ICANN

INTERNET CORPORATION FOR ASSIGNED NAMES AND NUMBERS

New gTLD Program

New gTLD Program in Brief

Since ICANN was founded in 1998 as a not-for-profit, multi-stakeholder organization dedicated to coordinating the Internet's addressing system, one of its foundational principles has been to promote competition in the domain name marketplace while ensuring Internet security and stability. The expansion of the generic top-level domains (gTLDs) will allow for more innovation, choice and change to the Internet's addressing system, now represented by 21 gTLDs.

The decision to introduce new gTLDs followed a detailed and lengthy consultation process with all constituencies of the global Internet community represented by a wide variety of stakeholders – governments, individuals, civil society, business and intellectual property constituencies, and the technology community. Also contributing to this policy work were ICANN's Governmental Advisory Committee (GAC), At-Large Advisory Committee (ALAC), Country Code Names Supporting Organization (ccNSO), and Security and Stability Advisory Committee (SSAC). The policy was completed by the Generic Names Supporting Organization (GNSO) in 2007, and adopted by ICANN's Board in June, 2008. The program is expected to launch in calendar year 2010.

The ICANN team continues to share with the Internet community the ongoing program developments through the release of draft Applicant Guidebooks, excerpts, explanatory memoranda and in-person meetings. All details can be found on this page.

In a world with over 1.6 billion Internet users – and growing – diversity, choice and competition are key to the continued success and reach of the global network.

New gTLD History at a Glance

- Eight gTLDs predated ICANN's creation – dot-com, dot-edu, dot-gov, dot-int, dot-mil, dot-net, dot-org and dot-arpa.
- ICANN has successfully carried out two previous application rounds for new gTLDs: 2000 (dot-aero, dot-biz, dot-coop, dot-info, dot-museum, dot-name and dot-pro); and 2004 (dot-asia, dot-cat, dot-jobs, dot-mobi, dot-tel, dot-travel).
- The Generic Names Supporting Organization (GNSO) has developed policy recommendations that are the foundation guiding ICANN in introducing new gTLDs. The policy work started in December 2005 and concluded in September 2007.
- In June 2008, during ICANN's Paris meeting, ICANN Board approved the GNSO recommendations for introducing New gTLDs to the Internet's addressing system.

Fast Facts

- According to Internet World Stats, there are an estimated 1.6 billion Internet users worldwide.
- An Internet address is made up of a series of characters separated by dots. For example, in the website address www.icann.org, the top-level domain is ".org" and the second-level domain is "icann". In some cases, you can also find third-level domain names.
- There are currently 21 gTLDs. A gTLD can, in some cases, identify the nature of an organization operating a specific website. For example, a website with a dot-com address usually indicates a commercial organization: dot-museum is dedicated to museums, dot-mobi for mobile phone users, dot-aero for the aviation industry, and so on.
- There are around 250 two-letter country-code TLDs (ccTLDs), which identify a country or territory. For example, the Internet extension dot-jp corresponds to Japan, while dot-eu corresponds to the European Union.
- The year 2008 ended with a total base of 177 million domain name registrations across all of the top-level domains (TLDs). This represents 16 percent growth over the previous year and 2 percent growth over the third quarter of 2008. Of the 177 million second-level domain name registrations, 96 million are gTLD registrations.

Did you know?

- The Internet Corporation for Assigned Names and Numbers (ICANN) is responsible for introducing new generic top-level domains (gTLDs). The priority is to ensure that new gTLDs are awarded in a fair and transparent process to organizations that can effectively manage them on behalf of Internet users.
- ICANN is currently developing the program that facilitates the creation of new Internet extensions, or gTLDs. Under this new process, more extensions will be created, and with them, potentially a whole new way of using the Internet. Also, for the first time, Internationalized Domain Names (IDNs) will be available at the top level, enabling new extensions in different scripts such as Arabic, Chinese, Greek, Hindu, and more. Millions of people around the world will be able to use the Internet's naming system in their own languages.
- The Internet's fundamental protocol – TCP/IP – has passed its 30th birthday, and the naming system on top of it – DNS – has passed its 25th birthday. The Internet has gone from a few networked computers to a network accessed by a billion people, from a Western phenomenon to a truly global one, and from research roots to an engine of commerce accounting for trillions of dollars in commerce.
- During that time, the use of top-level domain (TLD) identifiers, such as dot-com, dot-net, dot-uk, has actually changed very little. The most widely recognized global TLD is dot-com. While the scale of these TLDs has changed dramatically since their inception – more than 20 years ago for dot-com – the availability and usage of these top-level names has been permitted to change very little.
- The entity responsible for operating a gTLD is called a registry. Depending on the kind of gTLD, these organizations are referred to as registry operators or sponsors. New gTLD registries must sign agreements with ICANN to meet technical requirements and comply with applicable policies.

What are gTLDs?

gTLD stands for generic top-level domain – what Internet users see as an Internet extension like dot-com, dot-org or dot-info – and they are part of the structure of the Internet's domain name system.

Why are new gTLDs being introduced?

The wider Internet community that takes part in the ICANN policy development process has advocated for new gTLDs. Since it was founded in 1998, one of ICANN's key mandates has been to create competition in the domain name market.

In addition the Joint Project Agreement that ICANN has with the US Department of Commerce says, "ICANN shall maintain and build on processes to ensure that competition, consumer interests, and Internet DNS stability and security issues are identified and considered in TLD management decisions, including the consideration and implementation of new TLDs."

Opening the top-level space so that names can be proposed rather than be restricted to the existing 21 gTLDs could open up a new wave of innovation. Competition and innovation best occur when a stable and open platform is available and the barriers to entry are reduced.

Will this change how the Internet operates?

This planned increase of the number of gTLDs is not expected to affect the way the Internet operates, but it will potentially change the way people find information on the Internet.

What is ICANN doing to protect trademark holders?

First, an objection-based process will enable rightsholders to demonstrate that a proposed gTLD would infringe their legal rights. Second, applicants for new gTLDs will be required to describe in their applications the rights protection mechanism they propose for second-level registrations, which must be made public. Third, all new gTLDs must ensure that second-level registrations are subject to ICANN's Uniform Domain Name Dispute Resolution Policy (UDRP), a process that has worked well to protect rights for many years. Finally, ICANN has been working closely with the trademark community to find additional solutions to potential issues for trademark holders in implementing new gTLDs.

Will ICANN prevent the registration of objectionable or racist extensions?

Offensive names could be subject to an objection-based process based on public morality and order. This process will be conducted by an international arbitration body using criteria drawing on provisions in a number of international treaties.

How are IDNs related to gTLDs?

IDN is the short name for Internationalized Domain Name. IDNs are domain names with characters in addition to a, b…, z; 0, 1,…, 9; and "-".

Such domain names could contain characters with diacritical marks as required by many European languages, or characters from non-Latin scripts; for example, Arabic or Chinese. During the 2010 application round, IDN gTLDs will be allowed for the first time in the history of the Internet. The IDN top-level domain names will offer many new opportunities and benefits for Internet users around the world by allowing them to establish and use top-level domains in their native languages and scripts.

How many new gTLDs are expected?

There is no way of knowing the exact number of applications ICANN will receive during the 2010 application round or how many of these applications will qualify and become gTLD registries. Market speculations have estimated anything from hundreds to thousands of applications.

Is applying for a new gTLD the same as buying a domain name?

No. Nowadays, organizations and individuals around the world can buy second-level and, in some cases, even third-level domain names. They simply need to find an accredited registrar or reseller, comply with the registrant terms and conditions and pay annual fees. The application for a new gTLD is a much more complex process. An applicant for a new gTLD is, in fact, applying to create and operate a registry business and sign a contract with ICANN.

Can I register my idea for a new gTLD with ICANN in advance of the next application period?

No, ICANN will not be taking reservations or pre-registrations of new gTLDs.

Can I simply reserve a gTLD and decide later whether or not to use it?

One of the reasons ICANN is opening the top-level space is to allow for competition and innovation in the marketplace. The application process requires applicants to provide a detailed plan for the launch and operations of the proposed gTLD. ICANN expects new gTLDs to be operational shortly after the registry agreement is signed.

How and when can I see which TLDs are being applied for and who is behind the applications?

After the application period is closed, ICANN will verify all applications for completeness and then release on its website the list of TLDs, applicant names and nonconfidential information about the applications.

Is this the only opportunity to apply for a new gTLD?

No. ICANN plans to hold additional rounds in the future. The exact dates for these future rounds are not yet available. "Applicants who are unsuccessful may re-apply in future rounds.

Application Process

Who can apply for a new gTLD?

Any public or private organization from any part of the world can apply to create and operate a new gTLD. Applicants will need to demonstrate the operational, technical and financial capability to run a registry and comply with additional specific requirements.

What is the New gTLD Applicant Guidebook?

The Applicant Guidebook is a step-by-step guide for future applicants for a new gTLD to understand what to expect during the application and evaluation periods and how the process works. Since late 2008, the Applicant Guidebook has been released in drafts posted for public comment. This is part of ICANN's bottom-up decision-making model and is a great opportunity for the Internet community to weigh in on the final set of criteria and processes. The final Applicant Guidebook is expected in 2010 and will contain a definitive set of rules and requirements.

Why is ICANN asking for so much information from the applicants?

One of ICANN's core missions is to preserve the security, stability and global interoperability of the Internet. Future new gTLD registries are expected to comply with ICANN's contract and follow all best practices and standards to ensure this mission is fulfilled.

Can I apply for more than one gTLD?

Yes. However, each application will be treated individually and there is no discounted application fee.

Can I apply for any kind of gTLD or are there any specific restrictions?

ICANN has a set of specific rules for gTLD strings that each applicant must carefully consider. For example, an application for a gTLD composed of numbers only will be rejected. Applicants for IDN gTLDs must carefully follow the additional technical specifications for IDNs outlined in the Applicant Guidebook.

Applicants representing a community-based TLD or a geographic TLD must meet additional specific requirements.

What will happen during the application period and how long will it take?

The application period will likely last for several weeks. Applicants will use a dedicated interface named TAS (TLD Application System) to answer questions about the applied-for TLD and their business and technical capability to operate a registry. The interface will also allow applicants to upload supporting documents and serve as a tracking and workflow management tool for ICANN staff, applicants and the various service providers supporting the evaluation or objection processes.

What happens if there are other applications for the same gTLD?

ICANN does not allow for two or more identical gTLDs. If there are two or more applications for the same gTLD, applicants will be required to follow the string contention procedures outlined in the Applicant Guidebook. Applicants should also be aware that the same specific rules will apply if two or more gTLD strings are considered to be highly similar by a panel of experts. The two processes proposed by ICANN to deal with the identical and similar gTLD applications are auctions and community priority (comparative) evaluation. The latter applies only in cases where there is a community-based applicant.

What can I do if someone applies for a gTLD that represents my brand or trademark?

ICANN will have a dispute resolution mechanism managed by a dispute resolution service provider (DRSP) that will process objections from third-parties that feel that their legal rights are being infringed upon.

Can third parties prevent an applicant from getting a new gTLD?

After the list of all gTLD applications is published on ICANN's website, there will be an open objection period followed by established dispute resolution procedures. Objections can be filed only on four specific enumerated grounds. Details about these procedures, such as who has standing, where and how objections are filed, and how much objections will cost, among other, can be found in the Applicant Guidebook.

Timeline and Fees

When can I apply?

The application period is expected to take place in 2010. The application period will have specific open and close dates and times.

How much is the application fee?

The application fee is estimated at US$185,000. There is also a US$100 user registration fee to access the TAS. All applicants will be required to pay the same initial application and user registration fees. Various methods of payment will be accepted. Because an application might follow different paths, such as going through an objection or auction process, additional fees may apply to some applicants.

Will ICANN issue refunds?

Yes, refunds will apply in specific circumstances. Details about refund conditions are specified in the Applicant Guidebook.

Are there any ongoing fees once a gTLD is approved by ICANN?

Yes. Once an application successfully passes all evaluation steps, the applicant must sign a Registry Agreement with ICANN. Under the agreement, there are two fees: a fixed fee of US$6,250 per calendar quarter and a transaction fee of US$0.20 on future domain registrations and renewals.

The information presented here about the application and evaluation process is the most up-to-date available. However, it is a high-level summary and is subject to change. For exact details about the program please review the actual text of the Applicant Guidebook with the proposed Registry Agreement as it is being revised and finalized. For information about the New gTLD Program, please visit www.icann.org or email ICANN staff at newgltd@icann.org.

Where can I find more information?

For current information on the New gTLD Program, go to *http://www.icann.org/en/topics/new-gtld-program.htm*

To learn about GNSO Policy Development, go to *http://gnso.icann.org/*

To learn about IDNs, go to *http://www.icann.org/en/topics/idn/*

A full list of current gTLDs is available at *http://www.icann.org/registries/listing.html*

Glossary and useful terms

Applicant – an entity that has applied to ICANN for a new gTLD by submitting its application form through the online application system.

Application – an application for a new gTLD. An application includes the completed application form, any supporting documents and any other information that may be submitted by the applicant at ICANN's request.

Applicant Guidebook – a step-by-step guide for future applicants for a new gTLD to understand what to expect during the application and evaluation periods and how the process works.

Auction – a method for allocating property or goods to the highest bidder.

Community priority (comparative) evaluation – a process to resolve string contention, which may be elected by a community-based applicant.

Community-based TLD – a community-based gTLD is one operated for the benefit of a defined community consisting of a restricted population. An applicant designating its application as community-based must be prepared to substantiate its status as representative of the community it names in the application.

TCP/IP -Transmission Control Protocol/Internet Protocol – the Internet's basic communication language or protocol. The communications protocol underlying the Internet, IP allows large, geographically diverse networks of computers to communicate with each other quickly and economically over a variety of physical links. An IP address is the numerical address by which a location in the Internet is identified. Computers on the Internet use IP addresses to route traffic and establish connections among themselves; people generally use the human-friendly names made possible by the Domain Name System.

Objection – a formal objection filed with a dispute resolution service provider in accordance with that provider's procedures.

DNS – Domain Name System – helps users find their way around the Internet. Every computer on the Internet has a unique address – just like a telephone number – which is a rather complicated string of numbers. It is called its IP address. IP addresses are hard to remember. The DNS makes using the Internet easier by allowing a familiar string of letters (the domain name) to be used instead of the arcane IP address. So instead of typing 207.151.159.3, you can type www.internic.net. It is a mnemonic device that makes addresses easier to remember.

DRSP – dispute resolution service provider – An entity engaged by ICANN to adjudicate dispute resolution proceedings in response to formally filed objections.

TAS – TLD Application System – The online interface for submitting applications to ICANN.

Registry – is the authoritative, master database of all domain names registered in each top-level domain. The registry operator keeps the master database and also generates the zone file that allows computers to route Internet traffic to and from top-level domains anywhere in the world.

Registry Agreement – The agreement executed between ICANN and successful gTLD applicants, which appears in draft form at *http://www.icann.org/en/topics/new-gtlds/*.

Registrar – currently, a domain name in gTLDs can be registered with a registrar. The registrar can provide a variety of contact and technical information that makes up the domain name registration, keep records of the contact information and submit the technical information to a central directory, the registry. Registrants are required to enter a registration contract with the registrar that sets forth the terms under which the registration is accepted and will be maintained.

TLD – top-level domains are the names at the top of the DNS naming hierarchy. They appear in domain names as the string of letters following the last (rightmost) dot, such as "net" in "www.example.net". The administrator for a TLD controls what second-level names are recognized in that TLD. The administrators of the root domain or root zone control what TLDs are recognized by the DNS. Commonly used TLDs include dot-com, dot-net, dot-edu, dot-jp, dot-de, and the like.

GAC – Governmental Advisory Committee – is an advisory committee composed of appointed representatives of national governments, multinational governmental organizations and treaty organizations, and distinct economies. Its function is to advise the ICANN Board on matters of concern to governments.

ALAC – At-Large Advisory Committee – considers and provides advice on the activities of the ICANN as they relate to the interests of individual Internet users.

ccNSO – Country-Code Names Supporting Organization – engages and provides leadership in activities relevant to country-code top-level domains (ccTLDs). This is achieved by developing policy recommendations to the ICANN Board, nurturing consensus across the ccNSO's community, including the name-related activities of ccTLDs, and coordinating with other ICANN SOs, committees or ICANN constituencies.

SSAC – Security and Stability Advisory Committee – the standing committee on the security and stability of the Internet's naming and address allocation systems. Its charter includes a focus on risk analysis and auditing. SSAC consists of approximately 20 technical experts from industry and academia as well as operators of Internet root servers, registrars and TLD registries.

GNSO – Generic Names Supporting Organization – one of ICANN's supporting organizations, formed of six constituencies: commercial and business constituency, gTLD registry constituency, ISP constituency, non-commercial constituency, registrar constituency, and IP constituency.

ISP – Internet Service Provider – An ISP provides access to the Internet to organizations or individuals. These services may include web hosting, email, VoIP (voice over IP), and support for many other applications.

String – the set of characters comprising an applied-for gTLD.

String Contention – The scenario in which there is more than one qualified applicant for the same gTLD or for gTLDs that are so similar that user confusion would result if more than one were to be delegated to the root zone.

Script – a collection of symbols used for writing a language. There are three basic kinds of scripts. Alphabetic (Arabic, Cyrillic, Latin) has individual elements termed letters. Ideographic (Chinese) has elements that are ideographs. Syllabary (Hangul) has individual elements that represent syllables. The writing systems of most languages use only one script but there are exceptions. For example, Japanese uses four different scripts representing all three categories. Scripts that do not appear in the Unicode code chart are completely unavailable for inclusion in IDNs.

About ICANN

To reach another person on the Internet you have to type an address into your computer - a name or a number. That address has to be unique so computers know where to find each other. ICANN coordinates these unique identifiers across the world. Without that coordination we wouldn't have one global Internet. ICANN was formed in 1998. It is a not-for-profit public-benefit corporation with participants from all over the world dedicated to keeping the Internet secure, stable and interoperable. It promotes competition and develops policy on the Internet's unique identifiers. ICANN doesn't control content on the Internet. It cannot stop spam and it doesn't deal with access to the Internet. But through its coordination role of the Internet's naming system, it does have an important impact on the expansion and evolution of the Internet. For more information please visit: ***www.icann.org***.

case of trademarks but require in respect of other intellectual property subject matter.[555] Geographic names have nevertheless not historically been considered registrable as trademarks, as will be explained in detail in the next section of this chapter.

5.1.2 INTELLECTUAL PROPERTY SUBJECT MATTER

With the exception of geographical indications, which are a specifically defined category of origin-connoting geographic names (these are discussed in detail in Chapter 7), geographic names are not expressly stated to fall within the scope of the TRIPS Agreement's definition of 'intellectual property' in Article 1(2) as: 'all categories of intellectual property that are the subject of sections 1 through 7 of Part II.' This definition has been characterized as 'pragmatic', but it 'excludes from general TRIPS obligations forms of intellectual property (or of protection that some would consider as being a part of intellectual property) not covered by TRIPS. Certain *sui generis* or new forms of protection may be concerned.'[556] Geographic names generally, not simply the narrow sub-set in geographical indications, may be one such exclusion. It is also relevant to note as a tangential matter that in terms of the ownership of rights recognized under the TRIPS Agreement, governments' claims as rights holders under that agreement are not contemplated in the wording of Article 1(3) or 42.[557]

The interpretation of the definition of 'intellectual property' in Article 1(2) was directly at issue in the WTO dispute *United States – Section 211 Omnibus Appropriations Act of 1998*.[558] The Panel in that case concluded that trade names did not fall within the list of categories articulated in Article 1(2), but the Appellate Body disagreed, interpreting 'intellectual property' to

---

[555] See Rosemary J. Coombe, *The cultural life of intellectual properties: authorship, appropriation, and the law* 61 (Duke University Press 1998). Coombe explains: 'Although trademarks are not conventionally understood to have "authors" because they require no necessary genius, originality, or creativity, the legal recognition that trademark "owners" have a proprietary interest in marketing signs increasingly relies upon a reenactment of the author-function as described by Foucault. This is evident in judicial acceptance of the belief that through investment, labor, and strategic dissemination, the holder of a trademark creates a set of unique meanings in the minds of consumers and that this value is produced solely by the owner's efforts' (internal citations omitted).

[556] Daniel Gervais, *The TRIPS Agreement: Drafting history and analysis* 166 (3d ed. revised, Sweet & Maxwell 2008).

[557] Art. 1(3) of the TRIPS Agreement identifies beneficiary rights holders as 'the nationals of other Members.' Note 1 to Art. 1 indicates that 'nationals' means 'persons, natural or legal, who are domiciled or who have a real and effective industrial or commercial establishment in that customs territory.' Note 11 to Art. 42 of the TRIPS Agreement clarifies that 'federations and associations having legal standing to assert' rights are considered rights holders for the purposes of enforcement.

[558] *United States – Section 211 Omnibus Appropriations Act of 1998*, 41 I.L.M. 654 (W.T.O. D.S.B. App. Body 2 Jan. 2002).

include not only the categories indicated in each title of each Section of Part II of the TRIPS Agreement but also categories of intellectual property subject to each Section of Part II. Applying this reasoning, trade names can be distinguished because geographic names (other than geographical indications) are not even mentioned in the TRIPS Agreement. Furthermore, as the Appellate Body pointed out, trade names are expressly recognized in Article 8 of the Paris Convention for the Protection of Industrial Property, which is incorporated into the TRIPS Agreement by reference.

Geographic names, by contrast, are not expressly provided for in the Paris Convention, the definition of 'industrial property'[559] in which is considered:

> a traditional but not entirely exact denomination for certain exclusive rights, resembling property rights, regarding creative ideas or distinguishing signs or designations in the industrial or commercial field, supplemented by certain rules against unfair behavior in the same field. The term is inexact because 'industrial property' presents no more than an analogy with normal property; further, because it covers more than industrial subjects only; and, finally, because the rules against unfair behavior are not necessarily related to property at all.[560]

This interpretation allows for the recognition of rights in non-commercial names by the Paris Convention, but beyond their possible recognition as trademarks, geographic names fall within that agreement's covered subject matter only insofar as they constitute indications of source or appellations of origin, or give rise to an unfair competition claim. Their ability to do this is explored in detail in Chapter 8 of this book, but at this stage it can be concluded that geographic names are not provided for as such within the protected subject matter of the Paris Convention.

---

[559] **Paris Convention Art. 1**

> ...
>
> (2) The protection of industrial property has as its object patents, utility models, industrial designs, trademarks, service marks, trade names, indications of source or appellations of origin, and the repression of unfair competition.
>
> (3) Industrial property shall be understood in the broadest sense and shall apply not only to industry and commerce proper, but likewise to agricultural and extractive industries and to all manufactured or natural products, for example, wines, grain, tobacco leaf, fruit, cattle, minerals, mineral waters, beer, flowers and flour.
>
> ...

[560] Bodenhausen, 20. See also WIPO Standing Committee on the Law of Trademarks, Industrial Designs and Geographical Indications, *Report Adopted by the Standing Committee*, WIPO Doc. SCT/21/8 (26 Nov. 2009) para. 317 (comments of South Africa) (available at http://www.wipo.int/edocs/mdocs/sct/en/sct_21/sct_21_8.pdf).

Nor do geographic names as such fall expressly within the scope of the broader definition of 'intellectual property' set out at Article 2 of the Convention Establishing the World Intellectual Property Organization:[561]

> (viii) 'intellectual property' shall include the rights relating to:
> - literary, artistic and scientific works,
> - performances of performing artists, phonograms, and broadcasts,
> - inventions in all fields of human endeavor,
> - scientific discoveries,
> - industrial designs,
> - trademarks, service marks, and commercial names and designations,
> - protection against unfair competition,
>
> and all other rights resulting from intellectual activity in the industrial, scientific, literary or artistic fields.

Their primarily non-commercial use separates geographic names from classification as 'industrial' alongside trade and service marks, while the fact that their creation requires no particularly creative or inventive thought isolates them from the other catch-all 'intellectual' fields.

There is therefore scant express support for a claim to rights in the nature of intellectual property in geographic names at the international level. This does not stop WTO Member States from treating geographic names as protectable intellectual property, yet for this to be considered a general principle of international law it must be relatively consistent and widespread. The most obvious means by which States might do so is through registrability as a trademark.

5.2 GEOGRAPHIC NAMES AS TRADEMARKS

The recognition of rights in names under international law has historically focused primarily on the intellectual property subject matter of trademarks and trade names; these have been expressly protected since 1883 by the Paris Convention on the Protection of Industrial Property (the 'Paris Convention'). In addition to the minimum standards framework laid down in the Paris Convention, trademarks' protection at the international level was helpfully clarified[562] and harmonized by the TRIPS Agreement, while administrative measures pertaining to the international recognition of rights in trademarks are provided for by the Nice Agreement Concerning the International Classification of Goods and Services for the Purposes of the Registration of

---

[561] Convention Establishing the World Intellectual Property Organization (14 Jul. 1967, entered into force 26 Apr. 1970), 828 U.N.T.S. 3.

[562] See Thomas Cottier, *The Prospects for Intellectual Property in GATT*, 28 Common Mkt. L. Rev. 383, 403-404 (1991).

prohibit registration as a trademark of emblems of national significance such as armorial bearings and national flags. Article 6*ter* (1)(b) contains a similar proscription in relation to IGOs except that it also expressly excludes the names of such organizations from trademark registration. This serves to highlight the absence of States' names in the wording of sub-section (1)(a).[598] Relying on the principle of *expressio unius exclusio alterius*, WIPO has interpreted this subtle yet significant difference as not requiring that Member States exclude country names from registration as trademarks.[599] This interpretation is consistent with:

> the duty of a treaty interpreter to examine the words of the treaty to determine the intentions of the parties. This should be done in accordance with the principles of treaty interpretation set out in Article 31 of the Vienna Convention. But these principles of interpretation neither require nor condone the imputation into a treaty of words that are not there or the importation into a treaty of concepts that were not intended.[600]

Interpretations of the terms 'armorial bearings', 'other State emblems', 'official signs and hallmarks indicating control and warranty', and 'heraldic symbols' as including country names have been rejected. South Africa was an enthusiastic proponent of this interpretation, but the remark that this 'view has not been universally and definitely accepted'[601] suggests rather more support than may actually exist and conflicts with the acknowledgement made elsewhere that:

> other members of the Paris Union had made very laudable efforts at ensuring protection against the use of official State names as elements of

---

organizations of which one or more countries of the Union are members, with the exception of armorial bearings, flags, other emblems, abbreviations, and names, that are already the subject of international agreements in force, intended to ensure their protection. (emphasis added)

[598] See WIPO, *WIPO II Report*, paras 278-285. See also Bodenhausen, 94-99.

[599] WIPO, *WIPO II Report*, para. 281.

See also Susy Frankel, *WTO Application of 'the Customary Rules of Interpretation of Public International Law' to Intellectual Property*, 46 Va. J. Int'l L. 365, 388-389 (2005-2006). An alternative interpretation of Art. 6*ter* (1) is defended by Matthew Rimmer in *Virtual Countries: Internet Domain Names and Geographical Terms*, February 2003 Media Int'l Austl. Incorp. Culture & Pol'y 124, 132 (2003). Rimmer posits that an alternate interpretation of Art. 6*ter* 'is justified, on the one hand, in light of its spirit and underlying objectives, and, on the other hand, in view of recent technological evolutions, in particular the emergence of the Internet as a commercial medium and the importance of domain names as valuable signposts in this context.'

[601] WIPO Standing Committee on the Law of Trademarks, Industrial Designs and Geographical Indications, *The Protection of Country Names in the Domain Name System: Comments Submitted by the Government of the Republic of South Africa*, WIPO Doc. SCT/S2/6 (17 May 2002) (available at www.wipo.int/edocs/mdocs/sct/en/sct_s2/sct_s2_6.doc).

that a flag, once adopted, is assumed to be easily and immediately identifiable as a particular State's own, not only by other heads of State and the diplomatic community but by people all over the world near or far from the State in question who would otherwise have contact with the flag if used as a trademark. Exclusion of flags from registration as a trademark is justified because their 'registration or use would violate the right of the State to control the use of symbols of its sovereignty'.[635] Yet are not country names symbols of sovereignty just as much as, if not more so than, flags? If so, is there a custom or general principle of international law recognizing States' rights in country names, even if the Paris Convention does not explicitly require this? To answer this question, this study now turns to a fundamental principle of international law that is the cornerstone of the international legal order itself: sovereignty.

6.3 SOVEREIGNTY AND COUNTRY NAMES

Both the proposal made by the Jamaican delegation to the WIPO Standing Committee to expand the scope of Paris Convention Article 6*ter* (1) and the recommendation made by ICANN's GAC to limit applications for new geographic gTLDs rely on sovereignty to justify restricting others' use of country names.[636] Sovereignty has also been asserted as a basis for national control of country code top-level domains.[637] Acknowledging the imprecision with which the term 'sovereignty' is used, as will be discussed further below, the impression one gets is that these are assertions of an inherent right of States to possess and control the use of their representative symbols, including their name. The seemingly inherent nature of the right suggests that it is derived from principles of natural law and the very conceptual and philosophical underpinnings of the international legal order. This is at least

---

the protection of this Article, and all subsequent modifications of such list. Each country of the Union shall in due course make available to the public the lists so communicated. *Nevertheless such communication is not obligatory in respect of flags of States.* (emphasis added)

[635] Bodenhausen, 96.

[636] See comments of the Delegation of Jamaica 'that its proposal was intended to protect the integrity and sovereignty of a State' in WIPO Standing Committee on the Law of Trademarks, Industrial Designs and Geographical Indications, *Report Adopted by the Standing Committee*, WIPO Doc. SCT/21/8 (26 Nov. 2009) para. 311. The GAC's view is expressed in the context of Internationalized Domain Names (IDNs) that 'ICANN should consult with the Government or relevant public authority of the territory concerned to determine whether there may be any potential infringement of their sovereign rights regarding their country or territory name'. GAC, *GAC Communiqué: New Delhi*, 2, https://gacweb.icann.org/display/gacweb/GAC+31+Meeting+New+Delhi%2C+India+9-14+February+2008 (February 2008, accessed 15 Oct. 2012).

[637] See Von Arx & Hagen, 68.

how the protection of State emblems by means of Article 6*ter* of the Paris Convention has been explained.[638]

Even if the protection of State emblems has as its origin the principle of sovereignty, one need look no further than the Paris Convention in order to identify international law expressly recognizing States' rights. It has been determined in the preceding section of this chapter that country names do not fall within this ambit; they are not specifically recognized in the Paris Convention or indeed any other international convention of universal scope as symbols of sovereignty meriting protection as such by means of an exclusion from trademark registration or other form of proprietary rights. States' names are nevertheless just as powerful and likely more universally recognizable identifiers than flags or other national symbols. The question therefore arises as to whether possession and protection of States' rights in their names can alternatively be based on the status of statehood, either as a condition of statehood or a consequence of it.

Various sources identify a link between national flags as expressions or 'emblems' of sovereignty and national identity,[639] but less clearly articulated is a link between country names and sovereignty. If it were clear that sovereignty encompasses a right to possess and prevent others' use of a name, the issue of States' rights in country names would not be the open question that it is today. An answer can only be reached by piecing together historical and contemporary understandings of statehood in order to demarcate the legal connection, if any, between sovereignty, statehood and country name. This section of this chapter considers first whether having a name is a condition of statehood, and second, whether having a name is a right of statehood.

Jur. 2d *Flag* §1 ('A national or state flag is an emblem of that nation or state's sovereignty and authority.'); Michael Billig, *Banal Nationalism* 40-41 (Sage Publications 1995) (discussing the powerful impact of even unwaved flags as symbols of nationality and nationhood); Arundhati Virmani, *National Symbols Under Colonial Domination: The nationalization of the Indian flag, March-August 1923*, 164 Past & Present 169 (1999); Yael Navaro-Yashin, *Confinement and the Imagination: Sovereignty and Subjectivity in a Quasi-State*, in *Sovereign bodies: citizens, migrants and states in the postcolonial world* 103-104 (Thomas Blom Hansen & Finn Stepputat eds., Princeton University Press 2005) (discussing the importance of the flag of the Turkish Republic of Northern Cyprus to its sovereignty); *Sovereignty flag should fly, says Maori Party*, nzherald.co.nz (31 Jan. 2007) (available at http://www.nzherald.co.nz/waitangi-day/news/article.cfm?c_id=1500878&objectid=10421769).

6.3.1 NAME AS A CONDITION OF STATEHOOD

6.3.1.1 Statehood and Possession of a Name

Foundational historical works on sovereignty and statehood offer little support for the position that statehood is conditioned on having a name. For example, Emerich de Vattel, whose seminal work *Le Droit des gens; ou, Principes de la loi naturelle appliqués à la conduit et aux affaires des nations et des souverains* is considered one of the foundations of modern nation-State theory, saw only self-government as necessary.[640] Yet where specific territories are identified as having achieved the status of sovereign statehood, they are commonly referred to by name. For example, Franciscus de Vittoria, another influential early contributor to international legal theory, described a 'perfect State' as 'one which is complete in itself, that is, which is not a part of another community, but has its own laws and its own council and its own magistrates, such as is the Kingdom of Castille and Aragon and the Republic of Venice and the like'.[641] Little can be drawn from this, however, because the examples to which Vittoria points are States in possession of a name rather than States lacking names. The latter situation is not contemplated.

Contemporary scholars have experienced difficulty in articulating a definition or identifying attributes of statehood. This is at least partly due to the traditionally complex question of the need for recognition; that issue[642] must be set aside as separate from a possible link between statehood and country name.[643] The definition of 'State' provided by Article 3 of the Montevideo Convention on Rights and Duties of States[644] (hereinafter the 'Montevideo Convention') is viewed as setting the standard despite that convention being a regional agreement only.[645] From it can be extrapolated

---

[641] Franciscus de Vittoria, *De Indis et de Iure Belli Relectiones*, in *Relectiones Theologicae XII* (Ernest Nys ed.), reprinted in *The Classics of International Law* 169 para. 7 §§425-426 (James Brown ed., 1917).

[642] On recognition, see James Crawford, *The creation of states in international law* 38, 89-95 (2d ed., Clarendon Press 2007).

[643] See Matthew C. R. Craven, *What's in a Name? The Former Yugoslav Republic of Macedonia and Issues of Statehood*, 16 Austl. Y.B. Int'l L. 199, 238 (1995) (arguing that a link between name choice and recognition 'offends the notion of sovereignty itself'). See also Louis Henkin et al., *International Law: Cases and Materials* 253 (3d ed., West 1993).

[644] Convention on Rights and Duties of States adopted by the Seventh International Conference of American States (26 Dec. 1933, entered into force 26 Dec. 1934), 165 L.N.T.S. 19.

[645] The definition of 'State' in the Restatement (Third) of Foreign Relations Law of the United States almost precisely mirrors that of the Montevideo Convention, and in comments to the Restatement it is said that this definition 'is well-established in international law'. See *Restatement (Third) of the Foreign Relations Law of the United*

four principal criteria: a permanent population; a defined territory; government; and capacity to enter into relations with other States.[646] Clearly, possession of a name is not one of these four criteria. Nor is it one of the other criteria that have been suggested over time, including permanence, willingness and ability to observe international law, civilization, and legal order.[647] The requirements of membership in the United Nations are based first and foremost on having achieved statehood, but even these do not expressly require that aspiring members have a name.[648]

It is only plausible to take the position that possession of a name is a condition of statehood if it can be said that having a name, while not an express criterion of statehood, is a necessary or inherent aspect of a criterion of statehood. Considering in turn the four criteria identified by the Montevideo Convention as just noted, it could only be possible to interpret possession of a name as a necessary aspect of having the capacity to enter into relations with other States; the crux of this argument is that having a name is a necessary aspect of legal personality.[649] This will now be considered.

6.3.1.2 Name as a Necessary Aspect of Legal Personality

Having legal personality means being treated by the law as possessing the capacity to enter into formal relations with other legal persons and be held

---

States § 201 Comment a (1987). As to the effectiveness of the definition, see John Dugard, *Recognition and the United Nations* 123 (Cambridge University Press 1987) ('Although Rhodesia, Transkei, Boputhatswana, Venda, Ciskei and, possibly, the Turkish Republic of Northern Cyprus met or meet the traditional requirements of statehood expounded in the Montevideo Convention of 1933, it is absurd to contend that any of these entities […] acquired the status of "State".')

[646] Even those who deem it inappropriate to view determinations of statehood as a checklist-based activity nevertheless tend to accept that certain fundamental characteristics 'constitute in legal terms the core of the concept of statehood'. Crawford, 42. Crawford qualifies this by arguing that the strictness of the elucidation of these characteristics in individual cases depends upon context and 'that the exclusive attributes of States do not prescribe specific rights, powers or capacities that all States must, to be States, possess: they are presumptions as to the existence of such rights, powers or capacities, rules that these exist unless otherwise stipulated. This must be so, since the actual powers, rights and obligations of particular States vary considerably. The legal consequences of statehood are thus seen to be—paradoxically—matters of evidence or rather of presumption.'

[647] *Ibid.*, 89-95.

[648] Art. 4(1) of the Charter of the United Nations requires that applicants: (1) be a state; (2) be peace-loving; (3) accept the obligations of the UN Charter; (4) be able and willing to carry out these obligations.

[649] See Igor Janev, *Legal Aspects of the Use of a Provisional Name for Macedonia in the United Nations System*, 93 Am. J. Int'l L. 155, 160 (1999).

accountable for one's actions, as are natural, living persons.[650] States are 'the principal examples of international persons.'[651]

Without a name, it has been argued, it is not possible to be identified and therefore not possible to engage and transact with others:

> From the point of view of legal theory, the inherent right of a state to have a name can be derived from the *necessity* for a juridical personality to have a *legal identity*. In the absence of such an identity, the juridical person (such as a state) could – to a considerable degree (or even completely) – lose its capacity to conclude agreements and independently enter into and conduct its relations with other juridical persons. Therefore, the name of a state appears to be an *essential element of its juridical personality* and its statehood.[652] (emphasis in original)

This use of the term 'legal identity' helps to highlight that beyond their undeniably symbolic function, names primarily play a practical function in serving to identify things and distinguish them from others. Having some means by which to be identified and differentiated is certainly facilitative of engaging in relations with others, and contract law seeks as a general matter that parties be identifiable. A name is one means of distinguishing a party from another, but it is certainly not the only means; reference to geographical location, numbers and symbols could all be used, even if not as easily and memorably as names.[653] Each State could, for example, be assigned a number according to its order of accession to the United Nations, or it could be identified by its longitudinal and latitudinal coordinates or an image of its national flag. It could also be assigned a completely random and meaningless number. An analogy can be drawn with transactions between persons, in which context it is not strictly necessary that a party be referred to by name as opposed to another identifier or that the identifiers used have semantic value or be unique as against all others. It is simply necessary to provide sufficient information to distinguish one from others.[654]

[651] Henkin et al., 241. See also Vattel, I §2 ('[L'Etat] deviant une personne morale, qui a son etendement et sa volonté proper, et qui est capable d'obligations et de droits').

[652] Janev, *Legal Aspects of the Use of a Provisional Name for Macedonia in the United Nations System*, 160; Igor Janev, *Some Remarks of the Legal Status of Macedonia in the United Nations Organization*, 53 Rev. Int'l Aff. 1108 (2002).

[653] Reference can be made here to domain names and the early decision to assign a name in addition to a number to identify hosts in the network. This is discussed in detail in Part I, Chapter 2, section 2.1.3 above.

[654] See Janev, *Some Remarks on Legal Status*, 2 ('In the absence of such an identity, the juridical person, such as a state, could to a large extent (or even completely) loose [sic] its capacity to interact with other such juridical persons (e.g., conclude agreements, etc.) and independently enter into and conduct its external relations. The name of a state is, thus, an essential element of its juridical personality and, consequently, of its statehood.').

Nor is a name required of a legal person in order to express consent to be bound, bearing in mind that the voluntary expression of State consent is the cornerstone of positive international law. Just as illiterate persons can indicate their willingness to be bound to a legal instrument by stamping their fingerprint upon it or inscribing the letter 'X', so too could States communicate consent to be bound in a variety of visible ways. It is the expression of consent that is of consequence, not the form that expression takes or the possibility that others' expression of consent takes a similar form.

Another key aspect of relations between legal persons is participation in dispute resolution. In the international context one can look to the Statute as well as the Rules of the ICJ (hereinafter, the 'ICJ Rules'),[655] the latter of which specify the manner in which proceedings are to be initiated and conducted. Article 38(1) of the ICJ Rules requires in relevant part that an application to commence proceedings before the Court must 'indicate the party making it, the State against which the claim is brought, and the subject of the dispute'. Considering subject matter first, the *Island of Palmas Case (or Miangas)*[656] demonstrates that territorial disputes are resolvable even where the territory the subject of the dispute is referred to by multiple names.

Turning to the naming of State parties, while Article 38(1) of the ICJ Rules does not expressly require that State parties have a name, names are typically used for this purpose. Article 38(1) does not preclude commencing proceedings before the Court against, for example, 'the State whose application for membership in the United Nations was made' on a particular date or in a particular numbered document or 'the fiftieth State to join the United Nations', but these are not things that ordinarily occur in practice. One need look no further than the ICJ's docket for evidence of the practice and consistency of the use of States' names in proceedings.[657] It must be noted, however, that not all States have come before the ICJ and its predecessor, the Permanent Court of International Justice,[658] with a name of their own choosing. An example of this is the ongoing case brought by the

'former Yugoslav Republic of Macedonia' against Greece,[659] a dispute which is comprehensively discussed in the next section of this chapter. The applicant's name in that case is a provisional one recommended by the UN Security Council, and not the name under which that country sought membership in the United Nations. The relevant question at this point in the enquiry is whether, without the provisional name, this country would have been prevented from raising its claim against Greece. In other words, was possession of a name (provisional or permanent) procedurally necessary to commencing the case?

Article 38(1) of the ICJ Rules requires identification of 'the party making' the application. It does not demand a particular format that identification must take. Identification of a party other than by its name would not run counter to ordinary meaning or defeat the object and purpose of the treaty as prescribed by Article 31(1) of the Vienna Convention, but the existence of a consistent subsequent practice 'in the application of'[660] Article 38(1) of the ICJ Rules supports an interpretation of this as calling for use of a State party's name.[661] Because all parties before the Court have had names, it is difficult to envisage what might otherwise occur. Presumably, names are used unless the party in question does not have a name, in which case some other identifier must – from a purely practical standpoint – be an acceptable substitute. Unless otherwise specified in the Rules, standing could not logically be denied of the basis of non-possession of a name if possession of a name is not itself a condition of statehood.

This discussion reveals that a distinction must be made between practical necessity and legal necessity. It is undeniably the case that names facilitate the functions of the UN, and so much so that this could be characterized as necessary (as opposed to simply desirable) from a perspective of operational convenience. Yet from the ease of using names does not automatically follow a legal obligation. Neither can a general sense of legal obligation be easily inferred from existing evidence of practice in the functions of the UN. Rights in country names as such derived from States' possession of legal personality, or indeed derived from any other condition or right of statehood, cannot be based upon practicality or '(mere) comity (*courtoisie, comitas gentium*)'.[662]

Even if it is the case that State parties are required to be referred by name in ICJ proceedings, this does not equate to a strict prohibition against nameless parties' participation in proceedings, nor does it speak to exclusive

rights of States in their names. There is no clear evidence of a felt sense of legal obligation to possess a name in order to participate as a UN member, and such a legal obligation is not expressly articulated in UN instruments. From these things and from the fungible nature of identifiers in legal transactions it can be concluded that possession of legal personality does not require possession of a name, and thus that States' claims to exclusive rights in country names should not be based upon their possession of legal personality.

6.3.2 NAME AS A RIGHT OF STATEHOOD

6.3.2.1 A Right of States to Select a Name

Even if not required in order to achieve the status of statehood, possession of a name may alternatively be a right that accrues as a consequence of having achieved statehood. This reasoning makes a distinction between the capacities that must be possessed in order to achieve the status of statehood from capacities or rights that, once statehood is achieved, are imputed to the State. This bifurcated approach is reflected, for example, in the Restatement (Third) of the Foreign Relations Law of the United States[663] (the 'Restatement'), which sets out the required elements of statehood in § 201 and then separately in § 206 the 'capacities, rights and duties of States' as:

> (a) sovereignty over its territory and general authority over its nationals;
> (b) status as a legal person, with capacity to own, acquire, and transfer property, to make contracts and enter into international agreements, to become a member of international organizations, and to pursue, and be subject to, legal remedies;

---

[663] The Restatements are treatises prepared and published by the American Law Institute on a variety of legal topics. They have the primary aim of providing guidance to judges and lawyers by clarifying and explaining fundamental legal subjects. The Third Restatement of the Foreign Relations Law of the United States captures international law as applicable to the United States, which 'stems largely from customary international law and international agreements to which the United States is a party.' ALI, *Publications Catalog: Restatements of the Law – Foreign Relations Law of the United States*, http://www.ali.org/index.cfm?fuseaction=publications.ppage&node_id=33 (accessed 15 Oct. 2012). The Restatement of the Foreign Relations Law of the United States of course offers the perspective of only the United States as to international law, but the high regard in which its reporters are held mean that it has significance beyond that one country's borders: 'It should and will be consulted by lawyers in all parts of the world. For the lawyer in the United States, it may be a kind of authoritative codification. For lawyers in other countries, it is a valuable source of information about the foreign relations power in the United States and prevailing American views on international law.' Rudolf Bernhardt et al., *Book Review*, 86(3) Am. J. Int'l L. 608, 609 (1992) (reviewing *Restatement (Third) of the Foreign Relations Law of the United States*).

(c) capacity to join with other states to make international law, as customary law or by international agreement.

The wording of § 206 of the Restatement is illustrative of the general absence in international law and scholarship of an express attribution to States of a right to select or use a name. It is necessary, therefore, to consider whether such a right is implied because it is inherently an aspect of sovereignty, bearing in mind that sovereign rights derive from the 'simple fact' of the State's 'existence as a person under international law.'[664]

In determining whether possession and exclusive use of a name is a sovereign right of States, the advice offered by Justice Haynes of the High Court of Australia should be borne in mind: 'Sovereignty is a concept that legal scholars have spent much time examining. It is a word that is sometimes used to refer to very different legal concepts and for that reason alone, care must be taken to identify how it is being used.'[665] Similar concern is expressed, for example, in the comments to § 206 of the Restatement, which specify that its use in this context of States' rights 'implies a state's lawful control over its territory generally to the exclusion of other states, authority to govern in that territory, and authority to apply law there.'[666] The exercise of this control is a core right to inhere in all States.

As to whether there are more specifically articulated rights of States (which could include a right to a name), there are divergent views. Vattel's reliance in the eighteenth century on natural law to explain the origin of States' rights echoes in modern arguments supporting an inherent, 'inalienable right' of States to select and use a name.[667] These arguments can also be linked to a right to culture and heritage, similar to what was termed by an early twentieth century diplomat the right to 'national distinctiveness'.[668] Contrasting with these is the view that 'statehood does not involve any inherent substantive rights' but is 'rather a form of standing'.[669] The works of historical and contemporary scholars who support the notion of States' rights offer little support for a specific right of States to select and use a name. Nevertheless, it is difficult to oppose the idea that a State may choose and use a name by virtue of the exercise of sovereignty and further that when it does so, it is free by virtue of that authority to place restrictions on others'

use of its chosen name within its sovereign territory. The same can be said of national flags and domestic laws prohibiting their desecration.[670]

In other words, sovereignty does not require that a State select and use a name to identify itself, but rather bestows States with the inherent authority to do so if they so choose.[671] In practice, States do select a name. This is evidenced by the United Nations Terminology Bulletin Country Names (from which, not coincidentally, the names of ccTLDs are derived).[672] Though not expressly required under the UN Charter or the Rules of Procedure of the General Assembly to do so, applications for UN membership refer to applicants by name:[673] indeed, compliance with Rule of Procedure 134[674] would be difficult as a practical matter if this were not done. The would be UN member is then acknowledged by that name on acceptance.[675]

---

[670] An interesting comparative analysis of flag desecration laws is provided by Ute Krüdewagen, *Political Symbols in Two Constitutional Orders: The Flag Desecration Decisions of the United States Supreme Court and the German Federal Constitutional Court*, 19(2) Ariz. J. Int'l & Comp. L. 679 (2002).

[671] See Janev, *Legal Aspects of the Use of a Provisional Name for Macedonia in the United Nations System*, 160 ('every state naturally has an inherent right to a name').

[672] UN Terminology Bulletin No. 347/Rev. 1, *United Nations Terminology Bulletin Country Names* (available at http://unstats.un.org/unsd/methods/m49/m49alpha.htm). On the naming of ccTLDs, see Part I, Chapter 2, section 2.4.2 above.

[673] Recent examples include the Application of the Republic of Bosnia and Herzegovina at U.N. Doc. A/46/921 S23971 Annex (19 May 1992) ('On behalf of the Presidency of the Republic of Bosnia and Herzegovina and in conformity with the United Nations Charter, I am submitting the request of the Republic of Bosnia and Herzegovina to be admitted to the United Nations Organization as a full Member State.'); Application of the Democratic Republic of East Timor at U.N. Doc. A/56/953-S/2002/558 Annex (20 May 2002) ('In connection with the application by the Democratic Republic of East Timor for membership in the United Nations, we have the honour, on behalf of the Democratic Republic of East Timor and in our capacities as the President of the Republic and the Prime Minister, to declare that the Democratic Republic of East Timor accepts the obligations contained in the Charter of the United Nations and solemnly undertakes to fulfil them.'); Application of the Republic of Montenegro, U.N. Doc. A/60/890-S/2006/409 Annex (16 Jun. 2006) ('In line with the results of the referendum held in the Republic of Montenegro on 21 May 2006, organized in accordance with Article 60 of the Constitutional Charter of the State Union of Serbia and Montenegro, in my capacity as President of the Republic of Montenegro, I have the honour to request the admission of the Republic of Montenegro to membership in the United Nations.').

[674] Rule 134 of the Rules of Procedure of the General Assembly of the United Nations provides: 'Any State which desires to become a Member of the United Nations shall submit an application to the Secretary-General. Such application shall contain a declaration, made in a formal instrument, that the State in question accepts the obligations contained in the Charter.'

[675] Continuing with the above examples, see the Admission of the Republic of Bosnia and Herzegovina to membership in the United Nations, U.N. Doc. A/Res/46/237 (22 May 1992); Admission of the Democratic Republic of East Timor for admission to membership in the United Nations, U.N. Doc. A/Res/57/3 (2 Oct. 2002); Admission of

Sovereignty gives the State not only the authority to choose a name, but also to limit others' use of the selected name within its territory. There are, for example, reportedly 'thousands' of laws in Canada and 'probably millions' in the United States, that 'bestow upon "public authorities" (which are often not elected bodies but government agencies, state-owned corporations, or non profit organizations) an absolute right to control particular signifiers.'[676] All States have the authority to select names and regulate their domestic use in this way, and have this authority equally, as articulated in the Montevideo Convention at Article 4: 'States are juridically equal, enjoy the same rights, and have equal capacity in their exercise.' Yet equality among States raises certain challenges in this context in that it does not prevent a State from selecting another State's name as its own; indeed, equality suggests that they are each equally entitled to make a particular selection.

The question of States' rights in country names therefore does not end with name selection and use within the sovereign territory. It must further be considered whether States' authority to select a name is somehow limited by the rights of other States and relatedly, whether States have a right to be referred to by their chosen name.

6.3.2.2 A Right of States to Object to Another State's Name

It is entirely possible that one State might choose to be identified in the same or similar way as another. This duplication of identifiers could be said to have a direct impact on the States in question and those transacting with them. While on the one hand it might be said that the only limit to name choice is imagination, in practice, geographic name choices are drawn from a relatively limited field of reference that is, by its very nature, shared with neighbouring States: 'The names of the countries are usually associated with their geographical location and dimension. Geography, at any rate, political geography, as reflected in the boundary making and delimitation of frontiers, territorial, maritime and aerial or atmospheric, changes with time.'[677] As borders fluctuate and time passes, so too are history, culture, language and environmental conditions shared, and it is from this pool of shared experience that geographic names are often drawn. Thus the very same reasoning behind one State's choice of name could also underpin another (particularly neighbouring) State's choice of name.

It is clear why a State would prefer that other States not choose the same name, and this bears out in practice. The relative infrequency with which naming conflicts have arisen is nevertheless surprising when one considers

the Republic of Montenegro for admission to membership in the United Nations, U.N. Doc. A/Res/60/264 (12 Jul. 2006).

[676] Coombe, 135-136.

[677] Sompong Sucharitkul, *The Inter-temporal Character of International and Comparative Law Regarding the Rights of the Indigenous Populations of the World*, 50 Am. J. Comp. L. 3, 10 (2002).

the frequency with which new States have been created and old ones extinguished in modern times: it has been noted that more than 125 new States have been created or reconstituted since the coming into force of the United Nations Charter in 1945, not including name changes.[678] Even in this highly dynamic environment, the only major conflict is the ongoing dispute between Greece and the country provisionally referred to as the 'former Yugoslav Republic of Macedonia', or 'FRYOM'. This dispute will next be critically analysed, but first, some comments must be made about its uniqueness. One conclusion to potentially be drawn from the scarcity of name choice disputes is that there is a customary rule of avoiding selecting a conflicting State name. The existence of such a rule is undermined, however, by the number of States with shared names[679] and the simple fact that in none of these cases has conflict arisen to the level of the Macedonia name dispute. What drives name choice (and, by corollary, avoidance of choosing what others have already chosen) may not be a sense of legal obligation but rather simply an overriding interest in avoiding confusion with other States – a practical preference to not be confused with others. Although (as concluded in the previous section of this chapter) possession of a name is not a necessary aspect of legal personality, it does make transacting with other legal persons more convenient. Where similar names can be differentiated, these can be used without serious issue.

What then would lead a State to select a name insufficiently distinctive from or objectionable to others? One possibility already alluded to in the previous paragraphs is that shared history and experiences could lead multiple States to select the same or similar representations and symbols of their sovereignty. Objection on this basis is defensible in principle only for neighbours or States otherwise currently or historically related. Exemplary of such a situation are neighbours Greece and the FRYOM, one of the new nations borne out of dismembered Yugoslavia.

Responding to Greece's objection to Macedonia's application[680] for UN membership, the UN Security Council recommended that the country be 'provisionally referred to for all purposes within the United Nations as "the Former Yugoslav Republic of Macedonia" pending settlement of the difference that has arisen over the name of the State'.[681] The name is but one

---

[678] See Crawford, 715 and Appendix 1.

[679] Examples of identical or materially similar country names include: (a) the Democratic Republic of the Congo and Republic of the Congo, (b) the Republic of Equatorial Guinea, the Republic of Guinea, the Republic of Guinea-Bissau, and the Independent State of Papua New Guinea, (c) the Democratic People's Republic of Korea and the Republic of Korea, and (d) Niger and Nigeria.

[680] U.N. Doc. A/47/876-S/25147 (1992), discussed in detail in Michael C. Wood, *Participation of Former Yugoslav States in the United Nations and in Multilateral Treaties*, in *Max Planck Y.B. U.N. L.* 236-241 (Armin von Bogdandy ed., Martinus Nijhoff Publishers 1997).

[681] S.C. Res. 817, 7 Apr. 1993, U.N. Doc. S/INF/49 (1993), at para. 2.

aspect of this now long-running dispute; in earlier proceedings before the European Court of Justice (ECJ) Greece complained of large scale efforts to promote 'the idea of a unified Macedonia' through that country's chosen name (Republic of Macedonia), the wording of its constitution, and such activities as 'the circulation of maps, calendars and car stickers' and 'school history books' depicting the FYROM as encompassing Greek territory.[682] Also concerning to Greece was the FRYOM's adoption of the 'Sun of Vergina' on its flag, this emblem having been discovered in excavations on Greek territory.[683] Greece demanded that the FRYOM cease use of its chosen name and symbols and related activities, all of which it interpreted as territorial claims amounting to a threat of war.[684]

The ECJ's decision went not to resolving the name dispute but rather to interim measures requested by the European Commission to suspend economic sanctions imposed by Greece against the FRYOM, which request was ultimately rejected by the Court.[685] A subsequent Interim Accord between Greece and the FRYOM required only undertakings to continue negotiation 'with a view to reaching agreement' on this matter.[686] In 2008, the FRYOM instituted proceedings before the ICJ asserting that the Interim Accord had been breached by Greece by its objection to the FRYOM's application to join the North Atlantic Treaty Organization.[687] In December 2011, the Court found[688] that Greece's objection violated the Interim Accord. The applicant's clear intentions to refer to itself by its constitutionally chosen name within NATO (which ultimately resolved to delay a decision on admission pending resolution of the name dispute) was considered not to render Greece's objection lawful. The Court seized the opportunity to highlight the fact that the dispute has been ongoing for sixteen years, and to remind the parties of their obligation under the Interim Accord to make good faith efforts towards its resolution.

This dispute is a unique constellation[689] and though it remains unresolved, an attempt can be made to draw conclusions from the legality of Greece's demand that its neighbour avoid adopting the name 'Macedonia' in order to broadly articulate limitations upon States' sovereign rights to select a name. Notably, leading scholars have avoided doing so.[690] One highly regarded text characterizes the matter as one of 'political guarantees ensuring that [the FRYOM] had no territorial claims towards a neighbouring Community state'.[691] Another sees the dispute as illustrative of the potential problems inherent in States' sovereign authority, but makes no statement as to the legality of Greece's demands.[692] The problem, it has been said, is that this dispute:

> both clarifies and obscures the status of country names in international law. On the one hand, both the UN's and the EU's reactions suggest that Greece's claim that a country's choice of name could be a form of aggression was not, as an abstract matter, per se unreasonable. Thus, it appears that international law recognizes the theoretical possibility that a country's choice of name might amount to hostile propaganda against a neighbour, such as in 'the use of a denomination which implies territorial claims.' In so doing, it suggests that the presumed norm that countries control their names has been weakened; conversely, it suggests that the idea that one country has rights regarding another country's use of names might theoretically have more merit than many had previously suspected.[693]

These comments attribute to States a right to select a name, but posit that this right is not absolute. This is consistent with the principle of sovereignty, which gives the State supreme but not absolute authority within its territory. Interference in domestic matters is permitted by Article 2(7) of the United Nations Charter, as well as by customary international law. Further, the Friendly Relations Declaration requires that 'every State shall refrain from any action aimed at the partial or total disruption of the national unity or

---

[693] Froomkin, *When We Say US™, We Mean It!*, 856, quoting the European Commission's 16 Dec. 1991 Guidelines on the Recognition of New States in Eastern Europe and in the Soviet Union, as reprinted in Danilo Türk, *Declaration on Yugoslavia*, 4(1) Eur. J. Int'l L. 73, 73 (1993).

territorial integrity of any other State or country.'[694] If the right of a State to select and use a name is based on sovereignty, then this limitation must correspondingly apply, meaning that one State's name choice cannot constitute an unlawful interference with the sovereignty of another State. Such an interpretation is supported by the general principle of abuse of rights, which serves to limit a State's choice of name to the extent that the choice had the effect of 'inflict[ing] upon another State an injury which cannot be justified by a legitimate consideration of its own advantage.'[695] A link to the general principle of good faith is equally clear given that '[a] state that acts in good faith is unlikely to abuse its rights.'[696] A related principle of 'good neighbourliness' was raised by Judge ad hoc Roucounas and suggested in his dissenting opinion to have been breached by the FRYOM.[697]

The determination of whether one State's choice of name constitutes an unlawful interference with the sovereignty of another State or a breach of the principles of good faith, abuse of rights or good neighbourliness depends entirely on the facts in question.[698] As a result, it is impossible to develop universal rules around the selection of country names. In the Macedonia dispute, the European Commission Declaration on Yugoslavia required each former Yugoslav republic to declare that it had agreed, *inter alia*, 'to adopt constitutional and political guarantees "ensuring that it has no territorial claims" against a neighboring E.C. country and that it would not use a name (e.g., Macedonia) that implied such claims and would conduct "no hostile propaganda activities" against a neighbouring E.C. country.'[699] This is likely as precise as rules could be articulated. This difficulty, along with the infrequency with which naming disputes have arisen,[700] may help to explain

[699] European Community, *Declaration on Yugoslavia and on the Guidelines on the Recognition of New States (Extraordinary European Political Cooperation Ministerial Meeting, Brussels, 16 Dec. 1991)*, 31 I.L.M. 1485 (1992).

[700] There is another reported instance of a naming dispute in recent history, in which proposed changes to the name of the country of Uzbekistan were rejected on the basis of their being interpreted as territorial claims. See Crawford, 68 n. 141, citing Karen Dawisha & Bruce Parrott, *Russia and the new states of Eurasia: the politics of upheaval* 85 (Cambridge University Press 1995).

the non-existence of expressly acknowledged, detailed rules of international law on name selection.

There is no denying the potential for the choice of name by a State and even the purely internal, domestic use of the name to provoke (intentionally or unintentionally) changes in the world order. That part of the population in State A might be motivated by State B's choice of name to exercise a right of self-determination is a realistic possibility. Yet self-determination in its contemporary form is a right of peoples to be involved in a meaningful way in the constitution and maintenance of the systems that govern their lives.[701] The possibility that, as a right of peoples, self-determination encompasses a right to self- or group-identify using geographic names is explored in Chapter 9, below, along with other potential human rights bases of rights in geographic names.

6.3.2.3 A Right of States to be Referred by Their Chosen Name

A separate but related question is whether States have a right to be referred to by their chosen name. As discussed above, there is a strong practical and diplomatic incentive for States to have a name, but this does not necessarily speak to the existence of a legal obligation to have a name either generally or for a particular purpose. It has been noted earlier in this chapter that there is a practice of using names in the functions of the UN, though there are no provisions in the UN Charter that require members to have a name. The use of names is directed in certain UN procedures, for example in General Assembly plenary voting.[702] Yet use of *a* name is one matter, while use of a State's *chosen name* is another; the issue here is specifically whether, to give one specific example, the United States of America is obliged to use the name 'Russian Federation' when referring to that country within or even beyond the UN context.

For the most part, the practice of using names in the UN is axiomatic. Names are ordinarily used – and without any special emphasis on their being used – in accordance with the wishes of the named UN member. One notable instance of special emphasis is the General Assembly's pronouncement 'that, in accordance with the desires of its people, South West Africa shall henceforth be known as "Namibia".'[703] Applications are ordinarily accepted using standardized language,[704] and the new member is then referred to by

---

[702] General Assembly of the United Nations, *Rules of Procedure and Comments*, Rule 87.

[703] *Question of South West Africa*, G.A. Res. 2372(XXII), U.N. Doc. A/Res/2372(XXII) (12 Jun. 1968).

[704] General Assembly resolutions on administration are worded as follows:
The General Assembly,
Having received the recommendation of the Security Council of [date] that [State name] should be admitted to membership in the United Nations,

other members accordingly. The case of the FRYOM is in this context again a unique constellation: the UN Security Council avoided making use of that country's chosen name when resolving on its membership application, instead recommending admission of the 'State whose application is contained in document S/25147', and then recommending the use of a provisional name.[705] The General Assembly then admitted the so-called 'former Yugoslav Republic of Macedonia' using the standardized language just noted.

The Russian Federation provides an example of a different situation, that of an existing UN member changing its name. Leaving aside questions of continuation of membership[706] which lie outside the scope of this study, the Russian Federation's assumption of the Union of Soviet Socialist Republics' seat at the United Nations was characterized by then-President Yeltsin as a simple name change. He simply requested 'that the name "Russian Federation" should be used in the United Nations in place of the name "the Union of Soviet Socialist Republics".'[707] There is no record of objection to this request,[708] and the name 'Russian Federation' has accordingly since been used in the UN General Assembly and Security Council.[709]

Looking beyond these forums to the ICJ, it has been noted in the previous section of this chapter in the context of legal personality that there is uniform practice in referring to parties by name in ICJ disputes, and that this practice is supported at least to some extent by the wording of Article 38(1) of the ICJ Rules. That Article does not expressly require that an official name be used, but presumably the name of a UN member as per its admission is the name that will be used. The 'Macedonia' case is illustrative: it was docketed as '*the former Yugoslav Republic of Macedonia v. Greece*'. That case nevertheless offers no particular support to the existence of a legal obligation to refer to parties by their chosen name except insofar as it evidences a sense of felt obligation on the FRYOM's part to refer to itself by its provisional name as recommended by the UN Security Council. More assistance would have been offered were the roles of the parties in that case reversed (in other words, it would be interesting to see whether Greece would identify the respondent as something other than the 'former Yugoslav Republic of Macedonia'). Greece's counter-memorial and rejoinder did refer

to the 'former Yugoslav Republic of Macedonia',[710] which is procedurally sensible, given that Greece was the respondent, but not expressly required by Article 49 of the ICJ Rules. It is also interesting to note that the respondent in the case against Greece before the ECJ was not identified as 'Greece' but rather as the 'Hellenic Republic' (the name under which it entered the Treaty Establishing the European Community).[711]

Of these instances just discussed, the language that is most strongly supportive of a right of members to be referred to by their chosen name is that of the UN Security Council in directing other members to refer to the 'former Yugoslav Republic of Macedonia' and do so 'for all purposes within the United Nations'.[712] This, ironically, is not a case of a State being referred to by its chosen name, but rather a provisional name to be used pending a dispute involving the name. Even if this or perhaps the Namibia case or standard practice offers a basis upon which a right of States to be referred to by their chosen name can be asserted, this is an extremely limited right which would prevent only alternative name use within and for UN purposes. This would not prevent the use of alternative names (e.g., a reference to the United Kingdom of Great Britain and Northern Ireland by the slang name 'Old Blighty',[713] or even a reference to that country as 'Britain' or 'the UK') by a member of the GAC in ICANN discourse, a government official from commenting to the press, or even in international relations outside of the UN context, while acknowledging the potential detriment such actions might in some instances have in terms of good international relations. Much of State conduct around naming appears to have as its basis not clearly identifiable legal rules but rather good international relations with the aim of avoidance and resolution of disputes through good faith negotiations. The United Nations Security Council has encouraged this from Greece and the FRYOM,[714] though as-yet those States have been unable to achieve resolution of their dispute.

6.4 CONCLUSIONS ON RIGHTS IN GEOGRAPHIC NAMES AS SUCH

Two related bases have been explored in this chapter as potential sources of rights in geographic names under international law: Article 6*ter* of the Paris Convention for the Protection of Industrial Property and the principle of sovereignty. First, Article 6*ter* requires that States prohibit the registrability as trademarks of State flags and other emblems, as well as the emblems of IGOs. In this chapter, the interpretation of Article 6*ter* (1)(a) by WIPO has been confirmed with reference to recent survey evidence and as-yet unsuccessful attempts to amend that Article. The results of the questionnaire drafted by the WIPO Standing Committee indicate that many States are reserving country names from trademark registration even though they are not obliged under Article 6*ter* to do so. An isolated instance of the use of the notification procedure specified in Article 6*ter* (3) by Iceland has also been highlighted, but other actions in this space suggest that this is a unique interpretation of Article 6*ter* which does not constitute evidence of a custom of reserving rights in country names.

From discussions around proposed amendments to widen the scope of Article 6*ter* to include country names can be extrapolated the conclusion that there currently is no international law recognizing rights in country names as such that could be called upon to justify their exclusive use by States and the prevention of their use by others. The analysis documented in this chapter supports that view. It is only logical to reach the same conclusion as respects sub-national names. That said, Article 6*ter* does not prevent States from reserving rights in geographic names as such; it simply does not require that they do so. The protection offered by ICANN through the *gTLD Applicant Guidebook* is therefore not inconsistent with Article 6*ter*.

The second basis of rights evaluated in this chapter is the foundational international law principle of sovereignty. Governments have looked to the principle of sovereignty in order to justify what they view as an inherent right to prevent others' use of 'their' names. While there may be a growing body of examples of conflict over private parties' use of geographical names,[715] there are surprisingly few examples of name conflicts between States. As a result, there are very few constellations from which support of States' rights in country names can be drawn. In this chapter it has been considered that there are actually three rights potentially encompassed in a right of States to country names: a right to select a name, a right to object to another State's name, and a right to be referred to by a chosen name. In relation to none of these is there an express right contained in any international convention, though the ICJ Rules do refer to the identification of party names, while the UN General Assembly Rules refer to plenary voting according to name. At

---

[715] For examples, see discussion of UDRP cases involving geographic names at Part II, Chapter 3, section 3.3.1.2 above.

the same time, in relation to none of these is there an express denial of a corresponding right in any international convention.

