded from their ratification or accession the relevant group of Articles (see, for new members of the Union, Article 21, to be commented upon below).

At the earlier of the dates on which any of the groups of Articles referred to will enter into force, *Articles 18 to 30* of the Stockholm text, *containing final clauses*, will *also enter into force* (Article 20(3)). This latter part of the Convention will bind *all* member States which have ratified or acceded to the Stockholm Act, even if they have excluded one of the groups of Articles 1 to 12 or 13 to 17 from their ratification or accession, because the final clauses of Articles 18 to 30 must apply together with any other part of the Stockholm Act. Of course, some of the final clauses, because of their nature—for example, those regarding the place of deposit of instruments of ratification or accession—will be applied even before any formal entry into force.

The provisions so far referred to deal only with the *initial* entry into force of the various parts of the Stockholm Act and not with the situation of member States which ratify or accede to that Act after the first ten such States. The member States first mentioned may also, according to Article 20(1)*(b)* and (2)*(c)*, exclude one of the groups of Articles 1 to 12 or 13 to 17 from their ratification or accession. If they do *not* exclude any group which has been excluded before by any other member State, their ratification or accession will count towards the total of ten ratifications or accessions required for the entry into force of the relevant group of Articles. Subject to their possible exclusion of one of the above groups of Articles, Articles 1 to 17 will enter into force with respect to those member States (Article 20(2)*(c)*) *three months* after the *date of notification* of their ratification or accession by the Director General to the other member States (Article 29(5)), unless *a subsequent date* has been indicated in the instrument or declaration deposited. At the same time, Articles 18 to 30 of the Stockholm Act will enter into force with respect to such member States (Article 20(3)).

ARTICLE 21*(a)*

(1) Any country outside the Union may accede to this Act and thereby become a member of the Union *(b)*. Instruments of accession shall be deposited with the Director General *(c)*.

(2)(a) With respect to any country outside the Union which deposits its instrument of accession one month or more before the date of entry into force of any provisions of the present Act, this Act shall enter into force *(d)*, unless a subsequent date has been indicated in the instrument of accession, on the date upon which provisions first enter into force pursuant to Article 20(2)(a) or (b); provided that:

(i) if Articles 1 to 12 do not enter into force on that date, such country shall, during the interim period before the entry into force of such provisions, and in substitution therefor, be bound by Articles 1 to 12 of the Lisbon Act,

(ii) if Articles 13 to 17 do not enter into force on that date, such country shall, during the interim period before the entry into force of such provisions, and in substitution therefor, be bound by Articles 13 and 14(3), (4), and (5), of the Lisbon Act.

If a country indicates a subsequent date in its instrument of accession, this Act shall enter into force with respect to that country on the date thus indicated.

(b) With respect to any country outside the Union which deposits its instrument of accession on a date which is subsequent to, or precedes by less than one month, the entry into force of one group of Articles of the present Act, this Act shall, subject to the proviso of subparagraph (a), enter into force three months after the date on which its accession has been notified by the Director General, unless a subsequent date has been indicated in the instrument of accession. In the latter case, this Act shall enter into force with respect to that country on the date thus indicated.

(3) With respect to any country outside the Union which deposits its instrument of accession after the date of entry into force of the present Act in its entirety, or less than one month before such date, this Act shall enter into force three months after the date on which

its accession has been notified by the Director General, unless a subsequent date has been indicated in the instrument of accession. In the latter case, this Act shall enter into force with respect to that country on the date thus indicated.

(a) This Article, regarding the accession to the Stockholm Act of States which before *were not members of the Union* and dealing further with the *entry into force* of the Stockholm Act *with respect to those States*, was introduced into the Convention by the Revision Conference of Stockholm in 1967. It replaces, with important modifications, Article 16 of the earlier texts.

(b) As has been observed above—see observation *(b)* on Article 20—States which were not party to the Convention before its revision at Stockholm in 1967 cannot have *signed* the Stockholm Act and therefore cannot *ratify* it, but they may *accede* to it. As further observed—see observation *(b)* on Article 1, paragraph (1)—the Convention does not provide any procedure for the admission of new members to the Union. However, reference must be made to Article 25, which declares that it should be understood that, at the time a country deposits its instrument of ratification or accession, *it will be in a position under its domestic law to give effect to the provisions of the Convention*, and which further states that any such country also undertakes to adopt, in accordance with its constitution, *the measures necessary to ensure the application of the Convention.*

(c) This provision parallels the second sentence of Article 20(1)*(a)* regarding member States of the Union (see, above, observation *(d)* on Article 20).

(d) States which were not previously members of the Union may accede to the Stockholm Act only *in its entirety* : they are not allowed to exclude certain groups of Articles from their accession. However, since *member States of the Union may*, when ratifying or acceding to the Stockholm Act, exclude certain groups of Articles, *the entry into force of the Stockholm Act may be only partial, or may be partial at first.*

It has therefore been necessary to give *special rules for the entry into force* of the Stockholm Act *with respect to States outside the Union*, which, although they are not allowed to exclude certain groups of Articles from their accession, may be faced with the effect of such exclusion by member States of the Union.

In these rules a distinction has been made between: (*i*) States outside the Union which deposit their instrument of accession one month or more *before* the entry into force of *any* provisions of the Stockholm Act (Article 21(2)*(a)*), (*ii*) States outside the Union which deposit their instrument of accession *after*, or *less* than *one month before, one group of Articles* of the Stockholm Act has entered into force (Article 21(2)*(b)*), and (*iii*) States outside the Union which deposit their instrument of accession *after the date of entry into force of the Stockholm Act in its entirety* (Article 21(3)).

The effects of accession in these three cases are described in the provisions referred to.

In the first case, the State concerned must " wait " until the initial entry into force of the Stockholm Act takes place before it becomes bound by that Act. When, afterwards, the Stockholm Act enters into force, the State concerned will (unless it has indicated a subsequent date) immediately be bound by it but, if the Stockholm Act does not then enter into force with respect to a certain group of Articles, such State will, in the interim period before the entry into force of the said provisions, be bound by the corresponding Articles of the Lisbon Act.

In the second case, the acceding State will be *bound by the same Acts* of Stockholm and possibly of Lisbon, but only *three months after the date on which its accession has been notified* by the Director General to the other member States, unless a subsequent date has been indicated in the instrument of accession.

In the third case, the acceding State will be *bound by the entire Stockholm Act* but as from the same *dates* as indicated in the preceding paragraph.

An additional observation may be made regarding territories (colonies, protectorates, etc.) to which the Convention was applied by virtue of Article 16*bis* of the Acts of Washington (1911), The Hague (1925), London (1934) and Lisbon (1958)—the Article which has become, in modified form, Article 24 of the Stockholm Act—but which since then *have obtained their independence as States.* It has already been observed above—see observation *(d)* on Article 1, paragraph (1)—that in such cases the new State is no longer bound by treaties applying to it in its former dependent status, unless it expressly accedes to these treaties. With respect to the Paris Convention, these States, desiring not to interrupt the application of the Convention, have often not limited themselves to a *new accession*, but have made a *declaration confirming membership or a declaration of continuity*, or the said *declaration combined with accession in the normal form.*[1] Such declarations mean that according to the country concerned the Convention has not ceased to be applicable, as regards that country, between the date of its independence and its subsequent accession.

With respect to the new State, such declaration may be considered to be an accession with retroactive effect from the date of its independence. Although the Convention does not provide for this procedure, it may be accepted with respect to States to which the Convention already applied, because uninterrupted application of the Convention is in the interest of all member States, for example, with respect to the right of priority—see, above, observation *(g)* on Article 4, Section A—and many other provisions of the Convention.

Declarations as referred to may also be made with regard to accession to the Stockholm Act. Their effect will be that the formerly applicable Act or Acts of the Convention will apply retroactively, whereas the Stockholm Act will apply according to the provisions of Article 21.

---

[1] See, for example, the declarations of Indonesia, *P.I.*, 1950, p. 222; the Ivory Coast, the Central African Republic, Chad, Upper Volta and Laos, *I.P.*, 1963, p. 214; the Malagasy Republic and Senegal, *I.P.*, 1963, p. 234; Gabon, *I.P.*, 1964, p. 23; Cameroon, *I.P.*, 1964, p. 66; Niger, *I.P.*, 1964, p. 118; Trinidad and Tobago, *I.P.*, 1964, p. 139; Southern Rhodesia, *I.P.*, 1965, p. 43; Zambia, *I.P.*, 1965, p. 43; Malawi, *I.P.*, 1965, p. 239; Mauritania, *I.P.*, 1965, p. 43; Dahomey, *I.P.*, 1966, p. 270; Togo, *I.P.*, 1967, p. 196. See also U.N. document A/CN.4/200/Add.1.

ARTICLE 22[(a)]

Subject to the possibilities of exceptions provided for in Articles 20(1)(b) and 28(2), ratification or accession shall automatically entail acceptance of all the clauses and admission to all the advantages of this Act *(b)*.

(a) This Article existed in essence in the original text of the Convention of 1883.[1] It related then, however, only to States newly adhering to the Union. The provision was maintained by the Revision Conferences until that of Stockholm in 1967. This latter Conference made the provision also applicable to States already members of the Union which ratify or accede to the Stockholm Act, and introduced a reservation regarding Articles 20(1)*(b)* and 28(2).

(b) The purpose of the Article is to *exclude*, with two exceptions, *all possibility of making reservations* by a State which ratifies or accedes to the Stockholm Act. Apart from the two possible exceptions, ratification of or accession to that Act means that *all rights and obligations deriving from the Convention are automatically accepted*. The only exceptions are that, according to Article 20(1)*(b)*, *States already members of the Union* may, as observed above, *exclude* from their ratification of or accession to the Stockholm Act *either Articles 1 to 12 or Articles 13 to 17*, whereas, according to Article 28(2), *any State, whether already a member of the Union or not*, may, when ratifying or acceding to the Stockholm Act, declare that it does not agree to be bound by *the jurisdictional clause of Article 28(1)*. This latter provision will be commented upon below.

---

[1] *Actes de Paris*, I, pp. 28 (proposal for Article 14), 122, 145/6 (adoption).

ARTICLE 23*(a)*

After the entry into force of this Act in its entirety *(b)*, a country *(c)* may not accede to earlier Acts of this Convention *(d)*.

(a) This provision was introduced into the Convention by the Revision Conference of Stockholm in 1967. No such provision existed in earlier texts of the Convention, but since the Revision Conference of Washington in 1911 the Convention contained other provisions according to which the earlier Act or Acts remained in force between member States which had ratified or acceded to them but had not (yet) accomplished those acts regarding the most recent Act (see, for example, Article 18(4), (5) and (6) of the Lisbon Act, to be compared with Article 27(2)*(a)*, *(b)* and *(c)* of the Stockholm Act). These provisions were traditionally[1] interpreted as meaning that earlier Acts of the Convention remained in force *only* for the purpose indicated and could not be independently acceded to after a more recent Act of the Convention had entered into force.

The Article under consideration was inserted in the Stockholm Act in order to confirm this tradition and to avoid future controversies.[2]

It must be observed, however, that if, in the conditions referred to in the Article, a State accedes to the Stockholm Act, this does not mean that it will not be bound to other States, members of the Union, which have not yet ratified or acceded to the Stockholm Act but are bound by earlier Acts of the Convention (see, for this question, observation *(e)* on Article 1(1), above, and also the commentary on Article 27, below). This is because the States party to the Convention have constituted *a Union* embodied in successive Acts of the Convention, as a consequence of which a State can only enter (and leave) *the Union as a whole* and must always be *bound*—albeit possibly by different Acts of the Convention—*to all other member States*.[3]

(b) The provision under consideration applies only after the entry into force of the Stockholm Act *in its entirety*, and not when it has entered into force with the exception of one of the groups of Articles

---

[1] Although not without exceptions. See LACINA: " The Problem of Conventional Relations between Countries according to the different Texts of the Paris Convention, " *I.P.*, 1966, p. 259.

[2] See document S/3 prepared for the Stockholm Conference, p. 50, paragraph 152.

[3] Report of Main Committee IV of the Stockholm Conference, *I.P.*, 1967, p. 222, paragraph 17.

referred to in Article 20(1)*(b)*(i) and (ii). In the latter case, countries may still accede to the Lisbon Act.

(c) The provision applies both to States which are already members of the Union and to States newly adhering to it.

For the first category of States, this means that a member State which has not ratified or acceded to a more recent Act than that of The Hague (1925) or London (1934) may, under the conditions indicated, only ratify or accede to the Stockholm Act (1967) and not that of Lisbon (1958). The question which Act will govern the relations of such State with other member States will be examined below when considering Article 27.

With respect to the second category of States, the provision means that, under the conditions indicated, such State can only accede to the Stockholm Act and not to any earlier Act. See, for its relations with other member States, Article 27(3), to be examined below.

(d) In the past, some States acceded *not only* to the *most recent Act* of the Convention but *to the Convention as such, as it had been revised and with regard to all revisions still in force.*[1] In view of the Article under consideration, this practice may not be continued with regard to the Stockholm Act.[2] If it is continued, references in the instrument of ratification or accession to earlier Acts of the Convention will have to be disregarded. As has been said, the question *by which Acts* a State which ratifies or accedes to the Stockholm Act *will be bound*, or which Acts it will apply with regard to other member States of the Union, will be examined below when considering Article 27.

---

[1] See, for example, the accession of U.S.S.R., *I.P.*, 1965, p. 74; of Uganda, *I.P.*, 1965, p. 98; of Algeria, *I.P.*, 1965, p. 239.

[2] See document S/3 prepared for the Stockholm Conference, p. 51: proposal for Article 16*quater*, corrected by document S/3 corr. 1; the latter proposal was adopted by the Conference.

ARTICLE 24(a)

(1) Any country may declare in its instrument of ratification or accession, or may inform the Director General by written notification any time thereafter, that this Convention shall be applicable to all or part of those territories, designated in the declaration or notification, for the external relations of which it is responsible *(b)*.

(2) Any country which has made such a declaration or given such a notification may, at any time, notify the Director General that this Convention shall cease to be applicable to all or part of such territories *(c)*.

(3)(a) Any declaration made under paragraph (1) shall take effect on the same date as the ratification or accession in the instrument of which it was included, and any notification given under such paragraph shall take effect three months after its notification by the Director General.

(b) Any notification given under paragraph (2) shall take effect twelve months after its receipt by the Director General.

(a) Provisions enabling member States to accede to the Convention also on behalf of their colonies and other dependent territories were introduced into the Convention by the Revision Conference of Washington in 1911.[1] These provisions then constituted Article 16*bis* of the Convention, an Article which was only modified on matters of detail by the subsequent Revision Conferences of The Hague (1925), London (1934) and Lisbon (1958). The Revision Conference of Stockholm in 1967, in declaring the Article applicable to territories for the external relations of which a State is responsible, adapted the provision to contemporary terminology; the Stockholm Conference also modified the Article in the light of the new administrative system adopted at that Conference.

(b) A declaration making the Convention applicable to designated territories will have a twofold effect. On the one hand, after such declaration takes effect, nationals of member States of the Union,

---

[1] *Actes de Washington*, pp. 57, 68, 208 (proposals), 221/2 (observations), 311 (report to Plenary Committee), 256/7 (discussion in Third Plenary Session), 260 (discussion and adoption in Fourth Plenary Session).

and those assimilated to such nationals, will be able to claim application of the Convention in such territories; on the other hand, nationals of those territories and persons who are assimilated to such nationals by Article 3 of the Convention may claim application of the Convention in all other member States (see also, above, observation *(b)* on Article 2(1)).

(c) This provision and the remaining provisions of the Article under consideration are self-explanatory.

ARTICLE 25(a)

(1) Any country party to this Convention undertakes to adopt, in accordance with its constitution, the measures necessary to ensure the application of this Convention *(b)*.

(2) It is understood that, at the time a country deposits its instrument of ratification or accession, it will be in a position under its domestic law to give effect to the provisions of this Convention *(c)*.

(a) The original text of the Convention of 1883 contained a provision (Article 17), according to which the carrying out of the reciprocal engagements contained in the Convention was subject, as far as necessary, to the observance of the formalities and rules established by the constitutional laws of the member States. To this was added the provision that member States were bound to procure the application of these engagements, which they undertook to do " with as little delay as possible."[1] This provision underwent only slight changes as to form during subsequent Revision Conferences until that of Lisbon in 1958. At that Conference it was replaced[2] by what is now, unaltered, with the exception of minor changes as to form, Article 25 of the Stockholm text.

(b) It is obvious that the Convention would not achieve its purpose if the member States did not carry out the obligations which they accepted in acceding to the Convention. These obligations may differ according to the constitutional system of the State concerned.

If such State accepts the " self-executing " character of certain provisions of the Convention—see, above, Chapter II.3 and II.4—its administrative and judicial authorities will have to apply those provisions directly. Moreover, such State will be obliged to adopt and maintain legislation in conformity with the Convention on all points where the Convention requires such legislation and it will also have to carry out its obligations in the administrative field.

A State which according to its constitution or constitutional system cannot accept the " self-executing " character of provisions of an international convention is under the obligation to introduce provisions

---

[1] *Actes de Paris*, I, pp. 145/6 (adoption: the Acts do not show how the provision came into being).

[2] *Actes de Lisbonne*, pp. 292 (proposal of U.S.A. and discussion in First Committee), 304 (report of First Committee), 109 (adoption in Second Plenary Session) 120 (General Report).

to the same effect in its domestic legislation, while its further obligations are the same as indicated above.

In practice, there have been several instances where a member State did not, or at least did not for some time, comply with its obligations under the Convention, particularly because it maintained legislation which was not in conformity with the Convention.

Article 17 of the Convention, as it stood from the time of its origin until the Revision Conference of Lisbon in 1958, did not permit a very strong reaction against such practices because, referring first to the observance of formalities and rules established by the constitutional laws of the member States, the Article declared that those States were only bound to apply the Convention " with as little delay as possible."

This was changed by the introduction of the new Article 17 (now Article 25) by the Revision Conference of Lisbon.

Under this provision, the first obligation for any member State is to adopt, in accordance with its constitution, *the measures necessary to ensure the application of the Convention.* Such measures will be, in the first place, the *legislative* measures necessary to carry out the obligations of the Convention and, in the second place, the *administrative* measures necessary in connexion with such legislation or with provisions of the Convention which are considered " self-executing " in the State concerned.

(c) The second obligation imposed upon any member State by the Article under consideration relates to the *moment of its ratification of or accession to the Convention.* It must then be in a position, *under its domestic law,* to *give effect to the provisions of the Convention,* which means that at that time all measures referred to above under observation *(b) must already have been taken.* This provision has sometimes been violated by member States but until the Revision Conference of Stockholm in 1967 no organ existed to establish formally such violation. The Stockholm Conference has changed this situation by introducing into the Convention Article 28 concerning disputes between member States regarding the interpretation or application of the Convention. This jurisdictional clause binds any member State, unless it declares, at the time of signature or ratification of, or accession to, the Stockholm Act that it does not consider itself bound by it. It will enable States which are bound by it to bring before the International Court of Justice cases where a member State does not comply with Article 25 of the Convention, now under consideration, unless negotiations or other methods of settlement bring about such compliance.

ARTICLE 26*(a)*

(1) This Convention shall remain in force without limitation as to time *(b)*.

(2) Any country may denounce this Act by notification addressed to the Director General *(c)*. **Such denunciation shall constitute also denunciation of all earlier Acts** *(d)* **and shall affect only the country making it, the Convention remaining in full force and effect as regards the other countries of the Union** *(e)*.

(3) Denunciation shall take effect one year after the day on which the Director General has received the notification *(f)*.

(4) The right of denunciation provided by this Article shall not be exercised by any country before the expiration of five years from the date upon which it becomes a member of the Union *(g)*.

(a) This Article partly maintains provisions on the duration of the Convention, and the possibility and effect of denunciation of it by a member State, which were already in the original text of the Convention of 1883 (then Article 18 but, since the Revision Conference of Washington, Article 17*bis*). The Revision Conference of Stockholm in 1967 introduced several modifications which will be commented upon below.

(b) The principle that the Convention is concluded for an *indefinite duration* and that possible denunciations by member States will affect only such States and not the other member States as regards which the Convention will remain in full force has been included in the Convention since its origin.

(c) Denunciations have to be addressed to the depositary of the Convention. Until the Revision Conference of Stockholm in 1967 this was the Government of the Swiss Confederation; according to the Stockholm Act, and in conformity with the adopted changes in the administrative system, it will be the Director General of WIPO.

(d) As has already been observed several times—see observation *(e)* on Article 1(1) and observation *(a)* on Article 23—one of the effects of the legal construction of the Paris Convention as a treaty whose member States constitute a Union is that States can only enter and leave the Union *as a whole*. It is therefore not possible for a member

State to denounce, for example, the most recent Act of the Convention, or any earlier Act, and to remain bound by other Acts. If a State denounces the Stockholm Act, this will constitute also denunciation of all earlier Acts.

(e) See observation *(b)* above.

(f) Several other communications by States, provided for under the Stockholm text of the Convention, will take effect after their *notification by the Director General* of WIPO (see, for example, Articles 20(2)*(c)*, 21(2)*(b)* and (3), 24(3)*(a)*). However, *denunciations* will take effect one year after the day on which the Director General has *received* the relevant notification because the effect of a denunciation must not be retarded by the delay involved in its transmission to other countries. See also, for an analogous situation, Article 24(3)*(b)*, and, further, Articles 17(3) and 30(2).

(g) This provision was added to the Article under consideration by the Revision Conference of Stockholm in 1967 in order to prevent hasty decisions as to denunciation of the Convention by States which have not belonged to the Union for a sufficiently long time to have experience to rely on.[1] It is to be noted that the period of five years is counted not from the ratification of or accession to the Stockholm Act but from the date on which the State concerned *has become a member of the Union* (through accession to any of the successive Acts of the Convention).

---

[1] See document S/3 prepared for the Stockholm Conference, p. 54, paragraph 162.

ARTICLE 27*(a)*

(1) The present Act shall, as regards the relations between the countries to which it applies, and to the extent that it applies, replace the Convention of Paris of March 20, 1883, and the subsequent Acts of revision *(b)*.

(2)(a) As regards the countries to which the present Act does not apply, or does not apply in its entirety, but to which the Lisbon Act of October 31, 1958, applies, the latter shall remain in force in its entirety or to the extent that the present Act does not replace it by virtue of paragraph (1)*(c)*.

(b) Similarly, as regards the countries to which neither the present Act, nor portions thereof, nor the Lisbon Act applies, the London Act of June 2, 1934, shall remain in force in its entirety or to the extent that the present Act does not replace it by virtue of paragraph (1).

(c) Similarly, as regards the countries to which neither the present Act, nor portions thereof, nor the Lisbon Act, nor the London Act applies, the Hague Act of November 6, 1925, shall remain in force in its entirety or to the extent that the present Act does not replace it by virtue of paragraph (1).

(3) Countries outside the Union which become party to this Act shall apply it with respect to any country of the Union not party to this Act or which, although party to this Act, has made a declaration pursuant to Article 20(1)(b)(i). Such countries recognize that the said country of the Union may apply, in its relations with them, the provisions of the most recent Act to which it is party *(d)*.

(a) This Article deals with the application of earlier Acts of the Convention after the Stockholm Act has—wholly or partly—entered into force and until the moment when all member States will have ratified or acceded to the Stockholm Act in its entirety. With respect to such application of earlier Acts, the Stockholm Act has maintained the system which was introduced into the Convention by the Revision Conference of Washington in 1911[1] and was continued, with the necessary adaptations, by the subsequent Revision Conferences.[2]

---

[1] *Actes de Washington*, pp. 232 (proposal for Article 27*bis*), 311 (report to Plenary Committee), 260/1 (adoption in Fourth Plenary Session).

[2] *Actes de La Haye*, pp. 266 (proposal), 424 (report of First Sub-Committee); 526 (report of General Committee), 549/50 (report of Drafting Committee), 581 (adoption in Second Plenary Session); *Actes de Londres*, pp. 474 (report of Drafting Committee), 519 (adoption in Second Plenary Session); *Actes de Lisbonne*, p. 109 (discussion and adoption in Second Plenary Session).

However, the Stockholm Act has introduced modifications, first of all because it had to take into account the fact that, in view of Article 20(1)*(b)*, it may enter into force only partially, that is, to the exclusion of a certain group of Articles, and secondly when it added an important provision (Article 27(3)) concerning the application of Acts of the Convention by, and in relation to, a State which was not a member of the Union before acceding to the Stockholm Act.

(b) This provision prescribes that relations between States to which the Stockholm Act applies, because they have ratified it or acceded to it, will be *exclusively governed by the Stockholm Act*, which *replaces*, as far as those relations are concerned, *all earlier Acts*. If, however, such State has excluded from its ratification or accession either Articles 1 to 12 or 13 to 17 of the Stockholm Act, only the other Articles of the Stockholm Act will apply, whereas Articles replaced by the excluded Articles will continue to apply according to the other paragraphs of the Article under consideration.

(c) Paragraphs 2*(a)(b)* and *(c)* of this Article maintain, with the exception that they also take into account the possibility of partial entry into force of the Stockholm Act, the system regarding the application of earlier Acts of the Convention adopted by the Revision Conference of Washington (1911) and continued by subsequent Revision Conferences. Unfortunately, although this system raises several questions,[1] it was not explained or commented upon during any of those Conferences. The Revision Conference of Stockholm in 1967 has clarified the situation to some extent, because it was observed there[2] that a distinction must be made between *accession* to earlier Acts of the Convention and *application* of such Acts, whereas a new provision (Article 27(3)) was adopted regarding the application of Acts of the Convention by, and in relation to, a State which would accede to the Convention without having previously been a member of the Union.

Taking into account those developments, the situation with regard to the application of earlier Acts of the Convention may be described as follows.

---

[1] See, for the situation before the Revision Conference of Stockholm in 1967: "A propos de l'application simultanée des textes successifs de la Convention d'Union," *P.I.*, 1936, p. 99, and Lacina: "The Problem of Conventional Relations between Countries according to the different Texts of the Paris Convention, " *I.P.*, 1966, p. 257. See also *BIRPI Lecture Course on Industrial Property*, 1965, p. 11.

[2] Report of Main Committee IV of the Stockholm Conference, *I.P.*, 1967, p. 222, paragraph 18.

With respect to States which *were not members of the Union before they acceded to the Stockholm Act*, Article 27(3) will apply. Such States will apply the Stockholm Act not only, of course, with respect to member States which have already ratified or acceded to that Act, but also with respect to member States which have *not* yet ratified or acceded to the Stockholm Act or which have ratified or acceded to that Act *to the exclusion of Articles 1 to 12 thereof*. Although the provision does not say so, the same solution will apply with respect to member States which have ratified or acceded to the Stockholm Act *to the exclusion of Articles 13 to 17 thereof:* such States will continue to be bound by the old administrative system, but the newly acceding State will only be bound by the new administrative system of the Stockholm Act.

On the other hand, the newly acceding State will have to recognize that *any other member State* of the Union *may* apply, in its relations to that State, the provisions *of the most recent Act to which it is party*. The word " may " indicates that such other member State *may also apply*, in its relations with a newly acceding State, the Stockholm Act; although it has not yet *acceded* to that Act, it may apply it,[1] and the newly acceding State cannot complain because the Stockholm Act is precisely the Act which it has accepted.

The situation is more complicated with respect to States which *were already members of the Union* before they ratified or acceded to the Stockholm Act (to the possible exclusion of one of the groups of Articles 1 to 12 or 13 to 17).

Such States will, of course, apply the Stockholm Act (to the extent that they have accepted it) with respect to all other States which have (and to the extent that they have) accepted the Stockholm Act.

With respect to States which have not done so (or to the extent that they have not done so) the Article under consideration specifies (paragraphs (2)*(a)*, *(b)* and *(c)*) that *earlier Acts of the Convention remain in force*.

Nevertheless, a member State which has ratified or acceded to the Stockholm Act *may also apply* it—and may wish to do so because it has modified its domestic legislation accordingly—to member States which have not yet ratified or acceded to that Act. This is so, because there is no reason why a member State of the Union should not be *allowed* to do what a newly acceding State *must* do. The first-mentioned member State *may* however also apply, with respect to any other

---

[1] This concerns the part of the Convention dealing with substantive law, the application of administrative provisions being regulated in Article 30, paragraph (2).

member State, *the most recent common Act*, and will in any case have to accept that *such other member State will apply*, with regard to it, *the most recent common Act* which according to the provision under examination has remained in force.

But what if there is *no such most recent common Act*, for example, because one member State ratifies the Stockholm Act after having acceded only to the Lisbon Act (1958), whereas another member State has not ratified or acceded to a more recent Act than that of London (1934) or The Hague (1925)? In such case, the member State which has ratified or acceded to the Stockholm Act may still apply that Act in its relations with the other State. It may, however, also apply, although it is not formally *bound by it*, the most recent Act to which the other member State is party, which is all that the other State may claim, not having ratified or acceded to more recent Acts. The State which has ratified or acceded to the Stockholm Act will in any case have to accept that any other member State will apply the most recent Act to which it is party and which has remained in force according to paragraphs (2)*(a)*, *(b)* and *(c)* of the Article under consideration.

In view of the uncertainties left by this Article, a declaration by member States regarding the Acts they consider applicable in certain situations [1] will be most useful.

(d) As has been observed, this provision applies only to States which *were not members of the Union* until they acceded to the Stockholm Act. The provision has already been commented upon above.

---

[1] Cf. Report of Main Committee IV of the Stockholm Conference, *I.P.*, 1967, p. 222, paragraph 18, which, however, erroneously refers to newly acceding States, which are bound by Article 27(3) and therefore cannot make such declaration.

ARTICLE 28*(a)*

(1) Any dispute between two or more countries of the Union concerning the interpretation or application of this Convention, not settled by negotiation, may, by any one of the countries concerned, be brought before the International Court of Justice by application in conformity with the Statute of the Court, unless the countries concerned agree on some other method of settlement *(b)*. **The country bringing the dispute before the Court shall inform the International Bureau ; the International Bureau shall bring the matter to the attention of the other countries of the Union** *(c)*.

(2) Each country may, at the time it signs this Act or deposits its instrument of ratification or accession, declare that it does not consider itself bound by the provisions of paragraph (1). With regard to any dispute between such country and any other country of the Union, the provisions of paragraph (1) shall not apply *(d)*.

(3) Any country having made a declaration in accordance with the provisions of paragraph (2) may, at any time, withdraw its declaration by notification addressed to the Director General *(e)*.

(a) This Article, containing a jurisdictional clause, which may however be subject to a declaration of non-acceptance, was introduced into the Convention by the Revision Conference of Stockholm in 1967. Earlier attempts to introduce such a clause, made at the Revision Conferences of The Hague (1925), London (1934) and Lisbon (1958), had failed.[1]

(b) The provision grants competence to the International Court of Justice to decide on any *dispute between two or more member States* concerning the *interpretation* or *application* of the Convention unless, of course, such dispute is settled by negotiation or the States concerned agree on some other method of settlement, for example, by way of international arbitration. Such dispute may be brought before the International Court by application in conformity with the Statute of the Court. This Court, established at The Hague (Netherlands), consists of

---

[1] *Actes de La Haye*, pp. 353/4 (proposal of U.K.), 420/4 (report of First Sub-Committee); *Actes de Londres*, p. 293 (proposals of Mexico, Netherlands and Switzerland; see also pp. 162/4 for an intended proposal of the International Bureau), 349/51 (report of First Sub-Committee), 472/3 (report of Drafting Committee); *Actes de Lisbonne*, pp. 192/8 (proposal), 199/201 (observations), 202 (discussion in First Committee), 300/1 (report of First Committee).

fifteen members, elected for nine years by the General Assembly and by the Security Council of the United Nations. The Court may be supplemented by judges of the nationality of the litigating parties. It is declared competent to deal with all cases which the parties refer to it and all matters specially provided for in treaties and conventions in force (Article 36, paragraph 1, of the Statue of the Court). *Only States may be parties in cases before the Court* (Article 34, paragraph 1, of its Statute).

(c) It is provided that the *State bringing* a dispute before the Court *must inform the International Bureau. The Court itself* may, subject to and in conformity with its Rules, request *of public international organizations,* such as WIPO, *information relevant to a case before it* and it will receive such *information presented by such organizations on their own initiative.* Moreover, whenever the construction of a convention (such as the Paris Convention) is in question in a case before the Court, the international organization concerned will receive copies of all the written proceedings at the Court (Article 34, paragraphs 2 and 3, of its Statute).

In the provision under consideration, it is further provided that *the International Bureau* will bring a dispute before the Court *to the attention of the other member States of the Union.* This will enable any such State which considers that it has an interest of a legal nature which may be affected by the decision in the case to submit a request to the Court to be permitted to intervene (Article 62 of the Statute). Whenever the construction of a convention in which States other than those concerned in the case are parties is in question, such States have a *right* to intervene, but, if they do so, the construction given by the judgment will be binding upon them (Article 63 of the Statute).

(d) As has already been observed above—see observation *(b)* on Article 22—the Stockholm Act of the Convention allows States to make reservations, that is, to exclude the application of provisions of the Convention, only on two points. One of these is the applicability of the jurisdictional clause. Any State may at the time of its signature[1] or ratification of, or accession to, the Stockholm Act declare that it does not consider itself bound by the jurisdictional clause, in which case the clause will not apply between such State and any other member State.

(e) A declaration concerning non-applicability of the jurisdictional clause may at any time be withdrawn. The provision is self-explanatory.

---

[1] The following States made this reservation at the time of their signature of the Stockholm Act (cf. *I.P.*, 1968, p. 33): Algeria, Bulgaria, Indonesia, Poland, Rumania and U.S.S.R.

ARTICLE 29*(a)*

(1)(a) This Act shall be signed in a single copy in the French language and shall be deposited with the Government of Sweden *(b)*.

(b) Official texts shall be established by the Director General, after consultation with the interested Governments, in the English, German, Italian, Portuguese, Russian and Spanish languages, and such other languages as the Assembly may designate *(c)*.

(c) In case of differences of opinion on the interpretation of the various texts, the French text shall prevail *(d)*.

(2) This Act shall remain open for signature at Stockholm until January 13, 1968 *(e)*.

(3) The Director General shall transmit two copies, certified by the Government of Sweden, of the signed text of this Act to the Governments of all countries of the Union and, on request, to the Government of any other country *(f)*.

(4) The Director General shall register this Act with the Secretariat of the United Nations *(g)*.

(5) The Director General shall notify the Governments of all countries of the Union of signatures, deposits of instruments of ratification or accession and any declarations included in such instruments or made pursuant to Article 20(1)(c), entry into force of any provisions of this Act, notifications of denunciation, and notifications pursuant to Article 24*(h)*.

(a) Since the Revision Conference of Washington in 1911 the Convention has contained (in Article 19) provisions concerning the signature of each successive Act and the communication of certified copies of those Acts to member States. The Revision Conference of Lisbon in 1958 introduced into this Article additional provisions concerning the languages of the official copy of the Act and of translations thereof. Those provisions were modified and adapted to the new administrative system by the Revision Conference of Stockholm to form what is now Article 29 of the Convention.

(b) The Stockholm Act has maintained the former system according to which there is *only one signed copy* of the Convention, as revised, and that Act is established *in the French language.*

(c) Whereas the Lisbon Act made provision, apart from the signed copy of the Act in French, for official *translations* of that Act in several other languages, the Stockholm Act prescribes that official *texts* —not mere translations—shall be established in such other languages. The status of texts in other languages has thereby been improved.

(d) However, since several texts in different languages may lead to different interpretations, it is also provided that in case of such differences the French text shall prevail.

(e) As in the case of the Lisbon Act, the Stockholm Act remained open for a period during which it could still be signed after the Revision Conference had closed, so that the Governments of member States could still reflect on the desirability of signing. At the closing date, January 13, 1968, the Stockholm Act had been signed by 46 member States.[1]

(f) This provision is self-explanatory.

(g) This provision implements an obligation existing under Article 102, paragraph 1, of the Charter of the United Nations, which provides that " every treaty and every international agreement entered into by any Member of the United Nations after the present [U. N.] Charter comes into force shall as soon as possible be registered with the Secretariat [of the U. N.] and published by it."

(h) This provision is again self-explanatory.

---

[1] See *I.P.*, 1968, p. 33.

ARTICLE 30[(a)]

(1) Until the first Director General assumes office, references in this Act to the International Bureau of the Organization or to the Director General shall be deemed to be references to the Bureau of the Union or its Director, respectively *(b)*.

(2) Countries of the Union not bound by Articles 13 to 17 may, until five years after the entry into force of the Convention establishing the Organization, exercise, if they so desire, the rights provided under Articles 13 to 17 of this Act as if they were bound by those Articles. Any country desiring to exercise such rights shall give written notification to that effect to the Director General; such notification shall be effective from the date of its receipt. Such countries shall be deemed to be members of the Assembly until the expiration of the said period *(c)*.

(3) As long as all the countries of the Union have not become Members of the Organization, the International Bureau of the Organization shall also function as the Bureau of the Union, and the Director General as the Director of the said Bureau *(d)*.

(4) Once all the countries of the Union have become Members of the Organization, the rights, obligations, and property, of the Bureau of the Union shall devolve on the International Bureau of the Organization *(e)*.

(a) This Article, containing transitional provisions, was introduced into the Convention by the Revision Conference of Stockholm in 1967. This was necessary in view of the important modifications of the administrative provisions of the Convention adopted by that Conference. The first three paragraphs of the Article deal with three different periods and also with different questions.[1]

Paragraph (1) concerns the period which will elapse until such time as the first Director General of WIPO assumes office and it deals, for that period, with references made in the Act to the said Director General or to the International Bureau of the said Organization.

Paragraph (2) relates to a period of five years after the entry into force of the WIPO Convention and deals with the possibility open to

---

[1] See document S/3 prepared for the Stockholm Conference, p. 58, paragraph 173.

member States to exercise, during that period, the rights provided by the new administrative system.

Paragraph (3) concerns the period which will end when all member States of the Union have also become Members of WIPO and deals with the functioning of the International Bureau and its head during that period, while paragraph (4) provides for certain consequences which will follow the expiration of the said period.

For all those provisions reference must be made to the close relationship envisaged between the Paris Union and WIPO (see, above, observation *(a)* on Article 13).

(b) Until the first Director General has assumed office, references made in the Stockholm Act to the International Bureau of Intellectual Property established by the WIPO Convention, or to its Director General, must be understood as references to BIRPI and its Director.[1] Examples of the application of this provision will include the transmittal of copies of the Stockholm Act to Governments (Article 29(3)) and the notifications to be made pursuant to Article 29(5). Those tasks have been assigned by the Stockholm Act to the Director General but, as long as there is no Director General, the said tasks will be carried out by the Director of BIRPI.

(c) Paragraph (2) of the Article under consideration will allow—during a period of five years after the entry into force of the WIPO Convention, entry into force which will complete the new administrative provisions of the Paris Convention—all member States which have not yet accepted the new administrative system embodied in Articles 13 to 17 to exercise, if they so desire, the rights provided under the said Articles as if they were bound by them. This possibility has been provided because the WIPO Convention, as well as the Stockholm Act of the Paris Convention, will enter into force after ratification or accession by comparatively few States and in such circumstances the organs of those Conventions, which would be composed only of the said States, would not have a sufficiently representative character. That is why, during this period, other member States of the Union will also be allowed, if they so desire, to vote in the Assembly, to be elected as members of the Executive Committee, to vote in the Executive Committee and to exercise all the other rights provided in Articles 13 to 17 (see also Article 21(2) of the WIPO Convention). The States which,

---

[1] See document S/3 prepared for the Stockholm Conference, p. 58, paragraph 174.

at the expiration of the five-year period, are still not bound by Articles 13 to 17 will lose those rights at the end of the fifth year.[1] See also observation *(c)* on Article 14 above.

(d) As long as there are member States of the Paris Union which are not Members of WIPO, the administrative organ must have a dual identity (see also Article 21(3) of the WIPO Convention): it will function at the same time as BIRPI, supervised by the Swiss Government, and as the International Bureau of Intellectual Property, established by the WIPO Convention and defined in Article 15(1)*(a)* of the Stockholm Act of the Paris Convention, controlled by the organs of both Conventions. As was explained to the Stockholm Conference, no procedural difficulties are expected in this respect.[2]

(e) This provision is self-explanatory.

---

[2] *Ibidem*, p. 58, paragraph 176; see also the rectification in document S/3 corr.2.

IV

PARIS CONVENTION FOR THE PROTECTION OF INDUSTRIAL PROPERTY [1]

of March 20, 1883,
as revised
at BRUSSELS on December 14, 1900, at WASHINGTON on June 2, 1911,
at THE HAGUE on November 6, 1925, at LONDON on June 2, 1934,
at LISBON on October 31, 1958,
and at STOCKHOLM on July 14, 1967

Article 1

[Establishment of the Union; Scope of Industrial Property] [2]

(1) The countries to which this Convention applies constitute a Union for the protection of industrial property.

(2) The protection of industrial property has as its object patents, utility models, industrial designs, trademarks, service marks, trade names, indications of source or appellations of origin, and the repression of unfair competition.

(3) Industrial property shall be understood in the broadest sense and shall apply not only to industry and commerce proper, but likewise to agricultural and extractive industries and to all manufactured or natural products, for example, wines, grain, tobacco leaf, fruit, cattle, minerals, mineral waters, beer, flowers, and flour.

(4) Patents shall include the various kinds of industrial patents recognized by the laws of the countries of the Union, such as patents of importation, patents of improvement, patents and certificates of addition, etc.

Article 2

[National Treatment for Nationals of Countries of the Union]

(1) Nationals of any country of the Union shall, as regards the protection of industrial property, enjoy in all the other countries of

---

[1] Official English text established under Article 29(1)(b).

[2] Articles have been given titles to facilitate their identification. There are no titles in the signed (French) text.

the Union the advantages that their respective laws now grant, or may hereafter grant, to nationals; all without prejudice to the rights specially provided for by this Convention. Consequently, they shall have the same protection as the latter, and the same legal remedy against any infringement of their rights, provided that the conditions and formalities imposed upon nationals are complied with.

(2) However, no requirement as to domicile or establishment in the country where protection is claimed may be imposed upon nationals of countries of the Union for the enjoyment of any industrial property rights.

(3) The provisions of the laws of each of the countries of the Union relating to judicial and administrative procedure and to jurisdiction, and to the designation of an address for service or the appointment of an agent, which may be required by the laws on industrial property are expressly reserved.

Article 3

[Same Treatment for Certain Categories of Persons as for Nationals of Countries of the Union]

Nationals of countries outside the Union who are domiciled or who have real and effective industrial or commercial establishments in the territory of one of the countries of the Union shall be treated in the same manner as nationals of the countries of the Union.

Article 4

[A to I. *Patents, Utility Models, Industrial Designs, Marks, Inventors' Certificates:* Right of Priority. — G. *Patents:* Division of the Application]

A(1) Any person who has duly filed an application for a patent, or for the registration of a utility model, or of an industrial design, or of a trademark, in one of the countries of the Union, or his successor in title, shall enjoy, for the purpose of filing in the other countries, a right of priority during the periods hereinafter fixed.

(2) Any filing that is equivalent to a regular national filing under the domestic legislation of any country of the Union or under bilateral or multilateral treaties concluded between countries of the Union shall be recognized as giving rise to the right of priority.

(3) By a regular national filing is meant any filing that is adequate to establish the date on which the application was filed in the country concerned, whatever may be the subsequent fate of the application.

B. Consequently, any subsequent filing in any of the other countries of the Union before the expiration of the periods referred to above shall not be invalidated by reason of any acts accomplished in the interval, in particular, another filing, the publication or exploitation of the invention, the putting on sale of copies of the design, or the use of the mark, and such acts cannot give rise to any third-party right or any right of personal possession. Rights acquired by third parties before the date of the first application that serves as the basis for the right of priority are reserved in accordance with the domestic legislation of each country of the Union.

C(1) The periods of priority referred to above shall be twelve months for patents and utility models, and six months for industrial designs and trademarks.

(2) These periods shall start from the date of filing of the first application ; the day of filing shall not be included in the period.

(3) If the last day of the period is an official holiday, or a day when the Office is not open for the filing of applications in the country where protection is claimed, the period shall be extended until the first following working day.

(4) A subsequent application concerning the same subject as a previous first application within the meaning of paragraph (2), above, filed in the same country of the Union, shall be considered as the first application, of which the filing date shall be the starting point of the period of priority, if, at the time of filing the subsequent application, the said previous application has been withdrawn, abandoned, or refused, without having been laid open to public inspection and without leaving any rights outstanding, and if it has not yet served as a basis for claiming a right of priority. The previous application may not thereafter serve as a basis for claiming a right of priority.

D(1) Any person desiring to take advantage of the priority of a previous filing shall be required to make a declaration indicating the date of such filing and the country in which it was made. Each country shall determine the latest date on which such declaration must be made.

(2) These particulars shall be mentioned in the publications issued by the competent authority, and in particular in the patents and the specifications relating thereto.

(3) The countries of the Union may require any person making a declaration of priority to produce a copy of the application (description, drawings, etc.) previously filed. The copy, certified as correct by the authority which received such application, shall not require any authen-

tication, and may in any case be filed, without fee, at any time within three months of the filing of the subsequent application. They may require it to be accompanied by a certificate from the same authority showing the date of filing, and by a translation.

(4) No other formalities may be required for the declaration of priority at the time of filing the application. Each country of the Union shall determine the consequences of failure to comply with the formalities prescribed by this Article, but such consequences shall in no case go beyond the loss of the right of priority.

(5) Subsequently, further proof may be required.

Any person who avails himself of the priority of a previous application shall be required to specify the number of that application; this number shall be published as provided for by paragraph (2), above.

E(1) Where an industrial design is filed in a country by virtue of a right of priority based on the filing of a utility model, the period of priority shall be the same as that fixed for industrial designs.

(2) Furthermore, it is permissible to file a utility model in a country by virtue of a right of priority based on the filing of a patent application, and vice versa.

F. No country of the Union may refuse a priority or a patent application on the ground that the applicant claims multiple priorities, even if they originate in different countries, or on the ground that an application claiming one or more priorities contains one or more elements that were not included in the application or applications whose priority is claimed, provided that, in both cases, there is unity of invention within the meaning of the law of the country.

With respect to the elements not included in the application or applications whose priority is claimed, the filing of the subsequent application shall give rise to a right of priority under ordinary conditions.

G(1) If the examination reveals that an application for a patent contains more than one invention, the applicant may divide the application into a certain number of divisional applications and preserve as the date of each the date of the initial application and the benefit of the right of priority, if any.

(2) The applicant may also, on his own initiative, divide a patent application and preserve as the date of each divisional application the date of the initial application and the benefit of the right of priority, if any. Each country of the Union shall have the right to determine the conditions under which such division shall be authorized.

H. Priority may not be refused on the ground that certain elements of the invention for which priority is claimed do not appear among the claims formulated in the application in the country of origin, provided that the application documents as a whole specifically disclose such elements.

I(1) Applications for inventors' certificates filed in a country in which applicants have the right to apply at their own option either for a patent or for an inventor's certificate shall give rise to the right of priority provided for by this Article, under the same conditions and with the same effects as applications for patents.

(2) In a country in which applicants have the right to apply at their own option either for a patent or for an inventor's certificate, an applicant for an inventor's certificate shall, in accordance with the provisions of this Article relating to patent applications, enjoy a right of priority based on an application for a patent, a utility model, or an inventor's certificate.

Article 4*bis*

[*Patents :* Independence of Patents Obtained for the Same Invention in Different Countries]

(1) Patents applied for in the various countries of the Union by nationals of countries of the Union shall be independent of patents obtained for the same invention in other countries, whether members of the Union or not.

(2) The foregoing provision is to be understood in an unrestricted sense, in particular, in the sense that patents applied for during the period of priority are independent, both as regards the grounds for nullity and forfeiture, and as regards their normal duration.

(3) The provision shall apply to all patents existing at the time when it comes into effect.

(4) Similarly, it shall apply, in the case of the accession of new countries, to patents in existence on either side at the time of accession.

(5) Patents obtained with the benefit of priority shall, in the various countries of the Union, have a duration equal to that which they would have, had they been applied for or granted without the benefit of priority.

Article 4*ter*

[*Patents :* Mention of the Inventor in the Patent]

The inventor shall have the right to be mentioned as such in the patent.

Article 4*quater*

[*Patents:* Patentability in Case of Restrictions of Sale by Law]

The grant of a patent shall not be refused and a patent shall not be invalidated on the ground that the sale of the patented product or of a product obtained by means of a patented process is subject to restrictions or limitations resulting from the domestic law.

Article 5

[A. *Patents:* Importation of Articles; Failure to Work or Insufficient Working; Compulsory Licenses. — B. *Industrial Designs:* Failure to Work; Importation of Articles. — C. *Marks:* Failure to Use; Different Forms; Use by Co-proprietors. — D. *Patents, Utility Models, Marks, Industrial Designs:* Marking]

A(1) Importation by the patentee into the country where the patent has been granted of articles manufactured in any of the countries of the Union shall not entail forfeiture of the patent.

(2) Each country of the Union shall have the right to take legislative measures providing for the grant of compulsory licenses to prevent the abuses which might result from the exercise of the exclusive rights conferred by the patent, for example, failure to work.

(3) Forfeiture of the patent shall not be provided for except in cases where the grant of compulsory licenses would not have been sufficient to prevent the said abuses. No proceedings for the forfeiture or revocation of a patent may be instituted before the expiration of two years from the grant of the first compulsory license.

(4) A compulsory license may not be applied for on the ground of failure to work or insufficient working before the expiration of a period of four years from the date of filing of the patent application or three years from the date of the grant of the patent, whichever period expires last; it shall be refused if the patentee justifies his inaction by legitimate reasons. Such a compulsory license shall be non-exclusive and shall not be transferable, even in the form of the grant of a sub-license, except with that part of the enterprise or goodwill which exploits such license.

(5) The foregoing provisions shall be applicable, mutatis mutandis, to utility models.

B. The protection of industrial designs shall not, under any circumstance, be subject to any forfeiture, either by reason of failure to work or by reason of the importation of articles corresponding to those which are protected.

C(1) If, in any country, use of the registered mark is compulsory, the registration may be cancelled only after a reasonable period, and then only if the person concerned does not justify his inaction.

(2) Use of a trademark by the proprietor in a form differing in elements which do not alter the distinctive character of the mark in the form in which it was registered in one of the countries of the Union shall not entail invalidation of the registration and shall not diminish the protection granted to the mark.

(3) Concurrent use of the same mark on identical or similar goods by industrial or commercial establishments considered as co-proprietors of the mark according to the provisions of the domestic law of the country where protection is claimed shall not prevent registration or diminish in any way the protection granted to the said mark in any country of the Union, provided that such use does not result in misleading the public and is not contrary to the public interest.

D. No indication or mention of the patent, of the utility model, of the registration of the trademark, or of the deposit of the industrial design, shall be required upon the goods as a condition of recognition of the right to protection.

Article 5*bis*

[*All Industrial Property Rights:* Period of Grace for the Payment of Fees for the Maintenance of Rights; *Patents:* Restoration]

(1) A period of grace of not less than six months shall be allowed for the payment of the fees prescribed for the maintenance of industrial property rights, subject, if the domestic legislation so provides, to the payment of a surcharge.

(2) The countries of the Union shall have the right to provide for the restoration of patents which have lapsed by reason of non-payment of fees.

Article 5*ter*

[*Patents:* Patented Devices Forming Part of Vessels, Aircraft, or Land Vehicles]

In any country of the Union the following shall not be considered as infringements of the rights of a patentee:

1. **the use on board vessels of other countries of the Union of devices forming the subject of his patent in the body of the vessel, in the machinery, tackle, gear and other accessories,**

when such vessels temporarily or accidentally enter the waters of the said country, provided that such devices are used there exclusively for the needs of the vessel;

2. the use of devices forming the subject of the patent in the construction or operation of aircraft or land vehicles of other countries of the Union, or of accessories of such aircraft or land vehicles, when those aircraft or land vehicles temporarily or accidentally enter the said country.

Article 5*quater*

[*Patents:* Importation of Products Manufactured by a Process Patented in the Importing Country]

When a product is imported into a country of the Union where there exists a patent protecting a process of manufacture of the said product, the patentee shall have all the rights, with regard to the imported product, that are accorded to him by the legislation of the country of importation, on the basis of the process patent, with respect to products manufactured in that country.

Article 5*quinquies*

[*Industrial Designs*]

Industrial designs shall be protected in all the countries of the Union.

Article 6

[*Marks:* Conditions of Registration; Independence of Protection of Same Mark in Different Countries]

(1) The conditions for the filing and registration of trademarks shall be determined in each country of the Union by its domestic legislation.

(2) However, an application for the registration of a mark filed by a national of a country of the Union in any country of the Union may not be refused, nor may a registration be invalidated, on the ground that filing, registration, or renewal, has not been effected in the country of origin.

(3) A mark duly registered in a country of the Union shall be regarded as independent of marks registered in the other countries of the Union, including the country of origin.

Article 6*bis*

[*Marks :* Well-Known Marks]

(1) The countries of the Union undertake, ex officio if their legislation so permits, or at the request of an interested party, to refuse or to cancel the registration, and to prohibit the use, of a trademark which constitutes a reproduction, an imitation, or a translation, liable to create confusion, of a mark considered by the competent authority of the country of registration or use to be well known in that country as being already the mark of a person entitled to the benefits of this Convention and used for identical or similar goods. These provisions shall also apply when the essential part of the mark constitutes a reproduction of any such well-known mark or an imitation liable to create confusion therewith.

(2) A period of at least five years from the date of registration shall be allowed for requesting the cancellation of such a mark. The countries of the Union may provide for a period within which the prohibition of use must be requested.

(3) No time limit shall be fixed for requesting the cancellation or the prohibition of the use of marks registered or used in bad faith.

Article 6*ter*

[*Marks :* Prohibitions concerning State Emblems, Official Hallmarks, and Emblems of Intergovernmental Organizations]

(1)(a) The countries of the Union agree to refuse or to invalidate the registration, and to prohibit by appropriate measures the use, without authorization by the competent authorities, either as trademarks or as elements of trademarks, of armorial bearings, flags, and other State emblems, of the countries of the Union, official signs and hallmarks indicating control and warranty adopted by them, and any imitation from a heraldic point of view.

(b) The provisions of subparagraph (a), above, shall apply equally to armorial bearings, flags, other emblems, abbreviations, and names, of international intergovernmental organizations of which one or more countries of the Union are members, with the exception of armorial bearings, flags, other emblems, abbreviations, and names, that are already the subject of international agreements in force, intended to ensure their protection.

(c) No country of the Union shall be required to apply the provisions of subparagraph (b), above, to the prejudice of the owners of rights acquired in good faith before the entry into force, in that country, of this Convention. The countries of the Union shall not be required to apply the said provisions when the use or registration referred to in subparagraph (a), above, is not of such a nature as to suggest to the public that a connection exists between the organization concerned and the armorial bearings, flags, emblems, abbreviations, and names, or if such use or registration is probably not of such a nature as to mislead the public as to the existence of a connection between the user and the organization.

(2) Prohibition of the use of official signs and hallmarks indicating control and warranty shall apply solely in cases where the marks in which they are incorporated are intended to be used on goods of the same or a similar kind.

(3)(a) For the application of these provisions, the countries of the Union agree to communicate reciprocally, through the intermediary of the International Bureau, the list of State emblems, and official signs and hallmarks indicating control and warranty, which they desire, or may hereafter desire, to place wholly or within certain limits under the protection of this Article, and all subsequent modifications of such list. Each country of the Union shall in due course make available to the public the lists so communicated.

Nevertheless such communication is not obligatory in respect of flags of States.

(b) The provisions of subparagraph (b) of paragraph (1) of this Article shall apply only to such armorial bearings, flags, other emblems, abbreviations, and names, of international intergovernmental organizations as the latter have communicated to the countries of the Union through the intermediary of the International Bureau.

(4) Any country of the Union may, within a period of twelve months from the receipt of the notification, transmit its objections, if any, through the intermediary of the International Bureau, to the country or international intergovernmental organization concerned.

(5) In the case of State flags, the measures prescribed by paragraph (1), above, shall apply solely to marks registered after November 6, 1925.

(6) In the case of State emblems other than flags, and of official signs and hallmarks of the countries of the Union, and in the case of armorial bearings, flags, other emblems, abbreviations, and names, of international intergovernmental organizations, these provisions shall apply only to marks registered more than two months after receipt of the communication provided for in paragraph (3), above.

(7) In cases of bad faith, the countries shall have the right to cancel even those marks incorporating State emblems, signs, and hallmarks, which were registered before November 6, 1925.

(8) Nationals of any country who are authorized to make use of the State emblems, signs, and hallmarks, of their country may use them even if they are similar to those of another country.

(9) The countries of the Union undertake to prohibit the unauthorized use in trade of the State armorial bearings of the other countries of the Union, when the use is of such a nature as to be misleading as to the origin of the goods.

(10) The above provisions shall not prevent the countries from exercising the right given in paragraph (3) of Article 6*quinquies*, Section B, to refuse or to invalidate the registration of marks incorporating, without authorization, armorial bearings, flags, other State emblems, or official signs and hallmarks adopted by a country of the Union, as well as the distinctive signs of international intergovernmental organizations referred to in paragraph (1), above.

Article 6*quater*

[*Marks:* Assignment of Marks]

(1) When, in accordance with the law of a country of the Union, the assignment of a mark is valid only if it takes place at the same time as the transfer of the business or goodwill to which the mark belongs, it shall suffice for the recognition of such validity that the portion of the business or goodwill located in that country be transferred to the assignee, together with the exclusive right to manufacture in the said country, or to sell therein, the goods bearing the mark assigned.

(2) The foregoing provision does not impose upon the countries of the Union any obligation to regard as valid the assignment of any mark the use of which by the assignee would, in fact, be of such a nature as to mislead the public, particularly as regards the origin, nature, or essential qualities, of the goods to which the mark is applied.

Article 6*quinquies*

[*Marks:* Protection of Marks Registered in One Country of the Union in the Other Countries of the Union]

A(1) Every trademark duly registered in the country of origin shall be accepted for filing and protected as is in the other countries of the Union, subject to the reservation indicated in this Article. Such countries may, before proceeding to final registration, require the production of a certificate of registration in the country of origin,

issued by the competent authority. No authentication shall be required for this certificate.

(2) Shall be considered the country of origin the country of the Union where the applicant has a real and effective industrial or commercial establishment, or, if he has no such establishment within the Union, the country of the Union where he has his domicile, or, if he has no domicile within the Union but is a national of a country of the Union, the country of which he is a national.

B. Trademarks covered by this Article may be neither denied registration nor invalidated except in the following cases:

1. when they are of such a nature as to infringe rights acquired by third parties in the country where protection is claimed ;
2. when they are devoid of any distinctive character, or consist exclusively of signs or indications which may serve, in trade, to designate the kind, quality, quantity, intended purpose, value, place of origin, of the goods, or the time of production, or have become customary in the current language or in the bona fide and established practices of the trade of the country where protection is claimed ;
3. when they are contrary to morality or public order and, in particular, of such a nature as to deceive the public. It is understood that a mark may not be considered contrary to public order for the sole reason that it does not conform to a provision of the legislation on marks, except if such provision itself relates to public order.

This provision is subject, however, to the application of Article 10*bis*.

C(1) In determining whether a mark is eligible for protection, all the factual circumstances must be taken into consideration, particularly the length of time the mark has been in use.

(2) No trademark shall be refused in the other countries of the Union for the sole reason that it differs from the mark protected in the country of origin only in respect of elements that do not alter its distinctive character and do not affect its identity in the form in which it has been registered in the said country of origin.

D. No person may benefit from the provisions of this Article if the mark for which he claims protection is not registered in the country of origin.

E. However, in no case shall the renewal of the registration of the mark in the country of origin involve an obligation to renew the registration in the other countries of the Union in which the mark has been registered.

F. The benefit of priority shall remain unaffected for applications for the registration of marks filed within the period fixed by Article 4, even if registration in the country of origin is effected after the expiration of such period.

Article 6*sexies*

[*Marks:* Service Marks]

The countries of the Union undertake to protect service marks. They shall not be required to provide for the registration of such marks.

Article 6*septies*

[*Marks:* Registration in the Name of the Agent or Representative of the Proprietor Without the Latter's Authorization]

(1) If the agent or representative of the person who is the proprietor of a mark in one of the countries of the Union applies, without such proprietor's authorization, for the registration of the mark in his own name, in one or more countries of the Union, the proprietor shall be entitled to oppose the registration applied for or demand its cancellation or, if the law of the country so allows, the assignment in his favor of the said registration, unless such agent or representative justifies his action.

(2) The proprietor of the mark shall, subject to the provisions of paragraph (1), above, be entitled to oppose the use of his mark by his agent or representative if he has not authorized such use.

(3) Domestic legislation may provide an equitable time limit within which the proprietor of a mark must exercise the rights provided for in this Article.

Article 7

[*Marks:* Nature of the Goods to which the Mark is Applied]

The nature of the goods to which a trademark is to be applied shall in no case form an obstacle to the registration of the mark.

Article 7*bis*

[*Marks:* Collective Marks]

(1) The countries of the Union undertake to accept for filing and to protect collective marks belonging to associations the existence of

which is not contrary to the law of the country of origin, even if such associations do not possess an industrial or commercial establishment.

(2) Each country shall be the judge of the particular conditions under which a collective mark shall be protected and may refuse protection if the mark is contrary to the public interest.

(3) Nevertheless, the protection of these marks shall not be refused to any association the existence of which is not contrary to the law of the country of origin, on the ground that such association is not established in the country where protection is sought or is not constituted according to the law of the latter country.

Article 8

[*Trade Names*]

A trade name shall be protected in all the countries of the Union without the obligation of filing or registration, whether or not it forms part of a trademark.

Article 9

[*Marks, Trade Names :* Seizure, on Importation, etc., of Goods Unlawfully Bearing a Mark or Trade Name]

(1) All goods unlawfully bearing a trademark or trade name shall be seized on importation into those countries of the Union where such mark or trade name is entitled to legal protection.

(2) Seizure shall likewise be effected in the country where the unlawful affixation occurred or in the country into which the goods were imported.

(3) Seizure shall take place at the request of the public prosecutor, or any other competent authority, or any interested party, whether a natural person or a legal entity, in conformity with the domestic legislation of each country.

(4) The authorities shall not be bound to effect seizure of goods in transit.

(5) If the legislation of a country does not permit seizure on importation, seizure shall be replaced by prohibition of importation or by seizure inside the country.

(6) If the legislation of a country permits neither seizure on importation nor prohibition of importation nor seizure inside the country, then, until such time as the legislation is modified accordingly, these measures shall be replaced by the actions and remedies available in such cases to nationals under the law of such country.

Article 10

[*False Indications:* Seizure, on Importation, etc., of Goods Bearing False Indications as to their Source or the Identity of the Producer]

(1) The provisions of the preceding Article shall apply in cases of direct or indirect use of a false indication of the source of the goods or the identity of the producer, manufacturer, or merchant.

(2) Any producer, manufacturer, or merchant, whether a natural person or a legal entity, engaged in the production or manufacture of or trade in such goods and established either in the locality falsely indicated as the source, or in the region where such locality is situated, or in the country falsely indicated, or in the country where the false indication of source is used, shall in any case be deemed an interested party.

Article 10*bis*

[*Unfair Competition*]

(1) The countries of the Union are bound to assure to nationals of such countries effective protection against unfair competition.

(2) Any act of competition contrary to honest practices in industrial or commercial matters constitutes an act of unfair competition.

(3) The following in particular shall be prohibited:

1. **all acts of such a nature as to create confusion by any means whatever with the establishment, the goods, or the industrial or commercial activities, of a competitor;**
2. **false allegations in the course of trade of such a nature as to discredit the establishment, the goods, or the industrial or commercial activities, of a competitor;**
3. **indications or allegations the use of which in the course of trade is liable to mislead the public as to the nature, the manufacturing process, the characteristics, the suitability for their purpose, or the quantity, of the goods.**

Article 10*ter*

[*Marks, Trade Names, False Indications, Unfair Competition:* Remedies, Right to Sue]

(1) The countries of the Union undertake to assure to nationals of the other countries of the Union appropriate legal remedies effectively to repress all the acts referred to in Articles 9, 10, and 10*bis*.

(2) They undertake, further, to provide measures to permit federations and associations representing interested industrialists, producers, or merchants, provided that the existence of such federations and associations is not contrary to the laws of their countries, to take action in the courts or before the administrative authorities, with a view to the repression of the acts referred to in Articles 9, 10, and 10*bis*, in so far as the law of the country in which protection is claimed allows such action by federations and associations of that country.

Article 11

[*Inventions, Utility Models, Industrial Designs, Marks:* Temporary Protection at Certain International Exhibitions]

(1) The countries of the Union shall, in conformity with their domestic legislation, grant temporary protection to patentable inventions, utility models, industrial designs, and trademarks, in respect of goods exhibited at official or officially recognized international exhibitions held in the territory of any of them.

(2) Such temporary protection shall not extend the periods provided by Article 4. If, later, the right of priority is invoked, the authorities of any country may provide that the period shall start from the date of introduction of the goods into the exhibition.

(3) Each country may require, as proof of the identity of the article exhibited and of the date of its introduction, such documentary evidence as it considers necessary.

Article 12

[Special National Industrial Property Services]

(1) Each country of the Union undertakes to establish a special industrial property service and a central office for the communication to the public of patents, utility models, industrial designs, and trademarks.

(2) This service shall publish an official periodical journal. It shall publish regularly:

(a) the names of the proprietors of patents granted, with a brief designation of the inventions patented;

(b) the reproductions of registered trademarks.

Article 13

[Assembly of the Union]

(1)(a) The Union shall have an Assembly consisting of those countries of the Union which are bound by Articles 13 to 17.

(b) The Government of each country shall be represented by one delegate, who may be assisted by alternate delegates, advisors, and experts.

(c) The expenses of each delegation shall be borne by the Government which has appointed it.

(2)(a) The Assembly shall:

(i) deal with all matters concerning the maintenance and development of the Union and the implementation of this Convention;

(ii) give directions concerning the preparation for conferences of revision to the International Bureau of Intellectual Property (hereinafter designated as "the International Bureau") referred to in the Convention establishing the World Intellectual Property Organization (hereinafter designated as "the Organization"), due account being taken of any comments made by those countries of the Union which are not bound by Articles 13 to 17;

(iii) review and approve the reports and activities of the Director General of the Organization concerning the Union, and give him all necessary instructions concerning matters within the competence of the Union;

(iv) elect the members of the Executive Committee of the Assembly;

(v) review and approve the reports and activities of its Executive Committee, and give instructions to such Committee;

(vi) determine the program and adopt the triennial budget of the Union, and approve its final accounts;

(vii) adopt the financial regulations of the Union;

(viii) establish such committees of experts and working groups as it deems appropriate to achieve the objectives of the Union;

(ix) determine which countries not members of the Union and which intergovernmental and international non-governmental organizations shall be admitted to its meetings as observers;

(x) adopt amendments to Articles 13 to 17;

(xi) take any other appropriate action designed to further the objectives of the Union;

(xii) perform such other functions as are appropriate under this Convention;

(xiii) subject to its acceptance, exercise such rights as are given to it in the Convention establishing the Organization.

(b) With respect to matters which are of interest also to other Unions administered by the Organization, the Assembly shall make its decisions after having heard the advice of the Coordination Committee of the Organization.

(3)(a) Subject to the provisions of subparagraph (b), a delegate may represent one country only.

(b) Countries of the Union grouped under the terms of a special agreement in a common office possessing for each of them the character of a special national service of industrial property as referred to in Article 12 may be jointly represented during discussions by one of their number.

(4)(a) Each country member of the Assembly shall have one vote.

(b) One-half of the countries members of the Assembly shall constitute a quorum.

(c) Notwithstanding the provisions of subparagraph (b), if, in any session, the number of countries represented is less than one-half but equal to or more than one-third of the countries members of the Assembly, the Assembly may make decisions but, with the exception of decisions concerning its own procedure, all such decisions shall take effect only if the conditions set forth hereinafter are fulfilled. The International Bureau shall communicate the said decisions to the countries members of the Assembly which were not represented and shall invite them to express in writing their vote or abstention within a period of three months from the date of the communication. If, at the expiration of this period, the number of countries having thus expressed their vote or abstention attains the number of countries which was lacking for attaining the quorum in the session itself, such decisions shall take effect provided that at the same time the required majority still obtains.

(d) Subject to the provisions of Article 17(2), the decisions of the Assembly shall require two-thirds of the votes cast.

(e) Abstentions shall not be considered as votes.

(5)(a) Subject to the provisions of subparagraph (b), a delegate may vote in the name of one country only.

(b) The countries of the Union referred to in paragraph (3)(b) shall, as a general rule, endeavor to send their own delegations to the sessions of the Assembly. If, however, for exceptional reasons, any such country cannot send its own delegation, it may give to the delegation of another such country the power to vote in its name provided that each delegation may vote by proxy for one country only Such power to vote shall be granted in a document signed by the Head of State or the competent Minister.

(6) Countries of the Union not members of the Assembly shal be admitted to the meetings of the latter as observers.

(7)(a) The Assembly shall meet once in every third calendar year in ordinary session upon convocation by the Director Genera and, in the absence of exceptional circumstances, during the same period and at the same place as the General Assembly of the Organization.

(b) The Assembly shall meet in extraordinary session upon convocation by the Director General, at the request of the Executive Committee or at the request of one-fourth of the countries members of the Assembly.

(8) The Assembly shall adopt its own rules of procedure.

Article 14

[Executive Committee]

(1) The Assembly shall have an Executive Committee.

(2)(a) The Executive Committee shall consist of countries elected by the Assembly from among countries members of the Assembly. Furthermore, the country on whose territory the Organization has its headquarters shall, subject to the provisions of Article 16(7)(b), have an ex officio seat on the Committee.

(b) The Government of each country member of the Executive Committee shall be represented by one delegate, who may be assisted by alternate delegates, advisors, and experts.

(c) The expenses of each delegation shall be borne by the Government which has appointed it.

(3) The number of countries members of the Executive Committee shall correspond to one-fourth of the number of countries members of the Assembly. In establishing the number of seats to be filled, remainders after division by four shall be disregarded.

(4) In electing the members of the Executive Committee, the Assembly shall have due regard to an equitable geographical distribution and to the need for countries party to the Special Agreements established in relation with the Union to be among the countries constituting the Executive Committee.

(5)(a) Each member of the Executive Committee shall serve from the close of the session of the Assembly which elected it to the close of the next ordinary session of the Assembly.

(b) Members of the Executive Committee may be re-elected, but only up to a maximum of two-thirds of such members.

(c) The Assembly shall establish the details of the rules governing the election and possible re-election of the members of the Executive Committee.

(6)(a) The Executive Committee shall:

(i) prepare the draft agenda of the Assembly;

(ii) submit proposals to the Assembly in respect of the draft program and triennial budget of the Union prepared by the Director General;

(iii) approve, within the limits of the program and the triennial budget, the specific yearly budgets and programs prepared by the Director General;

(iv) submit, with appropriate comments, to the Assembly the periodical reports of the Director General and the yearly audit reports on the accounts;

(v) take all necessary measures to ensure the execution of the program of the Union by the Director General, in accordance with the decisions of the Assembly and having regard to circumstances arising between two ordinary sessions of the Assembly;

(vi) perform such other functions as are allocated to it under this Convention.

(b) With respect to matters which are of interest also to other Unions administered by the Organization, the Executive Committee shall make its decisions after having heard the advice of the Coordination Committee of the Organization.

(7)(a) The Executive Committee shall meet once a year in ordinary session upon convocation by the Director General, preferably during the same period and at the same place as the Coordination Committee of the Organization.

(b) The Executive Committee shall meet in extraordinary session upon convocation by the Director General, either on his own initiative, or at the request of its Chairman or one-fourth of its members.

(8)(a) Each country member of the Executive Committee shall have one vote.

(b) One-half of the members of the Executive Committee shall constitute a quorum.

(c) Decisions shall be made by a simple majority of the votes cast.

(d) Abstentions shall not be considered as votes.

(e) A delegate may represent, and vote in the name of, one country only.

(9) Countries of the Union not members of the Executive Committee shall be admitted to its meetings as observers.

(10) The Executive Committee shall adopt its own rules of procedure.

Article 15

[International Bureau]

(1)(a) Administrative tasks concerning the Union shall be performed by the International Bureau, which is a continuation of the Bureau of the Union united with the Bureau of the Union established by the International Convention for the Protection of Literary and Artistic Works.

(b) In particular, the International Bureau shall provide the secretariat of the various organs of the Union.

(c) The Director General of the Organization shall be the chief executive of the Union and shall represent the Union.

(2) The International Bureau shall assemble and publish information concerning the protection of industrial property. Each country of the Union shall promptly communicate to the International Bureau all new laws and official texts concerning the protection of industrial property. Furthermore, it shall furnish the International Bureau with all the publications of its industrial property service of direct concern to the protection of industrial property which the International Bureau may find useful in its work.

(3) The International Bureau shall publish a monthly periodical.

(4) The International Bureau shall, on request, furnish any country of the Union with information on matters concerning the protection of industrial property.

(5) The International Bureau shall conduct studies, and shall provide services, designed to facilitate the protection of industrial property.

(6) The Director General and any staff member designated by him shall participate, without the right to vote, in all meetings of the Assembly, the Executive Committee, and any other committee of experts or working group. The Director General, or a staff member designated by him, shall be ex officio secretary of these bodies.

(7)(a) The International Bureau shall, in accordance with the directions of the Assembly and in cooperation with the Executive Committee, make the preparations for the conferences of revision of the provisions of the Convention other than Articles 13 to 17.

(b) The International Bureau may consult with intergovernmental and international non-governmental organizations concerning preparations for conferences of revision.

(c) The Director General and persons designated by him shall take part, without the right to vote, in the discussions at these conferences.

(8) The International Bureau shall carry out any other tasks assigned to it.

Article 16

[Finances]

(1)(a) The Union shall have a budget.

(b) The budget of the Union shall include the income and expenses proper to the Union, its contribution to the budget of expenses common to the Unions, and, where applicable, the sum made available to the budget of the Conference of the Organization.

(c) Expenses not attributable exclusively to the Union but also to one or more other Unions administered by the Organization shall be considered as expenses common to the Unions. The share of the Union in such common expenses shall be in proportion to the interest the Union has in them.

(2) The budget of the Union shall be established with due regard to the requirements of coordination with the budgets of the other Unions administered by the Organization.

(3) The budget of the Union shall be financed from the following sources:

(i) contributions of the countries of the Union;
(ii) fees and charges due for services rendered by the International Bureau in relation to the Union;
(iii) sale of, or royalties on, the publications of the International Bureau concerning the Union;
(iv) gifts, bequests, and subventions;
(v) rents, interests, and other miscellaneous income.