From the as-yet unresolved dispute between Greece and the FRYOM over the name 'Macedonia' can be extracted certain conclusions about States' rights to select and object to a name. This dispute is the manifestation of a rational tendency to select a name that happens to be based upon an identity or history shared with neighbouring States. The escalation of this dispute into an international legal dispute is, however, unique. From it and other instances of name similarity not escalated into international disputes it can be deduced that there is no rule of international law preventing one State from selecting the same or similar name as another State's. This dispute suggests that a State's right to select a name is not absolute, but rather is limited by obligations not to encroach upon another State's sovereignty and to act in good faith. There are no clear rules to determine when this occurs, nor is it practicable to attempt to develop rules beyond the general proscription imposed upon the FRYOM not to interfere with the territorial integrity of another State. Nor for the same reasons is it practicable to develop rules around objections to States' choice of name. These situations can only be resolved on a case-by-case basis, having due regard to the facts at issue.

As to the implications of these conclusions in the context of domain names, conflicting applications for new geographic gTLDs are inevitable: there are already in existence several constellations of similar country names which, although they have not previously been disputed in the offline context, could be the subject of a future challenge in the online context due to the technical requirement of absolute name uniqueness and the policy decision to prevent confusingly similar TLD strings. Although conflicting applications for a .macedonia new gTLD were not made in the initial round of top-level expansion under the New gTLD Program, these remain a real possibility in future expansion rounds if the prohibition on applications for country and territory names is lifted. It would be inappropriate to develop a single rule of priority on the basis of sovereignty, simply because sovereignty does not support such a rule. On this basis, as a matter of policy and to preserve the stability of the internet and its DNS, ICANN should consider refusing the creation of any geographic new gTLD for which competing applications have been submitted.

Finally, to the extent that a right to be referred to by one's chosen name can be derived from practice within the UN and before the ICJ, these are limited to those specific contexts and will not serve to prevent failures to properly identify a State in other contexts such as the DNS. Further, the recognition of a right in that limited context is not alone determinative of the exclusivity of a State's rights in a particular name in that particular context, or certainly in any other context.

Summary of Conclusions

The internet makes information easily, cheaply and instantaneously accessible without regard to borders, language or cultural differences. As a result, there is wider use and a correspondingly higher likelihood that others will have exposure to uses of geographic names. This is precisely the situation that ICANN attempts to manage in the internet Domain Name System through the policy on geographic names documented in the *gTLD Applicant Guidebook*. The approach taken is to bar applications constituted of country and territory names and to require the authorization of relevant governments to applications for new gTLDs constituted of many other types of geographic names. This approach is based on untested assumptions about governments' rights in geographic names.

This study has been undertaken to remove the need for policy-making on the basis of assumptions about States' rights in geographic names. The legal bases of rights examined in this study fall into two broad, overlapping categories: bases that recognize rights of States to geographic names and bases that recognize rights of non-State others to geographic names. Importantly, none of the bases within the first category prove or disprove the exclusivity of States' rights. Within the second category, certain bases impliedly disprove the exclusivity of States' rights, while others neither prove nor disprove the exclusivity of States' rights. As to each, the following findings have been made and conclusions reached:

(1) Within the first category of bases recognizing rights of States to geographic names fall trademarks, the principle of sovereignty, geographical indications, the right to prevent confusion with a competitor and the protection against dilution afforded well-known trademarks. While rights are available to States under each of these bases, none proves their exclusivity. In particular, while the principle of sovereignty recognizes States' rights in geographic names,

it notably disproves exclusivity as against other States while offering scant guidance as to how disputes between States can be resolved. Further, the recognition of States' rights in geographic names on the basis of sovereignty does not speak to the exclusivity of States rights as against non-State others. None of the other bases of legal rights falling within this category expressly demand the recognition of States' rights in geographic names. Rather, they all offer the possibility of recognition provided that certain criteria are met or factual circumstances are established.

(2) Within the second category of bases recognizing rights of others to geographic names and therefore weighing against a finding of exclusivity of States' rights fall trademarks, geographical indications, and human rights to expression and culture. The human rights to expression and culture are expressly unavailable to States, with the result that States' rights in geographic names cannot be considered exclusive. The fact that many countries do not prohibit the use or registration of geographic terms as a trademark and the recognition (albeit limited) afforded geographical indications under international law further support a finding that States' rights in geographic names are not exclusive. With the exception of geographical indications, none of these bases of rights expressly cover geographic names, but all offer the possibility of recognition provided that certain criteria are met or factual circumstances are established.

(3) Also falling within the second category of bases recognizing rights of others to geographic names are bases that neither specifically prove nor disprove the exclusivity of States' rights because they do not recognize rights in geographic names as such, but rather only place limitations upon uses of or actions affecting geographic names. Into this grouping fall the right to prevent confusion with a competitor and the protection against dilution afforded well-known marks, as well as the human rights to nationality, self-determination, language and property.

(4) Not falling within either of these two broad categories because of their current lack of recognition at the international level are State personality rights and cultural property rights.

(5) The application of these findings leads to the conclusion that ICANN's policy of recognizing exclusive rights of States in geographic names fails to acknowledge the recognition under international law of non-State others' rights in geographic names. Such an acknowledgement is called for by the adoption by ICANN's Board of Directors of the recommendation of the Generic Names Supporting Organization, an internal ICANN advisory body, to ensure that new gTLDs added to the DNS do not 'infringe the existing legal rights of others that are recognized or enforceable

under generally accepted and internationally recognized principles of law'.[1132]

(6) The application of these findings additionally leads to the conclusion that although rights of others in geographic names are recognized under international law, in particular through the human rights of expression and culture, those bases of recognition do not require the recognition in DNS policy of private property rights in geographic names as such. This being the case, it is appropriate that geographic names as such are not mandatorily actionable under new gTLD rights protection measures (the Legal Rights Objection, the Trademark Claims service and the Uniform Rapid Suspension procedure).

(7) It has also been shown that geographic names receive the greatest protection under international law and in DNS policy when they satisfy the criteria for registration as trademarks. The conclusions reached in this study lead to the prediction that the New gTLD Program will be the catalyst for significant changes in domestic trademark laws, with Switzerland as a model. These changes will have the effect of bringing geographic names within the scope of trademark subject matter, which will have the concomitant effect of bringing geographic names within the scope of legal rights recognized and protected in DNS policy.

This book began by quoting the words of Timothy Denton, a lawyer and consultant specializing in internet domain name policy. His words appear at the start of this work as a prompt not to simply accept assumptions about legal rights in geographic names, but they could just as logically be placed here as an overarching summary of the delicate interplay between legal rights and internet DNS policy at this critical juncture in the system's development. Lawyers and technologists may debate the theoretical need to do something about the inconsistencies identified in this book between geographic names' treatment in DNS policy and international law, but in practice it is impossible to divorce the DNS from the 'real'[1133] (or 'offline') world in which it operates. Contemporary society may be in a transition period between the supremacy of law and the supremacy of technology, but for now the two are inextricably intertwined. Questions about technology cannot be answered without an understanding of the impact of law, and vice versa. States' reactions to proposed new internet top-level domains may result in changes to the recognition of rights under international law in geographic names through custom or general principles of international law. ICANN's *gTLD Applicant Guidebook* may at some point in the future be considered evidence

[1133] WIPO, *WIPO I Report*, para. 22.

of the crystallization of recognition in international law of rights in geographic names. The two processes – development of domain name policy and development of international law – are interrelated, and are likely to remain so for the foreseeable future.

From Denton's words can be distilled a need for dialogue within the internet community to ensure that the conflicts that arise along the path of DNS development do not result in its stagnation. In a similar vein it was once remarked in the ISOC: 'If the Internet stumbles, it will not be because we lack for technology, vision, or motivation. It will be because we cannot set a direction and march collectively into the future.'[1134] This study has been undertaken with the intention of informing policy development in relation to geographic names and their treatment in DNS, with the hope that the conclusions that have been reached will facilitate future progress rather than create obstacles to the internet's continued development.

NEW GTLD REVEAL DAY - APPLIED-FOR STRINGS

New Top-Level Domain Name Applications Revealed

Historic Milestone for the Internet's Domain Name System

The Internet Corporation for Assigned Names and Numbers (ICANN) today revealed who has applied for which generic Top-Level Domain (gTLD) names in what is expected to become the largest expansion in the history of the Internet's Domain Name System.

A total of 1,930 new gTLD applications were received during the application period of the new generic Top-Level Domain program.

"We are standing at the cusp of a new era of online innovation," said Rod Beckstrom, President and Chief Executive Officer. "That means new businesses, new marketing tools, new jobs, and new ways to link communities and share information."

Beckstrom made the comments during a London news conference, where it was revealed which organizations have applied for which specific domain names.

Senior Vice President Kurt Pritz noted that the applications will now be subject to a public comment and objection period, and a rigorous, objective and independent evaluation system.

"A 60-day comment period begins today, allowing anyone in the world to submit comments on any application, and the evaluation panels will consider them," said Pritz. "If anyone objects to an application and believes they have the grounds to do so, they can file a formal objection to the application. And they will have seven months to do that."

Of the 1,930 applications received:

- 66 are geographic name applications.
- 116 applications are for Internationalized Domain Names, or IDNs, for strings in scripts such as Arabic, Chinese, and Cyrillic.

Applications were received from 60 countries and territories, broken down by ICANN's geographic regions;

- 911 from North America.
- 675 from Europe.
- 303 are from Asia-Pacific.
- 24 from Latin America and the Caribbean.
- 17 from Africa.

Beckstrom noted that the applications from Latin America/Caribbean and Africa would be the first gTLDs ever from those regions.

He also pointed out that the new gTLD program is the result of seven years of international consultation and debate among a wide variety of Internet stakeholders.

BYLAWS FOR INTERNET CORPORATION FOR ASSIGNED NAMES AND NUMBERS | A California Nonprofit Public-Benefit Corporation

As amended 11 February 2016

TABLE OF CONTENTS

feedback

ARTICLE I: MISSION AND CORE VALUES

Section 1. MISSION

The mission of The Internet Corporation for Assigned Names and Numbers ("ICANN") is to coordinate, at the overall level, the global Internet's systems of unique identifiers, and in particular to ensure the stable and secure operation of the Internet's unique identifier systems. In particular, ICANN:

1. Coordinates the allocation and assignment of the three sets of unique identifiers for the Internet, which are
    a. Domain names (forming a system referred to as "DNS");
    b. Internet protocol ("IP") addresses and autonomous system ("AS") numbers; and
    c. Protocol port and parameter numbers.
2. Coordinates the operation and evolution of the DNS root name server system.
3. Coordinates policy development reasonably and appropriately related to these technical functions.

Section 2. CORE VALUES

In performing its mission, the following core values should guide the decisions and actions of ICANN:

1. Preserving and enhancing the operational stability, reliability, security, and global interoperability of the Internet.

2. Respecting the creativity, innovation, and flow of information made possible by the Internet by limiting ICANN's activities to those matters within ICANN's mission requiring or significantly benefiting from global coordination.

3. To the extent feasible and appropriate, delegating coordination functions to or recognizing the policy role of other responsible entities that reflect the interests of affected parties.

4. Seeking and supporting broad, informed participation reflecting the functional, geographic, and cultural diversity of the Internet at all levels of policy development and decision-making.

5. Where feasible and appropriate, depending on market mechanisms to promote and sustain a competitive environment.

6. Introducing and promoting competition in the registration of domain names where practicable and beneficial in the public interest.

7. Employing open and transparent policy development mechanisms that (i) promote well-informed decisions based on expert advice, and (ii) ensure that those entities most affected can assist in the policy development process.

8. Making decisions by applying documented policies neutrally and objectively, with integrity and fairness.

9. Acting with a speed that is responsive to the needs of the Internet while, as part of the decision-making process, obtaining informed input from those entities most affected.

10. Remaining accountable to the Internet community through mechanisms that enhance ICANN's effectiveness.

11. While remaining rooted in the private sector, recognizing that governments and public authorities are responsible for public policy and duly taking into account governments' or public authorities' recommendations.

These core values are deliberately expressed in very general terms, so that they may provide useful and relevant guidance in the broadest possible range of circumstances. Because they are not narrowly prescriptive, the specific way in which they apply, individually and collectively, to each new situation will necessarily depend on many factors that cannot be fully anticipated or enumerated; and because they are statements of principle rather than practice, situations will inevitably arise in which perfect fidelity to all eleven core values simultaneously is not possible. Any ICANN body making a recommendation or decision shall exercise its judgment to determine which core values are most relevant and how they apply to the specific circumstances of the case at hand, and to determine, if necessary, an appropriate and defensible balance among competing values.

ARTICLE II: POWERS

Section 1. GENERAL POWERS

Except as otherwise provided in the Articles of Incorporation or these Bylaws, the powers of ICANN shall be exercised by, and its property controlled and its business and affairs conducted by or under the direction of, the Board. With respect to any matters that would fall within the provisions of Article III, Section 6, the Board may act only by a majority vote of all members of the Board. In all other matters, except as otherwise provided in these Bylaws or by law, the Board may act by majority vote of those present at any annual, regular, or special meeting of the Board. Any references in these Bylaws to a vote of the Board shall mean the vote of only those members present at the meeting where a quorum is present unless otherwise specifically provided in these Bylaws by reference to "all of the members of the Board."

Section 2. RESTRICTIONS

ICANN shall not act as a Domain Name System Registry or Registrar or Internet Protocol Address Registry in competition with entities affected by the policies of ICANN. Nothing in this Section is intended to preventICANN from taking whatever steps are necessary to protect the operational stability of the Internet in the event of financial failure of a

Registry or Registrar or other emergency.

Section 3. NON-DISCRIMINATORY TREATMENT

ICANN shall not apply its standards, policies, procedures, or practices inequitably or single out any particular party for disparate treatment unless justified by substantial and reasonable cause, such as the promotion of effective competition.

ARTICLE III: TRANSPARENCY

Section 1. PURPOSE

ICANN and its constituent bodies shall operate to the maximum extent feasible in an open and transparent manner and consistent with procedures designed to ensure fairness.

Section 2. WEBSITE

ICANN shall maintain a publicly-accessible Internet World Wide Web site (the "Website"), which may include, among other things, (i) a calendar of scheduled meetings of the Board, Supporting Organizations, and Advisory Committees; (ii) a docket of all pending policy development matters, including their schedule and current status; (iii) specific meeting notices and agendas as described below; (iv) information on ICANN's budget, annual audit, financial contributors and the amount of their contributions, and related matters; (v) information about the availability of accountability mechanisms, including reconsideration, independent review, and Ombudsman activities, as well as information about the outcome of specific requests and complaints invoking these mechanisms; (vi) announcements about ICANN activities of interest to significant segments of the ICANN community; (vii) comments received from the community on policies being developed and other matters; (viii) information aboutICANN's physical meetings and public forums; and (ix) other information of interest to the ICANN community.

Section 3. MANAGER OF PUBLIC PARTICIPATION

There shall be a staff position designated as Manager of Public

Participation, or such other title as shall be determined by the President, that shall be responsible, under the direction of the President, for coordinating the various aspects of public participation in ICANN, including the Website and various other means of communicating with and receiving input from the general community of Internet users.

Section 4. MEETING NOTICES AND AGENDAS

At least seven days in advance of each Board meeting (or if not practicable, as far in advance as is practicable), a notice of such meeting and, to the extent known, an agenda for the meeting shall be posted.

Section 5. MINUTES AND PRELIMINARY REPORTS

1. All minutes of meetings of the Board and Supporting Organizations(and any councils thereof) shall be approved promptly by the originating body and provided to the ICANN Secretary for posting on the Website.
2. No later than 11:59 p.m. on the second business days after the conclusion of each meeting (as calculated by local time at the location of ICANN's principal office), any resolutions passed by the Board of Directors at that meeting shall be made publicly available on the Website; provided, however, that any actions relating to personnel or employment matters, legal matters (to the extent the Board determines it is necessary or appropriate to protect the interests of ICANN), matters that ICANN is prohibited by law or contract from disclosing publicly, and other matters that the Board determines, by a three-quarters (3/4) vote of Directors present at the meeting and voting, are not appropriate for public distribution, shall not be included in the preliminary report made publicly available. The Secretary shall send notice to the Board of Directors and the Chairs of the Supporting Organizations (as set forth in Articles VIII - X of these Bylaws) and Advisory Committees (as set forth in Article XI of these Bylaws) informing them that the resolutions have been posted.
3. No later than 11:59 p.m. on the seventh business days after the conclusion of each meeting (as calculated by local time at the

location of ICANN's principal office), any actions taken by the Board shall be made publicly available in a preliminary report on the Website, subject to the limitations on disclosure set forth in Section 5.2 above. For any matters that the Board determines not to disclose, the Board shall describe in general terms in the relevant preliminary report the reason for such nondisclosure.

4. No later than the day after the date on which they are formally approved by the Board (or, if such day is not a business day, as calculated by local time at the location of ICANN's principal office, then the next immediately following business day), the minutes shall be made publicly available on the Website; provided, however, that any minutes relating to personnel or employment matters, legal matters (to the extent the Board determines it is necessary or appropriate to protect the interests of ICANN), matters that ICANN is prohibited by law or contract from disclosing publicly, and other matters that the Board determines, by a three-quarters (3/4) vote of Directors present at the meeting and voting, are not appropriate for public distribution, shall not be included in the minutes made publicly available. For any matters that the Board determines not to disclose, the Board shall describe in general terms in the relevant minutes the reason for such nondisclosure.

Section 6. NOTICE AND COMMENT ON POLICY ACTIONS

1. With respect to any policies that are being considered by the Board for adoption that substantially affect the operation of the Internet or third parties, including the imposition of any fees or charges,ICANN shall:
    a. provide public notice on the Website explaining what policies are being considered for adoption and why, at least twenty-one days (and if practical, earlier) prior to any action by the Board;

    b. provide a reasonable opportunity for parties to comment on the adoption of the proposed policies, to see the comments of others, and to reply to those comments, prior to any action by the Board; and

   c. in those cases where the policy action affects public policy concerns, to request the opinion of the GovernmentalAdvisory Committee and take duly into account any advice timely presented by the Governmental Advisory Committeeon its own initiative or at the Board's request.

2. Where both practically feasible and consistent with the relevant policy development process, an in-person public forum shall also be held for discussion of any proposed policies as described inSection 6(1)(b) of this Article, prior to any final Board action.
3. After taking action on any policy subject to this Section, the Board shall publish in the meeting minutes the reasons for any action taken, the vote of each Director voting on the action, and the separate statement of any Director desiring publication of such a statement.

Section 7. TRANSLATION OF DOCUMENTS

As appropriate and to the extent provided in the ICANN budget, ICANNshall facilitate the translation of final published documents into various appropriate languages.

ARTICLE IV: ACCOUNTABILITY AND REVIEW

Section 1. PURPOSE

In carrying out its mission as set out in these Bylaws, ICANN should be accountable to the community for operating in a manner that is consistent with these Bylaws, and with due regard for the core values set forth inArticle I of these Bylaws. The provisions of this Article, creating processes for reconsideration and independent review of ICANN actions and periodic review of ICANN's structure and procedures, are intended to reinforce the various accountability mechanisms otherwise set forth in these Bylaws, including the transparency provisions of Article III and the Board and other selection mechanisms set forth throughout these Bylaws.

Section 2. RECONSIDERATION

1. ICANN shall have in place a process by which any person or entity materially affected by an action of ICANN may request review or reconsideration of that action by the Board.

2. Any person or entity may submit a request for reconsideration or review of an ICANN action or inaction ("Reconsideration Request") to the extent that he, she, or it have been adversely affected by:
    a. one or more staff actions or inactions that contradict established ICANN policy(ies); or

    b. one or more actions or inactions of the ICANN Board that have been taken or refused to be taken without consideration of material information, except where the party submitting the request could have submitted, but did not submit, the information for the Board's consideration at the time of action or refusal to act; or

    c. one or more actions or inactions of the ICANN Board that are taken as a result of the Board's reliance on false or inaccurate material information.

3. The Board has designated the Board Governance Committee to review and consider any such Reconsideration Requests. The Board Governance Committee shall have the authority to:
    a. evaluate requests for review or reconsideration;

    b. summarily dismiss insufficient requests;

    c. evaluate requests for urgent consideration;

    d. conduct whatever factual investigation is deemed appropriate;

    e. request additional written submissions from the affected party, or from other parties;

    f. make a final determination on Reconsideration Requests regarding staff action or inaction, without reference to the Board of Directors; and

    g. make a recommendation to the Board of Directors on the merits of the request, as necessary.

4. ICANN shall absorb the normal administrative costs of the reconsideration process. It reserves the right to recover from a party requesting review or reconsideration any costs that are deemed to be extraordinary in nature. When such extraordinary costs can be foreseen, that fact and the reasons why such costs are necessary and appropriate to evaluating the Reconsideration Request shall be communicated to the party seeking reconsideration, who shall then have the option of withdrawing the request or agreeing to bear such costs.

5. All Reconsideration Requests must be submitted to an e-mail address designated by the Board Governance Committee within fifteen days after:
   a. for requests challenging Board actions, the date on which information about the challenged Board action is first published in a resolution, unless the posting of the resolution is not accompanied by a rationale. In that instance, the request must be submitted within 15 days from the initial posting of the rationale; or

   b. for requests challenging staff actions, the date on which the party submitting the request became aware of, or reasonably should have become aware of, the challenged staff action; or

   c. for requests challenging either Board or staff inaction, the date on which the affected person reasonably concluded, or reasonably should have concluded, that action would not be taken in a timely manner.

6. To properly initiate a Reconsideration process, all requestors must review and follow the Reconsideration Request form posted on theICANN website. athttp://www.icann.org/en/groups/board/governance/reconsideration. Requestors must also acknowledge and agree to the terms and conditions set forth in the form when filing.

7. Requestors shall not provide more than 25 pages (double-spaced,

12-point font) of argument in support of a Reconsideration Request. Requestors may submit all documentary evidence necessary to demonstrate why the action or inaction should be reconsidered, without limitation.

8. The Board Governance Committee shall have authority to consider Reconsideration Requests from different parties in the same proceeding so long as: (i) the requests involve the same general action or inaction; and (ii) the parties submitting Reconsideration Requests are similarly affected by such action or inaction. In addition, consolidated filings may be appropriate if the alleged causal connection and the resulting harm is the same for all of the requestors. Every requestor must be able to demonstrate that it has been materially harmed and adversely impacted by the action or inaction giving rise to the request.

9. The Board Governance Committee shall review each Reconsideration Request upon its receipt to determine if it is sufficiently stated. The Board Governance Committee may summarily dismiss a Reconsideration Request if: (i) the requestor fails to meet the requirements for bringing a Reconsideration Request; (ii) it is frivolous, querulous or vexatious; or (iii) the requestor had notice and opportunity to, but did not, participate in the public comment period relating to the contested action, if applicable. The Board Governance Committee's summary dismissal of a Reconsideration Request shall be posted on the Website.

10. For all Reconsideration Requests that are not summarily dismissed, the Board Governance Committee shall promptly proceed to review and consideration.

11. The Board Governance Committee may ask the ICANN staff for its views on the matter, which comments shall be made publicly available on the Website.

12. The Board Governance Committee may request additional information or clarifications from the requestor, and may elect to conduct a meeting with the requestor by telephone, email or, if acceptable to the party requesting reconsideration, in person. A

requestor may ask for an opportunity to be heard; the Board Governance Committee's decision on any such request is final. To the extent any information gathered in such a meeting is relevant to any recommendation by the Board Governance Committee, it shall so state in its recommendation.

13. The Board Governance Committee may also request information relevant to the request from third parties. To the extent any information gathered is relevant to any recommendation by the Board Governance Committee, it shall so state in its recommendation. Any information collected from third parties shall be provided to the requestor.

14. The Board Governance Committee shall act on a Reconsideration Request on the basis of the public written record, including information submitted by the party seeking reconsideration or review, by the ICANN staff, and by any third party.

15. For all Reconsideration Requests brought regarding staff action or inaction, the Board Governance Committee shall be delegated the authority by the Board of Directors to make a final determination and recommendation on the matter. Board consideration of the recommendation is not required. As the Board Governance Committee deems necessary, it may make recommendation to the Board for consideration and action. The Board Governance Committee's determination on staff action or inaction shall be posted on the Website. The Board Governance Committee's determination is final and establishes precedential value.

16. The Board Governance Committee shall make a final determination or a recommendation to the Board with respect to a Reconsideration Request within thirty days following its receipt of the request, unless impractical, in which case it shall report to the Board the circumstances that prevented it from making a final recommendation and its best estimate of the time required to produce such a final determination or recommendation. The final recommendation shall be posted on ICANN's website.

17. The Board shall not be bound to follow the recommendations of the Board Governance Committee. The final decision of the Board shall

be made public as part of the preliminary report and minutes of the Board meeting at which action is taken. The Board shall issue its decision on the recommendation of the Board Governance Committee within 60 days of receipt of the Reconsideration Request or as soon thereafter as feasible. Any circumstances that delay the Board from acting within this timeframe must be identified and posted on ICANN's website. The Board's decision on the recommendation is final.

18. If the requestor believes that the Board action or inaction posed for Reconsideration is so urgent that the timing requirements of the Reconsideration process are too long, the requestor may apply to the Board Governance Committee for urgent consideration. Any request for urgent consideration must be made within two business days (calculated at ICANN's headquarters in Los Angeles, California) of the posting of the resolution at issue. A request for urgent consideration must include a discussion of why the matter is urgent for reconsideration and must demonstrate a likelihood of success with the Reconsideration Request.

19. The Board Governance Committee shall respond to the request for urgent consideration within two business days after receipt of such request. If the Board Governance Committee agrees to consider the matter with urgency, it will cause notice to be provided to the requestor, who will have two business days after notification to complete the Reconsideration Request. The Board Governance Committee shall issue a recommendation on the urgent Reconsideration Request within seven days of the completion of the filing of the Request, or as soon thereafter as feasible. If the Board Governance Committee does not agree to consider the matter with urgency, the requestor may still file a Reconsideration Request within the regular time frame set forth within these Bylaws.

20. The Board Governance Committee shall submit a report to the Board on an annual basis containing at least the following information for the preceding calendar year:
    a. the number and general nature of Reconsideration Requests received, including an identification if the requests were acted upon, summarily dismissed, or remain pending;

b. for any Reconsideration Requests that remained pending at the end of the calendar year, the average length of time for which such Reconsideration Requests have been pending, and a description of the reasons for any request pending for more than ninety (90) days;

c. an explanation of any other mechanisms available to ensure that ICANN is accountable to persons materially affected by its decisions; and

d. whether or not, in the Board Governance Committee's view, the criteria for which reconsideration may be requested should be revised, or another process should be adopted or modified, to ensure that all persons materially affected byICANN decisions have meaningful access to a review process that ensures fairness while limiting frivolous claims.

Section 3. INDEPENDENT REVIEW OF BOARD ACTIONS

1. In addition to the reconsideration process described in Section 2 of this Article, ICANN shall have in place a separate process for independent third-party review of Board actions alleged by an affected party to be inconsistent with the Articles of Incorporation or Bylaws.

2. Any person materially affected by a decision or action by the Board that he or she asserts is inconsistent with the Articles of Incorporation or Bylaws may submit a request for independent review of that decision or action. In order to be materially affected, the person must suffer injury or harm that is directly and causally connected to the Board's alleged violation of the Bylaws or the Articles of Incorporation, and not as a result of third parties acting in line with the Board's action.

3. A request for independent review must be filed within thirty days of the posting of the minutes of the Board meeting (and the accompanying Board Briefing Materials, if available) that the requesting party contends demonstrates that ICANN violated its Bylaws or Articles of Incorporation. Consolidated requests may be appropriate when the causal connection between the

circumstances of the requests and the harm is the same for each of the requesting parties.

4. Requests for such independent review shall be referred to an Independent Review Process Panel ("IRP Panel"), which shall be charged with comparing contested actions of the Board to the Articles of Incorporation and Bylaws, and with declaring whether the Board has acted consistently with the provisions of those Articles of Incorporation and Bylaws. The IRP Panel must apply a defined standard of review to the IRP request, focusing on:
   a. did the Board act without conflict of interest in taking its decision?;

   b. did the Board exercise due diligence and care in having a reasonable amount of facts in front of them?; and

   c. did the Board members exercise independent judgment in taking the decision, believed to be in the best interests of the company?

5. Requests for independent review shall not exceed 25 pages (double-spaced, 12-point font) of argument. ICANN's response shall not exceed that same length. Parties may submit documentary evidence supporting their positions without limitation. In the event that parties submit expert evidence, such evidence must be provided in writing and there will be a right of reply to the expert evidence.

6. There shall be an omnibus standing panel of between six and nine members with a variety of expertise, including jurisprudence, judicial experience, alternative dispute resolution and knowledge ofICANN's mission and work from which each specific IRP Panel shall be selected. The panelists shall serve for terms that are staggered to allow for continued review of the size of the panel and the range of expertise. A Chair of the standing panel shall be appointed for a term not to exceed three years. Individuals holding an official position or office within the ICANN structure are not eligible to serve on the standing panel. In the event that an omnibus standing panel: (i) is not in place when an IRP Panel must

be convened for a given proceeding, the IRP proceeding will be considered by a one- or three-member panel comprised in accordance with the rules of the IRP Provider; or (ii) is in place but does not have the requisite diversity of skill and experience needed for a particular proceeding, the IRP Provider shall identify one or more panelists, as required, from outside the omnibus standing panel to augment the panel members for that proceeding.

7. All IRP proceedings shall be administered by an international dispute resolution provider appointed from time to time by ICANN("the IRP Provider"). The membership of the standing panel shall be coordinated by the IRP Provider subject to approval by ICANN.
8. Subject to the approval of the Board, the IRP Provider shall establish operating rules and procedures, which shall implement and be consistent with this Section 3.
9. Either party may request that the IRP be considered by a one- or three-member panel; the Chair of the standing panel shall make the final determination of the size of each IRP panel, taking into account the wishes of the parties and the complexity of the issues presented.
10. The IRP Provider shall determine a procedure for assigning members from the standing panel to individual IRP panels.
11. The IRP Panel shall have the authority to:
    a. summarily dismiss requests brought without standing, lacking in substance, or that are frivolous or vexatious;
    b. request additional written submissions from the party seeking review, the Board, the Supporting Organizations, or from other parties;
    c. declare whether an action or inaction of the Board was inconsistent with the Articles of Incorporation or Bylaws; and
    d. recommend that the Board stay any action or decision, or that the Board take any interim action, until such time as the Board reviews and acts upon the opinion of the IRP;

   e. consolidate requests for independent review if the facts and circumstances are sufficiently similar; and
   f. determine the timing for each proceeding.

12. In order to keep the costs and burdens of independent review as low as possible, the IRP Panel should conduct its proceedings by email and otherwise via the Internet to the maximum extent feasible. Where necessary, the IRP Panel may hold meetings by telephone. In the unlikely event that a telephonic or in-person hearing is convened, the hearing shall be limited to argument only; all evidence, including witness statements, must be submitted in writing in advance.

13. All panel members shall adhere to conflicts-of-interest policy stated in the IRP Provider's operating rules and procedures, as approved by the Board.

14. Prior to initiating a request for independent review, the complainant is urged to enter into a period of cooperative engagement withICANN for the purpose of resolving or narrowing the issues that are contemplated to be brought to the IRP. The cooperative engagement process is published on ICANN.org and is incorporated into this Section 3 of the Bylaws.

15. Upon the filing of a request for an independent review, the parties are urged to participate in a conciliation period for the purpose of narrowing the issues that are stated within the request for independent review. A conciliator will be appointed from the members of the omnibus standing panel by the Chair of that panel. The conciliator shall not be eligible to serve as one of the panelists presiding over that particular IRP. The Chair of the standing panel may deem conciliation unnecessary if cooperative engagement sufficiently narrowed the issues remaining in the independent review.

16. Cooperative engagement and conciliation are both voluntary. However, if the party requesting the independent review does not participate in good faith in the cooperative engagement and the conciliation processes, if applicable, and ICANN is the prevailing

party in the request for independent review, the IRP Panel must award to ICANN all reasonable fees and costs incurred by ICANNin the proceeding, including legal fees.

17. All matters discussed during the cooperative engagement and conciliation phases are to remain confidential and not subject to discovery or as evidence for any purpose within the IRP, and are without prejudice to either party.
18. The IRP Panel should strive to issue its written declaration no later than six months after the filing of the request for independent review. The IRP Panel shall make its declaration based solely on the documentation, supporting materials, and arguments submitted by the parties, and in its declaration shall specifically designate the prevailing party. The party not prevailing shall ordinarily be responsible for bearing all costs of the IRP Provider, but in an extraordinary case the IRP Panel may in its declaration allocate up to half of the costs of the IRP Provider to the prevailing party based upon the circumstances, including a consideration of the reasonableness of the parties' positions and their contribution to the public interest. Each party to the IRP proceedings shall bear its own expenses.
19. The IRP operating procedures, and all petitions, claims, and declarations, shall be posted on ICANN's website when they become available.
20. The IRP Panel may, in its discretion, grant a party's request to keep certain information confidential, such as trade secrets.
21. Where feasible, the Board shall consider the IRP Panel declaration at the Board's next meeting. The declarations of the IRP Panel, and the Board's subsequent action on those declarations, are final and have precedential value.

Section 4. PERIODIC REVIEW OF ICANN STRUCTURE AND OPERATIONS

1. The Board shall cause a periodic review of the performance and operation of each Supporting Organization, each Supporting

OrganizationCouncil, each Advisory Committee (other than the Governmental Advisory Committee), and the Nominating Committee by an entity or entities independent of the organization under review. The goal of the review, to be undertaken pursuant to such criteria and standards as the Board shall direct, shall be to determine (i) whether that organization has a continuing purpose in the ICANN structure, and (ii) if so, whether any change in structure or operations is desirable to improve its effectiveness.

These periodic reviews shall be conducted no less frequently than every five years, based on feasibility as determined by the Board. Each five-year cycle will be computed from the moment of the reception by the Board of the final report of the relevant review Working Group.

The results of such reviews shall be posted on the Website for public review and comment, and shall be considered by the Board no later than the second scheduled meeting of the Board after such results have been posted for 30 days. The consideration by the Board includes the ability to revise the structure or operation of the parts of ICANN being reviewed by a two-thirds vote of all members of the Board.

2. The Governmental Advisory Committee shall provide its own review mechanisms.

ARTICLE V: OMBUDSMAN

Section 1. OFFICE OF OMBUDSMAN

1. There shall be an Office of Ombudsman, to be managed by an Ombudsman and to include such staff support as the Board determines is appropriate and feasible. The Ombudsman shall be a full-time position, with salary and benefits appropriate to the function, as determined by the Board.

2. The Ombudsman shall be appointed by the Board for an initial term of two years, subject to renewal by the Board.

3. The Ombudsman shall be subject to dismissal by the Board only upon a three-fourths (3/4) vote of the entire Board.

4. The annual budget for the Office of Ombudsman shall be established by the Board as part of the annual ICANN budget process. The Ombudsman shall submit a proposed budget to the President, and the President shall include that budget submission in its entirety and without change in the general ICANN budget recommended by the ICANN President to the Board. Nothing in this Article shall prevent the President from offering separate views on the substance, size, or other features of the Ombudsman's proposed budget to the Board.

Section 2. CHARTER

The charter of the Ombudsman shall be to act as a neutral dispute resolution practitioner for those matters for which the provisions of the Reconsideration Policy set forth in Section 2 of Article IV or the Independent Review Policy set forth in Section 3 of Article IV have not been invoked. The principal function of the Ombudsman shall be to provide an independent internal evaluation of complaints by members of the ICANN community who believe that the ICANN staff, Board or anICANN constituent body has treated them unfairly. The Ombudsman shall serve as an objective advocate for fairness, and shall seek to evaluate and where possible resolve complaints about unfair or inappropriate treatment by ICANN staff, the Board, or ICANN constituent bodies, clarifying the issues and using conflict resolution tools such as negotiation, facilitation, and "shuttle diplomacy" to achieve these results.

Section 3. OPERATIONS

The Office of Ombudsman shall:

1. facilitate the fair, impartial, and timely resolution of problems and complaints that affected members of the ICANN community (excluding employees and vendors/suppliers of ICANN) may have with specific actions or failures to act by the Board or ICANN staff which have not otherwise become the subject of either the Reconsideration or Independent Review Policies;
2. exercise discretion to accept or decline to act on a complaint or question, including by the development of procedures to dispose of

complaints that are insufficiently concrete, substantive, or related toICANN's interactions with the community so as to be inappropriate subject matters for the Ombudsman to act on. In addition, and without limiting the foregoing, the Ombudsman shall have no authority to act in any way with respect to internal administrative matters, personnel matters, issues relating to membership on the Board, or issues related to vendor/supplier relations;

3. have the right to have access to (but not to publish if otherwise confidential) all necessary information and records from ICANNstaff and constituent bodies to enable an informed evaluation of the complaint and to assist in dispute resolution where feasible (subject only to such confidentiality obligations as are imposed by the complainant or any generally applicable confidentiality policies adopted by ICANN);
4. heighten awareness of the Ombudsman program and functions through routine interaction with the ICANN community and online availability;
5. maintain neutrality and independence, and have no bias or personal stake in an outcome; and
6. comply with all ICANN conflicts-of-interest and confidentiality policies.

Section 4. INTERACTION WITH ICANN AND OUTSIDE ENTITIES

1. No ICANN employee, Board member, or other participant inSupporting Organizations or Advisory Committees shall prevent or impede the Ombudsman's contact with the ICANN community (including employees of ICANN). ICANN employees and Board members shall direct members of the ICANN community who voice problems, concerns, or complaints about ICANN to the Ombudsman, who shall advise complainants about the various options available for review of such problems, concerns, or complaints.
2. ICANN staff and other ICANN participants shall observe and

respect determinations made by the Office of Ombudsman concerning confidentiality of any complaints received by that Office.

3. Contact with the Ombudsman shall not constitute notice to ICANNof any particular action or cause of action.

4. The Ombudsman shall be specifically authorized to make such reports to the Board as he or she deems appropriate with respect to any particular matter and its resolution or the inability to resolve it. Absent a determination by the Ombudsman, in his or her sole discretion, that it would be inappropriate, such reports shall be posted on the Website.

5. The Ombudsman shall not take any actions not authorized in these Bylaws, and in particular shall not institute, join, or support in any way any legal actions challenging ICANN structure, procedures, processes, or any conduct by the ICANN Board, staff, or constituent bodies.

Section 5. ANNUAL REPORT

The Office of Ombudsman shall publish on an annual basis a consolidated analysis of the year's complaints and resolutions, appropriately dealing with confidentiality obligations and concerns. Such annual report should include a description of any trends or common elements of complaints received during the period in question, as well as recommendations for steps that could be taken to minimize future complaints. The annual report shall be posted on the Website.

ARTICLE VI: BOARD OF DIRECTORS

Section 1. COMPOSITION OF THE BOARD

The ICANN Board of Directors ("Board") shall consist of sixteen voting members ("Directors"). In addition, four non-voting liaisons ("Liaisons") shall be designated for the purposes set forth in Section 9 of this Article. Only Directors shall be included in determining the existence of quorums, and in establishing the validity of votes taken by the ICANN Board.

Section 2. DIRECTORS AND THEIR SELECTION; ELECTION OF CHAIRMAN AND VICE-CHAIRMAN

1. The Directors shall consist of:

   a. Eight voting members selected by the Nominating Committee established by Article VII of these Bylaws. These seats on the Board of Directors are referred to in these Bylaws as Seats 1 through 8.

   b. Two voting members selected by the Address Supporting Organization according to the provisions of Article VIII of these Bylaws. These seats on the Board of Directors are referred to in these Bylaws as Seat 9 and Seat 10.

   c. Two voting members selected by the Country-Code NamesSupporting Organization according to the provisions of Article IX of these Bylaws. These seats on the Board of Directors are referred to in these Bylaws as Seat 11 and Seat 12.

   d. Two voting members selected by the Generic Names Supporting Organization according to the provisions of Article X of these Bylaws. These seats on the Board of Directors are referred to in these Bylaws as Seat 13 and Seat 14.

   e. One voting member selected by the At-Large Community according to the provisions of Article XI of these Bylaws. This seat on the Board of Directors is referred to in these Bylaws as Seat 15.

   f. The President ex officio, who shall be a voting member.

2. In carrying out its responsibilities to fill Seats 1 through 8, the Nominating Committee shall seek to ensure that the ICANN Board is composed of members who in the aggregate display diversity in geography, culture, skills, experience, and perspective, by applying the criteria set forth in Section 3 of this Article. At no time when it makes its selection shall the Nominating Committee select a Director to fill any vacancy or expired term whose selection would cause the total number of Directors (not including the President) from countries in any one Geographic Region (as defined in Section 5 of this Article) to exceed five;

and the Nominating Committee shall ensure when it makes its selections that the Board includes at least one Director who is from a country in eachICANN Geographic Region ("Diversity Calculation").

For purposes of this sub-section 2 of Article VI, Section 2 of the ICANNBylaws, if any candidate for director maintains citizenship of more than one country, or has been domiciled for more than five years in a country of which the candidate does not maintain citizenship ("Domicile"), that candidate may be deemed to be from either country and must select in his/her Statement of Interest the country of citizenship or Domicile that he/she wants the Nominating Committee to use for Diversity Calculation purposes. For purposes of this sub- section 2 of Article VI, Section 2 of theICANN Bylaws, a person can only have one "Domicile," which shall be determined by where the candidate has a permanent residence and place of habitation.

3. In carrying out their responsibilities to fill Seats 9 through 15, theSupporting Organizations and the At-Large Community shall seek to ensure that the ICANN Board is composed of members that in the aggregate display diversity in geography, culture, skills, experience, and perspective, by applying the criteria set forth in Section 3 of this Article. At any given time, no two Directors selected by a Supporting Organizationshall be citizens from the same country or of countries located in the same Geographic Region.

For purposes of this sub-section 3 of Article VI, Section 2 of the ICANNBylaws, if any candidate for director maintains citizenship of more than one country, or has been domiciled for more than five years in a country of which the candidate does not maintain citizenship ("Domicile"), that candidate may be deemed to be from either country and must select in his/her Statement of Interest the country of citizenship or Domicile that he/she wants the Supporting Organization or the At-Large Community to use for selection purposes. For purposes of this sub-section 3 of Article VI, Section 2 of the ICANN Bylaws, a person can only have one "Domicile," which shall be determined by where the candidate has a permanent residence and place of habitation.

4. The Board shall annually elect a Chairman and a Vice-Chairman from

among the Directors, not including the President.

Section 3. CRITERIA FOR SELECTION OF DIRECTORS

ICANN Directors shall be:

1. Accomplished persons of integrity, objectivity, and intelligence, with reputations for sound judgment and open minds, and a demonstrated capacity for thoughtful group decision-making;
2. Persons with an understanding of ICANN's mission and the potential impact of ICANN decisions on the global Internet community, and committed to the success of ICANN;
3. Persons who will produce the broadest cultural and geographic diversity on the Board consistent with meeting the other criteria set forth in this Section;
4. Persons who, in the aggregate, have personal familiarity with the operation of gTLD registries and registrars; with ccTLD registries; with IP address registries; with Internet technical standards and protocols; with policy-development procedures, legal traditions, and the public interest; and with the broad range of business, individual, academic, and non-commercial users of the Internet; and
5. Persons who are able to work and communicate in written and spoken English.

Section 4. ADDITIONAL QUALIFICATIONS

1. Notwithstanding anything herein to the contrary, no official of a national government or a multinational entity established by treaty or other agreement between national governments may serve as a Director. As used herein, the term "official" means a person (i) who holds an elective governmental office or (ii) who is employed by such government or multinational entity and whose primary function with such government or entity is to develop or influence governmental or public policies.
2. No person who serves in any capacity (including as a liaison) on

any Supporting Organization Council shall simultaneously serve as a Director or liaison to the Board. If such a person accepts a nomination to be considered for selection by the Supporting Organization Council or the At-Large Community to be a Director, the person shall not, following such nomination, participate in any discussion of, or vote by, the Supporting Organization Council or the committee designated by the At-Large Community relating to the selection of Directors by the Council or Community, until the Council or committee(s) designated by the At-Large Community has selected the full complement of Directors it is responsible for selecting. In the event that a person serving in any capacity on aSupporting Organization Council accepts a nomination to be considered for selection as a Director, the constituency group or other group or entity that selected the person may select a replacement for purposes of the Council's selection process. In the event that a person serving in any capacity on the At-LargeAdvisory Committee accepts a nomination to be considered for selection by the At-Large Community as a Director, the Regional At-Large Organization or other group or entity that selected the person may select a replacement for purposes of the Community's selection process.

3. Persons serving in any capacity on the Nominating Committee shall be ineligible for selection to positions on the Board as provided byArticle VII, Section 8.

Section 5. INTERNATIONAL REPRESENTATION

In order to ensure broad international representation on the Board, the selection of Directors by the Nominating Committee, each Supporting Organization and the At-Large Community shall comply with all applicable diversity provisions of these Bylaws or of any Memorandum of Understanding referred to in these Bylaws concerning the Supporting Organization. One intent of these diversity provisions is to ensure that at all times each Geographic Region shall have at least one Director, and at all times no region shall have more than five Directors on the Board (not including the President). As used in these Bylaws, each of the following is considered to be a "Geographic Region": Europe; Asia/Australia/Pacific; Latin America/Caribbean islands; Africa; and North America. The specific countries included in each Geographic Region shall be determined by the Board, and this Section shall be reviewed by the Board from time to time (but at least every three years) to determine whether any change is appropriate, taking account of the evolution of the Internet.

Section 6. DIRECTORS' CONFLICTS OF INTEREST

The Board, through the Board Governance Committee, shall require a statement from each Director not less frequently than once a year setting forth all business and other affiliations that relate in any way to the business and other affiliations of ICANN. Each Director shall be responsible for disclosing to ICANN any matter that could reasonably be considered to make such Director an "interested director" within the meaning of Section 5233 of the California Nonprofit Public Benefit Corporation Law ("CNPBCL"). In addition, each Director shall disclose toICANN any relationship or other factor that could reasonably be considered to cause the Director to be considered to be an "interested person" within the meaning of Section 5227 of the CNPBCL. The Board shall adopt policies specifically addressing Director, Officer, andSupporting Organization conflicts of interest. No Director shall vote on any matter in which he or she has a material and direct financial interest that would be affected by the outcome of the vote.

Section 7. DUTIES OF DIRECTORS

Directors shall serve as individuals who have the duty to act in what they reasonably believe are the best interests of ICANN and not as representatives of the entity that selected them, their employers, or any other organizations or constituencies.

Section 8. TERMS OF DIRECTORS

1. The regular term of office of Director Seats 1 through 15 shall begin as follows:
    a. The regular terms of Seats 1 through 3 shall begin at the conclusion of ICANN's annual meeting in 2003 and eachICANN annual meeting every third year after 2003;

    b. The regular terms of Seats 4 through 6 shall begin at the conclusion of ICANN's annual meeting in 2004 and eachICANN annual meeting every third year after 2004;

   c. The regular terms of Seats 7 and 8 shall begin at the conclusion of ICANN's annual meeting in 2005 and eachICANN annual meeting every third year after 2005;

   d. The terms of Seats 9 and 12 shall continue until the conclusion of ICANN's ICANN's annual meeting in 2015. The next terms of Seats 9 and 12 shall begin at the conclusion of ICANN's annual meeting in 2015 and eachICANN annual meeting every third year after 2015;

   e. The terms of Seats 10 and 13 shall continue until the conclusion of ICANN's annual meeting in 2013. The next terms of Seats 10 and 13 shall begin at the conclusion ofICANN's annual meeting in 2013 and each ICANN annual meeting every third year after 2013; and

   f. The terms of Seats 11, 14 and 15 shall continue until the conclusion of ICANN's annual meeting in 2014. The next terms of Seats 11, 14 and 15 shall begin at the conclusion ofICANN's annual meeting in 2014 and each ICANN annual meeting every third year after 2014.

2. Each Director holding any of Seats 1 through 15, including a Director selected to fill a vacancy, shall hold office for a term that lasts until the next term for that Seat commences and until a successor has been selected and qualified or until that Director resigns or is removed in accordance with these Bylaws.

3. At least two months before the commencement of each annual meeting, the Nominating Committee shall give the Secretary ofICANN written notice of its selection of Directors for seats with terms beginning at the conclusion of the annual meeting.

4. At least six months before the date specified for the commencement of the term as specified in paragraphs 1.d-f above, any Supporting Organization or the At-Large community entitled to select a Director for a Seat with a term beginning that year shall

give the Secretary of ICANN written notice of its selection.

5. Subject to the provisions of the Transition Article of these Bylaws, no Director may serve more than three consecutive terms. For these purposes, a person selected to fill a vacancy in a term shall not be deemed to have served that term. (Note: In the period prior to the beginning of the first regular term of Seat 15 in 2010, Seat 15 was deemed vacant for the purposes of calculation of terms of service.)

6. The term as Director of the person holding the office of President shall be for as long as, and only for as long as, such person holds the office of President.

Section 9. NON-VOTING LIAISONS

1. The non-voting liaisons shall include:
    a. One appointed by the Governmental Advisory Committee;

    b. One appointed by the Root Server System Advisory Committee established by Article XI of these Bylaws;

    c. One appointed by the Security and Stability Advisory Committee established by Article XI of these Bylaws;

    d. One appointed by the Internet Engineering Task Force.

2. The non-voting liaisons shall serve terms that begin at the conclusion of each annual meeting. At least one month before the commencement of each annual meeting, each body entitled to appoint a non-voting liaison shall give the Secretary of ICANNwritten notice of its appointment.

3. Each non-voting liaison may be reappointed, and shall remain in that position until a successor has been appointed or until the liaison resigns or is removed in accordance with these Bylaws.

4. The non-voting liaisons shall be entitled to attend Board meetings, participate in Board discussions and deliberations, and have access (under conditions established by the Board) to materials provided to Directors for use in Board discussions, deliberations

and meetings, but shall otherwise not have any of the rights and privileges of Directors. Non-voting liaisons shall be entitled (under conditions established by the Board) to use any materials provided to them pursuant to this Section for the purpose of consulting with their respective committee or organization.

Section 10. RESIGNATION OF A DIRECTOR OR NON-VOTING LIAISON

Subject to Section 5226 of the CNPBCL, any Director or non-voting liaison may resign at any time, either by oral tender of resignation at any meeting of the Board (followed by prompt written notice to the Secretary of ICANN) or by giving written notice thereof to the President or the Secretary ofICANN. Such resignation shall take effect at the time specified, and, unless otherwise specified, the acceptance of such resignation shall not be necessary to make it effective. The successor shall be selected pursuant to Section 12 of this Article.

Section 11. REMOVAL OF A DIRECTOR OR NON-VOTING LIAISON

1. Any Director may be removed, following notice to that Director, by a three-fourths (3/4) majority vote of all Directors; provided, however, that the Director who is the subject of the removal action shall not be entitled to vote on such an action or be counted as a voting member of the Board when calculating the required three-fourths (3/4) vote; and provided further, that each vote to remove a Director shall be a separate vote on the sole question of the removal of that particular Director. If the Director was selected by a Supporting Organization, notice must be provided to that Supporting Organization at the same time notice is provided to the Director. If the Director was selected by the At-Large Community, notice must be provided to the At-Large Advisory Committee at the same time notice is provided to the Director.

2. With the exception of the non-voting liaison appointed by the Governmental Advisory Committee, any non-voting liaison may be removed, following notice to that liaison and to the organization by which that liaison was selected, by a three-fourths (3/4) majority vote of all Directors if the selecting organization fails to promptly

remove that liaison following such notice. The Board may request the Governmental Advisory Committee to consider the replacement of the non-voting liaison appointed by that Committee if the Board, by a three-fourths (3/4) majority vote of all Directors, determines that such an action is appropriate.

Section 12. VACANCIES

1. A vacancy or vacancies in the Board of Directors shall be deemed to exist in the case of the death, resignation, or removal of any Director; if the authorized number of Directors is increased; or if a Director has been declared of unsound mind by a final order of court or convicted of a felony or incarcerated for more than 90 days as a result of a criminal conviction or has been found by final order or judgment of any court to have breached a duty under Sections 5230 et seq. of the CNPBCL. Any vacancy occurring on the Board of Directors shall be filled by the Nominating Committee, unless (a) that Director was selected by a Supporting Organization, in which case that vacancy shall be filled by that Supporting Organization, or (b) that Director was the President, in which case the vacancy shall be filled in accordance with the provisions of Article XIII of these Bylaws. The selecting body shall give written notice to the Secretary of ICANN of their appointments to fill vacancies. A Director selected to fill a vacancy on the Board shall serve for the unexpired term of his or her predecessor in office and until a successor has been selected and qualified. No reduction of the authorized number of Directors shall have the effect of removing a Director prior to the expiration of the Director's term of office.

2. The organizations selecting the non-voting liaisons identified inSection 9 of this Article are responsible for determining the existence of, and filling, any vacancies in those positions. They shall give the Secretary of ICANN written notice of their appointments to fill vacancies.

Section 13. ANNUAL MEETINGS

Annual meetings of ICANN shall be held for the purpose of electing Officers and for the transaction of such other business as may come before the meeting. Each annual meeting for ICANN shall be held at the principal office of ICANN, or any other appropriate place of the Board's time and choosing, provided such annual meeting is held within 14 months of the immediately preceding annual meeting. If the Board determines that it is practical, the annual meeting should be distributed in real-time and archived video and audio formats on the Internet.

Section 14. REGULAR MEETINGS

Regular meetings of the Board shall be held on dates to be determined by the Board. In the absence of other designation, regular meetings shall be held at the principal office of ICANN.

Section 15. SPECIAL MEETINGS

Special meetings of the Board may be called by or at the request of one-quarter (1/4) of the members of the Board or by the Chairman of the Board or the President. A call for a special meeting shall be made by the Secretary of ICANN. In the absence of designation, special meetings shall be held at the principal office of ICANN.

Section 16. NOTICE OF MEETINGS

Notice of time and place of all meetings shall be delivered personally or by telephone or by electronic mail to each Director and non-voting liaison, or sent by first-class mail (air mail for addresses outside the United States) or facsimile, charges prepaid, addressed to each Director and non-voting liaison at the Director's or non-voting liaison's address as it is shown on the records of ICANN. In case the notice is mailed, it shall be deposited in the United States mail at least fourteen (14) days before the time of the holding of the meeting. In case the notice is delivered personally or by telephone or facsimile or electronic mail it shall be delivered personally or by telephone or facsimile or electronic mail at least forty-eight (48) hours before the time of the holding of the meeting. Notwithstanding anything in this Section to the contrary, notice of a meeting need not be given to any Director who signed a waiver of notice or a written consent to holding the meeting or an approval of the minutes thereof, whether before or after the meeting, or who attends the meeting without protesting, prior thereto or at its commencement, the lack of notice to such Director. All such waivers, consents and approvals shall be filed with the corporate records or made a part of the minutes of the meetings.

Section 17. QUORUM

At all annual, regular, and special meetings of the Board, a majority of the total number of Directors then in office shall constitute a quorum for the transaction of business, and the act of a majority of the Directors present at any meeting at which there is a quorum shall be the act of the Board, unless otherwise provided herein or by law. If a quorum shall not be present at any meeting of the Board, the Directors present thereat may adjourn the meeting from time to time to another place, time, or date. If the meeting is adjourned for more than twenty-four (24) hours, notice shall be given to those Directors not at the meeting at the time of the adjournment.

Section 18. ACTION BY TELEPHONE MEETING OR BY OTHER COMMUNICATIONS EQUIPMENT

Members of the Board or any Committee of the Board may participate in a meeting of the Board or Committee of the Board through use of (i) conference telephone or similar communications equipment, provided that all Directors participating in such a meeting can speak to and hear one another or (ii) electronic video screen communication or other communication equipment; provided that (a) all Directors participating in such a meeting can speak to and hear one another, (b) all Directors are provided the means of fully participating in all matters before the Board or Committee of the Board, and (c) ICANN adopts and implements means of verifying that (x) a person participating in such a meeting is a Director or other person entitled to participate in the meeting and (y) all actions of, or votes by, the Board or Committee of the Board are taken or cast only by the members of the Board or Committee and not persons who are not members. Participation in a meeting pursuant to this Section constitutes presence in person at such meeting. ICANN shall make available at the place of any meeting of the Board the telecommunications equipment necessary to permit members of the Board to participate by telephone.

Section 19. ACTION WITHOUT MEETING

Any action required or permitted to be taken by the Board or a Committee of the Board may be taken without a meeting if all of the Directors entitled to vote thereat shall individually or collectively consent in writing to such action. Such written consent shall have the same force and effect as the unanimous vote of such Directors. Such written consent or consents shall be filed with the minutes of the proceedings of the Board

Section 20. ELECTRONIC MAIL

If permitted under applicable law, communication by electronic mail shall be considered equivalent to any communication otherwise required to be in writing. ICANN shall take such steps as it deems appropriate under the circumstances to assure itself that communications by electronic mail are authentic.

Section 21. RIGHTS OF INSPECTION

Every Director shall have the right at any reasonable time to inspect and copy all books, records and documents of every kind, and to inspect the physical properties of ICANN. ICANN shall establish reasonable procedures to protect against the inappropriate disclosure of confidential information.

Section 22. COMPENSATION

1. Except for the President of ICANN, who serves ex officio as a voting member of the Board, each of the Directors shall be entitled to receive compensation for his/her services as a Director. The President shall receive only his/her compensation for service as President and shall not receive additional compensation for service as a Director.

2. If the Board determines to offer a compensation arrangement to one or more Directors other than the President of ICANN for services to ICANN as Directors, the Board shall follow a process that is calculated to pay an amount for service as a Director that is in its entirety Reasonable Compensation for such service under the standards set forth in §53.4958-4(b) of the Treasury Regulations.

3. As part of the process, the Board shall retain an Independent

Valuation Expert to consult with and to advise the Board regarding Director compensation arrangements and to issue to the Board a Reasoned Written Opinion from such expert regarding the ranges of Reasonable Compensation for any such services by a Director. The expert's opinion shall address all relevant factors affecting the level of compensation to be paid a Director, including offices held on the Board, attendance at Board and Committee meetings, the nature of service on the Board and on Board Committees, and appropriate data as to comparability regarding director compensation arrangements for U.S.-based, nonprofit, tax-exempt organizations possessing a global employee base.

4. After having reviewed the expert's written opinion, the Board shall meet with the expert to discuss the expert's opinion and to ask questions of the expert regarding the expert's opinion, the comparability data obtained and relied upon, and the conclusions reached by the expert.

5. The Board shall adequately document the basis for any determination the Board makes regarding a Director compensation arrangement concurrently with making that determination.

6. In addition to authorizing payment of compensation for services as Directors as set forth in this Section 22, the Board may also authorize the reimbursement of actual and necessary reasonable expenses incurred by any Director and by non-voting liaisons performing their duties as Directors or non-voting liaisons.

7. As used in this Section 22, the following terms shall have the following meanings:
    a. An "Independent Valuation Expert" means a person retained by ICANN to value compensation arrangements that: (i) holds itself out to the public as a compensation consultant; (ii) performs valuations regarding compensation arrangements on a regular basis, with a majority of its compensation consulting services performed for persons other than ICANN; (iii) is qualified to make valuations of the type of services involved in any engagement by and forICANN; (iv) issues to ICANN a Reasoned Written Opinion

regarding a particular compensation arrangement; and (v) includes in its Reasoned Written Opinion a certification that it meets the requirements set forth in (i) through (iv) of this definition.

b. A "Reasoned Written Opinion" means a written opinion of a valuation expert who meets the requirements of subparagraph 7(a) (i) through (iv) of this Section. To be reasoned, the opinion must be based upon a full disclosure by ICANN to the valuation expert of the factual situation regarding the compensation arrangement that is the subject of the opinion, the opinion must articulate the applicable valuation standards relevant in valuing such compensation arrangement, and the opinion must apply those standards to such compensation arrangement, and the opinion must arrive at a conclusion regarding the whether the compensation arrangement is within the range of Reasonable Compensation for the services covered by the arrangement. A written opinion is reasoned even though it reaches a conclusion that is subsequently determined to be incorrect so long as the opinion addresses itself to the facts and the applicable standards. However, a written opinion is not reasoned if it does nothing more than recite the facts and express a conclusion.

c. "Reasonable Compensation" shall have the meaning set forth in §53.4958-4(b)(1)(ii) of the Regulations issued under §4958 of the Code.

8. Each of the non-voting liaisons to the Board, with the exception of the Governmental Advisory Committee liaison, shall be entitled to receive compensation for his/her services as a non-voting liaison. If the Board determines to offer a compensation arrangement to one or more non-voting liaisons, the Board shall approve that arrangement by a required three-fourths (3/4) vote.

Section 23. PRESUMPTION OF ASSENT

A Director present at a Board meeting at which action on any corporate matter is taken shall be presumed to have assented to the action taken unless his or her dissent or abstention is entered in the minutes of the meeting, or unless such Director files a written dissent or abstention to such action with the person acting as the secretary of the meeting before the adjournment thereof, or forwards such dissent or abstention by registered mail to the Secretary of ICANN immediately after the adjournment of the meeting. Such right to dissent or abstain shall not apply to a Director who voted in favor of such action.

ARTICLE VII: NOMINATING COMMITTEE

Section 1. DESCRIPTION

There shall be a Nominating Committee of ICANN, responsible for the selection of all ICANN Directors except the President and those Directors selected by ICANN's Supporting Organizations, and for such other selections as are set forth in these Bylaws.

Section 2. COMPOSITION

The Nominating Committee shall be composed of the following persons:

1. A non-voting Chair, appointed by the ICANN Board;
2. A non-voting Chair-Elect, appointed by the ICANN Board as a non-voting advisor;
3. A non-voting liaison appointed by the ICANN Root Server SystemAdvisory Committee established by Article XI of these Bylaws;
4. A non-voting liaison appointed by the ICANN Security and StabilityAdvisory Committee established by Article XI of these Bylaws;
5. A non-voting liaison appointed by the Governmental Advisory Committee;
6. Subject to the provisions of the Transition Article of these Bylaws, five voting delegates selected by the At-Large Advisory

Committeeestablished by Article XI of these Bylaws;

7. Voting delegates to the Nominating Committee shall be selected from the Generic Names Supporting Organization, established byArticle X of these Bylaws, as follows:
   a. One delegate from the Registries Stakeholder Group;
   b. One delegate from the Registrars Stakeholder Group;
   c. Two delegates from the Business Constituency, one representing small business users and one representing large business users;
   d. One delegate from the Internet Service Providers Constituency;
   e. One delegate from the Intellectual Property Constituency; and
   f. One delegate from consumer and civil society groups, selected by the Non-Commercial Users Constituency.
8. One voting delegate each selected by the following entities:
   a. The Council of the Country Code Names Supporting Organization established by Article IX of these Bylaws;
   b. The Council of the Address Supporting Organizationestablished by Article VIII of these Bylaws; and
   c. The Internet Engineering Task Force.
9. A non-voting Associate Chair, who may be appointed by the Chair, at his or her sole discretion, to serve during all or part of the term of the Chair. The Associate Chair may not be a person who is otherwise a member of the same Nominating Committee. The Associate Chair shall assist the Chair in carrying out the duties of the Chair, but shall not serve, temporarily or otherwise, in the place of the Chair.

Section 3. TERMS

Subject to the provisions of the Transition Article of these Bylaws:

1. Each voting delegate shall serve a one-year term. A delegate may serve at most two successive one-year terms, after which at least two years must elapse before the individual is eligible to serve another term.

2. The regular term of each voting delegate shall begin at the conclusion of an ICANN annual meeting and shall end at the conclusion of the immediately following ICANN annual meeting.

3. Non-voting liaisons shall serve during the term designated by the entity that appoints them. The Chair, the Chair-Elect, and any Associate Chair shall serve as such until the conclusion of the nextICANN annual meeting.

4. It is anticipated that upon the conclusion of the term of the Chair-Elect, the Chair-Elect will be appointed by the Board to the position of Chair. However, the Board retains the discretion to appoint any other person to the position of Chair. At the time of appointing a Chair-Elect, if the Board determines that the person identified to serve as Chair shall be appointed as Chair for a successive term, the Chair-Elect position shall remain vacant for the term designated by the Board.

5. Vacancies in the positions of delegate, non-voting liaison, Chair or Chair-Elect shall be filled by the entity entitled to select the delegate, non-voting liaison, Chair or Chair-Elect involved. For any term that the Chair-Elect position is vacant pursuant to paragraph 4 of this Article, or until any other vacancy in the position of Chair-Elect can be filled, a non-voting advisor to the Chair may be appointed by the Board from among persons with prior service on the Board or a Nominating Committee, including the immediately previous Chair of the Nominating Committee. A vacancy in the position of Associate Chair may be filled by the Chair in accordance with the criteria established by Section 2(9) of this Article.

6. The existence of any vacancies shall not affect the obligation of the Nominating Committee to carry out the responsibilities assigned to it in these Bylaws.

Section 4. CRITERIA FOR SELECTION OF NOMINATING COMMITTEE DELEGATES

Delegates to the ICANN Nominating Committee shall be:

1. Accomplished persons of integrity, objectivity, and intelligence, with reputations for sound judgment and open minds, and with experience and competence with collegial large group decision-making;

2. Persons with wide contacts, broad experience in the Internet community, and a commitment to the success of ICANN;

3. Persons whom the selecting body is confident will consult widely and accept input in carrying out their responsibilities;

4. Persons who are neutral and objective, without any fixed personal commitments to particular individuals, organizations, or commercial objectives in carrying out their Nominating Committee responsibilities;

5. Persons with an understanding of ICANN's mission and the potential impact of ICANN's activities on the broader Internet community who are willing to serve as volunteers, without compensation other than the reimbursement of certain expenses; and

6. Persons who are able to work and communicate in written and spoken English.

Section 5. DIVERSITY

In carrying out its responsibilities to select members of the ICANN Board (and selections to any other ICANN bodies as the Nominating Committee is responsible for under these Bylaws), the Nominating Committee shall take into account the continuing membership of the ICANN Board (and such other bodies), and seek to ensure that the persons selected to fill vacancies on the ICANN Board (and each such other body) shall, to the extent feasible and consistent with the other criteria required to be applied by Section 4 of this Article, make selections guided by Core Value 4 inArticle I, Section 2 .

Section 6. ADMINISTRATIVE AND OPERATIONAL SUPPORT

ICANN shall provide administrative and operational support necessary for the Nominating Committee to carry out its responsibilities.

Section 7. PROCEDURES

The Nominating Committee shall adopt such operating procedures as it deems necessary, which shall be published on the Website.

Section 8. INELIGIBILITY FOR SELECTION BY NOMINATING COMMITTEE

No person who serves on the Nominating Committee in any capacity shall be eligible for selection by any means to any position on the Board or any other ICANN body having one or more membership positions that the Nominating Committee is responsible for filling, until the conclusion of anICANN annual meeting that coincides with, or is after, the conclusion of that person's service on the Nominating Committee.

Section 9. INELIGIBILITY FOR SERVICE ON NOMINATING COMMITTEE

No person who is an employee of or paid consultant to ICANN (including the Ombudsman) shall simultaneously serve in any of the Nominating Committee positions described in Section 2 of this Article.

ARTICLE VIII: ADDRESS SUPPORTING ORGANIZATION

Section 1. DESCRIPTION

1. The Address Supporting Organization (ASO) shall advise the Board with respect to policy issues relating to the operation, assignment, and management of Internet addresses.

2. The ASO shall be the entity established by the Memorandum of

Understanding entered on 21 October 2004 between ICANN and the Number Resource Organization (NRO), an organization of the existing regional Internet registries (RIRs).

Section 2. ADDRESS COUNCIL

1. The ASO shall have an Address Council, consisting of the members of the NRO Number Council.
2. The Address Council shall select Directors to those seats on the Board designated to be filled by the ASO.

ARTICLE IX: COUNTRY-CODE NAMES SUPPORTING ORGANIZATION

Section 1. DESCRIPTION

There shall be a policy-development body known as the Country-Code Names Supporting Organization (ccNSO), which shall be responsible for:

1. developing and recommending to the Board global policies relating to country-code top-level domains;
2. Nurturing consensus across the ccNSO's community, including the name-related activities of ccTLDs; and
3. Coordinating with other ICANN Supporting Organizations, committees, and constituencies under ICANN.

Policies that apply to ccNSO members by virtue of their membership are only those policies developed according to section 4.10 and 4.11 of this Article. However, the ccNSO may also engage in other activities authorized by its members. Adherence to the results of these activities will be voluntary and such activities may include: seeking to develop voluntary best practices for ccTLD managers, assisting in skills building within the global community of ccTLD managers, and enhancing operational and technical cooperation among ccTLD managers.

Section 2. ORGANIZATION

The ccNSO shall consist of (i) ccTLD managers that have agreed in writing to be members of the ccNSO (see Section 4(2) of this Article) and (ii) a ccNSO Council responsible for managing the policy-development process of the ccNSO.

Section 3. ccNSO COUNCIL

1. The ccNSO Council shall consist of (a) three ccNSO Council members selected by the ccNSO members within each of ICANN's Geographic Regions in the manner described in Section 4(7) through (9) of this Article; (b) three ccNSO Council members selected by the ICANN Nominating Committee; (c) liaisons as described in paragraph 2 of this Section; and (iv) observers as described in paragraph 3 of this Section.

2. There shall also be one liaison to the ccNSO Council from each of the following organizations, to the extent they choose to appoint such a liaison: (a) the Governmental Advisory Committee; (b) the At-Large Advisory Committee; and (c) each of the Regional Organizations described in Section 5 of this Article. These liaisons shall not be members of or entitled to vote on the ccNSO Council, but otherwise shall be entitled to participate on equal footing with members of the ccNSO Council. Appointments of liaisons shall be made by providing written notice to the ICANN Secretary, with a notification copy to the ccNSO Council Chair, and shall be for the term designated by the appointing organization as stated in the written notice. The appointing organization may recall from office or replace its liaison at any time by providing written notice of the recall or replacement to the ICANN Secretary, with a notification copy to the ccNSO Council Chair.

3. The ccNSO Council may agree with the Council of any otherICANN Supporting Organization to exchange observers. Such observers shall not be members of or entitled to vote on the ccNSOCouncil, but otherwise shall be entitled to participate on equal footing with members of the ccNSO Council. The appointing Council may designate its observer (or revoke or change the designation of its observer) on the ccNSO Council at any time by providing written notice to the ICANN Secretary, with a notification

copy to the ccNSO Council Chair.

4. Subject to the provisions of the Transition Article of these Bylaws: (a) the regular term of each ccNSO Council member shall begin at the conclusion of an ICANN annual meeting and shall end at the conclusion of the third ICANN annual meeting thereafter; (b) the regular terms of the three ccNSO Council members selected by theccNSO members within each ICANN Geographic Region shall be staggered so that one member's term begins in a year divisible by three, a second member's term begins in the first year following a year divisible by three, and the third member's term begins in the second year following a year divisible by three; and (c) the regular terms of the three ccNSO Council members selected by the Nominating Committee shall be staggered in the same manner. Each ccNSO Council member shall hold office during his or her regular term and until a successor has been selected and qualified or until that member resigns or is removed in accordance with these Bylaws.

5. A ccNSO Council member may resign at any time by giving written notice to the ICANN Secretary, with a notification copy to theccNSO Council Chair.

6. ccNSO Council members may be removed for not attending three consecutive meetings of the ccNSO Council without sufficient cause or for grossly inappropriate behavior, both as determined by at least a 66% vote of all of the members of the ccNSO Council.

7. A vacancy on the ccNSO Council shall be deemed to exist in the case of the death, resignation, or removal of any ccNSO Council member. Vacancies in the positions of the three members selected by the Nominating Committee shall be filled for the unexpired term involved by the Nominating Committee giving the ICANN Secretary written notice of its selection, with a notification copy to the ccNSOCouncil Chair. Vacancies in the positions of the ccNSO Council members selected by ccNSO members shall be filled for the unexpired term by the procedure described in Section 4(7) through (9) of this Article.

8. The role of the ccNSO Council is to administer and coordinate the

affairs of the ccNSO (including coordinating meetings, including an annual meeting, of ccNSO members as described in Section 4(6) of this Article) and to manage the development of policy recommendations in accordance with Section 6 of this Article. TheccNSO Council shall also undertake such other roles as the members of the ccNSO shall decide from time to time.

9. The ccNSO Council shall make selections to fill Seats 11 and 12 on the Board by written ballot or by action at a meeting; any such selection must have affirmative votes of a majority of all the members of the ccNSO Council then in office. Notification of theccNSO Council's selections shall be given by the ccNSO Council Chair in writing to the ICANN Secretary, consistent with Article VI,Sections 8(4) and 12(1).
10. The ccNSO Council shall select from among its members theccNSO Council Chair and such Vice Chair(s) as it deems appropriate. Selections of the ccNSO Council Chair and Vice Chair(s) shall be by written ballot or by action at a meeting; any such selection must have affirmative votes of a majority of all the members of the ccNSO Council then in office. The term of office of the ccNSO Council Chair and any Vice Chair(s) shall be as specified by the ccNSO Council at or before the time the selection is made. The ccNSO Council Chair or any Vice Chair(s) may be recalled from office by the same procedure as used for selection.
11. The ccNSO Council, subject to direction by the ccNSO members, shall adopt such rules and procedures for the ccNSO as it deems necessary, provided they are consistent with these Bylaws. Rules for ccNSO membership and operating procedures adopted by theccNSO Council shall be published on the Website.
12. Except as provided by paragraphs 9 and 10 of this Section, theccNSO Council shall act at meetings. The ccNSO Council shall meet regularly on a schedule it determines, but not fewer than four times each calendar year. At the discretion of the ccNSO Council, meetings may be held in person or by other means, provided that all ccNSO Council members are permitted to participate by at least one means described in paragraph 14 of this Section. Except

where determined by a majority vote of the members of the ccNSOCouncil present that a closed session is appropriate, physical meetings shall be open to attendance by all interested persons. To the extent practicable, ccNSO Council meetings should be held in conjunction with meetings of the Board, or of one or more ofICANN's other Supporting Organizations.

13. Notice of time and place (and information about means of participation other than personal attendance) of all meetings of theccNSO Council shall be provided to each ccNSO Council member, liaison, and observer by e-mail, telephone, facsimile, or a paper notice delivered personally or by postal mail. In case the notice is sent by postal mail, it shall be sent at least 21 days before the day of the meeting. In case the notice is delivered personally or by telephone, facsimile, or e-mail it shall be provided at least seven days before the day of the meeting. At least seven days in advance of each ccNSO Council meeting (or if not practicable, as far in advance as is practicable), a notice of such meeting and, to the extent known, an agenda for the meeting shall be posted.

14. Members of the ccNSO Council may participate in a meeting of theccNSO Council through personal attendance or use of electronic communication (such as telephone or video conference), provided that (a) all ccNSO Council members participating in the meeting can speak to and hear one another, (b) all ccNSO Council members participating in the meeting are provided the means of fully participating in all matters before the ccNSO Council, and (c) there is a reasonable means of verifying the identity of ccNSOCouncil members participating in the meeting and their votes. A majority of the ccNSO Council members (i.e. those entitled to vote) then in office shall constitute a quorum for the transaction of business, and actions by a majority vote of the ccNSO Council members present at any meeting at which there is a quorum shall be actions of the ccNSO Council, unless otherwise provided in these Bylaws. The ccNSO Council shall transmit minutes of its meetings to the ICANN Secretary, who shall cause those minutes to be posted to the Website as soon as practicable following the meeting, and no later than 21 days following the meeting.

Section 4. MEMBERSHIP

1. The ccNSO shall have a membership consisting of ccTLDmanagers. Any ccTLD manager that meets the membership qualifications stated in paragraph 2 of this Section shall be entitled to be members of the ccNSO. For purposes of this Article, a ccTLDmanager is the organization or entity responsible for managing anISO 3166 country-code top-level domain and referred to in theIANA database under the current heading of "Sponsoring Organization", or under any later variant, for that country-code top-level domain.

2. Any ccTLD manager may become a ccNSO member by submitting an application to a person designated by the ccNSO Council to receive applications. Subject to the provisions of the Transition Article of these Bylaws, the application shall be in writing in a form designated by the ccNSO Council. The application shall include theccTLD manager's recognition of the role of the ccNSO within theICANN structure as well as the ccTLD manager's agreement, for the duration of its membership in the ccNSO, (a) to adhere to rules of the ccNSO, including membership rules, (b) to abide by policies developed and recommended by the ccNSO and adopted by the Board in the manner described by paragraphs 10 and 11 of this Section, and (c) to pay ccNSO membership fees established by theccNSO Council under Section 7(3) of this Article.
   A ccNSO member may resign from membership at any time by giving written notice to a person designated by the ccNSO Council to receive notices of resignation. Upon resignation the ccTLD manager ceases to agree to (a) adhere to rules of the ccNSO, including membership rules, (b) to abide by policies developed and recommended by theccNSO and adopted by the Board in the manner described by paragraphs 10 and 11 of this Section, and (c) to pay ccNSOmembership fees established by the ccNSO Council under Section 7(3) of this Article. In the absence of designation by the ccNSOCouncil of a person to receive applications and notices of resignation, they shall be sent to the ICANN Secretary, who shall notify the ccNSO Council of receipt of any such applications and notices.

3. Neither membership in the ccNSO nor membership in any Regional Organization described in Section 5 of this Article shall be a condition for access to or registration in the IANA database. Any individual relationship a ccTLD manager has with ICANN or theccTLD manager's receipt of IANA services is not in any way contingent upon membership in the ccNSO.

4. The Geographic Regions of ccTLDs shall be as described in Article VI, Section 5 of these Bylaws. For purposes of this Article, managers of ccTLDs within a Geographic Region that are members of the ccNSO are referred to as ccNSO members "within" the Geographic Region, regardless of the physical location of theccTLD manager. In cases where the Geographic Region of accNSO member is unclear, the ccTLD member should self-select according to procedures adopted by the ccNSO Council.

5. Each ccTLD manager may designate in writing a person, organization, or entity to represent the ccTLD manager. In the absence of such a designation, the ccTLD manager shall be represented by the person, organization, or entity listed as the administrative contact in the IANA database.

6. There shall be an annual meeting of ccNSO members, which shall be coordinated by the ccNSO Council. Annual meetings should be open for all to attend, and a reasonable opportunity shall be provided for ccTLD managers that are not members of the ccNSOas well as other non-members of the ccNSO to address the meeting. To the extent practicable, annual meetings of the ccNSOmembers shall be held in person and should be held in conjunction with meetings of the Board, or of one or more of ICANN's otherSupporting Organizations.

7. The ccNSO Council members selected by the ccNSO members from each Geographic Region (see Section 3(1)(a) of this Article) shall be selected through nomination, and if necessary election, by the ccNSO members within that Geographic Region. At least 90 days before the end of the regular term of any ccNSO-member-selected member of the ccNSO Council, or upon the occurrence of a vacancy in the seat of such a ccNSO Council member,

theccNSO Council shall establish a nomination and election schedule, which shall be sent to all ccNSO members within the Geographic Region and posted on the Website.

8. Any ccNSO member may nominate an individual to serve as accNSO Council member representing the ccNSO member's Geographic Region. Nominations must be seconded by anotherccNSO member from the same Geographic Region. By accepting their nomination, individuals nominated to the ccNSO Council agree to support the policies committed to by ccNSO members.

9. If at the close of nominations there are no more candidates nominated (with seconds and acceptances) in a particular Geographic Region than there are seats on the ccNSO Council available for that Geographic Region, then the nominated candidates shall be selected to serve on the ccNSO Council. Otherwise, an election by written ballot (which may be by e-mail) shall be held to select the ccNSO Council members from among those nominated (with seconds and acceptances), with ccNSOmembers from the Geographic Region being entitled to vote in the election through their designated representatives. In such an election, a majority of all ccNSO members in the Geographic Region entitled to vote shall constitute a quorum, and the selected candidate must receive the votes of a majority of those cast byccNSO members within the Geographic Region. The ccNSOCouncil Chair shall provide the ICANN Secretary prompt written notice of the selection of ccNSO Council members under this paragraph.

10. Subject to clause 4(11), ICANN policies shall apply to ccNSOmembers by virtue of their membership to the extent, and only to the extent, that the policies (a) only address issues that are within scope of the ccNSO according to Article IX, Section 6 and Annex C; (b) have been developed through the ccPDP as described inSection 6 of this Article, and (c) have been recommended as such by the ccNSO to the Board, and (d) are adopted by the Board as policies, provided that such policies do not conflict with the law applicable to the ccTLD manager which shall,

at all times, remain paramount. In addition, such policies shall apply to ICANN in its activities concerning ccTLDs.

11. A ccNSO member shall not be bound if it provides a declaration to the ccNSO Council stating that (a) implementation of the policy would require the member to breach custom, religion, or public policy (not embodied in the applicable law described in paragraph 10 of this Section), and (b) failure to implement the policy would not impair DNS operations or interoperability, giving detailed reasons supporting its statements. After investigation, the ccNSO Council will provide a response to the ccNSO member's declaration. If there is a ccNSO Council consensus disagreeing with the declaration, which may be demonstrated by a vote of 14 or more members of the ccNSO Council, the response shall state the ccNSO Council's disagreement with the declaration and the reasons for disagreement. Otherwise, the response shall state the ccNSOCouncil's agreement with the declaration. If the ccNSO Council disagrees, the ccNSO Council shall review the situation after a six-month period. At the end of that period, the ccNSO Council shall make findings as to (a) whether the ccNSO members' implementation of the policy would require the member to breach custom, religion, or public policy (not embodied in the applicable law described in paragraph 10 of this Section) and (b) whether failure to implement the policy would impair DNS operations or interoperability. In making any findings disagreeing with the declaration, the ccNSO Council shall proceed by consensus, which may be demonstrated by a vote of 14 or more members of theccNSO Council.

Section 5. REGIONAL ORGANIZATIONS

The ccNSO Council may designate a Regional Organization for eachICANN Geographic Region, provided that the Regional Organization is open to full membership by all ccNSO members within the Geographic Region. Decisions to designate or de-designate a Regional Organization shall require a 66% vote of all of the members of the ccNSO Council and shall be subject to review according to procedures established by the Board.

Section 6. ccNSO POLICY-DEVELOPMENT PROCESS AND SCOPE

1. The scope of the ccNSO's policy-development role shall be as stated in Annex C to these Bylaws; any modifications to the scope shall be recommended to the Board by the ccNSO by use of the procedures of the ccPDP, and shall be subject to approval by the Board.

2. In developing global policies within the scope of the ccNSO and recommending them to the Board, the ccNSO shall follow theccNSO Policy-Development Process (ccPDP). The ccPDP shall be as stated in Annex B to these Bylaws; modifications shall be recommended to the Board by the ccNSO by use of the procedures of the ccPDP, and shall be subject to approval by the Board.

Section 7. STAFF SUPPORT AND FUNDING

1. Upon request of the ccNSO Council, a member of the ICANN staff may be assigned to support the ccNSO and shall be designated as the ccNSO Staff Manager. Alternatively, the ccNSO Council may designate, at ccNSO expense, another person to serve as ccNSOStaff Manager. The work of the ccNSO Staff Manager on substantive matters shall be assigned by the Chair of the ccNSOCouncil, and may include the duties of ccPDP Issue Manager.

2. Upon request of the ccNSO Council, ICANN shall provide administrative and operational support necessary for the ccNSO to carry out its responsibilities. Such support shall not include an obligation for ICANN to fund travel expenses incurred by ccNSOparticipants for travel to any meeting of the ccNSO or for any other purpose. The ccNSO Council may make provision, at ccNSOexpense, for administrative and operational support in addition or as an alternative to support provided by ICANN.

3. The ccNSO Council shall establish fees to be paid by ccNSOmembers to defray ccNSO expenses as described in paragraphs 1 and 2 of this Section, as approved by the ccNSO members.

4. Written notices given to the ICANN Secretary under this Article shall be permanently retained, and shall be made available for review by the ccNSO Council on request. The ICANN Secretary shall also maintain the roll of members of the ccNSO, which shall include the name of each ccTLD manager's designated representative, and which shall be posted on the Website.

ARTICLE X: GENERIC NAMES SUPPORTING ORGANIZATION

Section 1. DESCRIPTION

There shall be a policy-development body known as the Generic NamesSupporting Organization (GNSO), which shall be responsible for developing and recommending to the ICANN Board substantive policies relating to generic top-level domains.

Section 2. ORGANIZATION

The GNSO shall consist of:

i. A number of Constituencies, where applicable, organized within the Stakeholder Groups as described in Section 5 of this Article;

ii. Four Stakeholder Groups organized within Houses as described inSection 5 of this Article;

iii. Two Houses within the GNSO Council as described in Section 3(8) of this Article; and

iv. a GNSO Council responsible for managing the policy development process of the GNSO, as described in Section 3 of this Article.

Except as otherwise defined in these Bylaws, the four Stakeholder Groups and the Constituencies will be responsible for defining their own charters with the approval of their members and of the ICANN Board of Directors.

Section 3. GNSO COUNCIL

1. Subject to the provisions of Transition Article XX, Section 5 of these

Bylaws and as described in Section 5 of Article X, the GNSO Council shall consist of:

a. three representatives selected from the Registries Stakeholder Group;

b. three representatives selected from the Registrars Stakeholder Group;

c. six representatives selected from the Commercial Stakeholder Group;

d. six representatives selected from the Non-Commercial Stakeholder Group; and

e. three representatives selected by the ICANN Nominating Committee, one of which shall be non-voting, but otherwise entitled to participate on equal footing with other members of the GNSOCouncil including, e.g. the making and seconding of motions and of serving as Chair if elected. One Nominating Committee Appointee voting representative shall be assigned to each House (as described in Section 3(8) of this Article) by the Nominating Committee.

No individual representative may hold more than one seat on the GNSOCouncil at the same time.

Stakeholder Groups should, in their charters, ensure their representation on the GNSO Council is as diverse as possible and practicable, including considerations of geography, GNSO Constituency, sector, ability and gender.

There may also be liaisons to the GNSO Council from other ICANNSupporting Organizations and/or Advisory Committees, from time to time. The appointing organization shall designate, revoke, or change its liaison on the GNSO Council by providing written notice to the Chair of the GNSOCouncil and to the ICANN Secretary. Liaisons shall not be members of or entitled to vote, to make or second motions, or to serve as an officer on the GNSO Council, but otherwise liaisons shall be entitled to participate on equal footing with members of the GNSO Council.

2. Subject to the provisions of the Transition Article XX, and Section 5 of these Bylaws, the regular term of each GNSO Council member shall begin at the conclusion of an ICANN annual meeting and shall end at the conclusion of the second ICANN annual meeting thereafter. The regular term of two representatives selected from Stakeholder Groups with three Council seats shall begin in even-numbered years and the regular term of the other representative selected from that Stakeholder Group shall begin in odd-numbered years. The regular term of three representatives selected from Stakeholder Groups with six Council seats shall begin in even-numbered years and the regular term of the other three representatives selected from that Stakeholder Group shall begin in odd-numbered years. The regular term of one of the three members selected by the Nominating Committee shall begin in even-numbered years and the regular term of the other two of the three members selected by the Nominating Committee shall begin in odd-numbered years. Each GNSO Council member shall hold office during his or her regular term and until a successor has been selected and qualified or until that member resigns or is removed in accordance with these Bylaws.

Except in a "special circumstance," such as, but not limited to, meeting geographic or other diversity requirements defined in the Stakeholder Group charters, where no alternative representative is available to serve, no Council member may be selected to serve more than two consecutive terms, in such a special circumstance a Council member may serve one additional term. For these purposes, a person selected to fill a vacancy in a term shall not be deemed to have served that term. A former Council member who has served two consecutive terms must remain out of office for one full term prior to serving any subsequent term as Council member. A "special circumstance" is defined in the GNSO Operating Procedures.

3. A vacancy on the GNSO Council shall be deemed to exist in the case of the death, resignation, or removal of any member. Vacancies shall be filled for the unexpired term by the appropriate Nominating Committee or Stakeholder Group that selected the member holding the position before the vacancy occurred by giving the GNSO Secretariat written notice of its selection. Procedures for handling Stakeholder Group-appointed GNSOCouncil member vacancies, resignations, and removals are prescribed in the applicable Stakeholder Group Charter.

A GNSO Council member selected by the Nominating Committee may be removed for cause: i) stated by a three-fourths (3/4) vote of all members of the applicable House to which the Nominating Committee appointee is assigned; or ii) stated by a three-fourths (3/4) vote of all members of each House in the case of the non-voting Nominating Committee appointee (see Section 3(8) of this Article). Such removal shall be subject to reversal by the ICANN Board on appeal by the affected GNSO Council member.
4. The GNSO Council is responsible for managing the policy development process of the GNSO. It shall adopt such procedures (the "GNSOOperating Procedures") as it sees fit to carry out that responsibility, provided that such procedures are approved by a majority vote of each House. The GNSO Operating Procedures shall be effective upon the expiration of a twenty-one (21) day public comment period, and shall be subject to Board oversight and review. Until any modifications are recommended by the GNSO Council, the applicable procedures shall be as set forth in Section 6 of this Article.

5. No more than one officer, director or employee of any particular corporation or other organization (including its subsidiaries and affiliates) shall serve on the GNSO Council at any given time.

6. The GNSO shall make selections to fill Seats 13 and 14 on the ICANNBoard by written ballot or by action at a meeting. Each of the two voting Houses of the GNSO, as described in Section 3(8) of this Article, shall make a selection to fill one of two ICANN Board seats, as outlined below; any such selection must have affirmative votes compromising sixty percent (60%) of all the respective voting House members:

a. the Contracted Party House shall select a representative to fill Seat 13; and

b. the Non-Contracted Party House shall select a representative to fill Seat 14

Election procedures are defined in the GNSO Operating Procedures.

Notification of the Board seat selections shall be given by the GNSO Chair in writing to the ICANN Secretary, consistent with Article VI, Sections 8(4)and 12(1).

7. The GNSO Council shall select the GNSO Chair for a term the GNSOCouncil specifies, but not longer than one year. Each House (as described in Section 3.8 of this Article) shall select a Vice-Chair, who will be a Vice-Chair of the whole of the GNSO Council, for a term the GNSO Council specifies, but not longer than one year. The procedures for selecting the Chair and any other officers are contained in the GNSO Operating Procedures. In the event that the GNSO Council has not elected a GNSOChair by the end of the previous Chair's term, the Vice-Chairs will serve as Interim GNSO Co-Chairs until a successful election can be held.

8. Except as otherwise required in these Bylaws, for voting purposes, theGNSO Council (see Section 3(1) of this Article) shall be organized into a bicameral House structure as described below:

a. the Contracted Parties House includes the Registries Stakeholder Group (three members), the Registrars Stakeholder Group (three members), and one voting member appointed by the ICANNNominating Committee for a total of seven voting members; and

b. the Non Contracted Parties House includes the Commercial Stakeholder Group (six members), the Non-Commercial Stakeholder Group (six members), and one voting member appointed by the ICANN Nominating Committee to that House for a total of thirteen voting members.

Except as otherwise specified in these Bylaws, each member of a voting House is entitled to cast one vote in each separate matter before theGNSO Council.

9. Except as otherwise specified in these Bylaws, Annex A, Annex A-1 andAnnex A-2 hereto, or the GNSO Operating Procedures, the default threshold to pass a GNSO Council motion or other voting action requires a simple majority vote of each House. The voting thresholds described below shall apply to the following GNSO actions:

a. Create an Issues Report: requires an affirmative vote of more than one-fourth (1/4) vote of each House or majority of one House.

b. Initiate a Policy Development Process ("PDP") Within Scope (as described in Annex A): requires an affirmative vote of more than one-third (1/3) of each House or more than two-thirds (2/3) of one House.

c. Initiate a PDP Not Within Scope: requires an affirmative vote ofGNSO Supermajority.

d. Approve a PDP Team Charter for a PDP Within Scope: requires an affirmative vote of more than one-third (1/3) of each House or more than two-thirds (2/3) of one House.

e. Approve a PDP Team Charter for a PDP Not Within Scope: requires an affirmative vote of a GNSO Supermajority.

f. Changes to an Approved PDP Team Charter: For any PDP Team Charter approved under d. or e. above, the GNSO Council may approve an amendment to the Charter through a simple majority vote of each House.

g. Terminate a PDP: Once initiated, and prior to the publication of a Final Report, the GNSO Council may terminate a PDP only for significant cause, upon a motion that passes with a GNSOSupermajority Vote in favor of termination.

h. Approve a PDP Recommendation Without a GNSO Supermajority: requires an affirmative vote of a majority of each House and further requires that one GNSO Council member representative of at least 3 of the 4 Stakeholder Groups supports the Recommendation.

i. Approve a PDP Recommendation With a GNSO Supermajority: requires an affirmative vote of a GNSO Supermajority,

j. Approve a PDP Recommendation Imposing New Obligations on Certain Contracting Parties: where an ICANN contract provision specifies that "a two-thirds vote of the council" demonstrates the presence of a consensus, the GNSO Supermajority vote threshold will have to be met or exceeded.

k. Modification of Approved PDP Recommendation: Prior to Final Approval by the ICANN Board, an Approved PDPRecommendation may be modified or amended by the GNSOCouncil with a GNSO Supermajority vote.

l. Initiation of an Expedited Policy Development Process (EPDP): requires an affirmative vote of a GNSO Supermajority.

m. Approve an EPDP Team Charter: requires an affirmative vote of aGNSO Supermajority.

n. Approval of EPDP recommendations: requires an affirmative vote of a GNSO Supermajority.

o. Approve an EPDP Recommendation Imposing New Obligations on Certain Contracting Parties: where an ICANN contract provision specifies that "a two-thirds vote of the council" demonstrates the presence of a consensus, the GNSO Supermajority vote threshold will have to be met or exceeded.

p. Initiation of a GNSO Guidance Process (GGP): requires an affirmative vote of more than one-third (1/3) of each House or more than two-thirds (2/3) of one House.

q. Rejection of initiation of a GGP requested by the ICANN Board: requires an affirmative vote of a GNSO Supermajority.

r. Approval of GGP recommendations: requires an affirmative vote of a GNSO Supermajority.

s. A "GNSO Supermajority" shall mean: (a) two-thirds (2/3) of the Council members of each House, or (b) three-fourths (3/4) of one House and a majority of the other House."

Section 4. STAFF SUPPORT AND FUNDING

1. A member of the ICANN staff shall be assigned to support theGNSO, whose work on substantive matters shall be assigned by the Chair of the GNSO Council, and shall be designated as theGNSO Staff Manager (Staff Manager).

2. ICANN shall provide administrative and operational support necessary for the GNSO to carry out its responsibilities. Such

support shall not include an obligation for ICANN to fund travel expenses incurred by GNSO participants for travel to any meeting of the GNSO or for any other purpose. ICANN may, at its discretion, fund travel expenses for GNSO participants under any travel support procedures or guidelines that it may adopt from time to time.

Section 5. STAKEHOLDER GROUPS

1. The following Stakeholder Groups are hereby recognized as representative of a specific group of one or more Constituencies or interest groups and subject to the provisions of the Transition Article XX, Section 5 of these Bylaws:

   a. Registries Stakeholder Group representing all gTLD registries under contract to ICANN;

   b. Registrars Stakeholder Group representing all registrars accredited by and under contract to ICANN;

   c. Commercial Stakeholder Group representing the full range of large and small commercial entities of the Internet; and

   d. Non-Commercial Stakeholder Group representing the full range of non-commercial entities of the Internet.

2. Each Stakeholder Group is assigned a specific number of Council seats in accordance with Section 3(1) of this Article.

3. Each Stakeholder Group identified in paragraph 1 of this Section and each of its associated Constituencies, where applicable, shall maintain recognition with the ICANN Board. Recognition is granted by the Board based upon the extent to which, in fact, the entity represents the global interests of the stakeholder communities it purports to represent and operates to the maximum extent feasible in an open and transparent manner consistent with procedures designed to ensure fairness. Stakeholder Group and Constituency Charters may be reviewed periodically as prescribed by the Board.

4. Any group of individuals or entities may petition the Board for

recognition as a new or separate Constituency in the Non-Contracted Parties House. Any such petition shall contain:

a. A detailed explanation of why the addition of such a Constituency will improve the ability of the GNSO to carry out its policy-development responsibilities;

b. A detailed explanation of why the proposed new Constituency adequately represents, on a global basis, the stakeholders it seeks to represent;

c. A recommendation for organizational placement within a particular Stakeholder Group; and

d. A proposed charter that adheres to the principles and procedures contained in these Bylaws.

Any petition for the recognition of a new Constituency and the associated charter shall be posted for public comment.

5. The Board may create new Constituencies as described in Section 5(3)in response to such a petition, or on its own motion, if the Board determines that such action would serve the purposes of ICANN. In the event the Board is considering acting on its own motion it shall post a detailed explanation of why such action is necessary or desirable, set a reasonable time for public comment, and not make a final decision on whether to create such new Constituency until after reviewing all comments received. Whenever the Board posts a petition or recommendation for a new Constituency for public comment, the Board shall notify the GNSO Council and the appropriate Stakeholder Group affected and shall consider any response to that notification prior to taking action.

Section 6. POLICY DEVELOPMENT PROCESS

The policy-development procedures to be followed by the GNSO shall be as stated in Annex A to these Bylaws. These procedures may be supplemented or revised in the manner stated in Section 3(4) of this Article.

ARTICLE XI: ADVISORY COMMITTEES

Section 1. GENERAL

The Board may create one or more Advisory Committees in addition to those set forth in this Article. Advisory Committee membership may consist of Directors only, Directors and non-directors, or non-directors only, and may also include non-voting or alternate members. Advisory Committees shall have no legal authority to act for ICANN, but shall report their findings and recommendations to the Board.

Section 2. SPECIFIC ADVISORY COMMITTEES

There shall be at least the following Advisory Committees:

1. Governmental Advisory Committee

    a. The Governmental Advisory Committee should consider and provide advice on the activities of ICANN as they relate to concerns of governments, particularly matters where there may be an interaction between ICANN's policies and various laws and international agreements or where they may affect public policy issues.

    b. Membership in the Governmental Advisory Committee shall be open to all national governments. Membership shall also be open to Distinct Economies as recognized in international fora, and multinational governmental organizations and treaty organizations, on the invitation of the Governmental Advisory Committee through its Chair.

    c. The Governmental Advisory Committee may adopt its own charter and internal operating principles or procedures to guide its operations, to be published on the Website.

    d. The chair of the Governmental Advisory Committee shall be elected by the members of the Governmental Advisory Committeepursuant to procedures adopted by such members.

    e. Each member of the Governmental Advisory Committee shall appoint one accredited representative to the Committee. The accredited representative of a member must hold a formal official position with the member's public administration. The term "official" includes a holder of an elected governmental office, or a person who is employed by such government, public authority, or multinational governmental or treaty organization and whose primary function with such government, public authority, or organization is to develop or influence governmental or public policies.

f. The Governmental Advisory Committee shall annually appoint one non-voting liaison to the ICANN Board of Directors, without limitation on reappointment, and shall annually appoint one non-voting liaison to the ICANN Nominating Committee.

g. The Governmental Advisory Committee may designate a non-voting liaison to each of the Supporting Organization Councils andAdvisory Committees, to the extent the Governmental Advisory Committee deems it appropriate and useful to do so.

h. The Board shall notify the Chair of the Governmental Advisory Committee in a timely manner of any proposal raising public policy issues on which it or any of ICANN's supporting organizations or advisory committees seeks public comment, and shall take duly into account any timely response to that notification prior to taking action.

i. The Governmental Advisory Committee may put issues to the Board directly, either by way of comment or prior advice, or by way of specifically recommending action or new policy development or revision to existing policies.

j. The advice of the Governmental Advisory Committee on public policy matters shall be duly taken into account, both in the formulation and adoption of policies. In the event that the ICANNBoard determines to take an action that is not consistent with the Governmental Advisory Committee advice, it shall so inform the Committee and state the reasons why it decided not to follow that advice. The Governmental Advisory Committee and the ICANNBoard will then try, in good faith and in a timely and efficient manner, to find a mutually acceptable solution.

k. If no such solution can be found, the ICANN Board will state in its final decision the reasons why the Governmental Advisory Committee advice was not followed, and such statement will be without prejudice to the rights or obligations of GovernmentalAdvisory Committee members with regard to public policy issues falling within their responsibilities.

2. Security and Stability Advisory Committee

   a. The role of the Security and Stability Advisory Committee ("SSAC") is to advise the ICANN community and Board on matters relating to the security and integrity of the Internet's naming and address allocation systems. It shall have the following responsibilities:
      1. To communicate on security matters with the Internet technical community and the operators and managers of critical DNS infrastructure services, to include the root name server operator community, the top-level domain registries and registrars, the operators of the reverse delegation trees such as in-addr.arpa and ip6.arpa, and others as events and developments dictate. The Committee shall gather and articulate requirements to offer to those engaged in technical revision of the protocols related to DNS and address allocation and those engaged in operations planning.

      2. To engage in ongoing threat assessment and risk analysis of the Internet naming and address allocation services to assess where the principal threats to stability and security lie, and to advise the ICANN community accordingly. The Committee shall recommend any necessary audit activity to assess the current status of DNS and address allocation security in relation to identified risks and threats.

      3. To communicate with those who have direct responsibility for Internet naming and address allocation security matters (IETF, RSSAC, RIRs, name registries, etc.), to ensure that its advice on security risks, issues, and priorities is properly

synchronized with existing standardization, deployment, operational, and coordination activities. The Committee shall monitor these activities and inform the ICANN community and Board on their progress, as appropriate.

4. To report periodically to the Board on its activities.

5. To make policy recommendations to the ICANN community and Board.

b. The SSAC's chair and members shall be appointed by the Board.SSAC membership appointment shall be for a three-year term, commencing on 1 January and ending the second year thereafter on 31 December. The chair and members may be re-appointed, and there are no limits to the number of terms the chair or members may serve. The SSAC chair may provide recommendations to the Board regarding appointments to theSSAC. The SSAC chair shall stagger appointment recommendations so that approximately one-third (1/3) of the membership of the SSAC is considered for appointment or re-appointment each year. The Board shall also have to power to remove SSAC appointees as recommended by or in consultation with the SSAC. (Note: The first full term under this paragraph shall commence on 1 January 2011 and end on 31 December 2013. Prior to 1 January 2011, the SSAC shall be comprised as stated in the Bylaws as amended 25 June 2010, and the SSAC chair shall recommend the re-appointment of all current SSAC members to full or partial terms as appropriate to implement the provisions of this paragraph.)

c. The SSAC shall annually appoint a non-voting liaison to the ICANNBoard according to Section 9 of Article VI.

3. Root Server System Advisory Committee

a. The role of the Root Server System Advisory Committee("RSSAC") is to advise the ICANN community and Board on matters relating to the operation, administration, security, and integrity of the Internet's Root Server System. It shall have the following responsibilities:

   1. Communicate on matters relating to the operation of theRoot Servers and their multiple instances with the Internet technical community and the ICANN community. The Committee shall gather and articulate requirements to offer to those engaged in technical revision of the protocols and best common practices related to the operation of DNSservers.

   2. Communicate on matters relating to the administration of theRoot Zone with those who have direct responsibility for that administration. These matters include the processes and procedures for the production of the Root Zone File.

   3. Engage in ongoing threat assessment and risk analysis of the Root Server System and recommend any necessary audit activity to assess the current status of root servers and the root zone.

   4. Respond to requests for information or opinions from theICANN Board of Directors.

   5. Report periodically to the Board on its activities.

   6. Make policy recommendations to the ICANN community and Board.

b. The RSSAC shall be led by two co-chairs. The RSSAC's chairs and members shall be appointed by the Board.
   1. RSSAC membership appointment shall be for a three-year term, commencing on 1 January and ending the second year thereafter on 31 December. Members may be re-appointed, and there are no limits to the number of terms the members may serve. The RSSAC chairs shall provide recommendations to the Board regarding appointments to the RSSAC. If the board declines to appoint a person nominated by the RSSAC then it will provide the rationale for its decision. The RSSAC chairs shall stagger appointment recommendations so that approximately one-third (1/3) of the membership of the RSSAC is considered for appointment or re-appointment each year. The Board

shall also have to power to remove RSSAC appointees as recommended by or in consultation with the RSSAC. (Note: The first term under this paragraph shall commence on 1 July 2013 and end on 31 December 2015, and shall be considered a full term for all purposes. All other full terms under this paragraph shall begin on 1 January of the corresponding year. Prior to 1 July 2013, the RSSAC shall be comprised as stated in the Bylaws as amended 16 March 2012, and the RSSAC chairs shall recommend the re-appointment of all current RSSAC members to full or partial terms as appropriate to implement the provisions of this paragraph.)

    2. The RSSAC shall recommend the appointment of the chairs to the board following a nomination process that it devises and documents.

  c. The RSSAC shall annually appoint a non-voting liaison to theICANN Board according to Section 9 of Article VI.

4. At-Large Advisory Committee

  a. The At-Large Advisory Committee (ALAC) is the primary organizational home within ICANN for individual Internet users. The role of the ALAC shall be to consider and provide advice on the activities of ICANN, insofar as they relate to the interests of individual Internet users. This includes policies created throughICANN's Supporting Organizations, as well as the many other issues for which community input and advice is appropriate. TheALAC, which plays an important role in ICANN's accountability mechanisms, also coordinates some of ICANN's outreach to individual Internet users.

  b. The ALAC shall consist of (i) two members selected by each of the Regional At-Large Organizations ("RALOs") established according to paragraph 4(g) of this Section, and (ii) five members selected by the Nominating Committee. The five members selected by the Nominating Committee shall include one citizen of a country within each of the five Geographic Regions established according toSection 5 of Article VI.

c. Subject to the provisions of the Transition Article of these Bylaws, the regular terms of members of the ALAC shall be as follows:
    1. The term of one member selected by each RALO shall begin at the conclusion of an ICANN annual meeting in an even-numbered year.
    2. The term of the other member selected by each RALO shall begin at the conclusion of an ICANN annual meeting in an odd-numbered year.
    3. The terms of three of the members selected by the Nominating Committee shall begin at the conclusion of an annual meeting in an odd-numbered year and the terms of the other two members selected by the Nominating Committee shall begin at the conclusion of an annual meeting in an even-numbered year.
    4. The regular term of each member shall end at the conclusion of the second ICANN annual meeting after the term began.

d. The Chair of the ALAC shall be elected by the members of theALAC pursuant to procedures adopted by the Committee.

e. The ALAC shall, after consultation with each RALO, annually appoint five voting delegates (no two of whom shall be citizens of countries in the same Geographic Region, as defined according toSection 5 of Article VI) to the Nominating Committee.

f. Subject to the provisions of the Transition Article of these Bylaws, the At-Large Advisory Committee may designate non-voting liaisons to each of the ccNSO Council and the GNSO Council.

g. There shall be one RALO for each Geographic Region established according to Section 5 of Article VI. Each RALO shall serve as the main forum and coordination point for public input to ICANN in its Geographic Region and shall be a non-profit organization certified by ICANN according to criteria and standards established by the

Board based on recommendations of the At-Large Advisory Committee. An organization shall become the recognized RALO for its Geographic Region upon entering a Memorandum of Understanding with ICANN addressing the respective roles and responsibilities of ICANN and the RALO regarding the process for selecting ALAC members and requirements of openness, participatory opportunities, transparency, accountability, and diversity in the RALO's structure and procedures, as well as criteria and standards for the RALO's constituent At-Large Structures.

h. Each RALO shall be comprised of self-supporting At-Large Structures within its Geographic Region that have been certified to meet the requirements of the RALO's Memorandum of Understanding with ICANN according to paragraph 4(i) of this Section. If so provided by its Memorandum of Understanding withICANN, a RALO may also include individual Internet users who are citizens or residents of countries within the RALO's Geographic Region.

i. Membership in the At-Large Community
    1. The criteria and standards for the certification of At-Large Structures within each Geographic Region shall be established by the Board based on recommendations from the ALAC and shall be stated in the Memorandum of Understanding between ICANN and the RALO for each Geographic Region.

    2. The criteria and standards for the certification of At-Large Structures shall be established in such a way that participation by individual Internet users who are citizens or residents of countries within the Geographic Region (as defined in Section 5 of Article VI) of the RALO will predominate in the operation of each At-Large Structure within the RALO, while not necessarily excluding additional participation, compatible with the interests of the individual Internet users within the region, by others.

    3. Each RALO's Memorandum of Understanding shall also include provisions designed to allow, to the greatest extent

possible, every individual Internet user who is a citizen of a country within the RALO's Geographic Region to participate in at least one of the RALO's At-Large Structures.

4. To the extent compatible with these objectives, the criteria and standards should also afford to each RALO the type of structure that best fits the customs and character of its Geographic Region.
5. Once the criteria and standards have been established as provided in this Clause i, the ALAC, with the advice and participation of the RALO where the applicant is based, shall be responsible for certifying organizations as meeting the criteria and standards for At-Large Structure accreditation.
6. Decisions to certify or decertify an At-Large Structure shall be made as decided by the ALAC in its Rules of Procedure, save always that any changes made to the Rules of Procedure in respect of ALS applications shall be subject to review by the RALOs and by the ICANN Board.
7. Decisions as to whether to accredit, not to accredit, or disaccredit an At-Large Structure shall be subject to review according to procedures established by the Board.
8. On an ongoing basis, the ALAC may also give advice as to whether a prospective At-Large Structure meets the applicable criteria and standards.

j. The ALAC is also responsible, working in conjunction with the RALOs, for coordinating the following activities:
    1. Making a selection by the At-Large Community to fill Seat 15 on the Board. Notification of the At-Large Community's selection shall be given by the ALAC Chair in writing to theICANN Secretary, consistent with Article VI, Sections 8(4) and 12(1).
    2. Keeping the community of individual Internet users informed about the significant news from ICANN;

3. Distributing (through posting or otherwise) an updated agenda, news about ICANN, and information about items in the ICANN policy-development process;
4. Promoting outreach activities in the community of individual Internet users;
5. Developing and maintaining on-going information and education programs, regarding ICANN and its work;
6. Establishing an outreach strategy about ICANN issues in each RALO's Region;
7. Participating in the ICANN policy development processes and providing input and advice that accurately reflects the views of individual Internet users;
8. Making public, and analyzing, ICANN's proposed policies and its decisions and their (potential) regional impact and (potential) effect on individuals in the region;
9. Offering Internet-based mechanisms that enable discussions among members of At-Large structures; and
10. Establishing mechanisms and processes that enable two-way communication between members of At-Large Structures and those involved in ICANN decision-making, so interested individuals can share their views on pendingICANN issues.

Section 3. PROCEDURES

Each Advisory Committee shall determine its own rules of procedure and quorum requirements.

Section 4. TERM OF OFFICE

The chair and each member of a committee shall serve until his or her successor is appointed, or until such committee is sooner terminated, or until he or she is removed, resigns, or otherwise ceases to qualify as a member of the committee.

Section 5. VACANCIES

Vacancies on any committee shall be filled in the same manner as provided in the case of original appointments.

Section 6. COMPENSATION

Committee members shall receive no compensation for their services as a member of a committee. The Board may, however, authorize the reimbursement of actual and necessary expenses incurred by committee members, including Directors, performing their duties as committee members.

ARTICLE XI-A: OTHER ADVISORY MECHANISMS

Section 1. EXTERNAL EXPERT ADVICE

1. Purpose. The purpose of seeking external expert advice is to allow the policy-development process within ICANN to take advantage of existing expertise that resides in the public or private sector but outside of ICANN. In those cases where there are relevant public bodies with expertise, or where access to private expertise could be helpful, the Board and constituent bodies should be encouraged to seek advice from such expert bodies or individuals.

2. Types of Expert Advisory Panels.
    a. On its own initiative or at the suggestion of any ICANN body, the Board may appoint, or authorize the President to appoint, Expert Advisory Panels consisting of public or private sector individuals or entities. If the advice sought from such Panels concerns issues of public policy, the provisions of Section 1(3)(b) of this Article shall apply.

    b. In addition, in accordance with Section 1(3) of this Article, the Board may refer issues of public policy pertinent to matters within ICANN's mission to a multinational governmental or treaty organization.

3. Process for Seeking Advice-Public Policy Matters.

   a. The Governmental Advisory Committee may at any time recommend that the Board seek advice concerning one or more issues of public policy from an external source, as set out above.

   b. In the event that the Board determines, upon such a recommendation or otherwise, that external advice should be sought concerning one or more issues of public policy, the Board shall, as appropriate, consult with the Governmental Advisory Committee regarding the appropriate source from which to seek the advice and the arrangements, including definition of scope and process, for requesting and obtaining that advice.

   c. The Board shall, as appropriate, transmit any request for advice from a multinational governmental or treaty organization, including specific terms of reference, to the Governmental Advisory Committee, with the suggestion that the request be transmitted by the Governmental Advisory Committee to the multinational governmental or treaty organization.

4. Process for Seeking and Advice-Other Matters. Any reference of issues not concerning public policy to an Expert Advisory Panel by the Board or President in accordance with Section 1(2)(a) of this Article shall be made pursuant to terms of reference describing the issues on which input and advice is sought and the procedures and schedule to be followed.

5. Receipt of Expert Advice and its Effect. External advice pursuant to this Section shall be provided in written form. Such advice is advisory and not binding, and is intended to augment the information available to the Board or other ICANN body in carrying out its responsibilities.

6. Opportunity to Comment. The Governmental Advisory Committee, in addition to the Supporting Organizations and other Advisory Committees, shall have an opportunity to comment upon any external advice received prior to any decision by the Board.

Section 2. TECHNICAL LIAISON GROUP

1. Purpose. The quality of ICANN's work depends on access to complete and authoritative information concerning the technical standards that underlie ICANN's activities. ICANN's relationship to the organizations that produce these standards is therefore particularly important. The Technical Liaison Group (TLG) shall connect the Board with appropriate sources of technical advice on specific matters pertinent to ICANN's activities.

2. TLG Organizations. The TLG shall consist of four organizations: the European Telecommunications Standards Institute (ETSI), the International Telecommunications Union's Telecommunication Standardization Sector (ITU-T), the World Wide Web Consortium (W3C), and the Internet Architecture Board (IAB).

3. Role. The role of the TLG organizations shall be to channel technical information and guidance to the Board and to otherICANN entities. This role has both a responsive component and an active "watchdog" component, which involve the following responsibilities:
   a. In response to a request for information, to connect the Board or other ICANN body with appropriate sources of technical expertise. This component of the TLG role covers circumstances in which ICANN seeks an authoritative answer to a specific technical question. Where information is requested regarding a particular technical standard for which a TLG organization is responsible, that request shall be directed to that TLG organization.

   b. As an ongoing "watchdog" activity, to advise the Board of the relevance and progress of technical developments in the areas covered by each organization's scope that could affect Board decisions or other ICANN actions, and to draw attention to global technical standards issues that affect policy development within the scope of ICANN's mission. This component of the TLG role covers circumstances in which ICANN is unaware of a new development, and would therefore otherwise not realize that a question should be asked.

4. TLG Procedures. The TLG shall not have officers or hold meetings, nor shall it provide policy advice to the Board as a committee (although TLG organizations may individually be asked by the Board to do so as the need arises in areas relevant to their individual charters). Neither shall the TLG debate or otherwise coordinate technical issues across the TLG organizations; establish or attempt to establish unified positions; or create or attempt to create additional layers or structures within the TLG for the development of technical standards or for any other purpose.
5. Technical Work with the IETF. The TLG shall have no involvement with the ICANN's work for the Internet Engineering Task Force (IETF), Internet Research Task Force, or the Internet Architecture Board (IAB), as described in the IETF-ICANN Memorandum of Understanding Concerning the Technical Work of the Internet Assigned Numbers Authority ratified by the Board on 10 March 2000.
6. Individual Technical Experts. Each TLG organization shall designate two individual technical experts who are familiar with the technical standards issues that are relevant to ICANN's activities. These 8 experts shall be available as necessary to determine, through an exchange of e-mail messages, where to direct a technical question from ICANN when ICANN does not ask a specific TLG organization directly.

ARTICLE XII: BOARD AND TEMPORARY COMMITTEES

Section 1. BOARD COMMITTEES

The Board may establish one or more committees of the Board, which shall continue to exist until otherwise determined by the Board. Only Directors may be appointed to a Committee of the Board. If a person appointed to a Committee of the Board ceases to be a Director, such person shall also cease to be a member of any Committee of the Board. Each Committee of the Board shall consist of two or more Directors. The

Board may designate one or more Directors as alternate members of any such committee, who may replace any absent member at any meeting of the committee. Committee members may be removed from a committee at any time by a two-thirds (2/3) majority vote of all members of the Board; provided, however, that any Director or Directors which are the subject of the removal action shall not be entitled to vote on such an action or be counted as a member of the Board when calculating the required two-thirds (2/3) vote; and, provided further, however, that in no event shall a Director be removed from a committee unless such removal is approved by not less than a majority of all members of the Board.

Section 2. POWERS OF BOARD COMMITTEES

1. The Board may delegate to Committees of the Board all legal authority of the Board except with respect to:
    a. The filling of vacancies on the Board or on any committee;
    b. The amendment or repeal of Bylaws or the Articles of Incorporation or the adoption of new Bylaws or Articles of Incorporation;
    c. The amendment or repeal of any resolution of the Board which by its express terms is not so amendable or repealable;
    d. The appointment of committees of the Board or the members thereof;
    e. The approval of any self-dealing transaction, as such transactions are defined in Section 5233(a) of the CNPBCL;
    f. The approval of the annual budget required by Article XVI; or
    g. The compensation of any officer described in Article XIII.
2. The Board shall have the power to prescribe the manner in which proceedings of any Committee of the Board shall be conducted. In the absence of any such prescription, such committee shall have the power to prescribe the manner in which its proceedings shall be

conducted. Unless these Bylaws, the Board or such committee shall otherwise provide, the regular and special meetings shall be governed by the provisions of Article VI applicable to meetings and actions of the Board. Each committee shall keep regular minutes of its proceedings and shall report the same to the Board from time to time, as the Board may require.

Section 3. TEMPORARY COMMITTEES

The Board may establish such temporary committees as it sees fit, with membership, duties, and responsibilities as set forth in the resolutions or charters adopted by the Board in establishing such committees.

ARTICLE XIII: OFFICERS

Section 1. OFFICERS

The officers of ICANN shall be a President (who shall serve as Chief Executive Officer), a Secretary, and a Chief Financial Officer. ICANN may also have, at the discretion of the Board, any additional officers that it deems appropriate. Any person, other than the President, may hold more than one office, except that no member of the Board (other than the President) shall simultaneously serve as an officer of ICANN.

Section 2. ELECTION OF OFFICERS

The officers of ICANN shall be elected annually by the Board, pursuant to the recommendation of the President or, in the case of the President, of the Chairman of the ICANN Board. Each such officer shall hold his or her office until he or she resigns, is removed, is otherwise disqualified to serve, or his or her successor is elected.

Section 3. REMOVAL OF OFFICERS

Any Officer may be removed, either with or without cause, by a two-thirds (2/3) majority vote of all the members of the Board. Should any vacancy occur in any office as a result of death, resignation, removal, disqualification, or any other cause, the Board may delegate the powers and duties of such office to any Officer or to any Director until such time as a successor for the office has been elected.

Section 4. PRESIDENT

The President shall be the Chief Executive Officer (CEO) of ICANN in charge of all of its activities and business. All other officers and staff shall report to the President or his or her delegate, unless stated otherwise in these Bylaws. The President shall serve as an ex officio member of the Board, and shall have all the same rights and privileges of any Board member. The President shall be empowered to call special meetings of the Board as set forth herein, and shall discharge all other duties as may be required by these Bylaws and from time to time may be assigned by the Board.

Section 5. SECRETARY

The Secretary shall keep or cause to be kept the minutes of the Board in one or more books provided for that purpose, shall see that all notices are duly given in accordance with the provisions of these Bylaws or as required by law, and in general shall perform all duties as from time to time may be prescribed by the President or the Board.

Section 6. CHIEF FINANCIAL OFFICER

The Chief Financial Officer ("CFO") shall be the chief financial officer ofICANN. If required by the Board, the CFO shall give a bond for the faithful discharge of his or her duties in such form and with such surety or sureties as the Board shall determine. The CFO shall have charge and custody of all the funds of ICANN and shall keep or cause to be kept, in books belonging to ICANN, full and accurate amounts of all receipts and disbursements, and shall deposit all money and other valuable effects in the name of ICANN in such depositories as may be designated for that purpose by the Board. The CFO shall disburse the funds of ICANN as may be ordered by the Board or the President and, whenever requested by them, shall deliver to the Board and the President an account of all his or her transactions as CFO and of the financial condition of ICANN. The CFO shall be responsible for ICANN's financial planning and forecasting and shall assist the President in the preparation of ICANN's annual budget. The CFO shall coordinate and oversee ICANN's funding, including any audits or other reviews of ICANN or its Supporting Organizations. The CFO shall be responsible for all other matters relating to the financial operation of ICANN.

Section 7. ADDITIONAL OFFICERS

In addition to the officers described above, any additional or assistant officers who are elected or appointed by the Board shall perform such duties as may be assigned to them by the President or the Board.

Section 8. COMPENSATION AND EXPENSES

The compensation of any Officer of ICANN shall be approved by the Board. Expenses incurred in connection with performance of their officer duties may be reimbursed to Officers upon approval of the President (in the case of Officers other than the President), by another Officer designated by the Board (in the case of the President), or the Board.

Section 9. CONFLICTS OF INTEREST

The Board, through the Board Governance Committee, shall establish a policy requiring a statement from each Officer not less frequently than once a year setting forth all business and other affiliations that relate in any way to the business and other affiliations of ICANN.

ARTICLE XIV: INDEMNIFICATION OF DIRECTORS, OFFICERS, EMPLOYEES, AND OTHER AGENTS

ICANN shall, to maximum extent permitted by the CNPBCL, indemnify each of its agents against expenses, judgments, fines, settlements, and other amounts actually and reasonably incurred in connection with any proceeding arising by reason of the fact that any such person is or was an agent of ICANN, provided that the indemnified person's acts were done in good faith and in a manner that the indemnified person reasonably believed to be in ICANN's best interests and not criminal. For purposes of this Article, an "agent" of ICANN includes any person who is or was a Director, Officer, employee, or any other agent of ICANN (including a member of any Supporting Organization, any Advisory Committee, the Nominating Committee, any other ICANN committee, or the Technical

Liaison Group) acting within the scope of his or her responsibility; or is or was serving at the request of ICANN as a Director, Officer, employee, or agent of another corporation, partnership, joint venture, trust, or other enterprise. The Board may adopt a resolution authorizing the purchase and maintenance of insurance on behalf of any agent of ICANN against any liability asserted against or incurred by the agent in such capacity or arising out of the agent's status as such, whether or not ICANN would have the power to indemnify the agent against that liability under the provisions of this Article.

ARTICLE XV: GENERAL PROVISIONS

Section 1. CONTRACTS

The Board may authorize any Officer or Officers, agent or agents, to enter into any contract or execute or deliver any instrument in the name of and on behalf of ICANN, and such authority may be general or confined to specific instances. In the absence of a contrary Board authorization, contracts and instruments may only be executed by the following Officers: President, any Vice President, or the CFO. Unless authorized or ratified by the Board, no other Officer, agent, or employee shall have any power or authority to bind ICANN or to render it liable for any debts or obligations.

Section 2. DEPOSITS

All funds of ICANN not otherwise employed shall be deposited from time to time to the credit of ICANN in such banks, trust companies, or other depositories as the Board, or the President under its delegation, may select.

Section 3. CHECKS

All checks, drafts, or other orders for the payment of money, notes, or other evidences of indebtedness issued in the name of ICANN shall be signed by such Officer or Officers, agent or agents, of ICANN and in such a manner as shall from time to time be determined by resolution of the Board.

Section 4. LOANS

No loans shall be made by or to ICANN and no evidences of indebtedness shall be issued in its name unless authorized by a resolution of the Board. Such authority may be general or confined to specific instances; provided, however, that no loans shall be made by ICANN to its Directors or Officers.

ARTICLE XVI: FISCAL MATTERS

Section 1. ACCOUNTING

The fiscal year end of ICANN shall be determined by the Board.

Section 2. AUDIT

At the end of the fiscal year, the books of ICANN shall be closed and audited by certified public accountants. The appointment of the fiscal auditors shall be the responsibility of the Board.

Section 3. ANNUAL REPORT AND ANNUAL STATEMENT

The Board shall publish, at least annually, a report describing its activities, including an audited financial statement and a description of any payments made by ICANN to Directors (including reimbursements of expenses).ICANN shall cause the annual report and the annual statement of certain transactions as required by the CNPBCL to be prepared and sent to each member of the Board and to such other persons as the Board may designate, no later than one hundred twenty (120) days after the close ofICANN's fiscal year.

Section 4. ANNUAL BUDGET

At least forty-five (45) days prior to the commencement of each fiscal year, the President shall prepare and submit to the Board, a proposed annual budget of ICANN for the next fiscal year, which shall be posted on the Website. The proposed budget shall identify anticipated revenue sources and levels and shall, to the extent practical, identify anticipated material expense items by line item. The Board shall adopt an annual budget and shall publish the adopted Budget on the Website.

Section 5. FEES AND CHARGES

The Board may set fees and charges for the services and benefits provided by ICANN, with the goal of fully recovering the reasonable costs of the operation of ICANN and establishing reasonable reserves for future expenses and contingencies reasonably related to the legitimate activities of ICANN. Such fees and charges shall be fair and equitable, shall be published for public comment prior to adoption, and once adopted shall be published on the Website in a sufficiently detailed manner so as to be readily accessible.

ARTICLE XVII: MEMBERS

ICANN shall not have members, as defined in the California Nonprofit Public Benefit Corporation Law ("CNPBCL"), notwithstanding the use of the term "Member" in these Bylaws, in any ICANN document, or in any action of the ICANN Board or staff.

ARTICLE XVIII: OFFICES AND SEAL

Section 1. OFFICES

The principal office for the transaction of the business of ICANN shall be in the County of Los Angeles, State of California, United States of America.ICANN may also have an additional office or offices within or outside the United States of America as it may from time to time establish.

Section 2. SEAL

The Board may adopt a corporate seal and use the same by causing it or a facsimile thereof to be impressed or affixed or reproduced or otherwise.

ARTICLE XIX: AMENDMENTS

Except as otherwise provided in the Articles of Incorporation or these Bylaws, the Articles of Incorporation or Bylaws of ICANN may be altered, amended, or repealed and new Articles of Incorporation or Bylaws adopted only upon action by a two-thirds (2/3) vote of all members of the Board.

ARTICLE XX: TRANSITION ARTICLE

Section 1. PURPOSE

This Transition Article sets forth the provisions for the transition from the processes and structures defined by the ICANN Bylaws, as amended and restated on 29 October 1999 and amended through 12 February 2002 (the "Old Bylaws"), to the processes and structures defined by the Bylaws of which this Article is a part (the "New Bylaws"). [Explanatory Note (dated 10 December 2009): For Section 5(3) of this Article, reference to the Old Bylaws refers to the Bylaws as amended and restated through to 20 March 2009.]

Section 2. BOARD OF DIRECTORS

1. For the period beginning on the adoption of this Transition Article and ending on the Effective Date and Time of the New Board, as defined in paragraph 5 of this Section 2, the Board of Directors of the Corporation ("Transition Board") shall consist of the members of the Board who would have been Directors under the Old Bylaws immediately after the conclusion of the annual meeting in 2002, except that those At-Large members of the Board under the Old Bylaws who elect to do so by notifying the Secretary of the Board on 15 December 2002 or in writing or by e-mail no later than 23 December 2002 shall also serve as members of the Transition Board. Notwithstanding the provisions of Article VI, Section 12 of the New Bylaws, vacancies on the Transition Board shall not be filled. The Transition Board shall not have liaisons as provided byArticle VI, Section 9 of the New Bylaws. The Board Committees existing on the date of adoption of this Transition Article shall continue in existence, subject to any change in Board Committees or their membership that the Transition Board may adopt by resolution.

2. The Transition Board shall elect a Chair and Vice-Chair to serve until the Effective Date and Time of the New Board.

3. The "New Board" is that Board described in Article VI, Section 2(1) of the New Bylaws.

4. Promptly after the adoption of this Transition Article, a Nominating Committee shall be formed including, to the extent feasible, the delegates and liaisons described in Article VII, Section 2 of the New Bylaws, with terms to end at the conclusion of the ICANN annual meeting in 2003. The Nominating Committee shall proceed without delay to select Directors to fill Seats 1 through 8 on the New Board, with terms to conclude upon the commencement of the first regular terms specified for those Seats in Article VI, Section 8(1)(a)-(c) of the New Bylaws, and shall give the ICANN Secretary written notice of that selection.

5. The Effective Date and Time of the New Board shall be a time, as designated by the Transition Board, during the first regular meeting of ICANN in 2003 that begins not less than seven calendar days after the ICANN Secretary has received written notice of the selection of Directors to fill at least ten of Seats 1 through 14 on the New Board. As of the Effective Date and Time of the New Board, it shall assume from the Transition Board all the rights, duties, and obligations of the ICANN Board of Directors. Subject to Section 4 of this Article, the Directors (Article VI, Section 2(1)(a)-(d)) and non-voting liaisons (Article VI, Section 9) as to which the ICANNSecretary has received notice of selection shall, along with the President (Article VI, Section 2(1)(e)), be seated upon the Effective Date and Time of the New Board, and thereafter any additional Directors and non-voting liaisons shall be seated upon the ICANNSecretary's receipt of notice of their selection.

6. The New Board shall elect a Chairman and Vice-Chairman as its first order of business. The terms of those Board offices shall expire at the end of the annual meeting in 2003.

7. Committees of the Board in existence as of the Effective Date and Time of the New Board shall continue in existence according to their existing charters, but the terms of all members of those committees shall conclude at the Effective Date and Time of the New Board. Temporary committees in existence as of the Effective Date and Time of the New Board shall continue in existence with their existing charters and membership, subject to any change the New Board may adopt by resolution.

8. In applying the term-limitation provision of Section 8(5) of Article VI, a Director's service on the Board before the Effective Date and Time of the New Board shall count as one term.

Section 3. ADDRESS SUPPORTING ORGANIZATION

The Address Supporting Organization shall continue in operation according to the provisions of the Memorandum of Understanding originally entered on 18 October 1999 between ICANN and a group of regional Internet registries (RIRs), and amended in October 2000, until a replacement Memorandum of Understanding becomes effective. Promptly after the adoption of this Transition Article, the Address Supporting Organization shall make selections, and give the ICANN Secretary written notice of those selections, of:

1. Directors to fill Seats 9 and 10 on the New Board, with terms to conclude upon the commencement of the first regular terms specified for each of those Seats in Article VI, Section 8(1)(d) and (e) of the New Bylaws; and
2. the delegate to the Nominating Committee selected by the Council of the Address Supporting Organization, as called for in Article VII, Section 2(8)(f) of the New Bylaws.

With respect to the ICANN Directors that it is entitled to select, and taking into account the need for rapid selection to ensure that the New Board becomes effective as soon as possible, the Address Supporting Organization may select those Directors from among the persons it previously selected as ICANN Directors pursuant to the Old Bylaws. To the extent the Address Supporting Organization does not provide theICANN Secretary written notice, on or before 31 March 2003, of its selections for Seat 9 and Seat 10, the Address Supporting Organizationshall be deemed to have selected for Seat 9 the person it selected as anICANN Director pursuant to the Old Bylaws for a term beginning in 2001 and for Seat 10 the person it selected as an ICANN Director pursuant to the Old Bylaws for a term beginning in 2002.

Section 4. COUNTRY-CODE NAMES SUPPORTING ORGANIZATION

1. Upon the enrollment of thirty ccTLD managers (with at least four within each Geographic Region) as members of the ccNSO, written notice shall be posted on the Website. As soon as feasible after that notice, the members of the initial ccNSO Council to be selected by the ccNSO members shall be selected according to the procedures stated in Article IX, Section 4(8) and (9). Upon the completion of that selection process, a written notice that theccNSO Council has been constituted shall be posted on the Website. Three ccNSO Council members shall be selected by theccNSO members within each Geographic Region, with one member to serve a term that ends upon the conclusion of the firstICANN annual meeting after the ccNSO Council is constituted, a second member to serve a term that ends upon the conclusion of the second ICANN annual meeting after the ccNSO Council is constituted, and the third member to serve a term that ends upon the conclusion of the third ICANN annual meeting after the ccNSOCouncil is constituted. (The definition of "ccTLD manager" stated inArticle IX, Section 4(1) and the definitions stated in Article IX, Section 4(4) shall apply within this Section 4 of Article XX.)

2. After the adoption of Article IX of these Bylaws, the Nominating Committee shall select the three members of the ccNSO Council described in Article IX, Section 3(1)(b). In selecting three individuals to serve on the ccNSO Council, the Nominating Committee shall designate one to serve a term that ends upon the conclusion of the first ICANN annual meeting after the ccNSOCouncil is constituted, a second member to serve a term that ends upon the conclusion of the second ICANN annual meeting after theccNSO Council is constituted, and the third member to serve a term that ends upon the conclusion of the third ICANN annual meeting after the ccNSO Council is constituted. The three members of theccNSO Council selected by the Nominating Committee shall not take their seats before the ccNSO Council is constituted.

3. Upon the ccNSO Council being constituted, the At-Large Advisory Committee and the Governmental Advisory Committee may designate one liaison each to the ccNSO Council, as provided

byArticle IX, Section 3(2)(a) and (b).

4. Upon the ccNSO Council being constituted, the Council may designate Regional Organizations as provided in Article IX, Section 5. Upon its designation, a Regional Organization may appoint a liaison to the ccNSO Council.

5. Until the ccNSO Council is constituted, Seats 11 and 12 on the New Board shall remain vacant. Promptly after the ccNSO Council is constituted, the ccNSO shall, through the ccNSO Council, make selections of Directors to fill Seats 11 and 12 on the New Board, with terms to conclude upon the commencement of the next regular term specified for each of those Seats in Article VI, Section 8(1)(d) and (f) of the New Bylaws, and shall give the ICANN Secretary written notice of its selections.

6. Until the ccNSO Council is constituted, the delegate to the Nominating Committee established by the New Bylaws designated to be selected by the ccNSO shall be appointed by the Transition Board or New Board, depending on which is in existence at the time any particular appointment is required, after due consultation with members of the ccTLD community. Upon the ccNSO Council being constituted, the delegate to the Nominating Committee appointed by the Transition Board or New Board according to this Section 4(9) then serving shall remain in office, except that theccNSO Council may replace that delegate with one of its choosing within three months after the conclusion of ICANN's annual meeting, or in the event of a vacancy. Subsequent appointments of the Nominating Committee delegate described in Article VII, Section 2(8)(c) shall be made by the ccNSO Council.

Section 5. GENERIC NAMES SUPPORTING ORGANIZATION

1. The Generic Names Supporting Organization ("GNSO"), upon the adoption of this Transition Article, shall continue its operations; however, it shall be restructured into four new Stakeholder Groups which shall represent, organizationally, the former Constituencies of the GNSO, subject to ICANN Board approval of each individual Stakeholder Group Charter:

   a. The gTLD Registries Constituency shall be assigned to the Registries Stakeholder Group;

   b. The Registrars Constituency shall be assigned to the Registrars Stakeholder Group;

   c. The Business Constituency shall be assigned to the Commercial Stakeholder Group;

   d. The Intellectual Property Constituency shall be assigned to the Commercial Stakeholder Group;

   e. The Internet Services Providers Constituency shall be assigned to the Commercial Stakeholder Group; and

   f. The Non-Commercial Users Constituency shall be assigned to the Non-Commercial Stakeholder Group.