(4)(a) For the purpose of establishing its contribution towards the budget, each country of the Union shall belong to a class, and shall pay its annual contributions on the basis of a number of units fixed as follows:

Class I	25
Class II	20
Class III	15
Class IV	10
Class V	5
Class VI	3
Class VII	1

(b) Unless it has already done so, each country shall indicate, concurrently with depositing its instrument of ratification or accession, the class to which it wishes to belong. Any country may change class. If it chooses a lower class, the country must announce such change to the Assembly at one of its ordinary sessions. Any such change shall take effect at the beginning of the calendar year following the said session.

(c) The annual contribution of each country shall be an amount in the same proportion to the total sum to be contributed to the budget of the Union by all countries as the number of its units is to the total of the units of all contributing countries.

(d) Contributions shall become due on the first of January of each year.

(e) A country which is in arrears in the payment of its contributions may not exercise its right to vote in any of the organs of the Union of which it is a member if the amount of its arrears equals or exceeds the amount of the contributions due from it for the preceding two full years. However, any organ of the Union may allow such a country to continue to exercise its right to vote in that organ if, and as long as, it is satisfied that the delay in payment is due to exceptional and unavoidable circumstances.

(f) If the budget is not adopted before the beginning of a new financial period, it shall be at the same level as the budget of the previous year, as provided in the financial regulations.

(5) The amount of the fees and charges due for services rendered by the International Bureau in relation to the Union shall be established, and shall be reported to the Assembly and the Executive Committee, by the Director General.

(6)(a) The Union shall have a working capital fund which shall be constituted by a single payment made by each country of the Union. If the fund becomes insufficient, the Assembly shall decide to increase it.

(b) The amount of the initial payment of each country to the said fund or of its participation in the increase thereof shall be a proportion of the contribution of that country for the year in which the fund is established or the decision to increase it is made.

(c) The proportion and the terms of payment shall be fixed by the Assembly on the proposal of the Director General and after it has heard the advice of the Coordination Committee of the Organization.

(7)(a) In the headquarters agreement concluded with the country on the territory of which the Organization has its headquarters, it shall be provided that, whenever the working capital fund is insufficient, such country shall grant advances. The amount of these advances and the conditions on which they are granted shall be the subject of separate agreements, in each case, between such country and the Organization. As long as it remains under the obligation to grant advances, such country shall have an ex officio seat on the Executive Committee.

(b) The country referred to in subparagraph (a) and the Organization shall each have the right to denounce the obligation to grant advances, by written notification. Denunciation shall take effect three years after the end of the year in which it has been notified.

(8) The auditing of the accounts shall be effected by one or more of the countries of the Union or by external auditors, as provided in the financial regulations. They shall be designated, with their agreement, by the Assembly.

Article 17

[Amendment of Articles 13 to 17]

(1) Proposals for the amendment of Articles 13, 14, 15, 16, and the present Article, may be initiated by any country member of the Assembly, by the Executive Committee, or by the Director General. Such proposals shall be communicated by the Director General to the member countries of the Assembly at least six months in advance of their consideration by the Assembly.

(2) Amendments to the Articles referred to in paragraph (1) shall be adopted by the Assembly. Adoption shall require three-fourths of the votes cast, provided that any amendment to Article 13, and to the present paragraph, shall require four-fifths of the votes cast.

(3) Any amendment to the Articles referred to in paragraph (1) shall enter into force one month after written notifications of acceptance, effected in accordance with their respective constitutional processes, have been received by the Director General from three-fourths of the countries members of the Assembly at the time it adopted the amendment. Any amendment to the said Articles thus accepted shall bind all the countries which are members of the Assembly at the time the amendment enters into force, or which become members thereof at a subsequent date, provided that any amendment increasing the financial obligations of countries of the Union shall bind only those countries which have notified their acceptance of such amendment.

Article 18

[Revision of Articles 1 to 12 and 18 to 30]

(1) This Convention shall be submitted to revision with a view to the introduction of amendments designed to improve the system of the Union.

(2) For that purpose, conferences shall be held successively in one of the countries of the Union among the delegates of the said countries.

(3) Amendments to Articles 13 to 17 are governed by the provisions of Article 17.

Article 19

[Special Agreements]

It is understood that the countries of the Union reserve the right to make separately between themselves special agreements for the protection of industrial property, in so far as these agreements do not contravene the provisions of this Convention.

Article 20

[Ratification or Accession by Countries of the Union ; Entry Into Force]

(1)(a) Any country of the Union which has signed this Act may ratify it, and, if it has not signed it, may accede to it. Instruments of ratification and accession shall be deposited with the Director General.

(b) Any country of the Union may declare in its instrument of ratification or accession that its ratification or accession shall not apply :

(i) to Articles 1 to 12, or
(ii) to Articles 13 to 17.

(c) Any country of the Union which, in accordance with subparagraph (b), has excluded from the effects of its ratification or accession one of the two groups of Articles referred to in that subparagraph may at any later time declare that it extends the effects of its ratification or accession to that group of Articles. Such declaration shall be deposited with the Director General.

(2)(a) Articles 1 to 12 shall enter into force, with respect to the first ten countries of the Union which have deposited instruments of ratification or accession without making the declaration permitted under paragraph (1)(b)(i), three months after the deposit of the tenth such instrument of ratification or accession.

(b) Articles 13 to 17 shall enter into force, with respect to the first ten countries of the Union which have deposited instruments of ratification or accession without making the declaration permitted under paragraph (1)(b)(ii), three months after the deposit of the tenth such instrument of ratification or accession.

(c) Subject to the initial entry into force, pursuant to the provisions of subparagraphs (a) and (b), of each of the two groups of Articles referred to in paragraph (1)(b)(i) and (ii), and subject to the provisions of paragraph (1)(b), Articles 1 to 17 shall, with respect to any country of the Union, other than those referred to in subparagraphs (a) and (b), which deposits an instrument of ratification or accession or any country of the Union which deposits a declaration pursuant to paragraph (1)(c), enter into force three months after the date of notification by the Director General of such deposit, unless a subsequent date has been indicated in the instrument or declaration deposited. In the latter case, this Act shall enter into force with respect to that country on the date thus indicated.

(3) With respect to any country of the Union which deposits an instrument of ratification or accession, Articles 18 to 30 shall enter into force on the earlier of the dates on which any of the groups of Articles referred to in paragraph (1)(b) enters into force with respect to that country pursuant to paragraph (2)(a), (b), or (c).

Article 21

[Accession by Countries Outside the Union ; Entry Into Force]

(1) Any country outside the Union may accede to this Act and thereby become a member of the Union. Instruments of accession shall be deposited with the Director General.

(2)(a) With respect to any country outside the Union which deposits its instrument of accession one month or more before the date of entry into force of any provisions of the present Act, this Act shall enter into force, unless a subsequent date has been indicated in the instrument of accession, on the date upon which provisions first enter into force pursuant to Article 20(2)(a) or (b) ; provided that :

(i) if Articles 1 to 12 do not enter into force on that date, such country shall, during the interim period before the entry into force of such provisions, and in substitution therefor, be bound by Articles 1 to 12 of the Lisbon Act,

(ii) if Articles 13 to 17 do not enter into force on that date, such country shall, during the interim period before the entry into force of such provisions, and in substitution therefor, be bound by Articles 13 and 14(3), (4), and (5), of the Lisbon Act.

If a country indicates a subsequent date in its instrument of accession, this Act shall enter into force with respect to that country on the date thus indicated.

(b) With respect to any country outside the Union which deposits its instrument of accession on a date which is subsequent to, or precedes by less than one month, the entry into force of one group of Articles

of the present Act, this Act shall, subject to the proviso of subparagraph (a), enter into force three months after the date on which its accession has been notified by the Director General, unless a subsequent date has been indicated in the instrument of accession. In the latter case, this Act shall enter into force with respect to that country on the date thus indicated.

(3) With respect to any country outside the Union which deposits its instrument of accession after the date of entry into force of the present Act in its entirety, or less than one month before such date, this Act shall enter into force three months after the date on which its accession has been notified by the Director General, unless a subsequent date has been indicated in the instrument of accession. In the latter case, this Act shall enter into force with respect to that country on the date thus indicated.

Article 22

[Consequences of Ratification or Accession]

Subject to the possibilities of exceptions provided for in Articles 20(1)(b) and 28(2), ratification or accession shall automatically entail acceptance of all the clauses and admission to all the advantages of this Act.

Article 23

[Accession to Earlier Acts]

After the entry into force of this Act in its entirety, a country may not accede to earlier Acts of this Convention.

Article 24

[Territories]

(1) Any country may declare in its instrument of ratification or accession, or may inform the Director General by written notification any time thereafter, that this Convention shall be applicable to all or part of those territories, designated in the declaration or notification, for the external relations of which it is responsible.

(2) Any country which has made such a declaration or given such a notification may, at any time, notify the Director General that this Convention shall cease to be applicable to all or part of such territories.

(3)(a) Any declaration made under paragraph (1) shall take effect on the same date as the ratification or accession in the instrument of which it was included, and any notification given under such paragraph

shall take effect three months after its notification by the Director General.

(b) Any notification given under paragraph (2) shall take effect twelve months after its receipt by the Director General.

Article 25

[Implementation of the Convention on the Domestic Level]

(1) Any country party to this Convention undertakes to adopt, in accordance with its constitution, the measures necessary to ensure the application of this Convention.

(2) It is understood that, at the time a country deposits its instrument of ratification or accession, it will be in a position under its domestic law to give effect to the provisions of this Convention.

Article 26

[Denunciation]

(1) This Convention shall remain in force without limitation as to time.

(2) Any country may denounce this Act by notification addressed to the Director General. Such denunciation shall constitute also denunciation of all earlier Acts and shall affect only the country making it, the Convention remaining in full force and effect as regards the other countries of the Union.

(3) Denunciation shall take effect one year after the day on which the Director General has received the notification.

(4) The right of denunciation provided by this Article shall not be exercised by any country before the expiration of five years from the date upon which it becomes a member of the Union.

Article 27

[Application of Earlier Acts]

(1) The present Act shall, as regards the relations between the countries to which it applies, and to the extent that it applies, replace the Convention of Paris of March 20, 1883, and the subsequent Acts of revision.

(2)(a) As regards the countries to which the present Act does not apply, or does not apply in its entirety, but to which the Lisbon Act of October 31, 1958, applies, the latter shall remain in force in its entirety or to the extent that the present Act does not replace it by virtue of paragraph (1).

(b) Similarly, as regards the countries to which neither the present Act, nor portions thereof, nor the Lisbon Act applies, the London Act of June 2, 1934, shall remain in force in its entirety or to the extent that the present Act does not replace it by virtue of paragraph (1).

(c) Similarly, as regards the countries to which neither the present Act, nor portions thereof, nor the Lisbon Act, nor the London Act applies, the Hague Act of November 6, 1925, shall remain in force in its entirety or to the extent that the present Act does not replace it by virtue of paragraph (1).

(3) Countries outside the Union which become party to this Act shall apply it with respect to any country of the Union not party to this Act or which, although party to this Act, has made a declaration pursuant to Article 20(1)(b)(i). Such countries recognize that the said country of the Union may apply, in its relations with them, the provisions of the most recent Act to which it is party.

Article 28

[Disputes]

(1) Any dispute between two or more countries of the Union concerning the interpretation or application of this Convention, not settled by negotiation, may, by any one of the countries concerned, be brought before the International Court of Justice by application in conformity with the Statute of the Court, unless the countries concerned agree on some other method of settlement. The country bringing the dispute before the Court shall inform the International Bureau ; the International Bureau shall bring the matter to the attention of the other countries of the Union.

(2) Each country may, at the time it signs this Act or deposits its instrument of ratification or accession, declare that it does not consider itself bound by the provisions of paragraph (1). With regard to any dispute between such country and any other country of the Union, the provisions of paragraph (1) shall not apply.

(3) Any country having made a declaration in accordance with the provisions of paragraph (2) may, at any time, withdraw its declaration by notification addressed to the Director General.

Article 29

[Signature, Languages, Depositary Functions]

(1)(a) This Act shall be signed in a single copy in the French language and shall be deposited with the Government of Sweden.

(b) Official texts shall be established by the Director General, after consultation with the interested Governments, in the English, German, Italian, Portuguese, Russian and Spanish languages, and such other languages as the Assembly may designate.

(c) In case of differences of opinion on the interpretation of the various texts, the French text shall prevail.

(2) This Act shall remain open for signature at Stockholm until January 13, 1968.

(3) The Director General shall transmit two copies, certified by the Government of Sweden, of the signed text of this Act to the Governments of all countries of the Union and, on request, to the Government of any other country.

(4) The Director General shall register this Act with the Secretariat of the United Nations.

(5) The Director General shall notify the Governments of all countries of the Union of signatures, deposits of instruments of ratification or accession and any declarations included in such instruments or made pursuant to Article 20(1)(c), entry into force of any provisions of this Act, notifications of denunciation, and notifications pursuant to Article 24.

Article 30

[Transitional Provisions]

(1) Until the first Director General assumes office, references in this Act to the International Bureau of the Organization or to the Director General shall be deemed to be references to the Bureau of the Union or its Director, respectively.

(2) Countries of the Union not bound by Articles 13 to 17 may, until five years after the entry into force of the Convention establishing the Organization, exercise, if they so desire, the rights provided under Articles 13 to 17 of this Act as if they were bound by those Articles. Any country desiring to exercise such rights shall give written notification to that effect to the Director General; such notification shall be effective from the date of its receipt. Such countries shall be deemed to be members of the Assembly until the expiration of the said period.

(3) As long as all the countries of the Union have not become Members of the Organization, the International Bureau of the Organization shall also function as the Bureau of the Union, and the Director General as the Director of the said Bureau.

(4) Once all the countries of the Union have become Members of the Organization, the rights, obligations, and property, of the Bureau of the Union shall devolve on the International Bureau of the Organization.

[7] Came into force on 1 June 1963 between the following countries, which had deposited their instrument of ratification with the Government of Switzerland, or whose application for accession had been notified by the latter by 1 May 1963 at the latest, in accordance with article 6 (1) and (2):

Country	*Date of deposit of the instrument of ratification, or of notification of application for accession (a)*
France (With a declaration to the effect that the ratification shall apply to all the territories of the French Republic: Metropolitan Departments, Algerian Departments, Departments of the Sahara, Departments of Guadeloupe, Guyana, Martinique and Reunion, and Overseas Territories.)	24 March 1961
Federal Republic of Germany (With a declaration to the effect that the Agreement shall also apply to *Land Berlin* with effect from the day it will come into force for the Federal Republic of Germany.)(¹)	28 July 1961
Czechoslovakia	12 August 1961*a*
Monaco	2 September 1961
United Kingdom of Great Britain and Northern Ireland (With the following declaration: "With regard to the International Agreement for the Suppression of False Indications of Origin on Goods, the Embassy have the honour to declare that, in the view of Her Majesty's Government, the United Kingdom, by its present legislation, gives full and complete effect to the Arrangement of Madrid as revised at Lisbon on the 31st of October, 1958, and that the United Kingdom domestic legislation does not impair this Arrangement in any way.")	6 September 1961
Switzerland	25 June 1962

(¹) The following countries notified the Government of Switzerland of the communications by which they objected to the declaration by the Federal Republic of Germany: Cuba, Czechoslovakia, Hungary, Poland, Romania.

Subsequently, the Agreement came into force in each of the following countries after the notification by the Government of Switzerland of the deposit of its instrument of accession, in accordance with article 6 (1) and (2):

(Continued on page 167)

directly or indirectly indicated as being the country or place of origin shall be seized on importation into any of the said countries.

(2) Seizure shall also be effected in the country where the false or deceptive indication of source has been applied, or into which the goods bearing the false or deceptive indication have been imported.

(3) If the laws of a country do not permit seizure upon importation, such seizure shall be replaced by prohibition of importation.

(Footnote 7 continued from page 165)

Country	*Date of notification of the accession*		*Date of entry into force*	
Algeria	5 April	1972	5 July	1972(1)
Cuba	11 September	1964	11 October	1964
German Democratic Republic	15 December	1964(2)	15 January	1965
Hungary	23 February	1967	23 March	1967
(With the following declaration: [*Translation—Traduction*] With regard to article 5 (2) of the Madrid Agreement for the Repression of False or Deceptive Indications of Source on Goods or 14 April 1891, revised at Washington on 2 June 1911, at the Hague on 6 November 1925, at London on 2 June 1934, and at Lisbon on 31 October 1958, the Presidential Council of the Hungarian People's Republic wishes to state that it adheres to the principles embodied in the Declaration adopted on 14 December 1960(3) by the United Nations General Assembly guaranteeing the independence of colonial countries and peoples. Accordingly, the Presidential Council of the Hungarian People's Republic considers that colonialism, in any of its forms and manifestations, is contrary to existing international law.)				
Ireland	9 May	1967	9 June	1967
Israel	2 June	1967	2 July	1967
Italy	29 November	1968	29 December	1968
Japan	21 July	1965	21 August	1965
Liechtenstein	10 March	1972	10 April	1972
Morocco	15 April	1967	15 May	1967
Sweden	3 September	1969	3 October	1969

(1) The date of entry into force, in respect of Algeria, of the Additional Act of Stockholm of 14 July 1967 to the above-mentioned Madrid Agreement (see p. 177 of this volume).

(2) The Governments of the following States have sent communications to the depositary to the effect that they objected to that instrument: Australia, Austria, Belgium, Brazil, Canada, Central African Republic, Denmark, Federal Republic of Germany, France, Greece, Haiti, Holy See, Iceland, Iran, Ireland, Ivory Coast, Japan, Luxembourg, Madagascar, Netherlands, New Zealand, Niger, Norway, Portugal, Republic of Viet Nam, San Marino, South Africa, Spain, Sweden, Switzerland, Turkey, United Kingdom of Great Britain and Northern Ireland, United States of America.

(3) United Nations, *Official Records of the General Assembly, Fifteenth Session, Supplement No. 16* (A/4684), p. 66.

(4) If the laws of a country permit neither seizure upon importation nor prohibition of importation nor seizure within the country, then, until such time as the laws are modified accordingly, those measures shall be replaced by the actions and remedies available in such cases to nationals under the laws of such country.

(5) In the absence of any special sanctions ensuring the repression of false or deceptive indications of source, the sanctions provided by the corresponding provisions of the laws relating to marks or trade names shall be applicable.

Article 2

(1) Seizure shall take place at the instance of the customs authorities, who shall immediately inform the interested party, whether an individual person or a legal entity, in order that such party may, if he so desires, take appropriate steps in connection with the seizure effected as a conservatory measure. However, the public prosecutor or any other competent authority may demand seizure either at the request of the injured party or ex officio; the procedure shall then follow its normal course.

(2) The authorities shall not be bound to effect seizure in the case of transit.

Article 3

These provisions shall not prevent the vendor from indicating his name or address upon goods coming from a country other than that in which the sale takes place; but in such case the address or the name must be accompanied by an exact indication in clear characters of the country or place of manufacture or production, or by some other indication sufficient to avoid any error as to the true source of the wares.

Article 3bis

The countries to which this Agreement applies also undertake to prohibit the use, in connection with the sale or display or offering for sale of any goods, of all indications in the nature of publicity capable of deceiving the public as to the source of the goods, and appearing on signs, advertisements, invoices, wine lists, business letters or papers, or any other commercial communication.

Article 4

The courts of each country shall decide what appellations, on account of their generic character, do not fall within the provisions of this Agreement, regional appellations concerning the source of products of the vine being, however, excluded from the reservation specified by this Article.

Article 5

(1) Countries of the Union for the Protection of Industrial Property which have not acceded to this Agreement may accede at their request in the manner prescribed by Article 16 of the General Convention.[1]

(2) The provisions of Articles 16 *bis* and 17 *bis* of the General Convention shall apply to this Agreement.

Article 6

(1) This Act shall be ratified and the instruments of ratification deposited at Berne not later than May 1, 1963. It shall come into force, between the countries in whose names it has been ratified, one month after that date. However, if before that date it has been ratified in the name of at least six countries, it shall come into force, between those countries, one month after the deposit of the sixth ratification has been notified to them by the Government of the Swiss Confederation, and, in the countries in whose names it has been ratified at a later date, one month after the notification of each of such ratifications.

(2) Countries in whose names the instrument of ratification has not been deposited within the period provided for in the preceding paragraph may accede under the terms of Article 16 of the General Convention.

(3) This Act shall, as regards the relations between the countries to which it applies, replace the Agreement concluded at Madrid on April 14, 1891,[2] and the Acts resulting from subsequent revisions.[3]

(4) As regards countries to which this Act does not apply, but to which the Madrid Agreement revised at London in 1934[4] applies, the latter shall remain in force.

(5) Similarly, as regards countries to which neither this Act nor the Madrid Agreement revised at London applies, the Madrid Agreement revised at The Hague in 1925[5] shall remain in force.

ADDITIONAL ACT OF STOCKHOLM OF JULY 14, 1967[1] TO THE MADRID AGREEMENT FOR THE REPRESSION OF FALSE OR DECEPTIVE INDICATIONS OF SOURCE ON GOODS OF APRIL 14, 1891,[2] REVISED AT WASHINGTON ON JUNE 2, 1911,[3] AT THE HAGUE ON NOVEMBER 6, 1925,[4] AT LONDON ON JUNE 2, 1934,[5] AND AT LISBON ON OCTOBER 31, 1958[6]

Article 1

Instruments of accession to the Madrid Agreement for the Repression of False or Deceptive Indications of Source on Goods, of April 14, 1891[2] (hereinafter designated as "the Madrid Agreement"), as revised at Washington on June 2, 1911,[3] at The Hague on November 6, 1925,[4] at London on June 2, 1934,[5] and at Lisbon on October 31, 1958[6] (hereinafter designated as "the Lisbon Act"), shall be deposited with the Director General of the World Intellectual Property Organization (hereinafter designated as "the Director General"), who shall notify such deposits to the countries party to the Agreement.

---

[1] Came into force on 26 April 1970, the date on which the Stockholm Convention of 14 July 1967 establishing the World Intellectual Property Organization(1) came into force, as between the following countries, which had by that date deposited their instrument of ratification or accession with the Director of the United International Bureaux for the Protection of Intellectual Property (BIRPI), in accordance with article 5 (1):

Country	*Date of deposit of instrument of ratification, or accession (a)*	
Ireland	27 March	1968
German Democratic Republic	20 June	1968*a*(2)
United Kingdom of Great Britain and Northern Ireland	26 February	1969
Israel	30 July	1969
Sweden	12 August	1969
Hungary	18 December	1969
Switzerland	26 January	1970

(1) See p. 3 of this volume.

(2) The Governments of the following States have sent communications to the depositary to the effect that they objected to that instrument: Argentina, Belgium, Canada, Denmark, Federal Republic of Germany, France, Gabon, Greece, Haiti, Holy See, Iceland, Iran, Ireland, Israel, Japan, Luxembourg, Madagascar, Niger, Portugal, South Africa, Spain, United Kingdom of Great Britain and Northern Ireland, United States of America.

Subsequently, the Additional Act came into force with respect to each of the following countries three months after the date on which its ratification or accession had been notified by the Director General of the World Intellectual Property Organization (WIPO) (the Director of the United International Bureaux for the Protection of Intellectual Property (BIRPI) before 22 September 1970), in accordance with article 5 (2):

Country	*Date of notification of deposit instrument of ratification, or accession (a)*		*Date of entry into force*	
Algeria	5 April	1972*a*	5 July	1972
Czechoslovakia	29 September	1970*a*	29 December	1970

(Continued on page 181)

Article 2

References in Articles 5 and 6 (2) of the Lisbon Act to Articles 16, 16*bis*, and 17*bis*, of the General Convention shall be construed as references to those provisions of the Stockholm Act of the Paris Convention for the Protection of Industrial Property[7] which correspond to the said Articles.

Article 3

(1) This Additional Act may be signed by any country party to the Madrid Agreement and may be ratified or acceded to by any country which has ratified or acceded to the Lisbon Act.

(2) Instruments of ratification or accession shall be deposited with the Director General.

Article 4

Any country which has not ratified or acceded to the Lisbon Act shall become bound also by Articles 1 and 2 of this Additional Act from the date on which its accession to the Lisbon Act enters into force, provided however that, if on the said date this Additional Act has not yet entered into force pursuant to Article 5 (1), then, such country shall become bound by Articles 1 and 2 of this Additional Act only from the date of entry into force of this Additional Act pursuant to Article 5 (1).

(Footnote 1 continued from page 179)

Country	*Date of notification of deposit instrument of ratification, or accession (a)*	*Date of entry into force*
Federal Republic of Germany .... (With a declaration to the effect that the Additional Act shall also apply to *Land Berlin* with effect from the day it will come into force for the Federal Republic of Germany.)	19 June 1970	19 September 1970
Liechtenstein	25 February 1972	25 May 1972

Article 5

(1) This Additional Act shall enter into force on the date on which the Stockholm Convention of July 14, 1967,[1] establishing the World Intellectual Property Organization has entered into force, provided however that, if by that date at least two ratifications or accessions to this Additional Act have not been deposited, then, this Additional Act shall enter into force on the date on which two ratifications or accessions to this Additional Act have been deposited.

(2) With respect to any country which deposits its instrument of ratification or accession after the date on which this Additional Act has entered into force pursuant to the foregoing paragraph, this Additional Act shall enter into force three months after the date on which its ratification or accession has been notified by the Director General.

Article 6

(1) This Additional Act shall be signed in a single copy in the French language and shall be deposited with the Government of Sweden.

(2) This Additional Act shall remain open for signature at Stockholm until the date of its entry into force pursuant to Article 5 (1).

(3) The Director General shall transmit two copies, certified by the Government of Sweden, of the signed text of this Additional Act to the Governments of all countries party to the Madrid Agreement and, on request, to the Government of any other country.

(4) The Director General shall register this Additional Act with the Secretariat of the United Nations.

(5) The Director General shall notify the Governments of all countries party to the Madrid Agreement of signatures, deposits of instruments of ratification or accession, entry into force, and other relevant notifications.

Article 7

Until the first Director General assumes office, references in this Additional Act to him shall be construed as references to the Director of the United International Bureaux for the Protection of Intellectual Property.

IN WITNESS WHEREOF, the undersigned, being duly authorized thereto, have signed this Additional Act.

DONE at Stockholm, on July 14, 1967.

GENEVA ACT OF THE LISBON AGREEMENT ON APPELLATIONS OF ORIGIN AND GEOGRAPHICAL INDICATIONS

List of Articles

Chapter VII: Final Provisions

Chapter I
Introductory and General Provisions

Article 1
Abbreviated Expressions

For the purposes of this Act, unless expressly stated otherwise:

(i) "Lisbon Agreement" means the Lisbon Agreement for the Protection of Appellations of Origin and their International Registration of October 31, 1958;

(ii) "1967 Act" means the Lisbon Agreement as revised at Stockholm on July 14, 1967, and amended on September 28, 1979;

(iii) "this Act" means the Lisbon Agreement on Appellations of Origin and Geographical Indications, as established by the present Act;

(iv) "Regulations" means the Regulations as referred to in Article 25;

(v) "Paris Convention" means the Paris Convention for the Protection of Industrial Property of March 20, 1883, as revised and amended;

(vi) "appellation of origin" means a denomination as referred to in Article 2(1)(i);

(vii) "geographical indication" means an indication as referred to in Article 2(1)(ii);

(viii) "International Register" means the International Register maintained by the International Bureau in accordance with Article 4 as the official collection of data concerning international registrations of appellations of origin and geographical indications, regardless of the medium in which such data are maintained;

(ix) "international registration" means an international registration recorded in the International Register;

(x) "application" means an application for international registration;

(xi) "registered" means entered in the International Register in accordance with this Act;

(xii) "geographical area of origin" means a geographical area as referred to in Article 2(2);

(xiii) "trans-border geographical area" means a geographical area situated in, or covering, adjacent Contracting Parties;

(xiv) "Contracting Party" means any State or intergovernmental organization party to this Act;

(xv) "Contracting Party of Origin" means the Contracting Party where the geographical area of origin is situated or the Contracting Parties where the trans-border geographical area of origin is situated;

(xvi) "Competent Authority" means an entity designated in accordance with Article 3;

(xvii) “beneficiaries” means the natural persons or legal entities entitled under the law of the Contracting Party of Origin to use an appellation of origin or a geographical indication;

(xviii) “intergovernmental organization” means an intergovernmental organization eligible to become party to this Act in accordance with Article 28(1)(iii);

(xix) “Organization” means the World Intellectual Property Organization;

(xx) “Director General” means the Director General of the Organization;

(xxi) “International Bureau” means the International Bureau of the Organization.

Article 2
Subject-Matter

(1) *[Appellations of Origin and Geographical Indications]* This Act applies in respect of:

(i) any denomination protected in the Contracting Party of Origin consisting of or containing the name of a geographical area, or another denomination known as referring to such area, which serves to designate a good as originating in that geographical area, where the quality or characteristics of the good are due exclusively or essentially to the geographical environment, including natural and human factors, and which has given the good its reputation; as well as

(ii) any indication protected in the Contracting Party of Origin consisting of or containing the name of a geographical area, or another indication known as referring to such area, which identifies a good as originating in that geographical area, where a given quality, reputation or other characteristic of the good is essentially attributable to its geographical origin.

(2) *[Possible Geographical Areas of Origin]* A geographical area of origin as described in paragraph (1) may consist of the entire territory of the Contracting Party of Origin or a region, locality or place in the Contracting Party of Origin. This does not exclude the application of this Act in respect of a geographical area of origin, as described in paragraph (1), consisting of a trans-border geographical area, or a part thereof.

Article 3
Competent Authority

Each Contracting Party shall designate an entity which shall be responsible for the administration of this Act in its territory and for communications with the International Bureau under this Act and the Regulations. The Contracting Party shall notify the name and contact details of such Competent Authority to the International Bureau, as specified in the Regulations.

Article 4
International Register

The International Bureau shall maintain an International Register recording international registrations effected under this Act, under the Lisbon Agreement and the 1967 Act, or under both, and data relating to such international registrations.

Chapter II
Application and International Registration

Article 5
Application

(1) *[Place of Filing]* Applications shall be filed with the International Bureau.

(2) *[Application Filed by Competent Authority]* Subject to paragraph (3), the application for the international registration of an appellation of origin or a geographical indication shall be filed by the Competent Authority in the name of:

(i) the beneficiaries; or

(ii) a natural person or legal entity having legal standing under the law of the Contracting Party of Origin to assert the rights of the beneficiaries or other rights in the appellation of origin or geographical indication.

(3) *[Application Filed Directly]* (a) Without prejudice to paragraph (4), if the legislation of the Contracting Party of Origin so permits, the application may be filed by the beneficiaries or by a natural person or legal entity referred to in paragraph (2)(ii).

(b) Subparagraph (a) applies subject to a declaration from the Contracting Party that its legislation so permits. Such declaration may be made by the Contracting Party at the time of deposit of its instrument of ratification or accession or at any later time. Where the declaration is made at the time of the deposit of its instrument of ratification or accession, it shall take effect upon the entry into force of this Act with respect to that Contracting Party. Where the declaration is made after the entry into force of this Act with respect to the Contracting Party, it shall take effect three months after the date on which the Director General has received the declaration.

(4) *[Possible Joint Application in the Case of a Trans-border Geographical Area]* In case of a geographical area of origin consisting of a trans-border geographical area, the adjacent Contracting Parties may, in accordance with their agreement, file an application jointly through a commonly designated Competent Authority.

(5) *[Mandatory Contents]* The Regulations shall specify the mandatory particulars that must be included in the application, in addition to those specified in Article 6(3).

(6) *[Optional Contents]* The Regulations may specify the optional particulars that may be included in the application.

Article 6
International Registration

(1) *[Formal Examination by the International Bureau]* Upon receipt of an application for the international registration of an appellation of origin or a geographical indication in due form, as specified in the Regulations, the International Bureau shall register the appellation of origin, or the geographical indication, in the International Register.

(2) *[Date of International Registration]* Subject to paragraph (3), the date of the international registration shall be the date on which the application was received by the International Bureau.

(3) *[Date of International Registration Where Particulars Missing]* Where the application does not contain all the following particulars:

(i) the identification of the Competent Authority or, in the case of Article 5(3), the applicant or applicants;

(ii) the details identifying the beneficiaries and, where applicable, the natural person or legal entity referred to in Article 5(2)(ii);

(iii) the appellation of origin, or the geographical indication, for which international registration is sought;

(iv) the good or goods to which the appellation of origin, or the geographical indication, applies;

the date of the international registration shall be the date on which the last of the missing particulars is received by the International Bureau.

(4) *[Publication and Notification of International Registrations]* The International Bureau shall, without delay, publish each international registration and notify the Competent Authority of each Contracting Party of the international registration.

(5) *[Date of Effect of International Registration]* (a) Subject to subparagraph (b), a registered appellation of origin or geographical indication shall, in each Contracting Party that has not refused protection in accordance with Article 15, or that has sent to the International Bureau a notification of grant of protection in accordance with Article 18, be protected from the date of the international registration.

(b) A Contracting Party may, in a declaration, notify the Director General that, in accordance with its national or regional legislation, a registered appellation of origin or geographical indication is protected from a date that is mentioned in the declaration, which date shall however not be later than the date of expiry of the time limit for refusal specified in the Regulations in accordance with Article 15(1)(a).

Article 7
Fees

(1) *[International Registration Fee]* International registration of each appellation of origin, and each geographical indication, shall be subject to payment of the fee specified in the Regulations.

(2) *[Fees for Other Entries in the International Register]* The Regulations shall specify the fees to be paid in respect of other entries in the International Register and for the supply of extracts, attestations, or other information concerning the contents of the international registration.

(3) *[Fee Reductions]* Reduced fees shall be established by the Assembly in respect of certain international registrations of appellations of origin, and in respect of certain international registrations of geographical indications, in particular those in respect of which the Contracting Party of Origin is a developing country or a least-developed country.

(4) *[Individual Fee]* (a) Any Contracting Party may, in a declaration, notify the Director General that the protection resulting from international registration shall extend to it only if a fee is paid to cover its cost of substantive examination of the international registration. The amount

of such individual fee shall be indicated in the declaration and can be changed in further declarations. The said amount may not be higher than the equivalent of the amount required under the national or regional legislation of the Contracting Party diminished by the savings resulting from the international procedure. Additionally, the Contracting Party may, in a declaration, notify the Director General that it requires an administrative fee relating to the use by the beneficiaries of the appellation of origin or the geographical indication in that Contracting Party.

(b) Non-payment of an individual fee shall, in accordance with the Regulations, have the effect that protection is renounced in respect of the Contracting Party requiring the fee.

Article 8
Period of Validity of International Registrations

(1) *[Dependency]* International registrations shall be valid indefinitely, on the understanding that the protection of a registered appellation of origin or geographical indication shall no longer be required if the denomination constituting the appellation of origin, or the indication constituting the geographical indication, is no longer protected in the Contracting Party of Origin.

(2) *[Cancellation]* (a) The Competent Authority of the Contracting Party of Origin, or, in the case of Article 5(3), the beneficiaries or the natural person or legal entity referred to in Article 5(2)(ii) or the Competent Authority of the Contracting Party of Origin, may at any time request the International Bureau to cancel the international registration concerned.

(b) In case the denomination constituting a registered appellation of origin, or the indication constituting a registered geographical indication, is no longer protected in the Contracting Party of Origin, the Competent Authority of the Contracting Party of Origin shall request cancellation of the international registration.

Chapter III
Protection

Article 9
Commitment to Protect

Each Contracting Party shall protect registered appellations of origin and geographical indications on its territory, within its own legal system and practice but in accordance with the terms of this Act, subject to any refusal, renunciation, invalidation or cancellation that may become effective with respect to its territory, and on the understanding that Contracting Parties that do not distinguish in their national or regional legislation as between appellations of origin and geographical indications shall not be required to introduce such a distinction into their national or regional legislation.

Article 10
Protection Under Laws of Contracting Parties or Other Instruments

(1) *[Form of Legal Protection]* Each Contracting Party shall be free to choose the type of legislation under which it establishes the protection stipulated in this Act, provided that such legislation meets the substantive requirements of this Act.

(2) *[Protection Under Other Instruments]* The provisions of this Act shall not in any way affect any other protection a Contracting Party may accord in respect of registered appellations of origin or registered geographical indications under its national or regional legislation, or under other international instruments.

(3) *[Relation to Other Instruments]* Nothing in this Act shall derogate from any obligations that Contracting Parties have to each other under any other international instruments, nor shall it prejudice any rights that a Contracting Party has under any other international instruments.

Article 11

Protection in Respect of Registered Appellations of Origin and Geographical Indications

(1) *[Content of Protection]* Subject to the provisions of this Act, in respect of a registered appellation of origin or a registered geographical indication, each Contracting Party shall provide the legal means to prevent:

(a) use of the appellation of origin or the geographical indication

(i) in respect of goods of the same kind as those to which the appellation of origin or the geographical indication applies, not originating in the geographical area of origin or not complying with any other applicable requirements for using the appellation of origin or the geographical indication;

(ii) in respect of goods that are not of the same kind as those to which the appellation of origin or geographical indication applies or services, if such use would indicate or suggest a connection between those goods or services and the beneficiaries of the appellation of origin or the geographical indication, and would be likely to damage their interests, or, where applicable, because of the reputation of the appellation of origin or geographical indication in the Contracting Party concerned, such use would be likely to impair or dilute in an unfair manner, or take unfair advantage of, that reputation;

(b) any other practice liable to mislead consumers as to the true origin, provenance or nature of the goods.

(2) *[Content of Protection in Respect of Certain Uses]* Paragraph (1)(a) shall also apply to use of the appellation of origin or geographical indication amounting to its imitation, even if the true origin of the goods is indicated, or if the appellation of origin or the geographical indication is used in translated form or is accompanied by terms such as “style”, “kind”, “type”, “make”, “imitation”, “method”, “as produced in”, “like”, “similar” or the like[1].

(3) *[Use in a Trademark]* Without prejudice to Article 13(1), a Contracting Party shall, *ex officio* if its legislation so permits or at the request of an interested party, refuse or invalidate the registration of a later trademark if use of the trademark would result in one of the situations covered by paragraph (1).

---

[1] Agreed Statement concerning Article 11(2): For the purposes of this Act, it is understood that where certain elements of the denomination or indication constituting the appellation of origin or geographical indication have a generic character in the Contracting Party of Origin, their protection under this paragraph shall not be required in the other Contracting Parties. For greater certainty, a refusal or invalidation of a trademark, or a finding of infringement, in the Contracting Parties under the terms of Article 11 cannot be based on the component that has a generic character.

Article 12
Protection Against Becoming Generic

Subject to the provisions of this Act, registered appellations of origin and registered geographical indications cannot be considered to have become generic[2] in a Contracting Party.

Article 13
Safeguards in Respect of Other Rights

(1) *[Prior Trademark Rights]* The provisions of this Act shall not prejudice a prior trademark applied for or registered in good faith, or acquired through use in good faith, in a Contracting Party. Where the law of a Contracting Party provides a limited exception to the rights conferred by a trademark to the effect that such a prior trademark in certain circumstances may not entitle its owner to prevent a registered appellation of origin or geographical indication from being granted protection or used in that Contracting Party, protection of the registered appellation of origin or geographical indication shall not limit the rights conferred by that trademark in any other way.

(2) *[Personal Name Used in Business]* The provisions of this Act shall not prejudice the right of any person to use, in the course of trade, that person's name or the name of that person's predecessor in business, except where such name is used in such a manner as to mislead the public.

(3) *[Rights Based on a Plant Variety or Animal Breed Denomination]* The provisions of this Act shall not prejudice the right of any person to use a plant variety or animal breed denomination in the course of trade, except where such plant variety or animal breed denomination is used in such a manner as to mislead the public.

(4) *[Safeguards in the Case of Notification of Withdrawal of Refusal or a Grant of Protection]* Where a Contracting Party that has refused the effects of an international registration under Article 15 on the ground of use under a prior trademark or other right, as referred to in this Article, notifies the withdrawal of that refusal under Article 16 or a grant of protection under Article 18, the resulting protection of the appellation of origin or geographical indication shall not prejudice that right or its use, unless the protection was granted following the cancellation, non-renewal, revocation or invalidation of the right.

Article 14
Enforcement Procedures and Remedies

Each Contracting Party shall make available effective legal remedies for the protection of registered appellations of origin and registered geographical indications and provide that legal proceedings for ensuring their protection may be brought by a public authority or by any interested party, whether a natural person or a legal entity and whether public or private, depending on its legal system and practice.

---

[2] Agreed Statement concerning Article 12: For the purposes of this Act, it is understood that Article 12 is without prejudice to the application of the provisions of this Act concerning prior use, as, prior to international registration, the denomination or indication constituting the appellation of origin or geographical indication may already, in whole or in part, be generic in a Contracting Party other than the Contracting Party of Origin, for example, because the denomination or indication, or part of it, is identical with a term customary in common language as the common name of a good or service in such Contracting Party, or is identical with the customary name of a grape variety in such Contracting Party.

Chapter IV
Refusal and Other Actions in Respect of International Registrations

Article 15
Refusal

(1) *[Refusal of Effects of International Registration]* (a) Within the time limit specified in the Regulations, the Competent Authority of a Contracting Party may notify the International Bureau of the refusal of the effects of an international registration in its territory. The notification of refusal may be made by the Competent Authority *ex officio*, if its legislation so permits, or at the request of an interested party.

(b) The notification of refusal shall set out the grounds on which the refusal is based.

(2) *[Protection Under Other Instruments]* The notification of a refusal shall not be detrimental to any other protection that may be available, in accordance with Article 10(2), to the denomination or indication concerned in the Contracting Party to which the refusal relates.

(3) *[Obligation to Provide Opportunity for Interested Parties]* Each Contracting Party shall provide a reasonable opportunity, for anyone whose interests would be affected by an international registration, to request the Competent Authority to notify a refusal in respect of the international registration.

(4) *[Registration, Publication and Communication of Refusals]* The International Bureau shall record the refusal and the grounds for the refusal in the International Register. It shall publish the refusal and the grounds for the refusal and shall communicate the notification of refusal to the Competent Authority of the Contracting Party of Origin or, where the application has been filed directly in accordance with Article 5(3), the beneficiaries or the natural person or legal entity referred to in Article 5(2)(ii) as well as the Competent Authority of the Contracting Party of Origin.

(5) *[National Treatment]* Each Contracting Party shall make available to interested parties affected by a refusal the same judicial and administrative remedies that are available to its own nationals in respect of the refusal of protection for an appellation of origin or a geographical indication.

Article 16
Withdrawal of Refusal

A refusal may be withdrawn in accordance with the procedures specified in the Regulations. A withdrawal shall be recorded in the International Register.

Article 17
Transitional Period

(1) *[Option to Grant Transitional Period]* Without prejudice to Article 13, where a Contracting Party has not refused the effects of an international registration on the ground of prior use by a third party or has withdrawn such refusal or has notified a grant of protection, it may, if its legislation so permits, grant a defined period as specified in the Regulations, for terminating such use.

(2) *[Notification of a Transitional Period]* The Contracting Party shall notify the International Bureau of any such period, in accordance with the procedures specified in the Regulations.

Article 18
Notification of Grant of Protection

The Competent Authority of a Contracting Party may notify the International Bureau of the grant of protection to a registered appellation of origin or geographical indication. The International Bureau shall record any such notification in the International Register and publish it.

Article 19
Invalidation

(1) *[Opportunity to Defend Rights]* Invalidation of the effects, in part or in whole, of an international registration in the territory of a Contracting Party may be pronounced only after having given the beneficiaries an opportunity to defend their rights. Such opportunity shall also be given to the natural person or legal entity referred to in Article 5(2)(ii).

(2) *[Notification, Recordal and Publication]* The Contracting Party shall notify the invalidation of the effects of an international registration to the International Bureau, which shall record the invalidation in the International Register and publish it.

(3) *[Protection Under Other Instruments]* Invalidation shall not be detrimental to any other protection that may be available, in accordance with Article 10(2), to the denomination or indication concerned in the Contracting Party that invalidated the effects of the international registration.

Article 20
Modifications and Other Entries in the International Register

Procedures for the modification of international registrations and other entries in the International Register shall be specified in the Regulations.

Chapter V
Administrative Provisions

Article 21
Membership of the Lisbon Union

The Contracting Parties shall be members of the same Special Union as the States party to the Lisbon Agreement or the 1967 Act, whether or not they are party to the Lisbon Agreement or the 1967 Act.

Article 22
Assembly of the Special Union

(1) *[Composition]* (a) The Contracting Parties shall be members of the same Assembly as the States party to the 1967 Act.

(b) Each Contracting Party shall be represented by one delegate, who may be assisted by alternate delegates, advisors and experts.

(c) Each delegation shall bear its own expenses.

(2) *[Tasks]* (a) The Assembly shall:

(i) deal with all matters concerning the maintenance and development of the Special Union and the implementation of this Act;

(ii) give directions to the Director General concerning the preparation of revision conferences referred to in Article 26(1), due account being taken of any comments made by those members of the Special Union which have not ratified or acceded to this Act;

(iii) amend the Regulations;

(iv) review and approve the reports and activities of the Director General concerning the Special Union, and give him or her all necessary instructions concerning matters within the competence of the Special Union;

(v) determine the program and adopt the biennial budget of the Special Union, and approve its final accounts;

(vi) adopt the financial Regulations of the Special Union;

(vii) establish such committees and working groups as it deems appropriate to achieve the objectives of the Special Union;

(viii) determine which States, intergovernmental and non-governmental organizations shall be admitted to its meetings as observers;

(ix) adopt amendments to Articles 22 to 24 and 27;

(x) take any other appropriate action to further the objectives of the Special Union and perform any other functions as are appropriate under this Act.

(b) With respect to matters which are of interest also to other Unions administered by the Organization, the Assembly shall make its decisions after having heard the advice of the Coordination Committee of the Organization.

(3) *[Quorum]* (a) One-half of the members of the Assembly which have the right to vote on a given matter shall constitute a quorum for the purposes of the vote on that matter.

(b) Notwithstanding the provisions of subparagraph (a), if, in any session, the number of the members of the Assembly which are States, have the right to vote on a given matter and are represented is less than one-half but equal to or more than one-third of the members of the Assembly which are States and have the right to vote on that matter, the Assembly may make decisions but, with the exception of decisions concerning its own procedure, all such decisions shall take effect only if the conditions set forth hereinafter are fulfilled. The International Bureau shall communicate the said decisions to the members of the Assembly which are States, have the right to vote on the said matter and were not represented and shall invite them to express in writing their vote or abstention within a period of three months from the date of the communication. If, at the expiration of this period, the number of such members having thus expressed their vote or abstention attains the number of the members which was lacking for attaining the quorum in the session itself, such decisions shall take effect provided that at the same time the required majority still obtains.

(4) *[Taking Decisions in the Assembly]* (a) The Assembly shall endeavor to take its decisions by consensus.

(b) Where a decision cannot be arrived at by consensus, the matter at issue shall be decided by voting. In such a case,

(i) each Contracting Party that is a State shall have one vote and shall vote only in its own name; and

(ii) any Contracting Party that is an intergovernmental organization may vote, in place of its member States, with a number of votes equal to the number of its member States which are party to this Act. No such intergovernmental organization shall participate in the vote if any one of its member States exercises its right to vote, and *vice versa*.

(c) On matters concerning only States that are bound by the 1967 Act, Contracting Parties that are not bound by the 1967 Act shall not have the right to vote, whereas, on matters concerning only Contracting Parties, only the latter shall have the right to vote.

(5) *[Majorities]* (a) Subject to Articles 25(2) and 27(2), the decisions of the Assembly shall require two-thirds of the votes cast.

(b) Abstentions shall not be considered as votes.

(6) *[Sessions]* (a) The Assembly shall meet upon convocation by the Director General and, in the absence of exceptional circumstances, during the same period and at the same place as the General Assembly of the Organization.

(b) The Assembly shall meet in extraordinary session upon convocation by the Director General, either at the request of one-fourth of the members of the Assembly or on the Director General's own initiative.

(c) The agenda of each session shall be prepared by the Director General.

(7) *[Rules of Procedure]* The Assembly shall adopt its own rules of procedure.

Article 23
International Bureau

(1) *[Administrative Tasks]* (a) International registration and related duties, as well as all other administrative tasks concerning the Special Union, shall be performed by the International Bureau.

(b) In particular, the International Bureau shall prepare the meetings and provide the Secretariat of the Assembly and of such committees and working groups as may have been established by the Assembly.

(c) The Director General shall be the Chief Executive of the Special Union and shall represent the Special Union.

(2) *[Role of the International Bureau in the Assembly and Other Meetings]* The Director General and any staff member designated by him shall participate, without the right to vote, in all meetings of the Assembly, the committees and working groups established by the Assembly. The Director General, or a staff member designated by him, shall be *ex officio* Secretary of such a body.

(3) *[Conferences]* (a) The International Bureau shall, in accordance with the directions of the Assembly, make the preparations for any revision conferences.

(b) The International Bureau may consult with intergovernmental and international and national non-governmental organizations concerning the said preparations.

(c) The Director General and persons designated by him shall take part, without the right to vote, in the discussions at revision conferences.

(4) *[Other Tasks]* The International Bureau shall carry out any other tasks assigned to it in relation to this Act.

Article 24
Finances

(1) *[Budget]* The income and expenses of the Special Union shall be reflected in the budget of the Organization in a fair and transparent manner.

(2) *[Sources of Financing of the Budget]* The income of the Special Union shall be derived from the following sources:

(i) fees collected under Article 7(1) and (2);

(ii) proceeds from the sale of, or royalties on, the publications of the International Bureau;

(iii) gifts, bequests, and subventions;

(iv) rent, investment revenue, and other, including miscellaneous, income;

(v) special contributions of the Contracting Parties or any alternative source derived from the Contracting Parties or beneficiaries, or both, if and to the extent to which receipts from the sources indicated in items (i) to (iv) do not suffice to cover the expenses, as decided by the Assembly.

(3) *[Fixing of Fees; Level of the Budget]* (a) The amounts of the fees referred to in paragraph (2) shall be fixed by the Assembly on the proposal of the Director General and shall be so fixed that, together with the income derived from other sources under paragraph (2), the revenue of the Special Union should, under normal circumstances, be sufficient to cover the expenses of the International Bureau for maintaining the international registration service.

(b) If the Program and Budget of the Organization is not adopted before the beginning of a new financial period, the authorization to the Director General to incur obligations and make payments shall be at the same level as it was in the previous financial period.

(4) *[Establishing the Special Contributions Referred to in Paragraph (2)(v)]* For the purpose of establishing its contribution, each Contracting Party shall belong to the same class as it belongs to in the context of the Paris Convention or, if it is not a Contracting Party of the Paris Convention, as it would belong to if it were a Contracting Party of the Paris Convention. Intergovernmental organizations shall be considered to belong to contribution class I (one), unless otherwise unanimously decided by the Assembly. The contribution shall be partially weighted according to the number of registrations originating in the Contracting Party, as decided by the Assembly.

(5) *[Working Capital Fund]* The Special Union shall have a working capital fund, which shall be constituted by payments made by way of advance by each member of the Special Union when the Special Union so decides. If the fund becomes insufficient, the Assembly may decide to increase it. The proportion and the terms of payment shall be fixed by the Assembly on the proposal of the Director General. Should the Special Union record a surplus of income over expenditure in any financial period, the Working Capital Fund advances may be repaid to each member proportionate to their initial payments upon proposal by the Director General and decision by the Assembly.

(6) *[Advances by Host State]* (a) In the headquarters agreement concluded with the State on the territory of which the Organization has its headquarters, it shall be provided that, whenever the working capital fund is insufficient, such State shall grant advances. The amount of those advances and the conditions on which they are granted shall be the subject of separate agreements, in each case, between such State and the Organization.

(b) The State referred to in subparagraph (a) and the Organization shall each have the right to denounce the obligation to grant advances, by written notification. Denunciation shall take effect three years after the end of the year in which it has been notified.

(7) *[Auditing of Accounts]* The auditing of the accounts shall be effected by one or more of the States members of the Special Union or by external auditors, as provided in the Financial Regulations of the Organization. They shall be designated, with their agreement, by the Assembly.

Article 25
Regulations

(1) *[Subject-Matter]* The details for carrying out this Act shall be established in the Regulations.

(2) *[Amendment of Certain Provisions of the Regulations]* (a) The Assembly may decide that certain provisions of the Regulations may be amended only by unanimity or only by a three-fourths majority.

(b) In order for the requirement of unanimity or a three-fourths majority no longer to apply in the future to the amendment of a provision of the Regulations, unanimity shall be required.

(c) In order for the requirement of unanimity or a three-fourths majority to apply in the future to the amendment of a provision of the Regulations, a three-fourths majority shall be required.

(3) *[Conflict Between This Act and the Regulations]* In the case of conflict between the provisions of this Act and those of the Regulations, the former shall prevail.

Chapter VI
Revision and Amendment

Article 26
Revision

(1) *[Revision Conferences]* This Act may be revised by Diplomatic Conferences of the Contracting Parties. The convocation of any Diplomatic Conference shall be decided by the Assembly.

(2) *[Revision or Amendment of Certain Articles]* Articles 22 to 24 and 27 may be amended either by a revision conference or by the Assembly according to the provisions of Article 27.

Article 27
Amendment of Certain Articles by the Assembly

(1) *[Proposals for Amendment]* (a) Proposals for the amendment of Articles 22 to 24, and the present Article, may be initiated by any Contracting Party or by the Director General.

(b) Such proposals shall be communicated by the Director General to the Contracting Parties at least six months in advance of their consideration by the Assembly.

(2) *[Majorities]* Adoption of any amendment to the Articles referred to in paragraph (1) shall require a three-fourths majority, except that adoption of any amendment to Article 22, and to the present paragraph, shall require a four-fifths majority.

(3) *[Entry into Force]* (a) Except where subparagraph (b) applies, any amendment to the Articles referred to in paragraph (1) shall enter into force one month after written notifications of acceptance, effected in accordance with their respective constitutional processes, have been received by the Director General from three-fourths of those Contracting Parties which, at the time the amendment was adopted, were members of the Assembly and had the right to vote on that amendment.

(b) Any amendment to Article 22(3) or (4) or to this subparagraph shall not enter into force if, within six months of its adoption by the Assembly, any Contracting Party notifies the Director General that it does not accept such amendment.

(c) Any amendment which enters into force in accordance with the provisions of this paragraph shall bind all the States and intergovernmental organizations which are Contracting Parties at the time the amendment enters into force, or which become Contracting Parties at a subsequent date.

Chapter VII
Final Provisions

Article 28
Becoming Party to This Act

(1) *[Eligibility]* Subject to Article 29 and paragraphs (2) and (3) of the present Article,

(i) any State which is party to the Paris Convention may sign and become party to this Act;

(ii) any other State member of the Organization may sign and become party to this Act if it declares that its legislation complies with the provisions of the Paris Convention concerning appellations of origin, geographical indications and trademarks;

(iii) any intergovernmental organization may sign and become party to this Act, provided that at least one member State of that intergovernmental organization is party to the Paris Convention and provided that the intergovernmental organization declares that it has been duly authorized, in accordance with its internal procedures, to become party to this Act and that, under the constituting treaty of the intergovernmental organization, legislation applies under which regional titles of protection can be obtained in respect of geographical indications.

(2) *[Ratification or Accession]* Any State or intergovernmental organization referred to in paragraph (1) may deposit

(i) an instrument of ratification, if it has signed this Act; or

(ii) an instrument of accession, if it has not signed this Act.

(3) *[Effective Date of Deposit]* (a) Subject to subparagraph (b), the effective date of the deposit of an instrument of ratification or accession shall be the date on which that instrument is deposited.

(b) The effective date of the deposit of the instrument of ratification or accession of any State that is a member State of an intergovernmental organization and in respect of which the protection of appellations of origin or geographical indications can only be obtained on the basis of legislation applying between the member States of the intergovernmental organization shall be the date on which the instrument of ratification or accession of that intergovernmental organization is deposited, if that date is later than the date on which the instrument of the said State has been deposited. However, this subparagraph does not apply with regard to States that are party to the Lisbon Agreement or the 1967 Act and shall be without prejudice to the application of Article 31 with regard to such States.

Article 29
Effective Date of Ratifications and Accessions

(1) *[Instruments to Be Taken into Consideration]* For the purposes of this Article, only instruments of ratification or accession that are deposited by States or intergovernmental organizations referred to in Article 28(1) and that have an effective date according to Article 28(3) shall be taken into consideration.

(2) *[Entry into Force of This Act]* This Act shall enter into force three months after five eligible parties referred to in Article 28 have deposited their instruments of ratification or accession.

(3) *[Entry into Force of Ratifications and Accessions]* (a) Any State or intergovernmental organization that has deposited its instrument of ratification or accession three months or more before the date of entry into force of this Act shall become bound by this Act on the date of the entry into force of this Act.

(b) Any other State or intergovernmental organization shall become bound by this Act three months after the date on which it has deposited its instrument of ratification or accession or at any later date indicated in that instrument.

(4) *[International Registrations Effected Prior to Accession]* In the territory of the acceding State and, where the Contracting Party is an intergovernmental organization, the territory in which the constituting treaty of that intergovernmental organization applies, the provisions of this Act shall apply in respect of appellations of origin and geographical indications already registered under this Act at the time the accession becomes effective, subject to Article 7(4) as well as the provisions of Chapter IV, which shall apply *mutatis mutandis*. The acceding State or intergovernmental organization may also specify, in a declaration attached to its instrument of ratification or accession, an extension of the time limit referred to in Article 15(1), and the periods referred to in Article 17, in accordance with the procedures specified in the Regulations in that respect.

Article 30
Prohibition of Reservations

No reservations to this Act are permitted.

Article 31
Application of the Lisbon Agreement and the 1967 Act

(1) *[Relations Between States Party to Both This Act and the Lisbon Agreement or the 1967 Act]* This Act alone shall be applicable as regards the mutual relations of States party to both this Act and the Lisbon Agreement or the 1967 Act. However, with regard to international registrations of appellations of origin effective under the Lisbon Agreement or the 1967 Act, the States shall accord no lower protection than is required by the Lisbon Agreement or the 1967 Act.

(2) *[Relations Between States Party to Both This Act and the Lisbon Agreement or the 1967 Act and States Party to the Lisbon Agreement or the 1967 Act Without Being Party to This Act]* Any State party to both this Act and the Lisbon Agreement or the 1967 Act shall continue to apply the Lisbon Agreement or the 1967 Act, as the case may be, in its relations with States party to the Lisbon Agreement or the 1967 Act that are not party to this Act.

Article 32
Denunciation

(1) *[Notification]* Any Contracting Party may denounce this Act by notification addressed to the Director General.

(2) *[Effective Date]* Denunciation shall take effect one year after the date on which the Director General has received the notification or at any later date indicated in the notification. It shall not affect the application of this Act to any application pending and any international registration in force in respect of the denouncing Contracting Party at the time of the coming into effect of the denunciation.

Article 33
Languages of this Act; Signature

(1) *[Original Texts; Official Texts]* (a) This Act shall be signed in a single original in the English, Arabic, Chinese, French, Russian and Spanish languages, all texts being equally authentic.

(b) Official texts shall be established by the Director General, after consultation with the interested Governments, in such other languages as the Assembly may designate.

(2) *[Time Limit for Signature]* This Act shall remain open for signature at the headquarters of the Organization for one year after its adoption.

Article 34
Depositary

The Director General shall be the depositary of this Act.

ICANN
The Internet Corporation for Assigned Names and Numbers

7 April 2014

Governmental Advisory Committee
Via, Ms. Heather Dryden
Chair, Governmental Advisory Committee

Re: Governmental Advisory Committee (GAC) Advice – .AMAZON (and related IDNs)

Dear Ms. Dryden:

I am pleased to inform you that the ICANN Board New gTLD Program Committee (NGPC) continues to make progress to address the open item of advice from the GAC concerning the New gTLD Program applications for .AMAZON, and related IDNs. As you are aware, in its Durban Communiqué, the GAC advised the ICANN Board that "the GAC has reached consensus on GAC Objection Advice according to Module 3.1 part I of the Applicant Guidebook on the following application: .amazon (application number 1-1315-58086) and related IDNs in Japanese (application number 1-1318-83995) and Chinese (application number 1-1318-5591)."

As previously reported, ICANN commissioned an independent, third-party expert to provide additional advice on the specific issues of application of law at issue. The analysis attached has been received and is being considered by the NGPC as it continues to deliberate on the appropriate next steps to address the GAC's advice on .AMAZON (and related IDNs).

ICANN provides this analysis to keep the parties informed and welcomes any additional information that they believe is relevant to the NGPC in making its final decision on the GAC's advice on .AMAZON (and related IDNs). ICANN has requested that Amazon EU S.à r.l. (the applicant of the .AMAZON applications identified in the GAC's advice) submit any additional information by 14 April 2014.

The NGPC is committed to giving due consideration to the complex issues at the crux of the matter, and reiterates its commitment to the most timely response possible to all interested parties including the distinguished members of the GAC. We appreciate the collaboration of the GAC in the New gTLD Program and all of its deliberations and inputs to the process.

Jérôme Passa

Contact Information Redacted

I, the undersigned Jérôme Passa, *agrégé* in law, professor at the Université Panthéon-Assas (Paris II, France), have been requested by ICANN to provide an opinion on the well-foundedness of various objections raised against the reservation of the new gTLD '.amazon'. This legal opinion is set out below.

1. In 2011, the Internet Corporation for Assigned Names and Numbers (ICANN), which is responsible for the worldwide administration of the Domain Name System (DNS), launched a new domain name system offering operators the possibility of reserving new gTLDs (generic Top Level Domains) designed to provide suffixes for new domain names.

Under this system, a company can reserve its own name or that of its trade mark or one of its trade marks, such as '.vuitton' or '.ipad', for example, as a new gTLD. Geographical names and purely generic product or service names can also be reserved in this way.

The system and, in particular, the conditions for assigning these new gTLDs are set out in a lengthy document entitled the Applicant Guidebook.

When, after an in-depth evaluation process, ICANN decides to assign a new gTLD to an applicant, the parties enter into an agreement known as a 'registry agreement' under which ICANN delegates the management of the new suffix to the beneficiary; the beneficiary thus becoming the registry operator for the new gTLD.

The beneficiary to whom the new gTLD is reserved is the only one permitted to exploit, or to authorise others to exploit, worldwide the domain names associated with the

2. Reservation of a new gTLD may infringe prior third-party rights or, more generally, interests.

ICANN is clearly well aware of this issue since a certain number of provisions in the Applicant Guidebook are aimed at preventing this type of infringement.

The beneficiary of a prior right or interest, for example, can object to the assignment of a gTLD (Applicant Guidebook, 3.2.1).

In addition, on issues affecting its member states, ICANN's Governmental Advisory Committee (GAC), an inter-governmental committee made up of representatives of national governments and intergovernmental organisations, can issue advice to ICANN's board on applications for new gTLDs (Applicant Guidebook, section 3.1).

The advice of the GAC, which may suggest that ICANN refuse to reserve a given gTLD (as in the case of '.amazon as we shall see below) is sent to the applicant which has a right of reply.

3. In view of the objections raised by the GAC and various member states, this concern to protect prior third-party rights and interests has led ICANN to consider the legitimacy and opportuneness of assigning the new gTLD '.amazon' to its applicant, namely the Amazon company .

The undersigned has been consulted on the specific issue of whether, on strictly legal grounds in the field of intellectual property law relating, in particular, to the rules of international law or fundamental principles, ICANN would be **bound**:

- to assign the new gTLD in question to its applicant, or, to the contrary,
- to refuse to assign it in order to protect prior rights as mentioned above.

In essence, the answer lies in whether or not a prior right actually exists and, where this is the case, in the nature and function of the right and the scope of protection conferred upon it by the rules of law.

Consequently, the undersigned will limit his opinion to the provisions of applicable international **intellectual property** agreements, to the fundamental principles governing this area of law and, where applicable, to the rules of supranational law constituted by the provisions of the applicable European Union legislation in the field of intellectual property.

With a few individual exceptions, there will be no reference to the provisions of the various regulations adopted by ICANN, the legal nature of which is likely to give rise to some

4. Amazon, a US corporation and owner of the *Amazon* trade mark for various products and services in a wide range of countries, has made an application for the new gTLD '.amazon'.

Objections have been raised against this application by various Latin American countries, including Brazil and Peru, through which the River Amazon flows and whose territories form part of the river's 5.5 million km^2 plain, known as Amazonia.

These objections were passed on by the GAC which recommended that ICANN reject Amazon's application.

The issues currently facing ICANN are:

- whether the rules and principles cited in support of these objections and reiterated in the unfavourable advice issued by the GAC are of such nature as to oblige ICANN to reject the application filed by Amazon (A) or, to the contrary,

- whether the rules and principles cited by Amazon in its response of 23 August 2013 to the GAC's advice oblige it to reserve the new gTLD '.amazon' (B).

A.- Concerning the objections to the assignment of the new gTLD '.amazon'

5. Though the term 'amazon' does not appear to correspond to the name of the Amazonia region in any language, and in particular in Spanish, Portuguese or English, an objection against the reservation of the new gTLD '.amazon' for Amazon might, in principle, nevertheless be raised on the basis of the notion of 'geographical indication' as defined in intellectual property law.

Indeed, where a geographical indication is protected on this basis it is protected not simply against the use of identical names but also, in most legal systems, against the use of names which imitate or invoke it. This is only logical since the use of a name which is merely similar may also be designed to take advantage of the reputation of the geographical indication or result in a reduction in its attractiveness in the eyes of the public.

Thus, if the names 'Amazonia' and 'Amazonas' were geographical indications, it would, given the evident similarity of the names in question, be possible to protect them against the use of the name 'Amazon'.

Indeed, the geographical name of a place can constitute a geographical indication and be recognised and protected as such under intellectual property law only if there exists in the public mind a link between the place in question and particular qualities or a reputation for specific products of that place because these qualities or this reputation are attributed to this geographical origin.

Thus, Article 22(1) of the TRIPS Agreement, which forms Annex I C of the Agreement establishing the World Trade Organisation and is binding on a great number of states, provides that "geographical indications are, for the purposes of this Agreement, indications which identify a good as originating in the territory of a Member, or a region or locality in that territory, where a given quality, reputation or other characteristic of the good is essentially attributable to its geographical origin."

Both European Union law and certain international conventions draw a distinction between such geographical indications based on the strength of the link between the geographical origin and the characteristics and qualities of the product in question. For example, the various European regulations on geographical indications draw a distinction between appellations of origin and geographical indications in the strict sense of the term.

Appellations of origin are the geographical names with the closest link between geographical origin and product characteristics or qualities. For example, Article 5(1) of Regulation (EU) No 1151/2012 of 21 November 2012 on quality schemes for agricultural products and foodstuffs[1] provides that "'designation of origin' is a name which identifies a product: (a) originating in a specific place, region or, in exceptional cases, a country; (b) whose quality or characteristics are essentially or exclusively due to a particular geographical environment with its inherent natural <u>and</u> human factors; and (c) the production steps of which all take place in the defined geographical area."

This definition is based closely on that given in Article 2(1) of the Lisbon Agreement for the Protection of Appellations of Origin and their International Registration of October 31, 1958, an international convention which came into effect in 1966 and which defines the term 'appellation of origin' as "the geographical denomination of a country, region, or locality, which serves to designate a product originating therein, the quality or characteristics of which are due exclusively or essentially to the geographical environment including natural <u>and</u> human factors."

An appellation of origin is thus characterised by the fact that the particular quality or

Geographical indications in the strict sense of the term differ from appellations of origin in that the link between the qualities or character of a product and its locality of origin is more tenuous. Indeed, Article 5(2) of the aforementioned EU Regulation provides that "'geographical indication' is a name which identifies a product: (a) originating in a specific place, region or country; (b) whose given quality, reputation or other characteristics is essentially attributable to its geographical origin; and (c) at least one of the production steps of which take place in the defined geographical area." The effect of geographical provenance on product characteristics is thus required, but not specified, and may therefore relate to both natural or human factors.

7. In many legal systems the protection of geographical indications in its wider sense is dependent on the completion of certain formalities in the country or region – such as the European Union – of origin of the products in question. This may be through either statutory recognition or registration with an administrative authority. In both cases, the formalities will define the geographical area in which the products in question must be produced, manufactured or processed and specify the production or manufacturing conditions to be fulfilled in order for the products to be identified under the geographical indication in question.

However, in certain legal systems – including under French law, for example[2] – a geographical name which is not – or not yet – recognised either by statute or by registration can still be afforded a certain degree of protection where the products from the geographical area in question are deemed to have special characteristics or qualities.

8. Under intellectual property law, a geographical name enjoys no status, regime or particular protection where it designates a place which is not specially known by the public for its products and services, whatever they may be. This is the case where this place is not the origin of any particular products or services or where the products or services originating in it do not or are not deemed to have any particular characteristics due to this origin in the minds of the public.

Such conclusion clearly results from the law governing geographical indications. It also emerges from the rules governing the relationships – frequent in practice – between trade marks and geographical names in most legal systems and in particular under EU and French law.

For example, we know that a trade mark consisting of the geographical name of a

For example, it has been held in France – and the solution would be the same in most legal systems – that a trade mark registered for clothing can validly consist of or contain the name 'Boston' even if the products in question are not manufactured in Boston as long as this US city has no particular reputation for clothing[3], which would only be the case if clothing made in Boston possessed particular characteristics or qualities because of its origin or a reputation in the minds of the public.

In this example the name 'Boston' is a **neutral geographical name** for clothing which has no impact under trade mark law.

It is also accepted that a trade mark consisting exclusively of the geographical name of a place will be refused or invalidated as being devoid of distinctive character if the place is the place of origin of the products covered by the trade mark, in this case the trade mark being, in effect, deemed to be descriptive of one of the characteristics of the products in question, i.e. their geographical provenance.

It has, however, also been held, notably by the General Court of the European Union, that this solution applies only where the geographical name has a certain reputation for the products in question in the minds of the public.

Thus in a judgment dealing with the trade mark *Port Louis*, consisting of the name of the capital of Mauritius, registered for textile products, the General Court underlined that "the registration as a Community trade mark of names designating certain geographical places already reputed or known for the category of products in question and which consequently have a link with this category in the eyes of interested parties"[4] is not possible. The fact that the trade mark owner's clothing comes or may come from this place is of no relevance and the trade mark is not considered to be descriptive since the town in question has no particular reputation for this category of products.

As in the case of the name 'Boston' dealt with above, the geographical name is neutral and therefore has no impact on the conditions of validity of the trade mark.

9. Supposing that, given its very large surface area and the fact that it comprises parts of various different countries, Amazonia constitutes the geographical area of a geographical indication within the legal meaning of the term – though this is already be disputed in view of the aforementioned definition of Article 22 (1) of the TRIPS Agreement which refers to products "originating in the territory of a Member" Amazonia would appear to have no

It is my view that the geographical names 'Amazonie', 'Amazonia' and 'Amazonas' do not constitute a geographical indication within the meaning of intellectual property law and in particular within the meaning of Article 22 (1) of the TRIPS Agreement, nor do they appear likely to become so in the near future for any specific products. However, ICANN may have specific information on this last point which might lead it to reach a different conclusion.

In consequence, I do not believe that assignment of the new gTLD '.amazon' to the Amazon company could be rejected on the basis of international or even local law on geographical indications.

10. Even supposing, hypothetically, that the geographical names 'Amazonie', 'Amazonia' and 'Amazonas' constituted geographical indications for specific products, this geographical indication would not necessarily justify the rejection of the application for assignment of the gTLD to the Amazon company.

As has already been pointed out, it is true that the fact that the name 'Amazon' and the name of the geographical indication are not identical is unlikely to prevent the application of the law governing geographical indications.

However, legal recognition of a geographical indication does not in any away imply that the geographical indication enjoys absolute protection, that is to say, protection against **any type** of use of an identical or similar name by a third party.

11. On one hand, indeed, Article 22 of the TRIPS Agreement provides only for protection against use as an indication of the geographical provenance of a product where this use misleads the public as to the geographical origin of the product.

On this point, "in respect of geographical indications" Article 22 2(a) requires parties to the Agreement to provide the legal means for interested parties to prevent "the use of any means in the designation or presentation of a good that indicates or suggests that the good in question originates in a geographical area other than the true place of origin in a manner which misleads the public as to the geographical origin of the good.".

However, given the nature of the Amazon company's activities and the fact that the *Amazon* sign is neither used nor designed to be used by it as an indication of the geographical origin of a product or service, the reservation and use by Amazon of the gTLD '.amazon'

Article 22 2(b) of the Agreement also requires the parties to protect geographical indications against "any use which constitutes an act of unfair competition within the meaning of Article 10*bis* of the Paris Convention". However, in order for an "act of competition contrary to honest practices in industrial or commercial matters" within the meaning of this last provision (sub-section 2) and an act "of such a nature as to create confusion (…) with the establishment, the goods, or the industrial or commercial activities, of a competitor" (sub-section 3 (i)) or "indications or allegations the use of which (…) is liable to mislead the public as to the (…) characteristics" or the quality "of the goods" (sub-section 3(iii)) to exist, the name identical or similar to the geographical indication must, as above, necessarily be used as the indication of the geographical provenance of products.

To summarize, the legal protection afforded to a geographical indication – supposing that such geographical indication exists – by the provisions of the TRIPS Agreement and the Paris Convention does not, <u>on its own</u>, justify a rejection of the Amazon's company application.

12. On the other hand, unlike the TRIPS Agreement, some legal systems do not limit the protection of geographical indications to cases in which an identical or similar name is used by a third party to indicate the geographical provenance of a product.

Thus, in the case of appellations of origin, Article 3 of the aforementioned Lisbon Agreement provides that "protection shall be ensured against any usurpation or imitation, even if the true origin of the product is indicated or if the appellation is used in translated form or accompanied by terms such as "kind", "type", "make", "imitation" or the like".

Even though the Agreement does not specify what such "usurpation or imitation" consists of, its general nature and wording suggest that the protection extends beyond cases in which a third party uses an identical or similar sign to indicate the geographical provenance of a product. Given the broad language used in this provision, it is difficult however to know exactly what the conditions and terms of this protection are.

The provisions of the above mentioned European regulations protecting geographical indications of agricultural and food products[5], wines[6] and spirits[7] are, however, more specific on this point.