2. Each GNSO Constituency described in paragraph 1 of this subsection shall continue operating substantially as before and no Constituency official, working group, or other activity shall be changed until further action of the Constituency, provided that eachGNSO Constituency described in paragraph 1 (c-f) shall submit to the ICANN Secretary a new or revised Charter inclusive of its operating procedures, adopted according to the Constituency's processes and consistent with these Bylaws Amendments, no later than the ICANN meeting in October 2009, or another date as the Board may designate by resolution.

3. Prior to the commencement of the ICANN meeting in October 2009, or another date the Board may designate by resolution, theGNSO Council shall consist of its current Constituency structure and officers as described in Article X, Section 3(1) of the Bylaws(as amended and restated on 29 October 1999 and amended through 20 March 2009 (the "Old Bylaws")). Thereafter, the composition of the GNSO Council shall be as provided in these Bylaws, as they may be amended from time to time. All committees, task forces, working groups, drafting committees, and similar groups established by the GNSO Council and in existence immediately before the adoption of this Transition Article shall continue in

existence with the same charters, membership, and activities, subject to any change by action of the GNSO Council orICANN Board.

4. Beginning with the commencement of the ICANN Meeting in October 2009, or another date the Board may designate by resolution (the "Effective Date of the Transition"), the GNSOCouncil seats shall be assigned as follows:
    a. The three seats currently assigned to the Registry Constituency shall be reassigned as three seats of the Registries Stakeholder Group;

    b. The three seats currently assigned to the Registrar Constituency shall be reassigned as three seats of the Registrars Stakeholder Group;

    c. The three seats currently assigned to each of the Business Constituency, the Intellectual Property Constituency, and the Internet Services Provider Constituency (nine total) shall be decreased to be six seats of the Commercial Stakeholder Group;

    d. The three seats currently assigned to the Non-Commercial Users Constituency shall be increased to be six seats of the Non-Commercial Stakeholder Group;

    e. The three seats currently selected by the Nominating Committee shall be assigned by the Nominating Committee as follows: one voting member to the Contracted Party House, one voting member to the Non-Contracted Party House, and one non-voting member assigned to the GNSOCouncil at large.

Representatives on the GNSO Council shall be appointed or elected consistent with the provisions in each applicable Stakeholder Group Charter, approved by the Board, and sufficiently in advance of the October 2009 ICANN Meeting that will permit those representatives to act in their official capacities at the start of said meeting.

5. The GNSO Council, as part of its Restructure Implementation Plan,

will document: (a) how vacancies, if any, will be handled during the transition period; (b) for each Stakeholder Group, how each assigned Council seat to take effect at the 2009 ICANN annual meeting will be filled, whether through a continuation of an existing term or a new election or appointment; (c) how it plans to address staggered terms such that the new GNSO Council preserves as much continuity as reasonably possible; and (d) the effect of Bylaws term limits on each Council member.

6. As soon as practical after the commencement of the ICANNmeeting in October 2009, or another date the Board may designate by resolution, the GNSO Council shall, in accordance with Article X, Section 3(7) and its GNSO Operating Procedures, elect officers and give the ICANN Secretary written notice of its selections.

Section 6. PROTOCOL SUPPORTING ORGANIZATION

The Protocol Supporting Organization referred to in the Old Bylaws is discontinued.

Section 7. ADVISORY COMMITTEES AND TECHNICAL LIAISON GROUP

1. Upon the adoption of the New Bylaws, the Governmental Advisory Committee shall continue in operation according to its existing operating principles and practices, until further action of the committee. The Governmental Advisory Committee may designate liaisons to serve with other ICANN bodies as contemplated by the New Bylaws by providing written notice to the ICANN Secretary. Promptly upon the adoption of this Transition Article, the Governmental Advisory Committee shall notify the ICANNSecretary of the person selected as its delegate to the Nominating Committee, as set forth in Article VII, Section 2 of the New Bylaws.
2. The organizations designated as members of the Technical Liaison Group under Article XI-A, Section 2(2) of the New Bylaws shall each designate the two individual technical experts described inArticle XI-A, Section 2(6) of the New Bylaws, by providing written

notice to the ICANN Secretary. As soon as feasible, the delegate from the Technical Liaison Group to the Nominating Committee shall be selected according to Article XI-A, Section 2(7) of the New Bylaws.

3. Upon the adoption of the New Bylaws, the Security and StabilityAdvisory Committee shall continue in operation according to its existing operating principles and practices, until further action of the committee. Promptly upon the adoption of this Transition Article, the Security and Stability Advisory Committee shall notify theICANN Secretary of the person selected as its delegate to the Nominating Committee, as set forth in Article VII, Section 2(4) of the New Bylaws.

4. Upon the adoption of the New Bylaws, the Root Server SystemAdvisory Committee shall continue in operation according to its existing operating principles and practices, until further action of the committee. Promptly upon the adoption of this Transition Article, the Root Server Advisory Committee shall notify the ICANNSecretary of the person selected as its delegate to the Nominating Committee, as set forth in Article VII, Section 2(3) of the New Bylaws.

5. At-Large Advisory Committee
   a. There shall exist an Interim At-Large Advisory Committeeuntil such time as ICANN recognizes, through the entry of a Memorandum of Understanding, all of the Regional At-Large Organizations (RALOs) identified in Article XI, Section 2(4) of the New Bylaws. The Interim At-Large Advisory Committee shall be composed of (i) ten individuals (two from each ICANN region) selected by the ICANN Board following nominations by the At-Large Organizing Committee and (ii) five additional individuals (one from each ICANN region) selected by the initial Nominating Committee as soon as feasible in accordance with the principles established inArticle VII, Section 5 of the New Bylaws. The initial Nominating Committee shall designate two of these individuals to serve terms until the

conclusion of the ICANNannual meeting in 2004 and three of these individuals to serve terms until the conclusion of the ICANN annual meeting in 2005.

b. Upon the entry of each RALO into such a Memorandum of Understanding, that entity shall be entitled to select two persons who are citizens and residents of that Region to be members of the At-Large Advisory Committee established by Article XI, Section 2(4) of the New Bylaws. Upon the entity's written notification to the ICANN Secretary of such selections, those persons shall immediately assume the seats held until that notification by the Interim At-LargeAdvisory Committee members previously selected by the Board from the RALO's region.

c. Upon the seating of persons selected by all five RALOs, the Interim At-Large Advisory Committee shall become the At-Large Advisory Committee, as established by Article XI, Section 2(4) of the New Bylaws. The five individuals selected to the Interim At-Large Advisory Committee by the Nominating Committee shall become members of the At-Large Advisory Committee for the remainder of the terms for which they were selected.

d. Promptly upon its creation, the Interim At-Large Advisory Committee shall notify the ICANN Secretary of the persons selected as its delegates to the Nominating Committee, as set forth in Article VII, Section 2(6) of the New Bylaws.

Section 8. OFFICERS

ICANN officers (as defined in Article XIII of the New Bylaws) shall be elected by the then-existing Board of ICANN at the annual meeting in 2002 to serve until the annual meeting in 2003.

Section 9. GROUPS APPOINTED BY THE PRESIDENT

Notwithstanding the adoption or effectiveness of the New Bylaws, task forces and other groups appointed by the ICANN President shall continue unchanged in membership, scope, and operation until changes are made by the President.

Section 10. CONTRACTS WITH ICANN

Notwithstanding the adoption or effectiveness of the New Bylaws, all agreements, including employment and consulting agreements, entered by ICANN shall continue in effect according to their terms.

Annex A: GNSO Policy Development Process

The following process shall govern the GNSO policy development process ("PDP") until such time as modifications are recommended to and approved by the ICANN Board of Directors ("Board"). The role of theGNSO is outlined in Article X of these Bylaws. If the GNSO is conducting activities that are not intended to result in a Consensus Policy, the Council may act through other processes.

Section 1. **Required Elements of a Policy Development Process**

The following elements are required at a minimum to form ConsensusPolicies as defined within ICANN contracts, and any other policies for which the GNSO Council requests application of this Annex A:

a. Final Issue Report requested by the Board, the GNSO Council ("Council") or Advisory Committee, which should include at a minimum a) the proposed issue raised for consideration, b) the identity of the party submitting the issue, and c) how that party Is affected by the issue;

b. Formal initiation of the Policy Development Process by the Council;

c. Formation of a Working Group or other designated work method;

d. Initial Report produced by a Working Group or other designated work method;

e. Final Report produced by a Working Group, or other designated work method, and forwarded to the Council for deliberation;

f. Council approval of PDP Recommendations contained in the Final Report, by the required thresholds;

g. PDP Recommendations and Final Report shall be forwarded to the Board through a Recommendations Report approved by the Council]; and

h. Board approval of PDP Recommendations.

Section 2. **Policy Development Process Manual**

The GNSO shall maintain a Policy Development Process Manual (PDPManual) within the operating procedures of the GNSO maintained by theGNSO Council. The PDP Manual shall contain specific additional guidance on completion of all elements of a PDP, including those elements that are not otherwise defined in these Bylaws. The PDP Manual and any amendments thereto are subject to a twenty-one (21) day public comment period at minimum, as well as Board oversight and review, as specified at Article X, Section 3.6.

Section 3. **Requesting an Issue Report**

Board Request. The Board may request an Issue Report by instructing theGNSO Council ("Council") to begin the process outlined the PDP Manual. In the event the Board makes a request for an Issue Report, the Board should provide a mechanism by which the GNSO Council can consult with the Board to provide information on the scope, timing, and priority of the request for an Issue Report.

Council Request. The GNSO Council may request an Issue Report by a vote of at least one-fourth (1/4) of the members of the Council of each House or a majority of one House.

Advisory Committee Request. An Advisory Committee may raise an issue for policy development by action of such committee to request an Issue Report, and transmission of that request to the Staff Manager and GNSOCouncil.

Section 4. **Creation of an Issue Report**

Within forty-five (45) calendar days after receipt of either (i) an instruction from the Board; (ii) a properly supported motion from the GNSO Council; or (iii) a properly supported motion from an Advisory Committee, the Staff Manager will create a report (a "Preliminary Issue Report"). In the event the Staff Manager determines that more time is necessary to create the Preliminary Issue Report, the Staff Manager may request an extension of time for completion of the Preliminary Issue Report.

The following elements should be considered in the Issue Report:

a. The proposed issue raised for consideration;

b. The identity of the party submitting the request for the Issue Report;

c. How that party is affected by the issue, if known;

d. Support for the issue to initiate the PDP, if known;

e. The opinion of the ICANN General Counsel regarding whether the issue proposed for consideration within the Policy Development Process is properly within the scope of the ICANN's mission, policy process and more specifically the role of the GNSO as set forth in the Bylaws.

f. The opinion of ICANN Staff as to whether the Council should initiate the PDP on the issue

Upon completion of the Preliminary Issue Report, the Preliminary Issue Report shall be posted on the ICANN website for a public comment period that complies with the designated practice for public comment periods within ICANN.

The Staff Manager is responsible for drafting a summary and analysis of the public comments received on the Preliminary Issue Report and producing a Final Issue Report based upon the comments received. The Staff Manager should forward the Final Issue Report, along with any summary and analysis of the public comments received, to the Chair of the GNSO Council for consideration for initiation of a PDP.

Section 5. **Initiation of the PDP**

The Council may initiate the PDP as follows:

Board Request: If the Board requested an Issue Report, the Council, within the timeframe set forth in the PDP Manual, shall initiate a PDP. No vote is required for such action.

GNSO Council or Advisory Committee Requests: The Council may only initiate the PDP by a vote of the Council. Initiation of a PDP requires a vote as set forth in Article X, Section 3, paragraph 9(b) and (c) in favor of initiating the PDP.

Section 6. **Reports**

An Initial Report should be delivered to the GNSO Council and posted for a public comment period that complies with the designated practice for public comment periods within ICANN, which time may be extended in accordance with the PDP Manual. Following the review of the comments received and, if required, additional deliberations, a Final Report shall be produced for transmission to the Council.

Section 7. **Council Deliberation**

Upon receipt of a Final Report, whether as the result of a working group or otherwise, the Council chair will (i) distribute the Final Report to all Council members; and (ii) call for Council deliberation on the matter in accordance with the PDP Manual.

The Council approval process is set forth in Article X, Section 3, paragraph 9(d) through (g), as supplemented by the PDP Manual.

Section 8. **Preparation of the Board Report**

If the PDP recommendations contained in the Final Report are approved by the GNSO Council, a Recommendations Report shall be approved by the GNSO Council for delivery to the ICANN Board.

Section 9. **Board Approval Processes**

The Board will meet to discuss the GNSO Council recommendation as soon as feasible, but preferably not later than the second meeting after receipt of the Board Report from the Staff Manager. Board deliberation on the PDP Recommendations contained within the Recommendations Report shall proceed as follows:

a. Any PDP Recommendations approved by a GNSO Supermajority Vote shall be adopted by the Board unless, by a vote of more than two-thirds (2/3) of the Board, the Board determines that such policy is not in the best interests of the ICANN community or ICANN. If the GNSO Council recommendation was approved by less than aGNSO Supermajority Vote, a majority vote of the Board will be sufficient to determine that such policy is not in the best interests of the ICANN community or ICANN.

b. In the event that the Board determines, in accordance with paragraph a above, that the policy recommended by a GNSOSupermajority Vote or less than a GNSO Supermajority vote is not in the best interests of the ICANN community or ICANN (the Corporation), the Board shall (i) articulate the reasons for its determination in a report to the Council (the "Board Statement"); and (ii) submit the Board Statement to the Council.

c. The Council shall review the Board Statement for discussion with the Board as soon as feasible after the Council's receipt of the Board Statement. The Board shall determine the method (e.g., by teleconference, e-mail, or otherwise) by which the Council and Board will discuss the Board Statement.

d. At the conclusion of the Council and Board discussions, the Council shall meet to affirm or modify its recommendation, and communicate that conclusion (the "Supplemental Recommendation") to the Board, including an explanation for the then-current recommendation. In the event that the Council is able to reach a GNSO Supermajority Vote on the Supplemental Recommendation, the Board shall adopt the recommendation unless more than two-thirds (2/3) of the Board determines that such policy is not in the interests of the ICANN community or ICANN. For any Supplemental Recommendation approved by less than aGNSO Supermajority Vote, a majority vote of the Board shall be sufficient to determine that the policy in the Supplemental Recommendation is not in the best interest of the ICANNcommunity or ICANN.

Section 10. **Implementation of Approved Policies**

Upon a final decision of the Board adopting the policy, the Board shall, as appropriate, give authorization or direction to ICANN staff to work with theGNSO Council to create an implementation plan based upon the implementation recommendations identified in the Final Report, and to implement the policy. The GNSO Council may, but is not required to, direct the creation of an implementation review team to assist in implementation of the policy.

Section 11. **Maintenance of Records**

Throughout the PDP, from policy suggestion to a final decision by the Board, ICANN will maintain on the Website, a status web page detailing the progress of each PDP issue. Such status page will outline the completed and upcoming steps in the PDP process, and contain links to key resources (e.g. Reports, Comments Fora, WG Discussions, etc.).

Section 12. **Additional Definitions**

"Comment Site", "Comment Forum", "Comments For a" and "Website" refer to one or more websites designated by ICANN on which notifications and comments regarding the PDP will be posted.

"Supermajority Vote" means a vote of more than sixty-six (66) percent of the members present at a meeting of the applicable body, with the exception of the GNSO Council.

"Staff Manager" means an ICANN staff person(s) who manages the PDP.

"GNSO Supermajority Vote" shall have the meaning set forth in the Bylaws.

Section 13. **Applicability**

The procedures of this Annex A shall be applicable to all requests for Issue Reports and PDPs initiated after 8 December 2011. For all ongoing PDPs initiated prior to 8 December 2011, the Council shall determine the feasibility of transitioning to the procedures set forth in this Annex A for all remaining steps within the PDP. If the Council determines that any ongoing PDP cannot be feasibly transitioned to these updated procedures, the PDP shall be concluded according to the procedures set forth in Annex A in force on 7 December 2011.

Annex A-1: GNSO Expedited Policy Development Process

The following process shall govern the specific instances where the GNSOCouncil invokes the GNSO Expedited Policy Development Process ("EPDP"). The GNSO Council may invoke the EPDP in the following limited circumstances: (1) to address a narrowly defined policy issue that was identified and scoped after either the adoption of a GNSO policy recommendation by the ICANN Board or the implementation of such an adopted recommendation; or (2) to create new or additional recommendations for a specific policy issue that had been substantially scoped previously such that extensive, pertinent background information already exists, e.g. (a) in an Issue Report for a possible PDP that was not initiated; (b) as part of a previous PDP that was not completed; or (c) through other projects such as a GGP. The following process shall be in place until such time as modifications are recommended to and approved by the ICANN Board of Directors. Where a conflict arises in relation to an EPDP between the PDP Manual (see Annex 2 of the GNSO Operating Procedures) and the procedures described in this Annex A-1, the provisions of this Annex A-1 shall prevail.

The role of the GNSO is outlined in Article X of these Bylaws. Provided the Council believes and documents via Council vote that the above-listed criteria are met, an EPDP may be initiated to recommend an amendment to an existing Consensus Policy; however, in all cases where the GNSO is conducting policy-making activities that do not meet the above criteria as documented in a Council vote, the Council should act through a Policy Development Process (see Annex A).

Section 1. **Required Elements of a GNSO Expedited Policy Development Process**

The following elements are required at a minimum to develop expeditedGNSO policy recommendations, including recommendations that could result in amendments to an existing Consensus Policy, as part of a GNSOExpedited Policy Development Process:

a. Formal initiation of the GNSO Expedited Policy Development Process by the GNSO Council, including an EPDP scoping document;

b. Formation of an EPDP Team or other designated work method;

c. Initial Report produced by an EPDP Team or other designated work method;

d. Final EPDP Policy Recommendation(s) Report produced by an EPDP Team, or other designated work method, and forwarded to the Council for deliberation;

e. GNSO Council approval of EPDP Policy Recommendations contained in the Final EPDP Policy Recommendation(s) Report, by the required thresholds;

f. EPDP Recommendations and Final EPDP Recommendation(s) Report forwarded to the Board through a Recommendations Report approved by the Council; and

g. Board approval of EPDP Recommendation(s).

Section 2. **Expedited Policy Development Process Manual**

The GNSO shall include a specific section(s) on the EPDP process as part of its maintenance of the GNSO Policy Development Process Manual (PDP Manual), described in Annex 5 of the GNSO Operating Procedures. The EPDP Manual shall contain specific additional guidance on completion of all elements of an EPDP, including those elements that are not otherwise defined in these Bylaws. The EPDP Manual and any amendments thereto are subject to a twenty-one (21) day public comment period at minimum, as well as Board oversight and review, as specified at Article X, Section 3.4.

Section 3. **Initiation of the EPDP**

The Council may initiate an EPDP as follows:

The Council may only initiate the EPDP by a vote of the Council. Initiation of an EPDP requires an affirmative Supermajority vote of the Council (as defined in these Bylaws) in favor of initiating the EPDP.

The request to initiate an EPDP must be accompanied by an EPDP scoping document, which is expected to include at a minimum the following information:

1. Name of Council Member / SG / C;
2. Origin of issue (e.g. previously completed PDP);
3. Scope of the effort (detailed description of the issue or question that the EPDP is expected to address);
4. Description of how this issue meets the criteria for an EPDP, i.e. how the EPDP will address either: (1) a narrowly defined policy issue that was identified and scoped after either the adoption of aGNSO policy recommendation by the ICANN Board or the implementation of such an adopted recommendation, or (2) new or additional policy recommendations on a specific GNSO policy issue that had been scoped previously as part of a PDP that was not completed or other similar effort, including relevant supporting information in either case;
5. If not provided as part of item 4, the opinion of the ICANN General Counsel as to whether the issue proposed for consideration is properly within the scope of the ICANN's mission, policy process and more specifically the role of the GNSO;
6. Proposed EPDP mechanism (e.g. WG, DT, individual volunteers);
7. Method of operation, if different from GNSO Working Group

Guidelines;

8. Decision-making methodology for EPDP mechanism, if different from GNSO Working Group Guidelines;
9. Target completion date.

Section 4. **Council Deliberation**

Upon receipt of an EPDP Final Recommendation(s) Report, whether as the result of an EPDP Team or otherwise, the Council chair will (i) distribute the Final EPDP Recommendation(s) Report to all Council members; and (ii) call for Council deliberation on the matter in accordance with the PDP Manual.

Approval of EPDP Recommendation(s) requires an affirmative vote of the Council meeting the thresholds set forth in in Article X, Section 3, paragraphs 9 n-o, as supplemented by the PDP Manual.

Section 5. **Preparation of the Board Report**

If the EPDP Recommendation(s) contained in the Final EPDP Recommendation(s) Report are approved by the GNSO Council, a Recommendation(s) Report shall be approved by the GNSO Council for delivery to the ICANN Board.

Section 6. **Board Approval Processes**

The Board will meet to discuss the EPDP recommendation(s) as soon as feasible, but preferably not later than the second meeting after receipt of the Recommendations Report from the Staff Manager. Board deliberation on the EPDP Recommendations contained within the Recommendations Report shall proceed as follows:

a. Any EPDP Recommendations approved by a GNSO Supermajority Vote shall be adopted by the Board unless, by a vote of more than two-thirds (2/3) of the Board, the Board determines that such policy is not in the best interests of the ICANN community or ICANN. If the GNSO Council recommendation was approved by less than aGNSO Supermajority Vote, a majority vote of the Board will be sufficient to determine that such policy is not in the best interests of the ICANN community or ICANN.

b. In the event that the Board determines, in accordance with paragraph a above, that the proposed EPDP Recommendations are not in the best interests of the ICANN community or ICANN (the Corporation), the Board shall (i) articulate the reasons for its determination in a report to the Council (the "Board Statement"); and (ii) submit the Board Statement to the Council.

c. The Council shall review the Board Statement for discussion with the Board as soon as feasible after the Council's receipt of the Board Statement. The Board shall determine the method (e.g., by teleconference, e-mail, or otherwise) by which the Council and Board will discuss the Board Statement.

d. At the conclusion of the Council and Board discussions, the Council shall meet to affirm or modify its recommendation, and communicate that conclusion (the "Supplemental Recommendation") to the Board, including an explanation for the then-current recommendation. In the event that the Council is able to reach a GNSO Supermajority Vote on the Supplemental Recommendation, the Board shall adopt the recommendation unless more than two-thirds (2/3) of the Board determines that such guidance is not in the interests of the ICANN community or ICANN. For any Supplemental Recommendation approved by less than aGNSO Supermajority Vote, a majority vote of the Board shall be sufficient to determine that the guidance in the Supplemental Recommendation is not in the best interest of the ICANNcommunity or ICANN.

Section 7. **Implementation of Approved Policies**

Upon a final decision of the Board adopting the EPDP recommendations, the Board shall, as appropriate, give authorization or direction to ICANNstaff to implement the EPDP Recommendations. If deemed necessary, the Board shall direct ICANN staff to work with the GNSO Council to create a guidance implementation plan, based upon the guidance recommendations identified in the Final EPDP Recommendation(s) Report.

Section 8. **Maintenance of Records**

Throughout the EPDP, from initiation to a final decision by the Board,ICANN will maintain on the Website, a status web page detailing the progress of each EPDP issue. Such status page will outline the completed and upcoming steps in the EPDP process, and contain links to key resources (e.g. Reports, Comments Fora, EPDP Discussions, etc.).

Section 9. **Applicability**

The procedures of this Annex A-1 shall be applicable from 28 September 2015 onwards.

Annex A-2: GNSO Guidance Process

The following process shall govern the GNSO guidance process ("GGP") until such time as modifications are recommended to and approved by theICANN Board of Directors ("Board"). The role of the GNSO is outlined in Article X of these Bylaws. If the GNSO is conducting activities that are intended to result in a Consensus Policy, the Council should act through a Policy Development Process (see Annex A).

Section 1. **Required Elements of a GNSO Guidance Process**

The following elements are required at a minimum to develop GNSOguidance:

1. Formal initiation of the GNSO Guidance Process by the Council, including a GGP scoping document;
2. Identification of the types of expertise needed on the GGP Team;
3. Recruiting and formation of a GGP Team or other designated work method;
4. Proposed GNSO Guidance Recommendation(s) Report produced

by a GGP Team or other designated work method;

5. Final GNSO Guidance Recommendation(s) Report produced by a GGP Team, or other designated work method, and forwarded to the Council for deliberation;
6. Council approval of GGP Recommendations contained in the Final Recommendation(s) Report, by the required thresholds;
7. GGP Recommendations and Final Recommendation(s) Report shall be forwarded to the Board through a Recommendations Report approved by the Council; and
8. Board approval of GGP Recommendation(s).

Section 2. **GNSO Guidance Process Manual**

The GNSO shall maintain a GNSO Guidance Process (GGP Manual) within the operating procedures of the GNSO maintained by the GNSOCouncil. The GGP Manual shall contain specific additional guidance on completion of all elements of a GGP, including those elements that are not otherwise defined in these Bylaws. The GGP Manual and any amendments thereto are subject to a twenty-one (21) day public comment period at minimum, as well as Board oversight and review, as specified at Article X, Section 3.4.

Section 3. **Initiation of the GGP**

The Council may initiate a GGP as follows:

The Council may only initiate the GGP by a vote of the Council or at the formal request of the ICANN Board. Initiation of a GGP requires a vote as set forth in Article X, Section 3, paragraph 9.p in favor of initiating the GGP. In the case of a GGP requested by the ICANN Board, a GGP will automatically be initiated unless the GNSO Council votes against the initiation of a GGP as set forth in Article X, Section 3, paragraph 9 q[1].

The request to initiate a GGP must be accompanied by a GGP scoping document, which is expected to include at a minimum the following information:

1. Name of Council Member / SG / C
2. Origin of issue (e.g., board request)
3. Scope of the effort (detailed description of the issue or question that the GGP is expected to address)
4. Proposed GGP mechanism (e.g. WG, DT, individual volunteers)
5. Method of operation, if different from GNSO Working Group Guidelines
6. Decision-making methodology for GGP mechanism, if different from GNSO Working Group Guidelines
7. Desired completion date and rationale

In the event the Board makes a request for a GGP, the Board should provide a mechanism by which the GNSO Council can consult with the Board to provide information on the scope, timing, and priority of the request for a GGP.

Section 4. **Council Deliberation**

Upon receipt of a Final Recommendation(s) Report, whether as the result of a GGP Team or otherwise, the Council chair will (i) distribute the Final Recommendation(s) Report to all Council members; and (ii) call for Council deliberation on the matter in accordance with the GGP Manual.

The Council approval process is set forth in Article X, Section 3, paragraph 9. r[2] as supplemented by the GGP Manual.

Section 5. **Preparation of the Board Report**

If the GGP recommendations contained in the Final Recommendation(s) Report are approved by the GNSO Council, a Recommendations Report shall be approved by the GNSO Council for delivery to the ICANN Board.

Section 6. **Board Approval Processes**

The Board will meet to discuss the GNSO Guidance recommendation(s) as soon as feasible, but preferably not later than the second meeting after receipt of the Board Report from the Staff Manager. Board deliberation on the GGP Recommendations contained within the Recommendations Report shall proceed as follows:

a. Any GGP Recommendations approved by a GNSO Supermajority Vote shall be adopted by the Board unless, by a vote of more than two-thirds (2/3) of the Board, the Board determines that such guidance is not in the best interests of the ICANN community orICANN.

b. In the event that the Board determines, in accordance with paragraph a above, that the proposed GNSO Guidance recommendation(s) adopted by a GNSO Supermajority Vote is not in the best interests of the ICANN community or ICANN (the Corporation), the Board shall (i) articulate the reasons for its determination in a report to the Council (the "Board Statement"); and (ii) submit the Board Statement to the Council.

c. The Council shall review the Board Statement for discussion with the Board as soon as feasible after the Council's receipt of the Board Statement. The Board shall determine the method (e.g., by teleconference, e-mail, or otherwise) by which the Council and Board will discuss the Board Statement.

d. At the conclusion of the Council and Board discussions, the Council shall meet to affirm or modify its recommendation, and communicate that conclusion (the "Supplemental Recommendation") to the Board, including an explanation for the then-current recommendation. In the event that the Council is able to reach a GNSO Supermajority Vote on the Supplemental Recommendation, the Board shall adopt the recommendation unless more than two-thirds (2/3) of the Board determines that such guidance is not in the interests of the ICANN community or ICANN.

Section 7. **Implementation of Approved GNSO Guidance**

Upon a final decision of the Board adopting the guidance, the Board shall, as appropriate, give authorization or direction to ICANN staff to implement the GNSO Guidance. If deemed necessary, the Board may direct ICANNStaff to work with the GNSO Council to create a guidance implementation plan, if deemed necessary, based upon the guidance recommendations identified in the Final Recommendation(s) Report.

Section 8. **Maintenance of Records**

Throughout the GGP, from initiation to a final decision by the Board,ICANN will maintain on the Website, a status web page detailing the progress of each GGP issue. Such status page will outline the completed and upcoming steps in the GGP process, and contain links to key resources (e.g. Reports, Comments Fora, GGP Discussions, etc.).

Section 9. **Additional Definitions**

"Comment Site", "Comment Forum", "Comments Fora" and "Website" refer to one or more websites designated by ICANN on which notifications and comments regarding the GGP will be posted.

"GGP Staff Manager" means an ICANN staff person(s) who manages the GGP.

Annex B: ccNSO Policy-Development Process (ccPDP)

The following process shall govern the ccNSO policy-development process ("PDP").

1. Request for an Issue Report

An Issue Report may be requested by any of the following:

a. *Council.* The ccNSO Council (in this Annex B, the "Council") may call for the creation of an Issue Report by an affirmative vote of at least seven of the members of the Council present at any meeting or voting by e-mail.

b. *Board.* The ICANN Board may call for the creation of an Issue Report by requesting the Council to begin the policy-development process.

c. *Regional Organization.* One or more of the Regional Organizations representing ccTLDs in the ICANN recognized Regions may call for creation of an Issue Report by requesting the Council to begin the policy-development process.

d. *ICANN Supporting Organization or Advisory Committee.* An ICANNSupporting Organization or an ICANN Advisory Committee may call for creation of an Issue Report by requesting the Council to begin the policy-development process.

e. *Members of the ccNSO.* The members of the ccNSO may call for the creation of an Issue Report by an affirmative vote of at least ten members of the ccNSO present at any meeting or voting by e-mail.

Any request for an Issue Report must be in writing and must set out the issue upon which an Issue Report is requested in sufficient detail to enable the Issue Report to be prepared. It shall be open to the Council to request further information or undertake further research or investigation for the purpose of determining whether or not the requested Issue Report should be created.

2. Creation of the Issue Report and Initiation Threshold

Within seven days after an affirmative vote as outlined in Item 1(a) above or the receipt of a request as outlined in Items 1 (b), (c), or (d) above the Council shall appoint an Issue Manager. The Issue Manager may be a staff member of ICANN (in which case the costs of the Issue Manager shall be borne by ICANN) or such other person or persons selected by the Council (in which case the ccNSO shall be responsible for the costs of the Issue Manager).

Within fifteen (15) calendar days after appointment (or such other time as the Council shall, in consultation with the Issue Manager, deem to be appropriate), the Issue Manager shall create an Issue Report. Each Issue Report shall contain at least the following:

a. The proposed issue raised for consideration;

b. The identity of the party submitting the issue;

c. How that party is affected by the issue;

d. Support for the issue to initiate the PDP;

e. A recommendation from the Issue Manager as to whether the Council should move to initiate the PDP for this issue (the "Manager Recommendation"). Each Manager Recommendation shall include, and be supported by, an opinion of the ICANNGeneral Counsel regarding whether the issue is properly within the scope of the ICANN policy process and within the scope of theccNSO. In coming to his or her opinion, the General Counsel shall examine whether:

    1. The issue is within the scope of ICANN's mission statement;

    2. Analysis of the relevant factors according to Article IX, Section 6(2) and Annex C affirmatively demonstrates that the issue is within the scope of the ccNSO;

    In the event that the General Counsel reaches an opinion in the affirmative with respect to points 1 and 2 above then the General Counsel shall also consider whether the issue:

    3. Implicates or affects an existing ICANN policy;

    4. Is likely to have lasting value or applicability, albeit with the need for occasional updates, and to establish a guide or framework for future decision-making.

In all events, consideration of revisions to the ccPDP (this Annex B) or to the scope of the ccNSO (Annex C) shall be within the scope ofICANN and the ccNSO.

In the event that General Counsel is of the opinion the issue is not properly within the scope of the ccNSO Scope, the Issue Manager shall inform the Council of this opinion. If after an analysis of the relevant factors according to Article IX, Section 6 and Annex C a majority of 10 or more Council members is of the opinion the issue is within scope the Chair of the ccNSO shall inform the Issue Manager accordingly. General Counsel and the ccNSO Council shall engage in a dialogue according to agreed rules and procedures to resolve the matter. In the event no agreement is reached between General Counsel and the Council as to whether the issue is within or outside Scope of the ccNSO then by a vote of 15 or more members the Council may decide the issue is within scope. The Chair of the ccNSOshall inform General Counsel and the Issue Manager accordingly. The Issue Manager shall then proceed with a recommendation whether or not the Council should move to initiate the PDP including both the opinion and analysis of General Counsel and Council in the Issues Report.

f. In the event that the Manager Recommendation is in favor of initiating the PDP, a proposed time line for conducting each of the stages of PDP outlined herein (PDP Time Line).

g. If possible, the issue report shall indicate whether the resulting output is likely to result in a policy to be approved by the ICANNBoard. In some circumstances, it will not be possible to do this until substantive discussions on the issue have taken place. In these cases, the issue report should indicate this uncertainty.Upon completion of the Issue Report, the Issue Manager shall distribute it to the full Council for a vote on whether to initiate the PDP.

3. Initiation of PDP

The Council shall decide whether to initiate the PDP as follows:

a. Within 21 days after receipt of an Issue Report from the Issue Manager, the Council shall vote on whether to initiate the PDP. Such vote should be taken at a meeting held in any manner deemed appropriate by the Council, including in person or by conference call, but if a meeting is not feasible the vote may occur by e-mail.

b. A vote of ten or more Council members in favor of initiating thePDP shall be required to initiate the PDP provided that the Issue Report states that the issue is properly within the scope of theICANN mission statement and the ccNSO Scope.

4. Decision Whether to Appoint Task Force; Establishment of Time Line

At the meeting of the Council where the PDP has been initiated (or, where the Council employs a vote by e-mail, in that vote) pursuant to Item 3 above, the Council shall decide, by a majority vote of members present at the meeting (or voting by e-mail), whether or not to appoint a task force to address the issue. If the Council votes:

a. In favor of convening a task force, it shall do so in accordance with Item 7 below.

b. Against convening a task force, then it shall collect information on the policy issue in accordance with Item 8 below.

The Council shall also, by a majority vote of members present at the meeting or voting by e-mail, approve or amend and approve the PDP Time Lineset out in the Issue Report.

5. Composition and Selection of Task Forces

a. Upon voting to appoint a task force, the Council shall invite each of the Regional Organizations (see Article IX, Section 6) to appoint two individuals to participate in the task force (the "Representatives"). Additionally, the Council may appoint up to three advisors (the "Advisors") from outside the ccNSO and, following formal request for GAC participation in the Task Force, accept up to two Representatives from the Governmental Advisory Committee to sit on the task force. The Council may increase the number of Representatives that may sit on a task force in its discretion in circumstances that it deems necessary or appropriate.

b. Any Regional Organization wishing to appoint Representatives to the task force must provide the names of the Representatives to the Issue Manager within ten (10) calendar days after such request so that they are included on the task force. Such Representatives need not be members of the Council, but each must be an individual who has an interest, and ideally knowledge and expertise, in the subject matter, coupled with the ability to devote a substantial amount of time to the task force's activities.

c. The Council may also pursue other actions that it deems appropriate to assist in the PDP, including appointing a particular individual or organization to gather information on the issue or scheduling meetings for deliberation or briefing. All such information shall be submitted to the Issue Manager in accordance with the PDP Time Line.

6. Public Notification of Initiation of the PDP and Comment Period

After initiation of the PDP, ICANN shall post a notification of such action to the Website and to the other ICANN Supporting Organizations andAdvisory Committees. A comment period (in accordance with the PDPTime Line, and ordinarily at least 21 days long) shall be commenced for the issue. Comments shall be accepted from ccTLD managers, otherSupporting Organizations, Advisory Committees, and from the public. The Issue Manager, or some other designated Council representative shall review the comments and incorporate them into a report (the "Comment Report") to be included in either the Preliminary Task Force Report or the Initial Report, as applicable.

7. Task Forces

a. *Role of Task Force.* If a task force is created, its role shall be responsible for (i) gathering information documenting the positions of the ccNSO members within the Geographic Regions and other parties and groups; and (ii) otherwise obtaining relevant information that shall enable the Task Force Report to be as complete and informative as possible to facilitate the Council's meaningful and informed deliberation.

The task force shall not have any formal decision-making authority. Rather, the role of the task force shall be to gather information that shall document the positions of various parties or groups as specifically and comprehensively as possible, thereby enabling the

Council to have a meaningful and informed deliberation on the issue.

b. *Task Force Charter or Terms of Reference.* The Council, with the assistance of the Issue Manager, shall develop a charter or terms of reference for the task force (the "Charter") within the time designated in the PDP Time Line. Such Charter shall include:
    1. The issue to be addressed by the task force, as such issue was articulated for the vote before the Council that initiated the PDP;
    2. The specific time line that the task force must adhere to, as set forth below, unless the Council determines that there is a compelling reason to extend the timeline; and
    3. Any specific instructions from the Council for the task force, including whether or not the task force should solicit the advice of outside advisors on the issue.

The task force shall prepare its report and otherwise conduct its activities in accordance with the Charter. Any request to deviate from the Charter must be formally presented to the Council and may only be undertaken by the task force upon a vote of a majority of the Council members present at a meeting or voting by e-mail. The quorum requirements of Article IX, Section 3(14) shall apply to Council actions under this Item 7(b).

c. *Appointment of Task Force Chair.* The Issue Manager shall convene the first meeting of the task force within the time designated in the PDP Time Line. At the initial meeting, the task force members shall, among other things, vote to appoint a task force chair. The chair shall be responsible for organizing the activities of the task force, including compiling the Task Force Report. The chair of a task force need not be a member of the Council.

d. *Collection of Information.*
    1. *Regional Organization Statements.* The Representatives shall each be responsible for soliciting the position of the Regional Organization for their Geographic Region, at a

minimum, and may solicit other comments, as each Representative deems appropriate, including the comments of the ccNSO members in that region that are not members of the Regional Organization, regarding the issue under consideration. The position of the Regional Organization and any other comments gathered by the Representatives should be submitted in a formal statement to the task force chair (each, a "Regional Statement") within the time designated in the PDP Time Line. Every Regional Statement shall include at least the following:

  i. If a Supermajority Vote (as defined by the Regional Organization) was reached, a clear statement of the Regional Organization's position on the issue;

  ii. If a Supermajority Vote was not reached, a clear statement of all positions espoused by the members of the Regional Organization;

  iii. A clear statement of how the Regional Organization arrived at its position(s). Specifically, the statement should detail specific meetings, teleconferences, or other means of deliberating an issue, and a list of all members who participated or otherwise submitted their views;

  iv. A statement of the position on the issue of anyccNSO members that are not members of the Regional Organization;

  v. An analysis of how the issue would affect the Region, including any financial impact on the Region; and

  vi. An analysis of the period of time that would likely be necessary to implement the policy.

2. *Outside Advisors.* The task force may, in its discretion, solicit the opinions of outside advisors, experts, or other members of the public. Such opinions should be set forth in a report prepared by such outside advisors, and (i) clearly labeled as coming from outside advisors; (ii) accompanied

by a detailed statement of the advisors' (a) qualifications and relevant experience and (b) potential conflicts of interest. These reports should be submitted in a formal statement to the task force chair within the time designated in the PDP Time Line.

e. *Task Force Report.* The chair of the task force, working with the Issue Manager, shall compile the Regional Statements, the Comment Report, and other information or reports, as applicable, into a single document ("Preliminary Task Force Report") and distribute the Preliminary Task Force Report to the full task force within the time designated in the PDP Time Line. The task force shall have a final task force meeting to consider the issues and try and reach a Supermajority Vote. After the final task force meeting, the chair of the task force and the Issue Manager shall create the final task force report (the "Task Force Report") and post it on the Website and to the other ICANN Supporting Organizations andAdvisory Committees. Each Task Force Report must include:

   1. A clear statement of any Supermajority Vote (being 66% of the task force) position of the task force on the issue;

   2. If a Supermajority Vote was not reached, a clear statement of all positions espoused by task force members submitted within the time line for submission of constituency reports. Each statement should clearly indicate (i) the reasons underlying the position and (ii) the Regional Organizations that held the position;

   3. An analysis of how the issue would affect each Region, including any financial impact on the Region;

   4. An analysis of the period of time that would likely be necessary to implement the policy; and

   5. The advice of any outside advisors appointed to the task force by the Council, accompanied by a detailed statement of the advisors' (i) qualifications and relevant experience and (ii) potential conflicts of interest.

8. Procedure if No Task Force is Formed

a. If the Council decides not to convene a task force, each Regional Organization shall, within the time designated in the PDP Time Line, appoint a representative to solicit the Region's views on the issue. Each such representative shall be asked to submit a Regional Statement to the Issue Manager within the time designated in the PDP Time Line.

b. The Council may, in its discretion, take other steps to assist in thePDP, including, for example, appointing a particular individual or organization, to gather information on the issue or scheduling meetings for deliberation or briefing. All such information shall be submitted to the Issue Manager within the time designated in thePDP Time Line.

c. The Council shall formally request the Chair of the GAC to offer opinion or advice.

d. The Issue Manager shall take all Regional Statements, the Comment Report, and other information and compile (and post on the Website) an Initial Report within the time designated in the PDPTime Line. Thereafter, the Issue Manager shall, in accordance with Item 9 below, create a Final Report.

9. Comments to the Task Force Report or Initial Report

a. A comment period (in accordance with the PDP Time Line, and ordinarily at least 21 days long) shall be opened for comments on the Task Force Report or Initial Report. Comments shall be accepted from ccTLD managers, other Supporting Organizations,Advisory Committees, and from the public. All comments shall include the author's name, relevant experience, and interest in the issue.

b. At the end of the comment period, the Issue Manager shall review the comments received and may, in the Issue Manager's reasonable discretion, add appropriate comments to the Task Force Report or Initial Report, to prepare the "Final Report". The Issue Manager shall not be obligated to include all comments made during the comment period, nor shall the Issue Manager be obligated to include all comments submitted by any one individual or organization.

c. The Issue Manager shall prepare the Final Report and submit it to the Council chair within the time designated in the PDP Time Line.

10. Council Deliberation

a. Upon receipt of a Final Report, whether as the result of a task force or otherwise, the Council chair shall (i) distribute the Final Report to all Council members; (ii) call for a Council meeting within the time designated in the PDP Time Line wherein the Council shall work towards achieving a recommendation to present to the Board; and (iii) formally send to the GAC Chair an invitation to the GAC to offer opinion or advice. Such meeting may be held in any manner deemed appropriate by the Council, including in person or by conference call. The Issue Manager shall be present at the meeting.

b. The Council may commence its deliberation on the issue prior to the formal meeting, including via in-person meetings, conference calls, e-mail discussions, or any other means the Council may choose.

c. The Council may, if it so chooses, solicit the opinions of outside advisors at its final meeting. The opinions of these advisors, if relied upon by the Council, shall be (i) embodied in the Council's report to the Board, (ii) specifically identified as coming from an outside advisor; and (iii) accompanied by a detailed statement of the advisor's (a) qualifications and relevant experience and (b) potential conflicts of interest.

11. Recommendation of the Council

In considering whether to make a recommendation on the issue (a "Council Recommendation"), the Council shall seek to act by consensus. If a minority opposes a consensus position, that minority shall prepare and circulate to the Council a statement explaining its reasons for opposition. If the Council's discussion of the statement does not result in consensus, then a recommendation supported by 14 or more of the Council members shall be deemed to reflect the view of the Council, and shall be conveyed to the Members as the Council's Recommendation. Notwithstanding the foregoing, as outlined below, all viewpoints expressed by Council members during the PDP must be included in the Members Report.

12. Council Report to the Members

In the event that a Council Recommendation is adopted pursuant to Item 11 then the Issue Manager shall, within seven days after the Council meeting, incorporate the Council's Recommendation together with any other viewpoints of the Council members into a Members Report to be approved by the Council and then to be submitted to the Members (the "Members Report"). The Members Report must contain at least the following:

a. A clear statement of the Council's recommendation;

b. The Final Report submitted to the Council; and

c. A copy of the minutes of the Council's deliberation on the policy issue (see Item 10), including all the opinions expressed during such deliberation, accompanied by a description of who expressed such opinions.

13. Members Vote

Following the submission of the Members Report and within the time designated by the PDP Time Line, the ccNSO members shall be given an opportunity to vote on the Council Recommendation. The vote of members shall be electronic and members' votes shall be lodged over such a period of time as designated in the PDP Time Line (at least 21 days long).

In the event that at least 50% of the ccNSO members lodge votes within the voting period, the resulting vote will be be employed without further process. In the event that fewer than 50% of the ccNSO members lodge votes in the first round of voting, the first round will not be employed and the results of a final, second round of voting, conducted after at least thirty days notice to the ccNSO members, will be employed if at least 50% of theccNSO members lodge votes. In the event that more than 66% of the votes received at the end of the voting period shall be in favor of the

Council Recommendation, then the recommendation shall be conveyed to the Board in accordance with Item 14 below as the ccNSORecommendation.

14. Board Report

The Issue Manager shall within seven days after a ccNSORecommendation being made in accordance with Item 13 incorporate theccNSO Recommendation into a report to be approved by the Council and then to be submitted to the Board (the "Board Report"). The Board Report must contain at least the following:

a. A clear statement of the ccNSO recommendation;

b. The Final Report submitted to the Council; and

c. the Members' Report.

15. Board Vote

a. The Board shall meet to discuss the ccNSO Recommendation as soon as feasible after receipt of the Board Report from the Issue Manager, taking into account procedures for Board consideration.

b. The Board shall adopt the ccNSO Recommendation unless by a vote of more than 66% the Board determines that such policy is not in the best interest of the ICANN community or of ICANN.
    1. In the event that the Board determines not to act in accordance with the ccNSO Recommendation, the Board shall (i) state its reasons for its determination not to act in accordance with the ccNSO Recommendation in a report to the Council (the "Board Statement"); and (ii) submit the Board Statement to the Council.

    2. The Council shall discuss the Board Statement with the Board within thirty days after the Board Statement is submitted to the Council. The Board shall determine the method (e.g., by teleconference, e-mail, or otherwise) by which the Council and Board shall discuss the Board Statement. The discussions shall be held in good faith and in a timely and efficient manner, to find a mutually

acceptable solution.

3. At the conclusion of the Council and Board discussions, the Council shall meet to affirm or modify its Council Recommendation. A recommendation supported by 14 or more of the Council members shall be deemed to reflect the view of the Council (the Council's "Supplemental Recommendation"). That Supplemental Recommendation shall be conveyed to the Members in a Supplemental Members Report, including an explanation for the Supplemental Recommendation. Members shall be given an opportunity to vote on the Supplemental Recommendation under the same conditions outlined in Item 13. In the event that more than 66% of the votes cast by ccNSO Members during the voting period are in favor of the Supplemental Recommendation then that recommendation shall be conveyed to Board as the ccNSO Supplemental Recommendation and the Board shall adopt the recommendation unless by a vote of more than 66% of the Board determines that acceptance of such policy would constitute a breach of the fiduciary duties of the Board to the Company.

4. In the event that the Board does not accept the ccNSOSupplemental Recommendation, it shall state its reasons for doing so in its final decision ("Supplemental Board Statement").

5. In the event the Board determines not to accept a ccNSOSupplemental Recommendation, then the Board shall not be entitled to set policy on the issue addressed by the recommendation and the status quo shall be preserved until such time as the ccNSO shall, under the ccPDP, make a recommendation on the issue that is deemed acceptable by the Board.

16. Implementation of the Policy

Upon adoption by the Board of a ccNSO Recommendation or ccNSOSupplemental Recommendation, the Board shall, as appropriate, direct or authorize ICANN staff to implement the policy.

17. Maintenance of Records

With respect to each ccPDP for which an Issue Report is requested (see Item 1), ICANN shall maintain on the Website a status web page detailing the progress of each ccPDP, which shall provide a list of relevant dates for the ccPDP and shall also link to the following documents, to the extent they have been prepared pursuant to the ccPDP:

a. Issue Report;

b. PDP Time Line;

c. Comment Report;

d. Regional Statement(s);

e. Preliminary Task Force Report;

f. Task Force Report;

g. Initial Report;

h. Final Report;

i. Members' Report;

j. Board Report;

k. Board Statement;

l. Supplemental Members' Report; and

m. Supplemental Board Statement.

In addition, ICANN shall post on the Website comments received in electronic written form specifically suggesting that a ccPDP be initiated.

Annex C: The Scope of the ccNSO

This annex describes the scope and the principles and method of analysis to be used in any further development of the scope of the ccNSO's policy-development role. As provided in Article IX, Section 6(2) of the Bylaws, that scope shall be defined according to the procedures of the ccPDP.

The scope of the ccNSO's authority and responsibilities must recognize the complex relation between ICANN and ccTLD managers/registries with regard to policy issues. This annex shall assist the ccNSO, the ccNSOCouncil, and the ICANN Board and staff in delineating relevant global policy issues.

Policy areas

The ccNSO's policy role should be based on an analysis of the following functional model of the DNS:

1. Data is registered/maintained to generate a zone file,
2. A zone file is in turn used in TLD name servers.

Within a TLD two functions have to be performed (these are addressed in greater detail below):

1. Entering data into a database (Data Entry Function) and
2. Maintaining and ensuring upkeep of name-servers for the TLD(Name Server Function).

These two core functions must be performed at the ccTLD registry level as well as at a higher level (IANA function and root servers) and at lower levels of the DNS hierarchy. This mechanism, as RFC 1591 points out, is recursive:

There are no requirements on sub domains of top-level domains beyond the requirements on higher-level domains themselves. That is, the requirements in this memo are applied recursively. In particular, all sub domains shall be allowed to operate their own domain name servers, providing in them whatever information the sub domain manager sees fit (as long as it is true and correct).

The Core Functions

1. Data Entry Function (DEF):

Looking at a more detailed level, the first function (entering and maintaining data in a database) should be fully defined by a naming policy. This naming policy must specify the rules and conditions:

a. under which data will be collected and entered into a database or data changed (at the TLD level among others, data to reflect a transfer from registrant to registrant or changing registrar) in the database.

b. for making certain data generally and publicly available (be it, for example, through Whois or nameservers).

2. The Name-Server Function (NSF)

The name-server function involves essential interoperability and stability issues at the heart of the domain name system. The importance of this function extends to nameservers at the ccTLD level, but also to the root servers (and root-server system) and nameservers at lower levels.

On its own merit and because of interoperability and stability considerations, properly functioning nameservers are of utmost importance to the individual, as well as to the local and the global Internet communities.

With regard to the nameserver function, therefore, policies need to be defined and established. Most parties involved, including the majority ofccTLD registries, have accepted the need for common policies in this area by adhering to the relevant RFCs, among others RFC 1591.

Respective Roles with Regard to Policy, Responsibilities, and Accountabilities

It is in the interest of ICANN and ccTLD managers to ensure the stable and proper functioning of the domain name system. ICANN and the ccTLDregistries each have a distinctive role to play in this regard that can be defined by the relevant policies. The scope of the ccNSO cannot be established without reaching a common understanding of the allocation of authority between ICANN and ccTLD registries.

Three roles can be distinguished as to which responsibility must be assigned on any given issue:

- Policy role: i.e. the ability and power to define a policy;
- Executive role: i.e. the ability and power to act upon and implement the policy; and
- Accountability role: i.e. the ability and power to hold the responsible entity accountable for exercising its power.

Firstly, responsibility presupposes a policy and this delineates the policy role. Depending on the issue that needs to be addressed those who are involved in defining and setting the policy need to be determined and defined. Secondly, this presupposes an executive role defining the power to implement and act within the boundaries of a policy. Finally, as a counter-balance to the executive role, the accountability role needs to defined and determined.

The information below offers an aid to:

1. delineate and identify specific policy areas;
2. define and determine roles with regard to these specific policy areas.

This annex defines the scope of the ccNSO with regard to developing policies. The scope is limited to the policy role of the ccNSO policy-development process for functions and levels explicitly stated below. It is anticipated that the accuracy of the assignments of policy, executive, and accountability roles shown below will be considered during a scope-definition ccPDP process.

Name Server Function (as to ccTLDs)

Level 1: Root Name Servers
Policy role: IETF, RSSAC (ICANN)
Executive role: Root Server System Operators

Accountability role: RSSAC (ICANN), (US DoC-ICANN MoU)

Level 2: ccTLD Registry Name Servers in respect to interoperability
Policy role: ccNSO Policy Development Process (ICANN), for best practices a ccNSO process can be organized
Executive role: ccTLD Manager
Accountability role: part ICANN (IANA), part Local Internet Community, including local government

Level 3: User's Name Servers
Policy role: ccTLD Manager, IETF (RFC)
Executive role: Registrant
Accountability role: ccTLD Manager

Data Entry Function (as to ccTLDs)
Level 1: Root Level Registry
Policy role: ccNSO Policy Development Process (ICANN)
Executive role: ICANN (IANA)
Accountability role: ICANN community, ccTLD Managers, US DoC, (national authorities in some cases)

Level 2: ccTLD Registry
Policy role: Local Internet Community, including local government, and/orccTLD Manager according to local structure
Executive role: ccTLD Manager
Accountability role: Local Internet Community, including national authorities in some cases

Level 3: Second and Lower Levels
Policy role: Registrant
Executive role: Registrant
Accountability role: Registrant, users of lower-level domain names

---

[1] A GNSO Supermajority Vote will be required to not initiate a GGP following a formal request from the ICANN Board.

[2] Approval of GGP recommendations requires a GNSO Supermajority Vote.

GNSO Operating Procedures

Table of Contents

Chapter 1.0: Introduction, Scope, and Definitions

1.1 Introduction

This document, the "Operating Procedures" of the GNSO, describes those supplementary elements of administration, governance, and other logistics/mechanics that are not already prescribed in the aforementioned ICANN Bylaws. Nothing in the contents of this document shall be in conflict with the ICANN Bylaws and, in the event of any discrepancy, apparent or otherwise, the ICANN Bylaws shall govern.

Taken together, the ICANN Bylaws and the GNSO Operating Procedures are intended to provide a complete set of rules, procedures, and practices for governing the operations of the GNSO.

1.2 Scope

The Generic Names Supporting Organization (GNSO), its description, purpose(s), structures (e.g. Council, Stakeholder Groups), and governance mandate are covered in ICANN Bylaws, Article X, Sections 1-6. Transition procedures to the new GNSO Council, to become effective in October 2009, are contained in Article XX, Section 5. The Policy Development Process (PDP) for the GNSO is described in ICANN Bylaws ANNEX A.

1.3 Definitions

1.3.1 An "appointing organization" is defined to be the Stakeholder Group or Constituency that elected or appointed a representative to the GNSO Council[1]. Note that, for the purposes of these procedures, the Nominating Committee is not considered an "appointing organization."

1.3.2 The terms "Council member," Council representative," and "Councilor" have the same meaning and are used synonymously throughout the text.

---

[1] For the purposes of these GNSO Operating Procedures, the three Board Appointees to the GNSO Council are considered to have been elected or appointed by the Non-Commercial Stakeholder Group (NCSG).

Chapter 2.0: GNSO Council Supplementary Procedures

2.1 GNSO Council Member Term Limits

The ICANN Bylaws {Article X, Section 3(2)} specify term limits for GNSO Council Representatives except under a "Special Circumstance," which is defined within these procedures as follows:

2.1.1 Special Circumstance

A Special Circumstance may arise under the following conditions:

a. a Stakeholder Group, as appropriate, is unable to meet a geographic/diversity requirement specified in its Charter; and

b. after a reasonable search, including but not limited to publicizing the position among ICANN's other Supporting Organizations and Advisory Committees, no other qualified candidate is available to serve as its Council representative.

If both conditions above are present, the applicable Stakeholder Group may petition the Council to allow its designated representative to serve a third consecutive term. Approval requires greater than 60% affirmative vote in each House and does not require the abstention of the affected Council member.

2.1.2 If a Stakeholder Group wishes to have one of its Council members serve a third consecutive term under circumstances other than as provided in 2.1.1 above, it shall document the details and provide its rationale to the GNSO Secretariat who will disseminate to the Council for consideration. The Council may elect to apply a Special Circumstance, at its discretion, and such action will require greater than 75% affirmative vote in each House without requiring the abstention of any member.

2.1.3 In the event that a Council member is approved to and serves a third consecutive term, or any portion thereof, he/she must remain out of office for one full term before being eligible to serve a subsequent term as a Council member.

2.2 Officer Elections: Chair and Vice-Chairs

The GNSO Council shall select the GNSO Chair and two Vice-Chairs as follows:

a. The GNSO Chair shall be elected by a 60 percent vote of each house.

b. Each house will be allowed to nominate one candidate for GNSO Council Chair. Each house is responsible for determining how to nominate its candidate. A candidate for GNSO Council Chair does not need to be a member of a house, but must be a member of the GNSO Council. Should a Chair be elected from outside of the houses that Chair will be a non-voting Chair.

    i. All ballots will include the "none of the above" option. In the event that a 60 percent vote of each house selects the "none of the above" option, each house will commence a new nomination period of not longer than 15 days. An election for the new nominees will be scheduled for no sooner than 30 days after the unsuccessful vote.

ii. In the case of a tie for the most votes between the two candidates, or between a candidate and "none of above," a second election will be held no sooner than 30 days. The candidates shall remain the same for this second election. In the case this second election also results in a tie, each house will commence a new nomination period of not longer than 15 days. An election for the new nominees will be rescheduled for no sooner than 30 days after the unsuccessful vote.

iii. The leading candidate will be defined as the one with the highest score. The score is calculated by adding together the voting percentages attained from each house. The highest percentage attainable in each house is 100. Thus, the maximum score a candidate can achieve is 200 as a result of attaining 100 percent of the votes from the contracted party house and 100 percent from the non-contracted party house (100 percent + 100 percent = score of 200). In case neither candidate reaches the 60 percent of each house threshold, a second ballot will be held between the leading candidate and "none of the above."

iv. In case neither candidate reaches the 60 percent of each house threshold and the candidates do not tie, a second runoff ballot will be held between the leading candidate and "none of the above."

v. If the single candidate does not reach the 60 percent of each house threshold in the runoff ballot, then each house will commence a new nomination period of not longer than 15 days. An election for the new nominees will be rescheduled for no sooner than 30 days after the unsuccessful runoff ballot.

c. Each house shall select a Council Vice-Chair from within its respective house.

d. A Chair may not be a member of the same Stakeholder Group of either of the Vice-Chairs.

e. The Chair and Vice-Chairs shall retain their votes (if any) in their respective houses (if any).

f. In the event that the GNSO Council has not elected a GNSO Council Chair by the end of the previous Chair's term, the Vice-Chairs will serve as Interim GNSO Co-Chairs until a successful election can be held.

g. The Council shall inform the Board and the Community appropriately and post the election results on the GNSO website within 2 business days following each election and runoff ballot, whether successful or unsuccessful.

2.3 Observers

The GNSO Council may agree with the Council of any other ICANN Supporting Organization or Advisory Committee to exchange observers. Such observers shall not be members of, or entitled to vote or make motions on, the GNSO Council, but otherwise shall be entitled to participate on equal footing with members of the GNSO Council. The appointing Council shall designate its observer (or revoke or change the designation of its observer) on the GNSO Council by providing written notice to the Chair of the GNSO Council and to the ICANN Secretary.

2.4 Board Seat Elections

2.4.1 The ICANN Bylaws, Article X, Section 3(6) specify that the Contracted Parties House shall select a representative to fill Board Seat 13 and that the Non-Contracted Parties House shall select a representative to fill Board Seat 14 according to procedures contained herein.

2.4.2 Timing

For the purposes of this section and Table 1 below, the date that either Board Seat 13 or 14 will become vacated shall be considered time period "T." The following activities shall take place according to the generalized schedule in the table below in order to meet the notification requirements provided in the Bylaws, Article VI, Section 8(4):

Table 1: Activities Timeline

Not Later Than:	**Activity Commences:**	**Maximum Duration:**
T – 5 Months	Call for Nominations	1 Month
T – 4 Months (or 16 Weeks)	Candidate Interviews	2 Weeks
T – 14 Weeks	First Round of Voting	2 Weeks
T – 12 Weeks	Second Round of Voting (if needed)	2 Weeks
T – 10 Weeks	Third Round of Voting (if needed)	2 Weeks
T – 8 Weeks	GNSO Secretariat Reports Election Results	3 Days
Next Council Meeting	Confirmation of Election	3 Days
T – 1 Month	GNSO Chair Notifies ICANN Secretary of Election as prescribed by Article VI, Sections 8(4) and 12(1) of the ICANN Bylaws.	3 Days

At the request of the House, the GNSO Secretariat will develop a specific schedule with actual dates in accordance with the above timeline.

2.4.3 Detailed Election Procedures

Each House is responsible for establishing its own internal procedures for nominations, interviews, voting, and candidate selection; however, those processes must be documented and forwarded to the GNSO Council for inclusion as ANNEXES to the GNSO Operating Procedures. If a House subsequently elects to alter its procedures, such amendments must be submitted to the GNSO Council before becoming effective so that the procedures accurately reflect the actual processes and activities performed by each House in selecting its candidate.

Chapter 3.0: GNSO Council Meetings

Except as provided elsewhere in these procedures, the GNSO Council shall act at meetings.

3.1 Meeting Facilities

Provided that all members participating in such a meeting can communicate with one another, members of the GNSO Council may participate in a meeting of the GNSO Council through use of (i) conference telephone or similar communications equipment; or (ii) electronic video screen communication or other communication equipment; provided that (a) all members are provided the means of fully participating in all matters before the GNSO Council, and (b) ICANN adopts and implements means of verifying that a person participating in such a meeting is a member of the GNSO Council or other person entitled to participate in the meeting and all actions of, or votes by, the GNSO Council are taken or cast only by the members of the GNSO Council and not persons who are not members.

3.2 Open vs. Closed Sessions

Except where determined by a majority vote of members of each house of the GNSO Council present that a closed session is appropriate, in-person meetings shall be open to physical or electronic attendance by all interested persons dependent upon space availability. Recordings of meetings will be made publicly available for any meetings not open to all interested parties. In cases where a closed session is deemed appropriate, the reason for such as closed session as well as the result of the vote will be published in the minutes. Votes in closed sessions shall be taken by a polling of the members.

3.3 Notice of Meetings

Advance notice of meetings shall be posted on the GNSO website, if reasonably practicable, at least 7 days in advance of the meeting for Administrative issues and 14 days in advance for Policy issues. Advance notice shall also be posted to other GNSO Council work spaces where practical.

Reports and motions should be submitted to the GNSO Council for inclusion on the agenda as soon as possible, but no later than 23h59 Coordinated Universal Time (UTC) on the day, 10 calendar days before the GNSO Council meeting.

The time of the meetings may vary to accommodate the different geographic regions represented by GNSO Council members. By way of guidance, start times corresponding to local times for the GNSO Council members earlier than 0600 and later than 2300 should be avoided where possible.

3.4 Meeting Schedules

The GNSO Chair and GNSO Council will prepare a 12-month schedule of meetings within 30 days following the ICANN annual meeting. GNSO Council members may request changes to the schedule during the year, which may be agreed upon by the Chair in consultation with the Council, subject to the minimum period of notice below.

3.5 Procedure to Produce the Minutes

Within 8 working days of a GNSO Council meeting, the GNSO Secretariat will forward draft summary to the GNSO Chair and Vice-Chairs.

Within 10 days of the meeting, the Chair and Vice-Chairs will edit the draft and request the Secretariat to circulate the draft summary to GNSO Council members for comment and approval. All comments received will be accepted for inclusion into the draft minutes unless there are objections. If no objections are received within 10 days, the minutes will be deemed to have been approved for posting.

All comments received from GNSO Council members will be incorporated in the summary unless there are objections from other GNSO Council members.

Where there are objections, the Chair will attempt to resolve the issue (by reference to the audio transcript, if any) and secure agreement from the relevant GNSO Council members. If agreement is not achieved, the Chair will determine the final version of the minutes and will note areas in which agreement has not been achieved

Disputes: If any GNSO Council member disputes what he or she has said in the resulting draft minutes, the recording and/or transcript of the meeting should be reviewed before minutes are approved.

The Chair will ensure the above procedure is complete and an approved version of the summary is circulated and made public within 21 days of the relevant meeting.

All minutes of meetings of the GNSO (and any working groups thereof) shall be approved promptly by the originating body. No later than the business day after the date on which they are approved by the Council, the minutes shall be made publicly available on the Website.

3.6 Speaking at Meetings

Both at physical and telephone meetings the GNSO Chair will recognize three types of intervention in the following order of priority:

1. A point of order
2. A point of information
3. A normal substantive intervention

3.6.1 Points of Order

At a physical meeting, a GNSO Council member may raise a hand or, during a teleconference, a GNSO Council member may speak over the dialogue and say immediately "point of order." A point of order is raised when there is an infraction of the GNSO Operating Procedures or improper decorum in speaking. The point of order must be raised as soon as possible after the error occurs. The Chair will suspend discussion to hear the point.

3.6.2 Points of Information and Normal Substantive Interventions

At a physical meeting, a GNSO Council member may raise a hand and wait to be recognized by the Chair and, during a teleconference, a GNSO Council member may speak in an appropriate gap and say immediately "[state name] to speak". This will be noted by the Chair who will invite the intervention in due course. To ensure balance, the GNSO Council Chair has the discretion to delay an intervention by a frequent speaker to allow others to speak. By way of guidance for the Chair, a GNSO Council member is not expected to speak for more than three minutes at a time and the Chair should solicit the views of other GNSO Council members before returning to the same speaker on any one issue. This guidance should not be construed as limiting the Council from substantive discussion on any one issue. The GNSO Council Chair's discretion to delay an intervention should not be exercised for a "point of information". A "point of information" is for GNSO Council members seeking information from the Chair or other GNSO Council members about meaning or procedure - it is specifically not intended to provide information.

3.7 Seating and Visibility

As possible, during in-person meetings, the GNSO Council Chair and Vice-Chairs should be located so they can observe all GNSO Council members.

3.8 Absences and Vacancies

3.8.1 Absence

i. GNSO Councilors are expected to attend all regularly scheduled Council meetings and be present at the time such sessions are called to order. Absences may be **planned** (due to a conflicting personal or professional obligation that cannot be reasonably altered) or **unplanned** (e.g. sudden illness, accident, injury, or other unanticipated event). In either case (including being late) the Councilor is expected to notify the GNSO Secretariat by e-mail or telephone as soon as practicable before the meeting begins.

ii. Whenever possible, a Councilor is expected to vote on such motions as may come before the GNSO Council using the means provided in Section 4.4-Absentee Voting. If the vote is outside of the scope of 4.4.1 then the Council member may opt for Section 4.6-Proxy Voting.

3.8.2 Leave of Absence

a. Planned: If a GNSO Council member anticipates being unable to attend two or more regularly-scheduled GNSO Council meetings consecutively, the Councilor shall notify the appointing organization or, for a House NCA, the Nominating Committee and the GNSO Secretariat that a "Leave of Absence" is being requested at which time the remedy described in Paragraph 3.8.4 is available.

b. Unplanned: When a GNSO Council member fails to attend two regularly-scheduled GNSO Council meetings consecutively without prior notification to the GNSO Secretariat, the GNSO Secretariat will advise the appointing organization or, for a House NCA, the Nominating Committee that the Councilor has satisfied the conditions for an effective "Leave of Absence" at which time the remedy described in Paragraph 3.8.4 is available.

3.8.3 Vacancies

a. In the event of a GNSO Council member resignation or other permanent vacancy, the Bylaws call for replacement according Article X, Section 3(3).

b. During any transition period following the occurrence of the permanent vacancy, but before a new election or appointment and subsequent seating of the replacement Councilor, the remedy in Paragraph 3.8.4 is available.

3.8.4 Remedy: Temporary Alternate

a. For a Councilor who is not appointed by the Nominating Committee, the appointing organization may, at its discretion, name a Temporary Alternate to serve in the absent or vacant Councilor's seat.

b. For a voting NCA, the Council non-voting NCA is immediately activated to serve as a Temporary Alternate subject to provisions in Section 4.7-Temporary Alternate. The communication required pursuant to Section 4.8-Procedures, Paragraph b, if it cannot be submitted by the voting NCA, will be completed and forwarded by the non-Voting NCA.

c. A named Temporary Alternate pursuant to this section is subject to the applicable provisions in Section 4.7-Temporary Alternate and Section 4.8-Procedures, Paragraph b, except that the communication to the GNSO Secretariat should be amended as follows:

    i. the reason or condition leading to the remedy is either "Leave of Absence" or "Vacancy," as applicable; and

    ii. the measures/motions/votes upon which the Temporary Alternate may engage are not constrained, as in other remedies (see Section 4.5-Abstentions), and may be noted as "All Subjects Permitted."

d. A named Temporary Alternate pursuant to this section will be expected to participate in all matters that would otherwise have occupied the attention of the absent Councilor.

3.8.5 Any occurrence of absence or vacancy that is not declared in advance, as provided in this section, will be recorded as "Absent" and such action will not reduce the denominator in any vote tabulation for the affected House.

Chapter 4.0: Voting

4.1 Quorum

In order for the GNSO Council to initiate a vote, a quorum must be present. A quorum is a majority of voting members in each House, which must include at least one member of each Stakeholder Group.

4.2 Voting Thresholds

Unless otherwise specified in these procedures or in the ICANN Bylaws, to pass a motion or other action, greater than 50% of the eligible voters in each House must cast affirmative votes. For all votes taken, the number of eligible voters in each House shall be fixed to the number of seats allocated in the Bylaws (a.k.a. the denominator) and is not affected by the number of members present or absent at the meeting in which the motion or other action is initiated. For rules and procedures concerning abstentions and their impact on voting thresholds, refer to Section 4.5-Abstentions).

4.3 Motions and Votes

4.3.1 Eligibility: All actions of, or votes by, the GNSO Council are taken or cast only by the members of the GNSO Council. Except as otherwise provided in these procedures, persons who are not Council members may not vote. Acts by the GNSO Council members present at any meeting at which there is a quorum shall be acts of the GNSO Council unless otherwise provided herein.

4.3.2 For each motion or action of the GNSO Council requiring a vote, Councilors may enter either a "No", "Yes, or "Abstain." For a vote of "Abstain," a reason or explanation is required. For votes of "No" or "Yes", at the discretion of the Councilor, an explanation or reason may be provided which will be recorded in the meeting minutes.

4.3.3 Resubmission of a Motion: If a motion has been voted on by the GNSO Council and not adopted, that motion may be resubmitted to the Council for consideration at a subsequent meeting of the Council, subject to the following criteria:

1. Explanation: The Councilor submitting the motion must also submit an explanation for the resubmission of the motion. The explanation need not accompany the motion when it is resubmitted; however, the explanation must be submitted no later than the deadline for submitting the motion (i.e., no later than 23h59 Coordinated Universal Time (UTC) on the day 10 calendar days before the Council meeting at which the motion is to be reconsidered). The explanation does not need to meet any requirements other than being submitted in a timely manner.
2. Publication: The text and explanation of the resubmitted motion must be published (i.e., circulated to the Council mailing list) no later than the deadline for submitting the motion.
3. Second: Upon the second resubmission of a motion (i.e., the third time the same motion comes before the Council), the motion must be seconded by a Councilor

from each house as a prerequisite for placing the resubmitted motion on the consent agenda.

4.3.4 Limitations and Exceptions to Resubmission of a Motion: The above procedure on resubmission of a motion is subject to the following limitations and exceptions:

1. Same Meeting: A motion may not be resubmitted at the same meeting at which the motion was voted upon but not adopted.

2. Material Changes: If material changes have been made to the text of a motion, the revised motion will not be considered a resubmitted motion. The revised motion will instead be considered a new motion. Whether or not a change in the text of a motion is material will be determined at the discretion of the GNSO Council Chair.

3. Timing: A motion will no longer be considered a resubmitted motion once two Council meetings have passed after the meeting at which the motion was voted upon but not adopted. The motion will thereafter be considered a new motion. For example, if a motion has been voted upon but not adopted at a meeting in January, it would be considered a resubmitted motion if submitted for a meeting in February or March, but would be considered a new motion if submitted for a meeting in April.

4. Motions Not Voted Upon: A motion that has been submitted to the Council but not voted upon (e.g., because the motion was tabled or withdrawn) will not be considered a resubmitted motion if it is submitted again to the Council. Instead, such a motion will still be considered a new motion.

5. ICANN Meetings: For purposes of this procedure, all Council sessions at an ICANN Meeting will be considered to be part of a single meeting.

4.4 Absentee Voting

4.4.1 Applicability

Absentee voting is permitted for the following limited number of Council motions or measures.

- a. Initiate a Policy Development Process (PDP);
- b. Approve a PDP recommendation;
- c. Recommend amendments to the GNSO Operating Procedures (GOP) or ICANN Bylaws;
- d. Fill a Council position open for election.

4.4.2 Absentee ballots, when permitted, must be submitted within the announced time limit, which shall be 72 hours from the meeting's adjournment. In exceptional circumstances, announced at the time of the vote, the Chair may reduce this time to 24 hours or extend the time to 7 calendar days, provided such amendment is verbally confirmed by all Vice-Chairs present.

4.4.3 The GNSO Secretariat will administer, record, and tabulate absentee votes according to these procedures and will provide reasonable means for transmitting and authenticating absentee ballots, which could include voting by telephone, e- mail, web-based interface, or other technologies as may become available.

4.4.4 Absentee balloting does not affect quorum requirements.

4.5 Abstentions

4.5.1 Duty of Councilors, Constituencies, and Stakeholder Groups

The GNSO Council is, by design, a small number of members organized into two voting Houses comprised of 7 and 13 members respectively, representing Stakeholder Groups as prescribed in the ICANN Bylaws (see http://www.icann.org/en/general/bylaws.htm#X). If approved within a particular Stakeholder Group Charter, a GNSO Council member may be a representative of a Constituency within that Stakeholder Group. Given the Council's size and the voting thresholds that have been defined, it is important that each Stakeholder Group (or Constituency, where applicable) vote decisively, through its appointed or elected Councilors, on every matter that is before the Council for action.

When exercising his/her voting responsibilities on Council matters, a GNSO Councilor is expected to comply with any obligations prescribed within the applicable Stakeholder Group or Constituency Charter governing Councilor's appointment to the Council. If such Charter procedures are silent with respect to voting guidance, directions, or restrictions, the Councilor may use his/her best-informed judgment, unless specifically directed as described in Paragraph 4.5.3 below.

When circumstances regarding a potential voting abstention occur that would otherwise prevent a Councilor from discharging his/her responsibilities (see Paragraph 4.5.2), the Councilor's appointing organization is provided a remedy (see Paragraph 4.5.3) designed to enable its vote to be exercised. For a Nominating Committee Appointee (NCA) assigned to a House (hereinafter House NCA), certain remedies are available and prescribed based upon a set of specific criteria, conditions, and implementation rules without requiring formal action by the Nominating Committee.

Specific Councilor obligations include:

a. Active participation: a Councilor is expected to actively participate in the regular affairs of the GNSO Council including, *inter alia*, attending its scheduled meetings, staying abreast of the technical and administrative agenda, engaging in relevant email and live discussions, reading minutes, evaluating reports, listening to meeting recordings (in the event of absence), asking questions that foster learning, voting responsibly on all matters before the Council, and periodically reviewing the performance of the Chair and Vice-Chairs.

b. Reasonable inquiry: Councilors should request and receive sufficient information, including support from their Constituencies or Stakeholder Groups, as appropriate, so Councilors may carry out their responsibilities. When a problem manifests itself or some issue does not make sense, a Councilor has a duty to inquire into the surrounding facts and circumstances and seek guidance.

4.5.2 Abstention Categories

Circumstances leading to a potential voting abstention can arise when a Council member perceives a set of conditions, relative to some action or motion before the Council that warrants his/her recusal from participating and/or voting. For purposes of the Council's operating procedures, abstentions will be grouped into two categories varying by severity and recommended action: "volitional" abstentions and "obligational" abstentions.

a. Volitional Abstentions

Circumstances may occur when a Council member elects to refrain from participating and voting for reasons that may include, but are not limited to:

- Perception of being inadequately informed
- Has not participated in relevant discussions or studied available materials
- Lacks sufficient understanding, expertise, or technical knowledge

The above list itemizes several potential reasons for a volitional abstention; however, as described in Paragraph 4.5.1 above, it is the duty of Council members to remain informed, to exercise their responsibilities to vote, and to take whatever reasonable measures are available so that this category of abstentions is minimized to the greatest extent possible. Appointing organizations are encouraged to provide sufficient guidance, assistance, education, and direction, where applicable, to avoid circumstances that might otherwise result in a volitional abstention.

b. Obligational Abstentions

This category of abstentions results from conditions in which a Councilor may find that he/she is unable to vote on a measure due to a competing personal (e.g. religious), professional, or political interest that interferes with his/her ability to participate in the matter or where participation raises ethical questions.

Disclaimer concerning the term "Conflict of Interest": There are certain financial interests and, possibly, incentives associated with GNSO actions that affect Internet domain name policies. As they pertain to GNSO Council voting actions, such interests are expected to be documented in a Councilor's required Statement of Interest (see Chapter 5.0) and do not require that the Councilor abstain from participating and voting. GNSO Councilors do not have a fiduciary responsibility to act in the best interests of ICANN in discharging their responsibilities on the Council. While the deliberations and decisions of ICANN are made in the interests of the global Internet community as a whole, GNSO Councilors are understood, in some cases, to represent the views of organizations and interest groups that would materially benefit from policies recommended by the GNSO. It is understood that Councilors are often employed by or represent those affected parties and such relationships could engender subsequent benefit to Councilors as individuals. As a result of these special circumstances and to avoid confusion with ICANN's Conflict of Interest Policy, which does not pertain to GNSO Council matters, the term "Conflict of Interest" will not pertain when a GNSO Councilor argues for and votes "Yes" or "No" on a matter which, by virtue of that action, directly or indirectly benefits that individual financially or *economically; however, that interpretation does not imply that circumstances cannot occur in which a Councilor may perceive his/her situation as obligating a formal abstention.*

A Councilor who believes that proceeding to vote on a motion or action before the Council not only warrants, but requires, his/her abstention and, thereby, recusal from deliberations, is considered to be facing an obligational abstention. Although it is not possible to draft a set of exhaustive conditions under which obligational abstentions can arise, two examples are provided by way of illustration:

> Case 1: a Councilor (attorney by profession) is representing a client in legal action relating to a matter before the Council and, and as required by his/her professional code, must abstain and, furthermore, such abstention should not be counted as a negative vote. *[Note: this type of situation requires the remedy specified in Paragraph 4.5.3 below].*
>
> Case 2: a Councilor is a paid consultant for a national political body that has a vested interest in a particular motion before the Council. The Councilor is concerned that his/her future income potential and ability to retain a consulting engagement with the national body may be affected if he/she votes on the measure. In such a case, the Councilor believes that the ethical course of action is to abstain.

In the two examples above, personal or professional obligations interfere with the Council member's ability to participate ethically; thus, requiring recusal from deliberations on the matter and abstention from voting.

4.5.3 Remedy To Avoid Abstaining on a Vote

According to existing rules, any abstention would not contribute to the passing of a motion; therefore, by default, an abstention functions as a "No" vote. The purpose of the remedial procedures in this section is to minimize this effect.

Voting Direction[2]

The preferred remedy, if applicable for the appointing organization, is to request a "Yes" or "No" voting instruction from the Council member's appointing organization (if applicable). The Council member is obligated to follow the instruction.

If a Voting Direction is not obtained then the Council member may opt for Section 4.6 (Proxy Voting).

4.6 Proxy Voting

An abstaining or absent Council member as defined above (the Proxy Giver) may transfer his or her vote to any other Council member (the Proxy Holder).

The Proxy Holder must vote in order of precedence according to one of three types:

1. An instruction from the Proxy Giver's appointing organization (if applicable), or if none;
2. An instruction from the Proxy Giver, or in the absence of either;
3. The Proxy Holder's own conscience.

a. Multiple Proxies

A GNSO Council member is not permitted to be a Proxy Holder for more than one Proxy Giver.

b. Quorum

An absent Council member does not count toward quorum even if a proxy has been established. A Temporary Alternate (see Section 4.7-Temporary Alternate below) if present, would count toward quorum.

c. Proxy Notification

A proxy notification must be sent to the GNSO Secretariat and should indicate which type it is. The notification should, where applicable, be sent by the Proxy Giver's appointing organization. Ordinarily a proxy notification must be received by the GNSO Secretariat before the start of the relevant meeting.

Exceptionally, a proxy notification may be given during a meeting by a Council member who is present but needs to leave before a vote. In all cases the most recent notification takes precedence.

---

[2] The term "appointing organization" (see Section 1.3.1) does not comprise the Nominating Committee; therefore, the Voting Direction remedy does not apply to House NCAs.

4.7 Temporary Alternate

Another remedy that may be exercised in avoiding the consequences of an abstention is the naming by the appointing organization of a Temporary Alternate who is empowered to "stand in" for the abstaining Councilor according to the provisions below. For a House NCA, the Temporary Alternate remedy is defined only for certain conditions of absence and vacancy as provided in Section 3.8 (Absences and Vacancies).

In selecting a Temporary Alternate, the appointing organization shall choose, from within its membership ranks, a responsible individual who is not a current voting GNSO Council member, but is otherwise knowledgeable on the matter at issue and qualified to represent the appointing organization's interests. The Temporary Alternate must meet all criteria (e.g. Term Limits) for GNSO Council membership.

i. The GNSO Secretariat will arrange for the named Temporary Alternate to participate in GNSO Council meetings, teleconferences, email list discussions, as appropriate, and will cause such arrangements to be deactivated upon conclusion of the Temporary Alternate's tenure.

ii. The Temporary Alternate is entitled to participate in Council deliberations and voting only upon the specific matter(s) outlined in the communication submitted to the GNSO Secretariat (see Section 4.8 (Procedures)). In all other matters, the regular Councilor is expected to function in Councilor's normal capacity. A Temporary Alternate may not be selected to register a proxy vote, as described in Section 4.6 (Proxy Voting).

iii. The presence of a duly recognized Temporary Alternate at a Council meeting is counted in quorum calculations; however, the regular Councilor, if present, and any Temporary Alternate only contribute a count of one to the meeting quorum.

iv. Only one Temporary Alternate may be named to act for a GNSO Councilor at a time.

v. If the Temporary Alternate is named for a Council member who is an elected officer of the GNSO Council, the Temporary Alternate does not assume those officer duties and responsibilities; the Council's leadership succession shall take effect as provided elsewhere in these procedures.

The above remedies are available for the purposes of ensuring that, to the maximum extent possible, each and every GNSO Council vote can be exercised and that conditions otherwise resulting in an abstention can be mitigated. The GNSO Council has not established any provision that would permit the voting thresholds and calculations to be altered, for example, by reducing the denominator due to an abstention.

4.8 Procedures

This paragraph outlines the notification and communication steps required when an abstention condition is identified as well as the procedures that must be followed in remedying the abstention.

For the purposes of these procedures, the term "written" or "in writing" shall mean via postal mail or electronic mail (e-mail).

In order for an abstention remedy to be implemented, all required procedures must be completed prior to the start of the GNSO Council meeting in which the vote will be taken; otherwise, the abstention will not be remedied and the provisions of Section 4.8, Paragraph c will apply.

a. Notification by Councilor

A Councilor who believes that he/she should abstain from participation/voting on a measure before the Council is required to provide, at the earliest opportunity, a brief written notification documenting the circumstances to the appointing organization with a copy forwarded to the GNSO Secretariat. For a House NCA, the notification should be sent to the GNSO Secretariat with a copy to the Council NCA who is required to acknowledge receipt to both parties that an automatic proxy is confirmed. If the situation is perceived to be confidential in nature and cannot be disclosed in the notification, a statement to that effect should be included by the Councilor.

b. Communication by Appointing Organization or NCA

To effectuate a remedy described in Paragraph 4.5.3 the appointing organization or, when applicable, the House or Council NCA must provide a written statement to the GNSO Secretariat, as early as possible prior to any discussion/voting on the matter at issue, containing the following information:

- Name of the abstaining Councilor.
- Remedy selected (from Paragraph 4.5.3).
- Reason(s) for or condition(s) leading to the remedy.
- Specific subject(s)/measure(s)/motion(s)/action(s) of the Council for which the remedy is being exercised.
- Date upon which the remedy will expire or terminate. No remedy may initially or subsequently extend beyond three (3) months at a time. If the period needs to be extended, a written notice can be provided to the GNSO Secretariat indicating the reason for extension (e.g. Council vote postponed) and a new expiration date. While there is no limit to the number of extensions; "standing" remedies are not allowed under any circumstances.
- For the specific remedies of Voting Direction and Proxy Voting, the communication must include an affirmation that the appointing organization has established a voting position, subject to provisions contained in its Charter or Bylaws, on the matter at issue. For Voting Direction, a statement from the appointing organization shall indicate that the affected Councilor has been instructed how to vote on the matter. Exclusion: these statements are not applicable or required in a remedy applied for a House NCA.
- For Proxy Voting, identification of the GNSO Councilor who will register the vote for the abstaining Councilor.
- For a Temporary Alternate, identification of the individual who will serve as a substitute for the abstaining Councilor. If not already published and available, a short bio and Statement of Interest should be prepared by the Temporary Alternate and delivered to the GNSO Secretariat in advance of any discussion or voting scheduled to take place.

c. Effect and Recording of an Abstention Not Otherwise Remedied

If an abstention cannot be avoided after pursuing the remedy provided in Paragraph 4.5.3, then the Councilor may abstain from voting and an "Abstention" will be entered into the record along with a reason. If the reason for the abstention warrants such action (e.g. obligational abstention), the Councilor shall be recused and not participate in discussions on the affected topic(s) or otherwise attempt to influence other Council members nor shall he/she vote on any action attendant to the matter for which the abstention conditions are present. An abstention shall not affect quorum requirements or calculations nor will it reduce the denominator in any vote tabulations for the affected House.

4.9 Consent Agenda

When preparing the meeting agenda, the Council Chair in consultation with the Council Vice-Chairs determines whether an item belongs on the consent agenda. All items that are subject to a different voting threshold than a simple majority vote (see ICANN Bylaws, Article X, section 3-9) or are subject to absentee voting (see section 4.4 – Absentee Voting) are not eligible for inclusion in the consent agenda. A numbered list of consent items is included as part of the meeting agenda. The list and supporting documents are included in the Council agenda in sufficient time to be read by all Council members prior to the meeting in accordance with section 3.3 – Notice of Meetings of these Operating Procedures.

At the beginning of the meeting, the Chair asks members what items they wish to have removed from the consent agenda and discussed individually. If any Council member requests that an item be removed from the consent agenda, it must be removed. Council members may request that an item be removed for any reason. They may wish, for example, to discuss the item, to query the item, or to register a vote against the item. If an item is removed from the consent agenda, it is added to the meeting agenda for that meeting, unless the Council Chair in consultation with the Council Vice-Chairs determines differently.

When there are no more items to be removed, the Chair reads out the number of the remaining consent items. Then the Chair calls for a vote.

When preparing the minutes, the full text of (or links to) the resolutions, reports or recommendations that were adopted as part of the consent agenda are included. In addition the minutes should include a statement regarding the composition/threshold that approved the consent agenda.

Chapter 5.0: Statements of Interest

5.1 Definitions

Generic Names Supporting Organization (GNSO) Group:

a. the GNSO Council, or

b. a work team, working group, committee or other such policy development body formed by and under the supervision of the GNSO Council.

Relevant Party: An individual who participates as a member of a GNSO Group.

Statement of Interest: A written statement made by a Relevant Party that provides a declaration of interests that may affect the Relevant Party's judgment, on any matters to be considered by the GNSO Group.

Material Interest: A material interest is an important interest and is generally, but not always, financial in nature. However, in the legal sense, the interest needs to be substantial or of consequence.

5.2 Policy

5.2.1 Purpose

The purpose of this policy is to set forth responsibilities and procedures pertaining to the content, creation, timely update, accuracy, completeness, and compliance of Statements of Interest as defined in Section 5.1.

5.2.2 Compliance

Each Relevant Party is responsible for ensuring that he or she complies with this policy. Failure to comply with these procedures is covered in Section 5.5.

This policy is administered by ICANN Staff. Administration includes informing new members of groups of the policies, posting all Statements of Interest, and following up on any requests from the Chairs of GNSO Groups pertaining to this procedure.

5.2.3 Exemptions

Full time ICANN Staff members are exempt from the individual responsibility of completing a Statement of Interest by virtue of ICANN posting a global Statement of Interest confirming that all employees and individuals who have an exclusive contract with ICANN are representing the interests of ICANN, and no others, at all times. The exemption does not extend to Staff who do not have an exclusive contract with ICANN.

5.3 Statement of Interest Procedures

5.3.1 Timeliness

Relevant Parties are required to provide to the GNSO Secretariat a Statement of Interest, updated not less frequently than once a year or whenever there is a material change, setting forth those specified interests, relationships, arrangements, and affiliations that may affect the judgments of Relevant Parties in the conduct of their participation within the GNSO. A completed Statement of Interest, updated at least annually, is a precondition for Relevant Parties to participate in a GNSO Group.

At the beginning of each meeting the Chair of the GNSO Group shall ask all Relevant Parties whether they have updates to their Statements of Interest.

5.3.2 Electronic Form and Publication

To ensure consistency, ICANN Staff shall develop, maintain, and provide to Relevant Parties an electronic Statement of Interest form including procedures and instructions pertaining to its completion online. ICANN Staff shall make available an alternative arrangement (e.g., email) in the event that a Relevant Party does not have the necessary Internet access or capability to complete the form online. ICANN Staff shall post the completed Statements of Interest in the relevant section of the GNSO web site prior to Relevant Parties undertaking any activity.

5.3.3 Content

Relevant Parties shall complete all six sections of the Statement of Interest form as specified below:

1. Please identify your current employer(s) and position(s).
2. Please identify your declared country of primary residence (which may be the country to which you pay taxes).
3. Please identify the type(s) of work performed at #1 above.
4. Please list any financial relationship beyond *de minimus* stock ownership you may have with any company that to your knowledge has a financial relationship or contract with ICANN.
5. Do you believe you are participating in the GNSO policy process as a representative of any individual or entity, whether paid or unpaid? Please answer “yes” or “no.” If the answer is “yes,” please provide the name of the represented individual or entity. If professional ethical obligations prevent you from disclosing this information, please so state.
6. Please identify any other relevant arrangements, interests, or benefits as requested in the following two questions:
    i. Do you have any type of material interest in ICANN GNSO policy development processes and outcomes? Please answer “yes” or “no.” If the answer is “yes,” please describe the material interest in ICANN GNSO policy development processes and outcomes.
    ii. Are there any arrangements/agreements between you and any other group, constituency or person(s) regarding your participation as a work team member? Please answer “yes” or “no.” If the answer is “yes,” please describe the arrangements/agreements and the name of the group, constituency, or person(s).

5.3.4 Timing of Updates and Recordation

A Relevant Party shall provide any changes/and or updates to his or her Statement of Interest within ten business days of any material change in any information appearing in the statement of interest form. Such changes shall also be recorded in the minutes of the meeting at which the Relevant Party advises of such change and should be posted as soon as possible.

5.4 Completeness and Accuracy

5.4.1 Completeness

ICANN Staff shall review each Relevant Party's Statement of Interest to ensure completeness. If ICANN Staff has reason to believe that a Relevant Party's documentation is not complete, ICANN Staff shall notify the Relevant Party and request that the omitted or missing information be provided or, if there are extenuating circumstances, explanation as to why the document is incomplete. If the matter cannot be satisfactorily resolved with the Relevant Party after a reasonable period, Staff shall raise the matter with the applicable Chair pursuant to Paragraph 5.4.3.

5.4.2 Accuracy

Concerns raised by ICANN Staff or a member of the ICANN community about the accuracy of a Relevant Party's Statement of Interest, including whether an interest that may affect the Relevant Party's judgment with respect to a pending matter has been disclosed, shall be brought to the attention of the applicable Chair and handled pursuant to Paragraph 5.4.3.

5.4.3 Appeal Process

If concerns about the completeness and/or accuracy of a Statement of Interest persist after reasonable attempts are made to resolve them with the Relevant Party, the matter shall be brought to the attention of the applicable Chair and handled according to decision-making methodology and appeal process as prescribed in the GNSO Working Group Guidelines (ANNEX 1, Sections 3.6 and 3.7). At each step of the appeal process, every effort should be made to resolve the completeness and/or accuracy concerns by working cooperatively with the Relevant Party.

5.5 Failure to Comply

5.5.1 Requirement to Participate

A Statement of Interest form must be submitted by each Relevant Party in accordance with these procedures. If a Relevant Party fails to provide a Statement of Interest once a year or whenever there is a material change, the Chair may temporarily suspend that Relevant Party's participation until the Statement of Interest is provided. Participation shall not be suspended if a Statement of Interest is subject to the Appeals process of Paragraph 5.4.3 until a final determination is made under that process.

5.5.2 Suspension

Pursuant to the appeal provisions referenced in Paragraph 5.4.3, if it is determined that a Relevant Party has not complied with these procedures, the GNSO Council Chair, in consultation with the Vice-Chairs, may suspend that Relevant Party's participation in a GNSO group until the failure to comply has been remedied. The ICANN General Counsel and GNSO Council will be notified when such actions are taken as a matter of protocol and the decision to take this step will be recorded in the GNSO Council minutes. If the failure to comply pertains to a Chair, the applicable Vice-Chairs shall act pending completion of the appeal process. If the failure to comply pertains to the GNSO Council Chair, the Vice-Chairs shall act after consulting with the ICANN Vice President - Policy Development.

Chapter 6.0: Stakeholder Groups and Constituencies: Operating Principles and Participation Guidelines

6.1 Participation Rules and Operating Procedures

The following sections address the BGC WG's recommendation that Groups shall establish and abide by a set of participation rules and operating procedures.

6.1.1 Participation Principles

All Stakeholder Groups/Constituencies (here-in-after called Groups) should adopt the rules below for participation. Such rules and procedures should be part of their Charters.[3]

a. All Groups should adopt these rules for participation to encourage openness, transparency and accountability. These rules and any other rules governing participation should be objective, standardized and clearly stated.[4] For the avoidance of doubt, while commonality is encouraged in the interest of simplification, Groups are not required to have identical rules and variation between Groups is acceptable, as appropriate.

b. Groups should have their participation rules based on common principles developed by the GNSO. Groups should avail themselves of ICANN staff services to make these rules available in English and the five United Nations languages – Chinese, Russian, Arabic, Spanish, and French – so that ICANN's global audience can understand them.[5]

c. All Groups should strive to improve inclusiveness and representativeness. Groups should have either a differential fee structure based on the ability to pay, in order to encourage increased representation from those living in less developed economies, or hardship provisions that entitle any potential member to apply for relief from the normal fee scale.[6]

d. All Groups should strive to remove information barriers and put in place well-structured outreach programs so that many potential stakeholders come to know of their existence and also of the benefits in being part of the ICANN policy process, thereby becoming more aware of the value of joining the GROUP.[7]

6.1.2 Membership[8]

a. All Groups should make and publish rules and procedures for admission requirements of interested parties as Members in clear and simple terms. Such rules and procedures should be part of their Charters.

b. All Groups should abide by rules governing membership, which are based on common principles. All Group members should have rights, duties and

[4] Ibid, page 43, paragraph 1.

[5] Ibid, page 42, paragraph 5.

[6] Ibid, page 41, last paragraph.

[7] Ibid, page 42, paragraph 4.

[8] Ibid, page 43, paragraph 2.

responsibilities and in particular, rights to vote as applicable as per Group membership rules.

c. All Groups must offer membership to natural persons or individuals (if applicable) as well as to entities with legal personality such as corporations. However, any person or organization applying for membership should meet the membership criteria laid down by the Group with ICANN's approval.

d. All Groups should stipulate the rights, duties, and responsibilities of its members in clear and simple terms and publish the same.

e. A simple application form should be devised for membership and it should be publicly available on the Group's website.
    i. Admission criteria should be predictable and objective and not arbitrary or discretionary. Where eligibility depends on participation in a certain sector of business, then applicants should be entitled to submit evidence of their participation in that sector.
    ii. The general membership should be entitled to object to an application for membership provided that such objection is based on predictable and objective membership criteria. Such an objection should be published to the Group members.
    iii. In applying for membership an applicant thereby agrees to abide by the written rules and regulations, including charters and bylaws, of the Group and terms and conditions laid down by it.

f. Status of a new application and admission decision, as far as possible, should be publicly available at the option of the applicant and an applicant should be advised of any objection to the application, be given the opportunity to ask clarifying questions about the objection, and be given the opportunity to reply with clarification or to reply in general.

g. In case of unfair treatment resulting in the rejection of an application or a dispute, the applicant may lodge a complaint with the ICANN Ombudsman or a mutually agreed upon non-biased neutral third party. The process for lodging a complaint with the Ombudsman is set forth in Article V of the ICANN Bylaws and in the Ombudsman Framework.[9]

h. Every member should remain in good standing until the Group has decided otherwise as per its Charter provisions. The reasons that such status can be imperiled should be certain and predictable and objective and not arbitrary or discretionary. In such an event, the member should be given an opportunity to be heard. Appropriate procedures should be made for such an eventuality. The affected party should have right of appeal to a neutral third party.

i. List of members and their contact details should be publicly available on the Group website. Individual members should have the right to have publication of address and other contact details withheld to protect their privacy. All members, unless otherwise stated should be eligible to participate in the business of the Group and have voting rights as applicable.

j. No legal or natural person should be a voting member of more than one Group.

---

[9] See <http://www.icann.org/ombudsman/documents/ombudsman-framework-26mar09-en.pdf>.

6.1.3 Policy and Consensus

a. All Group members should be eligible to participate in the Policy work of the Group and to join Committees formed to deal with policy issues and other Group issues, including eligibility of membership in the Group's committees.

b. Groups should refer to the GNSO Working Group model and guidelines for the purpose of reaching consensus and to improve accessibility, transparency, and accountability all Groups should establish and publish a consensus-building model or process that is publicly available to their membership and the community. Whatever consensus-building model or process a Group uses, the Group must describe the process and ensure that is publicly available to their membership and the community so it is visible and transparent.

6.2 Operating Principles

The following sections address the BGC WG's recommendations for clear operating principles for each Group to ensure that all Groups function in a representative, open, transparent and democratic manner.

Groups should adhere to the following common operating principles: representativeness, process integrity, flexibility, transparency, participation, openness, and other norms common to the GNSO.

6.2.1 Term Limits

a. No person should serve in the same Group Officer position for more than four consecutive years. A member who has served four consecutive years must remain out of office for one full term prior to serving any subsequent term in the same Group Officer position. Any exception to this policy would require approval by the Group membership.

6.2.2 Executive Committees

a. All Executive Committees must promptly publish action points, decisions, and any resolutions to Group members. It is recommended that prompt publication means within a reasonable period and a guideline is between 72 hours and 1 week of the relevant meeting.

b. All Executive Committees must publish to Group members their rules and procedures, decision making process and criteria.

6.2.3 Committees

a. Groups should adopt a standard set of rules and procedures to govern Group Committee constitution and operations. Whatever model is adopted, it should be published to the entire Group membership and maintained.

b. The formation of all Committees should be made known to the entire Group membership and eligibility to participate should be open to all members.

c. The fact a Committee has been established and its membership should be made available to the entire Group membership and should be published on the Group website.

d. Action points, decisions and any resolutions and final work products should be made available to the entire Group membership within a reasonable period of any given meeting.

e. Going forward, Groups should publish to the Group membership a list of all active and inactive Committees and their final decisions, resolutions and final work products.

6.2.4 Communications

a. Group mailing lists should be open to the entire Group membership and, at the election of the Group in any given case, to the public. The Group may have reserved lists if needed.

b. The outcome of all Group policy decisions should be open and publicly archived with posting rights limited to members at the election of the Group.

c. Group business, work products, finance and accounts, and submissions to Staff and other ICANN entities should be made available to the entire Group membership unless there are valid grounds for restricting distribution.

d. All Groups should have a published Privacy Policy providing for the protection of the private data of members.

6.2.5 Elections

Groups should publish and maintain a list of all Office holders, past and present, to inform Group members and to provide transparency for term limits.

6.2.6 Voting

a. All Group Charters should clearly delineate the voting rights of all of their members.

b. All Groups should permit all voting members in good standing to vote in elections as delineated in their Charters.

c. Members may be entitled to appoint proxies.

d. No legal or natural person should be a voting member of more than one Group.

6.2.7 Charter Amendments

The procedure for amending Group Charters should be stipulated therein.

6.2.8 Meetings

Groups should adopt simple and accessible basic meeting procedures. Groups also may refer to the GNSO Bylaws, Operating Procedures, and the GNSO Council Working Group Guidelines.

Minutes should be taken at meetings of the general Group membership and action points, decisions and any resolutions or minutes be published to the entire Group membership within a reasonable period.

6.2.9 Policy

a. Eligibility to participate on Policy Committees should be open to all members in good standing.

b. Any Member of a Group should be able to propose the Policy Committee consider a Policy issue in accordance with the Group Charter.

c. Policy Committee meetings should be open for attendance by all Group members.

6.2.10 GNSO Working Group (WG)

a. Any individual participant of a Group should be entitled to join any GNSO WG in an individual capacity and Groups should publish and advise all members of the call for WG participants.

b. Groups should adopt and publish to the Group membership their rules and procedures for selecting and appointing Group representatives to GNSO WGs. It is recommended that these appointments be open to the entire membership to increase opportunities for participation.

c. Group Members may participate in an individual or representative capacity, but Group representatives must advise the entire Group membership of the WG activity from time to time.

Version Control

Version	Date	Description
1.0	24 Sep 2009	New GNSO Operating Procedures adopted by Council
1.1	23 Nov 2009	Council approved text changes that were inadvertently omitted in v1.0 (Seoul)
1.2	28 Jan 2010	Council approved Annex 1 - Board Seat Elections Transition for Seat #13 and directed that a Public Comment Forum be initiated (28 Jan 2010 to 18 Feb 2010).
2.0	5 Aug 2010	Added Table of Contents; placeholder Chapters (6, 8, 9) for anticipated future content; Version Control; and Section 1.3-Definitions to Chapter 1.0. Added new content approved by GNSO Council: 2.1-Term Limits; 2.4-Board Seat Elections; 3.8-Absences and Vacancies; Chapter 4.0-Voting; Chapter 5.0-Statements and Disclosures of Interest; and Chapter 7.0-Stakeholder Groups and Constituencies: Operating Principles and Participation Guidelines.
2.1	7 April 2011	Added APPENDIX 1: GNSO Council Voting Results Table; Removed placeholder Chapter 6.0 (GNSO Work Prioritization) and renumbered Chapter 7.0 to become Chapter 6.0; Removed placeholder Chapters 8.0 (WG Guidelines) and 9.0 (PDP Procedures); Added ANNEX 1 for Council approved Working Group Guidelines; and Added bookmarks and reference links throughout the document.
2.2	8 April 2011	Replaced entire Chapter 5.0-Statements of Interest with language approved by the OSC (4 Feb 2011) and GNSO Council (7 April 2011), which removed references to "Disclosures of Interest" among other amendments; Inserted bookmarks including a link to WG Guidelines (new ANNEX 1); and Deleted all other GOP references to "Disclosures of Interest" consistent with this revision, including the WG Guidelines (ANNEX 1) added in v2.1.
2.3	22 September 2011	Revised text in Chapter 3.0-GNSO Council Meetings: 3.8.1 Absences; 3.8.4 Remedy: Temporary Alternate; and in Chapter 4.0-Voting: 4.5.3 Remedy To Avoid Abstaining on a Vote. The purpose of the revisions was to simplify and clarify the procedures and avoid contradicting the internal procedures of some constituencies. The revisions required renumbering of sections in Chapter 4 and subsequent revisions to references in Chapter 3.0 and Chapter 4.0 to those sections.
2.4	16 December 2011	On 08 December 2011 the ICANN Board of Directors approved a revised Annex A, GNSO Policy Development Process (PDP). See http://www.icann.org/en/minutes/resolutions-08dec11-en htm#2.5. The new PDP is included as the new ANNEX 2 in this revision.
2.5	13 September 2012	Following recommendations of the Standing Committee on Improvements Implementation, added new section on consent agenda (4.9) and updated Appendix A to incorporate changes resulting from adoption of the revised GNSO PDP.
2.6	16 May 2013	Following recommendations of the Standing Committee on Improvements Implementation, revised section 15 of the Policy Development Process (PDP) Manual, Annex 2 of the GNSO Council Operating Procedures, on Termination or Suspension of PDP prior to Final Report.

Version	Date	Description
2.7	13 June 2013	On 13 June 2013 the GNSO Council approved a motion instructing staff to update any sections in the GNSO Operating Procedures that are related to the submission of reports and / or motions to ensure that these are consistent with the new provision that reports and motions should be submitted to the GNSO Council for inclusion on the agenda as soon as possible, but no later than 23h59 Coordinated Universal Time (UTC) on the day, 10 calendar days before the GNSO Council meeting.

APPENDIX 1: GNSO Council Voting Results Table

Motion or Action	Reference	Threshold	CPH[10]: (3.3.1)	Conj.	NCPH[11]: (6.6.1)
Create Issue Report	Bylaws: Art X, §3(9)a	> ¼ Both (or) > ½ One	2	AND	4
			4	OR	7
Initiate PDP Within Scope	Bylaws: Art X, §3(9)b	> ⅓ Both (or) > ⅔ One	3	AND	5
			5	OR	9
Initiate PDP Not Within Scope	Bylaws: Art X, §3(9)c	>= ⅔ Both OR >= ¾ One AND > ½ One	5	AND	9
			6	AND	7
			4	AND	10
Approve PDP Team Charter for PDP Within Scope	Bylaws: Art X, §3(9)d	> ⅓ Both (or) > ⅔ One	3	AND	5
			5	OR	9
Approve PDP Team Charter for PDP Not Within Scope	Bylaws: Art X, §3(9)e	>= ⅔ Both OR >= ¾ One AND > ½ One	5	AND	9
			6	AND	7
			4	AND	10
Amendment to an Approved PDP Team Charter	Bylaws: Art X, §3(9)f	>½ Both	4	AND	7
Terminate a PDP (only for a significant cause)	Bylaws: Art X, §3(9)g	>= ⅔ Both OR >= ¾ One AND > ½ One	5	AND	9
			6	AND	7
			4	AND	10
Approve PDP Recommendation Without GNSO Super Majority	Bylaws: Art X, §3(9)h	> ½ Both[12] See footnote	4	AND	7

---

[10] CPH = Contracted Parties House

[11] NCPH = Non-Contracted Parties House

[12] Also requires that one GNSO Council member representative of at least 3 of the 4 Stakeholder Groups supports the Recommendation.

Approve PDP Recommendation With GNSO Super Majority	Bylaws: Art X, §3(9)i	>= ⅔ Both OR >= ¾ One AND > ½ One	5	AND	9
			6	AND	7
			4	AND	10
Approve PDP Recommendation Imposing New Obligations on Certain Contracting Parties (where a 2/3 vote of the council demonstrates the presence of a consensus)	Bylaws: Art X, §3(9)l	>= ⅔ Both OR >= ¾ One AND > ½ One	5	AND	9
			6	AND	7
			4	AND	10
Modify or Amend an Approved PDP Recommendation (only prior to Board approval)	Bylaws: Art X, §3(9)k	>= ⅔ Both OR >= ¾ One AND > ½ One	5	AND	9
			6	AND	7
			4	AND	10
Elect GNSO Chair	GOP: §2.2a	> 60% Both	5	AND	8
Elect Vice-Chair Each House	GOP: §2.2c	> 50% One	4	OR	7
Elect Board Seat 13	Bylaws: Art X, §3(6)a	> 60% One	5	▨	▨
Elect Board Seat 14	Bylaws: Art X, §3(6)b	> 60% One	▨	▨	8
Remove NCA Each House	Bylaws: Art X, §3(3)	> 75% One	6	OR	10
Remove NCA	Bylaws: Art X, §3(3)	> 75% Both	6	AND	10
Extend Term Limit: Geog/Diversity Circumstance	GOP: §2.1.1	> 60% Both	5	AND	8
Extend Term Limit: New Circumstance	GOP: §2.1.2	> 75% Both	6	AND	10
All Other (Default)	Bylaws: Art X, §3(9)	> ½ Both	4	AND	7

Instructions:

Set forth above are all possible vote counts necessary to effectuate GNSO Council decisions that result from the consensus voting thresholds published in the ICANN Bylaws and GNSO Council Operating Procedures.

Where the threshold action notes a "both" designation, the vote in that column cell that corresponds with the appropriate voting house composition must be combined with the vote total in a second column cell. Where a result indicates "one" the action can be triggered by only the vote count in the column cell that corresponds with the appropriate voting house composition. For example, to create an Issues Report would require (2 votes in the Contracted Parties House combined with 4 votes in the Non-Contracted Parties House) OR (4 votes from the Contracted Parties House or 7 votes in the Non-Contracted Parties House).

Unless otherwise specified, a motion or action affecting a Council Member (e.g., Extend Term Limit) does not require that Councilor to abstain.

The Secretariat shall announce the motion and then call the roll, varying the sequence randomly for each new vote.

Results shall be published by Councilor by House indicating number of votes by category: Yes, No, Abstain (with Reason).

Legend:

CPH = Contracted Parties House
NCPH = Non-Contracted Parties House
GOP = GNSO Operating Procedures
(3.3.1) = Three CPH Members; Three NCPH Members; 1 Voting NCA
(6.6.1) = Six CPH Members; Six NCPH Members; 1 Voting NCA

ANNEX 1: GNSO Working Group Guidelines

Section 1.0: General

1.1 Purpose

The objective of this document is to assist Working Groups to optimize productivity and effectiveness by providing a set of guidelines, checklists, templates, and other 'best practice' materials that they may consider and/or utilize, as appropriate, in the process of establishing the WG and throughout its life cycle.

1.2 Intended Audience

This document is intended to inform the (potential) members of Working Groups that have been created or are in the process of being created by the GNSO or another Chartering Organization[1] to achieve or accomplish one or more objectives or outcomes. It should be noted that the manner in which the output of a WG defined by these guidelines is used is not determined by these guidelines, but rather is determined by the charter of the WG and, if applicable, the relevant ICANN Bylaw definitions such as the Policy Development Process.

While the document is the outcome of an effort started in response to the GNSO reorganization, the guidelines are meant to be applicable to other chartering organizations; hence, reference is made to Chartering Organization or CO as opposed to GNSO Council throughout this document.

1.3 Revisions

As further experience is developed in the management, operation and practice of Working Groups, it is intended that this document will be updated when appropriate. Any proposals for updates or changes should be submitted to the GNSO Council for consideration (please contact the GNSO Secretariat for further information).

The GNSO Council should commit to the annual review of these documents to ensure that documents stay up-to-date.

---

[1] These guidelines can also be used when several organizations want to charter a joint working group, such as has been done in the Cross-Community Working Groups (CWG).

Section 2.0: Roles and Responsibilities

2.1 Introductions and Working Group Formation

2.1.1 Announcement of a Working Group

After a decision has been taken to form a Working Group, it is important to circulate a 'Call For Volunteers' as widely as possible in order to ensure broad representation and participation in the Working Group. Depending upon the scope of the Working Group and its intended subject matter, the following avenues could be explored:

- Publication of announcement on relevant ICANN web sites, including by not limited to the GNSO and other Supporting Organization and Advisory Committee web pages.
- Distribution of announcement to GNSO Stakeholder Groups, Constituencies, and/or other ICANN Supporting Organizations and Advisory Committees.
- Circulation of announcement to organizations that are considered to have expertise/knowledge/interest in relation to the subject matter of the Working Group.
- One-to-one outreach from either the GNSO Chair or the Interim WG Chair to the Chair of other ICANN Supporting Organizations and Advisory Committees either known to have an interest in the subject, or those where it is felt that their input into the discussions will be valuable. Individuals known to be knowledgeable or interested could be similarly approached.

Ideally, the 'Call For Volunteers' announcement should include the following types of information about the Working Group: its objective(s), expectations concerning activities and timeframes, links to relevant background information including its charter, details on how to sign up as a participant, and the requirement to submit a Statement of Interest (SOI). In addition, a Chartering Organization (CO) might want to include some statement as to the importance of the activity, that is, why the effort is being undertaken, its criticality, context, and perceived usefulness to the GNSO. While a WG may not "need to know" these elements in order to complete their tasks, it could help in recruitment and sense of purpose. In addition, the announcement should include a link to these Working Group Guidelines as well as any other instructions or information that might be applicable to that particular Working Group.

2.1.2 Membership Applications

The Chartering Organization Secretariat or their representative, herein after referred as the Secretariat, will be tasked to gather expressions of interest to participate in a WG. Following the submission of an expression of interest, the Secretariat will verify that the submission has been received from a 'real person.' If the expression of interest has been made on behalf of a company or organization, a primary point of contact and alternate will be required in order to be eligible for WG membership.

Upon completion of the 'real person' verification, the Secretariat will send a confirmation of receipt together with a request for a Statement of Interest (SOI), according to GNSO Operating Procedures, Chapter 5.0, and a link to these Working Group Guidelines.

Appeals Process

If concerns about the completeness and/or accuracy of a Statement of Interest persist after reasonable attempts are made to resolve them with the Relevant Party, the matter shall be brought to the attention of the applicable Chair and handled according to decision-making methodology and appeal process as prescribed in Sections 3.6 and 3.7.

2.1.3 Planning the First Meeting

The responsible ICANN Staff member will coordinate with the Chair, Interim Chair or Chartering Organization (as appropriate) on the timing and proposed agenda for the first meeting of the WG. In addition, the ICANN Staff member is expected to provide the members of the WG with the relevant background information, including any relevant historical data, and recommended materials for review prior to the first meeting, including, but not limited to, a link to these Working Group Guidelines.

Once a date and time has been identified, the Secretariat will send out the call-in details to all the members of the WG.

2.1.4 First Meeting of the Working Group

2.1.4.1 Introductions

For team-building purposes, to understand its resources and capabilities and, potentially, to help with prospective assignments, members of the Working Group should be provided with the opportunity, at the start of the first meeting, to share information regarding interests, background, skills, experience, especially as related to any requirements in the Charter.

Members of the Working Group should be informed that all Working Groups are normally expected to operate under the principles of transparency and openness, which means, *inter alia*, that mailing lists are publicly archived, meetings are normally recorded and/or transcribed, and SOIs are required from Working Group participants which will be publicly posted.

2.1.4.2 Election of the WG Leaders

Unless a Chair has already been named by the Chartering Organization, normally a Chair will be selected at the first meeting of the WG. Until that time, the Chartering Organization's liaison may fulfill the role of interim Chair. A Working Group may elect to have Co-Chairs and Vice-Chairs. Under extraordinary circumstances, ICANN staff may be requested to perform administrative co-ordination of the WG until such time a Chair can be appointed. Once selected, a Working Group Chair will need to be confirmed by the Chartering Organization (CO). The newly elected Chair will act on a provisional basis until the Chartering Organization has confirmed the appointment. If there are any objections to the selected Chair, the CO will conduct a vote to establish whether there is sufficient support for the selected Chair according to the voting procedures of the CO. If not, the Working Group will be requested to reconsider their choice for Chair and return to the CO with a new proposal.

In the unlikely event that the selected Chair is rejected by the CO, the CO must articulate its reason for the rejection and the WG must be able to ask for reconsideration of the decision.

2.1.4.3 Items for Review

At the first meeting of the WG or as soon thereafter as practicable, the following documents should be reviewed in order to ensure all members have a common understanding of the WG's mission, goals, objectives, deliverables, decision-making process and timeframes: Charter, Working Group Guidelines and any other documents relevant for the WGs discussion (e.g., Policy Development Process Guidebook, Issues Paper). These documents are normally transmitted to the WG prior to the first meeting. It is required that WGs develop a work plan that outlines the necessary steps and expected timing in order to achieve the milestones set out in the WG Charter. If a WG does not develop a work plan, it will need to provide a justification to the Chartering Organization.

If the Chartering Organization has specified that it would like the WG to complete a formal Self-Assessment, it may be helpful to participants to review the questionnaire (see Section 7.0) in advance so that, as plans unfold and deliberations proceed, members have an understanding of the information that will be asked at the conclusion of the team's work.

The WG Chair may use the following checklist ~~(see Addendum)~~ for ~~further details assistance.~~

Checklist	**Yes/No**
Have all WG members submitted Statements of Interest?	
Introduction of WG members	
Inform members that WG will operate under the principles of transparency and openness (i.e., mailing lists are publicly archived, meetings are recorded / transcribed)	
Review of WG's mission, goals, objectives, deliverables, decision-making process, timeframes and any other documents relevant for the WG‟s discussion	
Review WG Self-Assessment Questionnaire (see Section 7.0)	
Development of a work plan	
Schedule for future meetings of the WG	

If the Chartering Organization has specified that it would like the WG to complete a formal Self-Assessment, it may be helpful to participants to review the questionnaire (see Section 7.0) in advance so that, as plans unfold and deliberations proceed, members have an understanding of the information that will be asked at the conclusion of the team's work.

2.2 Working Group Member Roles and Responsibilities

The following is a description of standard WG roles. Typically, the Charter will outline the desired qualities and skills a WG Chair should possess, the role and name of the official liaison to the Chartering Organization, and any key Staff or other experts assigned to the WG. Any additional roles that are not included here should be listed in the WG Charter, including a description and minimal set of functions/duties to the extent that the chartering organization might wish to specify them.

A suggested procedure to conduct elections may be:

- Nominations or self-nominations;
- Statements of qualifications from candidates, which sets forth the qualifications, qualities and experience that they possess that will serve the particular WG;
- Vote by simple majority;
- Notification of and subsequent confirmation by the Chartering Organization of results of actions.

2.2.1 Chair

The purpose of a Chair is to call meetings, preside over working group deliberations, manage the process so that all participants have the opportunity to contribute, and report the results of the Working Group to the Chartering Organization. The Chair should underscore the importance of achieving overall representational balance on any sub-teams that are formed. The Chair should make it clear that participation on sub-teams is open to all and he/she should encourage representational balance to the degree possible. However, it should be understood that there will not always be volunteers from every interest group and that it is often acceptable to have a small sub-team that is not totally representational perform an initial role that will later be reviewed by a broader more representational group. In those cases where initially there is insufficient balance, the Chair should make a special outreach effort to those groups not represented. In all cases where the Chair believes that one set of interests or expertise is missing from a group, special efforts must be made to bring that interest or expertise into the group via invitation or other method and the situation must be documented in the final report, including a discussion of the efforts made to redress the balance. Additionally, the Chair should ensure that particular outreach efforts are made when community reviews are done of the group's output, to include reviews from the interests or expertise that were not adequately represented. The Chair should always encourage and, where necessary, enforce the ICANN Standards of Behavior (see 3.0 Norms).

2.2.2 Co-Chairs or Vice-Chairs

Appointing a co-chair(s) or vice-chair(s) may facilitate the work of the Chair by ensuring continuity in case of absence, sharing of workload, and allowing the Chair to become engaged in a particular debate.

2.2.3 Secretary

Note taker and recorder of the WG’s activities (Note: this role could also be fulfilled by ICANN Staff).

2.2.4 Liaison

A Member of the Chartering Organization (CO) may be appointed to serve as a Liaison to the Working Group. The role of the Liaison consists of reporting to the CO on a regular basis on the progress of the Working Group; assisting the Chair as required with his/her knowledge of WG processes and practices; taking back to the CO any questions or queries the WG might have in relation to its charter and mission; and, assisting or intervening when the WG faces challenges or problems. The liaison is expected to fulfill the liaison role in neutral manner, monitor the discussions of the Working Group and assist and inform the Chair and the WG as required.

2.2.5 Members

WG members as a whole are expected to participate, contribute and drive the work of the group. It is the responsibility of the WG members to make sure that any initial drafts represent as much of the diversity of views as possible. This may be done by either asking multiple WG members to contribute text that may be assembled with the help of staff, or for a drafting subgroup to be established to produce such an initial draft. While staff may be asked to help in assembling initial drafts, the WG is responsible for driving the work. Examples of member responsibilities include:

- Develop and draft working-group documents;
- Contribute ideas and knowledge to working group discussions;
- Act as liaisons between the Working Group and their respective stakeholder groups or constituencies;
- Ensure that stakeholder group or constituency statements are developed in an informed and timely way; and
- Actively and constructively participate in the consensus decision making process.

2.2.6 Staff

ICANN Staff performs the following two basic functions for any WG, namely secretariat (fundamentally a support function covering logistics) and policy liaison (a support function providing WG assistance in a neutral manner, including drafting, if required, which should reflect faithfully the deliberations of the Working Group). In addition, workload permitting, ICANN Staff may perform the following distinct roles for a WG as requested and appropriate:

- Expertise (technical, legal, economic, etc.);
- Operational/Implementation (facilitation with the framework of existing policies and rules);
- Scoping (for policy matters, internal role of the General Counsel, but possibly distinct, guaranteeing respect of the procedures and competencies of the different structures); or
- Liaison with other Staff or experts.

2.3 Use of Sub-Teams

The WG may decide to employ sub-teams as an efficient means of delegating topics or assignments to be completed. Sub-team members need to have a clear understanding of issues they work on as well as the results to be achieved. The members of sub-teams report their results to whole working group for review and approval. The WG should indicate whether or not it would like to have meetings of the sub-team recorded and/or transcribed.

Any member of the WG may serve on any sub-team; however, depending upon the specific tasks to be accomplished, the Chair should ensure that the sub-team is properly balanced with the appropriate skills and resources to ensure successful completion. It is recommended that the sub-team appoints a coordinator who heads up the sub-team and is responsible for providing regular progress updates to the Working Group. There is no need for formal confirmation by the CO or WG of such a coordinator.

The lifespan of a sub-team should not extend beyond that of the Working Group.

Decisions made by sub-teams should always be shared with the larger working group and a call for consensus must be made by the entire WG.

Section 3.0: Norms

3.1 Participation

Members of a WG are expected to be active participants, either on the WG mailing lists and/or in the WG meetings, although some might opt to take an observer approach (monitor mailing lists and/or meetings). The WG Chair is expected to make an assessment at the start of every meeting whether a sufficient number of WG members are present to proceed with the meeting and discussions. A sufficient number has not been defined in exact numbers in this context, but should be understood as having a representative number of WG members present. For example, the Chair may decide that there is not a sufficient number of WG present to make decisions, but that there is a sufficient number of WG members to have initial discussions on a certain issue and following those initial discussions encourage members on the mailing list to share their views before a decision is made at a subsequent meeting. An attendance record will be kept of every WG meeting.

If there is lack of participation resulting in meetings being cancelled and/or decisions being postponed, the Chair is expected to explore the reasons (e.g. issues with the schedule of meetings, conflict with other activities or priorities) and attempt to address them (e.g. review meeting schedule). If there is no obvious way to address the situation, the Chair should approach the Chartering Organization, Stakeholder Groups, or Constituencies for assistance (e.g. request for additional volunteers to the WG) on whether there is sufficient interest from the community to continue or whether the work should be delayed.

3.2 Representativeness

Ideally, a Working Group should mirror the diversity and representativeness of the community by having representatives from most, if not all, CO Stakeholder Groups and/or Constituencies. It should be noted that certain issues might be more of interest to one part of the community than others. The Chair, in cooperation with the Secretariat and ICANN Staff, is continually expected to assess whether the WG has sufficiently broad representation, and if not, which groups should be approached to encourage participation. Similarly, if the Chair is of the opinion that there is over-representation to the point of capture, he/she should inform the Chartering Organization.

3.3 Process Integrity

WGs are encouraged to focus and tailor their work efforts to achieve the identified goals of the Charter. While minimum attendance and participation requirements are not explicitly recommended, a Chair is expected, as outlined above, to take the necessary measures to ensure that all WG members have an opportunity to provide their input on issues and decisions. WG members should be mindful that, once input/comment periods have been closed, discussions or decisions should not be resurrected unless there is group consensus that the issue should be revisited in light of new information that has been introduced. If the reopening is perceived as abusive or dilatory, a WG member may appeal to the Chair (see Section 3.7).

Members are expected to participate faithfully in the WG's process (e.g., attending meetings, providing input OR monitoring discussions) and should formally withdraw if they find that they can no longer meet this expectation. Working group members may request a review by the Chair if a member disrupts the work or decision-making of the group as a result of inconsistent participation. It should be noted that there are no rules or requirements as to what constitutes sufficient or adequate 'participation;' this is an assessment that each WG member should make individually.

Public comments received as a result of a public comment forum held in relation to the activities of the WG should be carefully considered and analyzed. In addition, the WG is encouraged to explain their rationale for agreeing or disagreeing with the different comments received and, if appropriate, how these will be addressed in the report of the WG.

3.4 Individual/Group Behavior and Norms

ICANN's Expected Standards of Behavior are outlined in the ICANN Accountability and Transparency Framework, see http://www.icann.org/transparency/acct-trans-frameworks-principles-10jan08.pdf for further details. [2]

If a WG member feels that these standards are being abused, the affected party should appeal first to the Chair and Liaison and, if unsatisfactorily resolved, to the Chair of the Chartering Organization or their designated representative. It is important to emphasize that expressed disagreement is not, by itself, grounds for abusive behavior. It should also be taken into account that as a result of cultural differences and language barriers, statements may appear disrespectful or inappropriate to some but are not necessarily intended as such. However, it is expected that WG members make every effort to respect the principles outlined in ICANN's Expected Standards of Behavior as referenced above.

3.5 Rules of Engagement

This section contains procedures for handling any member that is perceived to be persistently and continually obstructing the Working Group's efforts.

The Chair, in consultation with the Chartering Organization liaison(s), is empowered to restrict the participation of someone who seriously disrupts the Working Group. Any such restriction will be reviewed by the Chartering Organization. Generally, the participant should first be warned privately, and then warned publicly before such a restriction is put into place. In extreme circumstances, this requirement may be bypassed. This restriction is subject to the right of appeal as outlined in Section 3.7.

3.6 Standard Methodology for Making Decisions

The Chair will be responsible for designating each position as having one of the following designations:

- **Full consensus** - when no one in the group speaks against the recommendation in its last readings. This is also sometimes referred to as **Unanimous Consensus.**
- **Consensus** - a position where only a small minority disagrees, but most agree[3].

---

[2] Other best practices that can be considered include the 'Statement on Respectful Online Communication', see http://www.odr.info/comments.php?id=A1767_0_1_0_C.

[3] For those that are unfamiliar with ICANN usage, you may associate the definition of 'Consensus' with other definitions and terms of art such as rough consensus or near consensus. It should be noted, however, that in the case of a GNSO PDP originated Working Group, all reports, especially Final Reports, must restrict themselves to the term 'Consensus' as this may have legal implications.

- **Strong support but significant opposition** - a position where, while most of the group supports a recommendation, there are a significant number of those who do not support it.
- **Divergence** (also referred to as **No Consensus**) - a position where there isn't strong support for any particular position, but many different points of view. Sometimes this is due to irreconcilable differences of opinion and sometimes it is due to the fact that no one has a particularly strong or convincing viewpoint, but the members of the group agree that it is worth listing the issue in the report nonetheless.
- **Minority View** - refers to a proposal where a small number of people support the recommendation. This can happen in response to a **Consensus**, **Strong support but significant opposition**, and **No Consensus;** or, it can happen in cases where there is neither support nor opposition to a suggestion made by a small number of individuals.

In cases of **Consensus**, **Strong support but significant opposition**, and **No Consensus**, an effort should be made to document that variance in viewpoint and to present any **Minority View** recommendations that may have been made. Documentation of **Minority View** recommendations normally depends on text offered by the proponent(s). In all cases of **Divergence,** the WG Chair should encourage the submission of minority viewpoint(s).

The recommended method for discovering the consensus level designation on recommendations should work as follows:

i. After the group has discussed an issue long enough for all issues to have been raised, understood and discussed, the Chair, or Co-Chairs, make an evaluation of the designation and publish it for the group to review.

ii. After the group has discussed the Chair's estimation of designation, the Chair, or Co-Chairs, should reevaluate and publish an updated evaluation.

iii. Steps (i) and (ii) should continue until the Chair/Co-Chairs make an evaluation that is accepted by the group.

iv. In rare case, a Chair may decide that the use of polls is reasonable. Some of the reasons for this might be:

    - A decision needs to be made within a time frame that does not allow for the natural process of iteration and settling on a designation to occur.
    - It becomes obvious after several iterations that it is impossible to arrive at a designation. This will happen most often when trying to discriminate between **Consensus** and **Strong support but Significant Opposition** or between **Strong support but Significant Opposition** and **Divergence.**

Care should be taken in using polls that they do not become votes. A liability with the use of polls is that, in situations where there is **Divergence** or **Strong Opposition**, there are often disagreements about the meanings of the poll questions or of the poll results.

Based upon the WG's needs, the Chair may direct that WG participants do not have to have their name explicitly associated with any Full Consensus or Consensus view/position. However, in all other cases and in those cases where a group member represents the minority viewpoint, their name must be explicitly linked, especially in those cases where polls where taken.

If a Chartering Organization wishes to deviate from the standard methodology for making decisions or empower the WG to decide its own decision-making methodology it should be affirmatively stated in the WG Charter.

Consensus calls should always involve the entire Working Group and, for this reason, should take place on the designated mailing list to ensure that all Working Group members have the opportunity to fully participate in the consensus process. It is the role of the Chair to designate which level of consensus is reached and announce this designation to the Working Group. Member(s) of the Working Group should be able to challenge the designation of the Chair as part of the Working Group discussion. However, if disagreement persists, members of the WG may use the process set forth below to challenge the designation.

If several participants[4] in a WG disagree with the designation given to a position by the Chair or any other consensus call, they may follow these steps sequentially:

1. Send email to the Chair, copying the WG explaining why the decision is believed to be in error.
2. If the Chair still disagrees with the complainants, the Chair will forward the appeal to the CO liaison(s). The Chair must explain his or her reasoning in the response to the complainants and in the submission to the liaison. If the liaison(s) supports the Chair's position, the liaison(s) will provide their response to the complainants. The liaison(s) must explain their reasoning in the response. If the CO liaison disagrees with the Chair, the liaison will forward the appeal to the CO. Should the complainants disagree with the liaison support of the Chair's determination, the complainants may appeal to the Chair of the CO or their designated representative. If the CO agrees with the complainants' position, the CO should recommend remedial action to the Chair.
3. In the event of any appeal, the CO will attach a statement of the appeal to the WG and/or Board report. This statement should include all of the documentation from all steps in the appeals process and should include a statement from the CO.[5]

3.7 Appeal Process

Any WG member that believes that his/her contributions are being systematically ignored or discounted or wants to appeal a decision of the WG or CO should first discuss the circumstances with the WG Chair. In the event that the matter cannot be resolved satisfactorily, the WG member should request an

---

[4] Any Working Group member may raise an issue for reconsideration; however, a formal appeal will require that that a single member demonstrates a sufficient amount of support for initiating an appeal before the formal process outlined in Section 3.7 can be invoked. In those cases where a single Working Group member is seeking reconsideration, the member will advise the Chair and/or Liaison of their issue and the Chair and/or Liaison will work with the dissenting member to investigate the issue and to determine if there is sufficient support for the reconsideration to initial the appeal process set forth in Section 3.7.

[5] It should be noted that ICANN also has other conflict resolution mechanisms available that could be considered in case any of the parties are dissatisfied with the outcome of this process.

opportunity to discuss the situation with the Chair of the Chartering Organization or their designated representative.

In addition, if any member of the WG is of the opinion that someone is not performing their role according to the criteria outlined in Section 2.2 of this document, the same appeals process may be invoked.

Section 4.0: Logistics and Requirements

4.1 Session Planning – General Meeting Logistics

The Chair will normally work with ICANN Staff and/or the Secretariat to coordinate the logistics for the WG meetings. Online tools are available that may be used to find a day and time convenient for most WG participants. It should be noted, however, that scheduling tools should follow the preference of the majority and accommodate those that are in different time zones. Alternating meeting times should be considered as an option if the same members of the WG are always 'inconvenienced' by a standing meeting time. WGs should decide how often they would like to meet (e.g., weekly, every two weeks) and for how long (e.g., 1 hour, 1.5 hours).

The Secretariat is responsible for communicating the timing and dial-in details for meetings that take place by conference call. Universal Standard Time (UTC) is used as a standard reference (local times can be found using www.timeanddate.com). Dial out support and/or toll free numbers, when available, will be provided to WG members to facilitate participation. Additionally, to facilitate remote participation and sharing of documents, WGs may make use of various online connect services. As described above, meetings are normally recorded and transcribed.

There is a presumption of full transparency in all WGs. In the extraordinary event that the WG should require confidentiality, it is up to that WG to propose a set of rules and procedures in collaboration with the CO.

WGs may opt to organize face-to-face meetings during ICANN meetings to take advantage of those members attending and to open its session to the broader ICANN community. It should be noted that not all WG members may attend an ICANN meeting, a factor that should be weighed in deciding whether to arrange a face-to-face session. Best efforts should be made to provide remote participation facilities for those not attending an ICANN meeting in person.

Apart from face-to-face sessions during ICANN meetings, WGs might decide that it is vital for its deliberations and/or reaching consensus to meet in person for a certain amount of time (e.g., day, two days). If funding is required to organize such a meeting (e.g., travel expenses), a request should be made to the Chartering Organization for approval with as much advance notice as possible[6].

A WG may request additional tools or applications if considered necessary to achieve the objectives set out in its Charter.

---

[6] Please note that the ICANN Budget is finalized and approved in advance of each fiscal year so if general funds are not available for a need like this, it may be difficult to obtain funding.

The Chair, with support of ICANN Staff, if required, is expected to circulate the draft agenda to the WG ideally at least 24 hours in advance. At the start of a meeting, the Chair should review the agenda and any proposed changes to that agenda.

Following the meeting, an MP3 recording and/or transcript will be made available for those who were not able to attend and/or other interested parties. In addition, a WG may consider using action items and/or notes from the meeting to record the main decisions or follow-up items from a meeting. The action items or meeting notes should be circulated in a timely manner in order to allow for sufficient preparation or response ahead of the next meeting.

4.2 Communication/Collaboration Tools

Each Working Group will have a dedicated mailing list. Working Group mailing lists are publicly archived (e.g., on the GNSO web site (http://gnso.icann.org). In addition, WGs may make use of collaborative workspaces such as Wikis (see https://community.icann.org). WGs are free to make use of different document formats, but it might be helpful to come to an agreement, in advance, to ensure that all members are able to work with them.

4.3 Translation

ICANN uses the following translation principles:

ICANN will provide timely and accurate translations, and move from an organization that provides translation of texts to one that is capable of communicating comfortably with a range of different languages. The translation framework comprises a four-layer system:

- The bottom layer contains those specific documents and publications that address the organization's overall strategic thinking. They will be translated into an agreed block of languages.
- The next layer contains a class of documents that ICANN undertakes to provide in different languages to allow interaction within ICANN processes by non-English speakers.
- The third layer comprises documents suggested by ICANN staff as being helpful or necessary in ongoing processes; and documents requested by the Internet community for the same reasons. These documents will be run through a translation approval system.
- The top layer is where the community is encouraged to use online collaborative tools to provide understandable versions of ICANN materials as well as material dynamically generated by the community itself. ICANN will provide the technology for community editing and rating, and a clear and predictable online location for this interaction to occur. It will also seek input from the community to review the tools.

English will remain the operating language of ICANN for business consultation and legal purposes.

Every effort will be made to ensure equity between comments made in languages other than English and those made in English. If it is not possible to arrange the release of particular documents in the agreed languages at the same time, then each language will be provided with the same time period in which to make comments.

ICANN will adopt the International Organisation for Standardisation's 639-2 naming system for identifying and labeling particular languages.