This is the case, in particular, of Article 13(1) of the aforementioned Regulation (EU) No 1151/2012 on quality schemes for agricultural products and foodstuffs[8], according to b). any misuse, imitation or evocation, even if the true origin of the products or services is indicated or if the protected name is translated or accompanied by an expression such as ‘style’, ‘type’, ‘method’, ‘as produced in’, ‘imitation’ or similar, including when those products are used as an ingredient;

c). any other false or misleading indication as to the provenance, origin, nature or essential qualities of the product that is used on the inner or outer packaging, advertising material or documents relating to the product concerned, and the packing of the product in a container liable to convey a false impression as to its origin;

d). any other practice liable to mislead the consumer as to the true origin of the product.”

A joint reading of sub-sections a) and b) of this provision reveals that geographical names registered under the Regulation are protected against any direct or indirect commercial use of a sign identical or similar (imitation or evocation) to the protected name for products comparable to those covered by the registration or for an product or service where this use takes advantage of the reputation of the protected name.

Though, where not otherwise stipulated, protection extends to uses which do not indicate a geographical provenance, a number of conditions must nevertheless be fulfilled. Either the sign in dispute must be used for products comparable to those covered by the registration or – unlike for a comparable product – the use in dispute must take advantage of the reputation of the protected name.

Though the trade mark *Champagne* registered and exploited by Yves-Saint-Laurent for a luxury perfume, i.e. in a non-geographical manner, was invalided and prohibited in France on the basis of comparable statutory provisions, it was because the use of this trade mark allowed its owner to take advantage of the reputation and prestige of the renown appellation of origin *Champagne* for a sparkling wine from the Champagne region[9].

Supposing that ICANN were required to take account of the provisions of European Union law, even though I do not believe this to be so particularly since in this case the geographical names in question – Amazonia, Amazonas and Amazonie – is not registered under any EU regulation, the reservation of the gTLD ‘.amazon’ would not in any case infringe a prior geographical indication, if one existed.

For, firstly, it would not in all likelihood be for the use of products comparable to those covered by this geographical indication indeed it is hard to see just what the

Beyond the law of geographical indications, the assignment of '.amazon' to Amazon would not in any event be prejudicial to the objecting states who, since they have no reason for linguistic reasons to reserve '.amazon', could always if they so wished reserve a new gTLD such as '.amazonia' or '.amazonas' which would create no risk of confusion with '.amazon'.

Finally, the fact that neither the name 'Amazon' nor that of the Amazonia region appears in any language on the ISO 3166 list is irrelevant. It is true that the country and region names on this list, whether they are reproduced, imitated or translated into a foreign language, cannot be reserved[10]. However, the fact that there is no bar to reserving the TLD '.amazon' on this ground does not mean that it could not be rejected on other grounds put forward by the objecting states or that Amazon could not claim a right to reserve it. On this last point, it is clear that no one can claim a TLD simply because the name it consists of is not included on the ISO list.

B.- Concerning the arguments put forward by the Amazon company in support of the assignment of the new gTLD '.amazon'

14. In response to the advice of the GAC reiterating the arguments of the objecting states, the Amazon company cites a certain number of rules of international law which, it claims, mean it must be assigned the TLD '.amazon'.

15. Firstly, and principally, the Amazon company cites its trade mark *Amazon* which is registered in almost 150 states around the world, including Brazil and Peru.

In substance, it contends that the intellectual property rights it holds in the name *Amazon* as a result of these registrations give it a *right to* the TLD '.amazon' and that ICANN is therefore obliged to assign the TLD to it.

In support of this argument Amazon cites Article 16(1) of the TRIPS Agreement which gives the owner of a registered trade mark "the exclusive right to prevent all third parties not having the owner's consent from using in the course of trade identical or similar signs for goods or services which are identical or similar to those in respect of which the trade mark is registered (…)."

15 1. However, it is my view that the argument advanced by Amazon is based on an

An intellectual property right is therefore, like any property, a right to exclude third parties and, in this case, a right to exclude unauthorised third parties from the scope of protection which the law grants to the owner of the intellectual property right.

Binding as against third parties, an intellectual property right never affords its owner **the right to exploit or to use the subject matter of its right.**

We know, for example, that a patent does not confer upon its owner the right to exploit the invention. Firstly, the exploitation of the invention may, for example, require him to obtain marketing approval as is the case for the marketing of pharmaceutical products. Secondly, if the patented invention in question represents an improvement of a prior invention which is itself also covered by a patent valid for the same territory, the patented invention cannot legally be exploited without the authorisation of the holder of the prior patent.

We also know that the holder of a copyright in a work is not necessarily able to exploit the work simply on the basis of this right. Firstly, its exploitation may come up against an administrative or legal prohibition based on reasons of public policy or a third party's right to privacy, for example. Secondly, if this work is derived from a prior work which is itself also protected, it cannot legally be exploited without the consent of the holder of the rights in the first work.

These simple examples demonstrate that an intellectual property right does not grant its owner a **right *to* use** the intangible subject matter in question. The right grants him ownership, ownership which is always binding on unauthorised third parties, but not, unless misinterpreting the notion of intellectual property, the possibility to exploit the subject matter of its ownership in any circumstances.

15-2. The same applies under trade mark law.

A trade mark right – the right associated with the registration of a trade mark – grants the owner a monopoly binding on third parties within the limits defined by law.

However, the holder cannot invoke this right as *a right to use* the sign, even for the products and services specified in the registration, or even as the right to use the sign in particular forms, such as a new gTLD.

The owner of a registered trade mark, though it is fully binding on third parties while

A few months earlier, the Court of Justice had already adopted the same solution with regard to Community designs[13].

15-3. The exclusive right held by the Amazon company in its trade mark *Amazon* in various Member States under Article 16(1) of the TRIPS Agreement does not therefore necessarily give it **the right per se either to use it or to use the *Amazon* sign in any other form it may choose, such as a new TLD**.

In my belief, therefore, the Amazon company is wrong in citing its registered trademarks and its rights under Article 16(1) of the TRIPS Agreement and in deducing that ICANN is therefore obliged to assign it the new TLD to allow it to exploit, as a TLD, the *Amazon* sign which forms the subject matter of these trade marks.

The *Amazon* trade marks held by the applicant do not in legal terms give it a *right to* the new TLD '.amazon'. The fact that the objecting states did not cite any trade marks in support of their arguments is irrelevant in this respect.

Moreover, I would also add that all these *Amazon* trade marks, which are each subject to the principle of territoriality, are legally effective on a national – or regional in the case of a Community trade mark – territory only, in particular, if Amazon holds one of them and that in consequence none of these trade marks would be binding on ICANN, which is responsible for the assignments of new TLDs worldwide in any event.

15-4. At the very most, the Amazon company's trademarks permit it to claim a **legitimate interest for applying for assignment** of '.amazon'.

However, this interest does not in any way guarantee it assignment of this new TLD in legal terms for there are other considerations to be taken into account in the ICANN decision.

16. The same can be said of the arguments put forward by Amazon based on Article 8 of the Paris Convention for the Protection of Industrial Property.

This very succinct article provides for the protection of trade names in the states party to the Convention without the need for any filing or registration formality.

Apart from the fact that it does not specify the conditions or the nature of this

17. Finally, in this case Amazon cannot effectively rely on the provisions of international human rights law and, in particular, – supposing it were applicable to and binding on ICANN – the European Convention on Human Rights (ECHR).

It is true that Article 1 of the First Additional Protocol to the ECHR provides for an entitlement "to the peaceful enjoyment of (…) possessions", while in its *Anheuser-Busch/Portugal* judgment of 11 January 2007[14] the European Court of Human held that this provision "applies to intellectual property as such".

However, Amazon cannot use this argument to claim a right to the registration of the new TLD '.amazon'.

Indeed, **firstly**, filing an application for assignment of this new TLD in no way guarantees it the assignment of the TLD.

In the aforementioned judgment, the European Court of Human Rights held that, given all the economic rights and interests attached to such an application, the owner of an application for registration of a trade mark is the holder of a substantial interest protected by Article 1 of the First Additional Protocol but that the Trade Mark Office's rejection of the application did not constitute interference in the applicant's right to the peaceful enjoyment of his possessions and thus a breach of Article 1 – thereby thankfully guaranteeing the freedom of offices to refuse trade mark or patent applications.

Supposing that an application for assignment of a new gTLD corresponding to a trade mark held by the applicant were to be qualified as a possession within the meaning of Article 1 of the First Additional Protocol, as is the case with an application for the registration of a trade mark – which in my view could be disputed –, according to the European Court's analysis ICANN's rejection of this application would not constitute a breach of the peaceful enjoyment of this possession.

Secondly, the Amazon company's *Amazon* trade marks undeniably constitute goods within the meaning of the aforementioned provision.

However, given its subject matter and purpose, a registered trade mark does not in any way guarantee its holder (as set out in section 15-2 et seq. above) a **right to** the assignment of the corresponding new TLD. Since this assignment is not a prerogative of the owner of the

18. Therefore, there exists no provision in either international intellectual property law or in the field of fundamental rights which could oblige ICANN to assign the gTLD '.amazon' to the Amazon company.

Conclusion

As regards the application for assignment of the new gTLD '.amazon' filed by the Amazon company:

i) **there is no rule of international, or even regional or national, law applicable in the field of geographical indications which obliges ICANN to reject the application;**

ii) **there is no rule of international, or even regional or national, law applicable in the field of intellectual property and in particular of trade marks or in the field of fundamental rights, which obliges ICANN to accept this application.**

PREFACE

This study is presented by the International Bureau of the World Intellectual Property Organization (WIPO) as a first step in a series of activities concerning protection against unfair competition. The first draft of the study was based on a text produced by two staff members of the Max Planck Institute for Foreign and International Patent, Copyright and Competition Law (Munich, Germany), Mrs. Frauke Henning-Bodewig and Mr. Heijo Ruijsenaars. The final version takes into account the advice of the following experts (given at a meeting in 1992 and in the form of written comments in 1993):

— John Adams (Director, Common Law Institute of Intellectual Property (CLIP), London);

— Ernesto Aracama-Zorraquín (Lawyer, Buenos Aires);

— Ivan Cherpillod (Lawyer, Lausanne);

— Gu Ming (Vice-Chairman, Law Committee of the National People's Congress, Beijing);

— Desmond Guobadia (Lawyer, Lagos);

— Frauke Henning-Bodewig (Mrs.) (Max Planck Institute for Foreign and International Patent, Copyright and Competition Law, Munich);

— Baldo Kresalja (Lawyer, Lima);

— Yoshiharu Kunogi (Director, Intellectual Property Policy Office, Ministry of International Trade and Industry, Tokyo);

— Krishnaswami Ponnuswami (Professor of Industrial Property Law, Faculty of Law, University of Delhi, Delhi);

— Heijo Ruijsenaars (Max Planck Institute for Foreign and International Patent, Copyright and Competition Law, Munich);

— Imre Voros (Justice, Constitutional Court, Budapest);

— Glen Weston (Former Professor, School of Law, George Washington University, Washington, D.C.; Naples, Florida).

The International Bureau expresses its gratitude to the above-named experts for their invaluable contributions.

December 1993

CONTENTS

I. INTRODUCTION

1. Protection against unfair competition has been recognized as forming part of industrial property protection for almost a century. It was in 1900, at the Brussels Diplomatic Conference for the Revision of the Paris Convention for the Protection of Industrial Property (hereinafter referred to as "the Paris Convention"), that this recognition was first manifested by the insertion of Article 10*bis* in the Convention. In its original version, as adopted at the Brussels Diplomatic Conference, the Article read as follows: "Nationals of the Convention (Articles 2 and 3) shall enjoy, in all the States of the Union, the protection granted to nationals against unfair competition." As a result of the subsequent revision conferences, the Article now reads as follows (in the Stockholm Act (1967) of the Paris Convention):

> "(1) The countries of the Union are bound to assure to nationals of such countries effective protection against unfair competition.
>
> (2) Any act of competition contrary to honest practices in industrial or commercial matters constitutes an act of unfair competition.
>
> (3) The following in particular shall be prohibited:
>
> 1. all acts of such a nature as to create confusion by any means whatever with the establishment, the goods, or the industrial or commercial activities, of a competitor;
> 2. false allegations in the course of trade of such a nature as to discredit the establishment, the goods, or the industrial or commercial activities, of a competitor;
> 3. indications or allegations the use of which in the course of trade is liable to mislead the public as to the nature, the manufacturing process, the characteristics, the suitability for their purpose, or the quantity, of the goods."

2. At first glance, there seem to be basic differences between the protection of industrial property rights, such as patents, registered industrial designs, registered trademarks, etc., on the one hand, and protection against acts of unfair competition on the other. Whereas industrial property rights, such as patents, are granted on application by industrial property offices and confer exclusive rights with respect to the subject matter concerned, protection against unfair competition is based not on such grants of rights but on the consideration – either stated in legislative provisions or recognized as a general principle of law – that acts contrary to honest business practice are to be prohibited. Nevertheless, the link between the two kinds of protection is clear when certain cases of unfair competition are considered. For example, in many countries unauthorized use of a trademark that has not been registered is considered illegal on the basis of general principles that belong to the field of protection against unfair competition (in a number of countries such unauthorized use is called "passing-off"). There is another example of this kind in the field of inventions: if an invention is not disclosed to the public and is considered to constitute a trade secret, the unauthorized performance by third parties of certain acts in relation to that trade secret may be illegal. Indeed the performance of certain acts in relation to an invention that has been disclosed to the public and is not patented or in respect of which the patent has expired, may under very special circumstances also be illegal (as an act of "slavish imitation").

3. The above examples show that protection against unfair competition effectively supplements the protection of industrial property rights, such as patents and registered trademarks, in cases where an invention or a sign is not protected by such a right. There are, of course, other cases of unfair competition, for example the case referred to in Article 10*bis*(3)2 of the Paris Convention, namely that of a false allegation in the course of trade of such a nature as to discredit a competitor, in which protection against unfair competition does not perform such a supplementary function. This is due to the fact that the notion of unfair competition covers a great variety of acts, as will be discussed in the analysis below.

II. THE NEED FOR PROTECTION

4. In the wake of recent political developments, a number of countries are currently in the process of adopting market economy systems, which allow free competition between industrial and commercial enterprises within certain limits defined by law. These developments are taking place not only in Central and Eastern European countries, but also in a number of developing countries. Free competition between enterprises is considered the best means of satisfying supply and demand in the economy and of serving the interests of consumers and the economy as a whole. However, where there is competition, acts of unfair competition are liable to occur. This phenomenon has been discernible in all countries and at all times, regardless of prevailing political or social systems.

5. Sometimes economic competition has been compared to competition in sport, because in both the best should win. In economic competition, that should be the enterprise providing the most useful and effective product or service on the most economical and (to the consumer) satisfying terms. This result can only be achieved, however, if all participants play according to a certain set of basic rules; and also as in sport, it may be tempting to disregard the rules. Violations of the basic rules of economic competition can take various forms, ranging from illegal but harmless acts (which can be committed by the most honest and careful entrepreneur) to malicious fouls, intended to harm competitors or mislead consumers. They may consist in a direct attack on an individual competitor or in a surreptitious deception of the "referee," who in economic competition typically is the consumer. Whatever form such violations may take, it is in the interest of the honest entrepreneur, the consumer and the public at large that they should be prevented as early and as effectively as possible.

6. Experience has shown that there is little hope of fairness in competition being achieved solely by the *free play of market forces.* In theory consumers, in their role as referees of economic play, could deter dishonest entrepreneurs by disregarding their goods or services

and favoring those of honest competitors. Reality, however, is different. As an economic situation becomes more complex, consumers become less able to act as referees. Often they are not even in a position to detect by themselves acts of unfair competition, let alone react accordingly. Indeed it is the consumer who – along with the honest competitor – has to be protected against unfair competition.

7. *Self-regulation* has sometimes been referred to as a remedy but it has not proved to be a sufficient safeguard against unfair competition. Without doubt, self-regulation by associations of enterprises can play an important role in ensuring honest business conduct: if self-regulation is well developed and generally observed, it can even be faster, less expensive and more efficient than any court system. Yet it stands or falls on continuing observance by all participants.

8. In order to prevent unfair competition effectively, self-regulation must, at least in certain areas, be supplemented by a system of legal enforcement. Only such a system can assure honest entrepreneurs that their chances of success will be determined by their own efforts, and assure consumers that they can make optimum buying choices, thus avoiding the waste of scarce resources, and ensuring improved market transparency and maximum economic welfare.

9. The rules on the prevention of unfair competition and those on the prevention of restrictive business practices (*antitrust* law) are interrelated: both aim at ensuring the efficient operation of a market economy. They do so in different ways, however: antitrust law is concerned with the preservation of the *freedom of competition* by combating restraints on trade and abuses of economic power, while unfair competition law is concerned with ensuring fairness in competition by forcing all participants to play according to the same rules. Yet both laws are equally important, although in different respects, and supplement each other. Countries setting up a system of market economy need an antitrust law, but one cannot rely on antitrust law alone to ensure fairness of competition as a side effect: that can be achieved only by distinct rules providing for protection against unfair competition.

10. *Industrial property laws* protecting inventions, industrial designs, marks, trade names, geographical indications, etc., are insufficiently comprehensive on their own to ensure honest practice in the market-

place. It is true that the protection of industrial property rights is in the interest not only of their owners, but also of consumers and of the public at large, and thus also serves the objective of ensuring fairness in competition. In particular, the unauthorized use of a trademark for a competing product not only constitutes undue exploitation of the trademark owner's goodwill, but also deceives the public as to the commercial origin of the product (and hence its characteristics). It can therefore be argued that trademark law is a specific part of the larger field of unfair competition law and that the enforcement of trademark protection serves to prevent acts of unfair competition, in particular, passing-off and dilution of distinctive quality or advertising value. The same is true, to a lesser extent, of other industrial property rights, such as patents, which protect inventors against undue exploitation of their efforts.

11. However, in spite of these common objectives, fair play in the marketplace cannot be ensured only by the protection of industrial property rights. A wide range of unfair acts, such as misleading advertising and the violation of trade secrets, are usually not dealt with by the specific laws on industrial property. Unfair competition law is therefore necessary either to supplement the laws on industrial property or to grant a type of protection that no such law can provide. In order to fulfill this function, unfair competition law must be *flexible*, and protection thereunder must be independent of any formality such as registration. In particular, unfair competition law must be able to adapt to all new forms of market behavior. Such flexibility does not necessarily entail a lack of predictability. Of course, unfair competition law can never be as specific as patent law or trademark law; yet experience in many countries has shown that it is possible to develop an efficient and flexible system of unfair competition law and at the same time to ensure sufficient predictability.

III. THE LEGAL BASIS FOR PROTECTION

A. *Development of Unfair Competition Law*

12. All countries that have established market economy systems have devised some kind of safeguard against unfair business practices. In doing so, however, they have chosen quite *different approaches.* While in other areas of industrial property law, such as those dealing with patents, designs or marks, it is generally agreed that protection is best afforded by a specific, comprehensive statute, the legal basis for the repression of unfair competition can range from a succinct general tort provision to detailed regulation in a special statute. The reason for this diversity of approaches is often purely historical.

13. The concept of unfair competition law emerged first in *France* around 1850. Although at that time there was no specific prohibition of dishonest business practices, the French courts were able to develop a comprehensive and effective system of unfair competition law on the basis of the *general provision* contained in Article 1382 of the French Civil Code, according to which unlawful acts entail an obligation to pay damages. As far as the protection of competitors is concerned, the principles developed by court decisions on the basis of Article 1382 of the French Civil Code are still the main bases for relief against unfair competition in France. For the protection of consumers, a law on fraud in connection with products was enacted as early as 1905, and has since been complemented by numerous statutes and decrees, including the so-called "Loi Royer" of 1973, which prohibits misleading advertising, and the Consumer Information Laws of 1978 and 1989.

14. In *Germany,* the situation evolved differently. Since the courts refused to extend the tort provisions of the Civil Code to unfair business practices, it was necessary to enact *specific legislation* on the subject. Thus the Law Against Unfair Competition of 1909 became, and has remained, the main basis for the repression of acts of unfair competi-

tion. The Law contains two general provisions on dishonest and deceptive trade practices, around which special provisions, for example, on the protection of trade secrets, are grouped. Furthermore, it relies almost exclusively on private party complaints, granting capacity to sue to competitors, consumers and business organizations. The German courts, relying especially on the two general provisions contained in Articles 1 and 3 of the Law, have developed a comprehensive system for the repression of unfair trade practices, which aims at protecting not only competitors but also consumers and the public at large.

15. The law of the various jurisdictions that make up the *United Kingdom* (England, Scotland, Wales and Northern Ireland) has taken a different approach, based on common law and equity, and has not developed a separate legal regime for protection against unfair competition. A traditionally liberal approach makes for reluctance to enact general rules that allow subjective opinions to be held on what is "fair" or not. The tort of passing-off, which has been recognized since 1824, is regarded as sufficient protection for competitors. Consequently, civil remedies for *competitors* are still restricted to isolated cases under uncodified tort principles, in particular the protection against passing-off, claims of injurious falsehood or breach of confidence. On the other hand, provisions on *consumer* protection against misleading acts were already introduced in 1862 and have in the meantime been supplemented by an autonomous set of consumer protection statutes, such as the Trade Descriptions Act of 1968, the Fair Trading Act of 1973, the Unsolicited Goods and Services Acts of 1971 and 1975 and the Consumer Protection Act of 1987. In 1988, the Control of Misleading Advertisements Regulations were enacted pursuant to the EC Directive of 1984. Additionally, a number of self-disciplinary advertising codes are fully recognized.

16. As in the United Kingdom, unfair competition law in the *United States of America* developed from judicial decisions, especially from the common law tort of passing-off. And, again as in the United Kingdom, there was – and is – no comprehensive common law tort of unfair competition. However, limited statutory relief against false claims about one's own product in interstate commerce has been granted since 1946 under the trademark protection provision of Section 43(a) of the trademark law (Lanham Act). In 1988 that provision was extended to cover also false or misleading representations about another's product or service. In addition, a federal agency, the Federal Trade Commission (FTC), was created in 1914, which has broad jurisdiction to pursue

any unfair or deceptive act or practice in or affecting interstate commerce. However, Section 5(a) of the FTC Act gives no right of action to injured competitors or consumers, whereas the statutes against unfair business practices which all States enacted in the latter half of this century (typically modelled on the FTC Act) often allow legal action to be brought by interested parties.

17. The above examples show how unfair competition law has developed differently in different countries. In the meantime many countries have passed *special legislation* on the subject or have replaced earlier laws on unfair competition. As regards recent legislative activity in this area, Switzerland adopted a Law Against Unfair Competition in 1986 which contains a broad general provision and a detailed regulation of specific market behavior, for example slavish imitation; Hungary adopted a Law on the Prohibition of Unfair Market Practice in 1990 which regulates unfair competition and antitrust law; Spain's Unfair Competition Law of 1991 contains a detailed regulation on practices harmful to consumers and competitors; and in 1991 Belgium adopted a Trade Practices and Consumer Protection Law which emphasizes the idea of consumer protection.

B. *International Protection: Article 10*bis *of the Paris Convention for the Protection of Industrial Property*

18. Article 1(2) of the Paris Convention mentions the repression of unfair competition along with patents, utility models, industrial designs, trademarks, trade names, indications of source and appellations of origin among the objects of industrial property protection, and Article 10*bis* contains an express provision on the repression of unfair competition (the text is reproduced in paragraph 1, above). In the more than one hundred States party to the Paris Convention the legal basis for the protection against unfair competition may thus be found not only in national legislation but also at the international level.

19. Under *Article 10*bis*(1)* of the Paris Convention, the countries of the Paris Union are bound to ensure *effective protection against unfair competition. Article 10*ter*(1)* of the Convention further provides for the obligation to ensure "appropriate legal remedies." In particular, measures must be taken to permit federations and associations repre-

senting interested industrialists, producers or merchants to take action, provided that this is not contrary to the laws of the country concerned and does not exceed the rights normally granted to national associations.

20. *Article 10*bis*(2)* of the Paris Convention defines unfair competition as any act of competition contrary to *honest practices* in industrial or commercial matters. This definition leaves the determination of the notion of "commercial honesty" to the national courts and administrative authorities. Member States of the Paris Union are also free to grant protection against certain acts even if the parties involved are not competing against each other.

21. *Article 10*bis*(3)* of the Paris Convention gives three examples of cases that "in particular" have to be prohibited. These *examples* must not be seen as exhaustive, but rather as the minimum protection that has to be granted by all member States. The first two – creating confusion and discrediting – can be regarded as belonging to the "traditional" field of competition law, namely that of competitor protection. The third one – misleading – was added by the 1958 Revision Conference in Lisbon, and takes into account the interests of both competitors and consumers.

22. Apart from Articles 10*bis* and 10*ter*, the Paris Convention contains several provisions relevant to protection against acts of unfair competition in a broader sense, especially those concerning *trademarks* and *trade names*. For example, Articles 6*sexies* and 8 provide for the protection of service marks and trade names, respectively. The protection of *indications of geographical origin*, to the extent that it is not provided by Article 10*bis*(3), results from Article 10 and Article 9, to which Article 10 refers.[1] Special agreements concluded within

---

[1] Articles 9 and 10 of the Paris Convention read as follows (the text of Article 10*bis* of the Paris Convention appears in paragraph 1, above):

"Article 9

(1) All goods unlawfully bearing a trademark or trade name shall be seized on importation into those countries of the Union where such mark or trade name is entitled to legal protection.

(2) Seizure shall likewise be effected in the country where the unlawful affixation occurred or in the country into which the goods were imported.

(3) Seizure shall take place at the request of the public prosecutor, or any other competent authority, or any interested party, whether a natural person or a legal entity, in conformity with the domestic legislation of each country.

(4) The authorities shall not be bound to effect seizure of goods in transit.

the Paris Convention, namely, the Madrid Agreement for the Repression of False or Deceptive Indications of Source on Goods and the Lisbon Agreement for the Protection of Appellations of Origin and their International Registration, along with bilateral treaties, specifically provide for the international protection of geographical indications.

C. *National Protection: Three Main Approaches to Unfair Competition Law*

23. According to Article 10*bis*(1) of the Paris Convention, the member States of the Paris Union have to provide effective protection against unfair competition. Although they are not obliged to introduce *special legislation* for the purpose, they must provide – at least on the basis of existing general legislation – effective safeguards against all acts "contrary to honest trade practices" and specifically against the practices referred to in Article 10*bis*(3). In the implementation of these treaty obligations, three main approaches can be distinguished.

(Footnote 1, continued)

(5) If the legislation of a country does not permit seizure on importation, seizure shall be replaced by prohibition of importation or by seizure inside the country.

(6) If the legislation of a country permits neither seizure on importation nor prohibition of importation nor seizure inside the country, then, until such time as the legislation is modified accordingly, these measures shall be replaced by the actions and remedies available in such cases to nationals under the law of such country.

Article 10

(1) The provisions of the preceding Article shall apply in cases of direct or indirect use of a false indication of the source of the goods or the identity of the producer, manufacturer, or merchant.

(2) Any producer, manufacturer, or merchant, whether a natural person or a legal entity, engaged in the production or manufacture of or trade in such goods and established either in the locality falsely indicated as the source, or in the region where such locality is situated, or in the country falsely indicated, or in the country where the false indication of source is used, shall in any case be deemed an interested party."

(1) *Protection Mainly Based on Specific Legislation*

24. Several countries have enacted *special statutes*[2] or *specific provisions within broader statutes*,[3] which, sometimes combined with provisions in general statutes such as the Civil Code, deal with protection against unfair competition. These statutes provide for civil or criminal sanctions and contain a broad general provision (often modelled on Article 10*bis*(2) of the Paris Convention) which is supplemented by detailed provisions on specific forms of unfair trade practice; they usually provide for civil sanctions and, in respect of specific cases, also for criminal sanctions. Although many of these countries have also enacted additional legislation concerning acts relating to certain products (food, drugs, etc.), the media (television) or marketing practices (gifts, bonuses), the statute against unfair competition remains the *main basis for protection.* Often the scope of that statute has been made even broader by the assumption that the violation of any other law can be an unfair trade practice because it gives an undue advantage in competition over the law-abiding competitor. In some countries the concept of a special law on competition has evolved towards the adoption of a more general law on market behavior,[4] or the link with antitrust law is stressed by the enactment of statutes that deal with the institution of competition itself as well as with fairness in competition.[5]

(2) *Protection Based on General Tort Law and/or on the Law Concerning "Passing Off" and Trade Secrets*

25. In a group of countries with a civil-law tradition,[6] which follow the approach consisting in the protection of the honest businessman, such protection is usually to be found in the *general tort law.* In another group of countries which follow common law traditions,[7] the

---

[2] For example, Austria, Belgium, Denmark, Finland, Germany, Japan, Luxembourg, Peru (see also footnote 3), the Republic of Korea, Spain, Sweden and Switzerland.

[3] For example, Bolivia, Brazil, Bulgaria, Canada, Colombia, Hungary, Mexico, Peru, Romania and Venezuela (as regards Bulgaria, Hungary and Romania, see also footnote 5).

[4] This has been done, for example, in Belgium, Sweden and, to a certain extent, Switzerland.

[5] This has been done, for example, in Bulgaria, Hungary (the relevant law has the title "Law on the Prohibition of Unfair Market Practice"), Romania and Venezuela.

[6] Notably France, Italy and the Netherlands.

[7] Notably in the various jurisdictions of the United Kingdom.

actions for *passing off* and for violation of trade secrets developed by the courts (at least originally) remain the main basis for the protection of competitors. As for the protection of *consumers*, a number of the same two groups of countries have, in addition, enacted separate sets of laws regulating specific cases of undesirable market behavior, such as misleading advertising, price comparisons, lotteries, games and bonuses; those laws are essentially independent of the protection of competitors under civil law or common law principles.

(3) *Combination of the Above Two Approaches*

26. Most countries party to the Paris Convention – even those that at first attempted to regulate unfair competition by means of general tort law – provide for a *combination* of general civil code principles, case law and special laws. In many countries with a *federal structure*, the division of legislative competence between the federal legislature and the legislatures of the federated States has led to an even more complex combination of the various forms of protection. In some of those countries, the federal legislator even has no jurisdiction over unfair competition to the extent that it is considered a State common law tort. Where, in such countries, protection is granted by the States, it is in general better developed than that granted at the federal level. In the United States of America, in particular, the limited availability of common law remedies against unfair competition was first dealt with in federal law through the establishment of an administrative authority (the Federal Trade Commission), and more recently through the extension of a federal law provision on trademarks (Article 43(a) of the trademark law (Lanham Act)) to a wide variety of misleading representations. Yet the most progressive regulation is to be found in the "business laws," "little FTC Acts," "Consumer Protection Laws" and other legislation adopted by States within the United States of America.

D. *The Role of Jurisprudence*

27. In spite of the different approaches mentioned above, all countries that have introduced effective safeguards against unfair competition take particular care over the *enforcement* of the law, and usually allow

their courts considerable discretion. The success of an unfair competition law depends largely on what the courts make of it. A few words in a general tort provision may be a sufficient basis on which to develop an efficient system of unfair competition law, while a most impressively drafted statute may give disappointing results. This does not mean, however, that an explicit and detailed regulation of unfair trade practices is not useful: it will at least have some preventive effect on market behavior; but it will remain ineffectual if it is not activated by the courts. In the ever-changing world of competition, even the most perceptive legislator cannot possibly anticipate all future forms of unfair market behavior and must rely on interpretation of the law by the courts. Many countries have therefore supplemented their explicit provisions against certain market practices with a *general provision*, which allows the courts to include new forms of unfair market practice in the general system.

IV. THE ACTS OF UNFAIR COMPETITION

A. *General Definition*

28. According to Article 10*bis*(2) of the Paris Convention, unfair competition consists in "any act of competition contrary to *honest practices*." Most countries with special laws on unfair competition have adopted the same or similar definitions for their general provision – using such terms as "honest trade practices" (Belgium and Luxembourg), "the principle of good faith" (Spain and Switzerland), "professional correctness" (Italy) and "good morals" (Germany, Greece and Poland). In the absence of specific legislation, the courts have defined fair competition with phrases like "the principles of honesty and fair dealing" or "the morals of the marketplace" (United States of America).

29. It is true that describing unfair competition as acts contrary to "honest trade practices," "good faith" and so on does not make for clear-cut, universally accepted standards of behavior, since the meaning of the terms used is rather fluid. The standard of "fairness" or "honesty" in competition is no more than a reflection of the sociological, economic, moral and ethical concepts of a society, and may therefore differ from country to country (and sometimes even within a country). That standard is also liable to change with time. Furthermore, there are always new acts of unfair competition, since there is ostensibly no limit to inventiveness in the field of competition. Any attempt to encompass all existing and future acts of competition in one sweeping definition – which at the same time defines all prohibited behavior *and* is flexible enough to adapt to new market practices – has so far failed.

30. This does not mean, however, that unfair competition is incapable of any general definition, and that the best one can do is label concrete examples of market behavior as being unfair. On the contrary, there

are some aspects that clearly indicate which practices are to be considered "fair" and which "unfair."

31. It has been generally recognized that certain acts of commercial behavior are always (or, as Article 10*bis*(3) of the Paris Convention puts it, "in particular") considered to constitute unfair competition. The most notable of those acts are the causing of confusion, discrediting and the use of misleading indications. The *common aspect* of these most important, but by no means exhaustive, examples of unfair market behavior is the attempt (by an entrepreneur) to succeed in competition without relying on his own achievements in terms of quality and price of his products and services, but rather by taking undue advantage of the work of another or by influencing consumer demand with false or misleading statements. Practices that involve such methods are therefore doubtful at the outset as to their fairness in competition.

32. Another reference point could be the *subjective element* in the unfair act. At first sight, the notion of "honesty" seems to refer to a moral standard, and some sort of *legal/ethical standard* is indeed involved. This, however, has to be distinguished from the question whether an act of unfair competition can be established in the absence of any fault, bad faith or negligence. Where unfair competition law has been developed on the basis of general tort provisions, the "tort of unfair competition" requires some kind of subjective element such as "fault" or "bad faith." In practice, however, the element of fault or bad faith is often assumed by the courts. Such subjective elements are therefore not essential to the notion of fairness in competition. Indeed, with certain exceptions, rather objective standards are applied for the purposes of establishing an act of unfair competition; of course, subjective conditions may be relevant for the purpose of determining the sanction applicable. Sometimes this objective approach to unfair competition law is expressly stated in the legislation, as in the Spanish law of 1991, which uses the expression "any act against good faith in an *objective sense*."

33. The most important factor for determining "unfairness" in the marketplace, however, is derived from the *purpose* of unfair competition law. In this respect, unfair competition law was initially designed to protect the honest businessman. In the meantime, consumer protection has been recognized as equally important. Moreover, some countries put special emphasis on the protection of the public at large, and

especially its interest in the freedom of competition. Modern unfair competition law therefore serves a threefold purpose, namely: the protection of competitors, the protection of consumers and the safeguarding of competition in the interest of the public at large. As stated in the Swiss law of 1986 and the Spanish law of 1991, the purpose of unfair competition law is to ensure fair and undistorted competition in the interest of all concerned. In practice, this means that unfair competition has also to be defined *functionally*, taking into account particularly the interests of those "concerned" by it, namely the parties involved in the operation of the marketplace.

34. One party who is always "concerned" is the honest *businessman.* Since unfair competition law started as a special law for the protection of the honest businessman, *a businessman's standard of behavior* logically serves as a starting point. A practice that is condemned as improper by all businessmen can, therefore, hardly qualify as a "fair" act of competition.

35. On the other hand, certain practices may be generally accepted within a branch of business but nevertheless considered "improper" by other market participants. In such cases, there has to be some *ethical correction* of the actual standards of behavior. Ethical standards dictate in particular that the interests of consumers must not be unnecessarily impaired, for example, by disregard for the principle of truthfulness (on which the consumer relies in his transactions), by enticement of the consumer into unsocial or even harmful behavior or by invasion of his privacy.

36. Furthermore, there may be practices that at first sight are not prejudicial either to other businessmen or to consumers, but nevertheless may have unwanted effects on the *economy at large.* For example, selling at dumping prices may in the long run destroy small and medium-sized businesses, and thus have adverse effects on free competition. Where these economic aspects are incorporated in unfair competition law,[8] such behavior will often be expressly labelled as "unfair."

37. When determining "honesty" in business dealings, all these factors have to be taken into account. In practice, the concept of unfair competition has increasingly become a *balancing of interests.* Differ-

---

[8] As in Belgium and Hungary.

ences in the evaluation of what is "fair" or "unfair" can generally be explained by the different emphasis placed on the aspects referred to above. For example, a particular kind of market behavior may well be seen differently in countries where the traditional law of unfair competition still focuses on the protection of the honest competitor, as opposed to countries that put special emphasis on the protection of consumers or the public at large.

38. On the other hand, there is broad agreement that at least some acts and practices are always irreconcilable with the notion of fairness in competition. These are discussed in detail below.

B. *Categories of Acts of Unfair Competition*

(1) *General Explanation*

39. Acts of unfair competition may be categorized in a variety of ways, depending on the criteria applied or the emphasis given to certain aspects of a given act or form of behavior. An act which is found to be "unfair" will often have taken place in circumstances which are complex, and which require scrutiny and judgment on the basis of established or prevailing standards. An act may be found to be unfair on more than one count, depending on the approach adopted to characterize the act. Therefore, one and the same act may fall into two or more categories. Likewise, no systematic categorization or classification of the acts of unfair competition can avoid some degree of overlap among the concepts and categories used.

40. For the purposes of establishing categories of acts of unfair competition and facilitating their analysis in this study, two broad groups of acts of unfair competition are distinguished, namely acts of the types expressly mentioned in Article 10*bis* of the Paris Convention and acts not expressly mentioned in Article 10*bis*.

(2) *Acts Expressly Mentioned in Article 10*bis

41. Article 10*bis*(3) (see paragraph 1, above) contains a non-exhaustive list of three types of acts of unfair competition, namely, acts likely

to cause confusion, acts that discredit a competitor, and acts that may mislead the public. Because the acts that are likely to cause confusion and those that may mislead the public are akin to one another and sometimes overlap, they are dealt with before the act of discrediting a competitor.

(a) Causing Confusion

(i) *General Circumstances Under Which Confusion Is Established*

42. Article 10*bis*(3)1 of the Paris Convention obliges member States to prohibit all acts that are of such a nature as to create confusion, by any means, with the establishment, the goods or the industrial or commercial activities of a competitor. The scope of Article 10*bis*(3)1 is very broad, as it covers any act in the course of trade involving a mark, sign, label, slogan, packaging, shape or color of goods, or any other distinctive indication used by a businessman. Thus not only *indications* used to distinguish goods, services or businesses but also the *appearance of goods* and the presentation of services are considered relevant for the prohibition of confusion. For example, Article 2598(1) of the Italian Civil Code expressly provides that anyone who uses names or distinctive signs likely to cause confusion with those of another person, or slavishly imitates the product of a competitor, or by whatever other means creates confusion with the names, signs, products or activities of competitors, commits an act of unfair competition. Similarly, under Article 6 of the Spanish Law on Unfair Competition, any acts that are capable of creating confusion with the activities, achievements or business of another, including the likelihood of association by consumers with respect to the commercial source, is deemed unfair. In the countries with a common law tradition, the concept of "passing-off" is broad enough to provide all types of indication, product and other subject matter with protection against confusion.

43. Under Article 10*bis*(3)1 of the Paris Convention, the "intent" to confuse is immaterial for the purposes of determining whether such an act constitutes an act of unfair competition. However, bad faith on the part of the imitator may have a bearing on the sanctions to be applied. Also, it is not usually necessary for confusion actually to have occurred, as the *likelihood of confusion* is often sufficient for an action

based on unfair competition. Finally, protection against confusion is provided *without any limitation in time*. Protection is available as long as confusion is likely, but sufficient latitude is allowed for the use of non-confusing indications in respect of products, services and businesses, so that competition in the relevant market is not stifled. However, as soon as the marketable creation becomes generic or commonplace, it loses its original or distinctive character, and likelihood of confusion may no longer be assumed to the same degree.

44. There are two main areas in which confusion frequently occurs. These are indications of commercial origin on the one hand, and the appearance of goods on the other. However, this does not preclude or limit the protection of other attributes or achievements against confusion.

(ii) *Types of Confusion*

45. Confusion can be established in different ways. The test for the *basic type of confusion* is whether the similar mark so resembles the protected mark that it is liable to confuse a substantial number of average consumers as to the *commercial source* of the goods or services. Factors frequently considered in determining confusion are the degree of distinctiveness of the protected mark, the size and reputation of its owner, the sophistication of the consumers concerned and, of course, the similarity of the marks and the goods or services involved. In many countries, confusion is not restricted to basic confusion as to the commercial source, but also includes that which gives the impression of a strong business connection between the two users of the same trademark or similar trademarks, i.e., confusion as to *affiliation*. However, the use of an identical or similar mark on clearly unrelated or completely different goods usually falls outside the scope of protection, as a large degree of dissimilarity of the goods or services involved will lead consumers to assume that the source of the goods or services is not the same and also that there is no particular business connection between the users.

46. A third form of confusion that has been referred to, for example, under Section 43(a) of the Lanham Act of the United States of America and under Section 53 of the Australian Trade Practices Act, is called confusion as to *sponsorship*. Under this test for confusion, consumers

will assume both that the goods or services do not originate from the same source and that the two enterprises do not entertain business relations so intensive and continuous as to cause confusion as to affiliation. Nevertheless, the consumer will expect, from the similarity of the marks, from the types of product or service that the mark is used for and from the manner of use by the second user, that the use of the protected mark by the second user has been *authorized by agreement* for a certain period of time. This type of confusion can be relevant, for example, in cases where the third party uses the mark (without authorization) for ornamental purposes on goods. However, unlike confusion as to source or affiliation, this third type of confusion has not the same status as other fully established grounds for relief under statutory trademark laws, as its exact boundaries are still developing.

47. This concept of confusion may be relevant to so-called "*publicity*" rights, relating to well-known artists and media or sports personalities, and to "*merchandising*" rights, relating to fictional characters in literary or artistic works. These rights concern relatively new marketing techniques whereby enterprises are "licensed," for a certain period of time, to make use of the popularity or fame symbolized by the names or likenesses of certain personalities or characters, as this use is expected to stimulate consumer demand for the product or service of the "licensee." Consumers would generally be misled by the use of the name or likeness of the personality or character in connection with the product or service into believing that the personality or the owner of rights in the character, which could also be a registered mark, had *expressly authorized* the use of their personality or character.

(iii) *Confusion With Respect to Indications*

48. An indication can be any sign, symbol or device that conveys to the consumer the message that a product or service on the market comes from a particular commercial source, even if this source is not known by its name. Indications may therefore consist of two-dimensional or three-dimensional signs, labels, slogans, packaging, colors or tunes, but are not limited to these. Protection against confusion with respect to indications is already available under specific legislation on trademarks, service marks and trade names. However, this protection

is often limited in several ways. The limitations may concern the *applicability* of the specific law to certain types of indication, or the exact *scope of protection.* Thus protection against confusion under unfair competition law may still be relevant where the specific legislation does not afford overall protection against confusion. This aspect is also relevant to the protection of *well-known marks* against confusion, as required by Article 6*bis* of the Paris Convention.

[Limited Applicability of Specific Legislation]

49. The general applicability of trademark law is usually confined to particular indications. Some countries do not, for example, recognize titles of single literary works or films, get-up (product appearances), shop interiors, colors or color combinations, or trade dress under statutory trademark law. As regards service marks, although most countries have a system for the registration of such marks in the same way as trademarks, in those that do not, protection under the rules of prevention of unfair competition is needed. Also, even in countries where three-dimensional trademarks are recognized and registrable, particular shapes may nevertheless be excluded. For example, shapes determined solely by the nature of the goods, appearances resulting from some technical or industrial function of the goods and product configurations determining the essential value of the goods are expressly excluded by the EC Directive to Approximate the Laws Relating to Trade Marks. The "functionality" doctrine, particularly developed in the United States of America, produces similar results.

50. Apart from this, protection under trademark law can sometimes be invoked only for marks that have been properly registered in the country where protection is sought. In this respect *Article 6*bis *of the Paris Convention* constitutes an exception in favor of a *well-known mark,* which does not need to be registered in order to be protected against the potentially confusing use of a mark that is a reproduction or an imitation of the well-known mark and is used for identical or similar articles. It is to be noted that a trademark may be well known in a country before it is registered or even used in that country, as a result of the advertising or reputation of the mark in other countries.

51. Unfair competition law may provide protection against confusion for indications or signs that are not protectable under trademark law. However, the *availability of protection* for a sign under unfair com-

petition law will depend partly on the reasons for the lack of protection for unregistered signs under the special laws. If a sign can in principle be covered by the specific legislation but does not meet the substantive requirements of that legislation, it would not seem consistent with a balanced system of protection to grant that sign the same protection under unfair competition law as would be granted to it under the special law. It is therefore argued that protection against confusion should only be available under unfair competition law if the indication or sign to be protected has *sufficient distinctiveness* to distinguish the products, services or other business activities concerned from the same or similar activities of other traders. Nevertheless, in order to promote the registration of marks, some unfair competition laws require more than just a minimum degree of distinctiveness for the protection of unregistered indications. For example, Article 2(1) of the Unfair Competition Prevention Law of the Republic of Korea requires the indication to be "widely known," which could in some cases restrict actual protection to one particular region.

52. The *degree of distinctiveness* of an indication that is not protected under statutory trademark law is assessed in relation to the same factors as apply to registered marks, including the meaning and the appearance of the indication, and its uniqueness compared with other indications for the same or a similar activity. Even if distinctiveness is inherently lacking, for example, owing to the descriptive nature of the indication for particular goods or services, the indication can be protected if it has acquired "distinctiveness by use," or *secondary meaning*, in the country where protection is sought. Secondary meaning implies that, as a result of continuous and exclusive use of the mark on the market, a substantial number of consumers have become aware of it and will associate the activity carried on under it with a particular commercial source. In Germany, for example, the trademark "4711" for perfume has been considered sufficiently distinctive as a result of public awareness that the goods under that mark come from a particular source. In fact the degree of secondary meaning depends on the market for the goods or services involved and the degree of descriptiveness of the indication in relation to those goods or services. The degree of secondary meaning (or percentage of consumers) necessary to achieve sufficient distinctiveness varies according to the practices of the court concerned. In some countries,[9] opinion polls or *market surveys* on con-

---

[9] Notably Germany.

sumer reactions often provide empirical data with which to determine the degree of secondary meaning, whereas in other countries[10] the courts themselves will judge whether an indication has acquired sufficient distinctiveness.

53. Secondary meaning analysis also applies to indications that have been *expressly excluded* from statutory trademark protection. For example, the configurations or shapes of goods that are deemed to be excluded from statutory protection under trademark law by the EC Directive to Approximate Laws Relating to Trade Marks may still acquire secondary meaning among consumers in a particular market. Under those circumstances, protection against confusion is justified if consumers could be led to believe mistakenly that other goods using the configuration come from the first user. It may not always be easy, however, to establish the necessary degree of secondary meaning, since the particular configuration of the goods must be recognized by the relevant consumers as indicating a particular source. If the exclusion in the specific legislation is clearly intended to dismiss the indication as not worth protecting at all, for example, in the case of purely descriptive words, protection is likely to be denied also under unfair competition law.

[Limited Scope of Trademark Protection]

54. Limitations on the *scope of protection* afforded by trademark law may also have the effect of allowing indications to be protected against confusion under unfair competition law. Although trademark laws usually grant protection against any potentially confusing use of a registered trademark, there may still be differences with respect to the exact scope of the protection against confusion. For example, protection against the use of the same or a similar mark might be restricted to those goods or services for which the mark is registered. If a mark identical or similar to the registered trademark is used for other goods or services and that use is likely to cause confusion, such protection might only be available under unfair competition law or passing-off principles. Generally, trademarks are protected against the use of identical or similar signs not only in respect of identical goods or services but also in respect of *similar* goods or services. This type of protection derives from what is sometimes called the "principle of speciality,"

---

[10] Notably Italy and France.

as the protection is related to the trademark's primary function of distinguishing the goods of one enterprise from those of competitors and other market participants. Thus if trademark protection is not available because the goods or services involved are held to be dissimilar (although confusion as to source may in fact be possible), protection against confusion can be sought under unfair competition law. However, there are also trademark laws that consider the likelihood of confusion to be the sole criterion for protection, regarding the similarity of the goods or services involved as not decisive in itself, but only as one of several determining factors. This kind of statutory protection would encompass all types of confusion.

55. The *criteria* used to judge the similarity of indications are, with some minor differences, the same throughout the world. The determining factors include the common elements of appearance, pronunciation and meaning or verbal translation of the marks involved, but the decisive factor is the *overall impression on the average consumer* of the goods or services involved. Particularly if the goods are for mass consumption, the individual elements of the marks involved are less carefully examined by the average consumer. Since the two marks are as a rule not closely examined side by side, in practice the similarities between the indications are more important than the differences. The similarity of the goods or services depends largely on the question whether consumers would generally expect the goods or services to originate from the same source. However, they do not need to be either functionally interchangeable or competitive.

56. Protection against confusion may be too limited for so-called "*well-known*" marks and, in particular, for marks with an even higher reputation. Article 6*bis* of the Paris Convention requires member States to protect trademarks that are well known in their country against any potentially confusing use of similar trademarks, but that obligation is only relevant for identical or similar goods. In certain cases, the unauthorized use of well-known marks for different goods or services may nevertheless cause confusion among consumers. For example, if the mark has been used for a broad range of products and has been extensively advertised or is well known for the particular "image" of its proprietor, consumers might associate such a mark with a certain origin and quality consistency rather than with goods or services of a specific kind. Such associations can also cause confusion. The member States are not obliged under Article 6*bis* to grant this extended

protection, but unfair competition law may be relevant. The question whether a trademark is "well known" in a given country for the purposes of Article 6*bis* of the Paris Convention has to be decided in each case on the basis of the facts. Usually, the factual determination of the notoriety of a trademark is based on its reputation and image in the mind of the trade circles and consumer groups concerned at the place and time relevant in the particular case. Factors such as the mark's inherent distinguishing power, the length of time that it has been used in the given country, the amount of advertising and other publicity given to it in various media and its established association with particular goods or services are often taken into consideration.

57. Statutory trademark law frequently requires that the use of a similar mark must be a form of *trademark use*, that is, use as an indication of the commercial source of the products or services. Thus ornamental use, such as use on advertising material or as a mere decoration on goods, for instance on ballpoint pens or ashtrays, or even as the configuration of an actual product such as an earring in the shape of the mark, is not always regarded as falling within the scope of statutory trademark protection. Protection against this type of use could, however, be sought under unfair competition law. One example of a trademark law that is very extensive in the above respects is the Uniform Benelux Trademark Law of 1971, which provides a broad definition of registrable marks and protection against any use of an identical or similar trademark by others without proper justification that is likely to cause prejudice to the trademark proprietor.

[Trade Names]

58. Similar limitations on protection against the unauthorized use of traders' or businesses' indications are to be found in the protection of *trade names*. Trade names serve to identify and to distinguish an enterprise and its business activities from those of other enterprises. Article 8 of the Paris Convention imposes the obligation to protect trade names in all countries of the Paris Union, without specifying what kind of protection should be granted or how it should be given. Nevertheless, trade names must be protected without any obligation of filing or registration. Most countries already protect trade names against the risk of confusion. This protection applies not only where trade names are covered by a special law, but also where they are protected under special provisions of unfair competition law, civil law,

company law or commercial law. As a general rule, a direct competitive relationship between the enterprises concerned is not decisive, but remains relevant in determining whether the use of the same or similar trade names might confuse consumers regarding the identity of enterprises or the relationship between them. The protection may extend beyond the particular field in which the prior trade name is used, as trade practice or the likelihood of expansion and diversification of the activities of the enterprise is frequently taken into account by the courts. Thus the scope of protection of trade names against confusion may sometimes be a little wider than the scope of protection of trademarks under trademark law.

(iv) *Confusion With Respect to Product Shapes*

59. The actual shape of a product could also lead to confusion among consumers. If the shape is so well known that consumers will relate the product with a particular commercial *source* (as in the case of the "Coca-Cola" bottle), then the shape can be regarded as a protectable indication.

60. It must also be noted that specific legislation is available in many countries for the protection of *industrial designs*, either to complement or to replace copyright protection for works of so-called "applied art." Such legislation usually prohibits the use of identical or similar product appearances for identical or similar goods. However, as with trademark legislation, protection under special laws on industrial designs is also limited in several ways, which vary significantly from country to country. In a manner similar to the specific protection under trademark laws, such limitations may concern the *general applicability* of the designs law to certain product appearances and also the *exact scope of the protection* granted by the specific legislation. For example, if the design protection of a surface decoration is limited to the use of the decoration on products for which the design is registered, protection against copying of the design for the decoration of other products may be obtained under unfair competition law, if the copied design is misleading or causes confusion as to the commercial source.

61. For protection against confusion concerning the *products* only, most requirements under unfair competition law are established by case law, frequently with reference to the practice of "*slavish imitation.*" Within this particular field of unfair competition law, it has often been

stated that, as a principle inherent in the free market system, market participants are free to imitate designs or other shapes, appearances or visual characteristics of products that are not protected by specific laws such as patent, copyright, design or possibly trademark laws.[11] Some of those specific laws even expressly preclude protection under unfair competition law for acts that are covered by the specific legislation if the design involved could be protected under that legislation. For example, Article 14(5) of the Uniform Benelux Designs Law of 1975 precludes actions to protect registrable designs under unfair competition law if protection could have been granted had the design been properly registered. Therefore, the mere risk of confusion as to the shape of the products will be insufficient to constitute unfair competition if the design would have been protectable under a specific law and product imitation would have been covered by that specific legislation. On the other hand, the risk of confusion as to the products may be sufficient to obtain protection under unfair competition if the design involved reveals a certain degree of originality but cannot be registered as a design owing to other requirements of the specific legislation, or if registration has been applied for but not yet secured.

62. If the design, shape or other characteristic non-functional features of the product are associated to a substantial degree by consumers with a certain source or origin, potential *confusion as to the source* of the product will usually constitute an act of unfair competition. Whether such potential confusion occurs in cases of imitation will be determined by the same factors as outlined above with respect to indications, that is, after examination of the question whether the characteristic features of a product have acquired a sufficient degree of secondary meaning, and the product designs involved will be judged on their similarities. In some countries[12] it is accepted that the risk of confusion as to source can be reduced by the use of *disclaimers*, like a clearly visible statement ruling out the possible assumption that the product or service comes from a particular source. However, such disclaimers are only seldom recognized as sufficiently reducing the risk of confusion.

---

[11] For example, under Article 11(1) of the Spanish Law on Unfair Competition, the imitation of achievements and entrepreneurial initiatives of another person is permitted, unless they are protected by an exclusive right. However, Article 11(2) contains an exception to this principle for cases of unfair imitation.

[12] Notably Japan.

63. Protection against confusion as to the *commercial source* of a product may also be available under specific trademark law if the applicable trademark legislation provides for the protection of three-dimensional marks or the "get-up" of products. However, if the product's appearance is not registered as a trademark, or if particular forms are possibly excluded from statutory trademark protection, the same principles as outlined above will apply to the protection against confusion between product shapes under unfair competition law.

(b) Misleading

(i) *General*

64. Misleading can roughly be defined as creating a false impression of a competitor's *own* products or services. It may well be the single most prevalent form of unfair competition, and it is by no means harmless. On the contrary, misleading can have quite serious consequences: the consumer, relying on incorrect information, may suffer financial (or more harmful) prejudice. The honest competitor loses clients. The transparency of the market diminishes, with adverse consequences for the economy as a whole and economic welfare.

65. Since truthfulness is rightly considered to be one of the main principles of honest trade practice, it is generally agreed that the prohibition of deception is essential to the concept of fairness in competition. Or, as Article 10*bis*(3) of the Paris Convention states, any indication or allegation that is likely to mislead, has "in particular" to be regarded as being contrary to honest practice.

66. Consequently, most member States of the Paris Union have included the prohibition of misleading acts or practices in their legal systems (or have even passed specific laws on the subject). In addition, the courts have developed a particularly abundant case law on misleading. Even in countries where in the past protection against deception has been less strong than in others, recent developments indicate a move towards greater strictness. In the search for effective legal solutions, however, countries have chosen quite divergent methods. A significant factor of this divergence is that misleading acts are primarily directed to the *consumer* and not directly to competitors. Where consumer protection is primarily looked upon as a matter of criminal

law, enforcement is left to the State enforcement authorities. However, most of the countries that have specific legislation on unfair competition have included a provision against deception into the relevant laws,[13] thus adopting a civil law approach.

67. While, on the whole, the regulation of misleading makes a many-faceted picture, most countries share the distinction between "normal" misleading, which may be done in good faith, and *special cases of misleading*, which may have particularly severe consequences. For the most serious cases of misleading, such as malicious misleading or deception in the health and drug field, several countries have introduced criminal sanctions in addition to civil law remedies. Moreover, special cases of potential deception such as bonuses, gifts, clearance sales and travelling sales are often regulated in detail. Even tighter restrictions are frequently imposed by self-regulatory institutions, which in some countries[14] have reached a particularly advanced state of development as regards protection against misleading.

68. In some countries the existing protection against misleading practices is to some extent a result of international *harmonization.* Because of the internationalization of commerce and communication media such as television, misleading acts and practices, especially in advertising, seldom stop at the border of a given country. Different national laws not only result in different and thus at least to some extent inadequate levels of consumer protection, but also affect the free circulation of goods and services. Countries that are economically bound in a common market have a particular need for harmonization of diverging national laws on misleading. Thus the European Community issued a Directive on Misleading Advertising in 1984 in order to set up a minimum objective criterion for determining whether advertising is misleading. A certain degree of harmonization has also been reached among the Nordic and the African countries.

(ii) *The Concept of Misleading*

69. There is a consensus according to which the concept of misleading is restricted neither to inherently false statements nor to statements

---

[13] Especially Belgium, Bulgaria, Germany, Hungary, Luxembourg, the Netherlands and Switzerland.

[14] Notably the United Kingdom.

that have actually led to a false impression on the part of the consumer. Instead it is considered sufficient (as it is by Article 10*bis*(3)3 of the Paris Convention) that the indications in question are *likely* to have a misleading effect. Even statements that are literally correct can be deceptive. If, for example, chemical ingredients are generally forbidden in bread, the courts of most countries would consider an advertising claim that a certain bread "was without chemical ingredients" to be deceptive, because, though literally true, it gives the misleading impression that the advertised fact is something out of the ordinary.

70. It is likewise not necessary for the product in question to be inferior, in an objective sense, so long as the indication or allegation has some *enticing effect* on the consumer. For example, if the public prefers domestic goods to foreign goods, a false declaration to the effect that imported goods are domestic is misleading even if the imported goods are of superior quality.

71. It is generally agreed that the question whether or not there is deception must be determined by the *reaction of the addressee* to the statement and not by the intention of its maker. However, the actual determination and evaluation of this reaction may differ from country to country and may also depend on the kind of addressee (consumers or traders) and the type of goods or services. The Paris Convention leaves this question to member States (as does the EC Directive on Misleading Advertising). The different opinions as to what *standards* have to be applied are the result of different answers to the following questions:

— Is the prohibition of misleading meant to protect the average or (also) the less educated, less critical consumer?

— How is the public reaction determined? Empirically or by an overall estimation by the judge himself?

— How many of the addressees must be likely to be misled for a statement to be considered misleading?

72. In a number of countries[15] the relevant standards are set on the basis of the notion of the *average consumer*. Where the courts base their assessments on the judges' own experience, there is a tendency

---

[15] Notably Belgium, France, Italy, the Netherlands, Spain and the United States of America (as far as Section 43(a) of the Lanham Act is concerned).

to assume that the average consumer is generally well informed and intelligent enough to be immunized against most of the dangers of deception. In those countries the threshold is also considerably higher. Although it is frequently stressed that it is sufficient if a "not unsubstantial proportion of the addressees" are likely to be misled, the tendency is to favor an average deception rate.

73. However, in Germany the emphasis is clearly on the less educated, less critically prepared consumer, who is easily influenced by false statements. Misleading is frequently proven by empirical methods, mainly consumer surveys, and the interference threshold is set very low, at 10 to 15 percent of the consumers.

(iii) *The Communication of Misleading Statements*

74. Since the main area of misleading in commerce is to be found in advertising, most countries with special legislation have focused on misleading *advertising*.[16] Other countries have chosen, as Article 10*bis*(3) of the Paris Convention has, the broader notion of "*indication or allegation*."[17] In countries that have a general provision on unfair competition this difference is minimal, however, since there is basic agreement that deceptions other than those in advertising are irreconcilable with "honest trade practice" and can therefore be judged under the general provision.

75. It is further agreed that the exact way in which the allegation, indication or presentation is made is immaterial. So is the form of the message. All methods of *communication* – written, oral or even symbolic – have to be taken into account. Communications may be in the form of trademarks, labels, brochures, radio commercials, television publicity spots, posters and so on. In general, misleading is concerned only with the effect a statement has on the addressee and not with the way in which the statement is communicated.

76. The communication need not contain "information" in a neutral, objective sense in order to be considered under the heading of mis-

---

[16] For example, Belgium, France, Germany, Greece, Luxembourg and Peru, as well as the EC Directive on Misleading Advertising.

[17] Notably Germany and Switzerland.

leading practices. On the other hand, the concept of misleading is restricted to those indications that might cause *misconceptions* on the part of the consumer. The allegation, indication or presentation must therefore be able to create some sort of *concrete impression* which can be shown to be true or untrue. "Unobjective" or suggestive advertising which does no more than create vague positive feelings about a product is therefore outside the scope of misleading. If in some countries[18] certain kinds of suggestion are forbidden, this is not done under the provisions on misleading, but rather under the general provision concerning honest trade practices.

77. A misleading communication does not necessarily have to be a positive one: a half-truth is always also a half-lie. For example, if it is claimed that a particular slice of bread has fewer calories than others, while this is solely due to the fact that it is thinner, the *omission* of this information can create as strong an incorrect impression as an express statement would have done. Consequently, some countries[19] have expressly mentioned the omission of relevant facts in their lists of misleading practices, or alternatively the courts have recognized that such omission can be a misleading practice.[20] An omission cannot always be equated with a positive statement, however. Since no businessman has the general duty to reveal adverse features of the product that he is offering, there can only be deception if the public, in the absence of express information, expects a certain characteristic to be present.

(iv) *Exaggerations*

78. The consequences of the different concepts of misleading can best be seen in the treatment of exaggerations. Although in all countries obvious exaggerations (even if literally inaccurate) are not considered deceptive because they can easily be recognized as "sales talk," the question of what is mere "*hot air*" or "puffing" and what is to be taken seriously is answered differently in different countries. In some countries (such as Germany), it is assumed that the public basically believes all advertising statements, and especially those that claim uniqueness ("the best, the first," etc.); consequently a specially strict

---

[18] Notably Germany.

[19] Notably Belgium, Bulgaria, Hungary and Spain.

[20] Notably Germany, the Netherlands and the United States of America.

standard is applied. Other countries (such as Italy and the United States of America) take the exact opposite position and tolerate generally formulated indications, in particular those in the form of claims of uniqueness. Thus in the United States of America the courts have generally only intervened if the product advertised as the best is in reality inferior.

(v) *The Subject Matter of Misleading*

79. Deceptive statements can be made on *all relevant aspects of business matters*. However, in principle, the prohibition of deception should be broad enough to cover those new forms of misleading that the legislator has not thought of. On the other hand, a statutory provision must give guidance to the courts. In countries with a predominantly civil law approach, this is often achieved by expressly naming those forms that "in particular" must be regarded as misleading, leaving the courts free to take other forms of deception into account. Usually at least the examples given in Article 10*bis*(3)3 of the Paris Convention are included, namely, "the nature, the manufacturing process, the characteristics, the suitability for their purpose, or the quantity, of the goods." Often services and indications of geographical origin are also included. Recent legislation on unfair competition also mentions some "modern" examples of misleading. The Greek Decree on Misleading Advertising, for example, expressly refers to misleading statements in the endorsement of products or the passing-off of an advertisement as a press article. The same applies in Belgium. In Hungary, any misleading references to the environment, among other things, are expressly forbidden. Still other countries (and the EC Directive on Misleading Advertising) prohibit any deception with respect to the *identity* of the advertiser. This is interesting inasmuch as there seems to be basic agreement that these specific errors of identity (while they do, of course, involve deception) are rather dealt with under the heading of *confusion* (or passing-off), which is largely covered by specific laws on trademarks and trade names. However, the express inclusion of errors as to commercial origin under the heading of deception is significant in that the special procedure provisions of unfair competition law may be applied. For example, consumer associations may bring an action in a case of misleading involving trademarks, whereas trademark law itself would restrict the right of action to the trademark owner.

80. A list of examples of misleading practices supplemented with a general provision is only possible, however, if the sanctions against misleading are predominantly those of civil law. *Criminal law* usually requires a relatively narrowly worded, enumerative prohibition, although in practice this difference is mitigated by the fact that usually the list of expressly named practices is fairly comprehensive.

(vi) *Subjective Requirements*

81. Even the most careful businessman can issue a statement that the public misunderstands in a way not foreseen by him. Misleading statements, especially in advertising, are therefore not always made in bad faith. On the other hand, even in the absence of any fault on the part of the advertiser, deception in competition has to be stopped in the interest of the consumer and of other competitors. The EC Directive on Misleading Advertising, for example, obliges member States to ensure the cessation of misleading "even without proof of actual loss or damage or of intention or negligence on the part of the advertiser." Countries that favor a civil law approach in the repression of unfair competition usually have few problems in doing so, but where the law against misleading conduct is essentially part of criminal law,[21] at least in theory some subjective element is required. Because of the difficulty of furnishing such evidence, this "subjective" concept has proved a hindrance. Thus, in practice, the courts have gradually reduced the requirement of intent. This can best be seen in France, where the (criminal) prohibition of misleading advertising in Article 44 of the Loi Royer in theory still requires "bad faith," but where the courts have first reduced this requirement to mere knowledge of facts, and have later even assumed such knowledge.

82. This primarily *objective approach* to the repression of misleading statements is, of course, restricted to a cease-and-desist action (and possibly to the remedy of publication). In all countries, an action for damages will only be successful if there is at least negligence. Intent, or even malicious behavior, is required in cases that can be described as real criminal offenses, for example in the food and drug field.

---

[21] As it is in France, in Peru and, partly, in the United Kingdom.

(vii) *Burden of Proof*

83. The question of who has to furnish evidence of the accuracy of a statement or the likelihood of deception can be of paramount importance in misleading advertising cases. According to general principles of procedural law in most countries, it is the plaintiff (or the public prosecutor or administrative authority) who bears the burden of proof. In the field of misleading, especially misleading advertising, however, some exceptions to this rule are made. The EC Directive on Misleading Advertising, for example, obliges member States to require the advertiser to furnish evidence of the accuracy of factual claims if "such a requirement appears appropriate on the basis of the circumstances of the particular case." Some countries have gone even further by implementing a general reversal of the burden of proof[22] or by placing the advertiser under the obligation to "reasonably substantiate" all advertising claims.[23]

(c) Discrediting Competitors

(i) *General*

84. Discrediting (or disparagement) is usually defined as any false allegation concerning a competitor that is likely to harm his commercial goodwill. Like misleading, discrediting tries to entice customers with incorrect information. Unlike misleading, however, this is not done by false or deceptive statements about one's own product, but rather by casting untruthful aspersions on a competitor, his products or his services. Discrediting, therefore, always involves a *direct attack on a particular businessman* or a particular category of businessmen, but its consequences go beyond that aim: since the information on the competitor or his products is incorrect, the consumer is liable to suffer also.

85. Article 10*bis*(3)2 of the Paris Convention obliges member States to prohibit all "false allegations in the course of trade of such a nature as to discredit the establishment, the goods, or the industrial or com-

---

[22] Notably Belgium, Denmark, France and the Netherlands.

[23] As does the Federal Trade Commission in the United States of America.

mercial activities, of a competitor." A similar provision can be found in most national laws on unfair competition.[24] But even without such an express prohibition, it is generally agreed that discrediting is irreconcilable with the notion of "fairness" in competition. Where unfair competition law has been developed on the basis of general tort provisions,[25] it is considered one of the "classical" forms of unfair competition. In all common law countries a (common law) tort of disparagement or discrediting is recognized; additionally some of those countries[26] have recently granted statutory relief. Since it is primarily the individual businessman who suffers from disparaging remarks, civil law sanctions (injunctive relief or damages) are preferred. However, in the most serious cases, especially those involving intentional or malicious defamation, criminal sanctions are also provided, often under the general criminal code.

(ii) *Reference to an Individual Competitor*

86. As mentioned above (in paragraph 84), it is in the very nature of discrediting to be directed against a particular businessman or *a particular category of businessmen.* The target need not necessarily be named, however: easy identification by the addressee of the statement is sufficient. This can be achieved by references like "a certain enterprise in X" or may even be the result of a special market situation, for example if there is only one relevant competitor.

87. Frequently, the person attacked will be a *competitor.* As in Article 10*bis*(3)2 of the Paris Convention, most countries restrict unfair competition law protection against disparagement to cases where there is at least some sort of competitive relationship between the plaintiff and the defendant. In some countries, however, the requirement of a competitive relationship has been totally abandoned,[27] and this has led to a considerably broader concept of discrediting: not only competitors but also consumer associations or the media can be held liable under

[27] Notably Belgium, Sweden and Switzerland.

unfair competition law if they make derogatory statements about an individual businessman.

(iii) *The Subject Matter of the Attack*

88. As to the subject matter of the attack, Article 10*bis*(3)2 of the Paris Convention names the establishment, the goods and the industrial or commercial activities (of a competitor). However, *any* kind of disparaging remark that is likely to harm the *goodwill* of an entrepreneur should be forbidden. The way in which the harm is done should be irrelevant. Harm to a business reputation can be caused by all forms of reference to the enterprise or to its goods, prices, employees, credit rating, qualifications and so on. It can also be caused by references to an entrepreneur's personal status, for example, his race, his nationality, his religion or his political position. These so-called "*personal references*" which have nothing to do with commercial activities are in some countries[28] expressly forbidden as disparaging; in others[29] they are considered illegal under the general provisions on protection against unfair competition.

(iv) *Intent or Actual Damage*

89. References to a competitor that affect his commercial goodwill can be made in good faith, for example if the maker of the statement believes it to be true. Effective protection against discrediting is therefore typically independent of any proof of *actual damage or intent.* In some countries (such as the United States of America), however, the common law tort of disparagement in theory requires proof of malice and damage. Although the courts in the United States of America have gradually eased that requirement, the concept still has proved to be too narrow, and that has led to the enactment of legislative provisions for the grant of statutory relief against disparagement without any evidence of damage or intent (see Section 43(a) of the Lanham Act).

---

[28] Notably Hungary.

[29] Notably Belgium, France, Germany and the Netherlands.

(v) *Statements of Fact*

90. Opinions differ on whether discrediting should be restricted to *statements of fact*. In some countries,[30] the statutory notion of discrediting is broad enough to cover also *statements of opinion*. In other countries, it has at least been recognized by the courts that such statements are within the scope of the general provision against dishonest trade practices.[31] In still other countries, disparagement is concerned mainly with statements of fact.

(vi) *False Statements*

91. The question whether statements of opinion can be discrediting has to be considered in connection with another question, namely, whether protection should be extended to the case of *accurate* statements. Article 10*bis*(3)2 of the Paris Convention speaks of *false* allegations. Many countries go further, however, recognizing that true, but nevertheless discrediting remarks are either directly within the scope of the express prohibition of discrediting,[32] or at least a violation of the general provisions on honest trade practices.[33] Thus, a literally truthful remark about a competitor may be considered unfair competition if the "attack" is blown up out of proportion, or if the words used are needlessly injurious. On the other hand, some countries expressly restrict the notion of discrediting to *inaccurate or at least misleading statements*. In the United States of America, for example, true but nevertheless disparaging statements are neither within the scope of the common law tort of disparagement nor within that of the statutory relief granted by Section 43(a) of the Lanham Act or – at State level – the statutes on business practices.

92. An explanation of this difference in attitudes can be found in the diverging assessment of "commercial honor." Where unfair competition law has its roots in the protection of the commercial reputation of the individual businessman – as it does in the continental European countries – a "special tort of business disparagement" has emerged,

[33] Notably Belgium, France, Germany and the Netherlands.

to which, in principle, much stricter rules apply than to defamatory statements outside the bounds of competition, where constitutional considerations such as freedom of speech have to be taken into account. In other countries,[34] especially those that have not developed a comprehensive system of protection against unfair competition, the attitude is exactly the opposite: it is assumed that, in the interest of competition, attacks on individual competitors are unavoidable, that they must be widely tolerated and that a line should only be drawn where the attack is based on false facts. In those countries, the plaintiff usually also bears the burden of proof as to the falseness of the statement (which can sometimes make an action impossible).

(3) *Acts Not Expressly Mentioned in Article 10*bis

(a) General

93. In addition to acts that cause confusion, mislead or discredit, which are referred to in Article 10*bis* of the Paris Convention, there are a number of other acts which have been recognized by the courts as unfair practices and which, increasingly, have become the subject of legislative provisions. Of particular interest in this connection is the trend towards explicit protection of trade secrets by express provisions in unfair competition laws, and the continuing evolution of provisions governing the practice of comparative advertising. Moreover, there has been an increasing recognition of the need to grant protection against undue "misappropriation" of, or "free riding" on, the achievements of competitors, regardless of the availability of specific industrial property rights, provided that, under the circumstances of the case, such acts are found to be unfair.

94. The above-mentioned categories of acts of unfair competition, as well as other categories, are discussed in the following paragraphs. It should be noted, however, that those categories can – and often do – overlap with the categories referred to in Article 10*bis* of the Paris Convention. For example, certain aspects of an act of unfair "free riding" may fall under the categories of causing confusion or discrediting another person's products or business.

(b) Violation of Trade Secrets

(i) *General*

95. Competitive strength usually depends on *innovative techniques and accompanying know-how* in the industrial and/or commercial field. However, such techniques and know-how are not always protectable by patent law. Firstly, patents are available only for inventions in the field of technology and not for innovative achievements concerning the conduct of business, etc. Moreover, some technical discoveries or information, while providing a valuable commercial advantage for a particular trader, may lack the novelty or inventive step required to make them patentable. Furthermore, during the pendency of a patent application, as long as the information has not been disclosed to the public, the owner of the information to be patented ought to be protected against any wrongful disclosure of the information by others, regardless of whether or not the application eventually leads to the grant of a patent. Although the Paris Convention does not mention trade secrets, the need for their protection against wrongful disclosure is generally recognized. The unauthorized use of valuable secret information by persons other than the holder of the secret is regarded as a misappropriation of business values that have been developed by the holder, who loses his competitive and economic advantage over competitors as soon as the information is used or disclosed by another.