4.4 Briefings and Subject Matter Experts

If the WG determines that it needs additional educational briefings occurring upfront or as issues emerge during deliberations, it should identify its specific requests to the CO including subject matter(s), type(s) of expertise, objectives, and costs. If additional costs are involved, prior approval must be obtained from the CO.

Additionally, a WG may, at any stage throughout its deliberations, decide to seek input from self-formed groups and/or individuals with the aim of further informing WG members about matters that fall within the remit of the WG and which are of interest to the ICANN community.

Section 5.0: Products and Outputs

The products and outputs of a Working Group may be prescribed by the Charter such as a report, recommendations, guidelines, self-assessment or defined by the process under which the WG operates (e.g., Policy Development Process). In addition, the Working Group might decide that additional products or outputs are required in order to carry out its Charter in an efficient and productive manner such as a statement of work or a project plan. Working Groups should be encouraged to review products and outputs from other WGs and/or consult with ICANN Staff to decide what additional products or outputs would be advisable to develop. Links to some examples of products and outputs produced by other GNSO Working Groups can be found hereunder:

- Initial Report – IRTP Part A WG Initial Report
- Final Report – GNSO Final Report on Domain Tasting
- Public Comment Review Sheet – Fast Flux Public Comments Review
- Recommendations/Guidelines – New gTLDs Principles, Recommendations & Implementation Guidelines
- Stakeholder Group/Constituency Statement Template – IRTP Part B Constituency Statement Template
- Public Comment Announcement Text – Post-Expiration Domain Name Recovery Public Comment Announcement
- WG Self Assessment Template (~~TBD~~ See Section 7.0.))

Section 6.0: Charter Guidelines

This section of the document is intended to assist any Chartering Organization in its effective implementation of Working Groups by providing a set of guidelines, checklists, templates, and other 'best practice' materials that it should consider and/or utilize, as appropriate, in creating, chartering, staffing, and guiding a Working Group (WG) to accomplish some desired outcome. The term “Chartering Organization” (CO), in this context, can be any formal entity or informal grouping of individuals that wishes to generate a WG Charter document.

These Guidelines are organized into three major sections as follows:

Section 6.1: Contains suggestions and recommendations related to the implementation of Working Groups.

Section 6.2: Is organized and structured to be a template containing specific elements that are recommended to be considered by any CO intending to produce a specific Working Group Charter document.

Section 6.3: Contains background information informing the effort to create this document.

6.1 General Working Group Implementation Guidelines

Introduction: This Section contains suggestions and recommendations related to the general implementation of Working Groups. For those engaged in drafting a specific Working Group Charter, please see Section 6.2 below for further details.

6.1.1 Announcement of a Working Group

After a decision has been taken to form a Working Group, it is important to circulate a ‘Call For Volunteers’ as widely as possible in order to ensure broad representation and participation in the Working Group. Depending upon the scope of the Working Group and its intended subject matter, the following avenues are required to be utilized as the default rule, subject to exceptions only in extraordinary circumstances:

- Publication of announcement on the relevant ICANN web sites.
- Distribution of announcement to appropriate Stakeholder Groups, Constituencies, and/or other ICANN Supporting Organizations and Advisory Committees.

Nothing in the foregoing is intended to limit the wider distribution of the call for volunteers. For example, the WG could consider:

- Circulation of announcement to organizations that are considered to have expertise/knowledge/interest in relation to the subject matter of the Working Group.

Ideally, the ‘Call For Volunteers’ announcement should include the following types of information about the Working Group: its objective(s), expectations concerning activities and timeframes, links to relevant background information including its charter, details on how to sign up as a participant, and the requirement to submit a Statement of Interest (SOI). In addition, a CO might want to include some statement as to the purpose of the activity, that is, why the effort is being undertaken, its criticality, context, and perceived usefulness to the Chartering Organization. While a WG may not "need to know" these elements in order to complete their tasks, it could help in recruitment and sense of purpose.

6.1.2 Transparency and Openness

All Working Groups are expected to operate under the principles of transparency and openness, which means, *inter alia*, that mailing lists are publicly archived, meetings are normally recorded and/or transcribed, and SOIs are required from Working Group participants and will be publicly available. It is important that prospective Working Group members are made aware of these principles.

6.1.3 Purpose, Importance, and Expectations of the Chair

While open Working Groups may offer many benefits in terms of broad participation and support, it is equally important that inclusiveness does not compromise effectiveness. An experienced Chair with strong leadership and facilitation skills will be a key ingredient of a successful outcome. He or she should be able to distinguish between participants who offer genuine reasons for dissent and those who raise issues in an effort to block progress. The Chair should have the authority to enforce agreed upon rules applicable to anyone trying to disrupt discussions and be able to exclude individuals in certain cases, provided an avenue of appeal is available. In addition, the Chair should be able to ensure that anyone joining a Working Group after it has begun has reviewed all documents and mailing list postings and agrees not to reopen previously decided questions. However, if there is support from the Chair to reopen an issue in light of new information that is provided either by a new member or an existing member of the Working Group, this should be possible.

The Chair is expected to assume a neutral role, refrain from promoting a specific agenda, and ensure fair treatment of all opinions and objectivity in identifying areas of agreement. This does not mean that a Chair experienced in the subject manner cannot express an opinion, but he or she should be explicit about the fact that a personal opinion or view is being stated, instead of a 'ruling of the chair.' However, a Chair should not become an advocate for any specific position. The appointment of co-chairs could be considered and is encouraged as a way to share the burden, provide continuity in case of absence of the Chair as well as allowing group leaders to rotate their participation in the discussion. In addition, in certain circumstances the CO may decide that it must appoint a completely neutral and independent Chair who would not participate in the substance of the discussions. In such circumstances, the Chair would be appointed by the CO.

Ideally, a Chair should have sufficient and substantive process expertise, possess leadership skills and be skilled in consensus building.

The Chartering Organization, working with the Staff, might consider the use of a professional facilitator, in certain circumstances, to help a Chair ensure neutrality and promote consensus or to provide other capabilities and expertise.

6.1.4 Other Important Roles

There are a number of other roles that a Chartering Organization should consider including:

- **Chartering Organization Liaisons** – A Member of the Chartering Organization (CO) is appointed to serve as a Liaison to the Working Group. The role of the Liaison consists of reporting to the CO on a regular basis on the progress of the Working Group; assisting the Chair as required with his/her knowledge of WG processes and practices; taking back to the CO any questions or queries the WG might have in relation to its charter and mission; and, assisting or intervening when the WG faces challenges or problems. The Liaison is expected to play a neutral role, monitor the discussions of the Working Group and assist and inform the Chair and the WG as required. The CO is therefore strongly encouraged to appoint an individual to the role of liaison who is expected to remain neutral and fulfill the role as described above.
- **Expert Advisors/Consultants** – If deemed necessary to fulfill the charter obligations, a CO may consider inviting one or more expert advisors or consultants to participate in the WG. If there are budget implications related to the participation of such external resources, funding should be confirmed in advance with the appropriate ICANN Staff organization.
- **ICANN Staff** – the following distinct Staff roles may be assigned to a WG:
    - Expertise (technical, legal, economic, etc.)
    - Secretariat (fundamentally a support function covering both logistics and drafting assistance in a neutral manner reflecting faithfully the deliberations of the Working Group)
    - Operational/Implementation (facilitation with the framework of existing policies and rules)
    - Scoping (for policy matters, internal role of the General Counsel, but possibly distinct, guaranteeing respect of the procedures and competencies of the different structures)

6.2 Working Group Charter Template[7]

Introduction: This Section of the Guidelines is organized and structured to be a template containing specific elements that are recommended to be considered by any group intending to produce a specific Working Group Charter document.

Disclaimer: The reader is cautioned that, while this template was designed to be comprehensive in terms of topics that might be applicable to a wide range of circumstances, not all Working Group Charters need to contain each and every section outlined below. Charter drafters are encouraged to consider all of the elements contained herein, but should feel unconstrained in skipping any section(s) that are not relevant to a particular purpose or adding additional sections that are specific to the particular WG effort. However, the following sections are required like 6.2.1, 6.2.2, 6.2.3 and all associated sub-sections.

---

[7] The Chartering Organization will be responsible for drafting the charter and may follow its own internal procedures for completing and/or assigning this task.

6.2.1 Working Group Identification

This section of the Charter should identify the name/identity of the Working Group and any sponsoring motion (as well as links/pointers) that establishes the Charter, if applicable. Drafters are also encouraged to identify which version of these Guidelines was referenced in preparing the Charter document. Specific elements that might be included in this section are:

- *Name of WG*
- *Name of Appointed Liaison(s)*
- *Names of Advisers to the WG, if any*
- *Name of WG Chair, if appointed in advance [Note: the Liaison may serve as Interim Chair until a Chair selected by the WG and confirmed by the CO]*
- *URL of any WG Workspace(s) and WG mailing list archives, if available*
- *Links to other ICANN documents or initiatives, including past documents or initiatives, that might have a bearing on the WGs discussions and deliberations*

Links to documents and/or decisions that have led to the creation of the WG

6.2.2 Mission, Purpose, and Deliverables

6.2.2.1 Mission and Scope

A well-written mission statement is characterized by its specificity, breadth and measurability.

The Scope of a WG should outline the boundaries within which the WG is expected to operate, e.g., in the context of a GNSO policy development process, the scope of a WG is limited to consideration of issues related to gTLDs and within ICANN's mission.

6.2.2.2 Objectives and Goals

The objectives/goals should clearly set out the issues that the WG is supposed to address. This could, for example, be in the form of a number of questions that the WG is expected to answer. In addition, objectives/goals could also include specific activities such as the organization of a workshop or production of certain documents. In general, well-defined objectives will structure and facilitate the deliberations of the WG and should be written clearly and concisely to minimize questions and confusion.

A provision should be considered that encourages the WG to request clarity from the CO if it feels it cannot carry out its tasks and responsibilities due to perceived uncertainties or limitations within the Charter. Furthermore, a WG has the possibility to renegotiate potential changes to the Charter if deemed necessary in order to achieve the objectives and goals set out.

6.2.2.3 Deliverables and Timeframes

A Charter is expected to include some, if not all, of the following elements: potential outcomes and/or expected deliverables, key milestones, and a target timeline - all of which can, if necessary, be further refined by the WG at its onset in conjunction with the CO. Although the identification of specific work tasks, outcomes, and deadlines might be perceived as constraining the WG in its activities, it is also intended to provide guidance to the WG and prevent unintentional scope creep. It should be emphasized that the WG can always ask the CO to reconsider any of the deliverables or renegotiate deadlines identified by providing its rationale.

In certain WGs, such as a Policy Development Process, the milestones and timeline might be prescribed by the ICANN Bylaws. In other situations, sufficient thought should be given to key milestones, realistic timelines, and ways to inform and consult the ICANN Community (such as public comment periods). It should be noted that any changes to milestone dates incorporated in the charter will need to be cleared with the CO.

6.2.3 Formation, Staffing, and Organization

6.2.3.1 Membership Criteria

This section of the charter should contain the chartering organization's guidance to the Working Group in terms of membership/staffing and may specify certain types of knowledge/expertise needed or desired, balance in skills/background/interest, openness to the ICANN community and its modus operandi, sizing elements/factors, and any limitations or restrictions to individuals previously banned from participating in a WG for cause.

6.2.3.2 Group Formation, Dependencies, and Dissolution

This section should outline information about the proper formation and instantiation of the Working Group (e.g., date, place, logistics). It would also indicate any dependencies or relationships with other groups, if applicable. Further information might be included addressing under what conditions the WG is dissolved.

6.2.3.3 Working Group Roles, Functions, and Duties

This section is intended to describe the WG roles that exist (e.g., Chair, Vice-Chair, Secretary, Liaison, Expert Advisor, Staff). A description of standard WG roles [provide list of standard roles] can be found in the WG Guidelines [include reference]. A reference to this section should be included in the Charter. Any additional roles that are not included in the WG Guidelines should be listed here including a description and minimal set of functions/duties to the extent that the chartering organization might wish to specify them.

6.2.3.4 Statements of Interest (SOI)

This section will contain guidelines relating to the elements and content of SOIs that each member of the WG is required to supply to the team. [See GNSO Operating Procedures, Chapter 5.0, for provisions related to Statements of Interest]
Further guidance is provided in Section 2.1.2 of this document on how to deal with any participant that does not provide an SOI despite multiple requests and reminders.

6.2.4 Rules of Engagement

The intention of this section is to provide a place in the Charter for those situations where a sponsor or chartering organization wishes to emphasize the rules of engagement or impose specific overarching 'rules of engagement' that will apply to the WGs deliberations and activities. The standard rules of engagement, including behavior and norms, are explained in further detail in Section 3.0 of this document.

6.2.4.1 Decision Making Methodologies

The standard methodology for making decisions is incorporated in Section 3.6 of this document and should be reproduced/referenced in the WG's charter. If a chartering organization wishes to deviate from the standard methodology for making decisions or empower the WG to decide its own decision-making methodology it should be affirmatively stated in this section.

6.2.4.2 Status Reporting

This section of the Charter should stipulate the types of status reports requested (e.g., Chair or Liaison update), frequency of reporting, and any guidance to the WG in terms of expected substance/content, e.g. status of deliberations, significant agreements/disagreements, how often are meetings held, how many active participants are there, role assignments, etc. It should also specify if there is a requirement for status updates at set times, e.g., two weeks prior to an ICANN meeting[8]*. If the CO has a standard for reporting, it can be included here by reference.*

6.2.4.3 Problem/Issue Escalation and Resolution Processes

The standard methodology for problem/issue escalation and resolution is incorporated in Section 3.4, 3.5 and 3.7 of this document and should be reproduced in the WG's charter. If a chartering organization wishes to deviate from the standard methodology for problem/issue escalation and resolution, and empower the WG to decide its problem/issue escalation and resolution methodology it should be affirmatively stated in this section.

6.2.4.4 Closure and Working Group Self-Assessment

This section of the Charter should describe any instructions for WG final closure including any feedback and/or self-assessment that is requested by the Chartering organization. This section might also indicate if there is any specific format, template, or prescribed manner in which the feedback is to be provided.

Charter Document History

This section should record key changes to the WG Charter, that take place after the adoption of the Charter by the CO.

6.3 Revisions

The original drafters of this document intended that its contents be continually revised and improved as individuals and groups gain experience with Working Groups and utilize these guidelines in writing charter documents. Comments about this document, including suggestions for revision may be directed to: policy-staff@icann.org. When offering suggestions for update, please cite the section, chapter, page number, and specific text along with recommendations for amendment. This document and its prior versions will be available on the GNSO Website (http://gnso.icann.org).

---

[8] It should be noted that the Board has adopted a 'Document Publication Operational Policy' (see http://www.icann.org/en/committees/participation/document-publication-operational-policy-30oct09-en.pdf) which requires the publication of documents 15 working days in advance of an ICANN public meeting.

6.4 Applicability

The GNSO Council or any of its sub-groups may decide to utilize a WG anytime they think that community wide participation is advisable for resolving issues. It should be emphasized that WGs are not intended to apply to policy development processes solely.

Addendum: Chair Checklist

~~Checklist~~	~~Yes/No~~
~~Have all WG members submitted Statements of Interest?~~	
~~Introduction of WG members~~	
~~Inform members that WG will operate under the principles of transparency and openness (i.e., mailing lists are publicly archived, meetings are recorded / transcribed)~~	
~~Review of WG's mission, goals, objectives, deliverables, decision-making process, timeframes and any other documents relevant for the WG's discussion~~	
~~Development of a work plan~~	
~~Schedule for future meetings of the WG~~	

7.0: Working Group Self-Assessment

A WG Self-Assessment instrument has been developed as a means for Chartering Organizations to formally request feedback from a WG as part of its closure process. WG members are asked a series of questions about the team's inputs, processes (e.g., norms, decision-making, logistics), and outputs as well as other relevant dimensions and participant experiences. Screenshots of the questionnaire have been assembled into a PDF (see link below) so that WG participants can review, in advance, how it is designed and what specific information will be solicited.

During the WG's closure process, coordinating with the Chair, Staff will provide a unique link (URL) to the online questionnaire along with open and close dates and any specific instructions. Staff will then perform the following actions:

- Monitor the online process providing status updates to the WG Chair;
- Provide technical assistance to WG members if requested;
- Notify the Chair when all team members have completed the questionnaire; and, following the close date,
- Summarize the feedback in a written report to the Chartering Organization.

Link to WG Self-Assessment Questionnaire: *INSERT LINK ONCE POSTED.*

END OF ANNEX 1

ANNEX 2: Policy Development Process Manual

1. PDP Manual - Introduction

These guidelines and processes supplement the requirements for PDPs described in Annex A of the ICANN Bylaws http://www.icann.org/en/general/bylaws.htm#AnnexA.

2. Requesting an Issue Report

As outlined in Annex A of the ICANN Bylaws, a request for an Issue Report may be initiated upon Board, Council or Advisory Committee request.

Requests for an Issue Report by the Board or by an Advisory Committee do not require any GNSO Council action, but are to be reviewed by Staff and prepared in accordance with Section 5.4 below.

3. Planning for Initiation of a PDP

Consistent with ICANN's commitment to fact-based policy development, the GNSO and Staff are encouraged to provide advice in advance of a vote on the request for an Issue Report specifying any additional research, discussion, or outreach that should be conducted as part of the development of the Issue Report, in order to ensure a balanced and informed Issue Report.

The GNSO is encouraged to consider scheduling workshops on substantive issues prior to the initiation of a PDP. Such workshops could, amongst others; facilitate community understanding of the issue; assist in scoping and defining the issue; gather support for the request of an Issue Report, and/or; serve as a means to gather additional data and/or information before a request is submitted. Where appropriate, the GNSO Council should consider requiring such a workshop during the planning and initiation phase for a specific issue. To the extent such workshops are utilized by the GNSO, the invitations and/or announcements for workshops should be communicated as broadly as possible.

The GNSO Council should take into full account the resources available, both volunteers and staff, when making its decision on whether or not to initiate a PDP.

4. Recommended Format of Issue Report Requests

The recommended format of requests for Issue Reports under paragraphs (b) and (c) of Section 2 is described below:

Request for Issue Report	
Name of Requestor:	
Name of Stakeholder Group/Constituency/Advisory Committee (if applicable) in support of request:	
Please provide rationale for policy development:	
Brief explanation of how issue affects your SG / Constituency / Advisory Committee:	
Suggestions on specific items to be addressed in the Issue Report (if any):	
Please provide a concise definition of the issue presented and the problems raised by the issue, including quantification to the extent feasible:	
What is the economic impact or effect on competition, consumer trust, privacy and other rights:	
Please provide supporting evidence (if any):	
How does this issue relate to the provisions of the ICANN Bylaws, the Affirmation of Commitments and/or ICANN's Articles of Incorporation:	
Date Submitted:	
Expected Completion Date:	

Any request for an Issue Report, either by completing the template or in another form, must include at a minimum: the name of the requestor and the definition of the issue. The submission of any additional information, such as the identification and quantification of problems, and other as outlined for example in the template, is strongly encouraged.

5. Creation of the Preliminary Issue Report

Within forty-five (45) calendar days after receipt of either (i) an instruction from the Board; (ii) a properly supported motion from the GNSO Council; or (iii) a properly supported motion from an Advisory Committee, the Staff Manager will create a report (a "Preliminary Issue Report"). In the event the Staff Manager determines that more time is necessary to create the Preliminary Issue Report, the Staff Manager may request an extension of time for completion of the Preliminary Issue Report, which request should be discussed with the Requestor.

In the event that the Issue Report was initially requested by the Board or an Advisory Committee, the requestor shall be informed of any extension of time for completion of the Issue Report. Any request for extension of time should include consideration of the complexity of the issue, the extent of research and outreach recommended, and the ICANN Staff workload.

The following elements should be considered in the Issue Report:

a) The proposed issue raised for consideration;
b) The identity of the party submitting the request for the Issue Report;
c) How that party is affected by the issue, if known;

d) Support for the issue to initiate the PDP, if known;
e) The opinion of the ICANN General Counsel regarding whether the issue proposed for consideration within the Policy Development Process is properly within the scope of the ICANN's mission, policy process and more specifically the role of the GNSO. In determining whether the issue is properly within the scope of the ICANN policy process, General Counsel's opinion should examine whether the issue:
    a. is within the scope of ICANN's mission statement, and more specifically the role of the GNSO;
    b. is broadly applicable;
    c. is likely to have lasting value or applicability, albeit with the need for occasional updates;
    d. is likely to enable ICANN to carry out its commitments under the Affirmation of Commitments;
    e. will establish a guide or framework for future decision-making;
    f. will implicate or affect an existing ICANN policy.
f) The opinion of ICANN Staff as to whether the Council should initiate the PDP on the issue

6. Public Comment on the Preliminary Issue Report

Upon completion of the preliminary Issue Report, the preliminary Issue Report shall be posted on the ICANN website for a public comment period of no less than 30 days. When posted for Public Comment, Staff is encouraged to translate the executive summary of Preliminary Issue Reports into the six UN languages to the extent permissible under the ICANN translation policy and the ICANN budget, though the posting of any version in English shall not be delayed while translations are being completed.

The Staff Manager is responsible for drafting a summary and analysis of the public comments received on the Issue Report and producing a Final Issue Report based upon the comments received. The Staff Manager should forward the Final Issue Report, along with any summary and analysis of the public comments received, to the Chair of the GNSO Council for consideration for initiation of a PDP.

The summary and analysis and the Final Issue Report are expected to be delivered to the Chair of the GNSO Council within 30 days of the closing of the public comment forum, though the Staff Manager may request an extension of that 30-day time for delivery.

7. Initiation of the PDP

The Council may initiate the PDP as follows:

Board Request: If the Board requested an Issue Report, the Council, within the timeframe set forth in the paragraph below, shall note for the record the confirmation of receipt of the Issue Report and the formal initiation of the PDP. No vote is required for such action.

GNSO Council or Advisory Committee Requests: The Council may only initiate the PDP by a vote of the Council. Initiation of a PDP requires a vote as set forth in Article X, Section 3, paragraph 9(b) and (c) in favor of initiating the PDP.

Timing of vote on Initiation of the PDP. The Council should endeavour to vote on whether to initiate the policy development process at the next scheduled Council meeting following the receipt of a Final Issue

Report; provided that the Final Issue Report is received no later than 23h59 Coordinated Universal Time (UTC) on the day, 10 calendar days prior to the GNSO Council meeting. If the Final Issue Report is forwarded to the GNSO Council Chair no later than 23h59 Coordinated Universal Time (UTC) on the day, 10 calendar days immediately preceding the next GNSO Council meeting, the Council should endeavour to vote on the initiation of the PDP at the subsequent GNSO Council meeting. At the request of any Council member, for any reason, consideration of the Final Issue Report may be postponed by not more than one (1) meeting, provided that the Council member details the rationale for such a postponement. Consideration of the Final Issue Report may only be postponed for a total of one (1) meeting, even if multiple Council members request postponement.

Upon consideration of the Final Issue Report the GNSO Council may, when necessary, vote to suspend further consideration of the Final Issue Report. Any motion to suspend further consideration of the Final Issue Report shall fail if the votes in favor of continuing consideration of the Final Issue Report is sufficient to initiate a PDP under Article X Section 9.b or 9.c of the Bylaws, as appropriate. The basis for suspension could include prioritization reasons such as insufficient Staff or community support available due to other ongoing PDP work, requests for additional data and requests for additional discussion. The GNSO Council is expected to use this procedure sparingly, and should generally endeavour to vote on the initiation of a PDP within 90 calendar days of the receipt of the Final Issue Report. Any decision to suspend consideration of the Final Issue Report is to be accompanied by a proposed timeline for further consideration, including a timeline for a vote on the initiation of the PDP.

In the event that the GNSO Council does not approve the initiation of the PDP, not including the possible suspension of further consideration of the Final Issue Report as described above, any Councillor may appeal the denial, and request that the GNSO Council hold a renewed vote on the initiation of the PDP at the next subsequent GNSO Council meeting.

In the event that the GNSO Council does not approve the initiation of the PDP following a Final Issue Report requested by an Advisory Committee (AC), the AC or its representatives should have the opportunity to meet with representatives of the GNSO, and in particular, those voting against the initiation of the PDP, to discuss the rationale for the rejection and why the AC feels that reconsideration is appropriate. Following this meeting, the AC may submit a statement to the GNSO Council requesting a re-vote and giving its rationale for such a re-vote. This process may be followed just once for any given Issue Report.

As part of its decision on the initiation of the PDP, the GNSO Council may include consideration of how ICANN’s budget and planning can best accommodate the PDP and/or its possible outcomes, and, if applicable, how the proposed PDP is aligned with ICANN’s Strategic Plan.

8. Development and Approval of the Charter for the PDP

Upon initiation of the PDP, a group formed at the direction of Council should be convened to draft the charter for the PDP Team. The Council should indicate the timeframe within which a draft PDP Charter is expected to be presented to the Chair of the GNSO Council. Such a timeframe should be realistic, but at the same time ensure that this task is completed as soon as possible and does not unnecessarily delay the formation of a Working Group. The elements of the Charter should include, at a minimum, the following elements as specified in the GNSO Working Group Guidelines: Working Group Identification; Mission, Purpose and Deliverables; Formation, Staffing and Organization, and; Rules of Engagement.

The Council should consider whether to approve the proposed PDP Charter at the Council meeting following the Chair's receipt of the proposed PDP Charter; provided that the proposed PDP Charter is received no later than 23h59 Coordinated Universal Time (UTC) on the day, 10 calendar days prior to the GNSO Council meeting. If the proposed PDP Charter is forwarded to the GNSO Council Chair no later than 23h59 Coordinated Universal Time (UTC) on the day, 10 calendar days immediately preceding the next GNSO Council meeting, the Council should endeavour to consider the proposed PDP Charter at the meeting after the next GNSO Council meeting.

The same voting thresholds that apply to the initiation of the PDP also apply to the approval of the proposed PDP Charter. Specifically, the proposed PDP Charter is to be approved with an affirmative vote of vote of more than one-third (1/3) of the Council members of each House or more than two-thirds (2/3) vote of one House in favour of approval of a Charter for a PDP within scope; unless the Staff Recommendation stated that the issue is not properly within the scope of the ICANN policy process or the GNSO, in which case a GNSO Supermajority Vote as set forth in Article X, Section 3, paragraph 9(c) in favour of approving the PDP Team Charter is specified to approve the PDP Charter.

Once approved, modification of any PDP Charter is discouraged, absent special circumstances. Approved charters may be modified or amended by a simple majority vote of each House.

In exigent circumstances, upon approval of the initiation of the PDP, the GNSO Council may direct certain work to be performed prior to the approval of the PDP Charter.

9. PDP Outcomes and Processes

Upon approval of the PDP Charter, the GNSO Council may form a working group, task force, committee of the whole or drafting team (the "PDP Team"), to perform the PDP activities. The preferred model for the PDP Team is the Working Group model due to the availability of specific Working Group rules and procedures that are included in the GNSO Operating Rules and Procedures. The GNSO Council should not select another model for conducting PDPs unless the GNSO Council first identifies the specific rules and procedures to guide the PDP Team's deliberations which should at a minimum include those set forth in the ICANN Bylaws and PDP Manual. The PDP Team is required to review and become familiar with the GNSO Working Group Guidelines, which also apply to PDP Working Groups (see http://gnso.icann.org/council/annex-1-gnso-wg-guidelines-07apr11-en.pdf), which includes further information and guidance on the functioning of GNSO Working Groups.

Once formed, the PDP Team is responsible for engaging in the collection of information. If deemed appropriate or helpful by the PDP Team, the PDP Team may solicit the opinions of outside advisors, experts, or other members of the public. The PDP Team should carefully consider the budgetary impacts, implementability, and/or feasibility of its proposed information requests and/or subsequent recommendations.

The PDP Team should formally solicit statements from each Stakeholder Group and Constituency in the early stages of the PDP. Stakeholder Groups and Constituencies should at a minimum have 35 days to complete such a statement from the moment that the statement is formally requested by the PDP Team. If appropriate, such statements may be solicited more than once by the PDP Team throughout the PDP process. The PDP Team is also encouraged to formally seek the opinion of other ICANN Advisory

Committees and Supporting Organizations, as appropriate that may have expertise, experience, or an interest in the PDP issue. Solicitation of opinions should be done during the early stages of the PDP.

In addition, the PDP Team should seek input from other SOs and ACs. Such input should be treated with the same due diligence as other comments and input processes. In addition, comments from ACs and SOs should receive a response from the PDP Team. This may include, for example, direct reference in the applicable Report or embedded in other responsive documentation or a direct response. The PDP Team is expected to detail in its report how input was sought from other SOs and ACs.

The PDP Team is encouraged to establish communication in the early stages of the PDP with other departments, outside the policy department, within ICANN that may have an interest, expertise, or information regarding the implementability of the issue. The Staff Manager is responsible for serving as the intermediary between the PDP Team and the various ICANN departments (finance, legal, compliance, etc.). The PDP Team Chair may escalate to the Vice President of Policy if the PDP Team is of the opinion that such communications have been hindered through the involvement of ICANN policy Staff. ICANN Staff may perform additional distinct roles for a PDP Team as requested and appropriate (see GNSO Working Group Guidelines for further details).

This Section illustrates the types of outcomes that are permissible from a PDP. PDP Teams may make recommendations to the GNSO Council regarding:

i. Consensus policies
ii. Other policies
iii. Best Practices
iv. Implementation Guidelines
v.Agreement terms and conditions
vi. Technical Specifications
vii. Research or Surveys to be Conducted
viii. Advice to ICANN or to the Board
ix. Advice to other Supporting Organizations or Advisory Committee
x.Budget issues
xi. Requests for Proposals
xii. Recommendations on future policy development activities

At the same time, a PDP Team may also conclude that no recommendation is necessary.

The Staff Manager is responsible for coordinating with the Chair(s) of the PDP Team to supervise and to carry out the PDP activities as necessary or appropriate, including, without limitation, making available the standard technical resources for the PDP Team, scheduling and attending PDP Team meetings, drafting and publishing PDP reports for public comment, and providing expertise where needed.

10. Publication of the Initial Report

After collection and review of information, the PDP Team and Staff are responsible for producing an Initial Report. The Initial Report should include the following elements:

- Compilation of Stakeholder Group and Constituency Statements

- Compilation of any statements received from any ICANN Supporting Organization or Advisory Committee
- Recommendations for policies, guidelines, best practices or other proposals to address the issue
- Statement of level of consensus for the recommendations presented in the Initial Report
- Information regarding the members of the PDP Team, such as the attendance records, Statements of Interest, etc.
- A statement on the WG discussion concerning impact of the proposed recommendations, which could consider areas such as economic, competition, operations, privacy and other rights, scalability and feasibility.

These elements may be included as content within the Initial Report or by reference to information posted on an ICANN website (such as through a hyperlink).

The Initial Report should be delivered to the GNSO Council and posted for a public comment period of not less than 30 days. If such a public comment period would coincide with an ICANN Public Meeting, the PDP Team is strongly encouraged to extend the public comment period a minimum of seven (7) days. Any public comment period on items other than the Issue Report and Initial Report shall be for a minimum of 21 days. The PDP Team is encouraged to explore other means to solicit input than the traditional public comment forum such as, for example, the use of a survey which might allow for asking more targeted questions.

11. Preparation of the Final Report

At the end of the public comment period, the Staff Manager will prepare a summary and analysis of the public comments received for the Working Group. Such a summary and analysis of the public comments should be provided at the latest 30 days after the closing of the public comment period, absent exigent circumstances. The Working Group shall review and take into consideration the public comments received. Following this review, the Staff Manager, in close coordination with the PDP Team, shall add those comments deemed appropriate for inclusion to the Initial Report. In addition, the Staff Manager and the PDP Team may update the Initial Report if there are any recommendations within the Initial Report that require modification to address comments received through public comment. Such a revised Report shall be put forward for consideration by the PDP Team. The Staff Manager and the PDP Team are not obligated to include all comments made during the comment period, including each comment made by any one individual or organization.

The PDP Team is expected to deliberate as appropriate to properly evaluate and address comments raised during the public comment period. This should include the careful consideration and analysis of the public comments; explaining the rationale for agreeing and disagreeing with the different comments received, and, if appropriate, how these will be addressed in the report of the PDP Team. Following the review of the comments received and, if required, additional deliberations, the PDP Team is expected to produce a Final Report for transmission to the Council. The analysis of the comments by the PDP Team is expected to be included or referenced as part of the Final Report.

While the Final Report is not required to be posted for public comment, in preparing the Final Report, the PDP Team should consider whether the Final Report should be posted for public comment as a [Draft]

Final Report, with the goal of maximizing accountability and transparency with regards the PDP, especially when substantial changes have been made compared to the contents of the Initial Report. When posted for Public Comment, Staff should consider translating the executive summaries of the Initial Reports and Draft Final Reports into the six UN languages, to the extent permissible under the ICANN translation policy and the ICANN budget, though the posting of any version in English is not to be delayed while translations are being completed. Upon completion of the Public Comment period, if any, and incorporation of any additional comments identified therein, or if no further comment period is necessary, the Final Report is to be forwarded to the GNSO Council Chair to begin the GNSO Council deliberation process.

In addition to any required public comment periods, the PDP Team may seek public comment on any item that the PDP Team notes it will benefit from further public input. The PDP Team does not have to seek approval from the GNSO Council to seek public comment on interim items. The minimum duration of a public comment period that does not concern the Initial Report is twenty (21) days.

Each recommendation in the Final Report should be accompanied by the appropriate consensus level designation (see section 3.6 – Standard Methodology for Making Decisions in the **GNSO Working Group Guidelines**).

12. Council Deliberation

The GNSO Council is strongly encouraged to allow sufficient time for Stakeholder Group, Constituency and Councillor review of the Final Report prior to a motion being made to formally adopt the Final Report. However, the GNSO Council is also encouraged to take formal action on a Final Report in a timely manner, and preferably no later than the second GNSO Council meeting after the report is presented. At the request of any Council member, for any reason, consideration of the Final Report may be postponed for no more than one (1) meeting, provided that such Council member details the rationale for such a postponement. Consideration of the Final Report may only be postponed for a total of one (1) meeting, even if multiple Council members request postponement. The GNSO Council may, if deemed appropriate, schedule a separate session with the PDP Team to discuss the Final Report and ask any clarifying questions that might arise.

The GNSO Council is expected to vote on the recommendations contained in the Final Report. Approval of the PDP recommendations contained in the Final Report requires an affirmative vote meeting the thresholds set forth at Article X, Section 3(9) d – f.

In the event that the Final Report includes recommendations that did not achieve the consensus within the PDP Team, the GNSO Council should deliberate on whether to adopt them or remand the recommendations for further analysis and work. Although the GNSO Council may adopt all or any portion of the recommendations contained in the Final Report, it is recommended that the GNSO Council take into account whether the PDP Team has indicated that any recommendations contained in the Final Report are interdependent. The GNSO Council is strongly discouraged from itemizing recommendations that the PDP Team has identified interdependent or modifying recommendations wherever possible. In the event the GNSO Council expresses concerns or proposes changes to the PDP recommendations, it may be more appropriate to pass these concerns or recommendations for changes back to the respective PDP Team for input and follow-up.

13. Preparation of the Board Report

If the PDP Recommendations contained in the Final Report are approved by the GNSO Council, the GNSO Council may designate a person or group responsible for drafting a Recommendations Report to the Board. If feasible, the Recommendations Report to the Board should be submitted to the Board in time for consideration at the next GNSO Council meeting following adoption of the Final Report. Staff should inform the GNSO Council from time to time of the format requested by the Board. These GNSO Council Reports supplement any Staff Reports that may highlight any legal, implementability, financial, and other operational concerns related to the PDP recommendations contained in the Final Report. In order to enhance ICANN's accountability and transparency, Staff is encouraged to publish its Staff Reports with minimal redactions wherever possible, without jeopardizing information that may be protected under attorney/client or other legal privileges.

14. GNSO Council Role in Implementation

Upon a final decision of the Board adopting the GNSO PDP policy, the Board may, as appropriate, give authorization or direction to ICANN staff to work with the GNSO Council to create an implementation plan based upon the implementation recommendations identified in the Final Report, and to implement the policy in as timely a fashion as possible. The GNSO Council may, but is not required to, direct the creation of an Implementation Review Team to assist Staff in developing the implementation details for the policy. In its Final Report, the PDP Team should provide recommendations to the GNSO Council on whether an Implementation Review Team should be established and any other recommendations deemed appropriate in relation to such an Implementation Review Team (e.g. composition).

ICANN Staff should inform the GNSO of its proposed implementation of a new GNSO recommended policy. If the proposed implementation is considered inconsistent with the GNSO Council's recommendations, the GNSO Council may notify the Board and request that the Board review the proposed implementation. Until the Board has considered the GNSO Council request, ICANN Staff should refrain from implementing the policy, although it may continue developing the details of the proposed implementation while the Board considers the GNSO Council request.

15. Termination or Suspension of PDP Prior to Final Report

The GNSO Council may terminate or suspend[9] a PDP prior to the publication of a Final Report only for significant cause, upon a motion that passes with a Supermajority Vote in favour of termination **or** suspension. The following are illustrative examples of possible reasons for a premature termination **or** suspension of a PDP:

1. **Deadlock**. The PDP Team is hopelessly deadlocked and unable to identify recommendations or statements that have either the strong support or a consensus of its members despite significant time and resources being dedicated to the PDP;
2. **Changing Circumstances**. Events have occurred since the initiation of the PDP that have rendered the PDP moot, no longer necessary; or warranting a suspension; or

---

[9] Suspension is a stated time interval during which there is a temporary cessation of the PDP, i.e. all activities are temporarily halted upon a decision of the GNSO Council. A mere change in milestones or schedule of the PDP is not considered a suspension.

3. **Lack of Community Volunteers.** Despite several calls for participation, the work of the PDP Team is significantly impaired and unable to effectively conclude its deliberations due to lack of volunteer participation.

In the case of a proposed termination of a PDP prior to the issuance of a Final Report or suspension of a PDP upon the recommendation of the PDP Team, the GNSO liaison to the PDP Team shall promptly submit to the Council a written Termination Summary or Suspension Summary specifying the reasons for the recommended action to be taken and, if applicable, the points of view represented in the PDP Team and the consensus status (as defined by the GNSO Working Group Guidelines) at the time such action is recommended. In the event that no PDP Team has been formed or there is no recommendation from the PDP Team for a proposed termination or suspension by the GNSO Council, any GNSO Council member may propose termination or suspension of a PDP. In the case of such a proposal, the GNSO Council will publicly specify the reasons for the recommended action and will conduct a public comment forum on the proposed termination or suspension prior to conducting the vote.

Upon the request of any Council Member, Advisory Committee or the ICANN Board, the GNSO Council will prepare a formal report on the proposed termination or suspension of a PDP outlining the reasons for the proposed action, current status of the PDP and expected next steps, if any.

16. Amendments or Modifications of Approved Policies

Approved GNSO Council policies may be modified or amended by the GNSO Council at any time prior to the final approval by the ICANN Board as follows:

1. The PDP Team is reconvened or, if disbanded, reformed, and should be consulted with regards to the proposed amendments or modifications;
2. The proposed amendments or modifications are posted for public comment for not less than thirty (30) days;
3. The GNSO Council approves of such amendments or modifications with a Supermajority Vote of both Houses in favour.

Approved GNSO Council policies that have been adopted by the ICANN Board and have been implemented by ICANN Staff may only be amended by the initiation of a new PDP on the issue.

17. Periodic Assessments of Approved Policies

Periodic assessment of PDP recommendations and policies is an important tool to guard against unexpected results or inefficient processes arising from GNSO policies. PDP Teams are encouraged to include proposed timing, assessment tools, and metrics for review as part of their Final Report. In addition, the GNSO Council may at any time initiate reviews of past policy recommendations.

18. Miscellaneous

This Manual may be updated by the GNSO Council from time to time following the same procedures as applicable to amendments to the GNSO Operating Rules and Procedures.

In the event of any inconsistencies between the ICANN Bylaws or this Manual, the terms of the ICANN Bylaws shall supersede.

Objective and Scope

The objective of the Working group is to draw upon the collective expertise of the participating SOs and ACs and others, and based on the initial analysis of the ccNSO Study Group on the uSe of names for Countries and territories as TLDs, further review the current status of representations of country and territory names, as they exist under current ICANN policies, guidelines and procedures. Secondly, provide advice regarding the feasibility of developing a consistent and uniform definitional framework that could be applicable across the respective SO's and AC's; and should such a framework be deemed feasible, provide detailed advice as to the content of he framework. The scope of the WG is limited to:

- Representations of names of Countries, Territories and their subdivisions listed on or eligible to be listed on the Alpha-2 code International Standard for country codes and codes for their subdivisions (ISO 3166-1), (Names of Country and Territory). Other geographical indicators, such as regions, are excluded;
- The use of Country and Territory names as Top Level Domains. The use of Country and Territory names as second or other level is excluded.

ccNSO Study Group on the use of Country and Territory Names

Final Report

September 2013

Table of Contents

1. Executive Summary

The Study Group on the use of Country and Territory Names ("the Study Group") was established by a resolution of the ccNSO Council on 8 December 2010. The Study Group was tasked with developing an overview of:

- the way in which the names of countries and territories are currently used within ICANN, be it in the form of policies, guidelines and/or procedures;
- the types of strings, relating to the names of countries and territories that currently used, or proposed to be used, as TLDs; and
- the issues that arise (or may arise) when current policies, guidelines and procedures are applied to these representations of country and territory names.

The Study Group is comprised of representatives from across the ICANN stakeholder community and conducted its work between May 2011 and June 2013.

Comments and Observations

In summary, the Study Group developed the following comments and observations.

- Throughout its deliberations, the Study Group observed an incredible level of complexity associated with any attempt to definitively categorize country or territory names, especially when such an effort includes multiple languages or scripts.

- A consistent observation was the inability of individual "lists" or resources to provide comprehensive, consistent or universal guidance regarding the various representations of country and territory names, in particular as a result of geo-political changes, the creation of new countries and the dissolution of others.

- ICANN's current policies and procedures (as they may relate to ccTLDs, IDNs or current and potential new gTLDs) do not afford consistent treatment of country and territory names. This may give rise to stakeholder and end-user confusion and uncertainty.

- ICANN's current policy framework (the Applicant Guidebook) for the introduction of new gTLDs affords an unprecedented level of protection for country and territory names, though notes that such protections are only confirmed for the first and current round of new gTLD applications.

- The current Fast Track and IDN ccTLD policy are restricted. The major restrictions are the requirements that:
    1. the IDN ccTLD string is a meaningful representation in a designated language of the territory, and
    2. only one string per designated language

  If adopted the IDN ccTLD policy should be reviewed in five years, which includes a review of these restrictions.

Recommendations

A. It is recommended that the ccNSO Council establish a cross community working group to:

- Further review the current status of representations of country and territory names, as they exist under current ICANN policies, guidelines and procedures;
- Provide advice regarding the feasibility of developing a consistent and uniform definitional framework that could be applicable across the respective SO's and AC's; and
- Should such a framework be deemed feasible, provide detailed advice as to the content of the framework.

The GNSO, ALAC and GAC should be invited to participate in such a WG.

B. In light of the need for further work on the treatment of country and territory names, the complexity of the issue at hand and the aforementioned inconsistencies between various ICANN policies, it is also recommended that the ccNSO Council request that the ICANN Board extend the current rule in the new gTLD Applicant Guidebook regarding the exclusion of all country and territory names in all languages, for consecutive rounds of new gTLD applications.

2. Introduction

Context

The treatment of country and territory names as Top Level Domains is a topic that has been discussed by the ccNSO, GAC, GNSO, ALAC and the ICANN Board for a number of years.

Issues regarding the treatment of representations of country and territory names have arisen in a wide range of ICANN policy processes, including the IDN fast track, IDN ccPDP, and the development of the new gTLD Applicant guidebook.

References to country and territory names and their use are also present in guidelines such as the GAC's "Principles and Guidelines for the Delegation and Administration of Country Code Top Level Domains" and "Principles regarding new gTLDs", foundation documents such as RFC1591 and administrative procedures such as those followed by IANA, in accordance with ISO3166-1, in the delegation and redelegation of ccTLDs.

However, there has never been an overarching, cross-constituency study undertaken on how country and territory names are used across the ICANN community. There is no analysis of how the various rules and procedures relating to how country and territory names are used, whether there are inconsistencies between each, whether current frameworks are appropriate, and consideration of whether a more unified policy approach is required, or desirable.

It is in recognising the absence of such a study, and the importance of country and territory names to a wide range of stakeholders, that the ccNSO Council convened the Study Group on the use of Country and Territory Names.

Background

On 21 November 2009, the Chair of the ccNSO, wrote to the Chair of the ICANN Board to express the ccNSO's belief that it would be inappropriate and unwise to, at that time, introduce new gTLDs that constitute meaningful representations of the names of countries and/or territories on the ISO 3166-1 list.

In his letter, the ccNSO Chair cited the potential, significant issues that had been identified by both the ccNSO and the GAC in relation to country/territory gTLDs, the extent to which these issues had not been addressed in a meaningful way to date, and the existence of an ongoing policy development process in which they could be considered.

In his letter, dated 21 June 2010, the Chair of the ICANN Board stated that, in response GAC's interpretation of paragraph 2.2 of the GAC principles on new gTLDs, the ICANN Board had reconsideration of the treatment of country and territory names in the new gTLD process.

This had resulted in a change of approach as reflected in draft version 4 of the Applicant Guidebook: namely, that country and territory names would not be available for delegation in the first round of the new gTLD application process.

The letter also acknowledged that the ccNSO was undertaking ongoing policy discussions. In particular, defining the distinction between country code and generic names may warrant a broader cross-SO/AC policy discussion and once policy is developed, it will be appropriate for the Board to reconsider its positions on the use of country and territory names.

On 8 December 2010, the Chair of the IDN ccPDP WG 1 informed the ccNSO Council that the use of Country and Territory names as TLD strings in general is considered outside the scope of the IDN ccPDP and will therefore not be addressed.

In response to this advice, the ccNSO Council resolved to establish a Study Group to examine these issues. The Members, experts and support staff are listed in **Annex A: Study Group Membership**.

Study group purpose and scope

The Study Group was established to provide the ccNSO Council, ccTLD community, and other interested stakeholders, including the GAC and GNSO Council:

1. An overview of current and proposed policies, guidelines and procedures for allocation and delegation of strings currently used or proposed to be used as TLDs that are either associated with Countries and Territories (i.e., by inclusion on the ISO 3166-1 list) and/or are otherwise considered representations of the names of Countries and Territories.

2. A comprehensive overview of the types and categories of strings currently used or proposed to be used as TLDs that are either associated with Countries and Territories (i.e., by inclusion on the ISO 3166-1 list) and/or are otherwise considered representations of Country and Territory names.

3. A comprehensive overview of issues arising (or likely to arise) in connection with applying the current and proposed policies, guidelines and procedures for allocation to types and categories of strings currently used or proposed to be used as TLDs that are either associated with

Countries and Territories (i.e., by inclusion on the ISO 3166-1 list) and/or are otherwise considered representations of Country and Territory names.

If considered appropriate, the Study Group was also empowered to advise on a course of further action, if any, to resolve the issues identified in the course of their work.

In particular, the Study Group was directed to:

a. Develop a work plan to conduct its study, including a high level schedule. The schedule is reflected in **Annex B: Timeline**;

b. Summarise existing and proposed policies, guidelines and implementation rules regarding the use of representations of Country and Territory names as TLDs;

c. Provide a comprehensive overview of the issues associated with the use of representations of Country and Territory names as TLDs as identified by the ccNSO, GAC and GNSO;

d. Liaise with the ccNSO, GAC and GNSO as needed to seek further clarification and input regarding b. and c.;

e. Liaise with the IDN ccPDP working group 1 as necessary and appropriate to seek further clarification and input, and provide input and feedback to that working group.

f. Liaise with ICANN's new gTLD project team as necessary and appropriate to seek further clarification and input and provide input and feed-back, for example to better understand the proposed future scope of excluded Country and Territory names and objection mechanisms;

g. Liaise with (IDN) ccTLDs and individual GAC-members as necessary and appropriate to solicit their views and perspectives on the use of representations of their Country or Territory names;

h. Prepare sessions to be conducted at ICANN meetings to inform and report to the ccTLD community, and other interested Supporting Organisations and Advisory Committees on the findings and intermediate results of the Study Group;

i. Provide a Final Report of its findings to the ccNSO Council.

A table outlining the Study Group's activities against each aforementioned task is at **Annex C: Checklist - Study Group tasks**.

The Study Group was also empowered to undertake any other activities that members deemed appropriate to fulfil the Group's purpose and scope.

Throughout the early stages of the Study Group's working schedule, group members also identified, and shared with other ICANN stakeholders, issues which were outside of the group's scope. These included:

- Developing a formal definition of what is and isn't a ccTLD
- Intervening in first round of the new gTLDs process
- Passing judgement on the effectiveness or appropriateness of previous policy approaches
- Making recommendations for additional protections for country and territory names
- Developing a definitive recommendation for how country and territory names should be treated in future policy processes.

It should be noted that the Study Group also determined that, in order to ensure its deliberations were expansive and comprehensive, it would address a very wide range of possible representations of country or territory names. As a guiding principle, the group attempted to capture and assess the many possible representations of the names of sovereign States that *may* be chosen, and how this would impact, and be dealt with, by existing policy structures within ICANN.

However, the group stressed throughout its outreach to community members that this thorough approach was not, at any stage, an attempt to expand the definition of "country and territory names" in the ICANN policy context, nor an endorsement for the expansion of current protections.

Making these clarifications was an important part of the Study Group's preliminary work, as it helped set a clear focus and work plan for the group, prevented internal misunderstandings and also allayed some of the community's concerns and possible misunderstandings about the intended outcomes of the Study Group.

Process to date

Over time the Study Group met through telephone conferences and at ICANN meetings. It provided regular updates to the communities, including the ccNSO, GAC and GNSO Council[1]. A comprehensive list of the activities of the Study Group is included in Annex B, Timeline.

The draft Final Report of the working group was published for public comment on 2 July 2013. The public forum closed on 30 August 2013. The summary and analysis of the comments is included (Annex D). After careful analysis of the comments received, the members of the Study group have not modified the observations and recommendations. However, if the ccNSO Council adopts the recommendations, the chair of the Study Group will advise the ccNSO Council that based on the comments received the proposed cross-community working group should take into account specific suggestions.

---

[1] The transcripts of the face-to-face meetings and telephone calls, and presentations are available at: http://ccnso.icann.org/workinggroups/unctwg.htm

3. Deliverable 1: Overview of current policies and procedures

The Study Group's first priority was the development an overview, or stocktake, of the ways in which country and territory names are currently used, or are proposed to be used, as TLD strings within ICANN policies, guidelines and procedures.

It was intended that commencing the Study Group's work with this priority would provide Study Group members with a factual, objective baseline understanding of the way in which country and territory names have been treated within ICANN in the past and will be in future. This would also provide an evidentiary basis for subsequent analysis of possible policy gaps or inconsistencies.

With respect to the (future) policies and methodologies included in the overview, the Study Group observed different terminology to refer to country and territories. The Study Group did not attempt to consolidate the terminology, but instead provided the terminology as used in the methodology and current and proposed policies.

This starting point is also important to illustrate to Study Group members – and the broader ICANN community – the key points of difference between ICANN's various policies and procedures, as they relate to country and territory names. That is, which policy or procedure is applied to a country or territory name as TLD, determines the applicable governance framework, the structure of relationships between the relevant stakeholders (including end-users) and their respective roles and responsibilities. This is not just relevant for the selection or delegation stage, but also for subsequent stages, once a country or territory name Top Level Domain is operational.

Current policies and methods for use of country and territory names as a TLD

Policy for two-letter codes as ccTLDs (ASCII ccTLDs)

Eligibility: The name of country or territory must be listed on International Standard ISO 3166-1, Codes for the representation of names of countries and their subdivisions – Part 1: Country Codes'

TLD String: two letter code as listed on the ISO 3166-1 standard and associated with a territory.

Reference Documents: RFC 1591, ICP-1, GAC principles on delegation and re-delegation of ccTLDs

Basic Rule from RFC 1591[2]: The IANA is not in the business to define what is and what is not a country. The selection of the ISO 3166 list as a basis for country code top-level domain names was made with the knowledge that ISO has a procedure for determining which entities should be and should not be on that list.

Rules Fast Track Process for IDN ccTLD's

Eligibility: The name of country or territory or must be listed on International Standard ISO 3166-1, Codes for the representation of names of countries and their subdivisions – Part 1: Country Codes'

---

[2] http://www.ietf.org/rfc/rfc1591.txt, section 4.2

TLD String: Meaningful representation of the name of a country or territory listed on ISO 3166-1 in an official language of that country or territory.

Meaningfulness Requirement
For purposes of the Fast Track the string used must be meaningful in the Official Language. A string is meaningful if it is in the Official Language and:
a) is the name of the Territory; or
b) a part of the name of the Territory that denotes the Territory in the language (for example "Lanka" representing Sri Lanka in Sinhalese) ; or
c) a short-form designation for the name of the Territory, recognizably denoting it in the indicated language (for example **РФ,** RF in Cyrillic)

Official language criteria
For the purpose of the Fast Track, an 'official' language is one that has a legal status in the Territory or that serves as a language of administration.

In the event that there is more than one Official Language in the Territory, it may be possible for the Territory to use the Fast Track for the delegation of one IDN ccTLD in each of those languages.

Only one (1) IDN ccTLD string per Official Language.
In the event that there is more than one Designated Language in the Territory, one (1) unique IDN ccTLD for each Official Language may be selected, provided the meaningful representation in one Designated Language cannot be confused with an existing IDN ccTLD string for that Territory.

Requirements relating to the script
For purposes of the Fast Track the term "non-Latin script" is used to designate any script that does not contain the twenty-six letters listed in the US-ASCII character set (a-z), either in their basic forms or with combining marks.

Procedural requirements:
Where the selected string is listed as the long form or short form name of the relevant Territory in of the United Nations Group of Experts on Geographical Names Manual[3] then the string should be considered to be meaningful. If the string is not so listed then meaningfulness will need to be documented by the selected delegate of the IDN ccTLD. The selected string is considered to meet the criteria if:
1. The identified language is an Official language/script of the Territory in accordance with the definition in Stage 1, section 1 above and
2. The selected string is the long or short form name of the relevant Territory in the identified language in the UNGEGN Manual, Part Three column 3 or 4
In all other cases additional documentation should be provided by the selected delegate.

The delegation, re-delegation and retirement of IDN ccTLD is similar and in accordance with the processes for the delegation, re-delegation and retirement of ccTLD's

Treatment of Country Names under the new gTLD process

New gTLD policy and process first round of applications

According to the Applicant Guidebook, version 2012-06-04[4], Module 2 Part III – Policy Requirements for Generic Top Level Domains
These requirements apply to all prospective Top Level Domain strings applied for as gTLDs.

3.1 Applied-for gTLD strings in ASCII must be composed of three or more visually distinct characters. Two character ASCII strings are not permitted, to avoid conflicting with current and future country codes based on the ISO 3166-1 standard.

3.2 Applied-for gTLD strings in IDN scripts must be composed of two or more visually distinct characters in the script, as appropriate. Note, however, that a two-character IDN string will not be approved if:

3.2.1 It is visually similar to any one-character label (in any script); or

3.2.2 It is visually similar to any possible two character ASCII combination.

According to the Applicant Guidebook, version 2012- 06-04, section 2.2.1.4.1:
Applications for strings that are country or territory names will not be approved, as they are not available under the new gTLD Program in the first application round. This based on advice from the Governmental Advisory Committee in recent communiqués providing interpretation of Principle 2.2 of the GAC Principles regarding New gTLDs to indicate that strings which are a meaningful representation or abbreviation of a country or territory name should be handled through the forthcoming ccPDP, and other geographic strings could be allowed in the gTLD space if in agreement with the relevant government or public authority[5]. A string shall be considered to be a country or territory name if:

i. It is an alpha-3 code listed in the ISO 3166-1 standard.
ii. It is a long-form name listed in the ISO 3166-1 standard, or a translation of the long-form name in any language.
iii. It is a short-form name listed in the ISO 3166-1 standard, or a translation of the short-form name in any language.
iv. It is the short- or long-form name association with a code that has been designated as "exceptionally reserved" by the ISO 3166 Maintenance Agency.

---

[4] http://newgtlds.icann.org/en/applicants/agb/evaluation-procedures-04jun12-en.pdf

[5] This rule in the Applicant Guidebook is the result of a long and extensive correspondence between the GAC and ICANN Board of Directors on the interpretation of the GAC new gTLD Principles section 2.2. See for background on this decision:
Letter from the Board to the GAC: http://www.icann.org/en/correspondence/dengate-thrush-to-dryden-23nov10-en.pdf
Letter from the GAC to the Board: http://www.icann.org/en/correspondence/dryden-to-dengate-thrush-23sep10-en.pdf
GAC Communiqué Nairobi: https://gacweb.icann.org/display/gacweb/GAC37+Meeting+Nairobi%2C+Kenya
GAC principles new gTLD's: Section 2.1 and 2.2
https://gacweb.icann.org/download/attachments/28278837/gTLD_principles_0.pdf?version=1&modificationDate=1312358178000&api=v2

v. It is a separable component of a country name designated on the “Separable Country Names List,” or is a translation of a name appearing on the list, in any language. See the Annex at the end of this module (not included).
vi. It is a permutation or transposition of any of the names included in items (i) through (v). Permutations include removal of spaces, insertion of punctuation, and addition or removal of grammatical articles like “the.” A transposition is considered a change in the sequence of the long or short–form name, for example, “RepublicCzech” or “IslandsCayman.”
vii. It is a name by which a country is commonly known, as demonstrated by evidence that the country is recognized by that name by an intergovernmental or treaty organization.

Policies under development

IDN ccTLD overall policy[6]

Eligibility

Eligibility only if name of territory listed on ISO 3166.
To be eligible for a ccTLD string a country, dependency or other area of particular geopolitical interest must be listed on the ‘International Standard ISO 3166, Codes for the representation of names of countries and their subdivisions – Part 1: Country Codes’, or, in some exceptional cases already assigned as a ccTLD and listed as an exceptionally reserved ISO 3166-1 code element

Requirements Country or Territory name as TLD String

An IDN country code Top Level Domain must contain at least one non-ASCII character.
For example, *españa* would qualify under this criteria and *italia* would not. *españa* contains at least one character other than [-, a-z, 0-9], while still being a valid domain name.
A different way of expressing this is that the IDN ccTLD must be a valid U-Label that can also be expressed as an A-label. It cannot be a NR-LDH Label.

For more formal definitions of these terms, see RFC 5890.

The IDN ccTLD string must be a meaningful Representation of the name of a Territory
The principle underlying the representation of Territories in two letter (ASCII) code elements is the visual association between the names of Territories (in English or French, or sometimes in another language) and their corresponding code elements[7].
A visual association between the IDN country code string and the name of a Territory should be maintained. An IDN ccTLD string has to be a meaningful representation of the name of the Territory. A country code string is considered meaningful if it is:
a) The name of the Territory; or
b) Part of the name of the Territory that denotes the Territory; or
c) A short-form designation for the name of the Territory, recognizably denoting the name.

---

[6] The current status (September 2013) is that the proposals have been adopted by the ccNSO Council and Membership. The ccNSO Recommendation will be submitted to the ICANN Board of Directors in October 2013. The Governmental Advisory Committee has the opportunity to provide advise or an opinion.
[7] See ISO 3166-1: 2006 Section 5.1

The meaningful Representation of the name of the Territory must be in a Designated Language of the Territory
The ccTLD string should be a meaningful representation of the name of the Territory in a "designated" language of that Territory. For this purpose a "designated" language is defined as a language that has a legal status in the Territory or that serves as a language of administration (hereafter: Designated Language)[8].

Only one (1) IDN ccTLD string per Designated Language.
In the event that there is more than one Designated Language in the Territory, one (1) unique IDN ccTLD for each Designated Language may be selected, provided the meaningful representation in one Designated Language cannot be confused with an existing IDN ccTLD string for that Territory.
Reference: IDN ccPDP Final Report

Contention rules relating to the use of country or territory names as TLDs

The following sets of contention rules have been identified:

- Fast Track Process rules
- New gTLD process: String Similarity Check (Module 2 Applicant Guidebook)
- New gTLD process: Objection Procedures (Module 3 Applicant Guidebook)
- IDN ccTLD overall Policy rules

Fast Track Process[9]

String confusion exists where a string so nearly resembles another visually that it is likely to deceive or cause confusion. For the likelihood of confusion to exist, it must be probable, not merely possible that confusion will arise in the mind of the average, reasonable Internet user. Mere association, in the sense that the string brings another string to mind, is insufficient to find a likelihood of confusion[10].

String confusion issues can involve two or more strings that are identical or are so confusingly similar that they cannot coexist in the DNS, such as:

Requested IDN ccTLD strings against existing TLDs and reserved names;

Requested IDN ccTLD strings against other requested IDN ccTLD strings; and

Requested IDN ccTLD strings against applied-for gTLD strings.

Contention situations between Fast Track requests and new gTLD applications are considered unlikely to occur. Assessments of whether strings are considered in conflict with existing or applied-for new gTLD strings are made in the DNS Stability String Evaluation for Fast Track requests and in the Initial Evaluation step for new gTLD applications. The following supplemental rules provide the thresholds for solving any identified contention issues:

A. A gTLD application that is approved by the ICANN Board will be considered an existing TLD in inter-process contention unless it is withdrawn. Therefore, any other later application for the same string will

---

[8] The limitation to Designated Language is recommended as criteria for reasons of stability of the DNS. According to some statistics currently 6909 living languages are identified. See for example: http://www.ethnologue.com/ethno_docs/distribution.asp?by=area. If one IDN ccTLD would be allowed per territory for every language this would potentially amount to 252*6909 or approximately 1.7 million IDN ccTLDs.

[9] http://www.icann.org/en/topics/idn/fast-track/idn-cctld-implementation-plan-16nov09-en.pdf

[10] Note the standard for string similarity is similar to the standard under the new gTLD process.

be denied.

B. A validated request for an IDN ccTLD will be considered an existing TLD in inter-process contention unless it is withdrawn. Therefore, any other later application for the same string will be denied.

For the purpose of the above contention rules, an IDN ccTLD string request is regarded as validated once it is confirmed that the string is a meaningful representation of the country or territory and that the string has passed the DNS String confusion with existing TLD strings (ccTLD, and gTLD, and any of the elements in the alpha-2 codes that is used by ISO 3166/MA (section 5.2 of ISO 3166-1:2006)

Result of the Evaluation[11]

If any issues with the selected string are discovered in this review the DNS Stability Panel can request clarification from the requester through ICANN.

If clarifications are insufficient or cannot be provided, the Termination Process will be initiated.

If the DNS Stability Panel review reveals no technical issues the requester is notified that the DNS Stability String Evaluation is successfully completed and that the requested string(s) will be queued for public posting.

New gTLD process: String similarity check[12]

The String Similarity Panel's task is to identify visual string similarities that would create a probability of user confusion.

The panel performs this task of assessing similarities that would lead to user confusion in four sets of circumstances, when comparing:

- Applied-for gTLD strings against existing TLDs and reserved names;
- Applied-for gTLD strings against other applied-for gTLD strings;
- Applied-for gTLD strings against strings requested as IDN ccTLDs; and
- Applied-for 2-character IDN gTLD strings against:
    - Every other single character.
    - Any other 2-character ASCII string (to protect possible future ccTLD delegations)

Similarity to Existing TLDs or Reserved Names

This review involves cross-checking between each applied-for string and the lists of existing TLD strings and Reserved Names to determine whether two strings are so similar to one another that they create a probability of user confusion.

In the simple case in which an applied-for gTLD string is identical to an existing TLD or reserved name, the online application system will not allow the application to be submitted.

---

[11] Implementation Plan Section 5.6.3

[12] See Applicant Guidebook, version 2012-06-04, section 2.4.1.

Testing for identical strings also takes into consideration the code point variants listed in any relevant IDN table. For example, protocols treat equivalent labels as alternative forms of the same label, just as "foo" and "Foo" are treated as alternative forms of the same label (RFC 3490). All TLDs currently in the root zone can be found at http://iana.org/domains/root/db/. IDN tables that have been submitted to ICANN are available at http://www.iana.org/domains/idn-tables/.

Similarity to TLD strings requested as IDN ccTLDs (Section 2.2.1.1.1)

Applied for gTLD strings will also be reviewed for similarity to TLD strings requested in the IDN ccTLD Fast Track process (see http://www.icann.org/en/topics/idn/fast-track/). Should a conflict with a prospective fast-track IDN ccTLD be identified, ICANN will take the following approach to resolving the conflict.

If one of the applications has completed its respective process before the other is lodged, that TLD will be delegated. A gTLD application that has successfully completed all relevant evaluation stages, including dispute resolution and string contention, if applicable, and is eligible for entry into a registry agreement will be considered complete, and therefore would not be disqualified by a newly-filed IDN ccTLD request. Similarly, an IDN ccTLD request that has completed evaluation (i.e., is "validated") will be considered complete and therefore would not be disqualified by a newly-filed gTLD application.

In the case where neither application has completed its respective process, where the gTLD application does not have the required approval from the relevant government or public authority, a validated request for an IDN ccTLD will prevail and the gTLD application will not be approved.

The term "validated" is defined in the IDN ccTLD Fast Track Process Implementation, which can be found at http://www.icann.org/en/topics/idn.

In the case where a gTLD applicant has obtained the support or non-objection of the relevant government or public authority, but is eliminated due to contention with a string requested in the IDN ccTLD Fast Track process, a full refund of the evaluation fee is available to the applicant if the gTLD application was submitted prior to the publication of the ccTLD request.

Review of 2-character IDN strings

In addition to the above reviews, an applied-for gTLD string that is a 2- character IDN string is reviewed by the String Similarity Panel for visual similarity to:

a. Any one-character label (in any script), and
b. Any possible two-character ASCII combination.

An applied-for gTLD string that is found to be too similar to a) or b) above will not pass this review.

Standard for String Confusion[13]

String confusion exists where a string so nearly resembles another visually that it is likely to deceive or

---

[13] Applicant Guidebook version 2012-06-04, section 2.2.1.1.2

cause confusion. For the likelihood of confusion to exist, it must be probable, not merely possible that confusion will arise in the mind of the average, reasonable Internet user. Mere association, in the sense that the string brings another string to mind, is insufficient to find a likelihood of confusion[14].

Outcome of String Similarity Review[15]

An application that fails the String Similarity review due to similarity to an existing TLD will not pass the Initial Evaluation, and no further reviews will be available. Where an application does not pass the String Similarity review, the applicant will be notified as soon as the review is completed.

An application for a string that is found too similar to another applied-for gTLD string will be placed in a contention set.

An application that passes the String Similarity review is still subject to objection by an existing TLD operator or by another gTLD applicant in the current application round. That process requires that a string confusion objection be filed by an objector having the standing to make such an objection. Such category of objection is not limited to visual similarity. Rather, confusion based on any type of similarity (including visual, aural, or similarity of meaning) may be claimed by an objector.

An applicant may file a formal objection against another gTLD application on string confusion grounds. Such an objection may, if successful, change the configuration of the preliminary contention sets in that the two applied-for gTLD strings will be considered in direct contention with one another. The objection process wi l not result in removal of an application from a contention set.

New gTLD process: Objection Procedures

This section includes general mechanisms and procedures for objection that may affect an application for country or territory name. Whether these mechanisms apply is unclear. However to ensure the overview is complete they are included for discussion by the members of WG .

The general mechanisms could be relevant if the applied string refers to the name of a country or territory that is not in the format listed in section 2.2.1.4.1 of the Applicant Guidebook (see above). The following mechanisms and procedures could be in particular relevant:

- The procedure by which ICANN's Governmental Advisory Committee may provide GAC Advice on new gTLDs to the ICANN Board of Directors concerning a specific application.
- Public Objection and Dispute Resolution Process, in particular:
    - Limited Public Interest Objection – The applied-for gTLD string is contrary to generally accepted legal norms of morality and public order that are recognized under principles of international law.
    - Community Objection – There is substantial opposition to the gTLD application from a significant portion of the community to which the gTLD string may be explicitly or implicitly targeted.

---

[14] Note the standard for string confusion is similar to the standard under the Fast Track Process

[15] Applicant Guidebook version 2012-06-04, section 2.2.1.1.3

Proposed IDN ccTLD overall policy for the selection of IDN ccTLD strings[16]

A selected IDN ccTLD string should not be confusingly similar with:

1. Any combination of two ISO 646 Basic Version (ISO 646-BV) characters (letter [a-z] codes), nor
2. Existing TLDs or reserved names.

The following supplemental rules provide the thresholds to solve any contention issues between the IDN ccTLD selection process and new gTLD process:

- A gTLD application that is approved by the ICANN Board will be considered an existing TLD unless it is withdrawn.
- A validated request for an IDN ccTLD will be considered an existing TLD unless it is withdrawn.

A selected IDN ccTLD string is considered confusingly similar with one or more other string(s) (which must be either Valid-U-labels or any combination of two or more ISO 646 BV characters) if the appearance of the selected string in common fonts in small sizes at typical screen resolutions is sufficiently close to one or more other strings so that it is probable that a reasonable Internet user who is unfamiliar with the script would perceive the strings to be the same or confuse one for the other .
The review of whether or not a selected IDN ccTLD string is confusingly similar is a process step and should be conducted externally and independently. The recommended procedure is described in Section 4, Processes and Documentation.

The method and criteria to assess confusing similarity should be developed as part of the implementation planning. For reasons of transparency and accountability they should be made public prior to implementation of the overall policy and endorsed by the ccNSO.

The assessment of confusing similarity of strings depends on amongst other things linguistic, technical, and visual perception factors, therefore these elements should be taken into consideration in developing the method and criteria.
Taking into account the overarching principle to preserve and ensure the security, stability and interoperability of the DNS, the method and criteria for the confusing similarity assessment of an IDN ccTLD string should take into account and be guided by the work in progress on Principles for Unicode Point Inclusion in labels in the DNS Root (http://tools.ietf.org/html/draft-iab-dns-zone-codepoint-pples-01).

4. Deliverable 2: Overview of the types and categories of strings associated with Country and Territory names (currently used or proposed to be used as TLDs)

In undertaking the second stage of its work, the Study Group determined to utilise two methodological tools to assist with its deliberations.

The first is a typology that provides a systematic approach to the identification, categorisation and analysis of the wide variety of ways in which country and territory names are represented, both within ICANN processes and the wider community.

---

[16] Section 2.1.2 I, Final Report IDN ccPDP, http://ccnso.icann.org/workinggroups/idn-ccpdp-final-29mar13-en.pdf

The second is a survey of a sub-set of UNESCO Member States, based upon the typology, that would test whether the proposed categorisations of country and territory names were relevant and appropriate and provide an evidentiary basis for the Study Group's third phase of work.

As a threshold issue, the Study Group notes that, despite the collective expertise and experience of group members, it is not possible to replicate the extensive body of work that has already occurred in other fora with regard to categorising country and territory names.

Other organisations have devoted many years of effort to the specific and complex issue of standardising country names references, and cataloguing the many examples of toponyms (place names), be they exonyms (references to a country by others) or endonyms (references to a country by locals).

One pertinent example is the extensive work undertaken by the United Nations Group of Experts on Geographical Names[17]. While the Study Group has sought to use existing resources to provide a frame of reference, it is acknowledged that this group's deadlines and specific focus on the Domain Name System and the current and potential future use of TLDs necessitates a more focussed and selective approach.

Country and territory names typology

During initial meetings, Study Group members were able to identify and share anecdotal examples of possible complexities and inconsistencies that arose in the treatment of country and territory names, when various policy frameworks were applied.

However, the group determined to develop a typology, or a set of categories, that would allow it to approach its work in a more comprehensive and methodologically-sound manner. Therefore, the typology was developed in order to provide a thorough framework through which the Study Group could discuss and assess the many different ways in which country and territory names are represented.

It also enabled the Study Group to fulfill its second deliverable – to provide a comprehensive overview of the categories of strings associated with country and territory names that are, *or could be used* as TLDs.

It is however, only an assessment and illustrative tool and is not, and cannot be, an exhaustive list. The Study Group notes that examples discussed below are simply used as case studies, and no judgment or criticism of how the relevant representations have been allocated or used, should be inferred.

The categories developed are:

- Two-letter representations of country or territory names in the International Organization for Standardization's (ISO) 3166-1 Alpha 2 list[18]

- Three-letter representations of country or territory names in the International Organization for Standardization's (ISO) 3166-1 Alpha 3 list

---

[17] http://unstats.un.org/unsd/geoinfo/ungegn/default.html

[18] http://www.iso.org/iso/country_codes.htm

- Other commonly-used abbreviations or acronyms

- “Official” long-form names (also referred to as “formal” or “principal” name or “name used for administrative purposes

- “Official” short-form names (also referred to as “formal” or “principal” name or “name used for administrative purposes

- Country / territory name in the six official languages of the United Nations - Arabic, Chinese (Mandarin), English, French, Russian, Spanish

- Commonly used or local names

- Country or territory names in minority or indigenous languages

- Long- and short-form representations of country name in non-official/administrative (or “other”) languages

ISO 3166-1 alpha 2 codes

These two-letter identifiers for countries and territories were included as the first category as they are the basis for the long-standing and commonly-used definition of ccTLDs within the ICANN environment. The ISO list was identified as a relevant resource in RFC1591[19] and underpins IANA’s procedures for root zone management and assessment of delegation and re-delegation requests.[20] [21] The list is maintained by the ISO 3166 Maintenance Agency, which adopts politically neutral procedures for determining which entities are included in the list. ICANN (specifically IANA) is simply a user of the ISO list and, as an interested stakeholder, participates in the Maintenance Agency’s deliberations.

The list itself is dependent upon other United Nations sources, namely the UN Terminology Bulletin Country Names and the list of Country and Region Codes for Statistical Use of the UN Statistics Division[22] A code cannot be allocated unless the relevant country or territory is identified in either of these publications.

Examples of ISO3166-1 alpha two codes used as ccTLD’s include Germany’s “.de”, Australia’s “.au” and Japan’s “.jp”. A full list of codes used as ccTLD’s is available in the IANA root zone database. [23]

The Study Group included these identifiers as an initial, non-contentious categorization that many in the ICANN community are familiar with and understand.

ISO3166-1 Alpha 3 codes

Study group members carefully deliberated the inclusion of ISO-3166-1 three-letter codes as a

---

[19] http://www.ietf.org/rfc/rfc1591.txt

[20] http://www.iana.org/domains/root/delegation-guide
[21] http://www.iana.org/procedures/cctld-establishment.html
[22] http://unstats.un.org/unsd/methods/m49/m49alpha.htm
[23] http://www.iana.org/domains/root/db

categorization in the group's typology.

Some Study Group members noted that, while two-letter codes had a long-standing role in policy and procedure, ICANN had not consistently extended the same protections and definitions to three-letter codes. The Study Group also noted that TLDs and the ISO3166-1 alpha 3 list had coexisted, with occasional intersections, for many years, with no significant policy-based conflicts.

However, following the release of the final version of the new gTLD applicant guidebook, which included a total prohibition on the use of ISO3166-1 three-letter codes, it was deemed appropriate to include this categorization in the group's discussions.

Other commonly used acronyms or abbreviations

In part, the Study Group chose to include this categorization in acknowledgement of the fact that the ISO 3166-1 two-letter and three-letter lists are not the only officially- or commonly-used resource for country and territory name abbreviations. Other examples include:

- International Olympic Committee (IOC)codes[24],
- assorted North Atlantic Treaty Organization(NATO) listings[25],
- International Telecommunication Union (ITU) codes,
- distinguishing signs (DS) codes for vehicles
- International Civil Aviation Organization (ICAO) codes
- World Meteorological Organisation codes, and
- the Fédération Internationale de Football Association (FIFA) codes.

While none of these collections have current status within any ICANN policy or procedure, they are potential sources as well.

Official / conventional Long-form and short form names

As with the ISO-3166 codes, country and territory long- and short-form names were included in the Study Group's deliberations as they are the most predictable, common representation of the identity of States.

The wording of this category ("Official" long-form names, also referred to as "formal" or "principal" name or "name used for administrative purposes") was carefully constructed in order to capture all possible international understandings of the term under analysis.

Once again, the Study Group observed that there is no single, authoritative source listing country and territory names. Current resources include:

- The United Nations Group of Experts on Geographical Names (UNGEGN) Manual for the standardization of geographical names[26] provides extensive guidance on the treatment and representation of geographical names.

[26] http://unstats.un.org/unsd/publication/seriesm/seriesm_88e.pdf

- The UNGEGN's working paper, including a list of country names[27] – 193 country names (both "official" names and the names in all 6 UN languages)
- UNTERM – the UN's multilingual terminology database[28] - 197 names (long and short form) of member states.
- The World Intellectual Property Organization's Standard ST.3[29] which includes 221 country and territory names and is also another listed of two-letter code representations.
- The United Nations Statistical Division's Standard Country or Area Codes for Statistical Use[30] – (using Terminology Bulletin No. 347/Rev.1) – over 240 names, also with three-letter code representations
- The ISO-3166-1 list – 249 names

This particular categorization also led the Study Group to consider issues relating to IDNs as, in many cases, the official names of countries are represented in non-Latin scripts.

Country and territory name in the six official languages of the UN

This category was included in the typology in order to further explore the complexities associated with introducing the concept of country name representations in different scripts and languages. In the first instance, the six languages of the UN were utilised to broaden scope in a controlled fashion, in terms familiar to UN Member States, and with the support of UNGEGN resources that provide guidance in this area. The Study Group essentially aimed to introduce the concept of country and territory name representations in (except in limited cases) scripts and strings that do not represent local or official languages.

Commonly used or local names

This category was included in the Study Group's deliberations as a broader grouping that could identify informal or local names for countries that were not captured in previous categories, as they are not in "official" languages, or do not represent the "official" name of the country.

Examples of country / territory name in minority or indigenous languages[31]

This category was included in the acknowledgement that significant ethnic minorities and/or indigenous populations exist in many countries and that the terminology they use to refer to their country or territory may not be captured by other elements of the typology. However, these representations may

[30] http://unstats.un.org/unsd/methods/m49/m49alpha.htm

[31] Depending on the source used, this category could include 7105 living languages. A living language is defined as one that has at least one speaker for whom it is their first language. See: http://www.ethnologue.com/statistics.

be identified by national governments as relevant terms, and which could also be perceivably used as TLDs[32].

Examples of name in non-official languages

This was, by far, the most expansive category addressed by the Study Group, incorporating many possible country name representations not previously captured in previous categories.

Although “commonly used” or “minority/indigenous” categorisations captured numerous examples, this category was specifically designed as a “catch all” to highlight issues the Study Group may not have previously identified.

Survey of a sub-set of UNESCO Member States

In September 2011, the Study Group formally corresponded with the United Nations Educational, Scientific and Cultural Organization (UNESCO), in order to seek UNESCO’s expert views upon the use of country and territory names as they pertain to the internationalization of the Internet.

The approach was made in accordance with ICANN’s Co-operation Agreement with UNESCO to promote linguistic diversity on the Internet, which was signed in December 2009.

On 30 September 2011, UNESCO Assistant Director-General for Communication, Jānis Kārkliņš, provided UNESCO’s preliminary views on the Study Group’s progress and undertook to collaborate with the group on any relevant activities.

Based upon this high-level agreement, Study Group members and UNESCO commenced work on developing a survey that could be circulated to UNESCO Member States. The survey was based upon the typology developed by the Study Group and was intended to serve as both a test of the typology and an exercise for gathering the expert input of UNESCO Member States on their perspectives relating to country and territory names.

It was determined that, for the sake of administrative and methodological expediency, the survey would be sent to a subset of Member States that display appropriate linguistic, script and geographical diversity.

Accordingly, the questions presented to Member States (in July 2012) were:

- ISO-3166-1 Alpha 2 code: What is your country or territory's two-letter representation in the International Organization for Standardization's (ISO) 3166-1 list?
- ISO-3166-1 Alpha 3 code: What is your country's / territory's three-letter representation in the International Organization for Standardization's (ISO) 3166-1 list?

---

[32] See for example submission of the UK government on the IDN ccPDP Interim Report, http://forum.icann.org/lists/comments-idn-ccpdp-05feb13/msg00000.html

- Are there any other commonly-used abbreviations or acronyms for your country or territory? Please provide examples and cite reference materials.

- What is your country or territory's "official" long-form name? This may also be referred to as a "formal" name, "principal" name or "name used for administrative purposes".
- What is your country or territory's "official" short-form name? This may also be referred to as a "formal" name, "principal" name or "name used for administrative purposes".

- Please provide both the long and short form name of your country / territory in the six official languages of the United Nations - Arabic, Chinese (Mandarin), English, French, Russian, Spanish.

- Please provide the long and short form names of the other participants in this survey (listed below) in your designated language/s

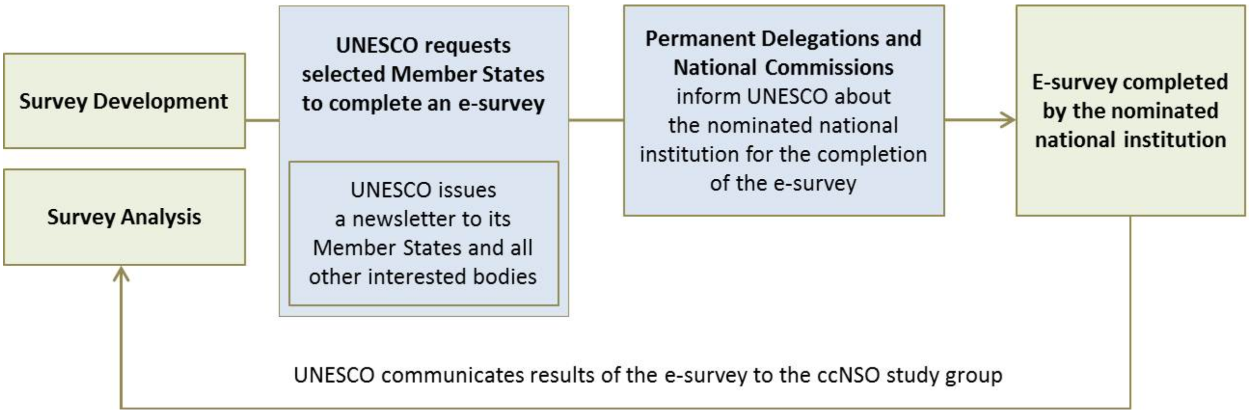
- Please provide examples of any other commonly-used or local representations of your country / territory name. For example: "Holland". If possible, please provide references or citations for these representations.

- Please provide examples of written indigenous or minority representations of your country or territory name. Please provide references or citations for these representations.

- Please provide examples of any other representations of your country or territory name that may not have been captured by the above categories. Please provide explanation and references or citations for these representations.

The survey also requested information regarding whether "civil society" stakeholders were consulted or involved in Member States' responses.

The detailed mechanism for the execution of the survey process is represented diagrammatically, below.



Overall, the survey garnered a moderate rate of response from UNESCO Member States. Of the 39 States that were surveyed, responses were received from 12.

This would not typically represent a statistically-significant response rate in order to ascertain trends across respondents; however the data gathered did confirm Member States' understanding of the typology and provided useful individual exemplars that illuminated the Study Group's deliberations.

The responses received also indicated that it is very difficult and time-consuming to engage and involve the appropriate governmental agency or department in matters relating to country and territory names.

As the survey of its Member States was undertaken by UNESCO, the details of responses remain the property of that agency. Access to the results of the e-survey could be considered upon receipt of an official request on a case-by-case basis, pending the approval of the respective Member State.

5. Deliverable 3: Issues arising or likely to arise in connection with applying policies to current or proposed strings

In the third stage of its work, the Study Group took the extensive list of examples gathered through the typology and feedback from the UNESCO survey and assessed what would happen should various ICANN policies and procedures by applied to these strings. In other words, the group sought to identify any difficulties or inconsistencies that may arise, the extent and applicability of existing frameworks, and whether any inconsistencies or gaps existed.

Once again, the group did not pass judgement on the applicability or appropriateness of current policies and procedures, noting that each was developed at a different time, for a specific purpose and that universally consistent outcomes were unlikely.

ISO 3166-1 alpha 2 codes

With the assistance of the input and guidance from experts familiar with ISO processes, the Study Group noted that the 3166-1 list itself is not static[33] and that geo-political changes, the creation of new countries and the dissolution of others meant that not even this most fundamental guideline document was without its own complexities and challenges.

Such past and potential changes include, though are not limited to:

- the formation of South Sudan and the allocation of the “SS” two letter code;
- the dissolution of the Netherlands Antilles,
    - deletion of the “AN” code
    - subsequent creation of numerous other code allocations including “BQ”, “CW” and “SX” code for Dutch Sint Maarten[34]
- dissolution of the former Soviet Union,
    - exceptional reservation of the “SU” code and continued use as a ccTLD
    - allocation of “RU” for Russia and numerous other codes to countries formerly part of the Soviet Union
- dissolution of the Socialist Federal Republic of Yugoslavia
    - transitional reservation of the “YU” code, following use by the Federal Republic of Yugoslavia,
    - reallocation of the “CS” code (previously-deleted code for Czechoslovakia) to Serbia and Montenegro and subsequent deletion upon the establishment of “RS” (Serbia) and “ME” (Montenegro), creation of .MK, (Macedonia, the former Yugoslav Republic of)

However, on the whole, the Study Group noted that this flexibility in the ISO list did not itself cause instability or uncertainty when it comes to the treatment of two-letter country codes as TLDs. Under well-established precedents, all two-letter codes, whether used as a country code or not, are excluded and can only be delegated or re-delegated for this specific purpose.

---

[33] http://www.iso.org/iso/home/standards/country_codes/updates_on_iso_3166.htm?show=tab2

[34] Note that Aruba’s “AW” designation and relevant ccTLD were already in existence. ‘MF” for French Saint Martin is not related to the Netherlands Antilles.

In noting this, the Study Group acknowledges that changes to the ISO list, and the creation or deletion of two-letter codes, have implications for the membership of the ccNSO, though this issue is out-of-scope for this project. Also, the matter of ensuring efficiency and consistency in IANA's processes for managing delegations and re-delegations is within the remit of the Framework of Interpretation Working Group[35] and is also out-of-scope for this group.

ISO3166-1 Alpha 3 codes

As mentioned in the discussion under Deliverable 2, the inclusion of ISO3166-1 alpha 3 codes was not as straightforward a decision as the inclusion of alpha 2 codes. Neither the policies relating to ccTLDs nor IDNs explicitly refer to three-letter codes. Similarly, previous processes such as the December 2003 Request for Proposal for new sponsored TLDs did not explicitly address the issue of three-letter representations of a country or territory.

As such, the range of current TLDs was established and allocated without specific consideration of whether the three-letter strings would intersect with country and territory name abbreviations, nor discussion of whether this eventuality was problematic. The Governmental Advisory Committee has, as far back as 2000 and 2001[36], provided advice to the ICANN Board on the treatment of country (and, more generally, geographic identifiers) though this was largely focused upon the use of such identifiers at the second level of existing or new TLDs.

However, given its responsibility for undertaking a comprehensive analysis of all of the representations of country and territory names that *may* be used as TLD strings, the Study Group determined it appropriate to include this categorization. The appropriateness of this decision was reinforced when ICANN included explicit reference to ISO3166-1 alpha 3 codes in the final version of the Applicant Guidebook.

The first example the Study Group discussed was that of ".com", the largest gTLD, and also an ISO3166-1 alpha 3 code for Comoros. The group acknowledged that this duality has existed since January 1985, when the TLD was first implemented. At the time, there were simply no policy protections in place for country names. However, ".com" has thrived as the pre-eminent gTLD and any attempt at retrospective application of protectionist policies for three-letter codes would provide an undesirable policy conflict and destabilizing, unenforceable influence in the case of this case study.

Furthermore, the Study Group noted the re-launch and rebranding of Colombia's ".co" in 2010 under auspices of the Colombian government with a liberalized policy regime aimed at attracting registrations from companies from both within and outside the country. Irrespective of the commercial success or uptake levels of ".co" domains, the Study Group observed that no prohibitions were placed (nor could be) upon Colombian government to determine the appropriate use of its own ccTLD and that ".co" and ".com" continue to coexist.

Prior to ICANN's 12 June 2012 announcement[37] of the strings applied-for during the first new gTLD round, the Study Group analysed the ISO3166-1 alpha 3 list to identify strings that could, due to dual

---

[35] http://ccnso.icann.org/workinggroups/foiwg.htm
[36] For example - http://archive.icann.org/en/committees/gac/communique-09sep01.htm
[37] http://newgtlds.icann.org/en/program-status/application-results/strings-1200utc-13jun12-en

meanings, be both meaningful representations of a country or territory and also a possible new gTLD application.

One policy circumstance that was noted in the Applicant Guidebook was the reservation of the code “NIC”, explicitly included on the “top-level domains reserved list” as a representation of “Network Information Center” and yet also an ISO3166-1 alpha 3 code representation for Nicaragua. The group noted that, although this is not an inconsistency *per se,* should future policy changes allow sovereign States to determine the allocation and use of three-letter country codes, this provision could not be afforded to the Government of Nicaragua, under current policy rules.

Similarly, use of “BEN”, the three-letter ISO representing Benin, could perceivably become problematic given confusion rules (that were not applicable in the circumstance of “.co” and “.com”) and the current ccTLD codes of “.be” for Belgium and “.bn” for Brunei Darussalam.

Another example is that of “CYM” - the ISO3166 three-letter code for the Cayman Islands. It could also be perceived as a meaningful abbreviation for “Cymru” (Wales). While applications for both “.cymru” and “.wales” were lodged with ICANN, current policies would prohibit use of “cym” for the same purpose. In addition, relaxation of this protection in future could give rise to issues of confusing similarity.

Following ICANN’s announcement of strings that had been applied for, the Study Group noted that applications had been received for “.AND”, “.ARE”, “.IDN” and “.EST”, representations of Andorra, the United Arab Emirates, Indonesia and Estonia, respectively. Although the Applicant Guidebook provides clear guidance, and includes procedures for objection and / or the possible withdrawal of these applications, the fact that formal interest was expressed for these strings, and applications made, highlights the possibility for confusion and a lack of policy clarity, even for stakeholders that are intimately familiar with the new gTLD process and ICANN’s rules around it. As of early March 2013, three of these applications have been withdrawn, though the application for .IDN remains active, under initial evaluation.

Other commonly used acronyms or abbreviations

Much like the consideration of ISO3166-1 three-letter codes, the Study Group determined to include “other” abbreviations in its deliberations, given the possibility of intersection between existing or future TLDs and meaningful country representations. In part, this was again an acknowledgement that ISO3166-1 is not the only widely used source of country abbreviation codes, and is not necessarily consistent with other lists.

One salient example is the case of Barbados. The ISO’s official designation is “BRB”, while numerous other sources use the abbreviation “BAR”. This is both a common English-language term and an applied-for gTLD string.

Overall, the group concluded that current ICANN policies, particularly with regard to the current new gTLD process, provide an inconsistent framework for treatment of three-letter country representations:

- ISO-related strings that could be of interest to potential new gTLD applicants (such as .BRB or .CAN or .GEO) are currently protected – and cannot be new gTLDs.

- The outcomes of the application round showed pent-up demand in this area with tangible examples such as ".IDN" and ".AND".
- Some codes – such as ".com" already are TLDs.
- Other three-letter codes on the ISO list (such as .NIC) could never be available, even if ICANN were to drop current protections, unless other Reserve List policies were changed
- And yet other three-letter codes – most notably those IDNs involved in the fast track process – are required to meet an entirely different set of eligibility criteria.

3-letter code	Country	Source	Designation
.BRB, .CAN, .GEO	Barbados, Canada, Georgia	ISO	- No allowable use (as for many ASCII codes) - In future???
.BAR	Barbados	IOC	- Potential gTLD - Possible objection?
.CYM	Cayman Isl.	ISO	- No allowable use - Wales (Cymru) ineligible
.COM	Comoros	ISO	- IS a gTLD
.NIC	Nicaragua	ISO List Reserved	- Prohibited new gTLD - Also a reserved name
.BEN	Benin	ISO List	- Prohibited new gTLD - Confusion rules (BE, BN)
.СРБ, .ҚАЗ, .УКР	Serbia, Kazakhstan Ukraine	Fast track	- IDN ccTLD

The general observation of the Study Group with regard to this circumstance is that there is no consistency or predictability with how particular three-letter codes will be managed, protected or allocated. It is outside of the scope of this group to recommend how these strings should be treated in future (open market with no restrictions, refined or limited set of protections etc) but it remains a policy issue for ICANN and its stakeholders that should be resolved.

Official / conventional Long-form and short form names

As mentioned in the discussion under Deliverable 2, although the definition of the long and short-form "official" names of countries appears to be a straight-forward process that can be addressed by ISO3166-1, this is not necessarily the case, given that other resources and lists exist that do not necessarily conform with the ISO list.

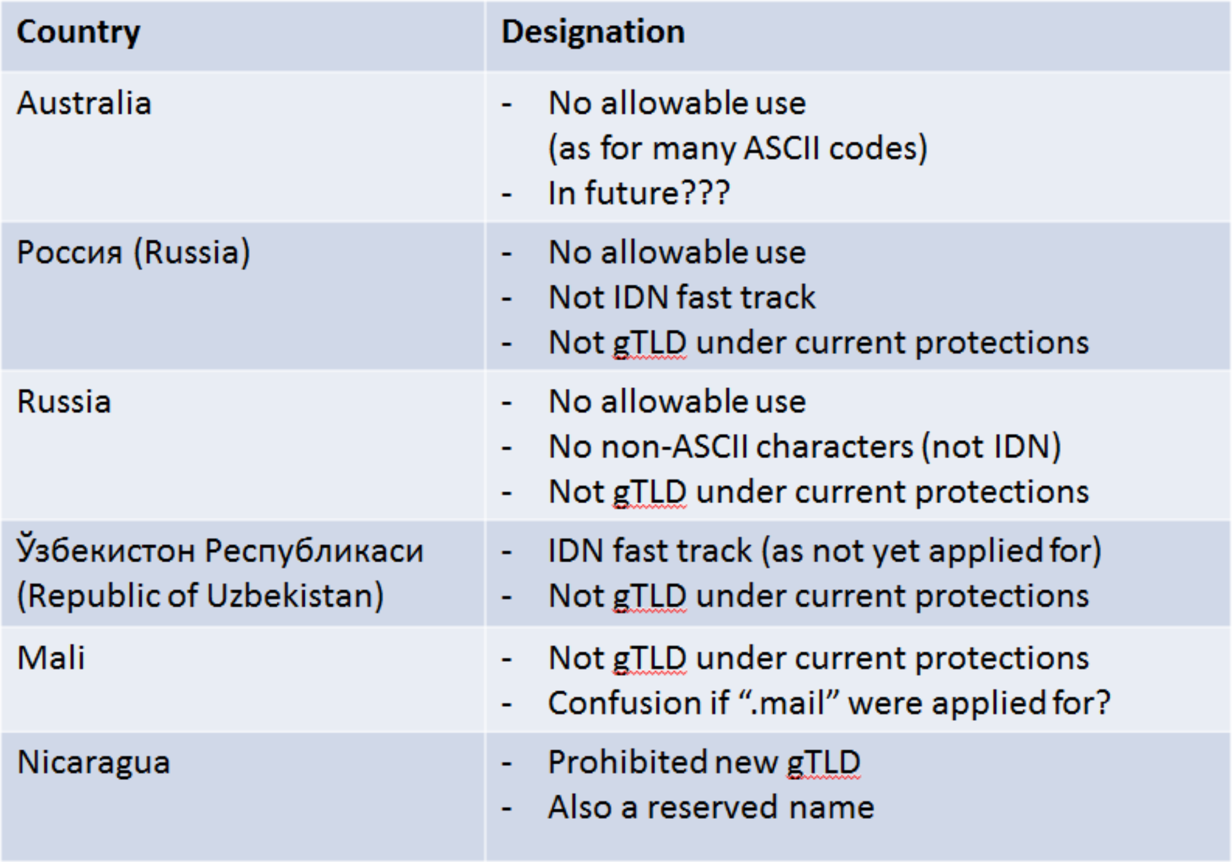
Their respective contents vary depending upon purpose, scope, frequency of revision and definition – for example whether the list either excludes or includes "territories".

The table below illustrates the above points, with green marks denoting the presence of an entry in the relevant resource list, and red denoting its absence.

	UNGEGN Manual	UNGEGN Working Paper	UNITERM List	WIPO ST3	UNSD Standard	ISO 3166
Bolivia	🟢	🔴	🟢	🔴	🔴	🔴
Plurtinational State of Bolivia	🔴	🟢	🟢	🟢	🟢	🟢
Cook Islands	🔴	🔴	🟢	🟢	🟢	🟢
Serbia and Montenegro	🔴	🔴	🟢	🔴	🔴	🟢 🔴
South Sudan	🔴	🔴	🟢	🟢	🟢	🟢
Hong Kong	🔴	🔴	🔴	🟢	🟢	🟢
Puerto Rico	🔴	🔴	🔴	🔴	🟢	🟢
Palestinian Territory, Occupied	🔴	🔴	🔴	🔴	🟢	🟢

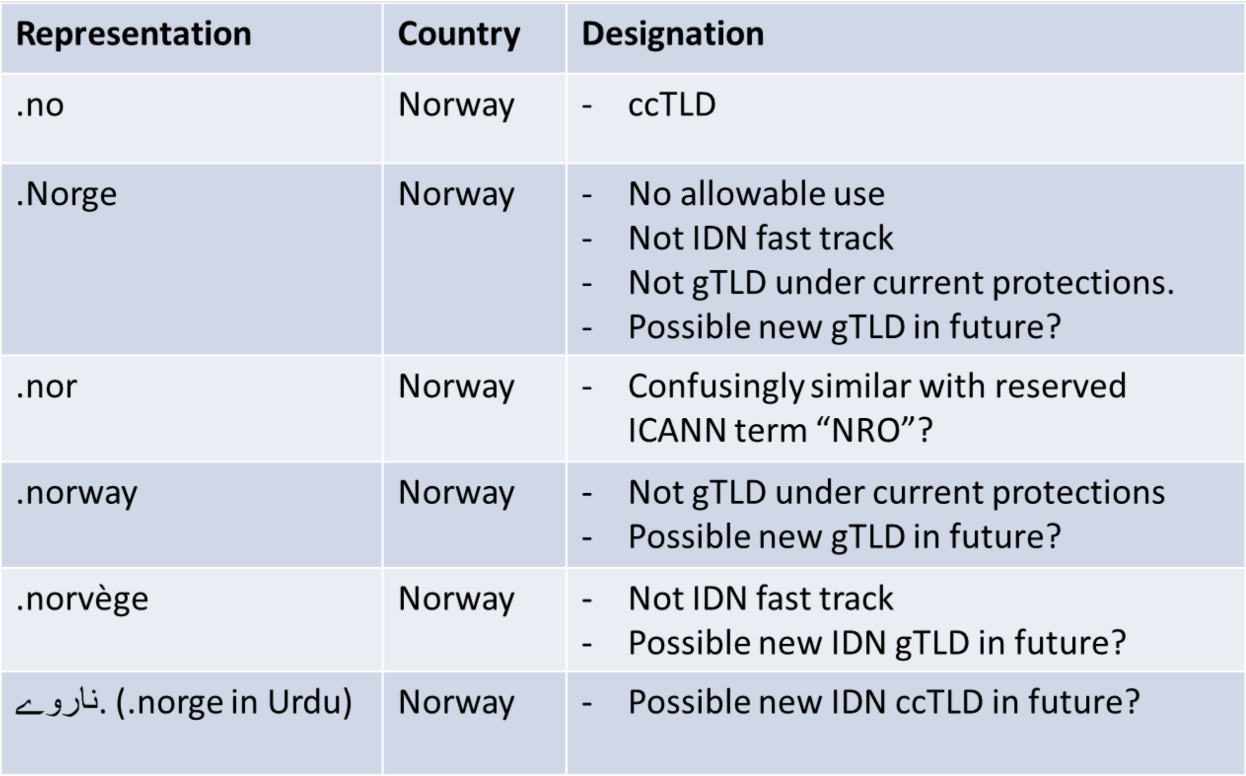
The reason for the Study Group noting these inconsistencies is to highlight the fundamental fallibility of any process that relies upon a single, given resource as an authoritative of "list" of country and territory names. While ISO3166 provides the most expansive list, it is only published in English and French, whereas UNGEGN resources include all six languages of the UN.

As a broader observation, the Study Group noted that rigid application of the current range of ICANN policies and procedures could potentially lead to an inconsistent treatment of country and territory names. That is, certain representations could be deemed as prohibited as new gTLDs according to the Applicant Guidebook, others could be considered IDNs, and yet others could be prohibited from use as an IDNccTLD given current "one per Official/Designated Language/" provisions of the fast track process and future IDN ccTLD policy.



Country	Designation
Australia	- No allowable use (as for many ASCII codes) - In future???
Россия (Russia)	- No allowable use - Not IDN fast track - Not gTLD under current protections
Russia	- No allowable use - No non-ASCII characters (not IDN) - Not gTLD under current protections
Ўзбекистон Республикаси (Republic of Uzbekistan)	- IDN fast track (as not yet applied for) - Not gTLD under current protections
Mali	- Not gTLD under current protections - Confusion if “.mail” were applied for?
Nicaragua	- Prohibited new gTLD - Also a reserved name

Furthermore, on aggregate, the assortment of current ICANN policies and procedures, even with relation to *an individual* country or territory, could cause unclear or inconsistent treatment. That is, multiple meaningful representations of the same country could be considered assessed as ccTLDs, IDN ccTLDs, a gTLD, an IDN gTLD, or prohibited for reserve list reasons.



Representation	Country	Designation
.no	Norway	- ccTLD
.Norge	Norway	- No allowable use - Not IDN fast track - Not gTLD under current protections. - Possible new gTLD in future?
.nor	Norway	- Confusingly similar with reserved ICANN term “NRO”?
.norway	Norway	- Not gTLD under current protections - Possible new gTLD in future?
.norvège	Norway	- Not IDN fast track - Possible new IDN gTLD in future?
ناروے. (.norge in Urdu)	Norway	- Possible new IDN ccTLD in future?

Country and territory name in the six official languages of the UN

For the most part, the Study Group focused upon the broader issue of the representation of country and territory names in multiple languages. This discussion was guided by the current provisions in the new gTLDs Applicant Guidebook where protections are afforded to names in all languages. This provision brings about its own complexities such as what constitutes a “language”, are protections expanded to all minority, spoken, written and historical languages and what authoritative sources can be used upon which to implement this policy position?

As a preliminary step in establishing the complexities and possible expansiveness of broadly-worded policy protections, the Study Group assessed the permutations that arise if “only” the six official UN languages are considered.

Utilizing the UNGEGN’s resources expands the scope of protections to over 1200 names, a figure that is doubled if both long and short-form names are included, and expanded further given many nations have more than one “official” language. Similarly, use of the ISO3166 list conservatively identifies over 1500 names and is multiplied again, if the above criteria are applied.

The Study Group’s motivation in identifying this pattern is to raise awareness that, even if strict, limited definitions are applied to the concept of country names, any resultant protections will be necessarily expansive in nature.

Commonly used or local names

One of the pertinent examples that the Study Group considered was the use of the term “Holland” which is commonly used interchangeably with “The Netherlands”, even though it refers more correctly to two provinces (North and South Holland). The term “Holland” is absent from the official lists of country and territory names previously discussed. However, the use of the term “Holland” to describe the whole of The Netherlands is so expansive that government entities, such as the Netherlands marketing and tourism authority NBTC, adopt the term for official purposes.[38]

Another pertinent example was drawn from the survey response received from the Republic of Armenia that listed a wide range of commonly used / local representations, including "Hayasdan”, "Hayastan", "Aiastan", "Hayk", "Mets Hayk" and "Hayastani Hanrapetutyun" along with historical names such as "Urartu", "Nairi", "Biayna", and "Kilikia".

The identification of such names introduces the issues and complexities associated with regional, geo-political and historical names.

The Study Group chose not to formally categorise and analyse historical and possible future country names, given the incredible difficulty and complexity associated with doing so. However, the group noted that such names could give rise to potential policy conflicts within the ICANN environment. For example, reverting to the example of “Holland”, the Study Group noted that the term “New Holland” is a historical representation of the island continent of Australia, is the tradename, brandname and business name of a large producer of farming and construction equipment and is also a string that has

---

[38] http://www.holland.com

been applied for as part of the new gTLDs process. Once again, the Study Group presents this observation as an illustrative example, and provides no judgment as to the preferred treatment of the string.

Examples of country / territory name in minority or indigenous languages

One example considered by the Study Group was “Aotearoa”, the representation of “New Zealand” in the Māori language. However, this is a somewhat unique example, as Māori is recognised as an official language, and would therefore be captured in narrower definitions discussed earlier in the Study Group’s work.

Other examples gleaned from the UNESCO survey process included minority representations of Armenia:

- Russian-"Армения",
- Ezid -"Ерманистан”,
- Assirian-"Armnstan",
- Kurdish-"Ermenistan" and
- Hebrew-"ארמניה רפובליקת"

In Sweden, there are five recognized minority languages[39]: Finnish, Meänkieli (Tornedal Finnish), Sami (all dialects), Romani Chib and Yiddish. Therefore the representations of “Sweden” in these languages are:

- Finnish: Ruotsi
- Meänkieli: Ruotti,
- Ruotsi Sami: Svöörje,
- Sveerje Romani Chib: Sveedi
- Yiddish: שוועדן

Examples of name in non-official languages

In adopting this all-encompassing category, the Study Group attempted to acknowledge the full extent of the permutations and complexities that could arise with regard to country and territory name representations. Such a categorization was deemed appropriate given that ICANN’s own rules for short- and long-form country names under the first round of the new gTLD process extended to representations “in all languages”.

As a threshold observation, the Study Group noted that to attempt to categorise and assess all country name representations, in all languages, creates an insurmountable challenge that can only be managed with a case-by-case objection procedure, rather than through the development of definitive “lists”.

---

[39] According to the definition of Designated Language they could qualify as a language for administration.

Numerous problems arise from attempting to define what constitutes a language - be it living, historical, written or oral. Once again, numerous resources exist that attempt to identify the current number of living languages and their minority dialects.

For example, SIL International maintains “Ethnologue” that currently contains descriptions of 7105 known living languages[40]. Alternative language names and dialects expand this list to nearly 40,000.

The International Organization for Standardization set of standards relating to the names of languages or language groups (ISO 639) includes a standard ISO 639-3:2007. This is a superset that contains alpha3 codes for the representation of names of languages –be they living, extinct, ancient or constructed languages. This standard contains 7776 entries[41] and is also maintained by SIL.

The Study Group noted this because, by any reasonable measure, it would be an almost impossible undertaking to comprehensively gather and list all country and territory names, in all languages[42].

---

[40] http://www.ethnologue.com/statistics

[41] http://www-01.sil.org/iso639-3/download.asp

[42] Assuming that countries and territories are defined through the ISO 3166-1 list and only documented living languages are relevant, such a list would contain 1,833,090 entries.

6. Deliverable 4: Study Group recommendations

The Country and Territory Names Study Group was tasked, by the ccNSO Council, with providing an analytical overview in three main areas:

- current ICANN policies, procedures and guidelines relating to the use of country and territory names,
- the types of strings that are, or may be, used as TLDs that could also be considered meaningful representations of country and territory names, and
- the issues that may arise if current policies and procedures are applied to these country and territory name-related strings.

This report represents the Study Group's findings in relation to these three main objectives.

However, the Group was also tasked with, if considered appropriate, the provision of advice with regard to a course of further action, to resolve any issues identified in the course of its work.

Study Group members hold that the provision of a detailed "state of play" represents a suitable evidentiary basis upon which to assess the issues at-hand. However, noting its narrow mandate, the members of the Study Group also believe it appropriate that their work should be used to provide meaningful guidance for future deliberations.

Accordingly, the Study Group offers the following comments and observations.

- Throughout its deliberations, the Study Group observed an incredible level of complexity associated with any attempt to definitively categorize country or territory names, especially when such an effort includes multiple languages or scripts.

- A consistent observation was the inability of individual "lists" or resources to provide comprehensive, consistent or universal guidance regarding the various representations of country and territory names, in particular as a result of geo-political changes, the creation of new countries and the dissolution of others.

- ICANN's current policies and procedures (as they may relate to ccTLDs, IDNs or current and potential new gTLDs) do not afford consistent treatment of country and territory names. This may give rise to stakeholder and end-user confusion and uncertainty.

- ICANN's current policy framework (the Applicant Guidebook) for the introduction of new gTLDs affords an unprecedented level of protection for country and territory names, though notes that such protections are only confirmed for first and current round of new gTLD applications.

- The current Fast Track and IDN ccTLD policy are restricted. The major restrictions are the requirements that:
  1. the IDN ccTLD string is a meaningful representation in a designated language of the territory, and
  2 only one string per designated language

If adopted the IDN ccTLD policy should be reviewed in five years, which includes a review of these restrictions.

Recommendations

It is recommended that the ccNSO Council establish a cross community working group to:

- further review the current status of representations of country and territory names, as they exist under current ICANN policies, guidelines and procedures;
- provide advice regarding the feasibility of developing a consistent and uniform definitional framework that could be applicable across the respective SO's and AC's; and
- should such a framework be deemed feasible, provide detailed advice as to the content of the framework.

The GNSO, ALAC and GAC should be invited to participate in such a WG.

In light of the need for further work on the treatment of country and territory names, the complexity of the issue at hand and the aforementioned inconsistencies between various ICANN policies, it is also recommended that the ccNSO Council request that the ICANN Board extend the current rule in the new gTLD Applicant Guidebook regarding the exclusion of all country and territory names in all languages, for consecutive rounds of new gTLD applications until such a time when the work of the cross community working group has been concluded.

Annex A: Study Group Membership

In accordance with the Study Group's purpose and scope, membership was open to all ccTLD managers (both members and non-members of the ccNSO), who were appointed by the ccNSO Council after a call for volunteers. The Chair was also appointed by the ccNSO Council, in accordance with the nomination of the SG membership.

The ccNSO Council also invited the GAC, ALAC and GNSO to participate either by appointing members directly according to their own rules and procedures, or by appointing liaisons to participate on equal footing with other SG members.

- Marika Konings, GNSO

Annex B: Timeline

Note: In addition to the meetings listed below, the Study Group met via teleconference on a number of occasions. Transcripts of face-to-face and teleconference meetings are available on the ccNSO website. [43]

31 October 2007	ccNSO Council resolves[44] to recommend to the ICANN Board that no name of a territory, as listed in ISO 3166-1, or a meaningful abbreviation of it, should be made available as a gTLD. This resolution was subsequently reaffirmed in December 2008, April 2009, and July 2009.
21 November 2009	Letter from ccNSO Chair to the Chair of the ICANN Board[45] expressing the ccNSO's view that all meaningful representations of country and territory names should be excluded from the process for the introduction of new generic Top Level Domains (gTLDs)
14 June 2010	ICANN Board Chair response to ccNSO Chair[46], citing the Governmental Advisory Committee's interpretation of paragraph 2.2 of the GAC Principles as the catalyst for the reconsideration of the treatment and country and territory names in the new gTLDs process and a decision that no meaningful representations of such names would be allowed during the first round of new gTLD applications. The letter also acknowledged: ○ the ccNSO's policy discussions on this matter; ○ that defining the distinction between country code and generic names may warrant a broader cross-SO/AC policy discussion; and ○ that, once policy is developed, it will be appropriate for the Board to reconsider its position.
8 December 2010	Chair of IDN ccPDP WG 1 advised the ccNSO Council that the use of Country and Territory names as TLD strings, in general, is considered outside the scope of the IDN ccPDP and will therefore not be addressed during the process. ccNSO Council resolved[47] (Resolution 58-02) *"to create an ad-hoc Study Group that will provide the ccTLD community and ccNSO Council with a comprehensive overview of the use of Country and Territory Names as TLD Strings".*
25 January 2011	Study Group's Statement of Purpose and Scope adopted by ccNSO Council
11 May 2011	Following a call for volunteers among ccTLDs and outreach to the broader ICANN community, the Study Group commenced work, via teleconference.
23 June 2011	Face-to-face meeting in Singapore
6 September 2011	Study Group seeks expert input from UNESCO, in accordance with the ICANN – UNESCO Partnership Agreement

30 September 2011	UNESCO provides response to SG letter and undertakes to collaborate on the development of a survey of UNESCO Member States to assist with the SG's deliberations.
27 October 2011	Face-to-face SG meeting of SG in Dakar, Senegal and briefings for ICANN community members
15 March 2012	Face-to-face SG meeting in San Jose, Costa Rica and briefings for ICANN community members
4 June 2012	ICANN releases final new gTLD applicant guidebook. The guidebook prohibits the use of meaningful representations of country and territory names.
25 June 2012	Face-to-face SG meeting in Prague, Czech Republic and briefings for ICANN community members
24 July 2012	UNESCO releases country and territory names survey to a sub-set of Member States and launches dedicated website
15 October 2012	Face-to-face SG meeting in Toronto, Canada and briefings for ICANN community members
March 2013	Development of draft final report and consideration by SG members
April 2013	Discussion of draft final report in Beijing, China.
July 2013	Release of Final Report for public comment
July- August 2013	Public comment period
September 2013	Publication of final report and submission to the ccNSO Council

Annex C: Checklist - Study Group tasks

	Allocated Study Group task	**Study Group action**
A	Develop a work plan, including a high level schedule	The Study Group developed a work plan in the early stages of its deliberations. The SG's work was divided into discreet elements, based upon the identified deliverables. The timeline at **Annex B** reflects the scheduling of this work.
B	Summarise existing and proposed policies, guidelines and implementation rules regarding the use of representations of Country and Territory names as TLDs	Delivered in Section 3: Deliverable 1 of this report.
C	Provide a comprehensive overview of the issues associated with the use of representations of Country and Territory names as TLDs as identified by the ccNSO, GAC and GNSO	Delivered in Section 4: Deliverable 2 (summarisation of current policies) and Section 5: Deliverable 3 of this report.
D	Liaise with the ccNSO, GAC and GNSO as needed to seek further clarification and input regarding Tasks B and C	Delivered through status reports to ACs and SOs throughout the SG's work and the ongoing contributions of SG members participating on behalf of those ACs and SOs.
E	Liaise with the IDN ccPDP working group 1 as necessary and appropriate to seek further clarification and input, and provide input and feedback to that working group	Clarification, where required, was provided by ICANN support staff that were also directly involved in the IDN ccPDP WG1 process.
F	Liaise with ICANN's new gTLD project team as necessary and appropriate to seek further clarification and input and provide input and feed-back, for example to better understand the proposed future scope of excluded Country and Territory names and objection mechanisms	Clarification and input, where required, was provided on an ongoing basis by relevant new gTLD project team members and other ICANN support staff. This was rarely required, given the highly-visible nature of the new gTLD process, and the frequent and detailed publication of supporting documents.
G	Liaise with (IDN) ccTLDs and individual GAC members as necessary and appropriate to solicit their views and perspectives on the use of representations of their Country or Territory names	Both the ccNSO and GAC were briefed on the progress of the Study Group on a number of occasions. At all times, both the ccNSO and GAC were invited to comment, individually, or collectively. These collective briefings led to numerous informal, individual discussions.
H	Prepare sessions to be conducted at ICANN meetings to inform and report to the ccTLD community, and other interested Supporting Organisations and Advisory Committees on the findings and intermediate results of the Study Group	Delivered at numerous ICANN meetings between 2011 and 2013.
I	Provide a Final Report of its findings to the ccNSO Council	Delivered.

Annex D: Summary and Analysis of comments on draft Final Report

Organizations and Groups that have submitted a comment:

Name	Submitted by	Initials
ALAC	Olivier Crepin-LeBlanc	OCL
Government of Montenegro	Milica Vucinic	MV
Hellenic Republic (Greece/Hellas) Ministry of Infrastructure, Transport & Networks	Panagiotis Papaspiliopoulos	PP
Intellectual Property Constituency	Claudio Di Gangi	CDG

Summary of Comments

General disclaimer: In this section a broad and comprehensive summary of the comments is provided. It is not intended to include every specific aspect or stated position by each contributor. If the reader is interested in specific aspects of any of the summarized comments or the full context, she or he is advised to read the specific contributions, which can be found at: http://www.icann.org/en/news/public-comment/unct-final-02jul13-en.htm (View comments submitted).

1. The comments of OCL, PP, and CDG are in support of the recommendation for further study, and the valuable contribution the study provides to the ICANN community on the use of Country and Territory Names as TLD's.

2. OCL and PP also support the second recommendation that the current rule in the Applicant Guidebook regarding the exclusion of all Country and Territory names in all languages needs to be extended until a framework a recommended has been developed.

3. MV is of the opinion the Applicant Guidebook must be modified to close the loophole that strings can be applied, which are simply a repetition of already-exising country codes listed in the ISO 3166 AND 3166-1 (for example: .MEME).

4. In addition to the support for the recommendations, PP represents that, given the complex nature of the issues around country and territory names, and there are a number of disputes regarding country and territory names, the following additional rule is necessary: "The eligibility procedure (of a given TLD process, ccTLD or gTLD, latin or IDN) is not valid in cases there are pending issues or unresolved disputes between countries or territories in the UN."

5. CDG: The IPC questions from a governance perspective whether the ccNSO Study Group's second recommendation is within scope of the ccNSO. The ccNSO develops and recommends to the Board global policies relating to country code top-level domains. The second recommendation relates to generic top-level domains.

6. CDG: in the view of the IPC any specific policy or procedure on the use of Country and Territory Names as TLD's, including as they may relate to current or future new gTLD applications, should not be frozen or made permanent until further study on the topic, as recommended, is complete and fully considered by the community.

7. CDG: Additional considerations should address the interplay of legal rights- intellectual property rights, in the delegation of strings associated with country and territory names.

8. CDG: The IPC notes that a reference to “sovereign rights” by the Study Group, which is considered to beyond the mandate of the group.

Analysis of Comments

This section is intended to provide an analysis and evaluation of the comments received.

1. The Study Groups notes 3 comments (OCL, PP and CDG) are in support of the recommendation of the Study Group to the ccNSO Council on the need of further study and creation of a general framework through a cross-community working group.

2. As to the comment from MV, although it relates to the use of a Country name as a TLD, the proposal focuses on changing specific aspects of the Applicant Guidebook, which is considered to be beyond the remit of the Study Group. In the view of the Study Group this specific aspect could be taken into consideration in further study. It also suggested to include it in the review of the first round of new gTLD applications.

3. As to the proposal by PP, the Study Group is of the view that the complexities PP is alluding to, in particular the case of disputed names, are relevant. However, it is the view of the Study Group that this particular topic, nor the proposed recommendations is within its mandate, and will therefore not include it in its Final Report, but the chair of Study will suggest to the ccNSO Council that it needs to be taken into account in the recommended further study and development of a framework.

4. With regard to the question whether the second recommendation (maintaining the current rule in the Applicant Guidebook until the proposed working group has completed its work) is within scope of the ccNSO, the Study Group view is the following:

- The ccNSO and ccNSO Council have repeatedly provided input and comments to ICANN on the topic of the use of Country and Territory names as generic Top Level Domains. The input and comments were provided as part of the public comment processes on the draft Applicant Guidebook and at the express request from Board members.

- As the Board indicated in its resolution 2012.02.07.07, ICANN will continue to work with the ICANN community to (…) address the prerequisites needed to open the second round of new gTLDs.

- The Study Group beliefs that it is within its mandate to advise to the ccNSO Council, and in particular to advise the ccNSO Council as part of ICANN’s further work and study in preparation the second round and potential consecutive rounds. Both recommendations to the Council should be considered in this context.

5. The Study Group reiterates its recommendation that the current rule in the Applicant Guidebook for the first round of new gTLD’s should be maintained temporarily, up and until such a time when the work of the cross community working group has been concluded. The Study Group sincerely hopes the proposed ccWG will be able to conclude its work prior to a second round of new gTLD applications will be opened. However, if this will no be the case, it is the view of the Study Group that not extending the rule would create irreversible consequences, which among others would further complicate and already complex area and discussions.

6. As with the other specific proposals, the Study Group believes that specific considerations such as the interplay between legal rights, including intellectual property rights and the delegation of strings associated with the names of Countries and Territories is a matter of further study and review and the development of framework that could be applicable across the respective SO's And AC's. The chair of the Study Group will suggest to the ccNSO Council that it needs to be taken into account in the recommended further study and development of a framework.

7. As to the reference to 'sovereign right' (emphasis added by CDG) the IPC noted and considered to be out of the mandate of the Study Group the following:
The Study Group used the term sovereign State in the text (page 8 and 27) as a general term, carefully avoiding any reference to the term "sovereign right" or "rights." In the first instance it was used to describe that (a.) many names have been associated with Countries (sovereign States), and (b.) each of these names are eligible to be chosen. In the second instance it was used to illustrate that a change to the current rules relating to the use of a specific country name as TLD, would create internal inconsistencies within one set of rules (in this case the rules in the Applicant Guidebook), if the government of a particular country would apply under the rules of the Applicant Guidebook. The Study Group considers both cases to be within its mandate.

ARTICLES OF INCORPORATION OF INTERNET CORPORATION FOR ASSIGNED NAMES AND NUMBERS

This page is available in: EnglishالعربيةEspañolFrançaisРусский中文

As Revised November 21, 1998

1. The name of this corporation is Internet Corporation for Assigned Names and Numbers (the "Corporation").

2. The name of the Corporation's initial agent for service of process in the State of California, United States of America is C T Corporation System.

3. This Corporation is a nonprofit public benefit corporation and is not organized for the private gain of any person. It is organized under the California Nonprofit Public Benefit Corporation Law for charitable and public purposes. The Corporation is organized, and will be operated, exclusively for charitable, educational, and scientific purposes within the meaning of § 501 (c)(3) of the Internal Revenue Code of 1986, as amended (the "Code"), or the corresponding provision of any future United States tax code. Any reference in these Articles to the Code shall include the corresponding provisions of any further United States tax code. In furtherance of the foregoing purposes, and in recognition of the fact that the Internet is an international network of networks, owned by no single nation, individual or organization, the Corporation shall, except as limited by Article 5 hereof, pursue the charitable and public purposes of lessening the burdens of government and promoting the global public interest in the

feedback

operational stability of the Internet by (i) coordinating the assignment of Internet technical parameters as needed to maintain universal connectivity on the Internet; (ii) performing and overseeing functions related to the coordination of the Internet Protocol ("IP") address space; (iii) performing and overseeing functions related to the coordination of the Internet domain name system ("DNS"), including the development of policies for determining the circumstances under which new top-level domains are added to the DNS root system; (iv) overseeing operation of the authoritative Internet DNS root server system; and (v) engaging in any other related lawful activity in furtherance of items (i) through (iv).

4. The Corporation shall operate for the benefit of the Internet community as a whole, carrying out its activities in conformity with relevant principles of international law and applicable international conventions and local law and, to the extent appropriate and consistent with these Articles and its Bylaws, through open and transparent processes that enable competition and open entry in Internet-related markets. To this effect, the Corporation shall cooperate as appropriate with relevant international organizations.

5. Notwithstanding any other provision (other than Article 8) of these Articles:

a. The Corporation shall not carry on any other activities not permitted to be carried on (i) by a corporation exempt from United States income tax under § 501 (c)(3) of the Code or (ii) by a corporation, contributions to which are deductible under § 170 (c)(2) of the Code.

b. No substantial part of the activities of the Corporation shall be the carrying on of propaganda, or otherwise attempting to influence legislation, and the Corporation shall be empowered to make the election under § 501 (h) of the Code.

c. The Corporation shall not participate in, or intervene in (including the publishing or distribution of statements) any political campaign on behalf of or in opposition to any candidate for public office.

d. No part of the net earnings of the Corporation shall inure to the benefit of or be distributable to its members, directors, trustees, officers, or other private persons, except that the Corporation shall be authorized and empowered to pay reasonable compensation for services rendered and to make payments and distributions in furtherance of the purposes set forth in Article 3 hereof.

e. In no event shall the Corporation be controlled directly or indirectly by one or more "disqualified persons" (as defined in § 4946 of the Code) other than foundation managers and other than one or more organizations described in paragraph (1) or (2) of § 509 (a) of the Code.

6. To the full extent permitted by the California Nonprofit Public Benefit Corporation Law or any other applicable laws presently or hereafter in effect, no director of the Corporation shall be personally liable to the Corporation or its members, should the Corporation elect to have members in the future, for or with respect to any acts or omissions in the performance of his or her duties as a director of the Corporation. Any repeal or modification of this Article 6 shall not adversely affect any right or protection of a director of the Corporation existing immediately prior to such repeal or modification.

7. Upon the dissolution of the Corporation, the Corporation's assets shall be distributed for one or more of the exempt purposes set forth in Article 3 hereof and, if possible, to a § 501 (c)(3) organization organized and operated exclusively to lessen the burdens of government and promote the global public interest in the operational stability of the Internet, or shall be distributed to a governmental entity for such purposes, or for such other charitable and public purposes that lessen the burdens of government by providing for the operational stability of the Internet. Any assets not so disposed of shall be disposed of by a court of competent jurisdiction of the county in which the principal office of the Corporation is then located, exclusively for such purposes or to such organization or organizations, as such court shall determine, that are organized and operated exclusively for such purposes, unless no such corporation exists, and in such case any assets not disposed of shall be distributed to a § 501(c)(3) corporation chosen by such court.

8. Notwithstanding anything to the contrary in these Articles, if the Corporation determines that it will not be treated as a corporation exempt from federal income tax under § 501(c)(3) of the Code, all references

herein to § 501(c)(3) of the Code shall be deemed to refer to § 501(c)(6) of the Code and Article 5(a)(ii), (b), (c) and (e) shall be deemed not to be a part of these Articles.

9. These Articles may be amended by the affirmative vote of at least two-thirds of the directors of the Corporation. When the Corporation has members, any such amendment must be ratified by a two-thirds (2/3) majority of the members voting on any proposed amendment.

AFFIRMATION OF COMMITMENTS BY THE UNITED STATES DEPARTMENT OF COMMERCE AND THE INTERNET CORPORATION FOR ASSIGNED NAMES AND NUMBERS

This page is available in:
Englishالعربية DeutschEspañolFrançaisItaliano日本語한국어Português
Русский中文

1. This document constitutes an Affirmation of Commitments (Affirmation) by the United States Department of Commerce ("DOC") and the Internet Corporation for Assigned Names and Numbers ("ICANN"), a not-for-profit corporation. In recognition of the conclusion of the Joint Project Agreement and to institutionalize and memorialize the technical coordination of the Internet's domain name and addressing system (DNS)[1], globally by a private sector led organization, the parties agree as follows:

2. The Internet is a transformative technology that will continue to empower people around the globe, spur innovation, facilitate trade and commerce, and enable the free and unfettered flow of information. One of the elements of the Internet's success is a highly decentralized network that enables and encourages decision-making at a local level. Notwithstanding this decentralization, global technical coordination of the Internet's underlying infrastructure - the DNS - is required to ensure interoperability.

feedback

3. This document affirms key commitments by DOC and ICANN, including commitments to: (a) ensure that decisions made related to the global technical coordination of the DNS are made in the public interest and are accountable and transparent; (b) preserve the security, stability and resiliency of the DNS; (c) promote competition, consumer trust, and consumer choice in the DNS marketplace; and (d) facilitate international participation in DNS technical coordination.

4. DOC affirms its commitment to a multi-stakeholder, private sector led, bottom-up policy development model for DNS technical coordination that acts for the benefit of global Internet users. A private coordinating process, the outcomes of which reflect the public interest, is best able to flexibly meet the changing needs of the Internet and of Internet users. ICANN andDOC recognize that there is a group of participants that engage inICANN's processes to a greater extent than Internet users generally. To ensure that its decisions are in the public interest, and not just the interests of a particular set of stakeholders, ICANN commits to perform and publish analyses of the positive and negative effects of its decisions on the public, including any financial impact on the public, and the positive or negative impact (if any) on the systemic security, stability and resiliency of the DNS.

5. DOC recognizes the importance of global Internet users being able to use the Internet in their local languages and character sets, and endorses the rapid introduction of internationalized country code top level domain names (ccTLDs), provided related security, stability and resiliency issues are first addressed. Nothing in this document is an expression of support by DOC of any specific plan or proposal for the implementation of new generic top level domain names (gTLDs) or is an expression by DOC of a view that the potential consumer benefits of new gTLDs outweigh the potential costs.

6. DOC also affirms the United States Government's commitment to ongoing participation in ICANN's Governmental Advisory Committee(GAC). DOC recognizes the important role of the GAC with respect toICANN decision-making and execution of tasks and of the effective consideration by ICANN of GAC input on the public policy aspects of the technical coordination of the Internet DNS.

7. ICANN commits to adhere to transparent and accountable budgeting processes, fact-based policy development, cross-community deliberations, and responsive consultation procedures that provide detailed explanations of the basis for decisions, including how comments have influenced the development of policy consideration, and to publish each year an annual report that sets out ICANN's progress against ICANN's bylaws, responsibilities, and strategic and operating plans. In addition, ICANNcommits to provide a thorough and reasoned explanation of decisions taken, the rationale thereof and the sources of data and information on which ICANN relied.

8. ICANN affirms its commitments to: (a) maintain the capacity and ability to coordinate the Internet DNS at the overall level and to work for the maintenance of a single, interoperable Internet; (b) remain a not for profit corporation, headquartered in the United States of America with offices around the world to meet the needs of a global community; and (c) to operate as a multi-stakeholder, private sector led organization with input from the public, for whose benefit ICANN shall in all events act. ICANN is a private organization and nothing in this Affirmation should be construed as control by any one entity.

9. Recognizing that ICANN will evolve and adapt to fulfill its limited, but important technical mission of coordinating the DNS, ICANN further commits to take the following specific actions together with ongoing commitment reviews specified below:

> 9.1 Ensuring accountability, transparency and the interests of global Internet users: ICANN commits to maintain and improve robust mechanisms for public input, accountability, and transparency so as to ensure that the outcomes of its decision-making will reflect the public interest and be accountable to all stakeholders by: (a) continually assessing and improving ICANN Board of Directors (Board) governance which shall include an ongoing evaluation of Board performance, the Board selection process, the extent to which Board composition meets ICANN's present and future needs, and the consideration of an appeal mechanism for Board decisions; (b) assessing the role and effectiveness of the GAC and its interaction with the Board and making recommendations for

> improvement to ensure effective consideration by ICANN of GACinput on the public policy aspects of the technical coordination of theDNS; (c) continually assessing and improving the processes by which ICANN receives public input (including adequate explanation of decisions taken and the rationale thereof); (d) continually assessing the extent to which ICANN's decisions are embraced, supported and accepted by the public and the Internet community; and (e) assessing the policy development process to facilitate enhanced cross community deliberations, and effective and timely policy development. ICANN will organize a review of its execution of the above commitments no less frequently than every three years, with the first such review concluding no later than December 31, 2010. The review will be performed by volunteer community members and the review team will be constituted and published for public comment, and will include the following (or their designated nominees): the Chair of the GAC, the Chair of the Board of ICANN, the Assistant Secretary for Communications and Information of theDOC, representatives of the relevant ICANN Advisory Committeesand Supporting Organizations and independent experts. Composition of the review team will be agreed jointly by the Chair of the GAC (in consultation with GAC members) and the Chair of the Board of ICANN. Resulting recommendations of the reviews will be provided to the Board and posted for public comment. The Board will take action within six months of receipt of the recommendations. Each of the foregoing reviews shall consider the extent to which the assessments and actions undertaken by ICANN have been successful in ensuring that ICANN is acting transparently, is accountable for its decision-making, and acts in the public interest. Integral to the foregoing reviews will be assessments of the extent to which the Board and staff have implemented the recommendations arising out of the other commitment reviews enumerated below.
>
> 9.2 Preserving security, stability and resiliency: ICANN has developed a plan to enhance the operational stability, reliability, resiliency, security, and global interoperability of the DNS, which will be regularly updated by ICANN to reflect emerging threats to theDNS. ICANN will organize a review of its execution of the above

commitments no less frequently than every three years. The first such review shall commence one year from the effective date of this Affirmation. Particular attention will be paid to: (a) security, stability and resiliency matters, both physical and network, relating to the secure and stable coordination of the Internet DNS; (b) ensuring appropriate contingency planning; and (c) maintaining clear processes. Each of the reviews conducted under this section will assess the extent to which ICANN has successfully implemented the security plan, the effectiveness of the plan to deal with actual and potential challenges and threats, and the extent to which the security plan is sufficiently robust to meet future challenges and threats to the security, stability and resiliency of the Internet DNS, consistent with ICANN's limited technical mission. The review will be performed by volunteer community members and the review team will be constituted and published for public comment, and will include the following (or their designated nominees): the Chair of theGAC, the CEO of ICANN, representatives of the relevant Advisory Committees and Supporting Organizations, and independent experts. Composition of the review team will be agreed jointly by the Chair of the GAC (in consultation with GAC members) and the CEO of ICANN. Resulting recommendations of the reviews will be provided to the Board and posted for public comment. The Board will take action within six months of receipt of the recommendations.

9.3 Promoting competition, consumer trust, and consumer choice:ICANN will ensure that as it contemplates expanding the top-level domain space, the various issues that are involved (including competition, consumer protection, security, stability and resiliency, malicious abuse issues, sovereignty concerns, and rights protection) will be adequately addressed prior to implementation. If and when new gTLDs (whether in ASCII or other language character sets) have been in operation for one year, ICANN will organize a review that will examine the extent to which the introduction or expansion of gTLDs has promoted competition, consumer trust and consumer choice, as well as effectiveness of (a) the application and evaluation process, and (b) safeguards put in place to mitigate issues involved in the introduction or expansion. ICANN will organize a further

> review of its execution of the above commitments two years after the first review, and then no less frequently than every four years. The reviews will be performed by volunteer community members and the review team will be constituted and published for public comment, and will include the following (or their designated nominees): the Chair of the GAC, the CEO of ICANN, representatives of the relevant Advisory Committees and Supporting Organizations, and independent experts. Composition of the review team will be agreed jointly by the Chair of the GAC (in consultation with GAC members) and the CEO of ICANN. Resulting recommendations of the reviews will be provided to the Board and posted for public comment. The Board will take action within six months of receipt of the recommendations.
>
> 9.3.1 ICANN additionally commits to enforcing its existing policy relating to WHOIS, subject to applicable laws. Such existing policy requires that ICANN implement measures to maintain timely, unrestricted and public access to accurate and complete WHOISinformation, including registrant, technical, billing, and administrative contact information. One year from the effective date of this document and then no less frequently than every three years thereafter, ICANN will organize a review of WHOIS policy and its implementation to assess the extent to which WHOIS policy is effective and its implementation meets the legitimate needs of law enforcement and promotes consumer trust. The review will be performed by volunteer community members and the review team will be constituted and published for public comment, and will include the following (or their designated nominees): the Chair of theGAC, the CEO of ICANN, representatives of the relevant Advisory Committees and Supporting Organizations, as well as experts, and representatives of the global law enforcement community, and global privacy experts. Composition of the review team will be agreed jointly by the Chair of the GAC (in consultation with GACmembers) and the CEO of ICANN. Resulting recommendations of the reviews will be provided to the Board and posted for public comment. The Board will take action within six months of receipt of the recommendations.

10. To facilitate transparency and openness in ICANN's deliberations and operations, the terms and output of each of the reviews will be published for public comment. Each review team will consider such public comment and amend the review as it deems appropriate before it issues its final report to the Board.

11. The DOC enters into this Affirmation of Commitments pursuant to its authority under 15 U.S.C. 1512 and 47 U.S.C. 902. ICANN commits to this Affirmation according to its Articles of Incorporation and its Bylaws. This agreement will become effective October 1, 2009. The agreement is intended to be long-standing, but may be amended at any time by mutual consent of the parties. Any party may terminate this Affirmation of Commitments by providing 120 days written notice to the other party. This Affirmation contemplates no transfer of funds between the parties. In the event this Affirmation of Commitments is terminated, each party shall be solely responsible for the payment of any expenses it has incurred. All obligations of the DOC under this Affirmation of Commitments are subject to the availability of funds.