96. Trade secrets are protected against unauthorized use and disclosure by various statutory means. Some countries have *special provisions* for the protection of trade secrets either under specific legislation on unfair competition[35] or as part of another law.[36] Other countries treat trade secrets as an aspect of *tort law*.[37] Still other countries have enacted *criminal*, *administrative*, *commercial* or *civil law provisions* prohibiting the unauthorized use or disclosure of business secrets. The criminal provisions are less important in practice, however, since normally knowledge of the secrecy, as well as malicious or fraudulent intent, have to be proved. Yet if the disclosure of a trade secret constitutes a criminal offense, it will normally constitute an act of unfair

---

[35] Notably Germany, Japan, Spain and Switzerland.

[36] For example, certain States of the United States of America, Mexico and Peru.

[37] For example, France and the Netherlands.

competition as well. Furthermore, since employees, consultants, independent contractors and joint venturers are often privy to trade secrets, several aspects of civil law concerning *employment contracts* and general contract law are also relevant, depending on the circumstances of the case. Finally, it is not unusual to have combinations of the above means available. For example, violation of trade secrets could result in unfair competition or tort liability, as well as in criminal sanctions. On the other hand, in situations where *non-competitors* have intimidated or influenced agents or employees, or have otherwise induced them or other persons bound to secrecy to disclose the secret information, only civil tort law might be applicable.

(ii) *What Information Can Be a Trade Secret?*

97. Although a legal definition of a trade secret rarely exists, several countries (following the example of France) differentiate between *manufacturing* (or *industrial*) secrets and *commercial* secrets, which could have consequences for the applicability of criminal law. The first category of trade secrets is related to information of purely *technical* character, like production methods, chemical formulae, blueprints or prototypes. Such information could constitute a patentable invention but, generally, patentability of the information in question, in particular, novelty in a patent law sense, is not required for the secret to be protectable. *Commercial secrets* include sales methods, distribution methods, contract forms, business schedules, details of price agreements, consumer profiles, advertising strategies and lists of suppliers or clients. Usually, the subject matter of trade secrets is rather broadly defined, and the final determination of what information can be a trade secret will depend on the specific circumstances of each individual case. For example, in the Unfair Competition Prevention Act of Japan, a trade secret is defined as any information relating to a production method, a sales method or any other information on technology or business that is unknown to the public. A similar definition is contained in the Uniform Trade Secrets Act of the United States of America, which has been adopted by about 20 States.

98. There are several lines of inquiry that serve to determine what information constitutes a trade secret: the extent to which the information is known to the public or within a particular trade or industry, the amount of effort and money expended by the trader in developing

the secret information, the value of that information to the trader and to his competitors, the extent of measures taken by the trader to guard the secrecy of the information and the ease or difficulty with which the information could be properly acquired by others. From a subjective point of view, the trader involved must have a *considerable interest* in keeping certain information as a trade secret. Although contractual obligations are not necessary, the trader must have shown the *intention* to have the information treated as a secret. Frequently, specific measures to maintain the secrecy of the particular information are also required. The fact that the information has been supplied confidentially will not always be sufficient. In some countries (for example, the United States of America and Japan), the efforts made by the owner of the information to keep it secret are considered by courts to be of primary importance in determining whether the information constitutes a trade secret at all.

99. From an objective point of view, the information must, in order to qualify as a trade secret, be known to a *limited group of persons* only, that is, it must not be generally known to experts or to competitors in the field. Even patent applications may be regarded as trade secrets as long as they are not published by the patent office. Therefore, external publications or other information that is readily available will not be considered secret. For example, the use or disclosure of a trade secret by a person who has acquired it in a *legitimate business transaction* and without any negligence is not deemed unfair. On the other hand, absolute secrecy is not a requirement, for the information might also be discovered independently by others. Also, business partners can be informed without loss of secrecy if it is obvious that the information has to remain secret. Factors that indicate whether the information has the necessary degree of confidentiality to constitute a protectable trade secret are whether it contains material that is not confidential if looked at in isolation, whether it has necessarily to be acquired by employees if they are to work efficiently and whether it is restricted to senior management or is also known at the junior level. Still, the most solid proof is the strict confidentiality of the information and the contractual duty to keep it secret.

(iii) *Use and Disclosure by (Former) Employees*

100. Even in countries where specific provisions on wrongful or unfair disclosure apply, *employment contracts* may serve to reinforce and

supplement the protection afforded to trade secrets under the law of unfair competition or tort law. It is generally accepted that employees have a basic right to use and exploit, for the purpose of earning their living, all skills, experience and knowledge that they may have acquired in the course of previous periods of employment, even with the help of trade secrets. Yet, an employee does have the duty, during the period of employment, to act with *good faith towards his employer* and, after the employment has come to an end, not to use or disclose any confidential information about his employer's affairs that may have come to his notice during his employment. For example, Article 85 of the Mexican Law on the Promotion and Protection of Industrial Property of 1991 provides that any person who, by reason of his work, employment, function or post, the practice of his profession or the conduct of business relations, has access to a trade secret and he has been warned that this information must be kept secret, shall abstain from revealing it without just cause and without the consent of the person keeping the secret or of its authorized user. Thus in many cases the use or disclosure of information will constitute a breach of the employment contract by the (former) employee if the information in question must remain secret. However, the distinction between using the skills, knowledge and experience legitimately acquired during employment and the prohibition on the use or disclosure of the former employer's industrial or commercial secrets is often difficult to make. Clearly, in cases where the behavior of the employee is equivalent to theft, embezzlement, industrial espionage or conspiracy with a competitor, a willful breach of confidence will be presumed.

101. Frequently, employment contracts incorporate *specific provisions* prohibiting the disclosure of business or trade secrets, but such provisions, like undertakings not to compete, must not be so restrictive of the professional abilities of the employee in the future that they constitute an undue *restraint of trade.* Criminal law, as well as civil and labor law, could create relevant duties in employment relations. For example, according to Article 237 of the Criminal Code of the Netherlands, the disclosure of trade secrets by a person employed by a trader is an offense, and Article 2622 of the Italian Civil Code forbids the disclosure of secret business information by directors, general managers and legal auditors of any type of company. Such provisions may be very important in situations where the employee is not bound by contractual clauses, or where the use of such information by former employees is not related to a *competitive action.* If the former em-

ployee can be regarded as a competitor of the former employer, for example if he has set up a company on his own in the same sector, a breach of confidence by the former employee will normally be an act of unfair competition. For example, the *inducement of customers* of the former employer to become clients of the employee in his new position will probably be deemed unfair, particularly if the employee misuses lists of customers or internal business details in order to make better offers. However, there can also be wrongful misuse of confidential information if special knowledge of the employer's activities in relation to clients' affairs is made use of to persuade those clients to transfer their business to another.

(iv) *Use and Disclosure by Competitors*

102. Competitors are usually very interested in acquiring the trade secrets of others. However, as trade secrets themselves are not fully equivalent to exclusive rights under industrial property law, the determination of the unfairness of competitors who use or disclose the trade secrets of others is based on the *means of acquiring the information.* For example, it is expressly stated in the Unfair Competition Prevention Law of Japan that the rules concerning the protection of trade secrets will not apply where a trade secret is obtained in the course of a legitimate trade activity, provided that the person obtaining the secret did not use dishonest means to do so, or did not negligently disregard the dishonesty of such means. Thus competitors who have not used any influence to bring about the disclosure of the secret information, but have merely taken advantage of the breach of contract of a former employee or partner of the competitor, will seldom be held liable. The competitor's awareness that the disclosure of the trade secret by the former employee or partner would be a breach of contract is regarded as a *minimum* level of intent for determining liability. The Mexican law, for example, makes it an offense to use a trade secret which has been disclosed by a third party where the person to whom the secret was disclosed knew that the third party was not authorized to disclose the secret. In any case, competitors are not allowed to interfere recklessly with the contractual relations of others. For example, if a competitor has bribed or otherwise *unlawfully persuaded* a (former) employee to disclose a competitor's trade secret, he will be liable for unfair competition.

103. There are many situations that will depend on the specific circumstances of the case. For example, where the use of trade secrets was part of a former business relationship between the competitors, the fact that the know-how was to be kept secret does not in itself imply that use by the competitor would always be deemed unfair. On the other hand, the possible lack of a contractual clause concerning the use of trade secrets does not preclude unfairness. If the disclosure of trade secrets by a (former) employee is willfully induced by a competitor, the competitor is committing an actionable offense, provided he should reasonably have known or suspected that disclosure of the information was a breach of contract at the time of receiving the information. Frequently, the inducement of employees to disclose trade secrets is combined with a (separate) act of unduly enticing employees away, which is consistently deemed to be a violation of unfair competition law.

(c) Taking Undue Advantage of Another's Achievement ("Free Riding")

(i) *General*

104. In addition to the likelihood of confusion, there are other circumstances that may be held relevant under various doctrines with respect to the imitation of indications, products or other marketable creations. Such circumstances involve the act of taking undue advantage of, or free riding on, another person's achievement recognized by consumers and other market participants like dealers, traders and suppliers. Frequently such achievements concern a certain indication or product but they could also be of purely technical character.

105. Protection in such cases depends on a number of requirements which vary from country to country. The unfairness of the competitive act is regarded as resulting not only from the *obvious exploitation* of the notoriety of the indication, commercial success of the product or technical achievement of the competitor *without any proper effort* being made to depart substantially from the characteristic features of that particular achievement, but also from the risk of *damage to the reputation* of the existing business. As a minimum prerequisite, the indication or the product must have a certain *distinctiveness* (which may be of a level not sufficient for protection under specific legisla-

tion). As the scope of protection may depend on the degree of distinctiveness, completely banal indications or products will not usually qualify for protection against mere imitation.

106. From a purely systematic point of view, the notion of "free riding" has a number of common features with the notions of causing confusion and misleading. Free riding on another person's market achievements can be defined as any act that a competitor or another market participant undertakes with the intention of directly exploiting another person's industrial or commercial achievement for his own business purposes *without substantially departing* from the original achievement. In that sense, free riding is the broadest form of competition by imitation. Under the principles of a free market, however, the exploitation or "appropriation" of another person's achievements is unfair only under specific circumstances. On the other hand, acts that cause confusion or mislead normally imply free riding on another person's achievements, but are generally recognized as forms of free riding that are *always* unfair.

107. When assessing the availability of protection against unfair competition for market achievements of others in the absence of confusion, it has often been stated that the *mere exploitation* of another's achievement is consistent with the principles of a free market system. Thus protection under the rules concerning unfair competition cannot simply be regarded as an alternative route to the securing of protection which would be available without the obligation to comply with the various requirements of protection imposed by specific industrial property legislation. As a certain balance of interests on the relevant market has been achieved by adopting specific legislation on patents, industrial designs, trademarks and so on, that balance must also be taken into consideration in the application of unfair competition law. As a general rule, protection under unfair competition law will be denied if the achievement that has been copied or appropriated is covered by specific industrial property legislation and the type of protection sought by resorting to unfair competition law could have been obtained, at least for a certain period of time, under that specific legislation (principle of "*preemption*").

108. As indicated above, protection *as such* may be invoked if the subject matter of specific legislation does not cover the achievement involved, for example, if the law is not applicable to achievements

made before a certain date, or if the protection granted by the special law is not broad enough to give the relief sought in the specific case. Some industrial property laws expressly provide that protection under unfair competition provisions may be invoked for achievements that are not protectable under the specific law. Some industrial property laws expressly exclude additional protection under unfair competition law for inventions, indications, signs or product shapes that are protectable under those laws. Still, it is not always clear what interests the legislation has in fact balanced by adopting the special law. Even legislative commentaries do not comprehensively clarify that question. Thus a common approach to the grant of *protection against free riding* under unfair competition law is to make such protection available only under *specific circumstances*, which must differ in some respects from the circumstances under which protection is granted by the specific legislation. The definition of those circumstances is often possible only under some sort of "catch-all" provision, and thus usually is established by case law. For the following types of free riding, specific circumstances resulting in an act of unfair competition are already recognized in many countries: dilution of the distinctive quality or advertising value of a mark, misappropriation of a reputation, slavish imitation and so-called "parasitic acts." These are dealt with in the following paragraphs.

(ii) *Dilution of the Distinctive Quality or Advertising Value of a Mark*

109. Generally, where the unauthorized use of a mark for different goods or services is not likely to cause confusion, there is neither trademark or service mark infringement nor an act of unfair competition. This follows from the "speciality principle" in trademark law, which is a consequence of the distinguishing function of trademarks and service marks. In some countries, however, such as Canada, the EC member States under the EC Directive to Approximate National Laws on Trade Marks and several States of the United States of America, marks that have acquired a certain renown are given additional protection against the so-called *dilution* of their *distinctive quality* or *advertising value*. The concept of "dilution" is understood as the watering down or gradual lessening of the ability of a mark to be immediately associated by consumers or the general public with a particular source. As some dilution can be regarded as being an inher-

ent result of the use of identical or similar marks for totally different goods or services, the main rationale behind the notion of dilution is that marks that have acquired a certain renown should be protected against the obvious desire of other market participants to take advantage of the essential "uniqueness" of a mark. The likelihood of substantial damage to the proprietor of the mark is assumed from the fact that the mark may lose its established association with certain products. The required degree of renown of the mark involved is determined by the relevant public or consumer groups. If it is a trademark for goods that appeal only to a selected group of consumers, it will have a better chance of reaching the required degree of renown than if it is one for mass-consumption goods. However, the required degree may still vary considerably from country to country.

(iii) *Exploitation of Another's Reputation*

110. Another type of misappropriation that has been recognized in recent years as being contrary to honest business practice is that of unfairly taking advantage of the reputation or "prestige" of the market achievements of other industrial or commercial enterprises. This doctrine has been particularly relevant in the appropriation of well-known indications. For example, if the quality of the genuinely marked product or service has led consumers to associate the mark with a certain origin or consistency of product quality, its unauthorized use for other goods or services, while not causing confusion as to their source, might still be considered unfair appropriation of a reputation. The doctrine may equally apply to product appearances, but in such a case the appearance must be recognized as indicating a certain degree of quality, image or prestige. Countries have different approaches to this kind of misappropriation, however. For example, whereas in France the appropriation of the prestige of another's mark or product is usually assumed to be unfair, in Spain that type of misappropriation is expressly prohibited without any further prerequisites in Article 12 of the Law Against Unfair Competition of 1991. In Germany it is required, for the appropriation by a third person to be allowed, that a secondary exploitation of the mark could not reasonably be expected. In the United States of America there is in principle no objection to appropriation unless a likelihood of confusion, for example as to "sponsorship," is established, for which purpose the prestige of the mark is taken into account.

111. Taking advantage of another's trademark or service mark may occur as a more or less veiled form of appropriation. For example, a competitor may use a generally similar, but noticeably different mark, nevertheless consciously drawing closely on the characteristic and well-known features of another's mark. Alternatively, he may use the mark in advertising his own trademarked goods with the aim of transferring the image of the well-known mark to his own goods, or again he may use another's mark with qualifying terms like "model," "type," "style," and so on (however, in some countries the term "suitable for" or other similar terms may be permissible in connection with spare parts and accessories). In this respect, it is not necessary that the market participant be a direct competitor of the proprietor of the mark, as long as there is a likelihood of damage to the exclusive image or reputation of the mark or the business involved.

(iv) *Slavish Imitation*

112. The concept of slavish imitation as a separate act of unfair competition has been developed in several countries of Europe. This kind of unfair free riding is usually regarded as an exception to the general rule of free appropriation in the area of products or indications that are not protectable or for which protection has lapsed under specific legislation, or where there is no likelihood of confusion as to the source of the products. In the absence of likelihood of confusion, the specific circumstances of the case must reveal some exceptional character for the act to be deemed unfair. Usually the unfairness is seen in the lack of research, investment, creativeness and expense on the part of the imitator, who has merely copied the achievement of another, despite the fact that alternative ways of competing effectively were available. The imitated products or indications would still have to possess a particular distinctiveness, which must not merely derive from technical features necessary for the product to function properly, but must concern aesthetic or decorative features that leave sufficient room for alternative shapes and designs.

113. Not all prerequisites of slavish imitation are equivalent in all countries, however. Apart from that, the qualifying circumstances may sometimes be combined with the concepts of dilution, misappropriation of reputation or "parasitic competition." Frequently, there has to be a marked contrast between the efforts made by the competitor to develop

his achievement, to introduce it on the market and to win some success or recognition and the efforts made by the imitator to copy and exploit that achievement for the act to be deemed unfair. One *statutory* example of a provision against this kind of unfair misappropriation is to be found in Article 5(c) of the Swiss Law Against Unfair Competition, which specifically treats as unfair any act which, by means of technical reproduction processes and without any corresponding effort, takes the marketable results of the work of another person and exploits them as such. There is a similar provision in Article 11(2) of the Spanish Law on Unfair Competition, which considers imitation of the achievements of another to be unfair if undue advantage is taken of the other's goodwill or efforts.

114. Acts of slavish imitation should be distinguished from acts of so-called "reverse engineering." The latter is generally understood to consist in examining or analyzing, by taking apart or decomposing, a product or substance in order to understand its structure, composition or operation and find out how it was made or constructed, and subsequently producing an improved version of the product or substance. The practice of reverse engineering is commonly practiced in industry in connection with the products of competitors, with the purpose of learning the technology they embody, and eventually producing a competing (improved or different but equivalent) product. In fact, it is part of the normal exercise of competition in a free market environment which, in turn, is based on broader public policy considerations. The practice of reverse engineering is, therefore, not in and of itself unfair; nevertheless, the product or other result obtained through reverse engineering may, under certain circumstances, constitute an infringement of an industrial property right. For example, if a product made after reverse engineering of a competitor's product falls under the claims of a valid patent (where appropriate, taking into account the doctrine of equivalence), that would constitute patent infringement. If a patent is not infringed, but the manner in which the original product was copied is found to be dishonest or unfair (regardless of whether reverse engineering took place), the relevant acts might still be actionable on grounds of unfair competition.

(v) *Parasitic Acts*

115. Another variety of unfair free riding recognized in some countries is the concept of "parasitic acts." This concept has many features

in common with the concept of slavish imitation. Here the mere imitation of the achievements of others is still considered inherent in a free market system, but exceptional circumstances may make the imitation unfair. For example, the imitation of one product which is not particularly new or original could possibly be allowed, but, as soon as the achievement involved is recognized as innovative or strongly appealing to consumers, the imitator has less reason to claim the fairness of his action. What tips the balance definitely against the imitator is his *systematic and methodical* appropriation of the characteristic achievements of *one particular* competitor in a routine manner.[38] Moreover, circumstances relating to the *modus operandi* of a competitor may denote unfairness: for example, ordering samples from a competitor for the purpose of imitating his products more easily and systematically may be found to be unfair parasitic behavior. Some countries[39] adopt a flexible approach in these cases, in particular, by adapting the scope of injunctions and also the time limits of protection to the particular circumstances. For example, the amortization of the innovation costs could be considered a relevant factor in determining whether or not a particular imitation is fair. As a result, protection could be restricted to identical imitations, and only for a period of time that is much shorter than under specific industrial property legislation. It is to be noted, however, that in some countries (for example, the United States of America) just copying the product of another person (even if done systematically, or in respect of one particular competitor) will not be recognized as unfair competition unless there is copying of non-functional features which are distinctive or have acquired secondary meaning.

(d) Comparative Advertising

(i) *Definition*

116. The different attitudes towards true but nevertheless discrediting statements can best be seen in the examination of *comparative advertising*. Comparative advertising may take two forms: a positive reference to another's product (claiming that one's own product is as good

---

[38] This criterion applies especially in Belgium, France, Italy, the Netherlands and Switzerland.

[39] Notably Germany.

as the other) or a negative reference (claiming that one's own product is better than the other). In the first instance, where the competitor's product is usually well known, the crucial question relates to the possibility of misappropriation of another's goodwill. In the second case, where the competitor's product is criticized, it is the question of disparagement that arises. However, both forms of comparison involve an (unauthorized) *reference to a competitor*, who is either mentioned by name or implicitly identifiable as such by the public.

(ii) *The General Restrictions: "Misleading" and "Discrediting" Comparisons*

117. It goes without saying that comparative advertising has to respect the restrictions applicable to all advertisements. In particular, it must not be misleading or disparaging. Comparison based on false or misleading statements about one's own product or involving false statements about the competitor's product is forbidden in all countries.

118. It must be remembered, however, that there are differences in the evaluation of the notion of "*misleading*" and especially in that of "*discrediting*." As mentioned above, some countries,[40] consider statements claiming superiority or uniqueness (like "the best," etc.) misleading unless they can be proved correct, while others consider them harmless exaggerations. Different assessments of the notions of "discrediting" and "misappropriation" are of even greater importance. In countries with a rather permissive attitude towards true but nevertheless disparaging statements, comparative advertising is generally tolerated.[41] As long as what is said is true, the courts will not interfere, even if the reference to the competitor or his product is clearly disparaging or exploits his goodwill. In countries that traditionally put special emphasis on the protection of the "honest" businessman and his reputation, comparative advertising is either forbidden or at least severely restricted. Sometimes the mere fact that a competitor is named against his will is considered discrediting and therefore unfair competition. According to the rule that "the honest businessman has a right not to be spoken of, even if the truth is spoken," the legislation of

---

[40] Notably Germany.

[41] Notably Canada, the United Kingdom and the United States of America.

some countries[42] has even expressly forbidden all comparisons that needlessly identify a competitor. The same argument has led the courts of other countries[43] to find comparative advertising more or less automatically against honest trade practice (and therefore against the general provision on unfair competition law). Although it has sometimes been stressed that true comparisons might be in the interest of consumers, doctrine and case law have in practice allowed comparisons only under very special circumstances, for example, if they have been expressly required by a customer, if they have been made to counter an illegal attack on the advertiser, or if the comparison is necessary to explain a certain system or new technical developments in general.

(iii) *The Trend Towards Admission of True Comparisons*

119. In recent years, however, this negative attitude towards comparative advertising has changed. It has been increasingly recognized that true comparisons of relevant facts can not only reduce the consumer's information search costs, but also have positive effects on the economy by improving market transparency. The courts of those countries that traditionally view comparative advertising as disparaging have gradually relaxed the strict prohibition on all statements identifying a competitor. In France, for example, price comparisons, if based on true, relevant and ample material, are allowed. More important, recent statutes on unfair competition at least indirectly allow comparative advertising.[44] At the European Community (EC) level, a new Directive[45] has been proposed that would oblige member States of the EC to allow truthful comparative advertising. On the whole, there seems to be a clear trend towards the admission of truthful comparative advertising.

(iv) *Special Dangers of Comparative Advertising*

120. On the other hand, it cannot be denied that comparative advertising can more easily be misleading or disparaging than most other

---

[43] Notably France, Germany, Italy and the Netherlands.

[44] Notably in Hungary, Spain and Switzerland.

[45] Proposal for a Council Directive concerning Comparative Advertising and amending Directive 84/450/EEC concerning Misleading Advertising, 1991.

forms of advertising, for example if the comparison is based on irrelevant (or not really comparable) aspects, or if the overall impression is misleading. These potential dangers require *special safeguards* against abuse. Countries that allow comparisons[46] place special emphasis on the fact that even true statements must not be unnecessarily disparaging[47] or that irrelevant facts must not be compared.[48] The 1991 EC proposal for a Directive on Comparative Advertising goes even further by expressly requiring that only relevant, objective and verifiable characteristics be compared, that the overall impression be not misleading, that there be no risk of confusion between the products compared and that the competitor and his product be in no way disparaged or discredited. Furthermore, the advertiser can be required to prove any claims made in surveys used to support the comparison.

(v) *Comparative Advertising and Trademark Law*

121. Comparison is often impossible without reference to a certain mark which refers to a particular product, service or business. In these cases, not only unfair competition law, but also *trademark law* has to be taken into account.

122. In countries where trademarks are protected solely as indications of the source of a product or service, the use of a trademark in comparative advertising may not be within the scope of trademark law. However, there are countries where the use of another's trademark in comparative advertising may be considered trademark infringement.[49] Article 13A of the Uniform Benelux Trademark Law, for example, protects the "advertising value" of trademarks against any use in potentially adverse circumstances (which can also take the form of an unwanted reference in comparative advertising). Canadian trademark law generally protects the goodwill of a trademark, while the current United Kingdom trademark law in principle forbids any reference to another's trademark. Even in the United States of America, where comparative advertising is generally allowed, the so-called "antidilution statutes" enacted by many States are in theory applicable to the use

---

[46] Notably Greece, Hungary, Spain and Switzerland.

[47] As in Switzerland.

[48] As in Spain.

[49] Notably Benelux, France, the United Kingdom and the United States of America (antidilution statutes).

of another person's marks in comparative advertising, since they grant – regardless of confusion – trademark protection against all acts that are liable to injure the business reputation or that dilute the distinctive quality of a mark. However, the statutes so far have not been applied in cases of truthful comparative advertising, and there may be constitutional reasons for such an exception in cases of comparative advertising. It is noteworthy that the proposal for a EC Directive on Comparative Advertising would allow such advertising provided, in particular, that it does not cause confusion between the marks of the advertiser and those of a competitor, and that it does not discredit, denigrate or indicate contempt for a competitor's marks.

(vi) *Comparisons Made by Third Parties*

123. In many countries product testing is done by consumer organizations and/or private or public institutions like the press, television and other media. Usually two questions will arise here: are the organizations liable under unfair competition law, and may the results of their testing be used in advertising?

124. In those countries that have given up the requirement of a competitive link between plaintiff and defendant,[50] unfair competition law is applicable to these organizations too. In other countries,[51] "unfair" product tests, which have an adverse effect on a business reputation, are primarily dealt with under general civil law tort provisions.

125. There seems to be no general agreement on the question whether and under what conditions such test results may be used by advertisers. In some countries (such as Germany) that in general do not accept comparative advertising, this kind of indirect comparision is basically considered legal. In other countries (such as Belgium), it is expressly forbidden for a competitor to refer to tests conducted by consumer organizations, and in still others (such as Switzerland), such references are severely restricted. In the proposal for an EC Directive on Comparative Advertising, tests by third parties may be used only with the express consent of the person who conducted them, apart from which the advertiser would be held responsible for any advertising claim based on such surveys.

[51] Notably France and Germany.

(e) Other Acts of Unfair Competition

(i) *General*

126. As mentioned earlier, unfair competition law particularly reflects the sociological, economic and ethical conceptions of a society. Apart from the specific categories of acts already discussed which are generally considered unfair competition, there is a wide range of acts and practices that may be dealt with under unfair competition law in one country but not necessarily in another. The discussion that follows is therefore restricted to those aspects that most countries appear to consider (although perhaps with different emphasis) contrary to "honest trade practice," either in the form of an express prohibition in the specific law or, more frequently, under the general provisions on unfair competition, or in specific other laws, decrees and the like. It is to be noted that the following explanations only give examples, not an exhaustive list of these other unfair practices.

(ii) *Nuisance Advertising, Exploitation of Fear, Undue Psychological Pressure, etc.*

127. Modern competition law aims to protect all those concerned by unfair market practices. Consequently, practices that "unduly" influence the *consumer* (or try to do so) may be considered contrary to honesty in competition. In practice, however, it is difficult to determine what requirements have to be met before a practice is deemed to be "undue" in relation to the consumer. Since the very purpose of all marketing or advertising practice is to influence consumers favorably, a certain borderline of influence has to be crossed. This is often asserted in cases where the privacy of the consumer has been invaded or where he has been manipulated by means of advertising techniques.

128. For example, in many countries the delivery of *unsolicited goods* to a person who is required to pay for them unless he expressely refuses or returns them is considered unfair competition, because it plays on the fact that many consumers either tend to forget to return the goods or even feel under an obligation to keep them. On the other hand, many countries tolerate *unsolicited home visits* ("door-to-door sales") as long as they do not involve any deception or impose undue psychological pressure on the consumer. Opinions may vary on the

question of *unsolicited telephone calls*: while some countries consider them *per se* an intrusion into the privacy of the consumer, most other countries tolerate them as long as the consumer's lack of experience and his privacy are not exploited. The same is true of the *unsolicited sending of advertising material.*

129. It is further considered unfair in many countries to abuse the consumer's *superstitions, credulity, fears or feelings of charity.* For example, an advertisement that exploits elderly people's fears of ending up in a nursing home, or causes unnecessary anxiety over death or health problems can be considered contrary to "honest" trade practice. The same is true if a special situation in which the consumer is especially vulnerable is exploited for commercial purposes, for example, if victims of car accidents are pestered with offers of towing services, or if the recently bereaved are offered funeral services. Most countries, moreover, take special precautions against any abuse of children's lack of experience.

130. Apart from these special cases, often regulated in specific laws, the courts of some countries[52] have identified a group of cases under the general clause against unfair competition which can be described as "*psychological pressure to purchase*" or "exaggerated enticement." These cases are mainly seen in connection with special marketing practices, however, like the offering of free goods or discounts and lotteries.

(iii) *Sales Promotion: Bonuses, Gifts, Lotteries, etc.*

131. A frequent marketing technique to attract new customers consists in the offering of bonuses, gifts and other inducements, and in the organization of competitions, lotteries or games. Such *sales promotion* can be a new and efficient channel of distribution and may thus stimulate competition. On the other hand, it may distract consumers from the merits of the principal goods or services and thereby entice them to buy something that is either not worth its price or not really needed. This is particularly true of marketing techniques like games, lotteries and other competitions, which exploit for advertising purposes a consumer's predisposition to *gambling*. Most of these are therefore regulated in one way or another, and sometimes even ex-

---

[52] Especially Germany.

pressly forbidden. Additionally, they are subject to self-regulation measures. There is, however, little agreement (and little consistency) on the question of what specific practices should be considered unfair competition. For example, bonuses, or any discount or other advantage dependent on the purchase of a product, are forbidden in principle in some countries,[53] allowed in principle in others[54] and more or less strictly regulated in others. *Lotteries*, where the winning of prizes is a matter of pure chance, are generally forbidden if they are linked to the purchase of a product, and otherwise are severely restricted. *Contests* in which the outcome can be influenced to a certain extent by the participant's own skill are generally viewed more favorably, provided that no deception is involved and that the consumer is not put under any pressure to buy. On the other hand, "*pyramid*" ("snowball") sales and other such methods are often considered potentially misleading and consequently forbidden (sometimes even on pain of criminal sanctions), or are at least severely restricted, whereas *sweepstakes* are often considered legal.

132. On the whole, the courts of most countries, even those that allow the sales promotion techniques mentioned above, pay special attention to the *actual conditions* under which these sales practices take place: if the consumer is put under any psychological or other pressure to buy, if the prizes are extremely valuable and so all the more enticing, an otherwise accepted marketing practice may well be considered contrary to "honest trade practice."

(iv) *Impeding of Market Activities*

133. Finally, there are several acts which may *hinder or obstruct* a competitor in his business activities, either directly or indirectly. An example of a direct obstruction would be the *actual obstruction* of trading on a particular market location, which would normally be considered unfair. Another example would be the deliberate destruction of bottles destined to be recycled and refilled by a producer of soft drinks in order to lessen his ability to supply the market. Other (indirect) impediments are often controlled by *antitrust law* but, under certain circumstances, unfair competition law may offer some addi-

---

[53] Belgium, France, Germany and Sweden.

[54] The United Kingdom and the United States of America.

tional protection. Impediments that are traditionally covered by antitrust law are *discrimination*, *boycotting* and *dumping*, but that does not preclude the application of unfair competition law, at least if the acts are perpetrated on an individual scale. For example, unreasonable interference with the business activities of competitors, sales at unreasonably low prices, like *below-cost prices*, or the imposition of fixed retail prices are practices that have been designated by the Fair Trade Commission of Japan as being prohibited by the Japanese Anti-Monopoly Act, but which might also be regarded, in theory, as forms of unfair competition. In some countries,[55] selling below cost or at an "exceptionally low profit margin" is expressly prohibited under unfair competition law. In the United Kingdom, the United States of America and other countries, "predatory pricing" with a view to damaging a competitor may be prohibited under competition law.

134. Other such unfair practices consist in *enticing away* from competitors, or in inducing the *personnel or agents* of competitors to terminate their employment or agency contracts. As indicated earlier, these acts of unfair competition are frequently accompanied by the violation of *trade secrets* but may, nevertheless, constitute separate unfair acts. Merely inducing the clients or employees of competitors to change suppliers or employers by offering better conditions is inherent in free competition and cannot therefore be regarded as unfair. However, means such as bribery or deception of clients, agents or employees, or inducement to breach a valid undertaking not to compete, will be deemed unfair, as will the systematic enticing away of personnel with a view to damaging one particular competitor.

---

[55] Notably Belgium, France, Luxembourg, Spain and Switzerland (under certain conditions).

V. ENFORCEMENT OF PROTECTION

A. *General*

135. The enforcement of protection against unfair competition is as important as the substantive law of unfair competition itself, for such protection would remain futile without the availability of adequate measures to halt violations, to prevent damage, or further damage, and possibly to win compensation for damages. Therefore, most specific laws against unfair competition provide for *special sanctions* which can be imposed on the infringing party. Usually such specific sanctions take the form of *civil* and *criminal* measures. Sanctions can also be imposed by government authorities in the form of *administrative* measures.[56] Some legislation further lays down special procedural rules, specifying such matters as the persons having the *capacity to sue* or the *time limits* for bringing the action before the court.

136. Where unfair competition law is primarily based on tort law, the normal *principles of civil proceedings* will apply. Although the basic principles of tort law may normally have relatively strict requirements, in particular with respect to the likelihood of damage and proof of the defendant's intent or negligence, those requirements are often less restrictively applied in cases of unfair competition law; indeed, in practice they are sometimes presumed. However, if tort law is only a *secondary* basis for a claim of unfair competition, as compared with specific legislation against unfair competition, the regular requirements of tort law must be met.

137. Other sanctions could possibly follow from violations of the rules set by *self-regulation*. Since such rules are usually supervised by specific authorities, composed of representatives of the relevant industries, the media and consumers, the proceedings and possible sanc-

---

[56] As in Australia, Bulgaria, Hungary, India, Mexico, Peru, Romania and the United States of America.

tions involved have a character that is different from administrative or civil court proceedings. Sanctions are only binding on persons who have adhered to the self-regulatory rules laid down by the authorities, but their practical importance for protection against unfair competition is fully recognized; these sanctions will therefore be dealt with separately.

B. *Civil Sanctions*

(1) *Categories of Sanctions*

138. There are several types of civil sanction, some of which, however, may not be available in every country. For example, under Article 13a of the German Law Against Unfair Competition as amended in 1987, a consumer has the right to rescind a contract that was entered into as a result of misleading advertising. The conditions for the exercise of this right are not easily met, and the remedy itself is quite unusual in unfair competition law. In practice, only a few of the broad range of sanctions are frequently applied in unfair competition proceedings. For example, *declaratory judgments*, that is, judgments stating that the plaintiff is entitled to perform a certain act or that the defendant is not entitled to do something, are rare in unfair competition proceedings.

(a) Injunction

139. In practice, the most important sanction is injunctive relief, which can be *final* but frequently takes the form of a *preliminary* injunction. This sanction is preferred by the complainant, as the infringing act can be stopped, although the actual damage may then not be easy to prove. In most cases injunctions restrain, in that they order the defendant to refrain immediately from performing a certain act of unfair competition. Injunctions may be sought for unfair acts that are likely to be committed or continued. Injunctions require neither proof of intent or bad faith nor proof of damage. Once an unfair act has been committed, the likelihood of continuation is usually presumed unless the defendant has formally undertaken to refrain from further

infringing acts. In some countries, injunctions may be enforceable with the mandatory payment of a *penalty fee* for not obeying the court order, which becomes payable without further intervention by the court.[57] In other countries, such disobedience may constitute a civil or possibly criminal contempt of court.[58]

140. Injunctions may also be accompanied by a mandatory order, demanding that the defendant *restore the status quo* preceding the violation. This can be an order to cancel applications or registrations of marks or trade names, to erase misleading or confusing indications, withdraw infringing goods from the market or to deliver up or destroy unlawful products or advertising material. Such mandatory orders are relevant in cases where the results of the acts of unfair competition cannot be eliminated by a restraining injunction. In blatant cases of unfair competition, an order to disclose the source of supply or provide a list of customers supplied is also possible. In some legislation, such as the Hungarian Act Against Unfair Trade Practices of 1990, the destruction of special instruments that served to manufacture the infringing goods can be ordered under certain circumstances. All types of mandatory orders are usually left to the court's discretion, as the measures have to be commensurate with the extent of the unfairness in the individual case, and thus a balance of interests has to be made by the court.

(b) Damages

141. Compensation for damages is available in every country. Unlike the application for an injunction, however, a common requirement determining compensation for damages is proof of *fault or intent* or at least *negligence or recklessness* on the part of the defendant. This is obvious in France, where the tort provision in Article 1382 of the Civil Code deals only with damage claims. However, French courts have been generous in the recognition of damage, including potential damage, and, as actual damage is usually hard to prove, a symbolic compensation of one franc is frequently imposed, while at the same time the cessation of the infringing act is ordered. Sometimes there is a rebuttable presumption of negligence if an act constitutes unfair com-

---

[57] As in Germany and the Netherlands.

[58] As it does in Australia, India, the United Kingdom and the United States of America.

petition, as under Article 2600(3) of the Italian Civil Code. Under such provisions, the person involved must prove good faith in the sense that due diligence on his part did not establish that the competitive act was unfair. Usually, damages as a result of unfair competition are purely monetary in character but, under certain circumstances, for example following defamatory publications or infringements of publicity rights, similar compensation for moral or immaterial damages may be available in some countries. In any case, sufficient evidence of actual, and somehow assessable, financial loss must be furnished in order to substantiate the claim of damage.

142. There are several *types of monetary damage* that can be compensated. The most commonly claimed damages are *loss of profits* and the damage done by *disorder caused on the plaintiff's market.* In some countries,[59] instead of the actual damage to the plaintiff, an account of *profits gained by the defendant* may be claimed on the ground of unjust enrichment. This sanction deprives the defendant of the profits actually resulting from his unfair acts, and in some countries may exceed the actual damages of the plaintiff. It could also serve as a measure to assess the loss of profits incurred by the plaintiff.[60] A form of damages particularly known in the United States of America and most Commonwealth countries is exemplary or so-called *punitive damages.* Those damages are claimed *in addition* to actual damages in cases where the motives of the defendant have been particularly malicious. In extreme cases, even treble damages may be available. In other countries, malice or intent may influence the amount of damages awarded by the court. Finally, in blatant cases of unfair competition, the costs resulting from *attorneys' and experts' fees*, apart from court costs which are usually fixed by the court when it passes judgment, may occasionally be awarded to the successful party at the court's discretion, for example, if such costs are deemed necessary to prevent further infringements or market disorder. This possibility is of considerable importance since there are only a few countries in which attorneys' and other fees are to be paid by the losing party.

143. As a basic rule, damages are regarded as only *compensatory*, that is, the plaintiff is to be put back in the position that he would have been in if the unfair act had not been committed. However, the

---

[59] Notably Spain, Switzerland and the United Kingdom.

[60] As in Japan.

amount is often difficult to determine with any precision. For loss of profits, in particular, high standards of proof may sometimes be required. Even cases of infringement of exclusive rights under intellectual property law seldom go into a full inquiry as to damages, and parties tend to settle the case once liability has been established. A common approach in such cases has also been to assess damages on the basis of a fictitious *license fee*. In legal literature, this approach has been criticized as having insufficient deterrent effect. Applying this approach in unfair competition law would only be acceptable in cases resembling a violation of industrial property rights and in classic cases of passing-off, where the parties involved are direct competitors. Thus, the amount of damages actually awarded by the courts can vary to a large extent.

(c) Rectification; Publication of the Judgment

144. Another sanction available in most countries is an order for rectification or for publication of the judgment awarded against the defendant. In some Asian countries, a specific form of rectification may involve a *letter of apology* in daily newspapers. Another frequently used kind of rectification (for example, in the United States of America) is *corrective advertising*. A rectification order is usually granted in cases of misleading or discrediting, but can also be appropriate for other methods of unfair advertising. In some countries publication of the judgment can also be ordered by the court at the expense of the defendant. Both sanctions may be claimed *in addition* to restraining injunctions, and in most countries apart from compensation for actual damage.

(2) *Right to Sue*

145. As mentioned before, protection against unfair competition serves not only the interests of competitors, but also those of consumers and the public interest. It is therefore of vital importance to the effective operation of unfair competition law that the right to sue should *not be restricted to competitors*, although they may be the most powerful group to invoke the law. However, not all market participants need an *individual* right to bring an action before a civil court. As any act

of competition has a direct influence on the market situation of individual *competitors*, at least that group cannot reasonably be deprived of their fundamental right to sue the unfair competitor. However, in many countries, direct competitive relations are not necessary for the right to sue if the indirect consequences of the unfair act would seriously *affect* the position of other participants, for example, on parallel or subsidiary markets. So in most countries merely *potential* competitive relations will suffice. Furthermore, in countries where protection against unfair competition is mainly based on tort law, every person whose interests are likely to be harmed, and this may include *individual consumers*, can usually bring an action. In such countries[61] not even a potential competitive relationship is required. Recent legislation also gives individual consumers a right to sue. Still, the risk of considerable costs may often deter them from exercising that right. Most individual consumer actions are therefore brought under available self-regulatory proceedings, the standing rules, costs and terms of which are less daunting.

146. Along with the growing tendency to consider consumer interests part of the objectives of protection against unfair competition, recent legislation in this field has provided *consumer organizations* with a separate right to have unfair acts stopped. Under Article 10*ter* of the Paris Convention, the member States must provide measures to permit federations and associations representing interested industrialists, producers or merchants to take action in the courts when acts of unfair competition are committed, insofar as the law of the country in which protection is sought allows such actions. With the inclusion of certain areas of consumer protection in unfair competition law, it should also be possible for consumer organizations to claim legal remedies against violations occurring in those areas. For example, the EC Directive on Misleading Advertising states that organizations regarded under national law as having a legitimate interest in the matter must have facilities for initiating proceedings against misleading advertising, either before a court or before an administrative authority competent either to decide on complaints or to initiate appropriate legal proceedings. Additionally, public officials or entities may be empowered *by law* in some countries to act as civil prosecutors on behalf of consumers before the court, as does the Consumer Ombudsman in Sweden and Norway or the Federal Office for Consumer Affairs in Mexico.

---

[61] Notably France, the Netherlands and the United Kingdom.

147. There are several *alternative* ways of establishing the right to initiate civil actions. For example, to prevent a possible misuse of such rights, some countries have restricted the right to bring a civil suit to organizations that can claim the protection of their members against unfair competition as their *statutory aim*, or are officially authorized as consumer organizations. Although actual damage to individual members is not usually required, most countries have restricted the claims available to consumer organizations to an *injunction and/or rectification* in the area of misleading advertising. Only in exceptional cases may organizations claim damages on behalf of their members.

148. The position of *other organizations*, such as traders in a certain branch of industry or professional groups, is far less uniform. In some countries, such organizations may have a right to sue insofar as their statutory purpose is being seriously jeopardized by the unfair act concerned.[62] In other countries, actual injury to some of the members and the transfer of their rights to the organization might be required,[63] or such organizations have no separate right to sue at all.[64] So-called *class actions* are possible in the United States of America. Finally, civil court actions can occasionally be initiated by *authorities* responsible for the control of competitive acts, either as semi-public or governmental authorities[65] or by virtue of self-regulation.[66]

(3) *Measures to Secure Evidence of Unfair Acts and Conserve Assets*

149. It is not unusual for unfair competition claims to fail in court owing to *lack of evidence* of the act regarded as unfair. An informal but commonly used method of securing proof of the allegedly unfair act is a "trap order," that is, the acquisition of infringing goods under an assumed name, which may result in clear evidence of at least part of the unfair act. With respect to acts of misleading or discrediting, the burden of proof may be imposed on the defendant, as he is supposed to have easy access to information substantiating his statements. Most countries do not have specific means of establishing evidence,

---

[62] Notably in Belgium, France, Germany and Italy.

[63] Notably in the Netherlands.

[64] Notably in Japan.

[65] Notably in France, Hungary, India and the United Kingdom.

[66] Notably in the United Kingdom.

as separate rules were deemed unnecessary when the laws against unfair competition were enacted. Those countries must therefore rely on *general principles of civil procedure law*. However, practices may vary considerably from country to country. While some rules of procedure provide adequate measures for the securing of evidence, like the disclosure of documents, expert opinions or the hearing of witnesses, they apply only to evidence of damages and not to the establishment of the unfair act itself. In some countries,[67] a conservatory or provisional "*seizure*" of goods is allowed, but this method is often restricted to the securing of monetary claims, the purpose being to sell the seized goods. This would clearly not be in the interest of the claimant.

150. Most measures under civil procedure law are available only *during trial*, and relatively few countries have civil procedure rules to secure proof *ex parte*, that is, without previous notice to the defendant of commencement of trial proceedings. However, as with infringement actions under specific industrial property legislation, there is a general tendency to ensure maximum availability of measures for securing evidence of an infringement before the defendant is able to dispose of that evidence, and also to have suppliers (or other persons recklessly participating in the unfair act) identified. This is particularly relevant to acts of confusion and misappropriation, or acts relating to the misuse of trade secrets. One example of the growing legislative awareness of the need for adequate means of collecting evidence is Article 24 of the new Spanish Act Against Unfair Competition of 1991, which provides for *ex parte* applications before the court to execute any means of determining those facts the knowledge of which is necessary to commence a proceeding, which means (according to the applicable rules of the Spanish Patent Law) may include inspection of premises and of allegedly infringing instruments.

151. Another recently accepted remedy in this area, which is known in the United Kingdom and in countries following the legal tradition of the United Kingdom, is the *Anton Piller order*. This order, the availability of which has become recognized through case law, enables a plaintiff to seek relief before a writ of summons has been served and *without notice to the defendant*. The order as issued by the court can include provisions preventing trading in certain goods or the destruction or disposal of goods, provisions permitting the plaintiff's lawyer and a limited number of other persons to enter and search the

---

[67] Notably Belgium and the Netherlands.

business premises or even the private house of the defendant or provisions causing documents or goods to be delivered up to the persons serving the order or the names and addresses of the suppliers of the goods involved to be disclosed, and it can prevent the defendant from informing third parties of the existence of the proceedings. In order to obtain this relief, the plaintiff must show that he has an extremely strong case, and that the potential damages claim is likely to be very substantial. Further, clear evidence of the defendant's possession of the infringing goods must be produced before the court, and it must be shown that there is a real possibility of the goods being destroyed or disappearing before a court action (with both parties involved) can be brought. Full disclosure of all facts known to the plaintiff is required, and also security for damages that might have to be paid to the defendant. On the other hand, as the Anton Piller order can easily be abused, there are strict requirements for its issue; moreover, the nature of the order must be explained clearly to the person to whom it is addressed, it must contain only the minimum provisions necessary to achieve its purpose, and a detailed report of the material taken is to be made by the lawyers executing it.

(4) *Accelerated Proceedings*

152. Most matters of unfair competition law are brought before the court in ordinary civil proceedings. In some countries, specific court divisions or judges may have some exclusive competence, for example, in matters of commercial law. However, protection against unfair competition can only be effective if the alleged offender can be enjoined in a *speedy and informal procedure*. Accelerated proceedings have therefore been made possible in many countries for immediate relief. Although several forms of interim relief may be available, such as for the rectification of a misleading advertisement, most claims under unfair competition law involve *interlocutory injunctions*. This kind of proceeding is usually characterized by a very short term between the writ of summons and the court trial, more flexible treatment of the rules of evidence, an informal trial procedure and a relatively short term between the trial and the summary judgment.

153. For interlocutory relief, the facts of the case must reveal not only a serious question to be tried, affording some prospect of success at full trial, but also the necessity of an urgent decision. This need

can be established by the *likelihood of irreparable damage* if the defendant's allegedly unfair acts do not cease immediately. As the proceeding must remain speedy and efficient, formalities are less important and only *prima facie* proof, that is, evidence on which serious assumptions can be made, is required. Thus, in cases where the facts are beyond doubt and the urgency is obvious, courts are sometimes able to issue a cease-and-desist order without hearing the defendant. In this respect, a special form of accelerated procedure has been established under Swiss Law, allowing the issuance and execution of preliminary injunctions within a few hours in order to withdraw infringing articles temporarily from a point of sale, or even from an exhibition or auction. On the other hand, the defendant should not be deprived of his rights if the matter is doubtful. Thus, courts consider the *balance of convenience* when granting or refusing injunctions. This balance entails considering the interests of both sides, including the relative strength of each party's case, and whether the defendant, if the injunction were granted, would be adequately compensated by virtue of the plaintiff's undertaking as a security for damages. In some countries, any claim brought in an accelerated procedure must also be brought before a civil court in an ordinary proceeding, possibly within a certain time limit.

C. *Criminal Sanctions*

154. In most countries criminal sanctions are available against certain specific acts of unfair competition, frequently alongside civil sanctions, but sometimes exclusively, as in some cases of *consumer protection.* Such criminal sanctions are often provided for in respect of severe cases of unfair practice and misuse of trade secrets, but also in special areas of consumer protection like the omission or the misleading use of indications, particularly for beverages and food. Most criminal sanctions range from a fine, sometimes without any statutory maximum, to imprisonment, usually for up to two or three years. However, where civil remedies can be obtained quickly and effectively, criminal sanctions generally play a less important role in practice. One major principle of criminal law is that only a particular, precisely defined act is punishable, and so general provisions of unfair competition can only be backed by civil law sanctions.

155. Under some legal systems,[68] natural persons and legal entities or administrative authorities can also be prosecutors in criminal proceedings. In some countries,[69] a victim may demand compensation, as a result of criminal proceedings, up to a limited amount. An interesting combination of both civil and criminal sanctions is available under French law, where the party who has been harmed by an unfair act constituting a criminal offense may claim his damages as a civil party without restrictions before the criminal court that is prosecuting the unfair act.

D. *Administrative Sanctions*

156. Many laws provide for administrative sanctions, which may be additional to the civil and/or criminal sanctions already available under unfair competition law.[70] Governmental intervention may be necessary to repress certain undesirable practices if competitors are unlikely to object to them and consumers are not in a position to take action. Thus the coexistence of different types of sanction ensures that all legitimate interests receive the required protection. Administrative sanctions may, however, be restricted to some specific acts of unfair competition that are particularly prejudicial to the public interest, such as misleading acts. Yet the administrative authorities of some countries, like the Federal Trade Commission of the United States of America, have very broad discretionary powers with respect to the choice and scope of remedies.

157. In the administrative proceedings, the authority in charge is usually empowered to institute inquiries against companies suspected of engaging in unfair trade practices, and may issue appropriate orders to cease and desist from the unfair act, or take any other measure necessary to stop such acts. In some countries, the public authority itself may be invested with judicial powers similar to those of a civil court (like the Monopolies and Restrictive Trade Practices Commission in India, and the Office of Economic Competition in Hungary). In other cases the authority can initiate criminal or civil proceedings against

---

[68] Notably in the United Kingdom.

[69] Notably Germany and the Netherlands.

[70] Notably in Australia, Belgium, Bulgaria, France, Hungary, India and Romania.

persons engaged in unlawful acts. The civil action can be brought in order to claim a final injunction and possibly also, although seldom, to recover damages on behalf of the complainant (as in Hungary).

158. Other administrative sanctions and proceedings are usually part of the regulation of competition in the public interest, such as provisions on colportage, pharmaceutical products, clearance sales and obligatory indications for food and beverages. However, such administrative proceedings, which normally lead to a fine, cannot be regarded as adequate remedies for the benefit of competitors.

E. *Sanctions Under Self-Regulation*

159. In some countries, a considerable proportion of the sanctions introduced to *protect consumers* stem from the voluntary self-regulation created by and for the advertising industry.[71] Where these systems function efficiently, the need for government regulation of the relevant commercial or industrial sectors is substantially reduced. In the United States of America, however, sanctions under self-regulation systems are severely limited by antitrust law because of concern that such systems might be used to restrict competition. The "codes" of self-regulation traditionally grant individual competitors or other market participants and consumers the same means of preventing or suppressing abuse, since there are normally no restrictions on the legal interests of the person entitled to start proceedings. Moreover, there are few formalities to meet regarding the form of the complaint, and decisions are taken within a short space of time.

160. Complaints under self-regulatory codes are investigated by specific bodies which, as mentioned above, may even have some semipublic character. Such bodies can require that the advertisement involved be *withdrawn or amended*, but compensation for damages is not usually possible under such self-regulatory provisions. Another effective sanction under a self-regulation code is *publication of the decision* of the relevant controlling body, including the name of the advertiser involved. Also, if the media concerned have adhered to the relevant code, they can decide not to publish advertising found to be

---

[71] Notably in Italy, the Netherlands and the United Kingdom.

in breach of it, and they may possibly refuse advertisements from agencies that defy the authority of the controlling body. However, if the advertiser involved is not likely to obey, or the complainant is not satisfied, the decisions of such bodies should be subject to appeal before a civil or administrative court. In the United Kingdom, for example, the Advertising Standards Authority can ask the Director General of Fair Trading to apply for a final injunction under the Control of Misleading Advertisements Regulations 1988 (or other relevant legislation) if it is not successful in persuading the advertiser of his wrong.

ANNEX

LIST OF LEGISLATIVE TEXTS CONCERNING PROTECTION AGAINST UNFAIR COMPETITION*

National Legislation

Argentina	– Law on Commercial Loyalty No. 22802 and Regulations, 1983 – Penal Code, Article 159
Australia	– Trade Practices Act (Sections 1-6, 52-55A, 75B-87A), 1974
Austria	– Federal Law Against Unfair Competition, 1923
Belgium	– Law on Trade Practices and Consumer Information and Protection, 1991
Bolivia	– Code of Commerce, Articles 66 to 71 – Penal Code, Articles 235 to 238
Brazil	– Code of Industrial Property (Law 7903 of 1945), Article 178 – Code of Industrial Property (Law 5772 of 1971), Articles 2(d) and 128
Bulgaria	– Law on the Protection of Competition, 1991
Canada	– Combines Investigation Act, 1976 – Competition Act, 1986 – Business Practices Act (Ontario), 1974 – Trade Practices Act (British Columbia), 1974 – Unfair Trade Practices Act (Alberta), 1975

---

* The information provided is not exhaustive. Translations of the titles of the legislative texts are not official.

Chile	– Law 18223 on Consumer Protection, 1983, Article 7
China	– Law on Protection Against Unfair Competition, September 1993

WIPO Arbitration and Mediation Center

ADMINISTRATIVE PANEL DECISION

Junta de Andalucia Consejeria de Turismo, Comercio y Deporte, Turismo Andaluz, S.A. v. Andalucía.Com Limited

Case No. D2006-0749

1. The Parties

The Complainant is Junta de Andalucia, Consejeria de Turismo, Comercio y Deporte, Turismo Andaluz, S.A., Malaga, Spain, represented by Landwell, PricewaterhouseCoopers, Sevilla, Spain.

The Respondent is Andalucia.Com Limited, Kingston, United Kingdom of Great Britain and Northern Ireland, represented by Norton Rose, London, United Kingdom of Great Britain and Northern Ireland.

2. The Domain Name and Registrar

The disputed domain name <andalucia.com> is registered with Total Registrations.

3. Procedural History

The Complaint was filed with the WIPO Arbitration and Mediation Center (the “Center”) on June 14, 2006. On June 20 and 23, 2006, the Center transmitted by email to Total Registrations a request for registrar verification in connection with the domain name at issue. On June 26, 2006, Total Registrations transmitted by email to the Center its verification response confirming that the Respondent is listed as the registrant and providing the contact details for the administrative, billing, and technical contact. In response to a notification by the Center that the Complaint was administratively deficient, the Complainant filed an amendment to the Complaint on June 29, 2006.

The Center verified that the Complaint together with the amendment to the Complaint satisfied the formal requirements of the Uniform Domain Name Dispute Resolution Policy (the “Policy”), the Rules for Uniform Domain Name Dispute Resolution Policy (the “Rules”), and

A mark consisting of the stylised word ANDALUCIA below a badge shaped logo comprising a stylised letter “A” in yellow on a part yellow and part blue background. The Spanish registration dates from June 10, 1991, and covers Classes 6: 12: 14: 16: 18: 24 – 25: 28 – 29: 32 – 35: 37 – 39 and 41 – 42. Complaint, Annex 3.

In addition, Complainant has registered other word marks in Spain incorporating the word “Andalucia”:

CALIDAD DE ANDALUCIA JUNTA DE ANDALUCIA	32 & 33
ALIMENTOS DE ANDALUCIA	32: 33: 38: 41
COYUNTURA ECONOMICA DE ANDALUCIA	16
FORO DEL TURISMO DE ANDALUCIA	16
ALTUR FERIA INTERNACIONAL DE TURISMO ANDALUZ	41
TURISMO ANDALUZ	16
JUNTA DE ANDALUCIA	1 to 45
EL EURO INFORMACION JUNTA DE ANDALUCIA CONSEJERIA DE ECONOMICA Y HACIENDA	35: 36: 38: 42
ITER JUNTA DE ANDALUCIA CONSEJERIA DE MEDIO AMBIENTE	16: 41 – 42
RESERVA NATURAL CONCERTADA JUNTA DE ANDALUCIA	9: 14: 16: 25: 36: 39: 41 to 43
PARQUE ARIURBANO JUNTA DE ANDALUCIA	9: 14:l 16: 25: 36: 39l 41 – 43
MONUMNTO NATURALE JUNTA DE ANDALUCIA	9: 14:l 16: 25: 36: 39l 41 – 43
GRAN ENCICLOPEDIA DE ANDALUCIA JUNTA DE ANDALUCIA	9: 16: 38: 41
A TURISMO DE ANDALUCIA	6: 12: 14: 16: 18: 24 – 25: 28 – 29: and 32 - 34

On March 30, 2004, Complainant filed a Community trademark, comprising a logo and the words JUNTA DE ANDALUCIA in classes 9: 14: 16: 25: 29-36: 38: and 41-45.

Complainant also points out that “Andalucia” is part of the name of institutions in the region which belong to the Junta de Andalucia, including the Andalucian Parliament, the Board of Governors of Andalucia, and the Andalucia Institute for Statistics, to name only a few. “Andalucia” is also part of the name of many public service companies such as Radio Television de Andalucia.

Complainant has spent in excess of Euros 67 million from 2001 through 2004 in the promotion of the region of Andalucia, including the promotion of public and tourist interest events, using such means as television and radio advertisements, posters, meeting with tour operators, and establishing a presence at fairs and international tourist events. Complaint, Annexes 11 and 12. This promotion has continued into 2005 and 2006. Complaint, Annex 12.

Complainant’s motives in promoting tourism are not merely cultural or altruistic, but are the equivalent of those of commercial ventures: the goals include the increase of revenues for Andalucian businesses and thereby achieving a corresponding increase in the tax revenues of Complainant.

B. Respondent’s Facts

Christopher Chaplow is the founder of the Andalucia.Com group of companies and managing director of Andalucia.Com Limited, the Respondent in these proceedings. Mr. Chaplow is a shareholder in Andalucia.Com Ltd, which in turn owns Andalucia Web Solutions Ltd. in the UK and Andalucia.com SL in Spain. Andalucia Web Solutions Ltd. owns AndWebSol SL in Spain, which runs Andalucia Web Solutions. The domain name <andalucia.com> is owned by Andalucia.com Ltd. and Andalucia.com SL pays an annual license fee to make commercial use of the domain name. Affidavit of Christopher John Chaplow (the “ChaplowAffidavit”), Response, Annex 1, at paragraph 5.

The aim of the business enterprise as Christopher John Chaplow states in the Affidavit (at paragraph 54) was and is “to provide good information that tourists and later non-Spaniards who have established residence in Andalucia would find interesting ” Response

On October 14, 1997, Respondent received an email from the webmaster at “www.caan.es”, the website of the Comunidad Autonimo de Andalucia, the correct political title of the region of Andalucia of which Junta de Andalucia is the governing body. The webmaster requested a link from Complainant’s website to the website at “www.caan.es” and added, “PS – Congratulations on your site”. Response, Annex 1, paragraph 35.

In March 1999, Respondent saw a paid banner on Yahoo inviting the user to visit “Andalucia”. By clicking on the link, Respondent was taken to “www.andalucia.org” where there was an “under construction” holding page. Upon performing a Whois search, Respondent found that Turismo Andaluz SA was the registrant of the domain name <andalucia.org>. This was the first time that Respondent became aware that Turismo Andaluz SA might be interested in setting up a website for the purpose of promoting tourism in Andalucia. Response, Annex 1, paragraphs 37 and 38.

In August 2000, Respondent filed for the mark ANDALUCIA.COM in Spain. On April 16, 2001, Respondent was informed that its application had been suspended because Complainant had objected that the mark was confusingly similar to Complainant’s registered marks, JUNTA DE ANDALUCIA and A ANDALUCIA. This was the first time that Respondent learned of the A ANDALUCIA mark. Response, Annex 1, paragraphs 43-45.

As Respondent’s website was directed at English speakers, Respondent decided to register the trademark ANDALUCIA.COM in the United States and the United Kingdom. On November 30, 2000, Respondent filed for a mark with the United States Patent & Trademark Office (“USPTO”). Due to an administrative error by Respondent’s trademark agents in Madrid, they were forced to refile on October 9, 2003. The mark issued on July 5, 2005. Complainant had filed for a mark with the USPTO on July 23, 2002, but did not object to Respondent’s mark. Response, Annex 1, paragraphs 46 and 48.

On January 19, 2002, Respondent applied for a UK trademark on ANDALUCIA.COM. The mark was granted on July 29, 2002. Response, Annex 1, paragraph 47.

In March 2002, Respondent noticed on the website to which the domain name <andaluciajunta.es> maintained by Complainant a link to “Guias de Hoteles [Translation: “Hotel Guide”] (Inglés)”. By clicking on the link, Respondent was taken to the Accommodation Home Page on the website to which the domain name at issue resolves. This was recorded by a Notary Public. Response, Annex 1, paragraph 50.

On June 14, 2006, Respondent received a copy of the Complaint in the present matter. Until that time, Respondent had no inkling that a dispute existed.

5. Parties’ Contentions

A. Complainant

Complainant contends that the domain name at issue is identical or confusingly similar to marks in which Complainant has rights in that Complainant registered marks well prior to the registration of the domain name at issue, that Respondent has no rights or legitimate interests in respect of the domain name at issue because Respondent knew or should have known of Complainant’s registered marks, and that Respondent has registered and is using the domain name at issue in bad faith since it has no license or other permission of the mark owner to use the mark in a domain name.

B. Respondent

Respondent contends that Complainant has no interest in a registered mark that is confusingly similar to the domain name at issue, in that Complainant’s mark is a word and design mark and that the predominant feature of Complainant’s mark is not the word, but the design, and further that in a geographic mark Complainant must establish secondary meaning as to source and that Complainant has failed to do so. Respondent contends that it has rights and legitimate interests in respect of the domain name at issue in that it has expended resources over the years in the development of the informational website to which the domain name resolves and that Complainant, knowing of Respondent’s website, failed to object for at least five years to Respondent’s use of the domain name. Respondent contends that it did not register the domain name at issue in bad faith, since at the time it registered the domain name it did not know of Complainant’s mark. Respondent contends that it did not use the domain name in bad faith, since it had no idea that Complainant objected to its use of the domain name at issue until it received a copy of the complaint in this matter.

Respondent alleges that the filing of the Complaint was done in bad faith and asks for a finding of Reverse Domain Name Hijacking.

6. Discussion and Findings

Paragraph 15(a) of the Rules instructs the Panel as to the principles the Panel is to use in determining the dispute: “A Panel shall decide a complaint on the basis of the statements and documents submitted in accordance with the Policy, these Rules and any rules and principles of law that it deems applicable.”

law marks. Rights in trademark not found). However because of the name and design mark registered in 1991, the Panel finds that none of these cases are determinative.

The Final Report of the Second WIPO Internet Domain Name Process, issued September 3, 2001, ("Second WIPO Report") dealt in part with the question of protectability for geographic indications under the UDRP. The Second WIPO Report notes that the existing international legal framework for the prohibition of false and deceptive indications of geographical source and the protection of geographical indications was developed for, and applies to, trade in goods.

In the present case both Complainant and Respondent are using the geographic indication to provide information services pertaining to the geographic region which the term describes. Can this be said to be a trademark use of a term, registered or not, when that term is used in the same manner that one might use a term in a search engine to find information that resides somewhere on the Internet? Even if a term has been registered as a mark, can it really have the status of a mark if it calls to mind not the source of goods or services, but only a geographic location?

Clearly, a geographic indication can acquire secondary meaning and serve as an indication of the source of goods or services. "Amazon" calls to mind not only the river and the geographic region through which it flows, but also the well-known online retailer. In the United States, "Sinai" is not only the geographic region of Egypt bordering Israel, but also designates kosher meats prepared by a certain American company. But could the use of the terms "Amazon" and "Sinai" really be said to be trademark use if the only way in which they are used is to provide information about the geographic regions to which they refer? Isn't this the informational equivalent of using apple to sell apples?

However, the Panel is faced with a situation where Complainant holds valid service marks issued by the Spanish trademark authorities. Can ANDALUCIA be said to be the dominant feature of those marks? Although the Panel believes it is a close call, the Panel concludes that at least as to the A ANDALUCIA word and design mark, ANDALUCIA is the dominant feature in the mark. Therefore, the Panel finds that the domain name at issue is confusingly similar to a mark in which Complainant has rights.

B. Rights or Legitimate Interests

In April 1996, Respondent registered the domain name at issue. At the time that Respondent registered the domain name, Respondent has stated under oath that he was unaware of Complainant's trademarks.

Since April 1996, Respondent has used the domain name at issue on an information site at which information is furnished concerning the region of Andalucia. Respondent's use of the domain name for this purpose was obviously open and notorious, as it was accessible by anyone with a computer and Internet access. In the summer of 1996 Respondent contacted Complainant's tourism department to seek approval for use of copyrighted text from a brochure on Respondent's website. In early 1997 Respondent applied to another agency of Complainant for a grant to help build Respondent's tourism website. In October 1997 Respondent received an email from the webmaster of the website for the political body of Andalucia requesting a link from Respondent's website and congratulating Respondent on Respondent's website.

In early 1999 Complainant wanted to register the domain name <andalucia.com>, but found that it had been previously registered. Complainant registered the domain name <andalucia.org> instead. In March 1999, Respondent saw a banner add on Yahoo inviting users to visit "Andalucia". When Respondent clicked on it, Respondent was taken to the website "www.andalucia.org" where an "under construction" holding page was posted.

In November 1999, upon learning that the domain name <andalusia.com> was then for sale, Respondent purchased the domain name for US$800 and has been using it since as gateway pages for search engine optimization.

In August 2000, Respondent filed for the registration of the mark ANDALUCIA.COM. On April 16, 2001, Respondent learned that its application had been suspended because of objection to the mark by Complainant on the grounds that the mark was confusingly similar to marks that Complainant owned, including the A ANDALUCIA word and design mark. This is the first time that Respondent learned that Complainant owned an A ANDALUCIA mark.

During the period 2000-2003, Respondent applied for and registered a word and design mark ANDALUCIA.COM in the United States and in the United Kingdom, since Respondent's website was aimed at English language speakers. Although Complainant had also filed for a word and design mark on ANDALUCIA with the USPTO, Complainant did not object to Respondent's filing.

In March 2002, Respondent discovered a link on one of Complainant's websites that linked to Respondent's website, and specifically to its listing of hotels in Andalucia.

Respondent did not know that a dispute existed until June 14, 2006, when it received a copy of the Complaint in this matter.

The panel believes that the use of a geographic indication in a domain name is analogous to the use of a generic descriptive term in a domain name. Thus it finds the cases on the use of generic descriptive terms in domain names instructive.

The WIPO Overview of WIPO Panel Views on Selected UDRP Questions ("WIPO Overview") sets out the consensus views of WIPO panelists on selected issues. Section 2.2 of the WIPO Overview specifically addresses the question, "Does a respondent automatically have a legitimate interest in a domain name comprised of a generic (dictionary) word(s)?" While the general rule is not necessarily, there is an exception, that is stated thusly: "However: If a respondent is using a generic word to describe his product/business or to profit from the generic value of the word without intending to take advantage of complainant's rights in that word, then it has a legitimate interest."

Some cases on this subject are illustrative. In *Porto Chico Stores, Inc. v. Otavio Zambon,* WIPO Case No. D2000-1270, Complainant sold clothes and cosmetics under the LOVELY GIRL trademark and used the domain name <lovelygirl.com> to resolve to a website at

7. Decision

For all the foregoing reasons, the Complaint is denied.

ADMINISTRATIVE PANEL DECISION

HER MAJESTY THE QUEEN, in right of her Government in New Zealand, as Trustee for the Citizens, Organizations and State of New Zealand, acting by and through the Honourable Jim Sutton, the Associate Minister of Foreign Affairs and Trade
v.
Virtual Countries, Inc

Case No. D2002-0754

1. The Parties

The Complainant is HER MAJESTY THE QUEEN, in right of her Government in New Zealand, as Trustee for the Citizens, Organizations and State of New Zealand, acting by and through the Honourable Jim Sutton, the Associate Minister of Foreign Affairs and Trade c/o The New Zealand Trade Development Board, Auckland, New Zealand.

The Respondent is Virtual Countries, Inc., Seattle, United States of America.

2. The Domain Name and Registrar

The Domain Name is <newzealand.com>.

The Registrar is Network Solutions, Inc.

to this decision.

While the Complainant acknowledged receipt of the Procedural Order, no Response has been received (in time or at all).

The Panel was properly constituted. The undersigned Panelists submitted Statements of Acceptance and Declarations of Impartiality and Independence.

No further submissions were received by WIPO or the Panel, as a consequence of which the date finally scheduled for the Panel's Decision is November 27, 2002.

4. Factual Background

The Complainant is Her Majesty The Queen, in right of her Government in New Zealand, as Trustee for the Citizens, Organizations and State of New Zealand, acting by and through the Honourable Jim Sutton, the Associate Minister of Foreign Affairs and Trade. New Zealand is an Independent Constitutional Monarchy (the Complainant is its Head of State) situated in the South Pacific Ocean.

The Respondent is Virtual Countries, Inc, a company based in Seattle, USA. It registered the Domain Name in 1996, and has for several years been operating a website containing information about New Zealand at "www.newzealand.com".

The Respondent is the proprietor of US trademark registration number 2557448 (filing date February 11, 2000) for NEWZEALAND.COM for business advertising.

On June 29, 2001, the Complainant filed five trademark applications in New Zealand for the mark NEW ZEALAND in classes 22, 29, 31, 33 and 41.

In the course of 2000 and 2001, the Respondent was in communication with various third parties in relation to transfer of the Domain Name, but there is a dispute as to the nature of some of those communications and who initiated them. Some of those third parties clearly came away with the impression that the Respondent would be willing to transfer the Domain Name in return for a very large sum of money.

5. Parties' Contentions

A. Complainant

The Complainant's contentions are conveniently summarised in paragraph 75 of the Complaint which reads as follows:-

"75. The Criteria articulated in clause 4(a) of the Policy have been established:

75.1 The name NEW ZEALAND is a trade and service mark in the hands of the Complainant, as the Head of State of New Zealand. The domain name in dispute is identical with that trademark.

75.2 Virtual Countries has no rights or legitimate interests in respect of the domain name because only the Complainant as Head of the Sovereign State of New Zealand, or its agencies, can have those rights or interests.

75.3 The domain name has been registered and is being used in bad faith. Virtual Countries registered the domain name in contravention of the known and established rights to the trademark NEW ZEALAND owned by the citizens, institutions and state of New Zealand represented by New Zealand's Head of State, her Majesty the Queen in Right of her Government in New Zealand. Further, Virtual Countries' purpose was to obtain the domain name and then sell it on for a substantial profit to a third party. Its current website is mere token use designed solely to seek to legitimise its improper acquisition of the domain name."

B. Respondent

Th R d t j t th C l i t' ll ti lt d i th t N Z l d i bl f b i t d k i k lt d i th t it h i ht l iti t i t t i t f th D i N d i t t th f t th t it h th

(ii) The Respondent has no rights or legitimate interest in respect of the Domain Name; and

(iii) The Domain Name has been registered in bad faith and is being used in bad faith.

If the Complaint fails, the Panel has to have regard to paragraph 15(e) of the Rules and in particular the following sentence namely:

"If after considering the submissions the Panel finds that the Complaint was brought in bad faith, for example in an attempt at reverse domain name hijacking or was brought primarily to harass the domain name holder, the Panel shall declare in its Decision that the Complaint was brought in bad faith and constitutes and abuse of the Administrative Proceeding."

Reverse Domain Name Hijacking is defined in paragraph 1 of the Rules as meaning "using the Policy in bad faith to attempt to deprive a registered domain name holder of a domain name."

Identical or confusingly similar

The first thing that a Complainant is required to prove under paragraph 4(a) of the Policy is that the Domain Name is identical or confusingly similar to a trademark or service mark in which the Complainant has rights.

The Domain Name, absent the generic domain suffix, is NEW ZEALAND and the name in which the Complainant claims trademark and service rights is also NEW ZEALAND. Accordingly, the Domain Name and the Complainant’s claimed trade/service mark are identical. But is NEW ZEALAND a trademark or service mark?

In paragraph 19 of the Complaint the Complainant claims that "the goods and services branded NEW ZEALAND have a single trade source, namely the State and Territory of New Zealand."

In paragraph 16 of the Complaint, the Complainant asserts that:-

"NEW ZEALAND is a trade and service mark owned collectively by all NZ citizens and their institutions represented by the Head of State that is to say the Complainant. This trademark is used to identify those goods and services produced by and for citizens, organisations and the State of New Zealand from the goods and services produced by citizens, organisations and/or States of other countries."

The Complainant has no trademark registrations of the name and has not produced in evidence details of any such registrations in the name of anybody else whom she represents. In passing, the Panel observes that the trademark and service mark applications for NEW ZEALAND filed in New Zealand by the Complainant of themselves are no indication that the Complainant has any relevant rights in the name and the Panel ignores them. On their face they are open to the objection that they are deceptive unless the specifications are restricted to goods/services from New Zealand; yet, if the specifications are so limited, the inherent descriptiveness of the name will be highlighted.

The Complainant in her representative capacity (as identified above) claims common law rights in the name. In other words, NEW ZEALAND is claimed to be a trademark or service mark in which the Complainant has unregistered rights.

The primary function of a trademark or service mark is to identify the proprietor as the source of the goods or services to which the mark has been applied and, in so doing, to distinguish the proprietor’s goods or services from the goods or services from the goods or services of other traders.

The primary function of the name NEW ZEALAND is to identify a geographical location, which, while inevitably the geographical source of goods and services, is not the specific trade source of those goods and services.

As an indication of geographical origin, when properly applied to goods and services, the name NEW ZEALAND does indeed serve to distinguish goods and services emanating from New Zealand from the goods and services emanating from other geographical areas. But indications of geographical origin are not of themselves trade/service marks. They are not trade/service marks for precisely the reason that they serve to indicate geographical origin. Trade/service marks on the other hand indicate a very precise trade origin. They identify the specific trader, the source of the goods/services. Ordinarily, an indication of geographical origin cannot serve that purpose. A wine label reading "NEW ZEALAND wine", for example, indicates that the wine emanates from New Zealand, but it does not indicate which of the hundreds of New Zealand wine producers is the source of that particular wine.

Indications of geographical origin, whether they be the names of towns, cities, regions, countries or indeed continents are certainly capable of being trademarks or service marks, but only when the geographical significance of the name is displaced. This usually only occurs after long and extensive use of the name as a brand by a single trader in such a manner as to distinguish his goods and services from those of his competitors. Thus, in England, for example, to golfers, NEW ZEALAND is well known as being the name of a golf club; to the general public ICELAND is a well known supermarket chain and food brand MALVERN the name of a town is well known as a brand of mineral water and YORK the name of a city is a well known

5. By the same token New Zealand producers of wine and lamb, for example, can restrain by way of the ‘extended form’ passing off action misuse of the geographical term ‘NEW ZEALAND’ when applied to wine/lamb et cetera.

6. Since terms protectable by way of passing off actions are common law/unregistered trademarks (see 3 above), ‘SCOTCH’ in relation to whisky, ‘CHAMPAGNE’ in relation to sparkling wine from the Champagne region of France and ‘NEW ZEALAND’ in relation to anything emanating from New Zealand are all unregistered trademarks.

The fundamental flaw in this line of reasoning is that the ‘classic form’ passing off action and the ‘extended form’ passing off action are two completely different animals, albeit both variants of the tort of passing off. The ‘classic form’ passing off action is designed to prevent misrepresentations as to trade origin and therefore serves to protect trade/service marks, such marks being indications of trade origin, whereas the ‘extended form’ passing off action serves to protect product descriptions in relation to which groups of traders have a shared goodwill. Self-evidently, product descriptions, which are available for use by all traders in such products, cannot constitute trade/service marks.

The Panel finds that the Complainant has failed to prove that ‘NEW ZEALAND’ is a trade/service mark in which the Complainant has rights.

If support is needed for this conclusion of the Panel, one need look no further than the New Zealand Government’s response dated March 4, 2002, to the WIPO Secretariat questionnaire on the protection of country names in the domain name system. The following paragraph is of particular interest:-

"New Zealand law, custom or practice does not preclude the use of country names under any circumstances. New Zealand does not see any reason why the domain names should be excepted from this general rule."

Respondent’s Rights or Legitimate Interests

In light of the foregoing finding, it is unnecessary for the Panel to address this topic. However, the Panel cannot but observe that the Respondent is the proprietor of a trademark registration in the United States in respect of the Domain Name and that the Domain Name is connected to a website, which, although sketchy and badly in need of being updated, appears to the Panel at one time to have been a genuine website concerned with New Zealand. Accordingly, even if the Complainant does have trademark or service mark rights in respect of the Domain Name, the Panel would have required a lot more evidence than the Complainant has put before the Panel to persuade it that the Respondent has no rights or legitimate interests in respect of the Domain Name.

Bad Faith

In light of the finding under paragraph 4(a)(i) it is unnecessary for the Panel to address this topic, but, again, the Panel has nothing before it to suggest any bad faith on the part of the Respondent. Even if, as the Complainant asserts, the Respondent registered the Domain Name with a view to selling it for a very large sum of money, there is nothing to suggest that the Respondent did so in order to sell it to the Complainant or a competitor of the Complainant (paragraph 4(b)(i) of the Policy). Significantly, there is nothing to suggest that when the Respondent registered the Domain Name it intended to violate anybody’s trademark rights, nor in the view of the Panel could the Respondent sensibly have anticipated that by registering the Domain Name it would be violating any such rights. Accordingly, whether one adopts an objective test or a subjective test in assessing ‘bad faith’, the allegation has to fail.

Reverse Domain Name Hijacking

Have those responsible for this Complaint used the Policy in bad faith to attempt to deprive the Respondent, a registered domain name holder, of the Domain Name? In addressing this question, the members of the Panel were unanimous in concluding that the filing of a complaint in the knowledge that the complaint is unmeritorious constitutes ‘use of the Policy in bad faith’ within the meaning of paragraph 1 of the Rules.

Prior to reading the Respondent’s supplementary submissions, the members of the Panel were divided on the question of reverse domain name hijacking. It seemed to some of the Panel that there might just be enough case law under the Policy (e.g. the <barcelona.com> decision) to encourage those responsible for the Complaint to hold a genuine belief in the merits of the Complaint.

However, having read the Response of the New Zealand Government to the WIPO Secretariat’s questionnaire referred to above, the Panel is unanimous in its view that when the Complaint was launched, those responsible for the Complaint, the New Zealand Government, were well aware that a claim to trademark and service mark rights in respect of NEW ZEALAND was baseless. Moreover, that document makes it clear that the New Zealand Government regards the protection of country names (*qua* country names) as being outside the scope of the Policy and does not approve of the Policy being extended to cover those country names, which are not trademarks.

There might have been scope for an argument in mitigation that the limb of the New Zealand Government responsible for the Complaint is the Ministry of Foreign Affairs and Trade whereas the limb of the New Zealand Government responsible for the Response to the questionnaire was the Ministry of Economic Development but that argument has not been put to the Panel Indeed the Complainant has not responded to the allegation of reverse domain name hijacking despite the Panel’s invitation

International Standards for Business, Government and Society

Glossary for ISO 3166 - Codes for countries and their subdivisions

Country codes (ISO 3166-1 and ISO 3166-3)

Alpha-2 code – a two-letter code that represents a country name, recommended as the general purpose code

Alpha-3 code – a three-letter code that represents a country name, which is usually more closely related to the country name

Alpha-4 code – a four-letter code that represents a country name that is no longer in use. The structure depends on the reason why the country name was removed from ISO 3166-1 and added to ISO 3166-3.

Country names might be removed from ISO 3166-1 for various reasons

- A country might change a significant part of its name, for example Burma (BU) was changed to Myanmar (MM) in 1989. The code element for the formerly used country name is therefore BUMM.
- A country may divide into two or more new ones, for example Czechoslovakia was divided into Czech Republic and Slovakia in 1993. The code element for the formerly used country name Czechoslovakia is CSHH, HH meaning that no single successor country exists.
- Two or more countries may merge for example Democratic Yemen (YD) and Yemen Arab Republic (YE) merged into the Republic of Yemen (YE) in 1990. The code element used for the formerly used country name Democratic Yemen is YDYE.

Unassigned codes – codes that have not been assigned to country names.

Reserved codes – codes that do not represent a country name in the standard but that have been reserved for a certain use. While a code is reserved it will not be used in the standard to represent a country. There are different types of reserved codes.

- *Exceptionally reserved codes* – codes that have been reserved for a particular use at special request of a national ISO member body, governments or international organizations. For example, the code UK has been reserved at the request of the United Kingdom so that it cannot be used for any other country.
- *Transitionally reserved codes* – codes that are reserved during a transitional period while new code elements that may replace them are taken into use. This results from changes in the standard. For example, the country codes for the former Yugoslavia have been reserved when it was removed from ISO 3166-1.
- *Indeterminately reserved* – a code that has been indeterminately reserved for use in a certain way. Usually this is justified by their presence in other coding systems. For example, several codes have been reserved by the World Intellectual Property Organization (WIPO) because they have been used in its Standard ST.3.

Formerly used codes – Codes that used to be part of the standard but that are no longer in use. See alpha-4 codes above.

Subdivision codes (ISO 3166-2)

Subdivision codes – code that represents the name of a principal subdivision (e.g province or state) of countries coded in ISO 3166-1. This code is based on the two-letter code element from ISO 3166-1 followed by a separator and up to three alphanumeric characters. The characters after the separator cannot be used on their own to denote a subdivision, they must be preceded by the alpha-2 country code.

For example – ID-RI is the Riau province of Indonesia and NG-RI is the Rivers province in Nigeria.

The codes denoting the subdivision are usually obtained from national sources and stem from coding systems already in place in the country.

New gTLD Program

Initial Evaluation Report

Report Date: 12 July 2013

Application ID:	1-1315-58086
Applied for String:	AMAZON
Priority Number:	1156
Applicant Name:	Amazon EU S.à r.l.

Overall Initial Evaluation Summary

Initial Evaluation Result — **Pass**

Congratulations!

Based on the review of your application against the relevant criteria in the Applicant Guidebook (including related supplemental notes and advisories), your application has passed Initial Evaluation.

Background Screening Summary

Background Screening — **Eligible**

Based on review performed to-date, the application is eligible to proceed to the next step in the Program. ICANN reserves the right to perform additional background screening and research, to seek additional information from the applicant, and to reassess and change eligibility up until the execution of the Registry Agreement.

Panel Summary

String Similarity — **Pass - No Contention**

The String Similarity Panel has determined that your application is consistent with the requirements in Sections 2.2.1.1 and 2.2.1.2 of the Applicant Guidebook, and your applied-for string is not in contention with any other applied-for strings.

DNS Stability — **Pass**

The DNS Stability Panel has determined that your application is consistent with the requirements in Section 2.2.1.3 of the Applicant Guidebook.

Geographic Names — **Not a Geographic Name - Pass**

The Geographic Names Panel has determined that your application does not fall within the criteria for a geographic name contained in the Applicant Guidebook Section 2.2.1.4.

Registry Services — **Pass**

The Registry Services Panel has determined that the proposed registry services do not require further review.

Technical & Operational Capability — **Pass**

The Technical & Operational Capability Panel determined that:

Your application meets the Technical & Operational Capability criteria specified in the Applicant Guidebook.

ICANN
The Internet Corporation for Assigned Names and Numbers

7 April 2014

Governmental Advisory Committee
Via, Ms. Heather Dryden
Chair, Governmental Advisory Committee

Re: Governmental Advisory Committee (GAC) Advice – .AMAZON (and related IDNs)

Dear Ms. Dryden:

I am pleased to inform you that the ICANN Board New gTLD Program Committee (NGPC) continues to make progress to address the open item of advice from the GAC concerning the New gTLD Program applications for .AMAZON, and related IDNs. As you are aware, in its Durban Communiqué, the GAC advised the ICANN Board that "the GAC has reached consensus on GAC Objection Advice according to Module 3.1 part I of the Applicant Guidebook on the following application: .amazon (application number 1-1315-58086) and related IDNs in Japanese (application number 1-1318-83995) and Chinese (application number 1-1318-5591)."

As previously reported, ICANN commissioned an independent, third-party expert to provide additional advice on the specific issues of application of law at issue. The analysis attached has been received and is being considered by the NGPC as it continues to deliberate on the appropriate next steps to address the GAC's advice on .AMAZON (and related IDNs).

ICANN provides this analysis to keep the parties informed and welcomes any additional information that they believe is relevant to the NGPC in making its final decision on the GAC's advice on .AMAZON (and related IDNs). ICANN has requested that Amazon EU S.à r.l. (the applicant of the .AMAZON applications identified in the GAC's advice) submit any additional information by 14 April 2014.

The NGPC is committed to giving due consideration to the complex issues at the crux of the matter, and reiterates its commitment to the most timely response possible to all interested parties including the distinguished members of the GAC. We appreciate the collaboration of the GAC in the New gTLD Program

Jérôme Passa

Contact Information Redacted

I, the undersigned Jérôme Passa, *agrégé* in law, professor at the Université Panthéon-Assas (Paris II, France), have been requested by ICANN to provide an opinion on the well-foundedness of various objections raised against the reservation of the new gTLD '.amazon'. This legal opinion is set out below.

1. In 2011, the Internet Corporation for Assigned Names and Numbers (ICANN), which is responsible for the worldwide administration of the Domain Name System (DNS), launched a new domain name system offering operators the possibility of reserving new gTLDs (generic Top Level Domains) designed to provide suffixes for new domain names.

Under this system, a company can reserve its own name or that of its trade mark or one of its trade marks, such as '.vuitton' or '.ipad', for example, as a new gTLD. Geographical names and purely generic product or service names can also be reserved in this way.

The system and, in particular, the conditions for assigning these new gTLDs are set out in a lengthy document entitled the Applicant Guidebook.

When, after an in-depth evaluation process, ICANN decides to assign a new gTLD to an applicant, the parties enter into an agreement known as a 'registry agreement' under which ICANN delegates the management of the new suffix to the beneficiary; the beneficiary thus becoming the registry operator for the new gTLD.

The beneficiary to whom the new gTLD is reserved is the only one permitted to

2. Reservation of a new gTLD may infringe prior third-party rights or, more generally, interests.

ICANN is clearly well aware of this issue since a certain number of provisions in the Applicant Guidebook are aimed at preventing this type of infringement.

The beneficiary of a prior right or interest, for example, can object to the assignment of a gTLD (Applicant Guidebook, 3.2.1).

In addition, on issues affecting its member states, ICANN's Governmental Advisory Committee (GAC), an inter-governmental committee made up of representatives of national governments and intergovernmental organisations, can issue advice to ICANN's board on applications for new gTLDs (Applicant Guidebook, section 3.1).

The advice of the GAC, which may suggest that ICANN refuse to reserve a given gTLD (as in the case of '.amazon as we shall see below) is sent to the applicant which has a right of reply.

3. In view of the objections raised by the GAC and various member states, this concern to protect prior third-party rights and interests has led ICANN to consider the legitimacy and opportuneness of assigning the new gTLD '.amazon' to its applicant, namely the Amazon company .

The undersigned has been consulted on the specific issue of whether, on strictly legal grounds in the field of intellectual property law relating, in particular, to the rules of international law or fundamental principles, ICANN would be **bound**:

- to assign the new gTLD in question to its applicant, or, to the contrary,
- to refuse to assign it in order to protect prior rights as mentioned above.

In essence, the answer lies in whether or not a prior right actually exists and, where this is the case, in the nature and function of the right and the scope of protection conferred upon it by the rules of law.

Consequently, the undersigned will limit his opinion to the provisions of applicable international **intellectual property** agreements, to the fundamental principles governing this area of law and, where applicable, to the rules of supranational law constituted by the provisions of the applicable European Union legislation in the field of intellectual property.

With a few individual exceptions there will be no reference to the provisions of the

4. Amazon, a US corporation and owner of the *Amazon* trade mark for various products and services in a wide range of countries, has made an application for the new gTLD '.amazon'.

Objections have been raised against this application by various Latin American countries, including Brazil and Peru, through which the River Amazon flows and whose territories form part of the river's 5.5 million km^2 plain, known as Amazonia.

These objections were passed on by the GAC which recommended that ICANN reject Amazon's application.

The issues currently facing ICANN are:

- whether the rules and principles cited in support of these objections and reiterated in the unfavourable advice issued by the GAC are of such nature as to oblige ICANN to reject the application filed by Amazon (A) or, to the contrary,

- whether the rules and principles cited by Amazon in its response of 23 August 2013 to the GAC's advice oblige it to reserve the new gTLD '.amazon' (B).

A.- Concerning the objections to the assignment of the new gTLD '.amazon'

5. Though the term 'amazon' does not appear to correspond to the name of the Amazonia region in any language, and in particular in Spanish, Portuguese or English, an objection against the reservation of the new gTLD '.amazon' for Amazon might, in principle, nevertheless be raised on the basis of the notion of 'geographical indication' as defined in intellectual property law.

Indeed, where a geographical indication is protected on this basis it is protected not simply against the use of identical names but also, in most legal systems, against the use of names which imitate or invoke it. This is only logical since the use of a name which is merely similar may also be designed to take advantage of the reputation of the geographical indication or result in a reduction in its attractiveness in the eyes of the public.

Thus, if the names 'Amazonia' and 'Amazonas' were geographical indications, it would, given the evident similarity of the names in question, be possible to protect them against the use of the name 'Amazon'.

Indeed, the geographical name of a place can constitute a geographical indication and be recognised and protected as such under intellectual property law only if there exists in the public mind a link between the place in question and particular qualities or a reputation for specific products of that place because these qualities or this reputation are attributed to this geographical origin.

Thus, Article 22(1) of the TRIPS Agreement, which forms Annex I C of the Agreement establishing the World Trade Organisation and is binding on a great number of states, provides that “geographical indications are, for the purposes of this Agreement, indications which identify a good as originating in the territory of a Member, or a region or locality in that territory, where a given quality, reputation or other characteristic of the good is essentially attributable to its geographical origin.”

Both European Union law and certain international conventions draw a distinction between such geographical indications based on the strength of the link between the geographical origin and the characteristics and qualities of the product in question. For example, the various European regulations on geographical indications draw a distinction between appellations of origin and geographical indications in the strict sense of the term.

Appellations of origin are the geographical names with the closest link between geographical origin and product characteristics or qualities. For example, Article 5(1) of Regulation (EU) No 1151/2012 of 21 November 2012 on quality schemes for agricultural products and foodstuffs[1] provides that “‘designation of origin’ is a name which identifies a product: (a) originating in a specific place, region or, in exceptional cases, a country; (b) whose quality or characteristics are essentially or exclusively due to a particular geographical environment with its inherent natural and human factors; and (c) the production steps of which all take place in the defined geographical area.”

This definition is based closely on that given in Article 2(1) of the Lisbon Agreement for the Protection of Appellations of Origin and their International Registration of October 31, 1958, an international convention which came into effect in 1966 and which defines the term ‘appellation of origin’ as “the geographical denomination of a country, region, or locality, which serves to designate a product originating therein, the quality or characteristics of which are due exclusively or essentially to the geographical environment including natural and human factors.”

Geographical indications in the strict sense of the term differ from appellations of origin in that the link between the qualities or character of a product and its locality of origin is more tenuous. Indeed, Article 5(2) of the aforementioned EU Regulation provides that "'geographical indication' is a name which identifies a product: (a) originating in a specific place, region or country; (b) whose given quality, reputation or other characteristics is essentially attributable to its geographical origin; and (c) at least one of the production steps of which take place in the defined geographical area." The effect of geographical provenance on product characteristics is thus required, but not specified, and may therefore relate to both natural or human factors.

7. In many legal systems the protection of geographical indications in its wider sense is dependent on the completion of certain formalities in the country or region – such as the European Union – of origin of the products in question. This may be through either statutory recognition or registration with an administrative authority. In both cases, the formalities will define the geographical area in which the products in question must be produced, manufactured or processed and specify the production or manufacturing conditions to be fulfilled in order for the products to be identified under the geographical indication in question.

However, in certain legal systems – including under French law, for example[2] – a geographical name which is not – or not yet – recognised either by statute or by registration can still be afforded a certain degree of protection where the products from the geographical area in question are deemed to have special characteristics or qualities.

8. Under intellectual property law, a geographical name enjoys no status, regime or particular protection where it designates a place which is not specially known by the public for its products and services, whatever they may be. This is the case where this place is not the origin of any particular products or services or where the products or services originating in it do not or are not deemed to have any particular characteristics due to this origin in the minds of the public.

Such conclusion clearly results from the law governing geographical indications. It also emerges from the rules governing the relationships – frequent in practice – between trade marks and geographical names in most legal systems and in particular under EU and French law.

For example, it has been held in France – and the solution would be the same in most legal systems – that a trade mark registered for clothing can validly consist of or contain the name 'Boston' even if the products in question are not manufactured in Boston as long as this US city has no particular reputation for clothing[3], which would only be the case if clothing made in Boston possessed particular characteristics or qualities because of its origin or a reputation in the minds of the public.

In this example the name 'Boston' is a **neutral geographical name** for clothing which has no impact under trade mark law.

It is also accepted that a trade mark consisting exclusively of the geographical name of a place will be refused or invalidated as being devoid of distinctive character if the place is the place of origin of the products covered by the trade mark, in this case the trade mark being, in effect, deemed to be descriptive of one of the characteristics of the products in question, i.e. their geographical provenance.

It has, however, also been held, notably by the General Court of the European Union, that this solution applies only where the geographical name has a certain reputation for the products in question in the minds of the public.

Thus in a judgment dealing with the trade mark *Port Louis*, consisting of the name of the capital of Mauritius, registered for textile products, the General Court underlined that "the registration as a Community trade mark of names designating certain geographical places already reputed or known for the category of products in question and which consequently have a link with this category in the eyes of interested parties"[4] is not possible. The fact that the trade mark owner's clothing comes or may come from this place is of no relevance and the trade mark is not considered to be descriptive since the town in question has no particular reputation for this category of products.

As in the case of the name 'Boston' dealt with above, the geographical name is neutral and therefore has no impact on the conditions of validity of the trade mark.

9. Supposing that, given its very large surface area and the fact that it comprises parts of various different countries, Amazonia constitutes the geographical area of a geographical indication within the legal meaning of the term – though this is already be disputed in view of the aforementioned definition of Article 22 (1) of the TRIPS Agreement which refers to

It is my view that the geographical names ‘Amazonie’, ‘Amazonia’ and ‘Amazonas’ do not constitute a geographical indication within the meaning of intellectual property law and in particular within the meaning of Article 22 (1) of the TRIPS Agreement, nor do they appear likely to become so in the near future for any specific products. However, ICANN may have specific information on this last point which might lead it to reach a different conclusion.

In consequence, I do not believe that assignment of the new gTLD ‘.amazon’ to the Amazon company could be rejected on the basis of international or even local law on geographical indications.

10. Even supposing, hypothetically, that the geographical names ‘Amazonie’, ‘Amazonia’ and ‘Amazonas’ constituted geographical indications for specific products, this geographical indication would not necessarily justify the rejection of the application for assignment of the gTLD to the Amazon company.

As has already been pointed out, it is true that the fact that the name ‘Amazon’ and the name of the geographical indication are not identical is unlikely to prevent the application of the law governing geographical indications.

However, legal recognition of a geographical indication does not in any away imply that the geographical indication enjoys absolute protection, that is to say, protection against **any type** of use of an identical or similar name by a third party.

11. On one hand, indeed, Article 22 of the TRIPS Agreement provides only for protection against use as an indication of the geographical provenance of a product where this use misleads the public as to the geographical origin of the product.

On this point, “in respect of geographical indications” Article 22 2(a) requires parties to the Agreement to provide the legal means for interested parties to prevent “the use of any means in the designation or presentation of a good that indicates or suggests that the good in question originates in a geographical area other than the true place of origin in a manner which misleads the public as to the geographical origin of the good.”.

However, given the nature of the Amazon company’s activities and the fact that the *Amazon* sign is neither used nor designed to be used by it as an indication of the geographical

Article 22 2(b) of the Agreement also requires the parties to protect geographical indications against "any use which constitutes an act of unfair competition within the meaning of Article 10*bis* of the Paris Convention". However, in order for an "act of competition contrary to honest practices in industrial or commercial matters" within the meaning of this last provision (sub-section 2) and an act "of such a nature as to create confusion (…) with the establishment, the goods, or the industrial or commercial activities, of a competitor" (sub-section 3 (i)) or "indications or allegations the use of which (…) is liable to mislead the public as to the (…) characteristics" or the quality "of the goods" (sub-section 3(iii)) to exist, the name identical or similar to the geographical indication must, as above, necessarily be used as the indication of the geographical provenance of products.

To summarize, the legal protection afforded to a geographical indication – supposing that such geographical indication exists – by the provisions of the TRIPS Agreement and the Paris Convention does not, <u>on its own</u>, justify a rejection of the Amazon's company application.

12. On the other hand, unlike the TRIPS Agreement, some legal systems do not limit the protection of geographical indications to cases in which an identical or similar name is used by a third party to indicate the geographical provenance of a product.

Thus, in the case of appellations of origin, Article 3 of the aforementioned Lisbon Agreement provides that "protection shall be ensured against any usurpation or imitation, even if the true origin of the product is indicated or if the appellation is used in translated form or accompanied by terms such as "kind", "type", "make", "imitation" or the like".

Even though the Agreement does not specify what such "usurpation or imitation" consists of, its general nature and wording suggest that the protection extends beyond cases in which a third party uses an identical or similar sign to indicate the geographical provenance of a product. Given the broad language used in this provision, it is difficult however to know exactly what the conditions and terms of this protection are.

The provisions of the above mentioned European regulations protecting geographical indications of agricultural and food products[5], wines[6] and spirits[7] are, however, more specific on this point.

This is the case, in particular, of Article 13(1) of the aforementioned Regulation (EU) b). any misuse, imitation or evocation, even if the true origin of the products or services is indicated or if the protected name is translated or accompanied by an expression such as ‘style’, ‘type’, ‘method’, ‘as produced in’, ‘imitation’ or similar, including when those products are used as an ingredient;

c). any other false or misleading indication as to the provenance, origin, nature or essential qualities of the product that is used on the inner or outer packaging, advertising material or documents relating to the product concerned, and the packing of the product in a container liable to convey a false impression as to its origin;

d). any other practice liable to mislead the consumer as to the true origin of the product.”

A joint reading of sub-sections a) and b) of this provision reveals that geographical names registered under the Regulation are protected against any direct or indirect commercial use of a sign identical or similar (imitation or evocation) to the protected name for products comparable to those covered by the registration or for an product or service where this use takes advantage of the reputation of the protected name.

Though, where not otherwise stipulated, protection extends to uses which do not indicate a geographical provenance, a number of conditions must nevertheless be fulfilled. Either the sign in dispute must be used for products comparable to those covered by the registration or – unlike for a comparable product – the use in dispute must take advantage of the reputation of the protected name.

Though the trade mark *Champagne* registered and exploited by Yves-Saint-Laurent for a luxury perfume, i.e. in a non-geographical manner, was invalided and prohibited in France on the basis of comparable statutory provisions, it was because the use of this trade mark allowed its owner to take advantage of the reputation and prestige of the renown appellation of origin *Champagne* for a sparkling wine from the Champagne region[9].

Supposing that ICANN were required to take account of the provisions of European Union law, even though I do not believe this to be so particularly since in this case the geographical names in question – Amazonia, Amazonas and Amazonie – is not registered under any EU regulation, the reservation of the gTLD ‘.amazon’ would not in any case infringe a prior geographical indication, if one existed.

For, firstly, it would not in all likelihood be for the use of products comparable to

Beyond the law of geographical indications, the assignment of '.amazon' to Amazon would not in any event be prejudicial to the objecting states who, since they have no reason for linguistic reasons to reserve '.amazon', could always if they so wished reserve a new gTLD such as '.amazonia' or '.amazonas' which would create no risk of confusion with '.amazon'.

Finally, the fact that neither the name 'Amazon' nor that of the Amazonia region appears in any language on the ISO 3166 list is irrelevant. It is true that the country and region names on this list, whether they are reproduced, imitated or translated into a foreign language, cannot be reserved[10]. However, the fact that there is no bar to reserving the TLD '.amazon' on this ground does not mean that it could not be rejected on other grounds put forward by the objecting states or that Amazon could not claim a right to reserve it. On this last point, it is clear that no one can claim a TLD simply because the name it consists of is not included on the ISO list.

B.- Concerning the arguments put forward by the Amazon company in support of the assignment of the new gTLD '.amazon'

14. In response to the advice of the GAC reiterating the arguments of the objecting states, the Amazon company cites a certain number of rules of international law which, it claims, mean it must be assigned the TLD '.amazon'.

15. Firstly, and principally, the Amazon company cites its trade mark *Amazon* which is registered in almost 150 states around the world, including Brazil and Peru.

In substance, it contends that the intellectual property rights it holds in the name *Amazon* as a result of these registrations give it a *right to* the TLD '.amazon' and that ICANN is therefore obliged to assign the TLD to it.

In support of this argument Amazon cites Article 16(1) of the TRIPS Agreement which gives the owner of a registered trade mark "the exclusive right to prevent all third parties not having the owner's consent from using in the course of trade identical or similar signs for goods or services which are identical or similar to those in respect of which the trade mark is registered (…)."

An intellectual property right is therefore, like any property, a right to exclude third parties and, in this case, a right to exclude unauthorised third parties from the scope of protection which the law grants to the owner of the intellectual property right.

Binding as against third parties, an intellectual property right never affords its owner **the right to exploit or to use the subject matter of its right.**

We know, for example, that a patent does not confer upon its owner the right to exploit the invention. Firstly, the exploitation of the invention may, for example, require him to obtain marketing approval as is the case for the marketing of pharmaceutical products. Secondly, if the patented invention in question represents an improvement of a prior invention which is itself also covered by a patent valid for the same territory, the patented invention cannot legally be exploited without the authorisation of the holder of the prior patent.

We also know that the holder of a copyright in a work is not necessarily able to exploit the work simply on the basis of this right. Firstly, its exploitation may come up against an administrative or legal prohibition based on reasons of public policy or a third party's right to privacy, for example. Secondly, if this work is derived from a prior work which is itself also protected, it cannot legally be exploited without the consent of the holder of the rights in the first work.

These simple examples demonstrate that an intellectual property right does not grant its owner a **right *to* use** the intangible subject matter in question. The right grants him ownership, ownership which is always binding on unauthorised third parties, but not, unless misinterpreting the notion of intellectual property, the possibility to exploit the subject matter of its ownership in any circumstances.

15-2. The same applies under trade mark law.

A trade mark right – the right associated with the registration of a trade mark – grants the owner a monopoly binding on third parties within the limits defined by law.

However, the holder cannot invoke this right as *a right to use* the sign, even for the products and services specified in the registration, or even as the right to use the sign in particular forms, such as a new gTLD.

A few months earlier, the Court of Justice had already adopted the same solution with regard to Community designs[13].

15-3. The exclusive right held by the Amazon company in its trade mark *Amazon* in various Member States under Article 16(1) of the TRIPS Agreement does not therefore necessarily give it **the right per se either to use it or to use the *Amazon* sign in any other form it may choose, such as a new TLD**.

In my belief, therefore, the Amazon company is wrong in citing its registered trademarks and its rights under Article 16(1) of the TRIPS Agreement and in deducing that ICANN is therefore obliged to assign it the new TLD to allow it to exploit, as a TLD, the *Amazon* sign which forms the subject matter of these trade marks.

The *Amazon* trade marks held by the applicant do not in legal terms give it a *right to* the new TLD '.amazon'. The fact that the objecting states did not cite any trade marks in support of their arguments is irrelevant in this respect.

Moreover, I would also add that all these *Amazon* trade marks, which are each subject to the principle of territoriality, are legally effective on a national – or regional in the case of a Community trade mark – territory only, in particular, if Amazon holds one of them and that in consequence none of these trade marks would be binding on ICANN, which is responsible for the assignments of new TLDs worldwide in any event.

15-4. At the very most, the Amazon company's trademarks permit it to claim a **legitimate interest for applying for assignment** of '.amazon'.

However, this interest does not in any way guarantee it assignment of this new TLD in legal terms for there are other considerations to be taken into account in the ICANN decision.

16. The same can be said of the arguments put forward by Amazon based on Article 8 of the Paris Convention for the Protection of Industrial Property.

This very succinct article provides for the protection of trade names in the states party to the Convention without the need for any filing or registration formality.

17. Finally, in this case Amazon cannot effectively rely on the provisions of international human rights law and, in particular, – supposing it were applicable to and binding on ICANN – the European Convention on Human Rights (ECHR).

It is true that Article 1 of the First Additional Protocol to the ECHR provides for an entitlement "to the peaceful enjoyment of (…) possessions", while in its *Anheuser-Busch/Portugal* judgment of 11 January 2007[14] the European Court of Human held that this provision "applies to intellectual property as such".

However, Amazon cannot use this argument to claim a right to the registration of the new TLD '.amazon'.

Indeed, **firstly**, filing an application for assignment of this new TLD in no way guarantees it the assignment of the TLD.

In the aforementioned judgment, the European Court of Human Rights held that, given all the economic rights and interests attached to such an application, the owner of an application for registration of a trade mark is the holder of a substantial interest protected by Article 1 of the First Additional Protocol but that the Trade Mark Office's rejection of the application did not constitute interference in the applicant's right to the peaceful enjoyment of his possessions and thus a breach of Article 1 – thereby thankfully guaranteeing the freedom of offices to refuse trade mark or patent applications.

Supposing that an application for assignment of a new gTLD corresponding to a trade mark held by the applicant were to be qualified as a possession within the meaning of Article 1 of the First Additional Protocol, as is the case with an application for the registration of a trade mark – which in my view could be disputed –, according to the European Court's analysis ICANN's rejection of this application would not constitute a breach of the peaceful enjoyment of this possession.

Secondly, the Amazon company's *Amazon* trade marks undeniably constitute goods within the meaning of the aforementioned provision.

However, given its subject matter and purpose, a registered trade mark does not in any way guarantee its holder (as set out in section 15 2 et seq. above) a **right to** the assignment of

18. Therefore, there exists no provision in either international intellectual property law or in the field of fundamental rights which could oblige ICANN to assign the gTLD '.amazon' to the Amazon company.

Conclusion

As regards the application for assignment of the new gTLD '.amazon' filed by the Amazon company:

i) **there is no rule of international, or even regional or national, law applicable in the field of geographical indications which obliges ICANN to reject the application;**

ii) **there is no rule of international, or even regional or national, law applicable in the field of intellectual property and in particular of trade marks or in the field of fundamental rights, which obliges ICANN to accept this application.**

Derivatives

exactable
Pronunciation: /ɪɡˈzaktəb(ə)l/
/ɛɡˈzaktəb(ə)l/
adjective
exactitude
Pronunciation: /ɪɡˈzaktɪtjuːd/
/ ˈ kt tj d/

Origin

Late Middle English (as a verb): from Latin *exact-* 'completed, ascertained, enforced', from the verb *exigere*, from *ex-* 'thoroughly' + *agere* 'perform'. The adjective dates from the mid 16th century and reflects the Latin *exactus* 'precise'.

Words that rhyme with exact

abreact, abstract, act, attract, bract, compact, contract, counteract, diffract, enact, extract, fact, humpbacked, impact, interact, matter-of-fact, pact, protract, redact, refract, retroact, subcontract, subtract, tact, tract, transact, unbacked, underact, untracked

a/ The designation sub-Saharan Africa is commonly used to indicate all of Africa except northern Africa, with the Sudan included in sub-Saharan Africa.

b/ The continent of North America (003) comprises Northern America (021), Caribbean (029), and Central America (013).

c/ There is no established convention for the designation of "developed" and "developing" countries or areas in the United Nations system. In common practice, Japan in Asia, Canada and the United States in northern America, Australia and New Zealand in Oceania, and Europe are considered "developed" regions or areas. In international trade statistics, the Southern African Customs Union is also treated as a developed region and Israel as a developed country; countries emerging from the former Yugoslavia are treated as developing countries; and countries of eastern Europe and of the Commonwealth of Independent States (code 172) in Europe are not included under either developed or developing regions.

ICANN Resolutions (/resolutions) » 2010-09-25 - New gTLDs - Directions for Next Applicant Guidebook

Important note: The Board Resolutions are as reported in the Board Meeting Transcripts, Minutes & Resolutions portion of ICANN's website. Only the words contained in the Resolutions themselves represent the official acts of the Board. The explanatory text provided through this database (including the summary, implementation actions, identification of related resolutions, and additional information) is an interpretation or an explanation that has no official authority and does not represent the purpose behind the Board actions, nor does any explanations or interpretations modify or override the Resolutions themselves. Resolutions can only be modified through further act of the ICANN Board.

Directed Staff to determine if the directions indicated by the Board below are consistent with GAC comments, and recommend any appropriate further action, and Staff is provided detailed directions regarding the next version of the Draft Applicant Guidebook.

Category:

gTLDs

Meeting Date:

Sat, 25 Sep 2010

Resolution Number:

2010.09.25.02,and 2010.09.25.03

URL for Resolution:

http://www.icann.org/en/minutes/resolutions-25sep10-en.htm#2 (http://www.icann.org/en/minutes/resolutions-25sep10-en.htm#2)

Status:

Complete

Implementation Actions:

- Incorporate Board direction into next draft of applicant guidebook
  - Responsible entity: Services Staff
  - Due date: 9 Nov 2010 for posting Proposed Final Applicant Guidebook; 10 Dec 2010 for Board approval of Guidebook

  - Due date: None stated
  - Completion date: September 2011 (see http://newgtlds.icann.org/applicants/candidate-support (http://newgtlds.icann.org/applicants/candidate-support))
- Post Root Server Scaling reports for public comment.
  - Responsible entity: Services Staff
  - Due date: None stated
  - Completion date: 6 October 2010 (see http://www.icann.org/en/announcements/announcement-2-06oct10-en.htm (http://www.icann.org/en/announcements/announcement-2-06oct10-en.htm))
- Publish the High Security TLD Concept for community input.
  - Responsible entity: ICANN Staff
  - Due date: None stated
  - Completion date: RFI issued on 22 September and updated on 13 October 2010 and 16 November 2010 (see http://www.icann.org/en/announcements/announcement-22sep10-en.htm (http://www.icann.org/en/announcements/announcement-22sep10-en.htm))
- Send letter to GNSO regarding Vertical Integration.
  - Responsible entity: ICANN Board
  - Due date: 8 October 2010
  - Completion date: Overtaken by events; On 7 October 2010 the Board received notice that the VI working group would be unable to deliver recommendations supported by a consensus of members (see http://www.icann.org/en/correspondence/gomes-to-dengate-thrush-07oct10-en.pdf (http://www.icann.org/en/correspondence/gomes-to-dengate-thrush-07oct10-en.pdf))

Resolution Text:

implementation plans in communication with the community.

Whereas, one of the goals of the New gTLD program is to establish a clear and predictable process.

Whereas, ICANN seeks to mitigate risks and costs to ICANN and the broader Internet community to the extent possible.

Whereas, meeting these goals require tradeoffs and balancing of competing interests.

Whereas, in Brussels the ICANN Board resolved <http://www.icann.org/en/minutes/resolutions-25jun10-en.htm#11 (https://wiki.icann.org/en/minutes/resolutions-25jun10-en.htm#11)> to dedicate its retreat scheduled for 24-25 September for the consideration of all the outstanding issues relating to the implementation of the New gTLD program.

Whereas, the Board held a retreat in Trondheim, Norway on 24-25 September 2010, and talked through the outstanding issues relating to the implementation of the New gTLD program in order to identify potential ways forward.

Whereas, the Board has identified certain directions to the CEO regarding items for inclusion in the forthcoming version of the Applicant Guidebook for the New gTLD program.

Whereas, the forthcoming version of the Applicant Guidebook will be posted for public comment, and ICANN will take into consideration all public comments before making final decisions on all these remaining issues by approving the final version of the Applicant Guidebook.

Whereas, on 23 September 2010, the Governmental Advisory Committee (GAC) provided comments on version 4 of the draft Applicant Guidebook.

Continents and UN Regions: The definition of Continent or UN Regions in the Guidebook should be expanded to include UNESCO's regional classification list which comprises: Africa, Arab States, Asia and the Pacific, Europe and North America, Latin America and the Caribbean.

Governments that file objections should be required to cover costs of the objection process just like any other objector; the objection process will be run on a cost-recovery and loser-pays basis (so the costs of objection processes in which governments prevail will be borne by applicants). Also, the Board notes that the GAC proposal for free government objections is not specific as to particular objection grounds or particular government objectors (for example whether both national and local government objectors would be covered).

2.2 New gTLD Applicant Support

Support to applicants will generally include outreach and education to encourage participation across all regions, but any direct financial support for applicant fees must come from sources outside of ICANN.

Staff will publish a list of organizations that request assistance and organizations that state an interest in assisting with additional program development, for example pro-bono consulting advice, pro-bono in-kind support, or financial assistance so that those needing assistance and those willing to provide assistance can identify each other and work together.

Owing to the level of uncertainty associated with the launch of new gTLDs, the fee levels currently in the Applicant Guidebook will be maintained for all applicants.

2.3 Root Zone Scaling

Real-world experience in root zone scaling has been gained as a result of the implementation of IPv6, DNSSEC and IDNs and the hard work of RSSAC and SSAC members in tackling the underlying stability question. Staff is directed to publish its analysis of the impact of IPv6, DNSSEC and IDN deployment on the root zone so far.

Further, ICANN will periodically consult with root zone operators regarding a procedure to define, monitor and publish data on root zone stability. As part of the regular interaction with the root server operators, ICANN will invite inputs from the root server operators and other interested parties regarding any signs of stress in the system and advice as to what actions or changes in process might be appropriate.

Finally, in the event that the number of applications exceeds the maximum rate, an objective method for determining the order of application processing that conforms to the limited delegation rate (not relying primarily on time-stamping) will be defined in the Applicant Guidebook.

2.4 String Similarity

Similar strings should not be delegated through the New gTLD Program absent an in-depth policy examination of the issues, including a clear, enforceable set of operating rules to avoid possible user confusion. Community-suggested modifications raise a complex set of policy issues and cannot be considered as a straightforward implementation matter for the first round of applications. Further policy work in this area is encouraged.

2.5 Variant Management

No changes will be made to the next version of the Applicant Guidebook with respect to the handling of gTLDs containing variant characters. I.e., no variants of gTLDs will be delegated through the New gTLD Program until appropriate variant management solutions are developed.

The recent delegation of Chinese-language ccTLDs does not yet provide a generally workable approach for gTLDs; there are serious limits to extending this approach at this time. ICANN will coordinate efforts to develop long-term policy and technical development work on these issues.

The Board notes that the following scenarios are possible while evaluating variant gTLD strings:

Applicant submits a gTLD string and indicates variants to this string. The applicant, if successful, will get the to the deployment of gTLDs containing variant characters IDNs. The analysis of needed work should identify the appropriate venues (e.g., ICANN, IETF, language community, etc.) for pursuing the necessary work. The report should be published for public review.

The CEO is directed to produce for the board by the next Board meeting (28 October 2010):

A Work plan for developing the issues report.
An identification of the skills and capabilities needed by ICANN to complete the issues report and further develop ICANN's organizational ability to continue the strategic rollout of IDN TLDs.

2.6 Trademark Protection

Substantive Evaluation: The Applicant Guidebook will provide a clear description of "substantive evaluation" at registration, and retain the requirement for at least substantive review of marks to warrant protection under sunrise services and utilization of the URS, both of which provide a specific benefit to trademark holders. Specifically, evaluation, whether at registration or by a validation service provider, is required on absolute grounds AND use of the mark.

Substantive evaluation upon trademark registration has essentially three requirements: ℹ evaluation on absolute grounds - to ensure that the applied for mark can in fact serve as a trademark; (ii) evaluation on relative grounds - to determine if previously filed marks preclude the registration; and (iii) evaluation of use - to ensure that the applied for mark is in current use.

Substantive review by Trademark Clearinghouse validation service provider shall require: ℹ evaluation on absolute grounds; and (ii) evaluation of use.

URS timing: In response to public comment, change the time to respond to a complaint from 20 days to 14 days , with one opportunity for an extension of seven days if there is a good faith basis for such an extension.

Examples of such parameters might include: (1) the application criteria were met, (2) no material exceptions to the form agreement terms, and (3) an independent confirmation that the process was followed.

The Board reserves the right under exceptional circumstances to individually consider an application for a new gTLD to determine whether approval would be in the best interest of the Internet community, for example, as a result of the use of an ICANN accountability mechanism. The Board approves the inclusion of a broad waiver and limitation of liability in the application terms and conditions.

2.8 Mitigating Malicious Conduct

While efforts to mitigate malicious conduct will continue, the implementation work completed to date by the community and staff to address the mitigation of malicious conduct issue is sufficient to proceed to launch the first New gTLD application round. The remaining issues should not delay launch with the following specific directives incorporated:

Background check: The background check should be clarified to provide detail and specificity in response to comment. The specific reference to terrorism will be removed (and the background check criteria will be revised). These clarifications regarding the background check criteria and process shall be included in the forthcoming version of the Applicant Guidebook.

Orphan glue records: Current provisions in the guidebook require each applicant to describe proposed measures for management and removal of orphan glue records for names removed from the zone. This requirement should remain in place, and will be adjusted if SSAC makes a new recommendation in its report on this issue.

High Security Zone (HSTLD) concept: The HSTLD concept is a voluntary concept being developed by a cross-stakeholder group including the financial services industry for use in TLDs wishing to provide services on a high-security basis. Thus, the development of the concept does not impact the launch of the gTLD application process. Any publication of this concept will be shared freely with other organizations that might be interested in

The Board agrees that ultimate responsibility for the new gTLD program rests with the Board. The Board, however, wishes to rely on the determinations of experts regarding these issues.

The Board will accept the Rec6 CWG recommendations that are not inconsistent with the existing process, as this can be achieved before the opening of the first gTLD application round, and will work to resolve any inconsistencies. Staff will consult with the Board for further guidance as required.

2.10 Registry Agreement

Required Notice and consent for increased or premium renewal prices: The current provision is necessary to protect registrants from predatory pricing upon renewals and the term should be retained.

Limitation of liability: The limitation of liability should remain as is. The remedies for registry operator are limited but appropriate given that ICANN is a non-profit entity that cannot afford to be open to unlimited liability.

Collection of variable transaction fee from registries if registrars decline to pay ICANN directly: The provision for the pass-through of fees is necessary to ensure that ICANN receives adequate funding in the event that ICANN accredited registrars (as a group) fail to approve the variable accreditation fees and should remain in the agreement.

Searchable Whois: Refer to the Board Data Consumer Protection Working Group to study issues and provide information to the Board relating to access and privacy to develop recommendations for possible inclusion in the forthcoming version of the applicant guidebook.

Indemnification of ICANN: The indemnification right should remain. ICANN staff has invited the Registry Stakeholder Group to propose language more precisely defining the exceptions to registry operator’s indemnification obligations for inclusion in the next version of the Draft Registry Agreement, and such a proposal should be considered for inclusion if received in a timely fashion.

- Other resolutions to be determined.

Additional Information:

- The resolution does not address funding for the items identified therein.

a/ The designation sub-Saharan Africa is commonly used to indicate all of Africa except northern Africa, with the Sudan included in sub-Saharan Africa.

b/ The continent of North America (003) comprises Northern America (021), Caribbean (029), and Central America (013).

c/ There is no established convention for the designation of "developed" and "developing" countries or areas in the United Nations system. In common practice, Japan in Asia, Canada and the United States in northern America, Australia and New Zealand in Oceania, and Europe are considered "developed" regions or areas. In international trade statistics, the Southern African Customs Union is also treated as a developed region and Israel as a developed country; countries emerging from the former Yugoslavia are treated as developing countries; and countries of eastern Europe and of the Commonwealth of Independent States (code 172) in Europe are not included under either developed or developing regions.

DEFINITIONS

AGB	ICANN gTLD Applicant Guidebook, version 2012-06-04
Amazon Community	The community defined in § 40 below
Applicant	AMAZON EU S.à.r.l.
Centre	International Centre for Expertise of the International Chamber of Commerce
Expert	Professor Luca G. Radicati di Brozolo
gTLD	Generic top level domain
IO	Independent Objector
Objection Procedures	Module 3 of the AGB
OTCA	Amazon Cooperation Treaty Organization
Procedure	New gTLD Dispute Resolution Procedure, Attachment to Module 3 of the AGB
Strings	".AMAZON", ".アマゾン" and ".亚马逊" gTLDs

1. This Expert Determination is rendered in the consolidated dispute settlement proceedings arising from the community objections to three applications for the generic top-level domain ("**gTLD**") name ".AMAZON", and the Japanese and Chinese terms for AMAZON (respectively アマゾン and 亚马逊) within the framework of the ICANN gTLD Application Process governed by the ICANN gTLD Applicant Guidebook, version 2012-06-04 (the "**AGB**").

I. INTRODUCTION

2. The three community objections at the origin of these proceedings (the "**Objections**") were filed on March 12, 2013 with the International Centre for Expertise of the International Chamber of Commerce (the "**Centre**") by the Independent Objector, Professor Alain Pellet, 12, Avenue Alphonse de Neuville, 92380 Garches, France, contact@independent-objector-newgtlds.org (the "**IO**").

3. The Objections (EXP/396/ICANN/13, EXP/397/ICANN/14 and EXP/398/ICANN/15) relate to three applications (the "**Applications**") filed by AMAZON EU S.à.r.l., 5 Rue Plaetis, Luxembourg L-2338, LU, lorna.gradden.am@valideus.com (the "**Applicant**") respectively for the ".AMAZON", ".アマゾン" and ".亚马逊" gTLDs (collectively the "**Strings**").

4. The content of all the Objections is practically identical.

5. On April 23, 2013 the Centre informed the Parties of its decision to consolidate the Objections.

6. The Applicant filed its Responses to the Objections on May 24, 2013.

7. The IO is represented in these proceedings by Ms Heloïse Bajer-Pellet, 15 Rue de la Banque, 75002 Paris, France, avocat@bajer.fr; Mr Daniel Müller, 20, Avenue Charles de Gaulle, 78290 Croissy sur Seine, France, mail@muellerdaniel.eu; Mr Phon van den Biesen, De Groene Bocht, Kaizergrecht 253, 1016 EB Amsterdam, The Netherlands, phonvandenbiesen@vdbkadvocaten.eu; and Mr Sam Wordsworth, 24 Lincoln Inn Fields, London WC2A 3EG, UK, SWordsworth@essexcourt.net.

Article 21(a) of the Procedure provides that the Centre and the Expert shall make reasonable efforts to ensure that the Expert renders his decision within 45 days of the "*constitution of the Panel*". The Centre considers that the Panel is constituted when the Expert is appointed, the Parties have paid their respective advances on costs in full and the file is transmitted to the Expert.

11. Following an exchange of correspondence with the IO and the Applicant (collectively the "**Parties**"), the Expert issued the Expert Mission on September 3, 2013.

12. At the request of the IO, the Expert allowed an exchange of submissions on the Applicant's challenge to the IO. The IO filed his additional written statement on August 16, 2013 whilst the Applicant filed its reply on August 22, 2013.

13. On September 9, 2013 the Centre informed the Expert that the time limit for submission of the draft expert determination was extended until October 5, 2013.

14. On the same date the Centre agreed to the Expert's request to deal with all three Objections in a single expert determination. The request was based on the consideration that the Applicant and the Objector are the same in all the consolidated proceedings and that the issues raised by all three Objections are practically identical and raise almost identical factual and legal issues.

15. In accordance with Article 19 of the the New gTLD Dispute Resolution Procedure (the "**Procedure**")**,**[1] and in the absence of any request by the Parties, no oral hearing was held.

16. The draft expert determination was submitted by the Expert for scrutiny to the Centre within the extended time limit in accordance with Article 21(a) and (b) of the Procedure.

17. These proceedings are administered by the Centre pursuant to Article 3(d) of the Procedure, which is applicable by virtue of its Article 1(d).

18. The proceedings are governed, as to matters of procedure, by the Procedure and by the Rules for Expertise of the International Chamber of Commerce, as supplemented by the ICC Practice Note on the Administration of Cases under the New gTLD Dispute Resolution Procedure (Article 4(a) and 4(b)(iv) of the Procedure).

to the statements and documents submitted by the Parties. The burden of proof that the Objection should be sustained rests with the Objector in accordance with the applicable standards.

21. As agreed by the Centre, and given that the issues raised by the three Objections are for the most part identical, this Expert Determination deals with all three Objections collectively. Reference to the individual Objections will only be made insofar as they raise different issues from the other Objections.

II. THE CHALLENGE TO THE IO AND THE IO'S STANDING

(a) The Position of the Applicant

22. On April 6, 2013, after the filing of the Objections by the IO, the Applicant wrote to ICANN denouncing that *"the office of the IO exhibits a Conflict of Interest within the meaning of ICANN's Conflict of Interest Policy"*. The challenge contended that the IO's Objections were based on comments in the Early Warning Procedure by the Governments of Peru and Brazil, with whom the IO has "*special links*" due to his professional ties with them, as he has with the Governments of Bolivia and Argentina, likewise identified as opponents of the Applications. Those links are asserted to have influenced and to continue to influence the IO's decision-making process in these proceedings. For the Applicant the Objections were used to formalize the objections of the governments of Brazil and Peru, in contrast with the principle that the IO can only act on behalf of the public who uses the global internet. The conflict of interest is viewed as the reason for the alleged inconsistency between the IO's approach to this application and to the ones for similar gTLDs (for instance for ".africa", ".persiangulf" and ".islam"). According to the Applicant, allowing the Objections to proceed would damage the integrity of the gTLD dispute resolution process, because the challenges would be made public, leading to the perception that the IO is not a safety net for the public. The Applicant concluded with the request that ICANN set aside the Objection on account of the conflict of interest and, if deemed necessary, appoint another non-conflicted IO. The Applicant accepted to maintain confidentiality over its challenge, while reserving its right to raise the matter if the Objection were allowed to proceed.

23. The Applicant wrote to ICANN again on April 24 and May 18, 2013 reiterating its

does not require the IO to be independent of anyone standing to benefit from the objection and releases him from the "*universally recognized obligation to decline additional work where it would create a conflict of interest with an existing relationship*". While recognizing that the IO does not act as a judge, arbitrator or expert, the Applicant underscores that the AGB binds him to the same basic rules of ethics that apply to those offices in relation not only to ICANN and applicants, but also to any other influences. The Applicant concedes that "*a normal average social life*" does not necessarily entail a conflict of interest or lack of independence, but asserts that the IO's ties to the governments of Brazil or Peru are not merely part of such a social life.

26. *Second*, the Applicant restates that the IO can only represent the community made up of those who use the internet (referred to by the parties also as the "*internet community*") and that it is "*plainly wrong*" that he can only represent a community that is "*delineated and distinguishable from internet users in general*". The IO is granted special standing to fulfill his role within the gTLD program and, unlike "*ordinary*" objectors, does not have to prove an on-going relationship with a community. Consequently, he loses his special standing if he acts outside his role, e.g. on behalf of a community comprising particular persons or entities. In the case at hand the community represented by the IO is not the public who use the internet. The IO requests the same remedy sought by his client Peru, who is the largest financial contributor to the Amazon Cooperation Treaty Organization ("**OTCA**"). Notwithstanding that the Applications generated no reasoned or substantiated comments from the public, unlike similar applications (".gcc", ".islam", ".persiangulf" and ".africa"), the IO only objected to the Applicant's ones. The Applicant also contests that OTCA lacks the capacity to file an objection and differs in this respect from other organizations that could have objected to the strings to which the IO did not object. It adds that objections to the Applications could have been put forward by other entities. Had he followed the same criteria as for other objections, the IO would have concluded that OTCA and the governments of Brazil and Peru were in at least as good a position as the IO to file an objection. The IO's failure to demonstrate his complete independence and his apparent pursuit of the interest of particular persons or entities deprives him of standing in this case.

27. *Third*, the Applicant refers to a statement of the Centre that the decision over the IO's independence falls within the Expert's authority[2] The Applicant argues that

risks *"unjustly and unfairly los[ing] with limited, if any, scope for a remedy"*. This would result in irreparable damage to the integrity of the gTLD dispute resolution process.

(b) The position of the IO

28. In a letter to counsel for the Applicant of June 8, 2013 the IO denounced the inappropriateness of the Applicant's direct approach to ICANN on the matter of his independence, stating that it is not for ICANN to take a position on it. The IO argued that the claim concerning his alleged bias *"has to be dealt with by the Expert panel, who has full authority to decide in all impartiality"*.

29. In the Objection the IO disclosed his relations with the Governments of Brazil and Peru, but clarified that in the present proceedings he is not representing them and is acting in the sole interests of the public who use the internet and that his relation with a State has nothing to do with his decision to object or not.

30. In his additional statement of August 16, 2013 the IO noted that Article 11(4) of the Rules is not relevant to a challenge of the IO, since the IO is only a party to these proceedings. He acknowledged, however, that the absence of a general procedure concerning the IO's independence and the possibility to challenge him for the entire gTLD program does not mean that no remedy is available. The IO recalls that in his June 8 letter referred to above he recognized that the Expert has the power to assess the IO's independence and to draw the necessary conclusions with regard to the Objection. Indeed, adds the IO, *"the Expert Panel is the guardian of the integrity of the process and it has the duty to ensure that the Expert Determination is soundly based on the standards established by the Guidebook"*. Although it affects only the IO's standing, the condition that the IO must not act on behalf of any particular person or entity, but solely in the best interests of the users of the internet (Objection Procedures, Section 3.2.5), needs to be addressed by the Expert even if in Article 2(d) of the Procedure the expert determination is referred to only as a *"decision upon the merits of the objection"*. The Expert must also address the standing of the Objector (Objection Procedures, Section 3.2.2). On this point the IO concludes that the Expert has the power to address whether the IO acts in the interest of the internet public or of a particular category of persons, regardless of whether the issue pertains to standing or to the merits. The matter must be decided

the global internet", the IO cannot accept that this implies that that public is the only community that he has standing to represent. The fact that the IO is dispensed from proving the regular standing requirements for the types of objections that he can file (Objection Procedures, Section 3.2.5) does not mean that his community objections can concern only the rights and interests of a "*hypothetical*" community of internet users. This would entail a profound change in one of the four tests for community objections, the one relating to the existence of a clearly delineated community, because the public who use the internet is not such a community. Even if the community relevant here were the one of those living in the geographical region with strong links to the Amazon, it would not follow that the IO is acting on its behalf, also considering the Applicant's acknowledgment that such community would not benefit from the rejection of the Application. The AGB does not require that every string which targets a community be applied for by a representative of that community. It is irrelevant whether the Applicant intends to target a specific community or to reserve its gTLD for it. However, the operation of the gTDL must not impinge on the rights and legitimate interests of a significant portion of the community to which the string is explicitly or implicitly targeted. The IO points to Section 1.2.3.2 of the Objection Procedures, which permits community applications even if the application is not designated as community-based or aimed at a particular community. Therefore, what is relevant is not who is targeted by the applicant, but whether a particular community is targeted by the string. The IO acts for a public interest even if he invokes the interest of a particular community and mitigates the risk that in some cases a valid objection might not be raised by those entitled to do so. As such he acts as a safety net. Finally, the IO notes that his policy is not to file an objection when there is "*a single established institution*" that could do so. In the present case there is no such single institution. OTCA, in particular, could not validly have filed an objection because it is not aimed at representing the interests of the Amazon region, but at realizing the economic interest of its Member States within that region.

(c) The Determination of the Expert

32. In light of the Expert's conclusions on the merits of the Objection (Section III below), an analysis of the challenge to the IO's independence could be moot. However, the issues raised by the Applicant in this connection have been amply debated by the

35. The Expert shares this view.

36. As noted by the Parties, there is no rule explicitly dealing with the power to decide on challenges to the independence of the IO, and in particular vesting it on the Expert. Such a power is not conferred on the Expert by the Rules, Article 11(4) of which deals only with challenges to the independence of the expert panel, nor by the Objection Procedures or the Procedure, the latter of which defines the expert determination as "*the decision on the merits of the Objection*" (Article 2(d)).

37. Nonetheless, as noted by the Applicant, whether the IO has exceeded his role is a serious issue that can impact on the decision on an objection and that must be capable of being decided. This is all the more so because Section 3.4.6 of the Objection Procedures stipulates that expert determinations will be accepted by ICANN, thus in essence making them final.[3] The power to decide a challenge to the IO would therefore seem to inure to the Expert's inherent powers.

38. The issue is even less problematic if, as acknowledged by the Parties, the question of the IO's independence can be characterized as pertaining to the IO's standing. Indeed, it is indisputably within the Expert's powers to rule on the standing requirements of objectors (Objection Procedures, Section 3.2.2). There is no reason to hold that this does not hold true also for the standing of the IO.

(ii) The merits of the challenge to the IO

39. It being accepted that the Expert has jurisdiction to deal with a challenge to the IO's independence, the next question debated by the Parties that needs to be addressed is whether, as contended by the Applicant, the IO may only file objections on behalf of the community consisting of "*the public who uses the global internet*" or whether, instead, he is entitled to object on behalf of, or at least in the interest of, more strictly defined groups or communities.

40. This issue is preliminary to the one of conflict of interest. In the present case, even on the IO's admission, the Objection relates not to the interests of the internet public but to those of a particular group of individuals or entities, which will be referred to here as the "**Amazon Community**" with an expression used also by the Parties[4]. Accepting the Applicant's preliminary arguments would therefore entail that the IO

42. In the Expert's opinion such a formalistic interpretation would result in an unduly restrictive conception of the IO's role. Indeed, there is merit in the IO's position that the internet community is not clearly delineated (and perhaps even, in his words, "*hypothetical*"). This being so, the Applicant's position would entail that the IO's objections would never meet the clear delineation test. What is more, since the internet community is somewhat amorphous, if the IO's standing to object were limited to applications affecting the interests of that community his role would be seriously curtailed, because few applications would qualify as such.

43. The language of Section 3.2.5 of the Objection Procedures allows a more constructive interpretation. The statement that the IO's role is to file objections when "*no objection has been filed*" can be construed in the sense that his role is to raise objections in situations where, for whatever reason, no objection will be forthcoming, even if the application is "*highly objectionable*". This could occur, for instance, if there is nobody in a position to represent the community or if those who could raise the objection are unwilling to do so for fear of negative repercussions, lack of financial means and so on. Likewise, the statement that the IO "*does not act <u>on behalf</u> of any particular person or entities*" can be understood as permitting the IO to raise an objection in situations where, while not technically acting "*on behalf*" of anybody (in the sense that nobody has given him a mandate to act or would even want him to act), he takes into account what can be considered the interests of a given community that would be prejudiced by an application.

44. The conclusion must therefore be that the Objections' admissibility is not affected by the fact that it concerns interests possibly coinciding with those of the Amazon Community, rather than those of the broader internet community.

45. In light of this conclusion and of the asserted coincidence between the interests of the Amazon Community defended by the Objections and those of the States with which the IO has professional relations, the issue of conflict of interest raised by the Applicant becomes relevant.

46. On the subject of the IO's conflicts of interest Section 3.2.5 of the Objection Procedures requires the IO to be and to remain independent and unaffiliated "*with any of the gTLD applicants*". In this connection, it points to the "*various rules of ethics for judges and international arbitrators*" as models to assess independence. It

the Expert has jurisdiction to examine the challenge implies an acknowledgement on his part that a conflict with parties standing to benefit from his Objection is potentially fatal to the Objection.

48. The Expert has difficulty accepting the IO's assertion that a finding of conflict in circumstances such as those of the present case would preclude anybody with *"a normal average social life"* from serving as the IO. The question is not whether the existence of special ties with certain persons or entities or categories of entities (which anybody will inevitably have) prevents a person from being appointed IO.[5] Rather, it is whether the existence of such ties becomes problematic in the event that the IO raises an objection that can be correlated to the interests of those with whom the ties exist.

49. The Applicant does have a point when it contests that the IO's professional ties at issue here do not fall within the notion of normal average social life. Such a definition does not sit well with the IO's representation of two sovereign States in international judicial proceedings.

50. In any event, if regard must be had to the standards applicable to judges and arbitrators (as predicated by Section 3.2.5 of the Objection Procedures), the relevant perspective in international arbitration nowadays is an objective one. In the words of the *IBA Guidelines on Conflicts of Interest in International Arbitration* (General Standard 2(c)), it is that of *"a reasonable and informed third party"*, whilst the ICC Rules of Arbitration refer to independence *"in the eyes of the parties"* (Article 11.2). By such standards, the IO's ties to two prominent members of the Amazon Community could give rise to a presumption of conflict in this case, completely regardless of whether, in filing the Objection, the IO acted *"on behalf"* of his clients, as contended but in no way substantiated by the Applicant.

51. There is one argument that could be advanced to refute the allegation of conflict of interest. It has to do with the absence of any indication that the two Governments *"on whose behalf"* he is alleged to be acting could not have filed an objection themselves (§ 91 ff. below) and would therefore have had to rely only on the IO to do it for them. In these conditions, the lack of initiative on the part of those Governments could denote that they had no interest in the Objections and that therefore the IO's action was prompted by other considerations. In the view of the

could be different.[6] Yet, the Expert considers it paramount for the confidence in the gTLD dispute resolution process that any decision on the IO's independence be taken on purely objective criteria and bearing in mind the need to ensure the perception of complete neutrality and impartiality of the office of the IO.

53. The Expert is of the view that, objectively considered, the links between the IO and two major representatives of the Amazon Community lead to justifiable doubts as to his independence in the eyes of the Applicant and of the broader public. Given the importance of ensuring the perception of neutrality, independence and impartiality of the office of the IO and of the entire gTLD dispute resolution process, the Expert finds that the Applicant's challenge to the independence of the IO must therefore be upheld.

III. THE MERITS OF THE OBJECTION

54. The Objection Procedures do not address the consequences of an upholding of a challenge to the independence of the IO. In particular, they do not provide that, upon a finding of a conflict of interest of the IO, the IO loses standing or that another IO must be appointed for the specific case, as suggested by the Applicant; nor do they provide for any other solution. If the consequence of a finding of lack of independence were a loss of standing by the IO, any consideration on the merits of the challenge would be moot. However, given the silence of the Objection Procedures and the resulting uncertainty on the consequences of the finding that the IO lacks the requisite independence in this case, the Expert considers it appropriate to deal also with the merits of the Objections and to decide whether they would deserve to be upheld, regardless of the IO's standing.

55. In accordance with Section 3.5.4 of the Objection Procedures, objections can be sustained if the Expert ascertains the existence of substantial opposition from a significant portion of the community to which the string may be targeted. This provision applies also to objections filed by the IO.

56. For a showing of such opposition the IO must prove that:

(i) the community invoked by him is clearly delineated;

(ii) there is substantial community opposition to the Application

Strings may be explicitly or implicitly targeted.

57. The four criteria will be addressed here in the order in which they have been addressed by the IO in the Objections.

III.A Targeting: the association between the community invoked by the IO and the Strings

(a) The position of the IO

58. According to the IO, although the Applications have not been framed as community-based, since they only target the Applicant and its subsidiaries, the Strings can be implicitly linked to a specific community different from the Applicant. The test to assess the Applications' implicit target is not limited to the intended use of the Strings by the Applicant, but is primarily concerned with the expectation of the average internet users and with their perceptions of the Strings and their associations.

59. The Applications target also "*the South-American region with the same English name around the Amazon River*". The identity between the Applicant's business name and brand and the English word for the South American river is not coincidental. The Applicant itself intentionally links the Strings to the Amazon river and region in its communications. The correlation between the Strings and the Amazon river and region is corroborated by the consistent use of the term "*Amazon*" to describe and characterize the Amazon region and the community. The term "*Amazon region*" is used by the 1978 Treaty for Amazon Cooperation and by UNESCO, which has included parts of the Amazon region in the World Heritage List under the 1972 Convention concerning the Protection of the World Cultural and Natural Heritage. The denomination is used also by the World Wildlife Fund.

60. In the eyes of the IO, all the foregoing demonstrates a strong association between the Amazon region and its community and the Strings.

(b) The position of the Applicant

61. The Applicant premises its argument on this point on the consideration that under

in the eyes of the public who use the global internet and holds that the Applicant will forever target Amazonia with its present and future services. The argument that the targeting test is based on the existence of a certain link or possible association by the public based on string similarity has been rejected by ICANN, which acknowledges that brand names and other strings that happen to relate to some geographic entities may also have legitimate unrelated uses. The Applicant "*clearly has 'legitimate uses'*" for its marks, global brand and company name as a gTLD string, including in local languages, which it has used since 1994. The Applicant cites the example of the ".patagonia" gTLD, that was found not to target the community of Patagonia.

(c) The Determination of the Expert

63. In the Objection Procedures (Section 3.5.4) the term "*targeting*" is used in relation to the third substantive test that must be satisfied by a community objection, i.e. the one of strong association between the invoked community and the applied-for string.

64. The Objection Procedures point to the following non-exclusive factors that can be balanced to indicate a strong association between a community and the applied-for-string: (*i*) statements contained in the application; (*ii*) other public statements by the applicant; (*iii*) associations by the public.

65. The reason for dealing with this test at the outset in the present case is that, prior to establishing whether there is a strong association between the Strings and a community, the community having the purportedly strong association must be identified. As seen above, in the context of the challenge to the IO's independence the Parties debated the IO's standing to file an objection in the interest of a community other than the internet community. In relation to the substantive test, the dispute between the Parties on the identification of the community is framed in terms of whether the community in whose interest an objection is brought can differ from the one "*targeted*" by the applicant.

66. The Applicant contends that consideration can only be given to the community "*explicitly*" targeted by the Applications, which in this case is the one revolving around the business activities of the Applicant's group and the Amazon brand. No

is not relevant whether that community is the one to which the applicant intends to direct its gTLD. The IO is persuasive in his argument that the association between a community and a string depends primarily on the expectations and perceptions of the average internet user.

68. The Applicant implies that only one community can be "*targeted*" by a gTLD and an application. The Expert finds no support in the Objection Procedures for this position, which is actually counterintuitive. If the term "*targeted*" is properly understood as meaning "*affected*", there is no reason why there cannot be more than one community affected by a given application for a gTLD. A gTLD can well have an impact on a broader range of persons or entities than the one envisaged by the applicant. The requirement invoked by the Applicant that the association between the community and the string be "*strong*" is not conclusive, since more than one of a string's possible multiple associations can be strong.

69. The Applicant's argument also risks upsetting the functioning of the gTLD objection procedure, which is aimed at protecting interests other than those of gTLD applicants. If applicants were in a position to render objections virtually impossible, in practice by determining themselves the community on whose behalf objections can be brought, in most cases no objection would be possible.

70. In light of this, the Applicant's emphasis on the intent of the party alleged to be doing the targeting and on the impossibility to target something accidentally is misplaced, because it relies on a notion that is not relevant for the strong association test. For the same reason, the insistence on the Applicant's "*legitimate uses*" for the applied-for gTLDs and on its "*strong brand recognition in the eyes of the public*" is beside the point in this context.

71. In the case at hand, therefore, the point is not the undisputed link between the Strings and the Amazon company name and brand, which quite probably exists in the perception of a large number of internet users. Rather, the point is whether there may also exist an at least equally strong association between the Strings and other communities affected by the Application, and in particular the one whose interests the IO purports to further.

72. The answer can only be affirmative. The Strings coincide with the name of the Amazon River and thereby entail an obvious association with the Amazon

III.B The clear delineation of the community invoked by the IO

(a) The position of the IO

75. The IO recalls that the AGB does not define the term "*community*". However, in requiring that the community expressing opposition be "*clearly delineated*" it lists certain non-limited factors, such as the recognition at local or global level, the level of formal boundaries and length of existence, the global distribution or the size of the community. The term community refers to a group of people living in the same place or having some characteristic in common, such as a territory, a region or place of residence, a language, a religion, an activity or values, interests or goals.

76. One of the relevant criteria is whether the group of individuals or entities can be delineated from others and whether members of the community are delineated from internet users in general and whether the community is recognized amongst its members and by the general public at global or local level. The IO quotes the description of the World Wildlife Fund which points to the Amazon's vast geographic expanse that embraces the territories of nine countries, to the features of its landscape in terms of variety of species, extension of the forests and in particular tropical ones, and the number and length of rivers, to the variety of ethnic and indigenous groups and to the link between the health of the region and the health of the planet.

77. The Amazon community can be clearly delineated from the general public by its strong link with the Amazon region. The community does not only share the geographic region. It has more far-reaching common interests and ties, including economic ones and those relating to the respect of the environment and the preservation of the indigenous culture and of the archeological and ethnological wealth. These common interests are recognized and protected through OTCA by the States which share the region and a common understanding of the specificities of the Amazon community and have put in place a process of cooperation, *inter alia* to achieve sustainable development.

78. The most interested States that share the Amazon territory have thus recognized the specificities of the region, the interests of the community and their particular needs. Their cooperation shows that the community is clearly recognized as a whole,

considered as a community. The asserted community comprises eight separate and sovereign countries with their own geography, economy, history, population and bio-diversities, which entail a diversity that rules out the idea of cohesiveness. Even the existence of common interests, ties and characteristics, assuming it could be proved factually, does not establish a community under the AGB. In any event, the alleged community is not clearly delineated because it lacks formal boundaries, which is a strict requirement under the AGB. Specific and strong links with a region are insufficient to establish clear delineation.

(c) The Determination of the Expert

80. As discussed above, the community whose clear delineation must be considered here is the Amazon Community, and not that of internet users in general, as contended by the Applicant.

81. The Expert recalls that, in accordance with Section 3.5.4 of the Objection Procedures, the factors that can be balanced to determine whether the invoked community is clearly delineated include, but are not limited to, (*i*) the level of the community's public recognition, (*ii*) the level of formal boundaries around it and what persons or entities are considered to form it, (*iii*) the length of time it has been in existence, (*iv*) its global distribution and (*v*) the number of people or entities that make it up.

82. The Expert considers that some of the factors highlighted by the IO could indicate the existence of an Amazon Community. The economic interests and ties within the Amazon region, and the community that can be considered related to it, are significant. More pertinently, the Amazon Community is characterized by its importance in terms of wealth of culture, archeology, ethnology and environment, as well as by its impact on the environment of the world as a whole. It therefore has its own specificity and interests, and its interests to a certain extent coincide with those of the broader public, in particular as concerns the environment. In general terms it can also be seen to be recognized as a community by outsiders. Moreover, the Amazon Community unquestionably has a very large population and has been in existence for a long time.

83. On the other hand, as underlined by the Applicant, the purported community is

III.C Whether there is a substantial opposition to the Strings within the community

(a) The position of the IO

85. The IO avers that the mere numerical criterion was not the intent of the drafters of the AGB, so that the Expert is not limited to a simple comparison between the number of those having expressed opposition and the overall size of the community. The word "*substantial*" can also be used to designate something of considerable importance or worth. In addition to the number of oppositions, regard must be had to their material content. Particular importance should be paid in that regard to the comments of the Governments in the Early Warning Procedure.

86. The broad meaning of the term substantial opposition is confirmed by the fact that the possibility to file community objections was granted to the IO, who has pointed out that he will abstain from filing an opposition if a single established institution is better placed to represent the community concerned. This shows that the IO's role is to defend the public interest by acting on behalf of the public for the defense of rights and interests that lack an institution which obviously could represent it. The IO also refers to Section 3.2.5 of the Objection Procedures, which makes the IO's objection conditional upon at least one comment in opposition having been made.

87. The IO acknowledges that the Application for the ".Amazon" string has triggered "*only a small number of comments*" and that those for the other two Strings have triggered "*no direct comments*". This can be explained by the limited awareness of members of the community of the new gTLD program and, in the case of the Strings in the Japanese and Chinese languages, by their language. This in itself is not enough to disqualify the Objection. Indeed, it is an essential part of the IO's mission to protect the users of the internet who are less aware of the ICANN Program and of its impact on their rights and interests. Particular importance must be accorded to the Early Warning issued by the Brazilian and Peruvian members of the GAC[7], given that Brazil shares more than half of the Amazon region and Peru is particularly interested in the protection and promotion of the interests and rights of the Amazon Community. In support of its position on the weight of the opposition the IO points also to the endorsement by Bolivia, Ecuador and Guayana. He further notes that the

to the gTLDs before any opposition could be said to be 'substantial'". The Applicant points to OTCA,[8] of which eight States are members and four are on ICANN's Governmental Advisory Committee, to the millions of people who live and do business in the region, to the many environmental groups working to preserve the region's environment and to the representatives of its indigenous peoples. The Applicant notes that, despite having knowledge of the process and the means to object, none of these potential opponents felt the need to file an objection, or even to comment or register concern regarding the Applications in the Applications Comments Forum or to oppose them in ICANN's At-Large Advisory Committee ("ALAC"), including the Regional At-Large Organization ("RALO") for Latin America and the Caribbean Islands. The Early Warning filed by the Governments of Brazil and Peru in November 2012, which was only directed at the Application for ".Amazon", only requested that the Application "*be included in the GAC early warning process*", which is not an objection. According to Section 1.1.2.4 of the AGB, it is up to governments to file an objection if they remain opposed to an application. In response to the early warning, and before the lapse of the objection period, the Applicant established contacts with the Governments involved, who have preferred to continue negotiations rather than file objections. This means that the Governments "*believe this objection does not have to succeed to protect their interests*".

(c) The Determination of the Expert

89. According to the Objection Procedures (Section 3.5.4) the factors that can be balanced to establish substantial opposition to the application within the community purported to be represented by an objector include (*i*) the number of expressions of opposition relative to the composition of the community, (*ii*) the representative nature of the entities expressing opposition, (*iii*) their stature and weight, (*iv*) their distribution or diversity, (*v*) their historical defense of the community in other contexts and (*vi*) the costs incurred by the objector to convey opposition.

90. As evidence of substantial opposition to the Applications the IO relies essentially on the position expressed by the Governments of Brazil and Peru in the Early Warning Procedure. The two Governments undoubtedly have significant stature and weight within the Amazon Community H as noted by the Applicant, beyond their

Applicant is persuasive in arguing that the Brazilian and Peruvian Governments' attitude is an indication of their belief that their interests can be protected even if the Objection does not succeed. Indeed, in assessing the substantial nature of the opposition to an objection regard must be had not only to the weight and authority of those expressing it, but also to the forcefulness of their opposition.

92. The IO acknowledges that the Applications triggered only a small number of comments, and that actually the Applications for the Chinese and Japanese translations of "Amazon" triggered none at all. He explains this with the alleged limited awareness of the Applications within the Amazon Community. This is not entirely convincing.

93. It is not necessary here to enter into the discussion between the Parties on whether, in strict legal terms, the OTCA would have had the power to file an Objection, or to consider whether, albeit lacking formal powers, it could nonetheless have made its voice heard in a debate on the Applications' potential negative consequences. However, it is difficult to ignore the argument that there were many other parties defending interests potentially affected by the Applications (environmental groups, representatives of the indigenous populations and so on) that could have voiced some form of opposition to the Applications, had they been seriously concerned about the consequences. Particularly given the standing of at least some of those organizations, it is implausible that none of them would have been aware of the Applications.

94. These considerations lead the Expert to find that the IO has failed to make a showing of substantial opposition to the Applications within the purported Amazon Community.

III.D Whether the Applications create a likelihood of material detriment to a significant portion of the Amazon community

(a) The position of the IO

95. The IO underscores that the Applications are aimed exclusively at providing "*a unique and dedicated platform for Amazon while simultaneously protecting the integrity of its brand and reputation*" and that the only eligible registrants are the

community and owning its cultural heritage of the possibility of obtaining the Strings and of benefitting from the reputation linked to the name of their community and region. This would lead to a disappearance of the link between the term Amazon and the Amazon region *"with far reaching consequences for the region and its population"*, because the users of the global internet *"will probably link the [Strings] exclusively to the Applicant and its corporate entities"*. Furthermore, the global internet users' awareness of the existence and importance of the region will suffer, causing harm to the core issues of the region, and ultimately to the health of the planet which is clearly linked to the health of the Amazon.

97. The IO concludes that the launch of closed-brand gTLDs as foreseen in the Applications is very likely to interfere with the legitimate interests of the Amazon Community and to cause material harm to it and to the public who use the global internet.

(b) The position of the Applicant

98. The Applicant premises its discussion of this point by underscoring the self-standing nature of the criterion of detriment. It also notes that ICANN amended the AGB to include the qualification that the detriment should be material and to the community, and not just to the objector. It also points to ICANN's statement that there is a *"presumption"* in favor of granting new gTLDs to eligible applicants. The Applicant contests the relevance of the IO's argument that, in case of success of the Applications, *"the peoples and entities being part of the Amazon community"* would be unable to obtain the Strings, underlining that the AGB makes it clear that *"an allegation of detriment that consists only of the applicant being delegated the string instead of the objector will not be sufficient for a finding of material detriment"*. Moreover, the detriment to the community would be the same even if the Applications were rejected, because it would still be unable to use the Strings, since neither it nor anyone else applied for them. In relation to the Chinese and Japanese translations of "Amazon" the Applicant adds that there is no evidence that the asserted community would want to use the Chinese or Japanese domain names. The Applicant also underscores that it has used "Amazon" as a trademark in many countries, including the ones of the Amazon region, for many years with no evidence of reduced awareness of, or confusion with, the Amazon region. Indeed, even the countries in the Amazon region have granted Amazon trademark registrations or

(c) The Determination of the Expert

99. The Objection Procedures list the following factors that can be taken into account to assess whether the Application is likely to create material detriment to the rights and legitimate interests of a significant proportion of the community: (*i*) the nature and extent of the damage to the community's reputation; (*ii*) evidence that the applicant does not act, or intend to act, in accordance with the interests of the community; (*iii*) interference with core activities of the community; (*iv*) nature and extent of the concrete or economic damages to the community and (*v*) level of certainty of alleged detrimental outcomes.

100. There is no dispute that the Applicant intends to use the Strings to operate closed domains. Consequently, no one, including the Amazon Community or anyone with coinciding interests, will be allowed to use the Strings. However, as the Applicant remarks, even if the Objections were sustained the Amazon Community would still not be entitled to use the Strings, since it did not apply for them. The Expert considers that, in and of itself, the failure of the Amazon Community, or of anybody sharing its interests, to apply for the Strings can be regarded as an indication that the inability to use the Strings is not crucial to the protection of the Amazon Community's interests.

101. In any event, the Amazon Community's inability to use the Strings is not an indication of detriment, and even less of material detriment. The Objection Procedures are clear in specifying that "*[a]n allegation of detriment that consists only of the applicant being delegated the string instead of the objector will not be sufficient for a filing of material detriment*" (Section 3.5.4).

102. Furthermore, the IO does not explain how the impossibility for the Amazon Community or entities or persons connected to it to use the Strings and their use by the Applicant would lead to a loss of the link between the term Amazon and the Amazon region. On the other hand, as the Applicant points out, "Amazon" has been used as a brand, trademark and domain name for nearly two decades also in the States arguably forming part of the Amazon Community. It is even registered in those States. There is no evidence, or even allegation, that this has caused any harm to the Amazon Community's interests, or has led to a loss of reputation linked to the name of the region or community or to any other form of damage.

Amazon Community comes also from the lack of serious opposition to the Application by those that might be considered to have the Community's interests at heart, which has already been underscored in Section III.C above. Of course, opposition to an application and detriment are considered under two different tests in the Objection Procedures. Opposition is not necessarily evidence of detriment, just as non-opposition is not conclusive evidence of lack of detriment. However, in this case very significant potential consequences are alleged and there are many entities that could have expressed opposition had their interests been threatened. The fact that none of them was prompted to raise any objection, whether formally or at least informally, can be taken as a significant indication of lack of likelihood of detriment. It further corroborates the position that the use by the Applicant of the Strings for closed gTLDs cannot impair the interests of the Amazon Community

105. In these conditions the Expert holds that the IO has failed to satisfy its burden of proof in relation to the material detriment requirement.

IV. CONCLUSION

106. The Expert finds that he has jurisdiction to rule on the challenge to the IO's independence and that, given the need to guarantee the perception of neutrality of the gTDL dispute resolution system, the challenge must be upheld.

107. On the merits of the Objections the Expert has found that the IO has sufficiently proven the strong relation between the Strings and the Amazon Community. Instead, the IO has not shown that there is substantial opposition to the Application within that community or that the Application would lead to substantial detriment. These findings make it unnecessary to decide on the clear delineation test.

108. Since pursuant to Section 3.5.4 of the Objection Procedures all four tests must be met for a community objection to prevail, the Objections must be rejected.

V. DECISION

109. For the reasons set out above and in accordance with Art. 21(d) of the Procedure, the Panel hereby renders the following Expert Determination:

Place of the Expertise: Paris

Durban GAC Communiqué

Communication

1. GAC Objections to Specific Applications:

a. The GAC Advises the ICANN Board that:

i The GAC has reached consensus on GAC Objection Advice according to Module 3.1 part I of the Applicant Guidebook on the following applications :

1. The application for .amazon (application number 1-1315-58086) and related IDNs in Japanese (application number 1-1318-83995) and Chinese (application number 1-1318-5591)

This page reflects the current application status. Application status will be updated from time to time to reflect the various New gTLD Program processes. Except for the application statuses "Withdrawn" and "Delegated", application statuses are not final.

A change in application status is intended to inform the applicants and the community of an application's current status. A change or update is not a definite indication that an application may proceed to another phase of the program. For more information including definitions of application statuses see the applicant advisory.

Please Note: The contact information provided on this page for withdrawn and delegated applications may no longer be current. The contact information listed reflects the information provided by the applicant during the application phase of the New gTLD Program. This information is not maintained once an application has withdrawn or been delegated. Current Registry contact information for applications that have contracted with ICANN and been delegated can be found at the Registry Listing page:https://www.icann.org/resources/pages/listing-2012-02-25-en.

Strings	".AMAZON", ".アマゾン" and ".亚马逊" gTLDs

1. This Expert Determination is rendered in the consolidated dispute settlement proceedings arising from the community objections to three applications for the generic top-level domain (“**gTLD**”) name “.AMAZON”, and the Japanese and Chinese terms for AMAZON (respectively アマゾン and 亚马逊) within the framework of the ICANN gTLD Application Process governed by the ICANN gTLD Applicant Guidebook, version 2012-06-04 (the “**AGB**”).

I. INTRODUCTION

2. The three community objections at the origin of these proceedings (the “**Objections**”) were filed on March 12, 2013 with the International Centre for Expertise of the International Chamber of Commerce (the “**Centre**”) by the Independent Objector, Professor Alain Pellet, 12, Avenue Alphonse de Neuville, 92380 Garches, France, contact@independent-objector-newgtlds.org (the “**IO**”).

3. The Objections (EXP/396/ICANN/13, EXP/397/ICANN/14 and EXP/398/ICANN/15) relate to three applications (the “**Applications**”) filed by AMAZON EU S.à.r.l., Contact Information Redacted Contact Information Redacted (the “**Applicant**”) respectively for the “.AMAZON”, “.アマゾン” and “.亚马逊” gTLDs (collectively the “**Strings**”).

4. The content of all the Objections is practically identical.

5. On April 23, 2013 the Centre informed the Parties of its decision to consolidate the Objections.

6. The Applicant filed its Responses to the Objections on May 24, 2013.

7. The IO is represented in these proceedings by Ms Heloïse Bajer-Pellet, Contact Information Redacted Mr Daniel Müller, Contact Information Redacted Mr Phon van den Biesen, Contact Information Redacted and Mr Sam Wordsworth, Contact Information Redacted Contact Information Redacted .

8. The Applicant is represented in these proceedings by Messrs. Nick Bolter and Gareth Dickson, Edwards Wildman Palmer UK LLP, Contact Information Redacted

9. On June 28, 2013 the Centre informed the Parties that on June 24, 2013 the Chairman of the Standing Committee appointed as sole member of the Panel of Experts Professor Luca G. Radicati di Brozolo, Arblit Radicati di Brozolo Sabatini, Contact Information Redacted Contact Information Redacted (the “**Expert**”), who submitted his declaration of acceptance and availability and statement of impartiality and independence on June 26, 2013.

10. The file of the case was transmitted by the Centre to the Expert on August 1, 2013.

Article 21(a) of the Procedure provides that the Centre and the Expert shall make reasonable efforts to ensure that the Expert renders his decision within 45 days of the "*constitution of the Panel*". The Centre considers that the Panel is constituted when the Expert is appointed, the Parties have paid their respective advances on costs in full and the file is transmitted to the Expert.

11. Following an exchange of correspondence with the IO and the Applicant (collectively the "**Parties**"), the Expert issued the Expert Mission on September 3, 2013.

12. At the request of the IO, the Expert allowed an exchange of submissions on the Applicant's challenge to the IO. The IO filed his additional written statement on August 16, 2013 whilst the Applicant filed its reply on August 22, 2013.

13. On September 9, 2013 the Centre informed the Expert that the time limit for submission of the draft expert determination was extended until October 5, 2013.

14. On the same date the Centre agreed to the Expert's request to deal with all three Objections in a single expert determination. The request was based on the consideration that the Applicant and the Objector are the same in all the consolidated proceedings and that the issues raised by all three Objections are practically identical and raise almost identical factual and legal issues.

15. In accordance with Article 19 of the the New gTLD Dispute Resolution Procedure (the "**Procedure**")**,**[1] and in the absence of any request by the Parties, no oral hearing was held.

16. The draft expert determination was submitted by the Expert for scrutiny to the Centre within the extended time limit in accordance with Article 21(a) and (b) of the Procedure.

17. These proceedings are administered by the Centre pursuant to Article 3(d) of the Procedure, which is applicable by virtue of its Article 1(d).

18. The proceedings are governed, as to matters of procedure, by the Procedure and by the Rules for Expertise of the International Chamber of Commerce, as supplemented by the ICC Practice Note on the Administration of Cases under the New gTLD Dispute Resolution Procedure (Article 4(a) and 4(b)(iv) of the Procedure).

19. Pursuant to Article 5(a) of the Procedure, the language of all submissions and proceedings was English. Moreover, in accordance with Article 6(a) of the Procedure, all communications by the Parties, the Expert and the Centre were submitted electronically.

20. As dictated by Article 20 of the Procedure, the merits of the dispute before the Expert are to be decided by reference to the relevant standards defined by ICANN, in particular in Module 3 of the AGB (the "**Objection Procedures**"), as well as to any rules and principles that the Expert determines to be applicable, having due regard

---

[1] Attachment to Module 3 of the AGB.

to the statements and documents submitted by the Parties. The burden of proof that the Objection should be sustained rests with the Objector in accordance with the applicable standards.

21. As agreed by the Centre, and given that the issues raised by the three Objections are for the most part identical, this Expert Determination deals with all three Objections collectively. Reference to the individual Objections will only be made insofar as they raise different issues from the other Objections.

II. THE CHALLENGE TO THE IO AND THE IO'S STANDING

(a) The Position of the Applicant

22. On April 6, 2013, after the filing of the Objections by the IO, the Applicant wrote to ICANN denouncing that "*the office of the IO exhibits a Conflict of Interest within the meaning of ICANN's Conflict of Interest Policy*". The challenge contended that the IO's Objections were based on comments in the Early Warning Procedure by the Governments of Peru and Brazil, with whom the IO has "*special links*" due to his professional ties with them, as he has with the Governments of Bolivia and Argentina, likewise identified as opponents of the Applications. Those links are asserted to have influenced and to continue to influence the IO's decision-making process in these proceedings. For the Applicant the Objections were used to formalize the objections of the governments of Brazil and Peru, in contrast with the principle that the IO can only act on behalf of the public who uses the global internet. The conflict of interest is viewed as the reason for the alleged inconsistency between the IO's approach to this application and to the ones for similar gTLDs (for instance for ".africa", ".persiangulf" and ".islam"). According to the Applicant, allowing the Objections to proceed would damage the integrity of the gTLD dispute resolution process, because the challenges would be made public, leading to the perception that the IO is not a safety net for the public. The Applicant concluded with the request that ICANN set aside the Objection on account of the conflict of interest and, if deemed necessary, appoint another non-conflicted IO. The Applicant accepted to maintain confidentiality over its challenge, while reserving its right to raise the matter if the Objection were allowed to proceed.

23. The Applicant wrote to ICANN again on April 24 and May 18, 2013 reiterating its challenge and soliciting a response prior to the deadline for responding to the Objection.

24. Referring to its correspondence with ICANN, in the Response to the Objection the Applicant restated that the IO lacks standing in these proceedings because of the conflict of interest. Indeed, under the AGB he has standing only to represent "*the public who use the global internet*", and cannot act on behalf of any particular entity or entities, as he is purportedly doing in these proceedings.

25. In its reply of August 22, 2013 to the IO's additional statement of August 16, 2013, the Applicant puts forward three sets of arguments. ***First***, it argues that the IO has a "*clear*" conflict of interest requiring him to recuse himself. It contests that the AGB

does not require the IO to be independent of anyone standing to benefit from the objection and releases him from the "*universally recognized obligation to decline additional work where it would create a conflict of interest with an existing relationship*". While recognizing that the IO does not act as a judge, arbitrator or expert, the Applicant underscores that the AGB binds him to the same basic rules of ethics that apply to those offices in relation not only to ICANN and applicants, but also to any other influences. The Applicant concedes that "*a normal average social life*" does not necessarily entail a conflict of interest or lack of independence, but asserts that the IO's ties to the governments of Brazil or Peru are not merely part of such a social life.

26. *Second*, the Applicant restates that the IO can only represent the community made up of those who use the internet (referred to by the parties also as the "*internet community*") and that it is "*plainly wrong*" that he can only represent a community that is "*delineated and distinguishable from internet users in general*". The IO is granted special standing to fulfill his role within the gTLD program and, unlike "*ordinary*" objectors, does not have to prove an on-going relationship with a community. Consequently, he loses his special standing if he acts outside his role, e.g. on behalf of a community comprising particular persons or entities. In the case at hand the community represented by the IO is not the public who use the internet. The IO requests the same remedy sought by his client Peru, who is the largest financial contributor to the Amazon Cooperation Treaty Organization ("**OTCA**"). Notwithstanding that the Applications generated no reasoned or substantiated comments from the public, unlike similar applications (".gcc", ".islam", ".persiangulf" and ".africa"), the IO only objected to the Applicant's ones. The Applicant also contests that OTCA lacks the capacity to file an objection and differs in this respect from other organizations that could have objected to the strings to which the IO did not object. It adds that objections to the Applications could have been put forward by other entities. Had he followed the same criteria as for other objections, the IO would have concluded that OTCA and the governments of Brazil and Peru were in at least as good a position as the IO to file an objection. The IO's failure to demonstrate his complete independence and his apparent pursuit of the interest of particular persons or entities deprives him of standing in this case.

27. *Third*, the Applicant refers to a statement of the Centre that the decision over the IO's independence falls within the Expert's authority[2]. The Applicant argues that whether the IO has exceeded his role is a serious issue, because the Expert Determination will be accepted by ICANN (Section 3.4.6 of the Objection Procedures). This means that, if the issue is not decided by the Expert, the Applicant

---

[2] The Applicant refers to a letter of the Center dated July 8, 2013 in reply to a request submitted by it on this point. Actually the Center's letter of that date states that "*Whether a decision on this question [i.e. the independence of the IO] falls into the Expert Panel's scope and authority pursuant to the applicable rules and procedures, will have to be decided by the Expert Panel itself. Should the Expert Panel decide that it does fall into the scope of its work, it will then be directly on the Expert Panel to take a decision on the raised question.*"

risks "*unjustly and unfairly los[ing] with limited, if any, scope for a remedy*". This would result in irreparable damage to the integrity of the gTLD dispute resolution process.

(b) The position of the IO

28. In a letter to counsel for the Applicant of June 8, 2013 the IO denounced the inappropriateness of the Applicant's direct approach to ICANN on the matter of his independence, stating that it is not for ICANN to take a position on it. The IO argued that the claim concerning his alleged bias "*has to be dealt with by the Expert panel, who has full authority to decide in all impartiality*".

29. In the Objection the IO disclosed his relations with the Governments of Brazil and Peru, but clarified that in the present proceedings he is not representing them and is acting in the sole interests of the public who use the internet and that his relation with a State has nothing to do with his decision to object or not.

30. In his additional statement of August 16, 2013 the IO noted that Article 11(4) of the Rules is not relevant to a challenge of the IO, since the IO is only a party to these proceedings. He acknowledged, however, that the absence of a general procedure concerning the IO's independence and the possibility to challenge him for the entire gTLD program does not mean that no remedy is available. The IO recalls that in his June 8 letter referred to above he recognized that the Expert has the power to assess the IO's independence and to draw the necessary conclusions with regard to the Objection. Indeed, adds the IO, "*the Expert Panel is the guardian of the integrity of the process and it has the duty to ensure that the Expert Determination is soundly based on the standards established by the Guidebook*". Although it affects only the IO's standing, the condition that the IO must not act on behalf of any particular person or entity, but solely in the best interests of the users of the internet (Objection Procedures, Section 3.2.5), needs to be addressed by the Expert even if in Article 2(d) of the Procedure the expert determination is referred to only as a "*decision upon the merits of the objection*". The Expert must also address the standing of the Objector (Objection Procedures, Section 3.2.2). On this point the IO concludes that the Expert has the power to address whether the IO acts in the interest of the internet public or of a particular category of persons, regardless of whether the issue pertains to standing or to the merits. The matter must be decided in a single expert determination, there being no option to have separate decisions on standing and merits.

31. On the merits of the challenge, the IO posits that, pursuant to Section 3.2.5 of the Objection Procedures, he must remain independent and unaffiliated with any gTLD applicant. He considers that the Applicant's understanding that conflicts can occur where an objection is filed in furtherance of the interests of a potential community with ties to the IO "*hardly makes any sense and would ultimately exclude any person having a normal average social life to serve as the Independent Objector*". The Applicant should not be entitled to construct its case on the artificial alleged bias deriving from the IO's professional relationships when he was appointed. While accepting that the AGB directs him to act in the sole interest of "*the public who use*

the global internet", the IO cannot accept that this implies that that public is the only community that he has standing to represent. The fact that the IO is dispensed from proving the regular standing requirements for the types of objections that he can file (Objection Procedures, Section 3.2.5) does not mean that his community objections can concern only the rights and interests of a "*hypothetical*" community of internet users. This would entail a profound change in one of the four tests for community objections, the one relating to the existence of a clearly delineated community, because the public who use the internet is not such a community. Even if the community relevant here were the one of those living in the geographical region with strong links to the Amazon, it would not follow that the IO is acting on its behalf, also considering the Applicant's acknowledgment that such community would not benefit from the rejection of the Application. The AGB does not require that every string which targets a community be applied for by a representative of that community. It is irrelevant whether the Applicant intends to target a specific community or to reserve its gTLD for it. However, the operation of the gTDL must not impinge on the rights and legitimate interests of a significant portion of the community to which the string is explicitly or implicitly targeted. The IO points to Section 1.2.3.2 of the Objection Procedures, which permits community applications even if the application is not designated as community-based or aimed at a particular community. Therefore, what is relevant is not who is targeted by the applicant, but whether a particular community is targeted by the string. The IO acts for a public interest even if he invokes the interest of a particular community and mitigates the risk that in some cases a valid objection might not be raised by those entitled to do so. As such he acts as a safety net. Finally, the IO notes that his policy is not to file an objection when there is "*a single established institution*" that could do so. In the present case there is no such single institution. OTCA, in particular, could not validly have filed an objection because it is not aimed at representing the interests of the Amazon region, but at realizing the economic interest of its Member States within that region.

(c) The Determination of the Expert

32. In light of the Expert's conclusions on the merits of the Objection (Section III below), an analysis of the challenge to the IO's independence could be moot. However, the issues raised by the Applicant in this connection have been amply debated by the Parties and raise important questions of principle for the gTLD dispute resolution process. The Expert therefore deems it appropriate to address them.

(i) <u>The Expert's power to decide the challenge</u>

33. The Parties' arguments raise, as a preliminary matter, the issue whether it falls within the Expert's mandate to address the existence of the IO's alleged conflict of interest and, in the event, to draw the consequences of a finding that a conflict exists.

34. Both the Applicant and the IO concur that the Expert has authority to decide a challenge to the IO's independence.

35. The Expert shares this view.

36. As noted by the Parties, there is no rule explicitly dealing with the power to decide on challenges to the independence of the IO, and in particular vesting it on the Expert. Such a power is not conferred on the Expert by the Rules, Article 11(4) of which deals only with challenges to the independence of the expert panel, nor by the Objection Procedures or the Procedure, the latter of which defines the expert determination as "*the decision on the merits of the Objection*" (Article 2(d)).

37. Nonetheless, as noted by the Applicant, whether the IO has exceeded his role is a serious issue that can impact on the decision on an objection and that must be capable of being decided. This is all the more so because Section 3.4.6 of the Objection Procedures stipulates that expert determinations will be accepted by ICANN, thus in essence making them final.[3] The power to decide a challenge to the IO would therefore seem to inure to the Expert's inherent powers.

38. The issue is even less problematic if, as acknowledged by the Parties, the question of the IO's independence can be characterized as pertaining to the IO's standing. Indeed, it is indisputably within the Expert's powers to rule on the standing requirements of objectors (Objection Procedures, Section 3.2.2). There is no reason to hold that this does not hold true also for the standing of the IO.

(ii) The merits of the challenge to the IO

39. It being accepted that the Expert has jurisdiction to deal with a challenge to the IO's independence, the next question debated by the Parties that needs to be addressed is whether, as contended by the Applicant, the IO may only file objections on behalf of the community consisting of "*the public who uses the global internet*" or whether, instead, he is entitled to object on behalf of, or at least in the interest of, more strictly defined groups or communities.

40. This issue is preliminary to the one of conflict of interest. In the present case, even on the IO's admission, the Objection relates not to the interests of the internet public but to those of a particular group of individuals or entities, which will be referred to here as the "**Amazon Community**" with an expression used also by the Parties[4]. Accepting the Applicant's preliminary arguments would therefore entail that the IO would lack standing altogether, so that the conflict issue would not even have reason to be raised.

41. The Applicant relies on a strict reading of the statement in Section 3.2.5 of the Objection Procedures that the IO "*does not act on behalf of any particular persons or interests, but acts solely in the best interests of the public who use the internet*".

---

[3] Section 3.4.6. of the AGB reads as follows: "*The findings of the panel will be considered an expert determination and advice that ICANN will accept within the dispute resolution process*".

[4] This definition leaves unprejudiced whether the Amazon Community is a community within the meaning of the substantive standards for the sustainability of a community objection under Section 3.5.4 of the Objection Procedures. This issue is addressed in Section III below.

42. In the Expert's opinion such a formalistic interpretation would result in an unduly restrictive conception of the IO's role. Indeed, there is merit in the IO's position that the internet community is not clearly delineated (and perhaps even, in his words, "*hypothetical*"). This being so, the Applicant's position would entail that the IO's objections would never meet the clear delineation test. What is more, since the internet community is somewhat amorphous, if the IO's standing to object were limited to applications affecting the interests of that community his role would be seriously curtailed, because few applications would qualify as such.

43. The language of Section 3.2.5 of the Objection Procedures allows a more constructive interpretation. The statement that the IO's role is to file objections when "*no objection has been filed*" can be construed in the sense that his role is to raise objections in situations where, for whatever reason, no objection will be forthcoming, even if the application is "*highly objectionable*". This could occur, for instance, if there is nobody in a position to represent the community or if those who could raise the objection are unwilling to do so for fear of negative repercussions, lack of financial means and so on. Likewise, the statement that the IO "*does not act <u>on behalf</u> of any particular person or entities*" can be understood as permitting the IO to raise an objection in situations where, while not technically acting "*on behalf*" of anybody (in the sense that nobody has given him a mandate to act or would even want him to act), he takes into account what can be considered the interests of a given community that would be prejudiced by an application.

44. The conclusion must therefore be that the Objections' admissibility is not affected by the fact that it concerns interests possibly coinciding with those of the Amazon Community, rather than those of the broader internet community.

45. In light of this conclusion and of the asserted coincidence between the interests of the Amazon Community defended by the Objections and those of the States with which the IO has professional relations, the issue of conflict of interest raised by the Applicant becomes relevant.

46. On the subject of the IO's conflicts of interest Section 3.2.5 of the Objection Procedures requires the IO to be and to remain independent and unaffiliated "*with any of the gTLD applicants*". In this connection, it points to the "*various rules of ethics for judges and international arbitrators*" as models to assess independence. It is silent, instead, on the possible conflicts arising from the IO's relations with the persons or entities whose interests he may be deemed to further by means of a given objection.

47. This silence could be explained by the fact that the Objection Procedures deal with the IO's independence in relation to his selection process, which occurs when the potential objectors are not yet identified and possibly even identifiable. It is therefore not conclusive. Although the IO is not in the same position as a judge or an arbitrator, the requirement that he be independent of one of the parties with an interest in the outcome of the proceedings (the applicant) seems to militate in favor of imposing the same requirement with respect to the other interested party (the group in whose purported interest the objection is filed). The IO's acceptance that

the Expert has jurisdiction to examine the challenge implies an acknowledgement on his part that a conflict with parties standing to benefit from his Objection is potentially fatal to the Objection.

48. The Expert has difficulty accepting the IO's assertion that a finding of conflict in circumstances such as those of the present case would preclude anybody with "*a normal average social life*" from serving as the IO. The question is not whether the existence of special ties with certain persons or entities or categories of entities (which anybody will inevitably have) prevents a person from being appointed IO.[5] Rather, it is whether the existence of such ties becomes problematic in the event that the IO raises an objection that can be correlated to the interests of those with whom the ties exist.

49. The Applicant does have a point when it contests that the IO's professional ties at issue here do not fall within the notion of normal average social life. Such a definition does not sit well with the IO's representation of two sovereign States in international judicial proceedings.

50. In any event, if regard must be had to the standards applicable to judges and arbitrators (as predicated by Section 3.2.5 of the Objection Procedures), the relevant perspective in international arbitration nowadays is an objective one. In the words of the *IBA Guidelines on Conflicts of Interest in International Arbitration* (General Standard 2(c)), it is that of "*a reasonable and informed third party*", whilst the ICC Rules of Arbitration refer to independence "*in the eyes of the parties*" (Article 11.2). By such standards, the IO's ties to two prominent members of the Amazon Community could give rise to a presumption of conflict in this case, completely regardless of whether, in filing the Objection, the IO acted "*on behalf*" of his clients, as contended but in no way substantiated by the Applicant.

51. There is one argument that could be advanced to refute the allegation of conflict of interest. It has to do with the absence of any indication that the two Governments "*on whose behalf*" he is alleged to be acting could not have filed an objection themselves (§ 91 ff. below) and would therefore have had to rely only on the IO to do it for them. In these conditions, the lack of initiative on the part of those Governments could denote that they had no interest in the Objections and that therefore the IO's action was prompted by other considerations. In the view of the Expert, however, such an argument does not carry sufficient weight. The decision on the existence of a conflict of interest cannot be made to depend on speculations as to the reasons why an objection was made by the IO rather than by the entities that could in principle stand to benefit from them.

52. Likewise, the Expert does not believe that the conflicts between the IO and the potential beneficiaries of an objection should be assessed differently from those with applicants. Admittedly, the practical relevance of the two types of conflicts

---

[5] The Applicant does not suggest that the IO should not have accepted his role at the outset because of ties of that kind.

could be different.[6] Yet, the Expert considers it paramount for the confidence in the gTLD dispute resolution process that any decision on the IO's independence be taken on purely objective criteria and bearing in mind the need to ensure the perception of complete neutrality and impartiality of the office of the IO.

53. The Expert is of the view that, objectively considered, the links between the IO and two major representatives of the Amazon Community lead to justifiable doubts as to his independence in the eyes of the Applicant and of the broader public. Given the importance of ensuring the perception of neutrality, independence and impartiality of the office of the IO and of the entire gTLD dispute resolution process, the Expert finds that the Applicant's challenge to the independence of the IO must therefore be upheld.

III. THE MERITS OF THE OBJECTION

54. The Objection Procedures do not address the consequences of an upholding of a challenge to the independence of the IO. In particular, they do not provide that, upon a finding of a conflict of interest of the IO, the IO loses standing or that another IO must be appointed for the specific case, as suggested by the Applicant; nor do they provide for any other solution. If the consequence of a finding of lack of independence were a loss of standing by the IO, any consideration on the merits of the challenge would be moot. However, given the silence of the Objection Procedures and the resulting uncertainty on the consequences of the finding that the IO lacks the requisite independence in this case, the Expert considers it appropriate to deal also with the merits of the Objections and to decide whether they would deserve to be upheld, regardless of the IO's standing.

55. In accordance with Section 3.5.4 of the Objection Procedures, objections can be sustained if the Expert ascertains the existence of substantial opposition from a significant portion of the community to which the string may be targeted. This provision applies also to objections filed by the IO.

56. For a showing of such opposition the IO must prove that:

(i) the community invoked by him is clearly delineated;

(ii) there is substantial community opposition to the Applications;

(iii) there is a strong association between the community invoked by the IO and the Strings;

(iv) the Applications create a likelihood of material detriment to the rights or legitimate interests of a significant portion of the community to which the

---

[6] Conflicts of interest of the IO with respect to an applicant entail a risk that no objection would be raised, despite the application's potential adverse impact on general interests. On the other hand, a conflict with respect to a party standing to benefit from an objection might lead to an objection being filed by the IO where none would otherwise be filed. However, the objection would still have to be assessed on its merits by a third party (the expert panel).

Strings may be explicitly or implicitly targeted.

57. The four criteria will be addressed here in the order in which they have been addressed by the IO in the Objections.

III.A Targeting: the association between the community invoked by the IO and the Strings

(a) The position of the IO

58. According to the IO, although the Applications have not been framed as community-based, since they only target the Applicant and its subsidiaries, the Strings can be implicitly linked to a specific community different from the Applicant. The test to assess the Applications' implicit target is not limited to the intended use of the Strings by the Applicant, but is primarily concerned with the expectation of the average internet users and with their perceptions of the Strings and their associations.

59. The Applications target also "*the South-American region with the same English name around the Amazon River*". The identity between the Applicant's business name and brand and the English word for the South American river is not coincidental. The Applicant itself intentionally links the Strings to the Amazon river and region in its communications. The correlation between the Strings and the Amazon river and region is corroborated by the consistent use of the term "*Amazon*" to describe and characterize the Amazon region and the community. The term "*Amazon region*" is used by the 1978 Treaty for Amazon Cooperation and by UNESCO, which has included parts of the Amazon region in the World Heritage List under the 1972 Convention concerning the Protection of the World Cultural and Natural Heritage. The denomination is used also by the World Wildlife Fund.

60. In the eyes of the IO, all the foregoing demonstrates a strong association between the Amazon region and its community and the Strings.

(b) The position of the Applicant

61. The Applicant premises its argument on this point on the consideration that under the AGB only one community is targeted by an application, since the AGB requires more than a mere nexus between the applied-for string and the asserted community; it requires a "*strong association*". The IO has failed to show that the Strings target the public who use the global internet, if this is the only community that the IO is entitled to represent, nor has he proved that the Strings target any other community.

62. According to the Applicant, it is not possible to target someone accidentally, since targeting implies precision and looks to the intent of the party alleged to be doing the targeting. The Application makes no mention of the community invoked by the IO and is "*clearly targeted*" at the Applicant's brand. The IO's argument on implicit targeting is too simplistic because it ignores the Applicant's strong brand recognition

in the eyes of the public who use the global internet and holds that the Applicant will forever target Amazonia with its present and future services. The argument that the targeting test is based on the existence of a certain link or possible association by the public based on string similarity has been rejected by ICANN, which acknowledges that brand names and other strings that happen to relate to some geographic entities may also have legitimate unrelated uses. The Applicant "*clearly has 'legitimate uses'*" for its marks, global brand and company name as a gTLD string, including in local languages, which it has used since 1994. The Applicant cites the example of the ".patagonia" gTLD, that was found not to target the community of Patagonia.

(c) The Determination of the Expert

63. In the Objection Procedures (Section 3.5.4) the term "*targeting*" is used in relation to the third substantive test that must be satisfied by a community objection, i.e. the one of strong association between the invoked community and the applied-for string.

64. The Objection Procedures point to the following non-exclusive factors that can be balanced to indicate a strong association between a community and the applied-for-string: (*i*) statements contained in the application; (*ii*) other public statements by the applicant; (*iii*) associations by the public.

65. The reason for dealing with this test at the outset in the present case is that, prior to establishing whether there is a strong association between the Strings and a community, the community having the purportedly strong association must be identified. As seen above, in the context of the challenge to the IO's independence the Parties debated the IO's standing to file an objection in the interest of a community other than the internet community. In relation to the substantive test, the dispute between the Parties on the identification of the community is framed in terms of whether the community in whose interest an objection is brought can differ from the one "*targeted*" by the applicant.

66. The Applicant contends that consideration can only be given to the community "*explicitly*" targeted by the Applications, which in this case is the one revolving around the business activities of the Applicant's group and the Amazon brand. No relevance can be given to the Amazon Community which is, instead, the focus of the Objections. The IO, for his part, adopts a broader approach, which relies on the community "*implicitly*" targeted by the Applications, which in this case is the Amazon Community.

67. The Objection Procedures do not bear out the Applicant's interpretation. Although the standard of strong association is dealt with under the heading "*targeting*", the "*target*" of the objection is not considered in Section 3.5.4. This provision requires proof that the applied-for gTLD be strongly associated with the community "*represented by the objector*". The focus is therefore on the community that the objector, and in this case the IO, considers to be affected, or prejudiced, by an application (and, in this sense, targeted) and on whose behalf or interest he acts. It

is not relevant whether that community is the one to which the applicant intends to direct its gTLD. The IO is persuasive in his argument that the association between a community and a string depends primarily on the expectations and perceptions of the average internet user.

68. The Applicant implies that only one community can be "*targeted*" by a gTLD and an application. The Expert finds no support in the Objection Procedures for this position, which is actually counterintuitive. If the term "*targeted*" is properly understood as meaning "*affected*", there is no reason why there cannot be more than one community affected by a given application for a gTLD. A gTLD can well have an impact on a broader range of persons or entities than the one envisaged by the applicant. The requirement invoked by the Applicant that the association between the community and the string be "*strong*" is not conclusive, since more than one of a string's possible multiple associations can be strong.

69. The Applicant's argument also risks upsetting the functioning of the gTLD objection procedure, which is aimed at protecting interests other than those of gTLD applicants. If applicants were in a position to render objections virtually impossible, in practice by determining themselves the community on whose behalf objections can be brought, in most cases no objection would be possible.

70. In light of this, the Applicant's emphasis on the intent of the party alleged to be doing the targeting and on the impossibility to target something accidentally is misplaced, because it relies on a notion that is not relevant for the strong association test. For the same reason, the insistence on the Applicant's "*legitimate uses*" for the applied-for gTLDs and on its "*strong brand recognition in the eyes of the public*" is beside the point in this context.

71. In the case at hand, therefore, the point is not the undisputed link between the Strings and the Amazon company name and brand, which quite probably exists in the perception of a large number of internet users. Rather, the point is whether there may also exist an at least equally strong association between the Strings and other communities affected by the Application, and in particular the one whose interests the IO purports to further.

72. The answer can only be affirmative. The Strings coincide with the name of the Amazon River and thereby entail an obvious association with the Amazon Community. Leaving aside for the moment whether there is such a community (which will be addressed in the following subsection III.B), there is no doubt that not only there exists an association between the Strings and the alleged Amazon Community, but that such association is "*strong*" in the perception of internet users.

73. This is borne out by the IO's evidence. As a matter of fact, not even the Applicant seems to dispute this, since its arguments go only to the preliminary points of whether the Amazon Community can be relevant for this test and of whether it exists at all, which is the subject of the next substantive test to be addressed.

74. The Expert is thus satisfied that the IO's Objection meets the test of "*strong association*" between the Strings and the community in whose interest it is filed.

III.B The clear delineation of the community invoked by the IO

(a) The position of the IO

75. The IO recalls that the AGB does not define the term "*community*". However, in requiring that the community expressing opposition be "*clearly delineated*" it lists certain non-limited factors, such as the recognition at local or global level, the level of formal boundaries and length of existence, the global distribution or the size of the community. The term community refers to a group of people living in the same place or having some characteristic in common, such as a territory, a region or place of residence, a language, a religion, an activity or values, interests or goals.

76. One of the relevant criteria is whether the group of individuals or entities can be delineated from others and whether members of the community are delineated from internet users in general and whether the community is recognized amongst its members and by the general public at global or local level. The IO quotes the description of the World Wildlife Fund which points to the Amazon's vast geographic expanse that embraces the territories of nine countries, to the features of its landscape in terms of variety of species, extension of the forests and in particular tropical ones, and the number and length of rivers, to the variety of ethnic and indigenous groups and to the link between the health of the region and the health of the planet.

77. The Amazon community can be clearly delineated from the general public by its strong link with the Amazon region. The community does not only share the geographic region. It has more far-reaching common interests and ties, including economic ones and those relating to the respect of the environment and the preservation of the indigenous culture and of the archeological and ethnological wealth. These common interests are recognized and protected through OTCA by the States which share the region and a common understanding of the specificities of the Amazon community and have put in place a process of cooperation, *inter alia* to achieve sustainable development.

78. The most interested States that share the Amazon territory have thus recognized the specificities of the region, the interests of the community and their particular needs. Their cooperation shows that the community is clearly recognized as a whole, irrespective of the divisions of sovereign States. All this leads to the conclusion that the community is clearly delineated.

(b) The position of the Applicant

79. The Applicant points to Section 4.2.3 of the AGB which states the need for "*very stringent*" requirements for a clearly delineated community and that community implies "*more of cohesion that mere commonality of interest*". It then acknowledges that, if the IO may only represent the public who use the global internet, that class meets the requirements of clear delineation. If, on the other hand, it is accepted that the IO may act on behalf of particular persons or entities, then the IO has not shown that the community he claims to be acting for has the required cohesiveness to be

considered as a community. The asserted community comprises eight separate and sovereign countries with their own geography, economy, history, population and bio-diversities, which entail a diversity that rules out the idea of cohesiveness. Even the existence of common interests, ties and characteristics, assuming it could be proved factually, does not establish a community under the AGB. In any event, the alleged community is not clearly delineated because it lacks formal boundaries, which is a strict requirement under the AGB. Specific and strong links with a region are insufficient to establish clear delineation.

(c) The Determination of the Expert

80. As discussed above, the community whose clear delineation must be considered here is the Amazon Community, and not that of internet users in general, as contended by the Applicant.

81. The Expert recalls that, in accordance with Section 3.5.4 of the Objection Procedures, the factors that can be balanced to determine whether the invoked community is clearly delineated include, but are not limited to, (*i*) the level of the community's public recognition, (*ii*) the level of formal boundaries around it and what persons or entities are considered to form it, (*iii*) the length of time it has been in existence, (*iv*) its global distribution and (*v*) the number of people or entities that make it up.

82. The Expert considers that some of the factors highlighted by the IO could indicate the existence of an Amazon Community. The economic interests and ties within the Amazon region, and the community that can be considered related to it, are significant. More pertinently, the Amazon Community is characterized by its importance in terms of wealth of culture, archeology, ethnology and environment, as well as by its impact on the environment of the world as a whole. It therefore has its own specificity and interests, and its interests to a certain extent coincide with those of the broader public, in particular as concerns the environment. In general terms it can also be seen to be recognized as a community by outsiders. Moreover, the Amazon Community unquestionably has a very large population and has been in existence for a long time.

83. On the other hand, as underlined by the Applicant, the purported community is composed of several different countries and exhibits within itself a considerable diversity in terms of geography, economy, population and bio-diversity. This could rule out the idea of cohesiveness, that arguably lies at the core of the notion of community and might imply something more than a mere commonality of interests. Furthermore, the IO has not focused particularly on the existence of formal barriers, which is one of the possible relevant criteria for the clear delineation test.

84. The record is therefore mixed and doubts could be entertained as to whether the clear delineation criterion is satisfied. However, in light of the conclusions on the other tests, there is no need to reach a conclusive finding on clear delineation.

III.C Whether there is a substantial opposition to the Strings within the community

(a) The position of the IO

85. The IO avers that the mere numerical criterion was not the intent of the drafters of the AGB, so that the Expert is not limited to a simple comparison between the number of those having expressed opposition and the overall size of the community. The word "*substantial*" can also be used to designate something of considerable importance or worth. In addition to the number of oppositions, regard must be had to their material content. Particular importance should be paid in that regard to the comments of the Governments in the Early Warning Procedure.

86. The broad meaning of the term substantial opposition is confirmed by the fact that the possibility to file community objections was granted to the IO, who has pointed out that he will abstain from filing an opposition if a single established institution is better placed to represent the community concerned. This shows that the IO's role is to defend the public interest by acting on behalf of the public for the defense of rights and interests that lack an institution which obviously could represent it. The IO also refers to Section 3.2.5 of the Objection Procedures, which makes the IO's objection conditional upon at least one comment in opposition having been made.

87. The IO acknowledges that the Application for the ".Amazon" string has triggered "*only a small number of comments*" and that those for the other two Strings have triggered "*no direct comments*". This can be explained by the limited awareness of members of the community of the new gTLD program and, in the case of the Strings in the Japanese and Chinese languages, by their language. This in itself is not enough to disqualify the Objection. Indeed, it is an essential part of the IO's mission to protect the users of the internet who are less aware of the ICANN Program and of its impact on their rights and interests. Particular importance must be accorded to the Early Warning issued by the Brazilian and Peruvian members of the GAC[7], given that Brazil shares more than half of the Amazon region and Peru is particularly interested in the protection and promotion of the interests and rights of the Amazon Community. In support of its position on the weight of the opposition the IO points also to the endorsement by Bolivia, Ecuador and Guayana. He further notes that the Application has not received the support of any government in the region.

(b) The position of the Applicant

88. For the Applicant, the IO has not proved substantial opposition within "*his asserted community*" or the larger one of the internet public. In its words, "*[t]here are many significant voices who could speak out in the event of genuine community opposition*

---

[7] The IO acknowledged that the Early Warning related only to the ".Amazon" string, but noted that it is equally relevant for the other two Strings. The concerns expressed by the Brazilian GAC member were expressed to relate also "*to possible future or existing applications in other languages, including IDN applications*".

to the gTLDs before any opposition could be said to be 'substantial'". The Applicant points to OTCA,[8] of which eight States are members and four are on ICANN's Governmental Advisory Committee, to the millions of people who live and do business in the region, to the many environmental groups working to preserve the region's environment and to the representatives of its indigenous peoples. The Applicant notes that, despite having knowledge of the process and the means to object, none of these potential opponents felt the need to file an objection, or even to comment or register concern regarding the Applications in the Applications Comments Forum or to oppose them in ICANN's At-Large Advisory Committee ("ALAC"), including the Regional At-Large Organization ("RALO") for Latin America and the Caribbean Islands. The Early Warning filed by the Governments of Brazil and Peru in November 2012, which was only directed at the Application for ".Amazon", only requested that the Application "*be included in the GAC early warning process*", which is not an objection. According to Section 1.1.2.4 of the AGB, it is up to governments to file an objection if they remain opposed to an application. In response to the early warning, and before the lapse of the objection period, the Applicant established contacts with the Governments involved, who have preferred to continue negotiations rather than file objections. This means that the Governments "*believe this objection does not have to succeed to protect their interests*".

(c) The Determination of the Expert

89. According to the Objection Procedures (Section 3.5.4) the factors that can be balanced to establish substantial opposition to the application within the community purported to be represented by an objector include (*i*) the number of expressions of opposition relative to the composition of the community, (*ii*) the representative nature of the entities expressing opposition, (*iii*) their stature and weight, (*iv*) their distribution or diversity, (*v*) their historical defense of the community in other contexts and (*vi*) the costs incurred by the objector to convey opposition.

90. As evidence of substantial opposition to the Applications the IO relies essentially on the position expressed by the Governments of Brazil and Peru in the Early Warning Procedure. The two Governments undoubtedly have significant stature and weight within the Amazon Community. However, as noted by the Applicant, beyond their expressions of opposition in the Early Warning Procedure, the two Governments did not voice disapproval of the initiative in other forms. As a matter of fact, they engaged in discussions with the Applicant.

91. This is not without significance. Indeed, had the two Governments seriously intended to oppose the Application, they would presumably have done so directly. There is no reason to believe that they could have been deterred from doing so by the fear of negative consequences or by the costs of filing an objection. The

---

[8] As mentioned in the discussion on the Applicant's challenge, the Applicant is of the view that OTCA does have the power to object to the Application.

Applicant is persuasive in arguing that the Brazilian and Peruvian Governments' attitude is an indication of their belief that their interests can be protected even if the Objection does not succeed. Indeed, in assessing the substantial nature of the opposition to an objection regard must be had not only to the weight and authority of those expressing it, but also to the forcefulness of their opposition.

92. The IO acknowledges that the Applications triggered only a small number of comments, and that actually the Applications for the Chinese and Japanese translations of "Amazon" triggered none at all. He explains this with the alleged limited awareness of the Applications within the Amazon Community. This is not entirely convincing.

93. It is not necessary here to enter into the discussion between the Parties on whether, in strict legal terms, the OTCA would have had the power to file an Objection, or to consider whether, albeit lacking formal powers, it could nonetheless have made its voice heard in a debate on the Applications' potential negative consequences. However, it is difficult to ignore the argument that there were many other parties defending interests potentially affected by the Applications (environmental groups, representatives of the indigenous populations and so on) that could have voiced some form of opposition to the Applications, had they been seriously concerned about the consequences. Particularly given the standing of at least some of those organizations, it is implausible that none of them would have been aware of the Applications.

94. These considerations lead the Expert to find that the IO has failed to make a showing of substantial opposition to the Applications within the purported Amazon Community.

III.D Whether the Applications create a likelihood of material detriment to a significant portion of the Amazon community

(a) The position of the IO

95. The IO underscores that the Applications are aimed exclusively at providing "*a unique and dedicated platform for Amazon while simultaneously protecting the integrity of its brand and reputation*" and that the only eligible registrants are the Applicant and its subsidiaries. If the Applications were upheld, the Strings would become closed brand gTLDs which the Applicant intends to operate without taking into account the Amazon Community's particular needs and interests. Domain names in the gTLDs in question will be "*used to support the business goals of Amazon*" and will not be offered to third parties, including the Governments and members of the targeted community.

96. This entails a risk of misappropriation, because granting exclusive rights on the Strings to a private company would prevent the use of the domains for public interest purposes related to the protection, promotion and awareness-raising on issues related to the Amazon region. The "*confiscation*" of the entire name space within the Strings by a single corporate entity would deprive the members of the

community and owning its cultural heritage of the possibility of obtaining the Strings and of benefitting from the reputation linked to the name of their community and region. This would lead to a disappearance of the link between the term Amazon and the Amazon region "*with far reaching consequences for the region and its population*", because the users of the global internet "*will probably link the [Strings] exclusively to the Applicant and its corporate entities*". Furthermore, the global internet users' awareness of the existence and importance of the region will suffer, causing harm to the core issues of the region, and ultimately to the health of the planet which is clearly linked to the health of the Amazon.

97. The IO concludes that the launch of closed-brand gTLDs as foreseen in the Applications is very likely to interfere with the legitimate interests of the Amazon Community and to cause material harm to it and to the public who use the global internet.

(b) The position of the Applicant

98. The Applicant premises its discussion of this point by underscoring the self-standing nature of the criterion of detriment. It also notes that ICANN amended the AGB to include the qualification that the detriment should be material and to the community, and not just to the objector. It also points to ICANN's statement that there is a "*presumption*" in favor of granting new gTLDs to eligible applicants. The Applicant contests the relevance of the IO's argument that, in case of success of the Applications, "*the peoples and entities being part of the Amazon community*" would be unable to obtain the Strings, underlining that the AGB makes it clear that "*an allegation of detriment that consists only of the applicant being delegated the string instead of the objector will not be sufficient for a finding of material detriment*". Moreover, the detriment to the community would be the same even if the Applications were rejected, because it would still be unable to use the Strings, since neither it nor anyone else applied for them. In relation to the Chinese and Japanese translations of "Amazon" the Applicant adds that there is no evidence that the asserted community would want to use the Chinese or Japanese domain names. The Applicant also underscores that it has used "Amazon" as a trademark in many countries, including the ones of the Amazon region, for many years with no evidence of reduced awareness of, or confusion with, the Amazon region. Indeed, even the countries in the Amazon region have granted Amazon trademark registrations or lower-level domain names for "Amazon". The Applicant highlights the absence of negative impact of the Amazon brand (described as "*one of the world's most recognized and trusted brands*") on the Amazon region since its introduction in 1994. Since then, only the Applicant and its group of companies have used "Amazon.com" and other "Amazon" domain names and trademarks, including in Latin America. There is no evidence that this has been detrimental to the Amazon region, nor that the elimination of the "inconsequential '.com'" would change the perception of users of the global internet in such a way that Amazonia will be removed from public consciousness and the region and the world will suffer the dire consequences presented by the IO.

(c) The Determination of the Expert

99. The Objection Procedures list the following factors that can be taken into account to assess whether the Application is likely to create material detriment to the rights and legitimate interests of a significant proportion of the community: (*i*) the nature and extent of the damage to the community's reputation; (*ii*) evidence that the applicant does not act, or intend to act, in accordance with the interests of the community; (*iii*) interference with core activities of the community; (*iv*) nature and extent of the concrete or economic damages to the community and (*v*) level of certainty of alleged detrimental outcomes.

100. There is no dispute that the Applicant intends to use the Strings to operate closed domains. Consequently, no one, including the Amazon Community or anyone with coinciding interests, will be allowed to use the Strings. However, as the Applicant remarks, even if the Objections were sustained the Amazon Community would still not be entitled to use the Strings, since it did not apply for them. The Expert considers that, in and of itself, the failure of the Amazon Community, or of anybody sharing its interests, to apply for the Strings can be regarded as an indication that the inability to use the Strings is not crucial to the protection of the Amazon Community's interests.

101. In any event, the Amazon Community's inability to use the Strings is not an indication of detriment, and even less of material detriment. The Objection Procedures are clear in specifying that "*[a]n allegation of detriment that consists only of the applicant being delegated the string instead of the objector will not be sufficient for a filing of material detriment*" (Section 3.5.4).

102. Furthermore, the IO does not explain how the impossibility for the Amazon Community or entities or persons connected to it to use the Strings and their use by the Applicant would lead to a loss of the link between the term Amazon and the Amazon region. On the other hand, as the Applicant points out, "Amazon" has been used as a brand, trademark and domain name for nearly two decades also in the States arguably forming part of the Amazon Community. It is even registered in those States. There is no evidence, or even allegation, that this has caused any harm to the Amazon Community's interests, or has led to a loss of reputation linked to the name of the region or community or to any other form of damage.

103. As further noted by the Applicant, it is unlikely that the loss of the ".com" after "Amazon" will change matters. More generally, there is no evidence either that internet users will be incapable of appreciating the difference between the Amazon group and its activities and the Amazon River and the Amazon Community, or that Amazonia and its specificities and importance for the world will be removed from public consciousness, with the dire consequences emphasized by the IO. Were a dedicated gTLD considered essential for the interests of the Amazon Community, other equally evocative strings would presumably be available. ".Amazonia" springs to mind.

104. Indirect confirmation of the absence of a risk of detriment to the interests of the

Amazon Community comes also from the lack of serious opposition to the Application by those that might be considered to have the Community's interests at heart, which has already been underscored in Section III.C above. Of course, opposition to an application and detriment are considered under two different tests in the Objection Procedures. Opposition is not necessarily evidence of detriment, just as non-opposition is not conclusive evidence of lack of detriment. However, in this case very significant potential consequences are alleged and there are many entities that could have expressed opposition had their interests been threatened. The fact that none of them was prompted to raise any objection, whether formally or at least informally, can be taken as a significant indication of lack of likelihood of detriment. It further corroborates the position that the use by the Applicant of the Strings for closed gTLDs cannot impair the interests of the Amazon Community

105. In these conditions the Expert holds that the IO has failed to satisfy its burden of proof in relation to the material detriment requirement.

IV. CONCLUSION

106. The Expert finds that he has jurisdiction to rule on the challenge to the IO's independence and that, given the need to guarantee the perception of neutrality of the gTDL dispute resolution system, the challenge must be upheld.

107. On the merits of the Objections the Expert has found that the IO has sufficiently proven the strong relation between the Strings and the Amazon Community. Instead, the IO has not shown that there is substantial opposition to the Application within that community or that the Application would lead to substantial detriment. These findings make it unnecessary to decide on the clear delineation test.

108. Since pursuant to Section 3.5.4 of the Objection Procedures all four tests must be met for a community objection to prevail, the Objections must be rejected.

V. DECISION

109. For the reasons set out above and in accordance with Art. 21(d) of the Procedure, the Panel hereby renders the following Expert Determination:

(i) The Independent Objector's Objections are dismissed and therefore the Applicant is the prevailing party in all consolidated cases;

(ii) The Applicant AMAZON EU S.à.r.l is entitled to the refund of the advance payment of costs in all consolidated cases by the Centre pursuant to Article 14(e) of the Procedure.

Place of the Expertise: Paris

OTCA	Amazon Cooperation Treaty Organization
Procedure	New gTLD Dispute Resolution Procedure, Attachment to Module 3 of the AGB
Strings	".AMAZON", ".アマゾン" and ".亚马逊" gTLDs

1. This Expert Determination is rendered in the consolidated dispute settlement proceedings arising from the community objections to three applications for the generic top-level domain ("**gTLD**") name ".AMAZON", and the Japanese and Chinese terms for AMAZON (respectively アマゾン and 亚马逊) within the framework of the ICANN gTLD Application Process governed by the ICANN gTLD Applicant Guidebook, version 2012-06-04 (the "**AGB**").

I. INTRODUCTION

2. The three community objections at the origin of these proceedings (the "**Objections**") were filed on March 12, 2013 with the International Centre for Expertise of the International Chamber of Commerce (the "**Centre**") by the Independent Objector, Professor Alain Pellet, 12, Avenue Alphonse de Neuville, 92380 Garches, France, contact@independent-objector-newgtlds.org (the "**IO**").

3. The Objections (EXP/396/ICANN/13, EXP/397/ICANN/14 and EXP/398/ICANN/15) relate to three applications (the "**Applications**") filed by AMAZON EU S.à.r.l., 5 Rue Plaetis, Luxembourg L-2338, LU, lorna.gradden.am@valideus.com (the "**Applicant**") respectively for the ".AMAZON", ".アマゾン" and ".亚马逊" gTLDs (collectively the "**Strings**").

4. The content of all the Objections is practically identical.

5. On April 23, 2013 the Centre informed the Parties of its decision to consolidate the Objections.

6. The Applicant filed its Responses to the Objections on May 24, 2013.

7. The IO is represented in these proceedings by Ms Heloïse Bajer-Pellet, 15 Rue de la Banque, 75002 Paris, France, avocat@bajer.fr; Mr Daniel Müller, 20, Avenue Charles de Gaulle, 78290 Croissy sur Seine, France, mail@muellerdaniel.eu; Mr Phon van den Biesen, De Groene Bocht, Kaizergrecht 253, 1016 EB Amsterdam, The Netherlands, phonvandenbiesen@vdbkadvocaten.eu; and Mr Sam Wordsworth, 24 Lincoln Inn Fields, London WC2A 3EG, UK, SWordsworth@essexcourt.net.

Article 21(a) of the Procedure provides that the Centre and the Expert shall make reasonable efforts to ensure that the Expert renders his decision within 45 days of the "*constitution of the Panel*". The Centre considers that the Panel is constituted when the Expert is appointed, the Parties have paid their respective advances on costs in full and the file is transmitted to the Expert.

11. Following an exchange of correspondence with the IO and the Applicant (collectively the "**Parties**"), the Expert issued the Expert Mission on September 3, 2013.

12. At the request of the IO, the Expert allowed an exchange of submissions on the Applicant's challenge to the IO. The IO filed his additional written statement on August 16, 2013 whilst the Applicant filed its reply on August 22, 2013.

13. On September 9, 2013 the Centre informed the Expert that the time limit for submission of the draft expert determination was extended until October 5, 2013.

14. On the same date the Centre agreed to the Expert's request to deal with all three Objections in a single expert determination. The request was based on the consideration that the Applicant and the Objector are the same in all the consolidated proceedings and that the issues raised by all three Objections are practically identical and raise almost identical factual and legal issues.

15. In accordance with Article 19 of the the New gTLD Dispute Resolution Procedure (the "**Procedure**")**,**[1] and in the absence of any request by the Parties, no oral hearing was held.

16. The draft expert determination was submitted by the Expert for scrutiny to the Centre within the extended time limit in accordance with Article 21(a) and (b) of the Procedure.

17. These proceedings are administered by the Centre pursuant to Article 3(d) of the Procedure, which is applicable by virtue of its Article 1(d).

18. The

The Internet Corporation for Assigned Names and Numbers

ICANN

To All Prospective Applicants for New gTLDs

Since ICANN's founding ten years ago as a not-for-profit, multi-stakeholder organization dedicated to coordinating the Internet's unique identifier system, one of its foundational principles has been to promote competition and choice in the domain-name marketplace while ensuring Internet security and stability.

We are now engaging in a detailed and lengthy consultation process with all constituencies of the global Internet community as to how best to introduce new gTLDs. Representatives from a wide variety of stakeholders—governments, individuals, civil society, business and intellectual property constituencies, and the technology community—were engaged in discussions and bottom-up policy development for more than three years. In October 2007, the Generic Names Supporting Organization (GNSO)—one of the groups that coordinate global Internet policy at ICANN—completed its policy development work on new gTLDs and approved a set of recommendations. All this policy development work culminated with ICANN's Board of Directors deciding to adopt the community-developed policy at the ICANN Paris meeting in June 2008. You can see a thorough brief of the policy process and outcomes at http://gnso.icann.org/issues/new-gtlds/.

In October 2008, ICANN published the first Draft Applicant Guidebook for public comment. I would like to thank all of the businesses, governments, individuals, communities, and other groups that provided comment. This feedback is an essential element of the implementation planning process for introducing new gTLDs.

Over 1200 pages of feedback, from more than 300 entities, was received. We also received many more verbal responses in various meetings. These comments have been analysed and considered in the context of the GNSO policy recommendations and the ICANN Board resolution to adopt those recommendations. The second version of the Draft Applicant Guidebook has been developed to reflect and address, to the extent possible, the comments received.

As with the first Draft Applicant Guidebook, several explanatory memoranda will accompany this version to enable readers to better understand the implementation work.

In addition to comments on the various elements of the Draft Applicant Guidebook, comments were also received on a number of important broader issues relating to the introduction of new gTLDs, such as the overall demand for new gTLDs, trademark protection, security and stability concerns relating to root zone capacity, and the potential for increased malicious conduct such as phishing and spoofing as a result of new gTLDs. ICANN is taking steps to engage interested parties in dialogue on those issues. These discussions, and progressing the work to develop a final version of the Draft Applicant Guidebook, will be undertaken concurrently. From an operational perspective, it is not resource effective or efficient to stop this work while discussion is taking place on the broader range of issues. Nor is it the intent to launch the process without resolving these overarching issues. Rather, it is the intention to continue engagement with the broader community while working out other implementation details of the program.

I look forward to receiving comments on this latest version of the Draft Applicant Guidebook.

Sincerely,

Paul D Twomey

Paul Twomey
President and CEO

Draft Applicant Guidebook, Version 2

Please note that this is a discussion draft only. Potential applicants should not rely on any of the proposed details of the new gTLD program as the program remains subject to further consultation and revision.

Draft Applicant Guidebook, v2

Module 1

Please note that this is a discussion draft only. Potential applicants should not rely on any of the proposed details of the new gTLD program as the program remains subject to further consultation and revision.

Module 1

Introduction to the gTLD Application Process

***Note for Draft Applicant Guidebook v2:** Where it is possible to provide a concise description of public comment on the first Draft Applicant Guidebook and how it has been considered in creating this draft, footnotes are included in the text. For a detailed analysis of public comment received on the first Draft Applicant Guidebook, see the summary posted at http://www.icann.org/en/topics/new-gtlds/agv1-analysis-public-comments-18feb09-en.pdf.*

This module gives applicants an overview of the process for applying for a new generic top-level domain, and includes instructions on how to complete and submit an application, the supporting documentation an applicant must submit with an application, the fees required and when and how to submit them.

This module also describes the conditions associated with particular types of applications, and the application life cycle.

For more about the origins, history and details of ICANN's policies on new gTLDs, please see http://gnso.icann.org/issues/new-gtlds/.

A glossary of relevant terms is included with the Draft Applicant Guidebook (Draft RFP).

Prospective applicants are encouraged to read and become familiar with the content of this entire module as well as the others, before starting the application process to make sure they understand what is required of them and what they can expect at each stage of the application evaluation process.

http://www.icann.org/en/topics/new-gtlds/interactive.htm.

1.1.1 Application Submission Dates

The application submission period opens at [time] UTC [date].

The application submission period closes at [time] UTC [date].

Applications may be submitted electronically through ICANN's online application system.

To receive consideration, all applications must be submitted electronically through the online application system by the close of the application submission period.

An application will not be considered, in the absence of exceptional circumstances, if:

- It is received after the due date.
- The application form is incomplete (either the questions have not been fully answered or required supporting documents are missing). Applicants will not ordinarily be permitted to supplement their applications after submission.
- The evaluation fee has not been paid by the deadline. Refer to Section 1.5 for fee information.

1.1.2 Application Processing Stages

This subsection provides an overview of the stages involved in processing an application submitted to ICANN. In Figure 1-1, the shortest and most straightforward path is marked with bold lines, while certain stages that may or may not be applicable in any given case are also shown. A brief description of each stage follows.

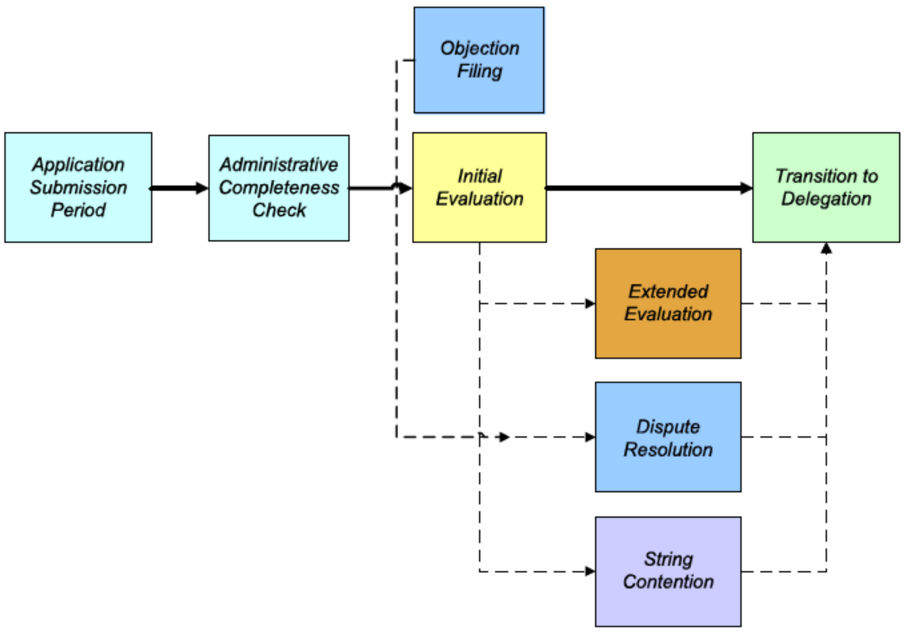

Figure 1-1 – Once submitted to ICANN, applications will pass through multiple stages of processing.

1.1.2.1 Application Submission Period

At the time the application submission period opens, applicants wishing to apply for a new gTLD can become registered users of the online application system.

Through the application system, applicants will answer a series of questions to provide general information, demonstrate financial capability, and demonstrate technical and operational capability. The supporting documents listed in subsection 1.2.3 of this module must also be submitted through the application system.

Applicants must also submit their evaluation fees during this period. Refer to Section 1.5 of this module for additional information about fees and payments.

Following the close of the application period, applicants can continue to use the application system as a resource to track the progress of their applications, although they may receive communications from ICANN through other means.

- The evaluation fees have been received.

ICANN will post at one time the applications considered complete and ready for evaluation as soon as practical after the close of the application period. Certain questions, including finance and security-related questions, have been designated by ICANN as confidential: applicant responses to these questions will not be posted. Confidential areas are indicated on the set of applicant questions at http://www.icann.org/en/topics/new-gtlds/draft-evaluation-criteria-clean-18feb09-en.pdf.

1.1.2.3 *Initial Evaluation*

Initial Evaluation will begin immediately after the administrative completeness check concludes. All complete applications will be reviewed during Initial Evaluation.

There are two main elements of the Initial Evaluation:

1. String reviews (concerning the applied-for gTLD string). String reviews include a determination that the applied-for gTLD string is not likely to cause security or stability problems in the DNS.
2. Applicant reviews (concerning the entity applying for the gTLD and its proposed registry services). Applicant reviews include a determination of whether the applicant has the requisite technical, operational, and financial capability to operate a registry.

At the conclusion of the Initial Evaluation period, ICANN will post a notice of all Initial Evaluation results. Depending on the volume of applications received, ICANN may post such notices in batches over the course of the Initial Evaluation period.

1.1.2.4 *Objection Filing*

filing period. Objections that have been filed during the objection filing period will be addressed in the dispute resolution stage, which is outlined in subsection 1.1.2.6 and discussed in detail in Module 3.

All applicants should be aware that third parties have the opportunity to file objections to any application during the objection filing period. Applicants whose applications are the subject of a formal objection will have an opportunity to file a response according to the dispute resolution service provider's rules and procedures (refer to Module 3).

An applicant wishing to file a formal objection to another application that has been submitted would do so within the objection filing period, following the objection filing procedures in Module 3.

1.1.2.5 Extended Evaluation

Extended Evaluation applies only to certain applicants that do not pass Initial Evaluation.

Applicants failing certain elements of the Initial Evaluation can request an Extended Evaluation. If the applicant does not expressly request an Extended Evaluation, the application will proceed no further. The Extended Evaluation period allows for one additional exchange of information between the applicant and evaluators to clarify information contained in the application. The reviews performed in Extended Evaluation do not introduce additional evaluation criteria.

An Extended Evaluation may also be required if the applied-for gTLD string or one or more proposed registry services raise technical issues that might adversely affect the security or stability of the DNS. The Extended Evaluation period provides a time frame for these issues to be investigated. Applicants will be informed if such reviews are required at the end of the Initial Evaluation period. Evaluators and any applicable experts consulted will

1.1.2.6 Dispute Resolution

Dispute resolution applies only to applicants whose applications are the subject of a formal objection.

Where formal objections are filed and filing fees paid during the objection filing period, dispute resolution service providers (DRSPs) will initiate and conclude proceedings based on the objections received. The formal objection procedure exists to provide a path for those who wish to object to an application that has been received by ICANN. Dispute resolution service providers provide the fora to adjudicate the proceedings based on the subject matter and the needed expertise. Consolidation of objections filed may occur, at the discretion of the DRSP.

As a result of the proceeding, either the applicant will prevail (in which case the application c

GAC PRINCIPLES REGARDING NEW gTLDs

Presented by the Governmental Advisory Committee
March 28, 2007

1. Preamble

1.1 The purpose of this document is to identify a set of general public policy principles related to the introduction, delegation and operation of new generic top level domains (gTLDs). They are intended to inform the ICANN Board of the views of the GAC regarding public policy issues concerning new gTLDs and to respond to the provisions of the World Summit on the Information Society (WSIS) process, in particular "*the need for further development of, and strengthened cooperation among, stakeholders for public policies for generic top-level domains (gTLDs)*"[1] and those related to the management of Internet resources and enunciated in the Geneva and Tunis phases of the WSIS.

1.2 These principles shall not prejudice the application of the principle of national sovereignty. The GAC has previously adopted the general principle that the Internet naming system is a public resource in the sense that its functions must be administered in the public or common interest. The WSIS Declaration of December 2003 also states that "*policy authority for Internet-related public policy issues is the sovereign right of States. They have rights and responsibilities for international Internet-related public policy issues.*"[2]

1.3 A gTLD is a top level domain which is not based on the ISO 3166 two-letter country code list[3]. For the purposes and scope of this document, new gTLDs are defined as any gTLDs added to the Top Level Domain name space after the date of the adoption of these principles by the GAC.

1.4 In setting out the following principles, the GAC recalls ICANN's stated core values as set out in its by-laws:

> *a. Preserving and enhancing the operational stability, reliability, security, and global interoperability of the Internet.*
>
> *b. Respecting the creativity, innovation, and flow of information made possible by the Internet by limiting ICANN's activities to those matters within ICANN's mission requiring or significantly benefiting from global coordination.*
>
> *c. To the extent feasible and appropriate, delegating coordination functions to or recognizing the policy role of other responsible entities that reflect the interests of affected parties.*

---

[1] See paragraph 64 of the WSIS Tunis Agenda, at http://www.itu.int/wsis/docs2/tunis/off/6rev1.html
[2] See paragraph 49.a) of the WSIS Geneva declaration at http://www.itu.int/wsis/docs/geneva/official/dop.html
[3] See: http://www.icann.org/general/glossary.htm#G

d. Seeking and supporting broad, informed participation reflecting the functional, geographic, and cultural diversity of the Internet at all levels of policy development and decision-making.

e. Where feasible and appropriate, depending on market mechanisms to promote and sustain a competitive environment.

f. Introducing and promoting competition in the registration of domain names where practicable and beneficial in the public interest.

g. Employing open and transparent policy development mechanisms that (i) promote well-informed decisions based on expert advice, and (ii) ensure that those entities most affected can assist in the policy development process.

h. Making decisions by applying documented policies neutrally and objectively, with integrity and fairness.

i. Acting with a speed that is responsive to the needs of the Internet while, as part of the decision-making process, obtaining informed input from those entities most affected.

j. Remaining accountable to the Internet community through mechanisms that enhance ICANN's effectiveness.

k. *While remaining rooted in the private sector, recognizing that governments and public authorities are responsible for public policy and duly taking into account governments' or public authorities' recommendations.*

2. Public Policy Aspects related to new gTLDs

When considering the introduction, delegation and operation of new gTLDs, the following public policy principles need to be respected:

Introduction of new gTLDs

2.1 New gTLDs should respect:

a) The provisions of the Universal Declaration of Human Rights[4] which seek to affirm *"fundamental human rights, in the dignity and worth of the human person and in the equal rights of men and women"*.

b) The sensitivities regarding terms with national, cultural, geographic and religious significance.

2.2 ICANN should avoid country, territory or place names, and country, territory or regional language or people descriptions, unless in agreement with the relevant governments or public authorities.

---

[4] See http://www.un.org/Overview/rights.html

2.3 The process for introducing new gTLDs must make proper allowance for prior third party rights, in particular trademark rights as well as rights in the names and acronyms of inter-governmental organizations (IGOs).

2.4 In the interests of consumer confidence and security, new gTLDs should not be confusingly similar to existing TLDs. To avoid confusion with country-code Top Level Domains no two letter gTLDs should be introduced.

Delegation of new gTLDs

2.5 The evaluation and selection procedure for new gTLD registries should respect the principles of fairness, transparency and non-discrimination. All applicants for a new gTLD registry should therefore be evaluated against transparent and predictable criteria, fully available to the applicants prior to the initiation of the process. Normally, therefore, no subsequent additional selection criteria should be used in the selection process.

2.6 It is important that the selection process for new gTLDs ensures the security, reliability, global interoperability and stability of the Domain Name System (DNS) and promotes competition, consumer choice, geographical and service-provider diversity.

2.7 Applicant registries for new gTLDs should pledge to:

a) Adopt, before the new gTLD is introduced, appropriate procedures for blocking, at no cost and upon demand of governments, public authorities or IGOs, names with national or geographic significance at the second level of any new gTLD.

b) Ensure procedures to allow governments, public authorities or IGOs to challenge abuses of names with national or geographic significance at the second level of any new gTLD.

2.8 Applicants should publicly document any support they claim to enjoy from specific communities.

2.9 Applicants should identify how they will limit the need for defensive registrations and minimise cyber-squatting that can result from bad-faith registrations and other abuses of the registration system

Operation of new gTLDs

2.10 A new gTLD operator/registry should undertake to implement practices that ensure an appropriate level of security and stability both for the TLD itself and for the DNS as a whole, including the development of best practices to ensure the accuracy, integrity and validity of registry information.

2.11 ICANN and a new gTLD operator/registry should establish clear continuity plans for maintaining the resolution of names in the DNS in the event of registry failure.

These plans should be established in coordination with any contingency measures adopted for ICANN as a whole.

2.12 ICANN should continue to ensure that registrants and registrars in new gTLDs have access to an independent appeals process in relation to registry decisions related to pricing changes, renewal procedures, service levels, or the unilateral and significant change of contract conditions.

2.13 ICANN should ensure that any material changes to the new gTLD operations, policies or contract obligations be made in an open and transparent manner allowing for adequate public comment.

2.14 The GAC WHOIS principles are relevant to new gTLDs.

3. Implementation of these Public Policy Principles

3.1 The GAC recalls Article XI, section 2, no. 1 h) of the ICANN Bylaws, which state that the ICANN Board shall notify the Chair of the Governmental Advisory Committee in a timely manner of any proposal raising public policy issues. Insofar, therefore, as these principles provide guidance on GAC views on the implementation of new gTLDs, they are not intended to substitute for the normal requirement for the ICANN Board to notify the GAC of any proposals for new gTLDs which raise public policy issues.

3.2 ICANN should consult the GAC, as appropriate, regarding any questions pertaining to the interpretation of these principles.

3.3 If individual GAC members or other governments express formal concerns about any issues related to new gTLDs, the ICANN Board should fully consider those concerns and clearly explain how it will address them.

3.4 The evaluation procedures and criteria for introduction, delegation and operation of new TLDs should be developed and implemented with the participation of all stakeholders.

N.B. The public policy priorities for GAC members in relation to the introduction of Internationalised Domain Name TLDs (IDN TLDs) will be addressed separately by the GAC.

Forrest-071

Convention on the Rights of Persons with Disabilities and Optional Protocol

UNITED NATIONS

CONVENTION ON THE RIGHTS OF PERSONS WITH DISABILITIES

Preamble

The States Parties to the present Convention,

(*a*) *Recalling* the principles proclaimed in the Charter of the United Nations which recognize the inherent dignity and worth and the equal and inalienable rights of all members of the human family as the foundation of freedom, justice and peace in the world,

(*b*) *Recognizing* that the United Nations, in the Universal Declaration of Human Rights and in the International Covenants on Human Rights, has proclaimed and agreed that everyone is entitled to all the rights and freedoms set forth therein, without distinction of any kind,

(*c*) *Reaffirming* the universality, indivisibility, interdependence and interrelatedness of all human rights and fundamental freedoms and the need for persons with disabilities to be guaranteed their full enjoyment without discrimination,

(*d*) *Recalling* the International Covenant on Economic, Social and Cultural Rights, the International Covenant on Civil and Political Rights, the International Convention on the Elimination of All Forms of Racial Discrimination, the Convention on the Elimination of All Forms of Discrimination against Women, the Convention against Torture and Other Cruel, Inhuman or Degrading Treatment or Punishment, the Convention on the Rights of the Child, and the International Convention on the Protection of the Rights of All Migrant Workers and Members of Their Families,

(*e*) *Recognizing* that disability is an evolving concept and that disability results from the interaction between persons with impairments and attitudinal and environmental barriers that hinders their full and effective participation in society on an equal basis with others,

(*f*) *Recognizing* the importance of the principles and policy guidelines contained in the World Programme of Action concerning Disabled Persons and in the Standard Rules on the Equalization of Opportunities for Persons with Disabilities in influencing the promotion, formulation and evaluation of the policies, plans, programmes and actions at the national, regional and international levels to further equalize opportunities for persons with disabilities,

(*g*) *Emphasizing* the importance of mainstreaming disability issues as an integral part of relevant strategies of sustainable development, (*h*) *Recognizing also* that discrimination against any person on the basis of disability is a violation of the inherent dignity and worth of the human person,

(*i*) *Recognizing further* the diversity of persons with disabilities,

(*j*) *Recognizing* the need to promote and protect the human rights of all persons with disabilities, including those who require more intensive support,

(*k*) *Concerned* that, despite these various instruments and undertakings, persons with disabilities continue to face barriers in their participation as equal members of society and violations of their human rights in all parts of the world,

(*l*) *Recognizing* the importance of international cooperation for improving the living conditions of persons with disabilities in every country, particularly in developing countries,

(*m*) *Recognizing* the valued existing and potential contributions made by persons with disabilities to the overall well-being and diversity of their communities, and that the promotion of the full enjoyment by persons with disabilities of their human rights and fundamental freedoms and of full participation by persons with disabilities will result in their enhanced sense of belonging and in significant advances in the human, social and economic development of society and the eradication of poverty,

(*n*) *Recognizing* the importance for persons with disabilities of their individual autonomy and independence, including the freedom to make their own choices,

(*o*) *Considering* that persons with disabilities should have the opportunity to be actively involved in decision-making processes about policies and programmes, including those directly concerning them,

(*p*) *Concerned* about the difficult conditions faced by persons with disabilities who are subject to multiple or aggravated forms of discrimination on the basis of race, colour, sex, language, religion, political or other opinion, national, ethnic, indigenous or social origin, property, birth, age or other status,

(*q*) *Recognizing* that women and girls with disabilities are often at greater risk, both within and outside the home, of violence, injury or abuse, neglect or negligent treatment, maltreatment or exploitation,

(*r*) *Recognizing* that children with disabilities should have full enjoyment of all human rights and fundamental freedoms on an equal basis with other children, and recalling obligations to that end undertaken by States Parties to the Convention on the Rights of the Child,

(*s*) *Emphasizing* the need to incorporate a gender perspective in all efforts to promote the full enjoyment of human rights and fundamental freedoms by persons with disabilities,

(*t*) *Highlighting* the fact that the majority of persons with disabilities live in conditions of poverty, and in this regard recognizing the critical need to address the negative impact of poverty on persons with disabilities,

(*u*) *Bearing in mind* that conditions of peace and security based on full respect for the purposes and principles contained in the Charter of the United Nations and observance of applicable human rights instruments are indispensable for the full protection of persons with disabilities, in particular during armed conflicts and foreign occupation,

(*v*) *Recognizing* the importance of accessibility to the physical, social, economic and cultural environment, to health and education and to information and communication, in enabling persons with disabilities to fully enjoy all human rights and fundamental freedoms,

(*w*) *Realizing* that the individual, having duties to other individuals and to the community to which he or she belongs, is under a responsibility to strive for the promotion and observance of the rights recognized in the International Bill of Human Rights,

(*x*) *Convinced* that the family is the natural and fundamental group unit of society and is entitled to protection by society and the State, and that persons with disabilities and their family members should receive the necessary protection and assistance to enable families to contribute towards the full and equal enjoyment of the rights of persons with disabilities,

(*y*) *Convinced* that a comprehensive and integral international convention to promote and protect the rights and dignity of persons with disabilities will make a significant contribution to redressing the profound social disadvantage of persons with disabilities and promote their participation in the civil, political, economic, social and cultural spheres with equal opportunities, in both developing and developed countries,

Have agreed as follows:

Article 1
Purpose

The purpose of the present Convention is to promote, protect and ensure the full and equal enjoyment of all human rights and fundamental freedoms by all persons with disabilities, and to promote respect for their inherent dignity.

Persons with disabilities include those who have long-term physical, mental, intellectual or sensory impairments which in interaction with various barriers may hinder their full and effective participation in society on an equal basis with others.

Article 2
Definitions

For the purposes of the present Convention:

“Communication” includes languages, display of text, Braille, tactile communication, large print, accessible multimedia as well as written, audio, plain-language, human-reader and augmentative and alternative modes, means and formats of communication, including accessible information and communication technology;

“Language” includes spoken and signed languages and other forms of non spoken languages;

“Discrimination on the basis of disability” means any distinction, exclusion or restriction on the basis of disability which has the purpose or effect of impairing or nullifying the recognition, enjoyment or exercise, on an equal basis with others, of all human rights and fundamental freedoms in the political, economic, social, cultural, civil or any other field. It includes all forms of discrimination, including denial of reasonable accommodation;

“Reasonable accommodation” means necessary and appropriate modification and adjustments not imposing a disproportionate or undue burden, where needed in a particular case, to ensure to persons with disabilities the enjoyment or exercise on an equal basis with others of all human rights and fundamental freedoms;

“Universal design” means the design of products, environments, programmes and services to be usable by all people, to the greatest extent possible, without the need for adaptation or specialized design. “Universal design” shall not exclude assistive devices for particular groups of persons with disabilities where this is needed.

Article 3
General principles

The principles of the present Convention shall be:

(*a*) Respect for inherent dignity, individual autonomy including the freedom to make one's own choices, and independence of persons;

(*b*) Non-discrimination;

(*c*) Full and effective participation and inclusion in society;

(*d*) Respect for difference and acceptance of persons with disabilities as part of human diversity and humanity;

(*e*) Equality of opportunity;

(*f*) Accessibility;

(*g*) Equality between men and women;

(*h*) Respect for the evolving capacities of children with disabilities and respect for the right of children with disabilities to preserve their identities.

Article 4
General obligations

1. States Parties undertake to ensure and promote the full realization of all human rights and fundamental freedoms for all persons with disabilities without discrimination of any kind on the basis of disability. To this end, States Parties undertake:

(*a*) To adopt all appropriate legislative, administrative and other measures for the implementation of the rights recognized in the present Convention;

(*b*) To take all appropriate measures, including legislation, to modify or abolish existing laws, regulations, customs and practices that constitute discrimination against persons with disabilities;

(*c*) To take into account the protection and promotion of the human rights of persons with disabilities in all policies and programmes;

(*d*) To refrain from engaging in any act or practice that is inconsistent with the present Convention and to ensure that public authorities and institutions act in conformity with the present Convention;

(*e*) To take all appropriate measures to eliminate discrimination on the basis of disability by any person, organization or private enterprise;

(*f*) To undertake or promote research and development of universally designed goods, services, equipment and facilities, as defined in article 2 of the present Convention, which should require the minimum possible adaptation and the least cost to meet the specific needs of a person with disabilities, to promote their availability and use, and to promote universal design in the development of standards and guidelines;

(*g*) To undertake or promote research and development of, and to promote the availability and use of new technologies, including information and communications technologies, mobility aids, devices and assistive technologies, suitable for persons with disabilities, giving priority to technologies at an affordable cost;

(*h*) To provide accessible information to persons with disabilities about mobility aids, devices and assistive technologies, including new technologies, as well as other forms of assistance, support services and facilities;

(*i*) To promote the training of professionals and staff working with persons with disabilities in the rights recognized in the present Convention so as to better provide the assistance and services guaranteed by those rights.

2. With regard to economic, social and cultural rights, each State Party undertakes to take measures to the maximum of its available resources and, where needed, within the framework of international cooperation, with a view to achieving progressively the full realization of these rights, without prejudice to those obligations contained in the present Convention that are immediately applicable according to international law.

3. In the development and implementation of legislation and policies to implement the present Convention, and in other decision-making processes concerning issues relating to persons with disabilities, States Parties shall closely consult with and actively involve persons with disabilities, including children with disabilities, through their representative organizations.

4. Nothing in the present Convention shall affect any provisions which are more conducive to the realization of the rights of persons with disabilities and which may be contained in the law of a State Party or international law in force for that State. There shall be no restriction upon or derogation from any of the

human rights and fundamental freedoms recognized or existing in any State Party to the present Convention pursuant to law, conventions, regulation or custom on the pretext that the present Convention does not recognize such rights or freedoms or that it recognizes them to a lesser extent.

5. The provisions of the present Convention shall extend to all parts of federal States without any limitations or exceptions.

Article 5
Equality and non-discrimination

1. States Parties recognize that all persons are equal before and under the law and are entitled without any discrimination to the equal protection and equal benefit of the law.

2. States Parties shall prohibit all discrimination on the basis of disability and guarantee to persons with disabilities equal and effective legal protection against discrimination on all grounds.

3. In order to promote equality and eliminate discrimination, States Parties shall take all appropriate steps to ensure that reasonable accommodation is provided.

4. Specific measures which are necessary to accelerate or achieve de facto equality of persons with disabilities shall not be considered discrimination under the terms of the present Convention.

Article 6
Women with disabilities

1. States Parties recognize that women and girls with disabilities are subject to multiple discrimination, and in this regard shall take measures to ensure the full and equal enjoyment by them of all human rights and fundamental freedoms.

2. States Parties shall take all appropriate measures to ensure the full development, advancement and empowerment of women, for the purpose of guaranteeing them the exercise and enjoyment of the human rights and fundamental freedoms set out in the present Convention.

Article 7
Children with disabilities

1. States Parties shall take all necessary measures to ensure the full enjoyment by children with disabilities of all human rights and fundamental freedoms on an equal basis with other children.

2. In all actions concerning children with disabilities, the best interests of the child shall be a primary consideration.

3. States Parties shall ensure that children with disabilities have the right to express their views freely on all matters affecting them, their views being given due weight in accordance with their age and maturity, on an equal basis with other children, and to be provided with disability and age-appropriate assistance to realize that right.

Article 8
Awareness-raising

1. States Parties undertake to adopt immediate, effective and appropriate measures:

(*a*) To raise awareness throughout society, including at the family level, regarding persons with disabilities, and to foster respect for the rights and dignity of persons with disabilities;

(*b*) To combat stereotypes, prejudices and harmful practices relating to persons with disabilities, including those based on sex and age, in all areas of life;

(*c*) To promote awareness of the capabilities and contributions of persons with disabilities.

2. Measures to this end include:

(*a*) Initiating and maintaining effective public awareness campaigns designed:

(i) To nurture receptiveness to the rights of persons with disabilities;

(ii) To promote positive perceptions and greater social awareness towards persons with disabilities;

(iii) To promote recognition of the skills, merits and abilities of persons with disabilities, and of their contributions to the workplace and the labour market;

(*b*) Fostering at all levels of the education system, including in all children from an early age, an attitude of respect for the rights of persons with disabilities;

(*c*) Encouraging all organs of the media to portray persons with disabilities in a manner consistent with the purpose of the present Convention;

(*d*) Promoting awareness-training programmes regarding persons with disabilities and the rights of persons with disabilities.

Article 9
Accessibility

1. To enable persons with disabilities to live independently and participate fully in all aspects of life, States Parties shall take appropriate measures to ensure to persons with disabilities access, on an equal basis with others, to the physical environment, to transportation, to information and communications, including information and communications technologies and systems, and to other facilities and services open or provided to the public, both in urban and in rural areas. These measures, which shall include the identification and elimination of obstacles and barriers to accessibility, shall apply to, inter alia:

(*a*) Buildings, roads, transportation and other indoor and outdoor facilities, including schools, housing, medical facilities and workplaces;

(*b*) Information, communications and other services, including electronic services and emergency services.

2. States Parties shall also take appropriate measures:

(*a*) To develop, promulgate and monitor the implementation of minimum standards and guidelines for the accessibility of facilities and services open or provided to the public;

(*b*) To ensure that private entities that offer facilities and services which are open or provided to the public take into account all aspects of accessibility for persons with disabilities;

(*c*) To provide training for stakeholders on accessibility issues facing persons with disabilities;

(*d*) To provide in buildings and other facilities open to the public signage in Braille and in easy to read and understand forms;

(*e*) To provide forms of live assistance and intermediaries, including guides, readers and professional sign language interpreters, to facilitate accessibility to buildings and other facilities open to the public;

(*f*) To promote other appropriate forms of assistance and support to persons with disabilities to ensure their access to information;

(*g*) To promote access for persons with disabilities to new information and communications technologies and systems, including the Internet;

(*h*) To promote the design, development, production and distribution of accessible information and communications technologies and systems at an early stage, so that these technologies and systems become accessible at minimum cost.

Article 10
Right to life

States Parties reaffirm that every human being has the inherent right to life and shall take all necessary measures to ensure its effective enjoyment by persons with disabilities on an equal basis with others.

Article 11
Situations of risk and humanitarian emergencies

States Parties shall take, in accordance with their obligations under international law, including international humanitarian law and international human rights law, all necessary measures to ensure the protection and safety of persons with disabilities in situations of risk, including situations of armed conflict, humanitarian emergencies and the occurrence of natural disasters.

Article 12
Equal recognition before the law

1. States Parties reaffirm that persons with disabilities have the right to recognition everywhere as persons before the law.

2. States Parties shall recognize that persons with disabilities enjoy legal capacity on an equal basis with others in all aspects of life.

3. States Parties shall take appropriate measures to provide access by persons with disabilities to the support they may require in exercising their legal capacity.

4. States Parties shall ensure that all measures that relate to the exercise of legal capacity provide for appropriate and effective safeguards to prevent abuse in accordance with international human rights law. Such safeguards shall ensure that measures relating to the exercise of legal capacity respect the rights, will and preferences of the person, are free of conflict of interest and undue influence, are proportional and tailored to the person’s circumstances, apply for the shortest time possible and are subject to regular review by a competent, independent and impartial authority or judicial body. The

safeguards shall be proportional to the degree to which such measures affect the person’s rights and interests.

5. Subject to the provisions of this article, States Parties shall take all appropriate and effective measures to ensure the equal right of persons with disabilities to own or inherit property, to control their own financial affairs and to have equal access to bank loans, mortgages and other forms of financial credit, and shall ensure that persons with disabilities are not arbitrarily deprived of their property.

Article 13
Access to justice

1. States Parties shall ensure effective access to justice for persons with disabilities on an equal basis with others, including through the provision of procedural and age-appropriate accommodations, in order to facilitate their effective role as direct and indirect participants, including as witnesses, in all legal proceedings, including at investigative and other preliminary stages.

2. In order to help to ensure effective access to justice for persons with disabilities, States Parties shall promote appropriate training for those working in the field of administration of justice, including police and prison staff.

Article 14
Liberty and security of person

1. States Parties shall ensure that persons with disabilities, on an equal basis with others:

(*a*) Enjoy the right to liberty and security of person;

(*b*) Are not deprived of their liberty unlawfully or arbitrarily, and that any deprivation of liberty is in conformity with the law, and that the existence of a disability shall in no case justify a deprivation of liberty.

2. States Parties shall ensure that if persons with disabilities are deprived of their liberty through any process, they are, on an equal basis with others, entitled to guarantees in accordance with international human rights law and shall be treated in compliance with the objectives and principles of the present Convention, including by provision of reasonable accommodation.

Article 15
Freedom from torture or cruel, inhuman or degrading treatment or punishment

1. No one shall be subjected to torture or to cruel, inhuman or degrading treatment or punishment. In particular, no one shall be subjected without his or her free consent to medical or scientific experimentation.

2. States Parties shall take all effective legislative, administrative, judicial or other measures to prevent persons with disabilities, on an equal basis with others, from being subjected to torture or cruel, inhuman or degrading treatment or punishment.

Article 16
Freedom from exploitation, violence and abuse

1. States Parties shall take all appropriate legislative, administrative, social, educational and other measures to protect persons with disabilities, both within and outside the home, from all forms of exploitation, violence and abuse, including their gender-based aspects.

2. States Parties shall also take all appropriate measures to prevent all forms of exploitation, violence and abuse by ensuring, inter alia, appropriate forms of gender- and age-sensitive assistance and support for persons with disabilities and their families and caregivers, including through the provision of information and education on how to avoid, recognize and report instances of exploitation, violence and abuse. States Parties shall ensure that protection services are age-, gender- and disability-sensitive.

3. In order to prevent the occurrence of all forms of exploitation, violence and abuse, States Parties shall ensure that all facilities and programmes designed to serve persons with disabilities are effectively monitored by independent authorities.

4. States Parties shall take all appropriate measures to promote the physical, cognitive and psychological recovery, rehabilitation and social reintegration of persons with disabilities who become victims of any form of exploitation, violence or abuse, including through the provision of protection services. Such recovery and reintegration shall take place in an environment that fosters the health, welfare, self-respect, dignity and autonomy of the person and takes into account gender- and age-specific needs.

5. States Parties shall put in place effective legislation and policies, including women- and child-focused legislation and policies, to ensure that instances of exploitation, violence and abuse against persons with disabilities are identified, investigated and, where appropriate, prosecuted.

Article 17
Protecting the integrity of the person

Every person with disabilities has a right to respect for his or her physical and mental integrity on an equal basis with others.

Article 18
Liberty of movement and nationality

1. States Parties shall recognize the rights of persons with disabilities to liberty of movement, to freedom to choose their residence and to a nationality, on an equal basis with others, including by ensuring that persons with disabilities:

(*a*) Have the right to acquire and change a nationality and are not deprived of their nationality arbitrarily or on the basis of disability;

(*b*) Are not deprived, on the basis of disability, of their ability to obtain, possess and utilize documentation of their nationality or other documentation of identification, or to utilize relevant processes such as immigration proceedings, that may be needed to facilitate exercise of the right to liberty of movement;

(*c*) Are free to leave any country, including their own;

(*d*) Are not deprived, arbitrarily or on the basis of disability, of the right to enter their own country.

2. Children with disabilities shall be registered immediately after birth and shall have the right from birth to a name, the right to acquire a nationality and, as far as possible, the right to know and be cared for by their parents.

Article 19
Living independently and being included in the community

States Parties to the present Convention recognize the equal right of all persons with disabilities to live in the community, with choices equal to others, and shall take effective and appropriate measures to facilitate full enjoyment by persons with disabilities of this right and their full inclusion and participation in the community, including by ensuring that:

(*a*) Persons with disabilities have the opportunity to choose their place of residence and where and with whom they live on an equal basis with others and are not obliged to live in a particular living arrangement;

(*b*) Persons with disabilities have access to a range of in-home, residential and other community support services, including personal assistance necessary to support living and inclusion in the community, and to prevent isolation or segregation from the community;

(*c*) Community services and facilities for the general population are available on an equal basis to persons with disabilities and are responsive to their needs.

Article 20
Personal mobility

States Parties shall take effective measures to ensure personal mobility with the greatest possible independence for persons with disabilities, including by:

(*a*) Facilitating the personal mobility of persons with disabilities in the manner and at the time of their choice, and at affordable cost;

(*b*) Facilitating access by persons with disabilities to quality mobility aids, devices, assistive technologies and forms of live assistance and intermediaries, including by making them available at affordable cost;

(*c*) Providing training in mobility skills to persons with disabilities and to specialist staff working with persons with disabilities;

(*d*) Encouraging entities that produce mobility aids, devices and assistive technologies to take into account all aspects of mobility for persons with disabilities.

Article 21
Freedom of expression and opinion, and access to information

States Parties shall take all appropriate measures to ensure that persons with disabilities can exercise the right to freedom of expression and opinion, including the freedom to seek, receive and impart information and ideas on an equal basis with others and through all forms of communication of their choice, as defined in article 2 of the present Convention, including by:

(*a*) Providing information intended for the general public to persons with disabilities in accessible formats and technologies appropriate to different kinds of disabilities in a timely manner and without additional cost;

(*b*) Accepting and facilitating the use of sign languages, Braille, augmentative and alternative communication, and all other accessible means, modes and formats of communication of their choice by persons with disabilities in official interactions;

(*c*) Urging private entities that provide services to the general public, including through the Internet, to provide information and services in accessible and usable formats for persons with disabilities;

(*d*) Encouraging the mass media, including providers of information through the Internet, to make their services accessible to persons with disabilities;

(*e*) Recognizing and promoting the use of sign languages.

Article 22
Respect for privacy

1. No person with disabilities, regardless of place of residence or living arrangements, shall be subjected to arbitrary or unlawful interference with his or her privacy, family, home or correspondence or other types of communication or to unlawful attacks on his or her honour and reputation. Persons with disabilities have the right to the protection of the law against such interference or attacks.

2. States Parties shall protect the privacy of personal, health and rehabilitation information of persons with disabilities on an equal basis with others.

Article 23
Respect for home and the family

1. States Parties shall take effective and appropriate measures to eliminate discrimination against persons with disabilities in all matters relating to marriage, family, parenthood and relationships, on an equal basis with others, so as to ensure that:

(*a*) The right of all persons with disabilities who are of marriageable age to marry and to found a family on the basis of free and full consent of the intending spouses is recognized;

(*b*) The rights of persons with disabilities to decide freely and responsibly on the number and spacing of their children and to have access to age-appropriate information, reproductive and family planning education are recognized, and the means necessary to enable them to exercise these rights are provided;

(*c*) Persons with disabilities, including children, retain their fertility on an equal basis with others.

2. States Parties shall ensure the rights and responsibilities of persons with disabilities, with regard to guardianship, wardship, trusteeship, adoption of children or similar institutions, where these concepts exist in national legislation; in all cases the best interests of the child shall be paramount. States Parties shall render appropriate assistance to persons with disabilities in the performance of their child-rearing responsibilities.

3. States Parties shall ensure that children with disabilities have equal rights with respect to family life. With a view to realizing these rights, and to prevent concealment, abandonment, neglect and segregation of children with disabilities, States Parties shall undertake to provide early and comprehensive information, services and support to children with disabilities and their families.

4. States Parties shall ensure that a child shall not be separated from his or her parents against their will, except when competent authorities subject to judicial review determine, in accordance with applicable law and procedures, that such separation is necessary for the best interests of the child. In no case shall a child be separated from parents on the basis of a disability of either the child or one or both of the parents.

5. States Parties shall, where the immediate family is unable to care for a child with disabilities, undertake every effort to provide alternative care within the wider family, and failing that, within the community in a family setting.

Article 24
Education

1. States Parties recognize the right of persons with disabilities to education. With a view to realizing this right without discrimination and on the basis of equal opportunity, States Parties shall ensure an inclusive education system at all levels and lifelong learning directed to:

(*a*) The full development of human potential and sense of dignity and self-worth, and the strengthening of respect for human rights, fundamental freedoms and human diversity;

(*b*) The development by persons with disabilities of their personality, talents and creativity, as well as their mental and physical abilities, to their fullest potential;

(*c*) Enabling persons with disabilities to participate effectively in a free society.

2. In realizing this right, States Parties shall ensure that:

(*a*) Persons with disabilities are not excluded from the general education system on the basis of disability, and that children with disabilities are not excluded from free and compulsory primary education, or from secondary education, on the basis of disability;

(*b*) Persons with disabilities can access an inclusive, quality and free primary education and secondary education on an equal basis with others in the communities in which they live;

(*c*) Reasonable accommodation of the individual's requirements is provided;

(*d*) Persons with disabilities receive the support required, within the general education system, to facilitate their effective education;

(*e*) Effective individualized support measures are provided in environments that maximize academic and social development, consistent with the goal of full inclusion.

3. States Parties shall enable persons with disabilities to learn life and social development skills to facilitate their full and equal participation in education and as members of the community. To this end, States Parties shall take appropriate measures, including:

(*a*) Facilitating the learning of Braille, alternative script, augmentative and alternative modes, means and formats of communication and orientation and mobility skills, and facilitating peer support and mentoring;

(*b*) Facilitating the learning of sign language and the promotion of the linguistic identity of the deaf community;

(*c*) Ensuring that the education of persons, and in particular children, who are blind, deaf or deafblind, is delivered in the most appropriate languages and modes and means of communication for the individual, and in environments which maximize academic and social development.

4. In order to help ensure the realization of this right, States Parties shall take appropriate measures to employ teachers, including teachers with disabilities, who are qualified in sign language and/or Braille, and to train professionals and staff who work at all levels of education. Such training shall incorporate disability awareness and the use of appropriate augmentative and alternative modes, means and formats of communication, educational techniques and materials to support persons with disabilities.

5. States Parties shall ensure that persons with disabilities are able to access general tertiary education, vocational training, adult education and lifelong learning without discrimination and on an equal basis with others. To this end, States Parties shall ensure that reasonable accommodation is provided to persons with disabilities.

Article 25
Health

States Parties recognize that persons with disabilities have the right to the enjoyment of the highest attainable standard of health without discrimination on the basis of disability. States Parties shall take all appropriate measures to ensure access for persons with disabilities to health services that are gender-sensitive, including health-related rehabilitation. In particular, States Parties shall:

(*a*) Provide persons with disabilities with the same range, quality and standard of free or affordable health care and programmes as provided to other persons, including in the area of sexual and reproductive health and population-based public health programmes;

(*b*) Provide those health services needed by persons with disabilities specifically because of their disabilities, including early identification and intervention as appropriate, and services designed to minimize and prevent further disabilities, including among children and older persons;

(*c*) Provide these health services as close as possible to people’s own communities, including in rural areas;

(*d*) Require health professionals to provide care of the same quality to persons with disabilities as to others, including on the basis of free and informed consent by, inter alia, raising awareness of the human rights, dignity, autonomy and needs of persons with disabilities through training and the promulgation of ethical standards for public and private health care;

(*e*) Prohibit discrimination against persons with disabilities in the provision of health insurance, and life insurance where such insurance is permitted by national law, which shall be provided in a fair and reasonable manner;

(*f*) Prevent discriminatory denial of health care or health services or food and fluids on the basis of disability.

Article 26
Habilitation and rehabilitation

1. States Parties shall take effective and appropriate measures, including through peer support, to enable persons with disabilities to attain and maintain maximum independence, full physical, mental, social and vocational ability, and full inclusion and participation in all aspects of life. To that end, States Parties shall organize, strengthen and extend comprehensive habilitation and rehabilitation services and programmes, particularly in the areas of health, employment, education and social services, in such a way that these services and programmes:

(*a*) Begin at the earliest possible stage, and are based on the multidisciplinary assessment of individual needs and strengths;

(*b*) Support participation and inclusion in the community and all aspects of society, are voluntary, and are available to persons with disabilities as close as possible to their own communities, including in rural areas.

2. States Parties shall promote the development of initial and continuing training for professionals and staff working in habilitation and rehabilitation services.

3. States Parties shall promote the availability, knowledge and use of assistive devices and technologies, designed for persons with disabilities, as they relate to habilitation and rehabilitation.

Article 27
Work and employment

1. States Parties recognize the right of persons with disabilities to work, on an equal basis with others; this includes the right to the opportunity to gain a living by work freely chosen or accepted in a labour market and work environment that is open, inclusive and accessible to persons with disabilities. States Parties shall safeguard and promote the realization of the right to work, including for those who acquire a disability during the course of employment, by taking appropriate steps, including through legislation, to, inter alia:

(*a*) Prohibit discrimination on the basis of disability with regard to all matters concerning all forms of employment, including conditions of recruitment, hiring and employment, continuance of employment, career advancement and safe and healthy working conditions;

(*b*) Protect the rights of persons with disabilities, on an equal basis with others, to just and favourable conditions of work, including equal opportunities and equal remuneration for work of equal value, safe and healthy working conditions, including protection from harassment, and the redress of grievances;

(*c*) Ensure that persons with disabilities are able to exercise their labour and trade union rights on an equal basis with others;

(*d*) Enable persons with disabilities to have effective access to general technical and vocational guidance programmes, placement services and vocational and continuing training;

(*e*) Promote employment opportunities and career advancement for persons with disabilities in the labour market, as well as assistance in finding, obtaining, maintaining and returning to employment;

(*f*) Promote opportunities for self-employment, entrepreneurship, the development of cooperatives and starting one’s own business;

(*g*) Employ persons with disabilities in the public sector;

(*h*) Promote the employment of persons with disabilities in the private sector through appropriate policies and measures, which may include affirmative action programmes, incentives and other measures;

(*i*) Ensure that reasonable accommodation is provided to persons with disabilities in the workplace;

(*j*) Promote the acquisition by persons with disabilities of work experience in the open labour market;

(*k*) Promote vocational and professional rehabilitation, job retention and return-to-work programmes for persons with disabilities.

2. States Parties shall ensure that persons with disabilities are not held in slavery or in servitude, and are protected, on an equal basis with others, from forced or compulsory labour.

Article 28
Adequate standard of living and social protection

1. States Parties recognize the right of persons with disabilities to an adequate standard of living for themselves and their families, including adequate food, clothing and housing, and to the continuous improvement of living conditions, and shall take appropriate steps to safeguard and promote the realization of this right without discrimination on the basis of disability.

2. States Parties recognize the right of persons with disabilities to social protection and to the enjoyment of that right without discrimination on the basis of disability, and shall take appropriate steps to safeguard and promote the realization of this right, including measures:

(*a*) To ensure equal access by persons with disabilities to clean water services, and to ensure access to appropriate and affordable services, devices and other assistance for disability-related needs;

(*b*) To ensure access by persons with disabilities, in particular women and girls with disabilities and older persons with disabilities, to social protection programmes and poverty reduction programmes;

(*c*) To ensure access by persons with disabilities and their families living in situations of poverty to assistance from the State with disability-related expenses, including adequate training, counselling, financial assistance and respite care;

(*d*) To ensure access by persons with disabilities to public housing programmes;

(*e*) To ensure equal access by persons with disabilities to retirement benefits and programmes.

Article 29
Participation in political and public life

States Parties shall guarantee to persons with disabilities political rights and the opportunity to enjoy them on an equal basis with others, and shall undertake:

(*a*) To ensure that persons with disabilities can effectively and fully participate in political and public life on an equal basis with others, directly or through freely chosen representatives, including the right and opportunity for persons with disabilities to vote and be elected, inter alia, by:

(i) Ensuring that voting procedures, facilities and materials are appropriate, accessible and easy to understand and use;

(ii) Protecting the right of persons with disabilities to vote by secret ballot in elections and public referendums without intimidation, and to stand for elections, to effectively hold office and perform all public functions at all levels of government, facilitating the use of assistive and new technologies where appropriate;

(iii) Guaranteeing the free expression of the will of persons with disabilities as electors and to this end, where necessary, at their request, allowing assistance in voting by a person of their own choice;

(*b*) To promote actively an environment in which persons with disabilities can effectively and fully participate in the conduct of public affairs, without discrimination and on an equal basis with others, and encourage their participation in public affairs, including:

(i) Participation in non-governmental organizations and associations concerned with the public and political life of the country, and in the activities and administration of political parties;

(ii) Forming and joining organizations of persons with disabilities to represent persons with disabilities at international, national, regional and local levels.

Article 30
Participation in cultural life, recreation, leisure and sport

1. States Parties recognize the right of persons with disabilities to take part on an equal basis with others in cultural life, and shall take all appropriate measures to ensure that persons with disabilities:

(*a*) Enjoy access to cultural materials in accessible formats;

(*b*) Enjoy access to television programmes, films, theatre and other cultural activities, in accessible formats;

(*c*) Enjoy access to places for cultural performances or services, such as theatres, museums, cinemas, libraries and tourism services, and, as far as possible, enjoy access to monuments and sites of national cultural importance.

2. States Parties shall take appropriate measures to enable persons with disabilities to have the opportunity to develop and utilize their creative, artistic and intellectual potential, not only for their own benefit, but also for the enrichment of society.

3. States Parties shall take all appropriate steps, in accordance with international law, to ensure that laws protecting intellectual property rights do not constitute an unreasonable or discriminatory barrier to access by persons with disabilities to cultural materials.

4. Persons with disabilities shall be entitled, on an equal basis with others, to recognition and support of their specific cultural and linguistic identity, including sign languages and deaf culture.

5. With a view to enabling persons with disabilities to participate on an equal basis with others in recreational, leisure and sporting activities, States Parties shall take appropriate measures:

(*a*) To encourage and promote the participation, to the fullest extent possible, of persons with disabilities in mainstream sporting activities at all levels;

(*b*) To ensure that persons with disabilities have an opportunity to organize, develop and participate in disability-specific sporting and recreational activities and, to this end, encourage the provision, on an equal basis with others, of appropriate instruction, training and resources;

(*c*) To ensure that persons with disabilities have access to sporting, recreational and tourism venues;

(*d*) To ensure that children with disabilities have equal access with other children to participation in play, recreation and leisure and sporting activities, including those activities in the school system;

(*e*) To ensure that persons with disabilities have access to services from those involved in the organization of recreational, tourism, leisure and sporting activities.

Article 31
Statistics and data collection

1. States Parties undertake to collect appropriate information, including statistical and research data, to enable them to formulate and implement policies to give effect to the present Convention. The process of collecting and maintaining this information shall:

(*a*) Comply with legally established safeguards, including legislation on data protection, to ensure confidentiality and respect for the privacy of persons with disabilities;

(*b*) Comply with internationally accepted norms to protect human rights and fundamental freedoms and ethical principles in the collection and use of statistics.

2. The information collected in accordance with this article shall be disaggregated, as appropriate, and used to help assess the implementation of

States Parties' obligations under the present Convention and to identify and address the barriers faced by persons with disabilities in exercising their rights.

3. States Parties shall assume responsibility for the dissemination of these statistics and ensure their accessibility to persons with disabilities and others.

Article 32
International cooperation

1. States Parties recognize the importance of international cooperation and its promotion, in support of national efforts for the realization of the purpose and objectives of the present Convention, and will undertake appropriate and effective measures in this regard, between and among States and, as appropriate, in partnership with relevant international and regional organizations and civil society, in particular organizations of persons with disabilities. Such measures could include, inter alia:

(*a*) Ensuring that international cooperation, including international development programmes, is inclusive of and accessible to persons with disabilities;

(*b*) Facilitating and supporting capacity-building, including through the exchange and sharing of information, experiences, training programmes and best practices;

(*c*) Facilitating cooperation in research and access to scientific and technical knowledge;

(*d*) Providing, as appropriate, technical and economic assistance, including by facilitating access to and sharing of accessible and assistive technologies, and through the transfer of technologies.

2. The provisions of this article are without prejudice to the obligations of each State Party to fulfil its obligations under the present Convention.

Article 33
National implementation and monitoring

1. States Parties, in accordance with their system of organization, shall designate one or more focal points within government for matters relating to the implementation of the present Convention, and shall give due consideration to the establishment or designation of a coordination mechanism within government to facilitate related action in different sectors and at different levels.

2. States Parties shall, in accordance with their legal and administrative systems, maintain, strengthen, designate or establish within the State Party, a framework, including one or more independent mechanisms, as appropriate, to promote, protect and monitor implementation of the present Convention. When designating or establishing such a mechanism, States Parties shall take into account the principles relating to the status and functioning of national institutions for protection and promotion of human rights.

3. Civil society, in particular persons with disabilities and their representative organizations, shall be involved and participate fully in the monitoring process.

Article 34
Committee on the Rights of Persons with Disabilities

1. There shall be established a Committee on the Rights of Persons with Disabilities (hereafter referred to as "the Committee"), which shall carry out the functions hereinafter provided.

2. The Committee shall consist, at the time of entry into force of the present Convention, of twelve experts. After an additional sixty ratifications or accessions to the Convention, the membership of the Committee shall increase by six members, attaining a maximum number of eighteen members.

3. The members of the Committee shall serve in their personal capacity and shall be of high moral standing and recognized competence and experience in the field covered by the present Convention. When nominating their candidates, States Parties are invited to give due consideration to the provision set out in article 4, paragraph 3, of the present Convention.

4. The members of the Committee shall be elected by States Parties, consideration being given to equitable geographical distribution, representation of the different forms of civilization and of the principal legal systems, balanced gender representation and participation of experts with disabilities.

5. The members of the Committee shall be elected by secret ballot from a list of persons nominated by the States Parties from among their nationals at meetings of the Conference of States Parties. At those meetings, for which two thirds of States Parties shall constitute a quorum, the persons elected to the Committee shall be those who obtain the largest number of votes and an absolute majority of the votes of the representatives of States Parties present and voting.

6. The initial election shall be held no later than six months after the date of entry into force of the present Convention. At least four months before the date of each election, the Secretary-General of the United Nations shall

address a letter to the States Parties inviting them to submit the nominations within two months. The Secretary-General shall subsequently prepare a list in alphabetical order of all persons thus nominated, indicating the State Parties which have nominated them, and shall submit it to the States Parties to the present Convention.

7. The members of the Committee shall be elected for a term of four years. They shall be eligible for re-election once. However, the term of six of the members elected at the first election shall expire at the end of two years; immediately after the first election, the names of these six members shall be chosen by lot by the chairperson of the meeting referred to in paragraph 5 of this article.

8. The election of the six additional members of the Committee shall be held on the occasion of regular elections, in accordance with the relevant provisions of this article.

9. If a member of the Committee dies or resigns or declares that for any other cause she or he can no longer perform her or his duties, the State Party which nominated the member shall appoint another expert possessing the qualifications and meeting the requirements set out in the relevant provisions of this article, to serve for the remainder of the term.

10. The Committee shall establish its own rules of procedure.

11. The Secretary-General of the United Nations shall provide the necessary staff and facilities for the effective performance of the functions of the Committee under the present Convention, and shall convene its initial meeting.

12. With the approval of the General Assembly of the United Nations, the members of the Committee established under the present Convention shall receive emoluments from United Nations resources on such terms and conditions as the Assembly may decide, having regard to the importance of the Committee’s responsibilities.

13. The members of the Committee shall be entitled to the facilities, privileges and immunities of experts on mission for the United Nations as laid down in the relevant sections of the Convention on the Privileges and Immunities of the United Nations.

Article 35
Reports by States Parties

1. Each State Party shall submit to the Committee, through the Secretary-General of the United Nations, a comprehensive report on measures taken to give effect to its obligations under the present Convention and on the progress

made in that regard, within two years after the entry into force of the present Convention for the State Party concerned.

2. Thereafter, States Parties shall submit subsequent reports at least every four years and further whenever the Committee so requests.

3. The Committee shall decide any guidelines applicable to the content of the reports.

4. A State Party which has submitted a comprehensive initial report to the Committee need not, in its subsequent reports, repeat information previously provided. When preparing reports to the Committee, States Parties are invited to consider doing so in an open and transparent process and to give due consideration to the provision set out in article 4, paragraph 3, of the present Convention.

5. Reports may indicate factors and difficulties affecting the degree of fulfilment of obligations under the present Convention.

Article 36
Consideration of reports

1. Each report shall be considered by the Committee, which shall make such suggestions and general recommendations on the report as it may consider appropriate and shall forward these to the State Party concerned. The State Party may respond with any information it chooses to the Committee. The Committee may request further information from States Parties relevant to the implementation of the present Convention.

2. If a State Party is significantly overdue in the submission of a report, the Committee may notify the State Party concerned of the need to examine the implementation of the present Convention in that State Party, on the basis of reliable information available to the Committee, if the relevant report is not submitted within three months following the notification. The Committee shall invite the State Party concerned to participate in such examination. Should the State Party respond by submitting the relevant report, the provisions of paragraph 1 of this article will apply.

3. The Secretary-General of the United Nations shall make available the reports to all States Parties.

4. States Parties shall make their reports widely available to the public in their own countries and facilitate access to the suggestions and general recommendations relating to these reports.

5. The Committee shall transmit, as it may consider appropriate, to the specialized agencies, funds and programmes of the United Nations, and other competent bodies, reports from States Parties in order to address a request or indication of a need for technical advice or assistance contained therein, along with the Committee's observations and recommendations, if any, on these requests or indications.

Article 37
Cooperation between States Parties and the Committee

1. Each State Party shall cooperate with the Committee and assist its members in the fulfilment of their mandate.

2. In its relationship with States Parties, the Committee shall give due consideration to ways and means of enhancing national capacities for the implementation of the present Convention, including through international cooperation.

Article 38
Relationship of the Committee with other bodies

In order to foster the effective implementation of the present Convention and to encourage international cooperation in the field covered by the present Convention:

(*a*) The specialized agencies and other United Nations organs shall be entitled to be represented at the consideration of the implementation of such provisions of the present Convention as fall within the scope of their mandate. The Committee may invite the specialized agencies and other competent bodies as it may consider appropriate to provide expert advice on the implementation of the Convention in areas falling within the scope of their respective mandates. The Committee may invite specialized agencies and other United Nations organs to submit reports on the implementation of the Convention in areas falling within the scope of their activities;

(*b*) The Committee, as it discharges its mandate, shall consult, as appropriate, other relevant bodies instituted by international human rights treaties, with a view to ensuring the consistency of their respective reporting guidelines, suggestions and general recommendations, and avoiding duplication and overlap in the performance of their functions.

Article 39
Report of the Committee

The Committee shall report every two years to the General Assembly and to the Economic and Social Council on its activities, and may make suggestions and general recommendations based on the examination of reports and information received from the States Parties. Such suggestions and general recommendations shall be included in the report of the Committee together with comments, if any, from States Parties.

Article 40
Conference of States Parties

1. The States Parties shall meet regularly in a Conference of States Parties in order to consider any matter with regard to the implementation of the present Convention.

2. No later than six months after the entry into force of the present Convention, the Conference of States Parties shall be convened by the Secretary-General of the United Nations. The subsequent meetings shall be convened by the Secretary-General biennially or upon the decision of the Conference of States Parties.

Article 41
Depositary

The Secretary-General of the United Nations shall be the depositary of the present Convention.

Article 42
Signature

The present Convention shall be open for signature by all States and by regional integration organizations at United Nations Headquarters in New York as of 30 March 2007.

Article 43
Consent to be bound

The present Convention shall be subject to ratification by signatory States and to formal confirmation by signatory regional integration organizations. It shall be open for accession by any State or regional integration organization which has not signed the Convention.

Article 44
Regional integration organizations

1. “Regional integration organization” shall mean an organization constituted by sovereign States of a given region, to which its member States have transferred competence in respect of matters governed by the present Convention. Such organizations shall declare, in their instruments of formal

confirmation or accession, the extent of their competence with respect to matters governed by the present Convention. Subsequently, they shall inform the depositary of any substantial modification in the extent of their competence.

2. References to “States Parties” in the present Convention shall apply to such organizations within the limits of their competence.

3. For the purposes of article 45, paragraph 1, and article 47, paragraphs 2 and 3, of the present Convention, any instrument deposited by a regional integration organization shall not be counted.

4. Regional integration organizations, in matters within their competence, may exercise their right to vote in the Conference of States Parties, with a number of votes equal to the number of their member States that are Parties to the present Convention. Such an organization shall not exercise its right to vote if any of its member States exercises its right, and vice versa.

Article 45
Entry into force

1. The present Convention shall enter into force on the thirtieth day after the deposit of the twentieth instrument of ratification or accession.

2. For each State or regional integration organization ratifying, formally confirming or acceding to the present Convention after the deposit of the twentieth such instrument, the Convention shall enter into force on the thirtieth day after the deposit of its own such instrument.

Article 46
Reservations

1. Reservations incompatible with the object and purpose of the present Convention shall not be permitted.

2. Reservations may be withdrawn at any time.

Article 47
Amendments

1. Any State Party may propose an amendment to the present Convention and submit it to the Secretary-General of the United Nations. The Secretary-General shall communicate any proposed amendments to States Parties, with a request to be notified whether they favour a conference of States Parties for the purpose of considering and deciding upon the proposals. In the event that, within four months from the date of such communication, at least one third of

the States Parties favour such a conference, the Secretary-General shall convene the conference under the auspices of the United Nations. Any amendment adopted by a majority of two thirds of the States Parties present and voting shall be submitted by the Secretary-General to the General Assembly of the United Nations for approval and thereafter to all States Parties for acceptance.

2. An amendment adopted and approved in accordance with paragraph 1 of this article shall enter into force on the thirtieth day after the number of instruments of acceptance deposited reaches two thirds of the number of States Parties at the date of adoption of the amendment. Thereafter, the amendment shall enter into force for any State Party on the thirtieth day following the deposit of its own instrument of acceptance. An amendment shall be binding only on those States Parties which have accepted it.

3. If so decided by the Conference of States Parties by consensus, an amendment adopted and approved in accordance with paragraph 1 of this article which relates exclusively to articles 34, 38, 39 and 40 shall enter into force for all States Parties on the thirtieth day after the number of instruments of acceptance deposited reaches two thirds of the number of States Parties at the date of adoption of the amendment.

Article 48
Denunciation

A State Party may denounce the present Convention by written notification to the Secretary-General of the United Nations. The denunciation shall become effective one year after the date of receipt of the notification by the Secretary-General.

Article 49
Accessible format

The text of the present Convention shall be made available in accessible formats.

Article 50
Authentic texts

The Arabic, Chinese, English, French, Russian and Spanish texts of the present Convention shall be equally authentic.

IN WITNESS THEREOF the undersigned plenipotentiaries, being duly authorized thereto by their respective Governments, have signed the present Convention.

OPTIONAL PROTOCOL TO THE CONVENTION ON THE RIGHTS OF PERSONS WITH DISABILITIES

The States Parties to the present Protocol have agreed as follows:

Article 1

1. A State Party to the present Protocol ("State Party") recognizes the competence of the Committee on the Rights of Persons with Disabilities ("the Committee") to receive and consider communications from or on behalf of individuals or groups of individuals subject to its jurisdiction who claim to be victims of a violation by that State Party of the provisions of the Convention.

2. No communication shall be received by the Committee if it concerns a State Party to the Convention that is not a party to the present Protocol.

Article 2

The Committee shall consider a communication inadmissible when:

(a) The communication is anonymous;
(b) The communication constitutes an abuse of the right of submission of such communications or is incompatible with the provisions of the Convention;
(c) The same matter has already been examined by the Committee or has been or is being examined under another procedure of international investigation or settlement;
(d) All available domestic remedies have not been exhausted. This shall not be the rule where the application of the remedies is unreasonably prolonged or unlikely to bring effective relief;
(e) It is manifestly ill-founded or not sufficiently substantiated; or when
(f) The facts that are the subject of the communication occurred prior to the entry into force of the present Protocol for the State Party concerned unless those facts continued after that date.

Article 3

Subject to the provisions of article 2 of the present Protocol, the Committee shall bring any communications submitted to it confidentially to the attention of the State Party. Within six months, the receiving State shall submit to the Committee written explanations or statements clarifying the matter and the remedy, if any, that may have been taken by that State.

Article 4

1. At any time after the receipt of a communication and before a determination on the merits has been reached, the Committee may transmit to the State Party concerned for its urgent consideration a request that the State Party take such interim measures as may be necessary to avoid possible irreparable damage to the victim or victims of the alleged violation.

2. Where the Committee exercises its discretion under paragraph 1 of this article, this does not imply a determination on admissibility or on the merits of the communication.

Article 5

The Committee shall hold closed meetings when examining communications under the present Protocol. After examining a communication, the Committee shall forward its suggestions and recommendations, if any, to the State Party concerned and to the petitioner.

Article 6

1. If the Committee receives reliable information indicating grave or systematic violations by a State Party of rights set forth in the Convention, the Committee shall invite that State Party to cooperate in the examination of the information and to this end submit observations with regard to the information concerned.

2. Taking into account any observations that may have been submitted by the State Party concerned as well as any other reliable information available to it, the Committee may designate one or more of its members to conduct an inquiry and to report urgently to the Committee. Where warranted and with the consent of the State Party, the inquiry may include a visit to its territory.

3. After examining the findings of such an inquiry, the Committee shall transmit these findings to the State Party concerned together with any comments and recommendations.

4. The State Party concerned shall, within six months of receiving the findings, comments and recommendations transmitted by the Committee, submit its observations to the Committee.

5. Such an inquiry shall be conducted confidentially and the cooperation of the State Party shall be sought at all stages of the proceedings.

Article 7

1. The Committee may invite the State Party concerned to include in its report under article 35 of the Convention details of any measures taken in response to an inquiry conducted under article 6 of the present Protocol.

2. The Committee may, if necessary, after the end of the period of six months referred to in article 6, paragraph 4, invite the State Party concerned to inform it of the measures taken in response to such an inquiry.

Article 8

Each State Party may, at the time of signature or ratification of the present Protocol or accession thereto, declare that it does not recognize the competence of the Committee provided for in articles 6 and 7.

Article 9

The Secretary-General of the United Nations shall be the depositary of the present Protocol.

Article 10

The present Protocol shall be open for signature by signatory States and regional integration organizations of the Convention at United Nations Headquarters in New York as of 30 March 2007.

Article 11

The present Protocol shall be subject to ratification by signatory States of the present Protocol which have ratified or acceded to the Convention. It shall be subject to formal confirmation by signatory regional integration organizations of the present Protocol which have formally confirmed or acceded to the Convention. It shall be open for accession by any State or regional integration organization which has ratified, formally confirmed or acceded to the Convention and which has not signed the Protocol.

Article 12

1. “Regional integration organization” shall mean an organization constituted by sovereign States of a given region, to which its member States have transferred competence in respect of matters governed by the Convention and the present Protocol. Such organizations shall declare, in their instruments of formal confirmation or accession, the extent of their competence with respect to matters governed by the Convention and the present Protocol.

Subsequently, they shall inform the depositary of any substantial modification in the extent of their competence.

2. References to "States Parties" in the present Protocol shall apply to such organizations within the limits of their competence.

3. For the purposes of article 13, paragraph 1, and article 15, paragraph 2, of the present Protocol, any instrument deposited by a regional integration organization shall not be counted.

4. Regional integration organizations, in matters within their competence, may exercise their right to vote in the meeting of States Parties, with a number of votes equal to the number of their member States that are Parties to the present Protocol. Such an organization shall not exercise its right to vote if any of its member States exercises its right, and vice versa.

Article 13

1. Subject to the entry into force of the Convention, the present Protocol shall enter into force on the thirtieth day after the deposit of the tenth instrument of ratification or accession.

2. For each State or regional integration organization ratifying, formally confirming or acceding to the present Protocol after the deposit of the tenth such instrument, the Protocol shall enter into force on the thirtieth day after the deposit of its own such instrument.

Article 14

1. Reservations incompatible with the object and purpose of the present Protocol shall not be permitted.

2. Reservations may be withdrawn at any time.

Article 15

1. Any State Party may propose an amendment to the present Protocol and submit it to the Secretary-General of the United Nations. The Secretary-General shall communicate any proposed amendments to States Parties, with a request to be notified whether they favour a meeting of States Parties for the purpose of considering and deciding upon the proposals. In the event that, within four months from the date of such communication, at least one third of the States Parties favour such a meeting, the Secretary-General shall convene the meeting under the auspices of the United Nations. Any amendment adopted by a majority of two thirds of the States Parties present and voting shall be

submitted by the Secretary-General to the General Assembly of the United Nations for approval and thereafter to all States Parties for acceptance.

2. An amendment adopted and approved in accordance with paragraph 1 of this article shall enter into force on the thirtieth day after the number of instruments of acceptance deposited reaches two thirds of the number of States Parties at the date of adoption of the amendment. Thereafter, the amendment shall enter into force for any State Party on the thirtieth day following the deposit of its own instrument of acceptance. An amendment shall be binding only on those States Parties which have accepted it.

Article 16

A State Party may denounce the present Protocol by written notification to the Secretary-General of the United Nations. The denunciation shall become effective one year after the date of receipt of the notification by the Secretary-General.

Article 17

The text of the present Protocol shall be made available in accessible formats.

Article 18

The Arabic, Chinese, English, French, Russian and Spanish texts of the present Protocol shall be equally authentic.

IN WITNESS THEREOF the undersigned plenipotentiaries, being duly authorized thereto by their respective Governments, have signed the present Protocol.

CONVENTION

CONVENTION

on the Protection and
Promotion of the

Diversity of Cultural Expressions

United Nations
Educational, Scientific and
Cultural Organization

CONVENTION

on the Protection and Promotion of the Diversity of Cultural Expressions

Paris, 20 October 2005

The General Conference of the United Nations Educational, Scientific and Cultural Organization, meeting in Paris from 3 to 21 October 2005 at its 33rd session,

Affirming that cultural diversity is a defining characteristic of humanity,

Conscious that cultural diversity forms a common heritage of humanity and should be cherished and preserved for the benefit of all,

Being aware that cultural diversity creates a rich and varied world, which increases the range of choices and nurtures human capacities and values, and therefore is a mainspring for sustainable development for communities, peoples and nations,

Recalling that cultural diversity, flourishing within a framework of democracy, tolerance, social justice and mutual respect between peoples and cultures, is indispensable for peace and security at the local, national and international levels,

Celebrating the importance of cultural diversity for the full realization of human rights and fundamental freedoms proclaimed in the Universal Declaration of Human Rights and other universally recognized instruments,

Emphasizing the need to incorporate culture as a strategic element in national and international development policies, as well as in international development cooperation, taking into account also the United Nations Millennium Declaration (2000) with its special emphasis on poverty eradication,

Taking into account that culture takes diverse forms across time and space and that this diversity is embodied in the uniqueness and plurality of the identities and cultural expressions of the peoples and societies making up humanity,

Recognizing the importance of traditional knowledge as a source of intangible and material wealth, and in particular the knowledge systems of indigenous peoples, and its positive contribution to sustainable development, as well as the need for its adequate protection and promotion,

Recognizing the need to take measures to protect the diversity of cultural expressions, including their contents, especially in situations where cultural expressions may be threatened by the possibility of extinction or serious impairment, *Emphasizing* the importance of culture for social cohesion in general, and in particular its potential for the enhancement of the status and role of women in society,

Being aware that cultural diversity is strengthened by the free flow of ideas, and that it is nurtured by constant exchanges and interaction between cultures,

Reaffirming that freedom of thought, expression and information, as well as diversity of the media, enable cultural expressions to flourish within societies,

Recognizing that the diversity of cultural expressions, including traditional cultural expressions, is an important factor that allows individuals and peoples to express and to share with others their ideas and values,

Recalling that linguistic diversity is a fundamental element of cultural diversity, and *reaffirming* the fundamental role that education plays in the protection and promotion of cultural expressions,

Taking into account the importance of the vitality of cultures, including for persons belonging to minorities and indigenous peoples, as manifested in their freedom to create, disseminate and distribute their traditional cultural expressions and to have access thereto, so as to benefit them for their own development,

Emphasizing the vital role of cultural interaction and creativity, which nurture and renew cultural expressions and enhance the role played by those involved in the development of culture for the progress of society at large,

Recognizing the importance of intellectual property rights in sustaining those involved in cultural creativity,

Being convinced that cultural activities, goods and services have both an economic and a cultural nature, because they convey identities, values and meanings, and must therefore not be treated as solely having commercial value,

Noting that while the processes of globalization, which have been facilitated by the rapid development of information and communication technologies, afford unprecedented conditions for enhanced interaction between cultures, they also represent a challenge for cultural diversity, namely in view of risks of imbalances between rich and poor countries,

Being aware of UNESCO's specific mandate to ensure respect for the diversity of cultures and to recommend such international agreements as may be necessary to promote the free flow of ideas by word and image,

Referring to the provisions of the international instruments adopted by UNESCO relating to cultural diversity and the exercise of cultural rights, and in particular the Universal Declaration on Cultural Diversity of 2001,

Adopts this Convention on 20 October 2005.

I. Objectives and guiding principles

Article 1 – OBJECTIVES

The objectives of this Convention are:

(a) to protect and promote the diversity of cultural expressions;

(b) to create the conditions for cultures to flourish and to freely interact in a mutually beneficial manner;

(c) to encourage dialogue among cultures with a view to ensuring wider and balanced cultural exchanges in the world in favour of intercultural respect and a culture of peace;

(d) to foster interculturality in order to develop cultural interaction in the spirit of building bridges among peoples;

(e) to promote respect for the diversity of cultural expressions and raise awareness of its value at the local, national and international levels;

(f) to reaffirm the importance of the link between culture and development for all countries, particularly for developing countries, and to support actions undertaken nationally and internationally to secure recognition of the true value of this link;

(g) to give recognition to the distinctive nature of cultural activities, goods and services as vehicles of identity, values and meaning;

(h) to reaffirm the sovereign rights of States to maintain, adopt and implement policies and measures that they deem appropriate for the protection and promotion of the diversity of cultural expressions on their territory;

(i) to strengthen international cooperation and solidarity in a spirit of partnership with a view, in particular, to enhancing the capacities of developing countries in order to protect and promote the diversity of cultural expressions.

Article 2 – GUIDING PRINCIPLES

1. Principle of respect for human rights and fundamental freedoms

Cultural diversity can be protected and promoted only if human rights and fundamental freedoms, such as freedom of expression, information and communication, as well as the ability of individuals to choose cultural expressions, are guaranteed. No one may invoke the provisions of this Convention in order to infringe human rights and fundamental freedoms as enshrined in the Universal Declaration of Human Rights or guaranteed by international law, or to limit the scope thereof.

2. Principle of sovereignty

States have, in accordance with the Charter of the United Nations and the principles of international law, the sovereign right to adopt measures and policies to protect and promote the diversity of cultural expressions within their territory.

3. Principle of equal dignity of and respect for all cultures

The protection and promotion of the diversity of cultural expressions presuppose the recognition of equal dignity of and respect for all cultures, including the cultures of persons belonging to minorities and indigenous peoples.

4. Principle of international solidarity and cooperation
International cooperation and solidarity should be aimed at enabling countries, especially developing countries, to create and strengthen their means of cultural expression, including their cultural industries, whether nascent or established, at the local, national and international levels.

5. Principle of the complementarity of economic and cultural aspects of development
Since culture is one of the mainsprings of development, the cultural aspects of development are as important as its economic aspects, which individuals and peoples have the fundamental right to participate in and enjoy.

6. Principle of sustainable development
Cultural diversity is a rich asset for individuals and societies. The protection, promotion and maintenance of cultural diversity are an essential requirement for sustainable development for the benefit of present and future generations.

7. Principle of equitable access
Equitable access to a rich and diversified range of cultural expressions from all over the world and access of cultures to the means of expressions and dissemination constitute important elements for enhancing cultural diversity and encouraging mutual understanding.

8. Principle of openness and balance
When States adopt measures to support the diversity of cultural expressions, they should seek to promote, in an appropriate manner, openness to other cultures of the world and to ensure that these measures are geared to the objectives pursued under the present Convention.

II. Scope of application

Article 3 – SCOPE OF APPLICATION

This Convention shall apply to the policies and measures adopted by the Parties related to the protection and promotion of the diversity of cultural expressions.

III. Definitions

Article 4 – DEFINITIONS

For the purposes of this Convention, it is understood that:

1. Cultural diversity
"Cultural diversity" refers to the manifold ways in which the cultures of groups and societies find expression. These expressions are passed on within and among groups and societies.

Cultural diversity is made manifest not only through the varied ways in which the cultural heritage of humanity is expressed, augmented and transmitted through the variety of cultural expressions, but also through diverse modes of artistic creation, production, dissemination, distribution and enjoyment, whatever the means and technologies used.

2. Cultural content
"Cultural content" refers to the symbolic meaning, artistic dimension and cultural values that originate from or express cultural identities.

3. Cultural expressions
"Cultural expressions" are those expressions that result from the creativity of individuals, groups and societies, and that have cultural content.

4. Cultural activities, goods and services
"Cultural activities, goods and services" refers to those activities, goods and services, which at the time they are considered as a specific attribute, use or purpose, embody or convey cultural expressions, irrespective of the commercial value they may have. Cultural activities may be an end in themselves, or they may contribute to the production of cultural goods and services.

5. Cultural industries
"Cultural industries" refers to industries producing and distributing cultural goods or services as defined in paragraph 4 above.

6. Cultural policies and measures
"Cultural policies and measures" refers to those policies and measures relating to culture, whether at the local, national, regional or international level that are either focused on culture as such or are designed to have a direct effect on cultural expressions of individuals, groups or societies, including on the creation, production, dissemination, distribution of and access to cultural activities, goods and services.

7. Protection
"Protection" means the adoption of measures aimed at the preservation, safeguarding and enhancement of the diversity of cultural expressions.

"Protect" means to adopt such measures.

8. Interculturality
"Interculturality" refers to the existence and equitable interaction of diverse cultures and the possibility of generating shared cultural expressions through dialogue and mutual respect.

IV. Rights and obligations of Parties

Article 5 – GENERAL RULE REGARDING RIGHTS AND OBLIGATIONS

1. The Parties, in conformity with the Charter of the United Nations, the principles of international law and universally recognized human rights instruments, reaffirm their sovereign right to formulate and implement their cultural policies and to adopt measures to protect and promote the diversity of cultural expressions and to strengthen international cooperation to achieve the purposes of this Convention.

2. When a Party implements policies and takes measures to protect and promote the diversity of cultural expressions within its territory, its policies and measures shall be consistent with the provisions of this Convention.

Article ⑥ – RIGHTS OF PARTIES AT THE NATIONAL LEVEL

1. Within the framework of its cultural policies and measures as defined in Article 4.6 and taking into account its own particular circumstances and needs, each Party may adopt measures aimed at protecting and promoting the diversity of cultural expressions within its territory.

2. Such measures may include the following:

(a) regulatory measures aimed at protecting and promoting diversity of cultural expressions;

(b) measures that, in an appropriate manner, provide opportunities for domestic cultural activities, goods and services among all those available within the national territory for the creation, production, dissemination, distribution and enjoyment of such domestic cultural activities, goods and services, including provisions relating to the language used for such activities, goods and services;

(c) measures aimed at providing domestic independent cultural industries and activities in the informal sector effective access to the means of production, dissemination and distribution of cultural activities, goods and services;

(d) measures aimed at providing public financial assistance;

(e) measures aimed at encouraging non profit organizations, as well as public and private institutions and artists and other cultural professionals, to develop and promote the free exchange and circulation of ideas, cultural expressions and cultural activities, goods and services, and to stimulate both the creative and entrepreneurial spirit in their activities;

(f) measures aimed at establishing and supporting public institutions, as appropriate;

(g) measures aimed at nurturing and supporting artists and others involved in the creation of cultural expressions;

(h) measures aimed at enhancing diversity of the media, including through public service broadcasting.

Article ⑦ – MEASURES TO PROMOTE CULTURAL EXPRESSIONS

1. Parties shall endeavour to create in their territory an environment which encourages individuals and social groups:

(a) to create, produce, disseminate, distribute and have access to their own cultural expressions, paying due attention to the special circumstances and needs of women as well as various social groups, including persons belonging to minorities and indigenous peoples;

(b) to have access to diverse cultural expressions from within their territory as well as from other countries of the world.

2. Parties shall also endeavour to recognize the important contribution of artists, others involved in the creative process, cultural communities, and organizations that support their work, and their central role in nurturing the diversity of cultural expressions.

Article ⑧ – MEASURES TO PROTECT CULTURAL EXPRESSIONS

1. Without prejudice to the provisions of Articles 5 and 6, a Party may determine the existence of special situations where cultural expressions on its territory are at risk of extinction, under serious threat, or otherwise in need of urgent safeguarding.

2. Parties may take all appropriate measures to protect and preserve cultural expressions in situations referred to in paragraph 1 in a manner consistent with the provisions of this Convention.

3. Parties shall report to the Intergovernmental Committee referred to in Article 23 all measures taken to meet the exigencies of the situation, and the Committee may make appropriate recommendations.

Article 9 – INFORMATION SHARING AND TRANSPARENCY

Parties shall:

(a) provide appropriate information in their reports to UNESCO every four years on measures taken to protect and promote the diversity of cultural expressions within their territory and at the international level;

(b) designate a point of contact responsible for information sharing in relation to this Convention;

(c) share and exchange information relating to the protection and promotion of the diversity of cultural expressions.

Article 10 – EDUCATION AND PUBLIC AWARENESS

Parties shall:

(a) encourage and promote understanding of the importance of the protection and promotion of the diversity of cultural expressions, *inter alia*, through educational and greater public awareness programmes;

(b) cooperate with other Parties and international and regional organizations in achieving the purpose of this article;

(c) endeavour to encourage creativity and strengthen production capacities by setting up educational, training and exchange programmes in the field of cultural industries. These measures should be implemented in a manner which does not have a negative impact on traditional forms of production.

Article 11 – PARTICIPATION OF CIVIL SOCIETY

Parties acknowledge the fundamental role of civil society in protecting and promoting the diversity of cultural expressions. Parties shall encourage the active participation of civil society in their efforts to achieve the objectives of this Convention.

Article 12 – PROMOTION OF INTERNATIONAL COOPERATION

Parties shall endeavour to strengthen their bilateral, regional and international cooperation for the creation of conditions conducive to the promotion of the diversity of cultural expressions, taking particular account of the situations referred to in Articles 8 and 17, notably in order to:

(a) facilitate dialogue among Parties on cultural policy;

(b) enhance public sector strategic and management capacities in cultural public sector institutions, through professional and international cultural exchanges and sharing of best practices;

(c) reinforce partnerships with and among civil society, non governmental organizations and the private sector in fostering and promoting the diversity of cultural expressions;

(d) promote the use of new technologies, encourage partnerships to enhance information sharing and cultural understanding, and foster the diversity of cultural expressions;

(e) encourage the conclusion of co production and co distribution agreements.

Article 13 – INTEGRATION OF CULTURE IN SUSTAINABLE DEVELOPMENT

Parties shall endeavour to integrate culture in their development policies at all levels for the creation of conditions conducive to sustainable development and, within this framework, foster aspects relating to the protection and promotion of the diversity of cultural expressions.

Article 14 – COOPERATION FOR DEVELOPMENT

Parties shall endeavour to support cooperation for sustainable development and poverty reduction, especially in relation to the specific needs of developing countries, in order to foster the emergence of a dynamic cultural sector by, *inter alia*, the following means:

(a) the strengthening of the cultural industries in developing countries through:

  (i) creating and strengthening cultural production and distribution capacities in developing countries;

  (ii) facilitating wider access to the global market and international distribution networks for their cultural activities, goods and services;

  (iii) enabling the emergence of viable local and regional markets;

  (iv) adopting, where possible, appropriate measures in developed countries with a view to facilitating access to their territory for the cultural activities, goods and services of developing countries;

  (v) providing support for creative work and facilitating the mobility, to the extent possible, of artists from the developing world;

  (vi) encouraging appropriate collaboration between developed and developing countries in the areas, *inter alia*, of music and film;

(b) capacity building through the exchange of information, experience and expertise, as well as the training of human resources in developing countries, in the public and private sector relating to, *inter alia*, strategic and management capacities, policy development and implementation, promotion and distribution of cultural expressions, small , medium and micro enterprise development, the use of technology, and skills development and transfer;

(c) technology transfer through the introduction of appropriate incentive measures for the transfer of technology and know how, especially in the areas of cultural industries and enterprises;

(d) financial support through:

  (i) the establishment of an International Fund for Cultural Diversity as provided in Article 18;

(ii) the provision of official development assistance, as appropriate, including technical assistance, to stimulate and support creativity;

(iii) other forms of financial assistance such as low interest loans, grants and other funding mechanisms.

Article 15 – COLLABORATIVE ARRANGEMENTS

Parties shall encourage the development of partnerships, between and within the public and private sectors and non profit organizations, in order to cooperate with developing countries in the enhancement of their capacities in the protection and promotion of the diversity of cultural expressions. These innovative partnerships shall, according to the practical needs of developing countries, emphasize the further development of infrastructure, human resources and policies, as well as the exchange of cultural activities, goods and services.

Article 16 – PREFERENTIAL TREATMENT FOR DEVELOPING COUNTRIES

Developed countries shall facilitate cultural exchanges with developing countries by granting, through the appropriate institutional and legal frameworks, preferential treatment to artists and other cultural professionals and practitioners, as well as cultural goods and services from developing countries.

Article 17 – INTERNATIONAL COOPERATION IN SITUATIONS OF SERIOUS THREAT TO CULTURAL EXPRESSIONS

Parties shall cooperate in providing assistance to each other, and, in particular to developing countries, in situations referred to under Article 8.

Article 18 – INTERNATIONAL FUND FOR CULTURAL DIVERSITY

1. An International Fund for Cultural Diversity, hereinafter referred to as “the Fund”, is hereby established.

2. The Fund shall consist of funds in trust established in accordance with the Financial Regulations of UNESCO.

3. The resources of the Fund shall consist of:

(a) voluntary contributions made by Parties;

(b) funds appropriated for this purpose by the General Conference of UNESCO;

(c) contributions, gifts or bequests by other States; organizations and programmes of the United Nations system, other regional or international organizations; and public or private bodies or individuals;

(d) any interest due on resources of the Fund;

(e) funds raised through collections and receipts from events organized for the benefit of the Fund;

(f) any other resources authorized by the Fund’s regulations.

4. The use of resources of the Fund shall be decided by the Intergovernmental Committee on the basis of guidelines determined by the Conference of Parties referred to in Article 22.

5. The Intergovernmental Committee may accept contributions and other forms of assistance for general and specific purposes relating to specific projects, provided that those projects have been approved by it.

6. No political, economic or other conditions that are incompatible with the objectives of this Convention may be attached to contributions made to the Fund.

7. Parties shall endeavour to provide voluntary contributions on a regular basis towards the implementation of this Convention.

Article 19 – EXCHANGE, ANALYSIS AND DISSEMINATION OF INFORMATION

1. Parties agree to exchange information and share expertise concerning data collection and statistics on the diversity of cultural expressions as well as on best practices for its protection and promotion.

2. UNESCO shall facilitate, through the use of existing mechanisms within the Secretariat, the collection, analysis and dissemination of all relevant information, statistics and best practices.

3. UNESCO shall also establish and update a data bank on different sectors and governmental, private and non profit organizations involved in the area of cultural expressions.

4. To facilitate the collection of data, UNESCO shall pay particular attention to capacity building and the strengthening of expertise for Parties that submit a request for such assistance.

5. The collection of information identified in this Article shall complement the information collected under the provisions of Article 9.

V. Relationship to other instruments

Article 20 – RELATIONSHIP TO OTHER TREATIES: MUTUAL SUPPORTIVENESS, COMPLEMENTARITY AND NON-SUBORDINATION

1. Parties recognize that they shall perform in good faith their obligations under this Convention and all other treaties to which they are parties. Accordingly, without subordinating this Convention to any other treaty,

(a) they shall foster mutual supportiveness between this Convention and the other treaties to which they are parties; and

(b) when interpreting and applying the other treaties to which they are parties or when entering into other international obligations, Parties shall take into account the relevant provisions of this Convention.

2. Nothing in this Convention shall be interpreted as modifying rights and obligations of the Parties under any other treaties to which they are parties.

Article 21 – INTERNATIONAL CONSULTATION AND COORDINATION

Parties undertake to promote the objectives and principles of this Convention in other international forums. For this purpose, Parties shall consult each other, as appropriate, bearing in mind these objectives and principles.

VI. Organs of the Convention

Article 22 – CONFERENCE OF PARTIES

1. A Conference of Parties shall be established. The Conference of Parties shall be the plenary and supreme body of this Convention.

2. The Conference of Parties shall meet in ordinary session every two years, as far as possible, in conjunction with the General Conference of UNESCO. It may meet in extraordinary session if it so decides or if the Intergovernmental Committee receives a request to that effect from at least one third of the Parties.

3. The Conference of Parties shall adopt its own rules of procedure.

4. The functions of the Conference of Parties shall be, *inter alia*:

(a) to elect the Members of the Intergovernmental Committee;

(b) to receive and examine reports of the Parties to this Convention transmitted by the Intergovernmental Committee;

(c) to approve the operational guidelines prepared upon its request by the Intergovernmental Committee;

(d) to take whatever other measures it may consider necessary to further the objectives of this Convention.

Article 23 – INTERGOVERNMENTAL COMMITTEE

1. An Intergovernmental Committee for the Protection and Promotion of the Diversity of Cultural Expressions, hereinafter referred to as “the Intergovernmental Committee”, shall be established within UNESCO. It shall be composed of representatives of 18 States Parties to the Convention, elected for a term of four years by the Conference of Parties upon entry into force of this Convention pursuant to Article 29.

2. The Intergovernmental Committee shall meet annually.

3. The Intergovernmental Committee shall function under the authority and guidance of and be accountable to the Conference of Parties.

4. The Members of the Intergovernmental Committee shall be increased to 24 once the number of Parties to the Convention reaches 50.

5. The election of Members of the Intergovernmental Committee shall be based on the principles of equitable geographical representation as well as rotation.

6. Without prejudice to the other responsibilities conferred upon it by this Convention, the functions of the Intergovernmental Committee shall be:

(a) to promote the objectives of this Convention and to encourage and monitor the implementation thereof;

(b) to prepare and submit for approval by the Conference of Parties, upon its request, the operational guidelines for the implementation and application of the provisions of the Convention;

(c) to transmit to the Conference of Parties reports from Parties to the Convention, together with its comments and a summary of their contents;

(d) to make appropriate recommendations to be taken in situations brought to its attention by Parties to the Convention in accordance with relevant provisions of the Convention, in particular Article 8;

(e) to establish procedures and other mechanisms for consultation aimed at promoting the objectives and principles of this Convention in other international forums;

(f) to perform any other tasks as may be requested by the Conference of Parties.

7. The Intergovernmental Committee, in accordance with its Rules of Procedure, may invite at any time public or private organizations or individuals to participate in its meetings for consultation on specific issues.

8. The Intergovernmental Committee shall prepare and submit to the Conference of Parties, for approval, its own Rules of Procedure.

Article 24 – UNESCO SECRETARIAT

1. The organs of the Convention shall be assisted by the UNESCO Secretariat.

2. The Secretariat shall prepare the documentation of the Conference of Parties and the Intergovernmental Committee as well as the agenda of their meetings and shall assist in and report on the implementation of their decisions.

VII. Final clauses

Article 25 – SETTLEMENT OF DISPUTES

1. In the event of a dispute between Parties to this Convention concerning the interpretation or the application of the Convention, the Parties shall seek a solution by negotiation.

2. If the Parties concerned cannot reach agreement by negotiation, they may jointly seek the good offices of, or request mediation by, a third party.

3. If good offices or mediation are not undertaken or if there is no settlement by negotiation, good offices or mediation, a Party may have recourse to conciliation in accordance with the procedure laid down in the Annex of this Convention. The Parties shall consider in good faith the proposal made by the Conciliation Commission for the resolution of the dispute.

4. Each Party may, at the time of ratification, acceptance, approval or accession, declare that it does not recognize the conciliation procedure provided for above. Any Party having made such a declaration may, at any time, withdraw this declaration by notification to the Director General of UNESCO.

Article 26 – RATIFICATION, ACCEPTANCE, APPROVAL OR ACCESSION BY MEMBER STATES

1. This Convention shall be subject to ratification, acceptance, approval or accession by Member States of UNESCO in accordance with their respective constitutional procedures.

2. The instruments of ratification, acceptance, approval or accession shall be deposited with the Director General of UNESCO.

Article 27 – ACCESSION

1. This Convention shall be open to accession by all States not Members of UNESCO but members of the United Nations, or of any of its specialized agencies, that are invited by the General Conference of UNESCO to accede to it.

2. This Convention shall also be open to accession by territories which enjoy full internal self government recognized as such by the United Nations, but which have not attained full independence in accordance with General Assembly resolution 1514 (XV), and which have competence over the matters governed by this Convention, including the competence to enter into treaties in respect of such matters.

3. The following provisions apply to regional economic integration organizations:

(a) This Convention shall also be open to accession by any regional economic integration organization, which shall, except as provided below, be fully bound by the provisions of the Convention in the same manner as States Parties;

(b) In the event that one or more Member States of such an organization is also Party to this Convention, the organization and such Member State or States shall decide on their responsibility for the performance of their obligations under this Convention. Such distribution of responsibility shall take effect following completion of the notification procedure described in subparagraph (c). The organization and the Member States shall not be entitled to exercise rights under this Convention concurrently. In addition, regional economic integration organizations, in matters within their competence, shall exercise their rights to vote with a number of votes equal to the number of their Member States that are Parties to this Convention. Such an organization shall not exercise its right to vote if any of its Member States exercises its right, and vice versa;

(c) A regional economic integration organization and its Member State or States which have agreed on a distribution of responsibilities as provided in subparagraph (b) shall inform the Parties of any such proposed distribution of responsibilities in the following manner:

  (i) in their instrument of accession, such organization shall declare with specificity, the distribution of their responsibilities with respect to matters governed by the Convention;

  (ii) in the event of any later modification of their respective responsibilities, the regional economic integration organization shall inform the depositary of any such proposed modification of their respective responsibilities; the depositary shall in turn inform the Parties of such modification;

(d) Member States of a regional economic integration organization which become Parties to this Convention shall be presumed to retain competence over all matters in respect of which transfers of competence to the organization have not been specifically declared or informed to the depositary;

(e) “Regional economic integration organization” means an organization constituted by sovereign States, members of the United Nations or of any of its specialized agencies, to which those States have transferred competence in respect of matters governed by this Convention and which has been duly authorized, in accordance with its internal procedures, to become a Party to it.

4. The instrument of accession shall be deposited with the Director General of UNESCO.

Article 28 – POINT OF CONTACT

Upon becoming Parties to this Convention, each Party shall designate a point of contact as referred to in Article 9.

Article 29 – ENTRY INTO FORCE

1. This Convention shall enter into force three months after the date of deposit of the thirtieth instrument of ratification, acceptance, approval or accession, but only with respect to those States or regional economic integration organizations that have deposited their respective instruments of ratification, acceptance, approval, or accession on or before that date. It shall enter into force with respect to any other Party three months after the deposit of its instrument of ratification, acceptance, approval or accession.

2. For the purposes of this Article, any instrument deposited by a regional economic integration organization shall not be counted as additional to those deposited by Member States of the organization.

Article 30 – FEDERAL OR NON-UNITARY CONSTITUTIONAL SYSTEMS

Recognizing that international agreements are equally binding on Parties regardless of their constitutional systems, the following provisions shall apply to Parties which have a federal or non unitary constitutional system:

(a) with regard to the provisions of this Convention, the implementation of which comes under the legal jurisdiction of the federal or central legislative power, the obligations of the federal or central government shall be the same as for those Parties which are not federal States;

(b) with regard to the provisions of the Convention, the implementation of which comes under the jurisdiction of individual constituent units such as States, counties, provinces, or cantons which are not obliged by the constitutional system of the federation to take legislative measures, the federal government shall inform, as necessary, the competent authorities of constituent units such as States, counties, provinces or cantons of the said provisions, with its recommendation for their adoption.

Article 31 – DENUNCIATION

1. Any Party to this Convention may denounce this Convention.

2. The denunciation shall be notified by an instrument in writing deposited with the Director General of UNESCO.

3. The denunciation shall take effect 12 months after the receipt of the instrument of denunciation. It shall in no way affect the financial obligations of the Party denouncing the Convention until the date on which the withdrawal takes effect.

Article 32 – DEPOSITARY FUNCTIONS

The Director General of UNESCO, as the depositary of this Convention, shall inform the Member States of the Organization, the States not members of the Organization and regional economic integration organizations referred to in Article 27, as well as the United Nations, of the deposit of all the instruments of ratification, acceptance, approval or accession provided for in Articles 26 and 27, and of the denunciations provided for in Article 31.

Article 33 – AMENDMENTS

1. A Party to this Convention may, by written communication addressed to the Director General, propose amendments to this Convention. The Director General shall circulate such communication to all Parties. If, within six months from the date of dispatch of the communication, no less than one half of the Parties reply favourably to the request, the Director General shall present such proposal to the next session of the Conference of Parties for discussion and possible adoption.

2. Amendments shall be adopted by a two thirds majority of Parties present and voting.

3. Once adopted, amendments to this Convention shall be submitted to the Parties for ratification, acceptance, approval or accession.

4. For Parties which have ratified, accepted, approved or acceded to them, amendments to this Convention shall enter into force three months after the deposit of the instruments referred to in paragraph 3 of this Article by two thirds of the Parties. Thereafter, for each Party that ratifies, accepts, approves or accedes to an amendment, the said amendment shall enter into force three months after the date of deposit by that Party of its instrument of ratification, acceptance, approval or accession.

5. The procedure set out in paragraphs 3 and 4 shall not apply to amendments to Article 23 concerning the number of Members of the Intergovernmental Committee. These amendments shall enter into force at the time they are adopted.

6. A State or a regional economic integration organization referred to in Article 27 which becomes a Party to this Convention after the entry into force of amendments in conformity with paragraph 4 of this Article shall, failing an expression of different intention, be considered to be:

(a) Party to this Convention as so amended; and

(b) a Party to the unamended Convention in relation to any Party not bound by the amendments.

Article 34 – AUTHORITATIVE TEXTS

This Convention has been drawn up in Arabic, Chinese, English, French, Russian and Spanish, all six texts being equally authoritative.

Article 35 – REGISTRATION

In conformity with Article 102 of the Charter of the United Nations, this Convention shall be registered with the Secretariat of the United Nations at the request of the Director General of UNESCO.

Annex

Conciliation Procedure

Article ① – CONCILIATION COMMISSION

A Conciliation Commission shall be created upon the request of one of the Parties to the dispute. The Commission shall, unless the Parties otherwise agree, be composed of five members, two appointed by each Party concerned and a President chosen jointly by those members.

Article ② – MEMBERS OF THE COMMISSION

In disputes between more than two Parties, Parties in the same interest shall appoint their members of the Commission jointly by agreement. Where two or more Parties have separate interests or there is a disagreement as to whether they are of the same interest, they shall appoint their members separately.

Article ③ – APPOINTMENTS

If any appointments by the Parties are not made within two months of the date of the request to create a Conciliation Commission, the Director General of UNESCO shall, if asked to do so by the Party that made the request, make those appointments within a further two month period.

Article ④ – PRESIDENT OF THE COMMISSION

If a President of the Conciliation Commission has not been chosen within two months of the last of the members of the Commission being appointed, the Director General of UNESCO shall, if asked to do so by a Party, designate a President within a further two month period.

Article ⑤ – DECISIONS

The Conciliation Commission shall take its decisions by majority vote of its members. It shall, unless the Parties to the dispute otherwise agree, determine its own procedure. It shall render a proposal for resolution of the dispute, which the Parties shall consider in good faith.

Article ⑥ – DISAGREEMENT

A disagreement as to whether the Conciliation Commission has competence shall be decided by the Commission.

CONVENTION FOR THE SAFEGUARDING OF THE INTANGIBLE CULTURAL HERITAGE

Paris, 17 October 2003

MISC/2003/CLT/CH/14

CONVENTION FOR THE SAFEGUARDING OF THE INTANGIBLE CULTURAL HERITAGE

The General Conference of the United Nations Educational, Scientific and Cultural Organization hereinafter referred to as UNESCO, meeting in Paris, from 29 September to 17 October 2003, at its 32nd session,

Referring to existing international human rights instruments, in particular to the Universal Declaration on Human Rights of 1948, the International Covenant on Economic, Social and Cultural Rights of 1966, and the International Covenant on Civil and Political Rights of 1966,

Considering the importance of the intangible cultural heritage as a mainspring of cultural diversity and a guarantee of sustainable development, as underscored in the UNESCO Recommendation on the Safeguarding of Traditional Culture and Folklore of 1989, in the UNESCO Universal Declaration on Cultural Diversity of 2001, and in the Istanbul Declaration of 2002 adopted by the Third Round Table of Ministers of Culture,

Considering the deep-seated interdependence between the intangible cultural heritage and the tangible cultural and natural heritage,

Recognizing that the processes of globalization and social transformation, alongside the conditions they create for renewed dialogue among communities, also give rise, as does the phenomenon of intolerance, to grave threats of deterioration, disappearance and destruction of the intangible cultural heritage, in particular owing to a lack of resources for safeguarding such heritage,

Being aware of the universal will and the common concern to safeguard the intangible cultural heritage of humanity,

Recognizing that communities, in particular indigenous communities, groups and, in some cases, individuals, play an important role in the production, safeguarding, maintenance and re-creation of the intangible cultural heritage, thus helping to enrich cultural diversity and human creativity,

Noting the far-reaching impact of the activities of UNESCO in establishing normative instruments for the protection of the cultural heritage, in particular the Convention for the Protection of the World Cultural and Natural Heritage of 1972,

Noting further that no binding multilateral instrument as yet exists for the safeguarding of the intangible cultural heritage,

Considering that existing international agreements, recommendations and resolutions concerning the cultural and natural heritage need to be effectively enriched and supplemented by means of new provisions relating to the intangible cultural heritage,

Considering the need to build greater awareness, especially among the younger generations, of the importance of the intangible cultural heritage and of its safeguarding,

Considering that the international community should contribute, together with the States Parties to this Convention, to the safeguarding of such heritage in a spirit of cooperation and mutual assistance, *Recalling* UNESCO's programmes relating to the intangible cultural heritage, in particular the Proclamation of Masterpieces of the Oral and Intangible Heritage of Humanity,

Considering the invaluable role of the intangible cultural heritage as a factor in bringing human beings closer together and ensuring exchange and understanding among them,

Adopts this Convention on this seventeenth day of October 2003.

I. General provisions

Article 1 – Purposes of the Convention

The purposes of this Convention are:

(a) to safeguard the intangible cultural heritage;

(b) to ensure respect for the intangible cultural heritage of the communities, groups and individuals concerned;

(c) to raise awareness at the local, national and international levels of the importance of the intangible cultural heritage, and of ensuring mutual appreciation thereof;

(d) to provide for international cooperation and assistance.

Article 2 – Definitions

For the purposes of this Convention,

1. The "intangible cultural heritage" means the practices, representations, expressions, knowledge, skills – as well as the instruments, objects, artefacts and cultural spaces associated therewith – that communities, groups and, in some cases, individuals recognize as part of their cultural heritage. This intangible cultural heritage, transmitted from generation to generation, is constantly recreated by communities and groups in response to their environment, their interaction with nature and their history, and provides them with a sense of identity and continuity, thus promoting respect for cultural diversity and human creativity. For the purposes of this Convention, consideration will be given solely to such intangible cultural heritage as is compatible with existing international human rights instruments, as well as with the requirements of mutual respect among communities, groups and individuals, and of sustainable development.

2. The "intangible cultural heritage", as defined in paragraph 1 above, is manifested inter alia in the following domains:

(a) oral traditions and expressions, including language as a vehicle of the intangible cultural heritage;

(b) performing arts;

(c) social practices, rituals and festive events;

(d) knowledge and practices concerning nature and the universe;

(e) traditional craftsmanship.

3. “Safeguarding” means measures aimed at ensuring the viability of the intangible cultural heritage, including the identification, documentation, research, preservation, protection, promotion, enhancement, transmission, particularly through formal and non-formal education, as well as the revitalization of the various aspects of such heritage.

4. “States Parties” means States which are bound by this Convention and among which this Convention is in force.

5. This Convention applies mutatis mutandis to the territories referred to in Article 33 which become Parties to this Convention in accordance with the conditions set out in that Article. To that extent the expression “States Parties” also refers to such territories.

Article 3 – Relationship to other international instruments

Nothing in this Convention may be interpreted as:

(a) altering the status or diminishing the level of protection under the 1972 Convention concerning the Protection of the World Cultural and Natural Heritage of World Heritage properties with which an item of the intangible cultural heritage is directly associated; or

(b) affecting the rights and obligations of States Parties deriving from any international instrument relating to intellectual property rights or to the use of biological and ecological resources to which they are parties.

II. Organs of the Convention

Article 4 – General Assembly of the States Parties

1. A General Assembly of the States Parties is hereby established, hereinafter referred to as “the General Assembly”. The General Assembly is the sovereign body of this Convention.

2. The General Assembly shall meet in ordinary session every two years. It may meet in extraordinary session if it so decides or at the request either of the Intergovernmental Committee for the Safeguarding of the Intangible Cultural Heritage or of at least one-third of the States Parties.

3. The General Assembly shall adopt its own Rules of Procedure.

Article 5 – Intergovernmental Committee for the Safeguarding of the Intangible Cultural Heritage

1. An Intergovernmental Committee for the Safeguarding of the Intangible Cultural Heritage, hereinafter referred to as “the Committee”, is hereby established within UNESCO. It shall be composed of representatives of 18 States Parties, elected by the States Parties meeting in General Assembly, once this Convention enters into force in accordance with Article 34.

2. The number of States Members of the Committee shall be increased to 24 once the number of the States Parties to the Convention reaches 50.

Article 6 – Election and terms of office of States Members of the Committee

1. The election of States Members of the Committee shall obey the principles of equitable geographical representation and rotation.

2. States Members of the Committee shall be elected for a term of four years by States Parties to the Convention meeting in General Assembly.

3. However, the term of office of half of the States Members of the Committee elected at the first election is limited to two years. These States shall be chosen by lot at the first election.

4. Every two years, the General Assembly shall renew half of the States Members of the Committee.

5. It shall also elect as many States Members of the Committee as required to fill vacancies.

6. A State Member of the Committee may not be elected for two consecutive terms.

7. States Members of the Committee shall choose as their representatives persons who are qualified in the various fields of the intangible cultural heritage.

Article 7 – Functions of the Committee

Without prejudice to other prerogatives granted to it by this Convention, the functions of the Committee shall be to:

(a) promote the objectives of the Convention, and to encourage and monitor the implementation thereof;

(b) provide guidance on best practices and make recommendations on measures for the safeguarding of the intangible cultural heritage;

(c) prepare and submit to the General Assembly for approval a draft plan for the use of the resources of the Fund, in accordance with Article 25;

(d) seek means of increasing its resources, and to take the necessary measures to this end, in accordance with Article 25;

(e) prepare and submit to the General Assembly for approval operational directives for the implementation of this Convention;

(f) examine, in accordance with Article 29, the reports submitted by States Parties, and to summarize them for the General Assembly;

(g) examine requests submitted by States Parties, and to decide thereon, in accordance with objective selection criteria to be established by the Committee and approved by the General Assembly for:

(i) inscription on the lists and proposals mentioned under Articles 16, 17 and 18;

(ii) the granting of international assistance in accordance with Article 22.

Article 8 – Working methods of the Committee

1. The Committee shall be answerable to the General Assembly. It shall report to it on all its activities and decisions.

2. The Committee shall adopt its own Rules of Procedure by a two-thirds majority of its Members.

3. The Committee may establish, on a temporary basis, whatever ad hoc consultative bodies it deems necessary to carry out its task.

4. The Committee may invite to its meetings any public or private bodies, as well as private persons, with recognized competence in the various fields of the intangible cultural heritage, in order to consult them on specific matters.

Article 9 – Accreditation of advisory organizations

1. The Committee shall propose to the General Assembly the accreditation of non-governmental organizations with recognized competence in the field of the intangible cultural heritage to act in an advisory capacity to the Committee.

2. The Committee shall also propose to the General Assembly the criteria for and modalities of such accreditation.

Article 10 – The Secretariat

1. The Committee shall be assisted by the UNESCO Secretariat.

2. The Secretariat shall prepare the documentation of the General Assembly and of the Committee, as well as the draft agenda of their meetings, and shall ensure the implementation of their decisions.

III. Safeguarding of the intangible cultural heritage at the national level

Article 11 – Role of States Parties

Each State Party shall:

(a) take the necessary measures to ensure the safeguarding of the intangible cultural heritage present in its territory;

(b) among the safeguarding measures referred to in Article 2, paragraph 3, identify and define the various elements of the intangible cultural heritage present in its territory, with the participation of communities, groups and relevant non-governmental organizations.

Article 12 – Inventories

1. To ensure identification with a view to safeguarding, each State Party shall draw up, in a manner geared to its own situation, one or more inventories of the intangible cultural heritage present in its territory. These inventories shall be regularly updated.

2. When each State Party periodically submits its report to the Committee, in accordance with Article 29, it shall provide relevant information on such inventories.

Article 13 – Other measures for safeguarding

To ensure the safeguarding, development and promotion of the intangible cultural heritage present in its territory, each State Party shall endeavour to:

- (a) adopt a general policy aimed at promoting the function of the intangible cultural heritage in society, and at integrating the safeguarding of such heritage into planning programmes;
- (b) designate or establish one or more competent bodies for the safeguarding of the intangible cultural heritage present in its territory;
- (c) foster scientific, technical and artistic studies, as well as research methodologies, with a view to effective safeguarding of the intangible cultural heritage, in particular the intangible cultural heritage in danger;
- (d) adopt appropriate legal, technical, administrative and financial measures aimed at:
  - (i) fostering the creation or strengthening of institutions for training in the management of the intangible cultural heritage and the transmission of such heritage through forums and spaces intended for the performance or expression thereof;
  - (ii) ensuring access to the intangible cultural heritage while respecting customary practices governing access to specific aspects of such heritage;
  - (iii) establishing documentation institutions for the intangible cultural heritage and facilitating access to them.

Article 14 – Education, awareness-raising and capacity-building

Each State Party shall endeavour, by all appropriate means, to:

- (a) ensure recognition of, respect for, and enhancement of the intangible cultural heritage in society, in particular through:
  - (i) educational, awareness-raising and information programmes, aimed at the general public, in particular young people;
  - (ii) specific educational and training programmes within the communities and groups concerned;

    - (iii) capacity-building activities for the safeguarding of the intangible cultural heritage, in particular management and scientific research; and
    - (iv) non-formal means of transmitting knowledge;

- (b) keep the public informed of the dangers threatening such heritage, and of the activities carried out in pursuance of this Convention;
- (c) promote education for the protection of natural spaces and places of memory whose existence is necessary for expressing the intangible cultural heritage.

Article 15 – Participation of communities, groups and individuals

Within the framework of its safeguarding activities of the intangible cultural heritage, each State Party shall endeavour to ensure the widest possible participation of communities, groups and, where appropriate, individuals that create, maintain and transmit such heritage, and to involve them actively in its management.

IV. Safeguarding of the intangible cultural heritage at the international level

Article 16 – Representative List of the Intangible Cultural Heritage of Humanity

1. In order to ensure better visibility of the intangible cultural heritage and awareness of its significance, and to encourage dialogue which respects cultural diversity, the Committee, upon the proposal of the States Parties concerned, shall establish, keep up to date and publish a Representative List of the Intangible Cultural Heritage of Humanity.

2. The Committee shall draw up and submit to the General Assembly for approval the criteria for the establishment, updating and publication of this Representative List.

Article 17 – List of Intangible Cultural Heritage in Need of Urgent Safeguarding

1. With a view to taking appropriate safeguarding measures, the Committee shall establish, keep up to date and publish a List of Intangible Cultural Heritage in Need of Urgent Safeguarding, and shall inscribe such heritage on the List at the request of the State Party concerned.

2. The Committee shall draw up and submit to the General Assembly for approval the criteria for the establishment, updating and publication of this List.

3. In cases of extreme urgency – the objective criteria of which shall be approved by the General Assembly upon the proposal of the Committee – the Committee may inscribe an item of the heritage concerned on the List mentioned in paragraph 1, in consultation with the State Party concerned.

Article 18 – Programmes, projects and activities for the safeguarding of the intangible cultural heritage

1. On the basis of proposals submitted by States Parties, and in accordance with criteria to be defined by the Committee and approved by the General Assembly, the Committee shall periodically select and promote national, subregional and regional programmes, projects and

activities for the safeguarding of the heritage which it considers best reflect the principles and objectives of this Convention, taking into account the special needs of developing countries.

2. To this end, it shall receive, examine and approve requests for international assistance from States Parties for the preparation of such proposals.

3. The Committee shall accompany the implementation of such projects, programmes and activities by disseminating best practices using means to be determined by it.

V. International cooperation and assistance

Article 19 – Cooperation

1. For the purposes of this Convention, international cooperation includes, inter alia, the exchange of information and experience, joint initiatives, and the establishment of a mechanism of assistance to States Parties in their efforts to safeguard the intangible cultural heritage.

2. Without prejudice to the provisions of their national legislation and customary law and practices, the States Parties recognize that the safeguarding of intangible cultural heritage is of general interest to humanity, and to that end undertake to cooperate at the bilateral, subregional, regional and international levels.

Article 20 – Purposes of international assistance

International assistance may be granted for the following purposes:

(a) the safeguarding of the heritage inscribed on the List of Intangible Cultural Heritage in Need of Urgent Safeguarding;

(b) the preparation of inventories in the sense of Articles 11 and 12;

(c) support for programmes, projects and activities carried out at the national, subregional and regional levels aimed at the safeguarding of the intangible cultural heritage;

(d) any other purpose the Committee may deem necessary.

Article 21 – Forms of international assistance

The assistance granted by the Committee to a State Party shall be governed by the operational directives foreseen in Article 7 and by the agreement referred to in Article 24, and may take the following forms:

(a) studies concerning various aspects of safeguarding;

(b) the provision of experts and practitioners;

(c) the training of all necessary staff;

(d) the elaboration of standard-setting and other measures;

(e) the creation and operation of infrastructures;

(f) the supply of equipment and know-how;

(g) other forms of financial and technical assistance, including, where appropriate, the granting of low-interest loans and donations.

Article 22 – Conditions governing international assistance

1. The Committee shall establish the procedure for examining requests for international assistance, and shall specify what information shall be included in the requests, such as the measures envisaged and the interventions required, together with an assessment of their cost.

2. In emergencies, requests for assistance shall be examined by the Committee as a matter of priority.

3. In order to reach a decision, the Committee shall undertake such studies and consultations as it deems necessary.

Article 23 – Requests for international assistance

1. Each State Party may submit to the Committee a request for international assistance for the safeguarding of the intangible cultural heritage present in its territory.

2. Such a request may also be jointly submitted by two or more States Parties.

3. The request shall include the information stipulated in Article 22, paragraph 1, together with the necessary documentation.

Article 24 – Role of beneficiary States Parties

1. In conformity with the provisions of this Convention, the international assistance granted shall be regulated by means of an agreement between the beneficiary State Party and the Committee.

2. As a general rule, the beneficiary State Party shall, within the limits of its resources, share the cost of the safeguarding measures for which international assistance is provided.

3. The beneficiary State Party shall submit to the Committee a report on the use made of the assistance provided for the safeguarding of the intangible cultural heritage.

VI. Intangible Cultural Heritage Fund

Article 25 – Nature and resources of the Fund

1. A “Fund for the Safeguarding of the Intangible Cultural Heritage”, hereinafter referred to as “the Fund”, is hereby established.

2. The Fund shall consist of funds-in-trust established in accordance with the Financial Regulations of UNESCO.

3. The resources of the Fund shall consist of:

   (a) contributions made by States Parties;

   (b) funds appropriated for this purpose by the General Conference of UNESCO;

   (c) contributions, gifts or bequests which may be made by:

      (i) other States;

      (ii) organizations and programmes of the United Nations system, particularly the United Nations Development Programme, as well as other international organizations;

      (iii) public or private bodies or individuals;

   (d) any interest due on the resources of the Fund;

   (e) funds raised through collections, and receipts from events organized for the benefit of the Fund;

   (f) any other resources authorized by the Fund's regulations, to be drawn up by the Committee.

4. The use of resources by the Committee shall be decided on the basis of guidelines laid down by the General Assembly.

5. The Committee may accept contributions and other forms of assistance for general and specific purposes relating to specific projects, provided that those projects have been approved by the Committee.

6. No political, economic or other conditions which are incompatible with the objectives of this Convention may be attached to contributions made to the Fund.

Article 26 – Contributions of States Parties to the Fund

1. Without prejudice to any supplementary voluntary contribution, the States Parties to this Convention undertake to pay into the Fund, at least every two years, a contribution, the amount of which, in the form of a uniform percentage applicable to all States, shall be determined by the General Assembly. This decision of the General Assembly shall be taken by a majority of the States Parties present and voting which have not made the declaration referred to in paragraph 2 of this Article. In no case shall the contribution of the State Party exceed 1% of its contribution to the regular budget of UNESCO.

2. However, each State referred to in Article 32 or in Article 33 of this Convention may declare, at the time of the deposit of its instruments of ratification, acceptance, approval or accession, that it shall not be bound by the provisions of paragraph 1 of this Article.

3. A State Party to this Convention which has made the declaration referred to in paragraph 2 of this Article shall endeavour to withdraw the said declaration by notifying the Director-General of UNESCO. However, the withdrawal of the declaration shall not take

effect in regard to the contribution due by the State until the date on which the subsequent session of the General Assembly opens.

4. In order to enable the Committee to plan its operations effectively, the contributions of States Parties to this Convention which have made the declaration referred to in paragraph 2 of this Article shall be paid on a regular basis, at least every two years, and should be as close as possible to the contributions they would have owed if they had been bound by the provisions of paragraph 1 of this Article.

5. Any State Party to this Convention which is in arrears with the payment of its compulsory or voluntary contribution for the current year and the calendar year immediately preceding it shall not be eligible as a Member of the Committee; this provision shall not apply to the first election. The term of office of any such State which is already a Member of the Committee shall come to an end at the time of the elections provided for in Article 6 of this Convention.

Article 27 – Voluntary supplementary contributions to the Fund

States Parties wishing to provide voluntary contributions in addition to those foreseen under Article 26 shall inform the Committee, as soon as possible, so as to enable it to plan its operations accordingly.

Article 28 – International fund-raising campaigns

The States Parties shall, insofar as is possible, lend their support to international fund-raising campaigns organized for the benefit of the Fund under the auspices of UNESCO.

VII. Reports

Article 29 – Reports by the States Parties

The States Parties shall submit to the Committee, observing the forms and periodicity to be defined by the Committee, reports on the legislative, regulatory and other measures taken for the implementation of this Convention.

Article 30 – Reports by the Committee

1. On the basis of its activities and the reports by States Parties referred to in Article 29, the Committee shall submit a report to the General Assembly at each of its sessions.

2. The report shall be brought to the attention of the General Conference of UNESCO.

VIII. Transitional clause

Article 31 – Relationship to the Proclamation of Masterpieces of the Oral and Intangible Heritage of Humanity

1. The Committee shall incorporate in the Representative List of the Intangible Cultural Heritage of Humanity the items proclaimed “Masterpieces of the Oral and Intangible Heritage of Humanity” before the entry into force of this Convention.

2. The incorporation of these items in the Representative List of the Intangible Cultural Heritage of Humanity shall in no way prejudge the criteria for future inscriptions decided upon in accordance with Article 16, paragraph 2.

3. No further Proclamation will be made after the entry into force of this Convention.

IX. Final clauses

Article 32 – Ratification, acceptance or approval

1. This Convention shall be subject to ratification, acceptance or approval by States Members of UNESCO in accordance with their respective constitutional procedures.

2. The instruments of ratification, acceptance or approval shall be deposited with the Director-General of UNESCO.

Article 33 – Accession

1. This Convention shall be open to accession by all States not Members of UNESCO that are invited by the General Conference of UNESCO to accede to it.

2. This Convention shall also be open to accession by territories which enjoy full internal self-government recognized as such by the United Nations, but have not attained full independence in accordance with General Assembly resolution 1514 (XV), and which have competence over the matters governed by this Convention, including the competence to enter into treaties in respect of such matters.

3. The instrument of accession shall be deposited with the Director-General of UNESCO.

Article 34 – Entry into force

This Convention shall enter into force three months after the date of the deposit of the thirtieth instrument of ratification, acceptance, approval or accession, but only with respect to those States that have deposited their respective instruments of ratification, acceptance, approval, or accession on or before that date. It shall enter into force with respect to any other State Party three months after the deposit of its instrument of ratification, acceptance, approval or accession.

Article 35 – Federal or non-unitary constitutional systems

The following provisions shall apply to States Parties which have a federal or non-unitary constitutional system:

(a) with regard to the provisions of this Convention, the implementation of which comes under the legal jurisdiction of the federal or central legislative power, the obligations of the federal or central government shall be the same as for those States Parties which are not federal States;

(b) with regard to the provisions of this Convention, the implementation of which comes under the jurisdiction of individual constituent States, countries, provinces or cantons which are not obliged by the constitutional system of the federation to take legislative measures, the federal government shall inform the competent authorities of such States, countries, provinces or cantons of the said provisions, with its recommendation for their adoption.

Article 36 – Denunciation

1. Each State Party may denounce this Convention.

2. The denunciation shall be notified by an instrument in writing, deposited with the Director-General of UNESCO.

3. The denunciation shall take effect twelve months after the receipt of the instrument of denunciation. It shall in no way affect the financial obligations of the denouncing State Party until the date on which the withdrawal takes effect.

Article 37 – Depositary functions

The Director-General of UNESCO, as the Depositary of this Convention, shall inform the States Members of the Organization, the States not Members of the Organization referred to in Article 33, as well as the United Nations, of the deposit of all the instruments of ratification, acceptance, approval or accession provided for in Articles 32 and 33, and of the denunciations provided for in Article 36.

Article 38 – Amendments

1. A State Party may, by written communication addressed to the Director-General, propose amendments to this Convention. The Director-General shall circulate such communication to all States Parties. If, within six months from the date of the circulation of the communication, not less than one half of the States Parties reply favourably to the request, the Director-General shall present such proposal to the next session of the General Assembly for discussion and possible adoption.

2. Amendments shall be adopted by a two-thirds majority of States Parties present and voting.

3. Once adopted, amendments to this Convention shall be submitted for ratification, acceptance, approval or accession to the States Parties.

4. Amendments shall enter into force, but solely with respect to the States Parties that have ratified, accepted, approved or acceded to them, three months after the deposit of the instruments referred to in paragraph 3 of this Article by two-thirds of the States Parties. Thereafter, for each State Party that ratifies, accepts, approves or accedes to an amendment, the said amendment shall enter into force three months after the date of deposit by that State Party of its instrument of ratification, acceptance, approval or accession.

5. The procedure set out in paragraphs 3 and 4 shall not apply to amendments to Article 5 concerning the number of States Members of the Committee. These amendments shall enter into force at the time they are adopted.

6. A State which becomes a Party to this Convention after the entry into force of amendments in conformity with paragraph 4 of this Article shall, failing an expression of different intention, be considered:

(a) as a Party to this Convention as so amended; and

(b) as a Party to the unamended Convention in relation to any State Party not bound by the amendments.

Article 39 – Authoritative texts

This Convention has been drawn up in Arabic, Chinese, English, French, Russian and Spanish, the six texts being equally authoritative.

Article 40 – Registration

In conformity with Article 102 of the Charter of the United Nations, this Convention shall be registered with the Secretariat of the United Nations at the request of the Director-General of UNESCO.

United Nations

United Nations Declaration
on the Rights of Indigenous Peoples

Resolution adopted by the General Assembly

[*without reference to a Main Committee (A/61/L.67 and Add.1)*]

61/295. United Nations Declaration on the Rights of Indigenous Peoples

The General Assembly,

Taking note of the recommendation of the Human Rights Council contained in its resolution 1/2 of 29 June 2006,[1] by which the Council adopted the text of the United Nations Declaration on the Rights of Indigenous Peoples,

Recalling its resolution 61/178 of 20 December 2006, by which it decided to defer consideration of and action on the Declaration to allow time for further consultations thereon, and also decided to conclude its consideration before the end of the sixty-first session of the General Assembly,

Adopts the United Nations Declaration on the Rights of Indigenous Peoples as contained in the annex to the present resolution.

107th plenary meeting
13 September 2007

Annex

United Nations Declaration on the Rights of Indigenous Peoples

The General Assembly,

Guided by the purposes and principles of the Charter of the United Nations, and good faith in the fulfilment of the obligations assumed by States in accordance with the Charter,

Affirming that indigenous peoples are equal to all other peoples, while recognizing the right of all peoples to be different, to consider themselves different, and to be respected as such,

---

[1] See *Official Records of the General Assembly, Sixty-first Session, Supplement No. 53* (A/61/53), part one, chap. II, sect. A.

Affirming also that all peoples contribute to the diversity and richness of civilizations and cultures, which constitute the common heritage of humankind,

Affirming further that all doctrines, policies and practices based on or advocating superiority of peoples or individuals on the basis of national origin or racial, religious, ethnic or cultural differences are racist, scientifically false, legally invalid, morally condemnable and socially unjust,

Reaffirming that indigenous peoples, in the exercise of their rights, should be free from discrimination of any kind,

Concerned that indigenous peoples have suffered from historic injustices as a result of, inter alia, their colonization and dispossession of their lands, territories and resources, thus preventing them from exercising, in particular, their right to development in accordance with their own needs and interests,

Recognizing the urgent need to respect and promote the inherent rights of indigenous peoples which derive from their political, economic and social structures and from their cultures, spiritual traditions, histories and philosophies, especially their rights to their lands, territories and resources,

Recognizing also the urgent need to respect and promote the rights of indigenous peoples affirmed in treaties, agreements and other constructive arrangements with States,

Welcoming the fact that indigenous peoples are organizing themselves for political, economic, social and cultural enhancement and in order to bring to an end all forms of discrimination and oppression wherever they occur,

Convinced that control by indigenous peoples over developments affecting them and their lands, territories and resources will enable them to maintain and strengthen their institutions, cultures and traditions, and to promote their development in accordance with their aspirations and needs,

Recognizing that respect for indigenous knowledge, cultures and traditional practices contributes to sustainable and equitable development and proper management of the environment,

Emphasizing the contribution of the demilitarization of the lands and territories of indigenous peoples to peace, economic and social progress and development, understanding and friendly relations among nations and peoples of the world,

Recognizing in particular the right of indigenous families and communities to retain shared responsibility for the upbringing, training, education and well-being of their children, consistent with the rights of the child,

Considering that the rights affirmed in treaties, agreements and other constructive arrangements between States and indigenous peoples are, in some situations, matters of international concern, interest, responsibility and character,

Considering also that treaties, agreements and other constructive arrangements, and the relationship they represent, are the basis for a strengthened partnership between indigenous peoples and States,

Acknowledging that the Charter of the United Nations, the International Covenant on Economic, Social and Cultural Rights[2] and the International Covenant on Civil and Political Rights,[2] as well as the Vienna Declaration and Programme of Action,[3] affirm the fundamental importance of the right to self-determination of all peoples, by virtue of which they freely determine their political status and freely pursue their economic, social and cultural development,

Bearing in mind that nothing in this Declaration may be used to deny any peoples their right to self-determination, exercised in conformity with international law,

Convinced that the recognition of the rights of indigenous peoples in this Declaration will enhance harmonious and cooperative relations between the State and indigenous peoples, based on principles of justice, democracy, respect for human rights, non-discrimination and good faith,

Encouraging States to comply with and effectively implement all their obligations as they apply to indigenous peoples under international instruments, in particular those related to human rights, in consultation and cooperation with the peoples concerned,

Emphasizing that the United Nations has an important and continuing role to play in promoting and protecting the rights of indigenous peoples,

---

[2] See resolution 2200 A (XXI), annex.

[3] A/CONF.157/24 (Part I), chap. III.

Believing that this Declaration is a further important step forward for the recognition, promotion and protection of the rights and freedoms of indigenous peoples and in the development of relevant activities of the United Nations system in this field,

Recognizing and reaffirming that indigenous individuals are entitled without discrimination to all human rights recognized in international law, and that indigenous peoples possess collective rights which are indispensable for their existence, well-being and integral development as peoples,

Recognizing that the situation of indigenous peoples varies from region to region and from country to country and that the significance of national and regional particularities and various historical and cultural backgrounds should be taken into consideration,

Solemnly proclaims the following United Nations Declaration on the Rights of Indigenous Peoples as a standard of achievement to be pursued in a spirit of partnership and mutual respect:

Article 1

Indigenous peoples have the right to the full enjoyment, as a collective or as individuals, of all human rights and fundamental freedoms as recognized in the Charter of the United Nations, the Universal Declaration of Human Rights[4] and international human rights law.

Article 2

Indigenous peoples and individuals are free and equal to all other peoples and individuals and have the right to be free from any kind of discrimination, in the exercise of their rights, in particular that based on their indigenous origin or identity.

Article 3

Indigenous peoples have the right to self-determination. By virtue of that right they freely determine their political status and freely pursue their economic, social and cultural development.

Article 4

Indigenous peoples, in exercising their right to self-determination, have the right to autonomy or self-government in matters relating to

---

[4] Resolution 217 A (III).

their internal and local affairs, as well as ways and means for financing their autonomous functions.

Article 5

Indigenous peoples have the right to maintain and strengthen their distinct political, legal, economic, social and cultural institutions, while retaining their right to participate fully, if they so choose, in the political, economic, social and cultural life of the State.

Article 6

Every indigenous individual has the right to a nationality.

Article 7

1. Indigenous individuals have the rights to life, physical and mental integrity, liberty and security of person.

2. Indigenous peoples have the collective right to live in freedom, peace and security as distinct peoples and shall not be subjected to any act of genocide or any other act of violence, including forcibly removing children of the group to another group.

Article 8

1. Indigenous peoples and individuals have the right not to be subjected to forced assimilation or destruction of their culture.

2. States shall provide effective mechanisms for prevention of, and redress for:

(*a*) Any action which has the aim or effect of depriving them of their integrity as distinct peoples, or of their cultural values or ethnic identities;

(*b*) Any action which has the aim or effect of dispossessing them of their lands, territories or resources;

(*c*) Any form of forced population transfer which has the aim or effect of violating or undermining any of their rights;

(*d*) Any form of forced assimilation or integration;

(*e*) Any form of propaganda designed to promote or incite racial or ethnic discrimination directed against them.

Article 9

Indigenous peoples and individuals have the right to belong to an indigenous community or nation, in accordance with the traditions and customs of the community or nation concerned. No discrimination of any kind may arise from the exercise of such a right.

Article 10

Indigenous peoples shall not be forcibly removed from their lands or territories. No relocation shall take place without the free, prior and informed consent of the indigenous peoples concerned and after agreement on just and fair compensation and, where possible, with the option of return.

Article 11

1. Indigenous peoples have the right to practise and revitalize their cultural traditions and customs. This includes the right to maintain, protect and develop the past, present and future manifestations of their cultures, such as archaeological and historical sites, artefacts, designs, ceremonies, technologies and visual and performing arts and literature.

2. States shall provide redress through effective mechanisms, which may include restitution, developed in conjunction with indigenous peoples, with respect to their cultural, intellectual, religious and spiritual property taken without their free, prior and informed consent or in violation of their laws, traditions and customs.

Article 12

1. Indigenous peoples have the right to manifest, practise, develop and teach their spiritual and religious traditions, customs and ceremonies; the right to maintain, protect, and have access in privacy to their religious and cultural sites; the right to the use and control of their ceremonial objects; and the right to the repatriation of their human remains.

2. States shall seek to enable the access and/or repatriation of ceremonial objects and human remains in their possession through fair, transparent and effective mechanisms developed in conjunction with indigenous peoples concerned.

Article 13

1. Indigenous peoples have the right to revitalize, use, develop and transmit to future generations their histories, languages, oral traditions, philosophies, writing systems and literatures, and to designate and retain their own names for communities, places and persons.

2. States shall take effective measures to ensure that this right is protected and also to ensure that indigenous peoples can understand and be understood in political, legal and administrative proceedings, where necessary through the provision of interpretation or by other appropriate means.

Article 14

1. Indigenous peoples have the right to establish and control their educational systems and institutions providing education in their own languages, in a manner appropriate to their cultural methods of teaching and learning.

2. Indigenous individuals, particularly children, have the right to all levels and forms of education of the State without discrimination.

3. States shall, in conjunction with indigenous peoples, take effective measures, in order for indigenous individuals, particularly children, including those living outside their communities, to have access, when possible, to an education in their own culture and provided in their own language.

Article 15

1. Indigenous peoples have the right to the dignity and diversity of their cultures, traditions, histories and aspirations which shall be appropriately reflected in education and public information.

2. States shall take effective measures, in consultation and cooperation with the indigenous peoples concerned, to combat prejudice and eliminate discrimination and to promote tolerance, understanding and good relations among indigenous peoples and all other segments of society.

Article 16

1. Indigenous peoples have the right to establish their own media in their own languages and to have access to all forms of non-indigenous media without discrimination.

2. States shall take effective measures to ensure that State-owned media duly reflect indigenous cultural diversity. States, without prejudice to ensuring full freedom of expression, should encourage privately owned media to adequately reflect indigenous cultural diversity.

Article 17

1. Indigenous individuals and peoples have the right to enjoy fully all rights established under applicable international and domestic labour law.

2. States shall in consultation and cooperation with indigenous peoples take specific measures to protect indigenous children from economic exploitation and from performing any work that is likely to be hazardous or to interfere with the child's education, or to be harmful to the child's health or physical, mental, spiritual, moral or social development, taking into account their special vulnerability and the importance of education for their empowerment.

3. Indigenous individuals have the right not to be subjected to any discriminatory conditions of labour and, inter alia, employment or salary.

Article 18

Indigenous peoples have the right to participate in decision-making in matters which would affect their rights, through representatives chosen by themselves in accordance with their own procedures, as well as to maintain and develop their own indigenous decision-making institutions.

Article 19

States shall consult and cooperate in good faith with the indigenous peoples concerned through their own representative institutions in order to obtain their free, prior and informed consent before adopting and implementing legislative or administrative measures that may affect them.

Article 20

1. Indigenous peoples have the right to maintain and develop their political, economic and social systems or institutions, to be secure in the enjoyment of their own means of subsistence and development, and to engage freely in all their traditional and other economic activities.

2. Indigenous peoples deprived of their means of subsistence and development are entitled to just and fair redress.

Article 21

1. Indigenous peoples have the right, without discrimination, to the improvement of their economic and social conditions, including, inter alia, in the areas of education, employment, vocational training and retraining, housing, sanitation, health and social security.

2. States shall take effective measures and, where appropriate, special measures to ensure continuing improvement of their economic and social conditions. Particular attention shall be paid to the rights and special needs of indigenous elders, women, youth, children and persons with disabilities.

Article 22

1. Particular attention shall be paid to the rights and special needs of indigenous elders, women, youth, children and persons with disabilities in the implementation of this Declaration.

2. States shall take measures, in conjunction with indigenous peoples, to ensure that indigenous women and children enjoy the full protection and guarantees against all forms of violence and discrimination.

Article 23

Indigenous peoples have the right to determine and develop priorities and strategies for exercising their right to development. In particular, indigenous peoples have the right to be actively involved in developing and determining health, housing and other economic and social programmes affecting them and, as far as possible, to administer such programmes through their own institutions.

Article 24

1. Indigenous peoples have the right to their traditional medicines and to maintain their health practices, including the conservation of their vital medicinal plants, animals and minerals. Indigenous individuals also have the right to access, without any discrimination, to all social and health services.

2. Indigenous individuals have an equal right to the enjoyment of the highest attainable standard of physical and mental health. States shall take the necessary steps with a view to achieving progressively the full realization of this right.

Article 25

Indigenous peoples have the right to maintain and strengthen their distinctive spiritual relationship with their traditionally owned or otherwise occupied and used lands, territories, waters and coastal seas and other resources and to uphold their responsibilities to future generations in this regard.

Article 26

1. Indigenous peoples have the right to the lands, territories and resources which they have traditionally owned, occupied or otherwise used or acquired.

2. Indigenous peoples have the right to own, use, develop and control the lands, territories and resources that they possess by reason of traditional ownership or other traditional occupation or use, as well as those which they have otherwise acquired.

3. States shall give legal recognition and protection to these lands, territories and resources. Such recognition shall be conducted with due respect to the customs, traditions and land tenure systems of the indigenous peoples concerned.

Article 27

States shall establish and implement, in conjunction with indigenous peoples concerned, a fair, independent, impartial, open and transparent process, giving due recognition to indigenous peoples' laws, traditions, customs and land tenure systems, to recognize and adjudicate the rights of indigenous peoples pertaining to their lands, territories and resources, including those which were traditionally owned or otherwise occupied or used. Indigenous peoples shall have the right to participate in this process.

Article 28

1. Indigenous peoples have the right to redress, by means that can include restitution or, when this is not possible, just, fair and equitable compensation, for the lands, territories and resources which they have traditionally owned or otherwise occupied or used, and which have been confiscated, taken, occupied, used or damaged without their free, prior and informed consent.

2. Unless otherwise freely agreed upon by the peoples concerned, compensation shall take the form of lands, territories and resources

equal in quality, size and legal status or of monetary compensation or other appropriate redress.

Article 29

1. Indigenous peoples have the right to the conservation and protection of the environment and the productive capacity of their lands or territories and resources. States shall establish and implement assistance programmes for indigenous peoples for such conservation and protection, without discrimination.

2. States shall take effective measures to ensure that no storage or disposal of hazardous materials shall take place in the lands or territories of indigenous peoples without their free, prior and informed consent.

3. States shall also take effective measures to ensure, as needed, that programmes for monitoring, maintaining and restoring the health of indigenous peoples, as developed and implemented by the peoples affected by such materials, are duly implemented.

Article 30

1. Military activities shall not take place in the lands or territories of indigenous peoples, unless justified by a relevant public interest or otherwise freely agreed with or requested by the indigenous peoples concerned.

2. States shall undertake effective consultations with the indigenous peoples concerned, through appropriate procedures and in particular through their representative institutions, prior to using their lands or territories for military activities.

Article 31

1. Indigenous peoples have the right to maintain, control, protect and develop their cultural heritage, traditional knowledge and traditional cultural expressions, as well as the manifestations of their sciences, technologies and cultures, including human and genetic resources, seeds, medicines, knowledge of the properties of fauna and flora, oral traditions, literatures, designs, sports and traditional games and visual and performing arts. They also have the right to maintain, control, protect and develop their intellectual property over such cultural heritage, traditional knowledge, and traditional cultural expressions.

2. In conjunction with indigenous peoples, States shall take effective measures to recognize and protect the exercise of these rights.

Article 32

1. Indigenous peoples have the right to determine and develop priorities and strategies for the development or use of their lands or territories and other resources.

2. States shall consult and cooperate in good faith with the indigenous peoples concerned through their own representative institutions in order to obtain their free and informed consent prior to the approval of any project affecting their lands or territories and other resources, particularly in connection with the development, utilization or exploitation of mineral, water or other resources.

3. States shall provide effective mechanisms for just and fair redress for any such activities, and appropriate measures shall be taken to mitigate adverse environmental, economic, social, cultural or spiritual impact.

Article 33

1. Indigenous peoples have the right to determine their own identity or membership in accordance with their customs and traditions. This does not impair the right of indigenous individuals to obtain citizenship of the States in which they live.

2. Indigenous peoples have the right to determine the structures and to select the membership of their institutions in accordance with their own procedures.

Article 34

Indigenous peoples have the right to promote, develop and maintain their institutional structures and their distinctive customs, spirituality, traditions, procedures, practices and, in the cases where they exist, juridical systems or customs, in accordance with international human rights standards.

Article 35

Indigenous peoples have the right to determine the responsibilities of individuals to their communities.

Article 36

1. Indigenous peoples, in particular those divided by international borders, have the right to maintain and develop contacts, relations and cooperation, including activities for spiritual, cultural, political, economic and social purposes, with their own members as well as other peoples across borders.

2. States, in consultation and cooperation with indigenous peoples, shall take effective measures to facilitate the exercise and ensure the implementation of this right.

Article 37

1. Indigenous peoples have the right to the recognition, observance and enforcement of treaties, agreements and other constructive arrangements concluded with States or their successors and to have States honour and respect such treaties, agreements and other constructive arrangements.

2. Nothing in this Declaration may be interpreted as diminishing or eliminating the rights of indigenous peoples contained in treaties, agreements and other constructive arrangements.

Article 38

States, in consultation and cooperation with indigenous peoples, shall take the appropriate measures, including legislative measures, to achieve the ends of this Declaration.

Article 39

Indigenous peoples have the right to have access to financial and technical assistance from States and through international cooperation, for the enjoyment of the rights contained in this Declaration.

Article 40

Indigenous peoples have the right to access to and prompt decision through just and fair procedures for the resolution of conflicts and disputes with States or other parties, as well as to effective remedies for all infringements of their individual and collective rights. Such a decision shall give due consideration to the customs, traditions, rules and legal systems of the indigenous peoples concerned and international human rights.

Article 41

The organs and specialized agencies of the United Nations system and other intergovernmental organizations shall contribute to the full realization of the provisions of this Declaration through the mobilization, inter alia, of financial cooperation and technical assistance. Ways and means of ensuring participation of indigenous peoples on issues affecting them shall be established.

Article 42

The United Nations, its bodies, including the Permanent Forum on Indigenous Issues, and specialized agencies, including at the country level, and States shall promote respect for and full application of the provisions of this Declaration and follow up the effectiveness of this Declaration.

Article 43

The rights recognized herein constitute the minimum standards for the survival, dignity and well-being of the indigenous peoples of the world.

Article 44

All the rights and freedoms recognized herein are equally guaranteed to male and female indigenous individuals.

Article 45

Nothing in this Declaration may be construed as diminishing or extinguishing the rights indigenous peoples have now or may acquire in the future.

Article 46

1. Nothing in this Declaration may be interpreted as implying for any State, people, group or person any right to engage in any activity or to perform any act contrary to the Charter of the United Nations or construed as authorizing or encouraging any action which would dismember or impair, totally or in part, the territorial integrity or political unity of sovereign and independent States.

2. In the exercise of the rights enunciated in the present Declaration, human rights and fundamental freedoms of all shall be respected. The exercise of the rights set forth in this Declaration shall be subject only to such limitations as are determined by law

and in accordance with international human rights obligations. Any such limitations shall be non-discriminatory and strictly necessary solely for the purpose of securing due recognition and respect for the rights and freedoms of others and for meeting the just and most compelling requirements of a democratic society.

3. The provisions set forth in this Declaration shall be interpreted in accordance with the principles of justice, democracy, respect for human rights, equality, non-discrimination, good governance and good faith.

ICANN Resolutions (/resolutions) » 2011-06-20 - Approval of the New gTLD Program

Important note: The Board Resolutions are as reported in the Board Meeting Transcripts, Minutes & Resolutions portion of ICANN's website. Only the words contained in the Resolutions themselves represent the official acts of the Board. The explanatory text provided through this database (including the summary, implementation actions, identification of related resolutions, and additional information) is an interpretation or an explanation that has no official authority and does not represent the purpose behind the Board actions, nor does any explanations or interpretations modify or override the Resolutions themselves. Resolutions can only be modified through further act of the ICANN Board.

Board authorizes the President and CEO to implement the new gTLD program as described below and adopts the reasons why the GAC advice was not followed, without prejudice to the rights or obligations of GAC members with regard to public policy issues falling within their responsibilities.

Category:

gTLDs

Meeting Date:

Mon, 20 Jun 2011

Resolution Number:

2011.06.20.01, 2011.06.20.02, 2011.06.20.03

URL for Resolution:

http://www.icann.org/en/minutes/resolutions-20jun11-en.htm#1 (http://www.icann.org/en/minutes/resolutions-20jun11-en.htm#1)

Status:

Ongoing

Implementation Actions:

- Implement the new gTLD program with above-described elements.
    - Responsible entity: President and CEO
    - Due date: None provided

Whereas, on 6 September 2007, the GNSO Council approved by a supermajority vote a motion supporting the 19 recommendations, as a whole, as set out in the Final Report of the ICANN Generic Names Supporting Organisation on the Introduction of New Generic Top-Level Domains going forward to the ICANN Board <http://gnso.icann.org/issues/new-gtlds/pdp-dec05-fr-parta-08aug07.htm (http://gnso.icann.org/issues/new-gtlds/pdp-dec05-fr-parta-08aug07.htm)>.

Whereas, the Board instructed staff to review the GNSO recommendations and determine whether they were capable of implementation, and staff engaged international technical, operational and legal expertise to support the implementation of the policy recommendations and developed implementation plans for the GNSO's policy recommendations.

Whereas, on 26 June 2008, the Board adopted the GNSO policy recommendations for the introduction of new gTLDs and directed staff to further develop and complete its detailed implementation plan, continue communication with the community on such work, and provide the Board with a final version of the implementation proposals for the board and community to approve before the launching the new gTLD application process <http://www.icann.org/en/minutes/resolutions-26jun08.htm#_Toc76113171 (http://www.icann.org/en/minutes/resolutions-26jun08.htm#_Toc76113171)>.

Whereas, staff has made implementation details publicly available in the form of drafts of the gTLD Applicant Guidebook and supporting materials for public discussion and comment.

Whereas, the first draft of the Applicant Guidebook was published on 23 October 2008 <http://www.icann.org/en/topics/new-gtlds/comments-en.htm (http://www.icann.org/en/topics/new-gtlds/comments-en.htm)>, and the Guidebook has undergone continued substantial revisions based on stakeholder input on multiple drafts.

Whereas, the Board has conducted intensive consultations with the Governmental Advisory Committee

<http://www.icann.ord/en/minutes/rationale-gac-response-new-gtld-20jun11-en.pdf (http://www.icann.org/en/minutes/rationale-gac-response-new-gtld-20jun11-en.pdf)> [PDF, 103 KB].

Whereas, the ICANN community has dedicated countless hours to the review and consideration of numerous implementation issues, by the submission of public comments, participation in working groups, and other consultations.

Whereas, the Board has listened to the input that has been provided by the community, including the supporting organizations and advisory committees, throughout the implementation process.

Whereas, careful analysis of the obligations under the Affirmation of Commitments and the steps taken throughout the implementation process indicates that ICANN has fulfilled the commitments detailed in the Affirmation <http://www.icann.org/en/documents/affirmation-of-commitments-30sep09-en.htm (http://www.icann.org/en/documents/affirmation-of-commitments-30sep09-en.htm)>.

Whereas, the Applicant Guidebook posted on 30 May 2011 <http://www.icann.org/en/topics/new-gtlds/comments-7-en.htm (http://www.icann.org/en/topics/new-gtlds/comments-7-en.htm)> includes updates resulting from public comment and from recent GAC advice.

Whereas, the draft New gTLDs Communications Plan <http://www.icann.org/en/topics/new-gtlds/new-gtlds-communications-plan-30may11-en.pdf (http://www.icann.org/en/topics/new-gtlds/new-gtlds-communications-plan-30may11-en.pdf)> [PDF, 486 KB] forms the basis of the global outreach and education activities that will be conducted leading up to and during the execution of the program in each of the ICANN geographic regions.

Whereas, the Draft FY12 Operating Plan and Budget <http://www.icann.org/en/announcements/announcement-17may11-en.htm (http://www.icann.org/en/announcements/announcement-17may11-en.htm)> includes a New gTLD Program Launch Scenario, and the Board is prepared to approve the expenditures included in Section 7 of

Resolved (2011.06.20.01), the Board authorizes the President and CEO to implement the new gTLD program which includes the following elements:

1. the 30 May 2011 version of the Applicant Guidebook <http://www.icann.org/en/topics/new-gtlds/comments-7-en.htm (http://www.icann.org/en/topics/new-gtlds/comments-7-en.htm)>, subject to the revisions agreed to with the GAC on 19 June 2011, including: (a) deletion of text in Module 3 concerning GAC advice to remove references indicating that future Early Warnings or Advice must contain particular information or take specified forms; (b) incorporation of text concerning protection for specific requested Red Cross and IOC names for the top level only during the initial application round, until the GNSO and GAC develop policy advice based on the global public interest, and (c) modification of the "loser pays" provision in the URS to apply to complaints involving 15 (instead of 26) or more domain names with the same registrant; the Board authorizes staff to make further updates and changes to the Applicant Guidebook as necessary and appropriate, including as the possible result of new technical standards, reference documents, or policies that might be adopted during the course of the application process, and to prominently publish notice of such changes;
2. the Draft New gTLDs Communications Plan as posted at <http://www.icann.org/en/topics/new-gtlds/new-gtlds-communications-plan-30may11-en.pdf (http://www.icann.org/en/topics/new-gtlds/new-gtlds-communications-plan-30may11-en.pdf)> [PDF, 486 KB], as may be revised and elaborated as necessary and appropriate;
3. operational readiness activities to enable the opening of the application process;
4. a program to ensure support for applicants from developing countries, with a form, structure and processes to be determined by the Board in consultation with stakeholders including: (a) consideration of the GAC recommendation for a fee waiver corresponding to 76 percent of the $185,000 USD evaluation fee, (b) consideration of recommendations of the ALAC and GNSO as chartering organizations of the Joint Applicant Support (JAS) Working Group, (c) designation of a budget of up to $2 million USD for seed funding, and creating opportunities for other parties to provide matching funds, and (d) the review of additional community feedback, advice from ALAC, and recommendations from the GNSO following their receipt of a Final Report from the JAS Working Group (requested in time to allow staff to develop an implementation plan for the Board's consideration at its October 2011 meeting in Dakar, Senegal), with the goal of having a sustainable applicant support system in place before the opening of the application window;

5 f h dli t f l f hi t i ti t f i ti TLD h t t ti i t i th TLD

(http://www.icann.org/en/minutes/timeline-new-gtld-program-20jun11.pdf)> [PDF, 167 KB], elements of which include the New gTLD application window opening on 12 January 2012 and closing on 12 April 2012, with the New gTLD Communications Plan beginning immediately.

Resolved (2011.06.20.02), the Board and the GAC have completed good faith consultations in a timely and efficient manner under the ICANN Bylaws, Article XI, Section 2.j. As the Board and the GAC were not able to reach a mutually acceptable solution on a few remaining issues, pursuant to ICANN Bylaws, Article XI, Section 2.k, the Board incorporates and adopts as set forth in the document describing the remaining areas of difference between ICANN's Board and the GAC <http://www.icann.ord/en/minutes/rationale-gac-response-new-gtld-20jun11-en.pdf (http://www.icann.org/en/minutes/rationale-gac-response-new-gtld-20jun11-en.pdf)> [PDF, 103 KB] the reasons why the GAC advice was not followed. The Board's statement is without prejudice to the rights or obligations of GAC members with regard to public policy issues falling within their responsibilities.

Resolved (2011.06.20.03), the Board wishes to express its deep appreciation to the ICANN community, including the members of the GAC, for the extraordinary work it has invested in crafting the New gTLD Program in furtherance of ICANN's mission and core values, and counts on the community's ongoing support in executing and reviewing the program.

Rationale for Resolution:

The rationale is available at: Rationale for Approval of the Launch of the New gTLD Program (http://www.icann.org/en/minutes/rationale-board-approval-new-gtld-program-launch-20jun11-en.pdf) [PDF, 624 KB]

Other Related Resolutions:

- Resolutions 2008.06.26.02-2008.06.26.03, adopting the GNSO policy recommendations for the introduction of new gTLDs, available at: http://www.icann.org/en/minutes/resolutions-26jun08.htm#_Toc76113171 (https://access.icann.org/en/minutes/,DanaInfo=www.icann.org+resolutions-26jun08.htm#_Toc76113171)

Rationale: Remaining areas of difference between ICANN's Board and Governmental Advisory Committee regarding implementation of the New gTLD Program

*Note: The Rationale is not final until approved with the minutes of the Board meeting.

20 June 2011

The GAC Indicative Scorecard <http://www.icann.org/en/topics/new-gtlds/gac-scorecard-23feb11-en.pdf> identified twelve issue areas for discussion between ICANN's Board and GAC; those were sub-divided into 80 topics. Each topic represented a potential difference between the then-proposed implementation of new gTLDs and the GAC position. Each topic required at least discussion and clarification. In many cases substantive changes in the program were requested.

A remarkable amount of work and compromise (more than a good faith effort) has reduced the areas of disagreement down to a few. This document is intended to capture those differences and explain the ICANN Board reasons for deciding on implementation characteristics that differ from the GAC advice.

It is important to note the complexity associated with the number of issues and the amount of nuance involved, combined with many face-to-face consultations and teleconferences. In this document, the Board identifies the key differences with the intent to identify them all but recognizes there might remain other differences in detail. Additionally, the Board recognizes that the Board and GAC agree there is work left to do on certain implementation items. These are not areas of disagreement; they are areas where the Board and GAC agree on future work, either prior to launch or post-launch. These areas are listed below.

The rationale summarizes and builds on earlier documents from the Board to the GAC <http://www.icann.org/en/topics/new-gtlds/board-notes-gac-scorecard-04mar11-en.pdf>.

Remaining areas of difference and Board rationale for decision:

Rationale: Remaining areas of difference between ICANN's Board and Governmental Advisory Committee regarding implementation of the New gTLD Program

a. Requirement for evidence of trademark "use"

<u>GAC Communication: Letter of 26 May 2011</u>

"The GAC maintains its advice to the Board that the requirement to provide evidence of use should be removed because it is inconsistent with trademark law in many jurisdictions, burdensome for business, disproportionate and discriminatory. The GAC notes that the principal reason the Board disagrees … is that this requirement would in its view deter gaming.

"In view of the Board's concern about this as an overriding risk that outweighs the concerns raised by the GAC if this requirement were to be imposed, the GAC asks the Board to provide a written document for the GAC's consideration by 8 June 2011, so that there is opportunity for GAC review before meeting in Singapore, which:

"a) provides a detailed, evidence-supported analysis of the gaming threat at the second level;

"b) explains why the Board believes that this requirement is the only practicable solution for addressing this threat and would successfully deter the practice of gaming;

"c) provides an analysis of the likely impact of this requirement on legitimate mark holders who would be rendered ineligible for inclusion in the Clearinghouse if this requirement is imposed;

"d) assesses the costs to business of having to furnish evidence of proof;

"e) explains the resources which ICANN will expect to be deployed by the Clearinghouse for the rigorous examination of proof of evidence.

b. Burdens of proof for URS and PDDRP

   GAC Communication: Letter of 26 May 2011
   "The GAC's advice to the Board that it reduce the burden of proof to the standard usual applicable to civil law (iv) is unchanged on the grounds that the GAC believes that this would constitute a significant reduction in the burden on business without compromising the effectiveness of the URS and the PDDRP."

   Board rationale
   The Board understands the GAC's clear advice. Both standards, preponderance of the evidence and clear and convincing evidence, are, contrary to the GAC claim, civil standards, not criminal standards and the Board believes that each applied as conditions warrant. In these cases, after significant balancing and consideration of public comment on both sides, it was decided to apply the higher standard. URS provides an extraordinary remedy – to take down names rapidly in clear-cut cases of abuse only. Similarly, the seriousness of the potential remedy in the PDDRP, potential termination of a registry agreement, warrants additional scrutiny beyond a 51% certainty of registry liability. This seriousness of the allegation involved in the PDDRP, addressing the egregious and systematic nature of the registry behavior supports the need for the clear and convincing burden of proof.

c. IOC / Red Cross requests

   GAC Communication: Letter of 26 May 2011
   "The GAC supports ICANN's continued application of very tightly drawn criteria for inclusion on the reserved names list, and the GAC is unaware of any other international non-profit organization that enjoys the level of

second level, e.g., olympic.taxis and redcross.salt.

The Board asked and received answers on this issue and the topic was discussed. The Board agrees that no other organization (or very few others) would qualify under the proposed criteria. Many organizations face these same issues. There are protections in the Guidebook that both organizations may utilize: objections and GAC Advice at the top level; URS, Sunrise, Trademark Claims, thick Whois, and PDDRP at the second level. Even with the extraordinary recognition these renowned organizations have earned, the Board is not sure a separate set of protections should be afforded them. In addition, such a reservation would unfairly penalize many entities with legitimate interests in these names: Olympic Paint, Olympic Airlines, Red Cross Salt, among many others.

There is a concern that what is being requested is creation of rights protection mechanisms on an ad hoc basis without addressing policy concerns. There has been a tremendous amount of work and community discussion about the rights protection mechanism to be included in the new gTLD program. And, while these two organizations have asked for special reserved protection, no community discussions have involved such a level of protection for special cases.

d. Need to show "affirmative" conduct in PDDRP

GAC Communication: Letter of 26 May 2011
"In PDDRP paragraph 6.1, the GAC advises that the word 'affirmative' be ***deleted***.

"A complainant must assert and prove, by clear and convincing evidence, that the registry operator's ***affirmative*** conduct in its operation or use of its gTLD string that is identical or confusingly similar to the complainant's mark, causes or materially contributes to the gTLD doing one of the following:

i. taking unfair advantage of the distinctive character or the reputation malicious activity. Given the penalties in PDDRP can be severe and are directed at the registry and not the registrant, the standard was written to require affirmative conduct.

2. Post delegation disputes: effect of administrative decisions

   Brief Statement of Difference
   The GAC wants ICANN to respect any "final legally binding decision", which the GAC notes would include "an administrative decision." ICANN has committed to respect orders of Courts only.

   GAC Communication: Letter of 26 May 2011
   "According to the GACs previous input, the GAC also wants ICANN to respect a legally binding administrative decision. The reason for this is that in some jurisdictions it is not possible for the Government or Public Authority to have their administrative decision confirmed by a court. Only the other party (i.e. the applicant) can take the decision of the Government or Public Authority to court.

   "If ICANN will not include the obligation to comply with a legally binding administrative decision in the Applicant Guidebook, you will have a situation where some Governments or Public Authorities will not have the possibility to give a letter of support or non-objection. In those cases, ICANN must be willing to comply with a legally binding administrative decision made by the Government or Public Authority which provided the initial letter of support or non-objection. This commitment from ICANN should be included in the final version of the Applicant Guidebook, or at least ICANN should signal that they are willing to accept this as an amendment in the registry agreement on a case-by-case basis."

   Board Rationale
   As noted previously, the GAC is essentially asking ICANN to expand the respect afforded to court orders to also include any "final legally binding decision", which the GAC notes would include "an administrative decision." ICANN is concerned that such a provision could have a very broad scope (including "decisions" from multiple

perhaps for example through a bilateral agreement between the operator and the government.

3. Applicant support levels

   Brief Statement of Difference

   The GAC calls for a 76% fee reduction for applicants from developing countries. The Board has not agreed to that figure and is developing a program, based on JAS and other advice, to identify sources of funding for needy applicants and processes to distribute them.

   GAC Communication: Letter of 26 May 2011

   "The GAC urges the Board to coordinate and implement as a matter of urgency the decisions relating to the process and timeline issues on the support programme in order to provide equal opportunities to all applicants, particularly from developing countries.

   "For support to developing countries, the GAC is asking for a fee waiver, which corresponds to 76 percent of the US$ 185,000 application fee requirement. Further, there will be instances where additional costs will be required: for example, for auction, objections, and extended evaluation. In such events, the GAC proposes fee reduction and waivers in these processes/instances where additional costs are required. The GAC would further like to propose an additional waiver of the annual US$ 25,000 fee during the first 3 years of operation."

   Board Rationale

   The Board is committed to implementing a program to aid deserving applicants, particularly those from developing countries. The Board is working toward developing a solution for the first round. In order to get a workable program in place, in time, the Board, after listening to community input through the JAS and other places, will develop solutions for funding and distributing funds.

Rationale: Remaining areas of difference between ICANN's Board and Governmental Advisory Committee regarding implementation of the New gTLD Program

Areas of agreement: remaining work

The GAC comments on the Applicant Guidebook (15 April 2011 version) also described additional work to be done: some as a prerequisite to accepting new gTLD applications and some as post-launch study; some as joint GAC-Board work and some for the ICANN Board to take on or facilitate. In each case, the Board essentially agrees and will undertake the following work:

1. Handling of sensitive strings

   "Further discussions are needed between the GAC and the ICANN Board to find a mutually agreed and understandable formulation for the communication of actionable GAC consensus advice regarding proposed new gTLD strings."

2. Communications: Government objection processes

   "The GAC cannot determine whether the Board's commitment to fund at least one objection per individual national government will be sufficient, in view of the as-yet-unknown number of new gTLD strings that may be considered controversial, objectionable, or to raise national sensitivities. The GAC therefore advises the Board that its Communication Outreach program should specifically identify the options available to governments to raise objections to any proposed string."

3. Root scaling: complete documentation

   "The GAC looks forward to the final implementation of GAC advice and to the publication by ICANN of a single authoritative document describing the monitoring system and reporting mechanisms. This document should be ready before the launch of the new gTLD program."

4. Operating practices for Community TLDs

   "The GAC requests information from the Board regarding how the GAC's concerns the aims, functionality and operation of the Clearinghouse would benefit from incorporating the current GAC proposals as well as any unforeseen questions and issues that may arise following the launch of the round.

"The post-launch review should establish whether the automated IP Claims system should be enhanced to include key terms associated with the goods or services identified by the mark, and typographical variations identified by the rights holder.

"The GAC advises that the review should include:

a) a consultation with registry providers, registrants and rights holders on the benefits or otherwise of extending the period of the Clearinghouse notifications beyond 60 days;
b) an analysis of the impact of the operation of the Clearinghouse notifications on the commercial watch services market;
c) an assessment of the likely resource requirements for extending the operation of the Clearinghouse notifications to potential registrants for the life of each new registry."

b. The Clearinghouse tender or request for proposals

"With regard to the issue of non-exact matches … the GAC … recommends that the request for proposal (RFP) that ICANN will issue to potential Clearinghouse providers includes a requirement that the candidate assess whether domain names that include a mark at the beginning or the end of an applied for second level domain could be included in the services."