AGB	ICANN gTLD Applicant Guidebook, version 2012-06-04
Amazon Community	The community defined in § 40 below
Applicant	AMAZON EU S.à.r.l.
Centre	International Centre for Expertise of the International Chamber of Commerce
Expert	Professor Luca G. Radicati di Brozolo
gTLD	Generic top level domain
IO	Independent Objector
Objection Procedures	Module 3 of the AGB
OTCA	Amazon Cooperation Treaty Organization
Procedure	New gTLD Dispute Resolution Procedure, Attachment to Module 3 of the AGB
Strings	".AMAZON", ".アマゾン" and ".亚马逊" gTLDs

1. This Expert Determination is rendered in the consolidated dispute settlement proceedings arising from the community objections to three applications for the generic top-level domain ("**gTLD**") name ".AMAZON", and the Japanese and Chinese terms for AMAZON (respectively アマゾン and 亚马逊) within the framework of the ICANN gTLD Application Process governed by the ICANN gTLD Applicant Guidebook, version 2012-06-04 (the "**AGB**").

I. INTRODUCTION

2. The three community objections at the origin of these proceedings (the "**Objections**") were filed on March 12, 2013 with the International Centre for Expertise of the International Chamber of Commerce (the "**Centre**") by the Independent Objector, Professor Alain Pellet, Contact Information Redacted (the "**IO**").

3. The Objections (EXP/396/ICANN/13, EXP/397/ICANN/14 and EXP/398/ICANN/15) relate to three applications (the "**Applications**") filed by AMAZON EU S.à.r.l., Contact Information Redacted Contact Information Redacted (the "**Applicant**") respectively for the ".AMAZON", ".アマゾン" and ".亚马逊" gTLDs (collectively the "**Strings**").

4. The content of all the Objections is practically identical.

5. On April 23, 2013 the Centre informed the Parties of its decision to consolidate the Objections.

6. The Applicant filed its Responses to the Objections on May 24, 2013.

7. The IO is represented in these proceedings by Ms Heloïse Bajer-Pellet, Contact Information Redacted Mr Daniel Müller, Contact Information Redacted Mr Phon van den Biesen, Contact Information Redacted ; and Mr Sam Wordsworth, Contact Information Redacted Contact Information Redacted

8. The Applicant is represented in these proceedings by Messrs. Nick Bolter and Gareth Dickson, Edwards Wildman Palmer UK LLP, Contact Information Redacted Contact Information Redacted

9. On June 28, 2013 the Centre informed the Parties that on June 24, 2013 the Chairman of the Standing Committee appointed as sole member of the Panel of Experts Professor Luca G. Radicati di Brozolo, Arblit Radicati di Brozolo Sabatini, Contact Information Redacted Contact Information Redacted (the "**Expert**"), who submitted his declaration of acceptance and availability and statement of impartiality and independence on June 26, 2013.

10. The file of the case was transmitted by the Centre to the Expert on August 1, 2013.

Article 21(a) of the Procedure provides that the Centre and the Expert shall make reasonable efforts to ensure that the Expert renders his decision within 45 days of the "*constitution of the Panel*". The Centre considers that the Panel is constituted when the Expert is appointed, the Parties have paid their respective advances on costs in full and the file is transmitted to the Expert.

11. Following an exchange of correspondence with the IO and the Applicant (collectively the "**Parties**"), the Expert issued the Expert Mission on September 3, 2013.

12. At the request of the IO, the Expert allowed an exchange of submissions on the Applicant's challenge to the IO. The IO filed his additional written statement on August 16, 2013 whilst the Applicant filed its reply on August 22, 2013.

13. On September 9, 2013 the Centre informed the Expert that the time limit for submission of the draft expert determination was extended until October 5, 2013.

14. On the same date the Centre agreed to the Expert's request to deal with all three Objections in a single expert determination. The request was based on the consideration that the Applicant and the Objector are the same in all the consolidated proceedings and that the issues raised by all three Objections are practically identical and raise almost identical factual and legal issues.

15. In accordance with Article 19 of the the New gTLD Dispute Resolution Procedure (the "**Procedure**"),[1] and in the absence of any request by the Parties, no oral hearing was held.

16. The draft expert determination was submitted by the Expert for scrutiny to the Centre within the extended time limit in accordance with Article 21(a) and (b) of the Procedure.

17. These proceedings are administered by the Centre pursuant to Article 3(d) of the Procedure, which is applicable by virtue of its Article 1(d).

18. The proceedings are governed, as to matters of procedure, by the Procedure and by the Rules for Expertise of the International Chamber of Commerce, as supplemented by the ICC Practice Note on the Administration of Cases under the New gTLD Dispute Resolution Procedure (Article 4(a) and 4(b)(iv) of the Procedure).

19. Pursuant to Article 5(a) of the Procedure, the language of all submissions and proceedings was English. Moreover, in accordance with Article 6(a) of the Procedure, all communications by the Parties, the Expert and the Centre were submitted electronically.

20. As dictated by Article 20 of the Procedure, the merits of the dispute before the Expert are to be decided by reference to the relevant standards defined by ICANN, in particular in Module 3 of the AGB (the "**Objection Procedures**"), as well as to any rules and principles that the Expert determines to be applicable, having due regard

---

[1] Attachment to Module 3 of the AGB.

to the statements and documents submitted by the Parties. The burden of proof that the Objection should be sustained rests with the Objector in accordance with the applicable standards.

21. As agreed by the Centre, and given that the issues raised by the three Objections are for the most part identical, this Expert Determination deals with all three Objections collectively. Reference to the individual Objections will only be made insofar as they raise different issues from the other Objections.

II. THE CHALLENGE TO THE IO AND THE IO'S STANDING

(a) The Position of the Applicant

22. On April 6, 2013, after the filing of the Objections by the IO, the Applicant wrote to ICANN denouncing that "*the office of the IO exhibits a Conflict of Interest within the meaning of ICANN's Conflict of Interest Policy*". The challenge contended that the IO's Objections were based on comments in the Early Warning Procedure by the Governments of Peru and Brazil, with whom the IO has "*special links*" due to his professional ties with them, as he has with the Governments of Bolivia and Argentina, likewise identified as opponents of the Applications. Those links are asserted to have influenced and to continue to influence the IO's decision-making process in these proceedings. For the Applicant the Objections were used to formalize the objections of the governments of Brazil and Peru, in contrast with the principle that the IO can only act on behalf of the public who uses the global internet. The conflict of interest is viewed as the reason for the alleged inconsistency between the IO's approach to this application and to the ones for similar gTLDs (for instance for ".africa", ".persiangulf" and ".islam"). According to the Applicant, allowing the Objections to proceed would damage the integrity of the gTLD dispute resolution process, because the challenges would be made public, leading to the perception that the IO is not a safety net for the public. The Applicant concluded with the request that ICANN set aside the Objection on account of the conflict of interest and, if deemed necessary, appoint another non-conflicted IO. The Applicant accepted to maintain confidentiality over its challenge, while reserving its right to raise the matter if the Objection were allowed to proceed.

23. The Applicant wrote to ICANN again on April 24 and May 18, 2013 reiterating its challenge and soliciting a response prior to the deadline for responding to the Objection.

24. Referring to its correspondence with ICANN, in the Response to the Objection the Applicant restated that the IO lacks standing in these proceedings because of the conflict of interest. Indeed, under the AGB he has standing only to represent "*the public who use the global internet*", and cannot act on behalf of any particular entity or entities, as he is purportedly doing in these proceedings.

25. In its reply of August 22, 2013 to the IO's additional statement of August 16, 2013, the Applicant puts forward three sets of arguments. *First*, it argues that the IO has a "*clear*" conflict of interest requiring him to recuse himself. It contests that the AGB

does not require the IO to be independent of anyone standing to benefit from the objection and releases him from the "*universally recognized obligation to decline additional work where it would create a conflict of interest with an existing relationship*". While recognizing that the IO does not act as a judge, arbitrator or expert, the Applicant underscores that the AGB binds him to the same basic rules of ethics that apply to those offices in relation not only to ICANN and applicants, but also to any other influences. The Applicant concedes that "*a normal average social life*" does not necessarily entail a conflict of interest or lack of independence, but asserts that the IO's ties to the governments of Brazil or Peru are not merely part of such a social life.

26. *Second*, the Applicant restates that the IO can only represent the community made up of those who use the internet (referred to by the parties also as the "*internet community*") and that it is "*plainly wrong*" that he can only represent a community that is "*delineated and distinguishable from internet users in general*". The IO is granted special standing to fulfill his role within the gTLD program and, unlike "*ordinary*" objectors, does not have to prove an on-going relationship with a community. Consequently, he loses his special standing if he acts outside his role, e.g. on behalf of a community comprising particular persons or entities. In the case at hand the community represented by the IO is not the public who use the internet. The IO requests the same remedy sought by his client Peru, who is the largest financial contributor to the Amazon Cooperation Treaty Organization ("**OTCA**"). Notwithstanding that the Applications generated no reasoned or substantiated comments from the public, unlike similar applications (".gcc", ".islam", ".persiangulf" and ".africa"), the IO only objected to the Applicant's ones. The Applicant also contests that OTCA lacks the capacity to file an objection and differs in this respect from other organizations that could have objected to the strings to which the IO did not object. It adds that objections to the Applications could have been put forward by other entities. Had he followed the same criteria as for other objections, the IO would have concluded that OTCA and the governments of Brazil and Peru were in at least as good a position as the IO to file an objection. The IO's failure to demonstrate his complete independence and his apparent pursuit of the interest of particular persons or entities deprives him of standing in this case.

27. *Third*, the Applicant refers to a statement of the Centre that the decision over the IO's independence falls within the Expert's authority[2]. The Applicant argues that whether the IO has exceeded his role is a serious issue, because the Expert Determination will be accepted by ICANN (Section 3.4.6 of the Objection Procedures). This means that, if the issue is not decided by the Expert, the Applicant

---

[2] The Applicant refers to a letter of the Center dated July 8, 2013 in reply to a request submitted by it on this point. Actually the Center's letter of that date states that "*Whether a decision on this question [i.e. the independence of the IO] falls into the Expert Panel's scope and authority pursuant to the applicable rules and procedures, will have to be decided by the Expert Panel itself. Should the Expert Panel decide that it does fall into the scope of its work, it will then be directly on the Expert Panel to take a decision on the raised question.*"

risks "*unjustly and unfairly los[ing] with limited, if any, scope for a remedy*". This would result in irreparable damage to the integrity of the gTLD dispute resolution process.

(b) The position of the IO

28. In a letter to counsel for the Applicant of June 8, 2013 the IO denounced the inappropriateness of the Applicant's direct approach to ICANN on the matter of his independence, stating that it is not for ICANN to take a position on it. The IO argued that the claim concerning his alleged bias "*has to be dealt with by the Expert panel, who has full authority to decide in all impartiality*".

29. In the Objection the IO disclosed his relations with the Governments of Brazil and Peru, but clarified that in the present proceedings he is not representing them and is acting in the sole interests of the public who use the internet and that his relation with a State has nothing to do with his decision to object or not.

30. In his additional statement of August 16, 2013 the IO noted that Article 11(4) of the Rules is not relevant to a challenge of the IO, since the IO is only a party to these proceedings. He acknowledged, however, that the absence of a general procedure concerning the IO's independence and the possibility to challenge him for the entire gTLD program does not mean that no remedy is available. The IO recalls that in his June 8 letter referred to above he recognized that the Expert has the power to assess the IO's independence and to draw the necessary conclusions with regard to the Objection. Indeed, adds the IO, "*the Expert Panel is the guardian of the integrity of the process and it has the duty to ensure that the Expert Determination is soundly based on the standards established by the Guidebook*". Although it affects only the IO's standing, the condition that the IO must not act on behalf of any particular person or entity, but solely in the best interests of the users of the internet (Objection Procedures, Section 3.2.5), needs to be addressed by the Expert even if in Article 2(d) of the Procedure the expert determination is referred to only as a "*decision upon the merits of the objection*". The Expert must also address the standing of the Objector (Objection Procedures, Section 3.2.2). On this point the IO concludes that the Expert has the power to address whether the IO acts in the interest of the internet public or of a particular category of persons, regardless of whether the issue pertains to standing or to the merits. The matter must be decided in a single expert determination, there being no option to have separate decisions on standing and merits.

31. On the merits of the challenge, the IO posits that, pursuant to Section 3.2.5 of the Objection Procedures, he must remain independent and unaffiliated with any gTLD applicant. He considers that the Applicant's understanding that conflicts can occur where an objection is filed in furtherance of the interests of a potential community with ties to the IO "*hardly makes any sense and would ultimately exclude any person having a normal average social life to serve as the Independent Objector*". The Applicant should not be entitled to construct its case on the artificial alleged bias deriving from the IO's professional relationships when he was appointed. While accepting that the AGB directs him to act in the sole interest of "*the public who use*

the global internet", the IO cannot accept that this implies that that public is the only community that he has standing to represent. The fact that the IO is dispensed from proving the regular standing requirements for the types of objections that he can file (Objection Procedures, Section 3.2.5) does not mean that his community objections can concern only the rights and interests of a "*hypothetical*" community of internet users. This would entail a profound change in one of the four tests for community objections, the one relating to the existence of a clearly delineated community, because the public who use the internet is not such a community. Even if the community relevant here were the one of those living in the geographical region with strong links to the Amazon, it would not follow that the IO is acting on its behalf, also considering the Applicant's acknowledgment that such community would not benefit from the rejection of the Application. The AGB does not require that every string which targets a community be applied for by a representative of that community. It is irrelevant whether the Applicant intends to target a specific community or to reserve its gTLD for it. However, the operation of the gTDL must not impinge on the rights and legitimate interests of a significant portion of the community to which the string is explicitly or implicitly targeted. The IO points to Section 1.2.3.2 of the Objection Procedures, which permits community applications even if the application is not designated as community-based or aimed at a particular community. Therefore, what is relevant is not who is targeted by the applicant, but whether a particular community is targeted by the string. The IO acts for a public interest even if he invokes the interest of a particular community and mitigates the risk that in some cases a valid objection might not be raised by those entitled to do so. As such he acts as a safety net. Finally, the IO notes that his policy is not to file an objection when there is "*a single established institution*" that could do so. In the present case there is no such single institution. OTCA, in particular, could not validly have filed an objection because it is not aimed at representing the interests of the Amazon region, but at realizing the economic interest of its Member States within that region.

(c) The Determination of the Expert

32. In light of the Expert's conclusions on the merits of the Objection (Section III below), an analysis of the challenge to the IO's independence could be moot. However, the issues raised by the Applicant in this connection have been amply debated by the Parties and raise important questions of principle for the gTLD dispute resolution process. The Expert therefore deems it appropriate to address them.

(i) <u>The Expert's power to decide the challenge</u>

33. The Parties' arguments raise, as a preliminary matter, the issue whether it falls within the Expert's mandate to address the existence of the IO's alleged conflict of interest and, in the event, to draw the consequences of a finding that a conflict exists.

34. Both the Applicant and the IO concur that the Expert has authority to decide a challenge to the IO's independence.

35. The Expert shares this view.

36. As noted by the Parties, there is no rule explicitly dealing with the power to decide on challenges to the independence of the IO, and in particular vesting it on the Expert. Such a power is not conferred on the Expert by the Rules, Article 11(4) of which deals only with challenges to the independence of the expert panel, nor by the Objection Procedures or the Procedure, the latter of which defines the expert determination as "*the decision on the merits of the Objection*" (Article 2(d)).

37. Nonetheless, as noted by the Applicant, whether the IO has exceeded his role is a serious issue that can impact on the decision on an objection and that must be capable of being decided. This is all the more so because Section 3.4.6 of the Objection Procedures stipulates that expert determinations will be accepted by ICANN, thus in essence making them final.[3] The power to decide a challenge to the IO would therefore seem to inure to the Expert's inherent powers.

38. The issue is even less problematic if, as acknowledged by the Parties, the question of the IO's independence can be characterized as pertaining to the IO's standing. Indeed, it is indisputably within the Expert's powers to rule on the standing requirements of objectors (Objection Procedures, Section 3.2.2). There is no reason to hold that this does not hold true also for the standing of the IO.

(ii) The merits of the challenge to the IO

39. It being accepted that the Expert has jurisdiction to deal with a challenge to the IO's independence, the next question debated by the Parties that needs to be addressed is whether, as contended by the Applicant, the IO may only file objections on behalf of the community consisting of "*the public who uses the global internet*" or whether, instead, he is entitled to object on behalf of, or at least in the interest of, more strictly defined groups or communities.

40. This issue is preliminary to the one of conflict of interest. In the present case, even on the IO's admission, the Objection relates not to the interests of the internet public but to those of a particular group of individuals or entities, which will be referred to here as the "**Amazon Community**" with an expression used also by the Parties[4]. Accepting the Applicant's preliminary arguments would therefore entail that the IO would lack standing altogether, so that the conflict issue would not even have reason to be raised.

41. The Applicant relies on a strict reading of the statement in Section 3.2.5 of the Objection Procedures that the IO "*does not act on behalf of any particular persons or interests, but acts solely in the best interests of the public who use the internet*".

---

[3] Section 3.4.6. of the AGB reads as follows: "*The findings of the panel will be considered an expert determination and advice that ICANN will accept within the dispute resolution process*".

[4] This definition leaves unprejudiced whether the Amazon Community is a community within the meaning of the substantive standards for the sustainability of a community objection under Section 3.5.4 of the Objection Procedures. This issue is addressed in Section III below.

42. In the Expert's opinion such a formalistic interpretation would result in an unduly restrictive conception of the IO's role. Indeed, there is merit in the IO's position that the internet community is not clearly delineated (and perhaps even, in his words, "*hypothetical*"). This being so, the Applicant's position would entail that the IO's objections would never meet the clear delineation test. What is more, since the internet community is somewhat amorphous, if the IO's standing to object were limited to applications affecting the interests of that community his role would be seriously curtailed, because few applications would qualify as such.

43. The language of Section 3.2.5 of the Objection Procedures allows a more constructive interpretation. The statement that the IO's role is to file objections when "*no objection has been filed*" can be construed in the sense that his role is to raise objections in situations where, for whatever reason, no objection will be forthcoming, even if the application is "*highly objectionable*". This could occur, for instance, if there is nobody in a position to represent the community or if those who could raise the objection are unwilling to do so for fear of negative repercussions, lack of financial means and so on. Likewise, the statement that the IO "*does not act <u>on behalf</u> of any particular person or entities*" can be understood as permitting the IO to raise an objection in situations where, while not technically acting "*on behalf*" of anybody (in the sense that nobody has given him a mandate to act or would even want him to act), he takes into account what can be considered the interests of a given community that would be prejudiced by an application.

44. The conclusion must therefore be that the Objections' admissibility is not affected by the fact that it concerns interests possibly coinciding with those of the Amazon Community, rather than those of the broader internet community.

45. In light of this conclusion and of the asserted coincidence between the interests of the Amazon Community defended by the Objections and those of the States with which the IO has professional relations, the issue of conflict of interest raised by the Applicant becomes relevant.

46. On the subject of the IO's conflicts of interest Section 3.2.5 of the Objection Procedures requires the IO to be and to remain independent and unaffiliated "*with any of the gTLD applicants*". In this connection, it points to the "*various rules of ethics for judges and international arbitrators*" as models to assess independence. It is silent, instead, on the possible conflicts arising from the IO's relations with the persons or entities whose interests he may be deemed to further by means of a given objection.

47. This silence could be explained by the fact that the Objection Procedures deal with the IO's independence in relation to his selection process, which occurs when the potential objectors are not yet identified and possibly even identifiable. It is therefore not conclusive. Although the IO is not in the same position as a judge or an arbitrator, the requirement that he be independent of one of the parties with an interest in the outcome of the proceedings (the applicant) seems to militate in favor of imposing the same requirement with respect to the other interested party (the group in whose purported interest the objection is filed). The IO's acceptance that

the Expert has jurisdiction to examine the challenge implies an acknowledgement on his part that a conflict with parties standing to benefit from his Objection is potentially fatal to the Objection.

48. The Expert has difficulty accepting the IO's assertion that a finding of conflict in circumstances such as those of the present case would preclude anybody with "*a normal average social life*" from serving as the IO. The question is not whether the existence of special ties with certain persons or entities or categories of entities (which anybody will inevitably have) prevents a person from being appointed IO.[5] Rather, it is whether the existence of such ties becomes problematic in the event that the IO raises an objection that can be correlated to the interests of those with whom the ties exist.

49. The Applicant does have a point when it contests that the IO's professional ties at issue here do not fall within the notion of normal average social life. Such a definition does not sit well with the IO's representation of two sovereign States in international judicial proceedings.

50. In any event, if regard must be had to the standards applicable to judges and arbitrators (as predicated by Section 3.2.5 of the Objection Procedures), the relevant perspective in international arbitration nowadays is an objective one. In the words of the *IBA Guidelines on Conflicts of Interest in International Arbitration* (General Standard 2(c)), it is that of "*a reasonable and informed third party*", whilst the ICC Rules of Arbitration refer to independence "*in the eyes of the parties*" (Article 11.2). By such standards, the IO's ties to two prominent members of the Amazon Community could give rise to a presumption of conflict in this case, completely regardless of whether, in filing the Objection, the IO acted "*on behalf*" of his clients, as contended but in no way substantiated by the Applicant.

51. There is one argument that could be advanced to refute the allegation of conflict of interest. It has to do with the absence of any indication that the two Governments "*on whose behalf*" he is alleged to be acting could not have filed an objection themselves (§ 91 ff. below) and would therefore have had to rely only on the IO to do it for them. In these conditions, the lack of initiative on the part of those Governments could denote that they had no interest in the Objections and that therefore the IO's action was prompted by other considerations. In the view of the Expert, however, such an argument does not carry sufficient weight. The decision on the existence of a conflict of interest cannot be made to depend on speculations as to the reasons why an objection was made by the IO rather than by the entities that could in principle stand to benefit from them.

52. Likewise, the Expert does not believe that the conflicts between the IO and the potential beneficiaries of an objection should be assessed differently from those with applicants. Admittedly, the practical relevance of the two types of conflicts

---

[5] The Applicant does not suggest that the IO should not have accepted his role at the outset because of ties of that kind.

could be different.[6] Yet, the Expert considers it paramount for the confidence in the gTLD dispute resolution process that any decision on the IO's independence be taken on purely objective criteria and bearing in mind the need to ensure the perception of complete neutrality and impartiality of the office of the IO.

53. The Expert is of the view that, objectively considered, the links between the IO and two major representatives of the Amazon Community lead to justifiable doubts as to his independence in the eyes of the Applicant and of the broader public. Given the importance of ensuring the perception of neutrality, independence and impartiality of the office of the IO and of the entire gTLD dispute resolution process, the Expert finds that the Applicant's challenge to the independence of the IO must therefore be upheld.

III. THE MERITS OF THE OBJECTION

54. The Objection Procedures do not address the consequences of an upholding of a challenge to the independence of the IO. In particular, they do not provide that, upon a finding of a conflict of interest of the IO, the IO loses standing or that another IO must be appointed for the specific case, as suggested by the Applicant; nor do they provide for any other solution. If the consequence of a finding of lack of independence were a loss of standing by the IO, any consideration on the merits of the challenge would be moot. However, given the silence of the Objection Procedures and the resulting uncertainty on the consequences of the finding that the IO lacks the requisite independence in this case, the Expert considers it appropriate to deal also with the merits of the Objections and to decide whether they would deserve to be upheld, regardless of the IO's standing.

55. In accordance with Section 3.5.4 of the Objection Procedures, objections can be sustained if the Expert ascertains the existence of substantial opposition from a significant portion of the community to which the string may be targeted. This provision applies also to objections filed by the IO.

56. For a showing of such opposition the IO must prove that:

(i) the community invoked by him is clearly delineated;

(ii) there is substantial community opposition to the Applications;

(iii) there is a strong association between the community invoked by the IO and the Strings;

(iv) the Applications create a likelihood of material detriment to the rights or legitimate interests of a significant portion of the community to which the

---

[6] Conflicts of interest of the IO with respect to an applicant entail a risk that no objection would be raised, despite the application's potential adverse impact on general interests. On the other hand, a conflict with respect to a party standing to benefit from an objection might lead to an objection being filed by the IO where none would otherwise be filed. However, the objection would still have to be assessed on its merits by a third party (the expert panel).

Strings may be explicitly or implicitly targeted.

57. The four criteria will be addressed here in the order in which they have been addressed by the IO in the Objections.

III.A Targeting: the association between the community invoked by the IO and the Strings

(a) The position of the IO

58. According to the IO, although the Applications have not been framed as community-based, since they only target the Applicant and its subsidiaries, the Strings can be implicitly linked to a specific community different from the Applicant. The test to assess the Applications' implicit target is not limited to the intended use of the Strings by the Applicant, but is primarily concerned with the expectation of the average internet users and with their perceptions of the Strings and their associations.

59. The Applications target also "*the South-American region with the same English name around the Amazon River*". The identity between the Applicant's business name and brand and the English word for the South American river is not coincidental. The Applicant itself intentionally links the Strings to the Amazon river and region in its communications. The correlation between the Strings and the Amazon river and region is corroborated by the consistent use of the term "*Amazon*" to describe and characterize the Amazon region and the community. The term "*Amazon region*" is used by the 1978 Treaty for Amazon Cooperation and by UNESCO, which has included parts of the Amazon region in the World Heritage List under the 1972 Convention concerning the Protection of the World Cultural and Natural Heritage. The denomination is used also by the World Wildlife Fund.

60. In the eyes of the IO, all the foregoing demonstrates a strong association between the Amazon region and its community and the Strings.

(b) The position of the Applicant

61. The Applicant premises its argument on this point on the consideration that under the AGB only one community is targeted by an application, since the AGB requires more than a mere nexus between the applied-for string and the asserted community; it requires a "*strong association*". The IO has failed to show that the Strings target the public who use the global internet, if this is the only community that the IO is entitled to represent, nor has he proved that the Strings target any other community.

62. According to the Applicant, it is not possible to target someone accidentally, since targeting implies precision and looks to the intent of the party alleged to be doing the targeting. The Application makes no mention of the community invoked by the IO and is "*clearly targeted*" at the Applicant's brand. The IO's argument on implicit targeting is too simplistic because it ignores the Applicant's strong brand recognition

in the eyes of the public who use the global internet and holds that the Applicant will forever target Amazonia with its present and future services. The argument that the targeting test is based on the existence of a certain link or possible association by the public based on string similarity has been rejected by ICANN, which acknowledges that brand names and other strings that happen to relate to some geographic entities may also have legitimate unrelated uses. The Applicant "*clearly has 'legitimate uses'*" for its marks, global brand and company name as a gTLD string, including in local languages, which it has used since 1994. The Applicant cites the example of the ".patagonia" gTLD, that was found not to target the community of Patagonia.

(c) The Determination of the Expert

63. In the Objection Procedures (Section 3.5.4) the term "*targeting*" is used in relation to the third substantive test that must be satisfied by a community objection, i.e. the one of strong association between the invoked community and the applied-for string.

64. The Objection Procedures point to the following non-exclusive factors that can be balanced to indicate a strong association between a community and the applied-for-string: (*i*) statements contained in the application; (*ii*) other public statements by the applicant; (*iii*) associations by the public.

65. The reason for dealing with this test at the outset in the present case is that, prior to establishing whether there is a strong association between the Strings and a community, the community having the purportedly strong association must be identified. As seen above, in the context of the challenge to the IO's independence the Parties debated the IO's standing to file an objection in the interest of a community other than the internet community. In relation to the substantive test, the dispute between the Parties on the identification of the community is framed in terms of whether the community in whose interest an objection is brought can differ from the one "*targeted*" by the applicant.

66. The Applicant contends that consideration can only be given to the community "*explicitly*" targeted by the Applications, which in this case is the one revolving around the business activities of the Applicant's group and the Amazon brand. No relevance can be given to the Amazon Community which is, instead, the focus of the Objections. The IO, for his part, adopts a broader approach, which relies on the community "*implicitly*" targeted by the Applications, which in this case is the Amazon Community.

67. The Objection Procedures do not bear out the Applicant's interpretation. Although the standard of strong association is dealt with under the heading "*targeting*", the "*target*" of the objection is not considered in Section 3.5.4. This provision requires proof that the applied-for gTLD be strongly associated with the community "*represented by the objector*". The focus is therefore on the community that the objector, and in this case the IO, considers to be affected, or prejudiced, by an application (and, in this sense, targeted) and on whose behalf or interest he acts. It

is not relevant whether that community is the one to which the applicant intends to direct its gTLD. The IO is persuasive in his argument that the association between a community and a string depends primarily on the expectations and perceptions of the average internet user.

68. The Applicant implies that only one community can be "*targeted*" by a gTLD and an application. The Expert finds no support in the Objection Procedures for this position, which is actually counterintuitive. If the term "*targeted*" is properly understood as meaning "*affected*", there is no reason why there cannot be more than one community affected by a given application for a gTLD. A gTLD can well have an impact on a broader range of persons or entities than the one envisaged by the applicant. The requirement invoked by the Applicant that the association between the community and the string be "*strong*" is not conclusive, since more than one of a string's possible multiple associations can be strong.

69. The Applicant's argument also risks upsetting the functioning of the gTLD objection procedure, which is aimed at protecting interests other than those of gTLD applicants. If applicants were in a position to render objections virtually impossible, in practice by determining themselves the community on whose behalf objections can be brought, in most cases no objection would be possible.

70. In light of this, the Applicant's emphasis on the intent of the party alleged to be doing the targeting and on the impossibility to target something accidentally is misplaced, because it relies on a notion that is not relevant for the strong association test. For the same reason, the insistence on the Applicant's "*legitimate uses*" for the applied-for gTLDs and on its "*strong brand recognition in the eyes of the public*" is beside the point in this context.

71. In the case at hand, therefore, the point is not the undisputed link between the Strings and the Amazon company name and brand, which quite probably exists in the perception of a large number of internet users. Rather, the point is whether there may also exist an at least equally strong association between the Strings and other communities affected by the Application, and in particular the one whose interests the IO purports to further.

72. The answer can only be affirmative. The Strings coincide with the name of the Amazon River and thereby entail an obvious association with the Amazon Community. Leaving aside for the moment whether there is such a community (which will be addressed in the following subsection III.B), there is no doubt that not only there exists an association between the Strings and the alleged Amazon Community, but that such association is "*strong*" in the perception of internet users.

73. This is borne out by the IO's evidence. As a matter of fact, not even the Applicant seems to dispute this, since its arguments go only to the preliminary points of whether the Amazon Community can be relevant for this test and of whether it exists at all, which is the subject of the next substantive test to be addressed.

74. The Expert is thus satisfied that the IO's Objection meets the test of "*strong association*" between the Strings and the community in whose interest it is filed.

III.B The clear delineation of the community invoked by the IO

(a) The position of the IO

75. The IO recalls that the AGB does not define the term "*community*". However, in requiring that the community expressing opposition be "*clearly delineated*" it lists certain non-limited factors, such as the recognition at local or global level, the level of formal boundaries and length of existence, the global distribution or the size of the community. The term community refers to a group of people living in the same place or having some characteristic in common, such as a territory, a region or place of residence, a language, a religion, an activity or values, interests or goals.

76. One of the relevant criteria is whether the group of individuals or entities can be delineated from others and whether members of the community are delineated from internet users in general and whether the community is recognized amongst its members and by the general public at global or local level. The IO quotes the description of the World Wildlife Fund which points to the Amazon's vast geographic expanse that embraces the territories of nine countries, to the features of its landscape in terms of variety of species, extension of the forests and in particular tropical ones, and the number and length of rivers, to the variety of ethnic and indigenous groups and to the link between the health of the region and the health of the planet.

77. The Amazon community can be clearly delineated from the general public by its strong link with the Amazon region. The community does not only share the geographic region. It has more far-reaching common interests and ties, including economic ones and those relating to the respect of the environment and the preservation of the indigenous culture and of the archeological and ethnological wealth. These common interests are recognized and protected through OTCA by the States which share the region and a common understanding of the specificities of the Amazon community and have put in place a process of cooperation, *inter alia* to achieve sustainable development.

78. The most interested States that share the Amazon territory have thus recognized the specificities of the region, the interests of the community and their particular needs. Their cooperation shows that the community is clearly recognized as a whole, irrespective of the divisions of sovereign States. All this leads to the conclusion that the community is clearly delineated.

(b) The position of the Applicant

79. The Applicant points to Section 4.2.3 of the AGB which states the need for "*very stringent*" requirements for a clearly delineated community and that community implies "*more of cohesion that mere commonality of interest*". It then acknowledges that, if the IO may only represent the public who use the global internet, that class meets the requirements of clear delineation. If, on the other hand, it is accepted that the IO may act on behalf of particular persons or entities, then the IO has not shown that the community he claims to be acting for has the required cohesiveness to be

considered as a community. The asserted community comprises eight separate and sovereign countries with their own geography, economy, history, population and bio-diversities, which entail a diversity that rules out the idea of cohesiveness. Even the existence of common interests, ties and characteristics, assuming it could be proved factually, does not establish a community under the AGB. In any event, the alleged community is not clearly delineated because it lacks formal boundaries, which is a strict requirement under the AGB. Specific and strong links with a region are insufficient to establish clear delineation.

(c) The Determination of the Expert

80. As discussed above, the community whose clear delineation must be considered here is the Amazon Community, and not that of internet users in general, as contended by the Applicant.

81. The Expert recalls that, in accordance with Section 3.5.4 of the Objection Procedures, the factors that can be balanced to determine whether the invoked community is clearly delineated include, but are not limited to, (*i*) the level of the community's public recognition, (*ii*) the level of formal boundaries around it and what persons or entities are considered to form it, (*iii*) the length of time it has been in existence, (*iv*) its global distribution and (*v*) the number of people or entities that make it up.

82. The Expert considers that some of the factors highlighted by the IO could indicate the existence of an Amazon Community. The economic interests and ties within the Amazon region, and the community that can be considered related to it, are significant. More pertinently, the Amazon Community is characterized by its importance in terms of wealth of culture, archeology, ethnology and environment, as well as by its impact on the environment of the world as a whole. It therefore has its own specificity and interests, and its interests to a certain extent coincide with those of the broader public, in particular as concerns the environment. In general terms it can also be seen to be recognized as a community by outsiders. Moreover, the Amazon Community unquestionably has a very large population and has been in existence for a long time.

83. On the other hand, as underlined by the Applicant, the purported community is composed of several different countries and exhibits within itself a considerable diversity in terms of geography, economy, population and bio-diversity. This could rule out the idea of cohesiveness, that arguably lies at the core of the notion of community and might imply something more than a mere commonality of interests. Furthermore, the IO has not focused particularly on the existence of formal barriers, which is one of the possible relevant criteria for the clear delineation test.

84. The record is therefore mixed and doubts could be entertained as to whether the clear delineation criterion is satisfied. However, in light of the conclusions on the other tests, there is no need to reach a conclusive finding on clear delineation.

III.C Whether there is a substantial opposition to the Strings within the community

(a) The position of the IO

85. The IO avers that the mere numerical criterion was not the intent of the drafters of the AGB, so that the Expert is not limited to a simple comparison between the number of those having expressed opposition and the overall size of the community. The word "*substantial*" can also be used to designate something of considerable importance or worth. In addition to the number of oppositions, regard must be had to their material content. Particular importance should be paid in that regard to the comments of the Governments in the Early Warning Procedure.

86. The broad meaning of the term substantial opposition is confirmed by the fact that the possibility to file community objections was granted to the IO, who has pointed out that he will abstain from filing an opposition if a single established institution is better placed to represent the community concerned. This shows that the IO's role is to defend the public interest by acting on behalf of the public for the defense of rights and interests that lack an institution which obviously could represent it. The IO also refers to Section 3.2.5 of the Objection Procedures, which makes the IO's objection conditional upon at least one comment in opposition having been made.

87. The IO acknowledges that the Application for the ".Amazon" string has triggered "*only a small number of comments*" and that those for the other two Strings have triggered "*no direct comments*". This can be explained by the limited awareness of members of the community of the new gTLD program and, in the case of the Strings in the Japanese and Chinese languages, by their language. This in itself is not enough to disqualify the Objection. Indeed, it is an essential part of the IO's mission to protect the users of the internet who are less aware of the ICANN Program and of its impact on their rights and interests. Particular importance must be accorded to the Early Warning issued by the Brazilian and Peruvian members of the GAC[7], given that Brazil shares more than half of the Amazon region and Peru is particularly interested in the protection and promotion of the interests and rights of the Amazon Community. In support of its position on the weight of the opposition the IO points also to the endorsement by Bolivia, Ecuador and Guayana. He further notes that the Application has not received the support of any government in the region.

(b) The position of the Applicant

88. For the Applicant, the IO has not proved substantial opposition within "*his asserted community*" or the larger one of the internet public. In its words, "*[t]here are many significant voices who could speak out in the event of genuine community opposition*

---

[7] The IO acknowledged that the Early Warning related only to the ".Amazon" string, but noted that it is equally relevant for the other two Strings. The concerns expressed by the Brazilian GAC member were expressed to relate also "*to possible future or existing applications in other languages, including IDN applications*".

to the gTLDs before any opposition could be said to be 'substantial'". The Applicant points to OTCA,[8] of which eight States are members and four are on ICANN's Governmental Advisory Committee, to the millions of people who live and do business in the region, to the many environmental groups working to preserve the region's environment and to the representatives of its indigenous peoples. The Applicant notes that, despite having knowledge of the process and the means to object, none of these potential opponents felt the need to file an objection, or even to comment or register concern regarding the Applications in the Applications Comments Forum or to oppose them in ICANN's At-Large Advisory Committee ("ALAC"), including the Regional At-Large Organization ("RALO") for Latin America and the Caribbean Islands. The Early Warning filed by the Governments of Brazil and Peru in November 2012, which was only directed at the Application for ".Amazon", only requested that the Application "*be included in the GAC early warning process*", which is not an objection. According to Section 1.1.2.4 of the AGB, it is up to governments to file an objection if they remain opposed to an application. In response to the early warning, and before the lapse of the objection period, the Applicant established contacts with the Governments involved, who have preferred to continue negotiations rather than file objections. This means that the Governments "*believe this objection does not have to succeed to protect their interests*".

(c) The Determination of the Expert

89. According to the Objection Procedures (Section 3.5.4) the factors that can be balanced to establish substantial opposition to the application within the community purported to be represented by an objector include (*i*) the number of expressions of opposition relative to the composition of the community, (*ii*) the representative nature of the entities expressing opposition, (*iii*) their stature and weight, (*iv*) their distribution or diversity, (*v*) their historical defense of the community in other contexts and (*vi*) the costs incurred by the objector to convey opposition.

90. As evidence of substantial opposition to the Applications the IO relies essentially on the position expressed by the Governments of Brazil and Peru in the Early Warning Procedure. The two Governments undoubtedly have significant stature and weight within the Amazon Community. However, as noted by the Applicant, beyond their expressions of opposition in the Early Warning Procedure, the two Governments did not voice disapproval of the initiative in other forms. As a matter of fact, they engaged in discussions with the Applicant.

91. This is not without significance. Indeed, had the two Governments seriously intended to oppose the Application, they would presumably have done so directly. There is no reason to believe that they could have been deterred from doing so by the fear of negative consequences or by the costs of filing an objection. The

---

[8] As mentioned in the discussion on the Applicant's challenge, the Applicant is of the view that OTCA does have the power to object to the Application.

Applicant is persuasive in arguing that the Brazilian and Peruvian Governments' attitude is an indication of their belief that their interests can be protected even if the Objection does not succeed. Indeed, in assessing the substantial nature of the opposition to an objection regard must be had not only to the weight and authority of those expressing it, but also to the forcefulness of their opposition.

92. The IO acknowledges that the Applications triggered only a small number of comments, and that actually the Applications for the Chinese and Japanese translations of "Amazon" triggered none at all. He explains this with the alleged limited awareness of the Applications within the Amazon Community. This is not entirely convincing.

93. It is not necessary here to enter into the discussion between the Parties on whether, in strict legal terms, the OTCA would have had the power to file an Objection, or to consider whether, albeit lacking formal powers, it could nonetheless have made its voice heard in a debate on the Applications' potential negative consequences. However, it is difficult to ignore the argument that there were many other parties defending interests potentially affected by the Applications (environmental groups, representatives of the indigenous populations and so on) that could have voiced some form of opposition to the Applications, had they been seriously concerned about the consequences. Particularly given the standing of at least some of those organizations, it is implausible that none of them would have been aware of the Applications.

94. These considerations lead the Expert to find that the IO has failed to make a showing of substantial opposition to the Applications within the purported Amazon Community.

III.D Whether the Applications create a likelihood of material detriment to a significant portion of the Amazon community

(a) The position of the IO

95. The IO underscores that the Applications are aimed exclusively at providing "*a unique and dedicated platform for Amazon while simultaneously protecting the integrity of its brand and reputation*" and that the only eligible registrants are the Applicant and its subsidiaries. If the Applications were upheld, the Strings would become closed brand gTLDs which the Applicant intends to operate without taking into account the Amazon Community's particular needs and interests. Domain names in the gTLDs in question will be "*used to support the business goals of Amazon*" and will not be offered to third parties, including the Governments and members of the targeted community.

96. This entails a risk of misappropriation, because granting exclusive rights on the Strings to a private company would prevent the use of the domains for public interest purposes related to the protection, promotion and awareness-raising on issues related to the Amazon region. The "*confiscation*" of the entire name space within the Strings by a single corporate entity would deprive the members of the

community and owning its cultural heritage of the possibility of obtaining the Strings and of benefitting from the reputation linked to the name of their community and region. This would lead to a disappearance of the link between the term Amazon and the Amazon region "*with far reaching consequences for the region and its population*", because the users of the global internet "*will probably link the [Strings] exclusively to the Applicant and its corporate entities*". Furthermore, the global internet users' awareness of the existence and importance of the region will suffer, causing harm to the core issues of the region, and ultimately to the health of the planet which is clearly linked to the health of the Amazon.

97. The IO concludes that the launch of closed-brand gTLDs as foreseen in the Applications is very likely to interfere with the legitimate interests of the Amazon Community and to cause material harm to it and to the public who use the global internet.

(b) The position of the Applicant

98. The Applicant premises its discussion of this point by underscoring the self-standing nature of the criterion of detriment. It also notes that ICANN amended the AGB to include the qualification that the detriment should be material and to the community, and not just to the objector. It also points to ICANN's statement that there is a "*presumption*" in favor of granting new gTLDs to eligible applicants. The Applicant contests the relevance of the IO's argument that, in case of success of the Applications, "*the peoples and entities being part of the Amazon community*" would be unable to obtain the Strings, underlining that the AGB makes it clear that "*an allegation of detriment that consists only of the applicant being delegated the string instead of the objector will not be sufficient for a finding of material detriment*". Moreover, the detriment to the community would be the same even if the Applications were rejected, because it would still be unable to use the Strings, since neither it nor anyone else applied for them. In relation to the Chinese and Japanese translations of "Amazon" the Applicant adds that there is no evidence that the asserted community would want to use the Chinese or Japanese domain names. The Applicant also underscores that it has used "Amazon" as a trademark in many countries, including the ones of the Amazon region, for many years with no evidence of reduced awareness of, or confusion with, the Amazon region. Indeed, even the countries in the Amazon region have granted Amazon trademark registrations or lower-level domain names for "Amazon". The Applicant highlights the absence of negative impact of the Amazon brand (described as "*one of the world's most recognized and trusted brands*") on the Amazon region since its introduction in 1994. Since then, only the Applicant and its group of companies have used "Amazon.com" and other "Amazon" domain names and trademarks, including in Latin America. There is no evidence that this has been detrimental to the Amazon region, nor that the elimination of the "inconsequential '.com'" would change the perception of users of the global internet in such a way that Amazonia will be removed from public consciousness and the region and the world will suffer the dire consequences presented by the IO.

(c) The Determination of the Expert

99. The Objection Procedures list the following factors that can be taken into account to assess whether the Application is likely to create material detriment to the rights and legitimate interests of a significant proportion of the community: (*i*) the nature and extent of the damage to the community's reputation; (*ii*) evidence that the applicant does not act, or intend to act, in accordance with the interests of the community; (*iii*) interference with core activities of the community; (*iv*) nature and extent of the concrete or economic damages to the community and (*v*) level of certainty of alleged detrimental outcomes.

100. There is no dispute that the Applicant intends to use the Strings to operate closed domains. Consequently, no one, including the Amazon Community or anyone with coinciding interests, will be allowed to use the Strings. However, as the Applicant remarks, even if the Objections were sustained the Amazon Community would still not be entitled to use the Strings, since it did not apply for them. The Expert considers that, in and of itself, the failure of the Amazon Community, or of anybody sharing its interests, to apply for the Strings can be regarded as an indication that the inability to use the Strings is not crucial to the protection of the Amazon Community's interests.

101. In any event, the Amazon Community's inability to use the Strings is not an indication of detriment, and even less of material detriment. The Objection Procedures are clear in specifying that "*[a]n allegation of detriment that consists only of the applicant being delegated the string instead of the objector will not be sufficient for a filing of material detriment*" (Section 3.5.4).

102. Furthermore, the IO does not explain how the impossibility for the Amazon Community or entities or persons connected to it to use the Strings and their use by the Applicant would lead to a loss of the link between the term Amazon and the Amazon region. On the other hand, as the Applicant points out, "Amazon" has been used as a brand, trademark and domain name for nearly two decades also in the States arguably forming part of the Amazon Community. It is even registered in those States. There is no evidence, or even allegation, that this has caused any harm to the Amazon Community's interests, or has led to a loss of reputation linked to the name of the region or community or to any other form of damage.

103. As further noted by the Applicant, it is unlikely that the loss of the ".com" after "Amazon" will change matters. More generally, there is no evidence either that internet users will be incapable of appreciating the difference between the Amazon group and its activities and the Amazon River and the Amazon Community, or that Amazonia and its specificities and importance for the world will be removed from public consciousness, with the dire consequences emphasized by the IO. Were a dedicated gTLD considered essential for the interests of the Amazon Community, other equally evocative strings would presumably be available. ".Amazonia" springs to mind.

104. Indirect confirmation of the absence of a risk of detriment to the interests of the

Amazon Community comes also from the lack of serious opposition to the Application by those that might be considered to have the Community's interests at heart, which has already been underscored in Section III.C above. Of course, opposition to an application and detriment are considered under two different tests in the Objection Procedures. Opposition is not necessarily evidence of detriment, just as non-opposition is not conclusive evidence of lack of detriment. However, in this case very significant potential consequences are alleged and there are many entities that could have expressed opposition had their interests been threatened. The fact that none of them was prompted to raise any objection, whether formally or at least informally, can be taken as a significant indication of lack of likelihood of detriment. It further corroborates the position that the use by the Applicant of the Strings for closed gTLDs cannot impair the interests of the Amazon Community

105. In these conditions the Expert holds that the IO has failed to satisfy its burden of proof in relation to the material detriment requirement.

IV. CONCLUSION

106. The Expert finds that he has jurisdiction to rule on the challenge to the IO's independence and that, given the need to guarantee the perception of neutrality of the gTDL dispute resolution system, the challenge must be upheld.

107. On the merits of the Objections the Expert has found that the IO has sufficiently proven the strong relation between the Strings and the Amazon Community. Instead, the IO has not shown that there is substantial opposition to the Application within that community or that the Application would lead to substantial detriment. These findings make it unnecessary to decide on the clear delineation test.

108. Since pursuant to Section 3.5.4 of the Objection Procedures all four tests must be met for a community objection to prevail, the Objections must be rejected.

V. DECISION

109. For the reasons set out above and in accordance with Art. 21(d) of the Procedure, the Panel hereby renders the following Expert Determination:

(i) The Independent Objector's Objections are dismissed and therefore the Applicant is the prevailing party in all consolidated cases;

(ii) The Applicant AMAZON EU S.à.r.l is entitled to the refund of the advance payment of costs in all consolidated cases by the Centre pursuant to Article 14(e) of the Procedure.

ICANN

4 June 2012

Preamble

New gTLD Program Background

New gTLDs have been in the forefront of ICANN's agenda since its creation. The new gTLD program will open up the top level of the Internet's namespace to foster diversity, encourage competition, and enhance the utility of the DNS.

Currently the namespace consists of 22 gTLDs and over 250 ccTLDs operating on various models. Each of the gTLDs has a designated "registry operator" and, in most cases, a Registry Agreement between the operator (or sponsor) and ICANN. The registry operator is responsible for the technical operation of the TLD, including all of the names registered in that TLD. The gTLDs are served by over 900 registrars, who interact with registrants to perform domain name registration and other related services. The new gTLD program will create a means for prospective registry operators to apply for new gTLDs, and create new options for consumers in the market. When the program launches its first application round, ICANN expects a diverse set of applications for new gTLDs, including IDNs, creating significant potential for new uses and benefit to Internet users across the globe.

The program has its origins in carefully deliberated policy development work by the ICANN community. In October 2007, the Generic Names Supporting Organization (GNSO)—one of the groups that coordinate global Internet policy at ICANN—formally completed its policy development work on new gTLDs and approved a set of 19 policy recommendations. Representatives from a wide variety of stakeholder groups—governments, individuals, civil society, business and intellectual property constituencies, and the technology community—were engaged in discussions for more than 18 months on such questions as the demand, benefits and risks of new gTLDs, the selection criteria that should be applied, how gTLDs should be allocated, and the contractual conditions that should be required for new gTLD registries going forward. The culmination of this policy development process was a decision by the ICANN Board of Directors to adopt the community-developed policy in June 2008. A thorough brief to the policy process and outcomes can be found at http://gnso.icann.org/issues/new-gtlds.

ICANN's work next focused on implementation: creating an application and evaluation process for new gTLDs that is aligned with the policy recommendations and provides a clear roadmap for applicants to reach delegation, including Board approval. This implementation work is reflected in the drafts of the applicant guidebook that were released for public comment, and in the explanatory papers giving insight into rationale behind some of the conclusions reached on specific topics. Meaningful community input has led to revisions of the draft applicant guidebook. In parallel, ICANN has established the resources needed to successfully launch and operate the program. This process concluded with the decision by the ICANN Board of Directors in June 2011 to launch the New gTLD Program.

For current information, timelines and activities related to the New gTLD Program, please go to http://www.icann.org/en/topics/new-gtld-program.htm.

ICANN

gTLD Applicant Guidebook

(v. 2012-06-04)

Module 1

4 June 2012

Module 1

Introduction to the gTLD Application Process

This module gives applicants an overview of the process for applying for a new generic top-level domain, and includes instructions on how to complete and submit an application, the supporting documentation an applicant must submit with an application, the fees required, and when and how to submit them.

This module also describes the conditions associated with particular types of applications, and the stages of the application life cycle.

Prospective applicants are encouraged to read and become familiar with the contents of this entire module, as well as the others, before starting the application process to make sure they understand what is required of them and what they can expect at each stage of the application evaluation process.

For the complete set of the supporting documentation and more about the origins, history and details of the policy development background to the New gTLD Program, please see http://gnso.icann.org/issues/new-gtlds/.

This Applicant Guidebook is the implementation of Board-approved consensus policy concerning the introduction of new gTLDs, and has been revised extensively via public comment and consultation over a two-year period.

1.1 Application Life Cycle and Timelines

This section provides a description of the stages that an application passes through once it is submitted. Some stages will occur for all applications submitted; others will only occur in specific circumstances. Applicants should be aware of the stages and steps involved in processing applications received.

1.1.1 Application Submission Dates

The user registration and application submission periods open at **00:01 UTC 12 January 2012**.

The user registration period closes at **23:59 UTC 29 March 2012.** New users to TAS will not be accepted beyond this time. Users already registered will be able to complete the application submission process.

Applicants should be aware that, due to required processing steps (i.e., online user registration, application submission, fee submission, and fee reconciliation) and security measures built into the online application system, it might take substantial time to perform all of the necessary steps to submit a complete application. Accordingly, applicants are encouraged to submit their completed applications and fees as soon as practicable after the Application Submission Period opens. Waiting until the end of this period to begin the process may not provide sufficient time to submit a complete application before the period closes. Accordingly, new user registrations will not be accepted after the date indicated above.

The application submission period closes at **23:59 UTC 12 April 2012.**

To receive consideration, all applications must be submitted electronically through the online application system by the close of the application submission period.

An application will not be considered, in the absence of exceptional circumstances, if:

- It is received after the close of the application submission period.
- The application form is incomplete (either the questions have not been fully answered or required supporting documents are missing). Applicants will not ordinarily be permitted to supplement their applications after submission.
- The evaluation fee has not been paid by the deadline. Refer to Section 1.5 for fee information.

ICANN has gone to significant lengths to ensure that the online application system will be available for the duration of the application submission period. In the event that the system is not available, ICANN will provide alternative instructions for submitting applications on its website.

1.1.2 Application Processing Stages

This subsection provides an overview of the stages involved in processing an application submitted to ICANN. Figure 1-1 provides a simplified depiction of the process. The shortest and most straightforward path is marked with bold lines, while certain stages that may or may not be applicable in any given case are also shown. A brief description of each stage follows.

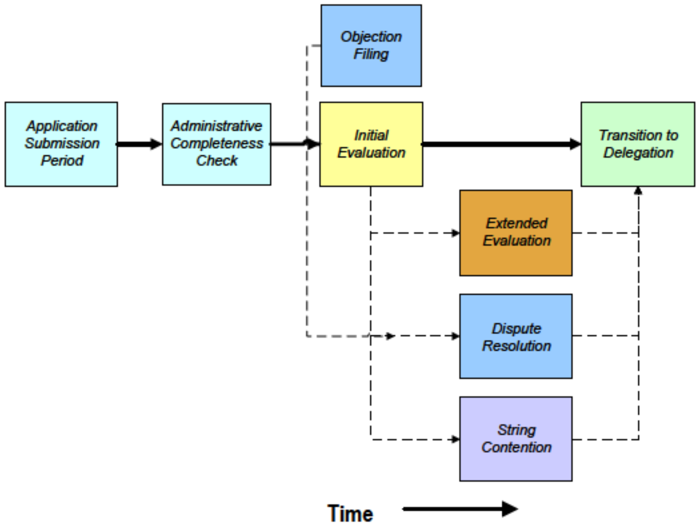

Figure 1-1 – Once submitted to ICANN, applications will pass through multiple stages of processing.

1.1.2.1 Application Submission Period

At the time the application submission period opens, those wishing to submit new gTLD applications can become registered users of the TLD Application System (TAS).

After completing the user registration, applicants will supply a deposit for each requested application slot (see section 1.4), after which they will receive access to the full application form. To complete the application, users will answer a series of questions to provide general information, demonstrate financial capability, and demonstrate technical and operational capability. The supporting documents listed in subsection 1.2.2 of this module must also be submitted through the online application system as instructed in the relevant questions.

Applicants must also submit their evaluation fees during this period. Refer to Section 1.5 of this module for additional information about fees and payments.

Each application slot is for one gTLD. An applicant may submit as many applications as desired; however, there is no means to apply for more than one gTLD in a single application.

Following the close of the application submission period, ICANN will provide applicants with periodic status updates on the progress of their applications.

1.1.2.2 Administrative Completeness Check

Immediately following the close of the application submission period, ICANN will begin checking all applications for completeness. This check ensures that:

- All mandatory questions are answered;
- Required supporting documents are provided in the proper format(s); and
- The evaluation fees have been received.

ICANN will post the public portions of all applications considered complete and ready for evaluation within two weeks of the close of the application submission period. Certain questions relate to internal processes or information: applicant responses to these questions will not be posted. Each question is labeled in the application form as to whether the information will be posted. See posting designations for the full set of questions in the attachment to Module 2.

The administrative completeness check is expected to be completed for all applications in a period of approximately 8 weeks, subject to extension depending on volume. In the event that all applications cannot be processed within this period, ICANN will post updated process information and an estimated timeline.

1.1.2.3 Comment Period

Public comment mechanisms are part of ICANN's policy development, implementation, and operational processes. As a private-public partnership, ICANN is dedicated to: preserving the operational security and stability of the Internet, promoting competition, achieving broad representation of global Internet communities, and developing policy appropriate to its mission through bottom-up, consensus-based processes. This necessarily involves the participation of many stakeholder groups in a public discussion.

ICANN will open a comment period (the Application Comment period) at the time applications are publicly posted on ICANN's website (refer to subsection 1.1.2.2). This period will allow time for the community to review and submit comments on posted application materials (referred to as "application comments.") The comment forum will require commenters to associate comments with specific applications and the relevant panel. Application comments received within a 60-day period from the posting of the application materials will be available to the evaluation panels performing the Initial Evaluation reviews. This period is subject to extension, should the volume of applications or other circumstances require. **To be considered by evaluators, comments must be received in the designated comment forum within the stated time period.**

Evaluators will perform due diligence on the application comments (i.e., determine their relevance to the evaluation, verify the accuracy of claims, analyze meaningfulness of references cited) and take the information provided in these comments into consideration. In cases where consideration of the comments has impacted the scoring of the application, the evaluators will seek clarification from the applicant. Statements concerning consideration of application comments that have impacted the evaluation decision will be reflected in the evaluators' summary reports, which will be published at the end of Extended Evaluation.

Comments received after the 60-day period will be stored and available (along with comments received during the comment period) for other considerations, such as the dispute resolution process, as described below.

In the new gTLD application process, all applicants should be aware that comment fora are a mechanism for the public to bring relevant information and issues to the attention of those charged with handling new gTLD applications. Anyone may submit a comment in a public comment forum.

Comments and the Formal Objection Process: A distinction should be made between application comments, which may be relevant to ICANN's task of determining whether applications meet the established criteria, and formal objections that concern matters outside those evaluation criteria. The formal objection process was created to allow a full and fair consideration of objections based on certain limited grounds outside ICANN's evaluation of applications on their merits (see subsection 3.2).

Public comments will not be considered as formal objections. Comments on matters associated with formal objections will not be considered by panels during Initial Evaluation. These comments will be available to and may be subsequently considered by an expert panel during a dispute resolution proceeding (see subsection 1.1.2.9). However, in general, application comments have a very limited role in the dispute resolution process.

String Contention: Comments designated for the Community Priority Panel, as relevant to the criteria in Module 4, may be taken into account during a Community Priority Evaluation.

Government Notifications: Governments may provide a notification using the application comment forum to communicate concerns relating to national laws. However, a government's notification of concern will not in itself be deemed to be a formal objection. A notification by a government does not constitute grounds for rejection of a gTLD application. A government may elect to use this comment mechanism to provide such a notification, in addition to or as an alternative to the GAC Early Warning procedure described in subsection 1.1.2.4 below.

Governments may also communicate directly to applicants using the contact information posted in the application, e.g., to send a notification that an applied-for gTLD string might be contrary to a national law, and to try to address any concerns with the applicant.

General Comments: A general public comment forum will remain open through all stages of the evaluation process, to provide a means for the public to bring forward any other relevant information or issues.

1.1.2.4 GAC Early Warning

Concurrent with the 60-day comment period, ICANN's Governmental Advisory Committee (GAC) may issue a GAC Early Warning notice concerning an application. This provides the applicant with an indication that the application is seen as potentially sensitive or problematic by one or more governments.

The GAC Early Warning is a notice only. It is not a formal objection, nor does it directly lead to a process that can result in rejection of the application. However, a GAC Early Warning should be taken seriously as it raises the likelihood that the application could be the subject of GAC Advice on New gTLDs (see subsection 1.1.2.7) or of a formal objection (see subsection 1.1.2.6) at a later stage in the process.

A GAC Early Warning typically results from a notice to the GAC by one or more governments that an application might be problematic, e.g., potentially violate national law or raise sensitivities. A GAC Early Warning may be issued for any reason.[1] The GAC may then send that notice to the Board – constituting the GAC Early Warning. ICANN will notify applicants of GAC Early Warnings as soon as practicable after receipt from the GAC. The GAC Early Warning notice may include a nominated point of contact for further information.

GAC consensus is not required for a GAC Early Warning to be issued. Minimally, the GAC Early Warning must be provided in writing to the ICANN Board, and be clearly labeled as a GAC Early Warning. This may take the form of an email from the GAC Chair to the ICANN Board. For GAC Early Warnings to be most effective, they should include the reason for the warning and identify the objecting countries.

Upon receipt of a GAC Early Warning, the applicant may elect to withdraw the application for a partial refund (see subsection 1.5.1), or may elect to continue with the application (this may include meeting with representatives from the relevant government(s) to try to address the concern). To qualify for the refund described in subsection 1.5.1, the applicant must provide notification to ICANN of its election to withdraw the application within 21 calendar days of the date of GAC Early Warning delivery to the applicant.

To reduce the possibility of a GAC Early Warning, all applicants are encouraged to identify potential sensitivities in advance of application submission, and to work with the relevant parties (including governments) beforehand to mitigate concerns related to the application.

1.1.2.5 Initial Evaluation

Initial Evaluation will begin immediately after the administrative completeness check concludes. All complete applications will be reviewed during Initial Evaluation. At the beginning of this period, background screening on the applying entity and the individuals named in the application will be conducted. Applications

---

[1] While definitive guidance has not been issued, the GAC has indicated that strings that could raise sensitivities include those that "purport to represent or that embody a particular group of people or interests based on historical, cultural, or social components of identity, such as nationality, race or ethnicity, religion, belief, culture or particular social origin or group, political opinion, membership of a national minority, disability, age, and/or a language or linguistic group (non-exhaustive)" and "those strings that refer to particular sectors, such as those subject to national regulation (such as .bank, .pharmacy) or those that describe or are targeted to a population or industry that is vulnerable to online fraud or abuse."

must pass this step in conjunction with the Initial Evaluation reviews.

There are two main elements of the Initial Evaluation:

1. String reviews (concerning the applied-for gTLD string). String reviews include a determination that the applied-for gTLD string is not likely to cause security or stability problems in the DNS, including problems caused by similarity to existing TLDs or reserved names.
2. Applicant reviews (concerning the entity applying for the gTLD and its proposed registry services). Applicant reviews include a determination of whether the applicant has the requisite technical, operational, and financial capabilities to operate a registry.

By the conclusion of the Initial Evaluation period, ICANN will post notice of all Initial Evaluation results. Depending on the volume of applications received, such notices may be posted in batches over the course of the Initial Evaluation period.

The Initial Evaluation is expected to be completed for all applications in a period of approximately 5 months. If the volume of applications received significantly exceeds 500, applications will be processed in batches and the 5-month timeline will not be met. The first batch will be limited to 500 applications and subsequent batches will be limited to 400 to account for capacity limitations due to managing extended evaluation, string contention, and other processes associated with each previous batch.

If batching is required, a secondary time-stamp process will be employed to establish the batches. (Batching priority will not be given to an application based on the time at which the application was submitted to ICANN, nor will batching priority be established based on a random selection method.)

The secondary time-stamp process will require applicants to obtain a time-stamp through a designated process which will occur after the close of the application submission period. The secondary time stamp process will occur, if required, according to the details to be published on ICANN's website. (Upon the Board's approval of a final designation of the operational details of the "secondary timestamp" batching process, the final plan will be added as a process within the Applicant Guidebook.)

If batching is required, the String Similarity review will be completed on all applications prior to the establishment of evaluation priority batches. For applications identified as part of a contention set, the entire contention set will be kept together in the same batch.

If batches are established, ICANN will post updated process information and an estimated timeline.

Note that the processing constraints will limit delegation rates to a steady state even in the event of an extremely high volume of applications. The annual delegation rate will not exceed 1,000 per year in any case, no matter how many applications are received.[2]

1.1.2.6 Objection Filing

Formal objections to applications can be filed on any of four enumerated grounds, by parties with standing to object. The objection filing period will open after ICANN posts the list of complete applications as described in subsection 1.1.2.2, and will last for approximately 7 months.

Objectors must file such formal objections directly with dispute resolution service providers (DRSPs), not with ICANN. The objection filing period will close following the end of the Initial Evaluation period (refer to subsection 1.1.2.5), with a two-week window of time between the posting of the Initial Evaluation results and the close of the objection filing period. Objections that have been filed during the objection filing period will be addressed in the dispute resolution stage, which is outlined in subsection 1.1.2.9 and discussed in detail in Module 3.

All applicants should be aware that third parties have the opportunity to file objections to any application during the objection filing period. Applicants whose applications are the subject of a formal objection will have an opportunity to file a response according to the dispute resolution service provider's rules and procedures. An applicant wishing to file a formal objection to another application that has been submitted would do so within the objection filing period, following the objection filing procedures in Module 3.

Applicants are encouraged to identify possible regional, cultural, property interests, or other sensitivities regarding TLD strings and their uses before applying and, where

---

[2] See "Delegation Rate Scenarios for New gTLDs" at http://icann.org/en/topics/new-gtlds/delegation-rate-scenarios-new-gtlds-06oct10-en.pdf for additional discussion.

possible, consult with interested parties to mitigate any concerns in advance.

1.1.2.7 Receipt of GAC Advice on New gTLDs

The GAC may provide public policy advice directly to the ICANN Board on any application. The procedure for GAC Advice on New gTLDs described in Module 3 indicates that, to be considered by the Board during the evaluation process, the GAC Advice on New gTLDs must be submitted by the close of the objection filing period. A GAC Early Warning is not a prerequisite to use of the GAC Advice process.

If the Board receives GAC Advice on New gTLDs stating that it is the consensus of the GAC that a particular application should not proceed, this will create a strong presumption for the ICANN Board that the application should not be approved. If the Board does not act in accordance with this type of advice, it must provide rationale for doing so.

See Module 3 for additional detail on the procedures concerning GAC Advice on New gTLDs.

1.1.2.8 Extended Evaluation

Extended Evaluation is available only to certain applicants that do not pass Initial Evaluation.

Applicants failing certain elements of the Initial Evaluation can request an Extended Evaluation. If the applicant does not pass Initial Evaluation and does not expressly request an Extended Evaluation, the application will proceed no further. The Extended Evaluation period allows for an additional exchange of information between the applicant and evaluators to clarify information contained in the application. The reviews performed in Extended Evaluation do not introduce additional evaluation criteria.

An application may be required to enter an Extended Evaluation if one or more proposed registry services raise technical issues that might adversely affect the security or stability of the DNS. The Extended Evaluation period provides a time frame for these issues to be investigated. Applicants will be informed if such a review is required by the end of the Initial Evaluation period.

Evaluators and any applicable experts consulted will communicate the conclusions resulting from the additional review by the end of the Extended Evaluation period.

At the conclusion of the Extended Evaluation period, ICANN will post summary reports, by panel, from the Initial and Extended Evaluation periods.

If an application passes the Extended Evaluation, it can then proceed to the next relevant stage. If the application does not pass the Extended Evaluation, it will proceed no further.

The Extended Evaluation is expected to be completed for all applications in a period of approximately 5 months, though this timeframe could be increased based on volume. In this event, ICANN will post updated process information and an estimated timeline.

1.1.2.9 Dispute Resolution

Dispute resolution applies only to applicants whose applications are the subject of a formal objection.

Where formal objections are filed and filing fees paid during the objection filing period, independent dispute resolution service providers (DRSPs) will initiate and conclude proceedings based on the objections received. The formal objection procedure exists to provide a path for those who wish to object to an application that has been submitted to ICANN. Dispute resolution service providers serve as the fora to adjudicate the proceedings based on the subject matter and the needed expertise. Consolidation of objections filed will occur where appropriate, at the discretion of the DRSP.

As a result of a dispute resolution proceeding, either the applicant will prevail (in which case the application can proceed to the next relevant stage), or the objector will prevail (in which case either the application will proceed no further or the application will be bound to a contention resolution procedure). In the event of multiple objections, an applicant must prevail in all dispute resolution proceedings concerning the application to proceed to the next relevant stage. Applicants will be notified by the DRSP(s) of the results of dispute resolution proceedings.

Dispute resolution proceedings, where applicable, are expected to be completed for all applications within approximately a 5-month time frame. In the event that volume is such that this timeframe cannot be accommodated, ICANN will work with the dispute resolution service providers to create processing procedures and post updated timeline information.

1.1.2.10 String Contention

String contention applies only when there is more than one qualified application for the same or similar gTLD strings.

String contention refers to the scenario in which there is more than one qualified application for the identical gTLD string or for similar gTLD strings. In this Applicant Guidebook, “similar” means strings so similar that they create a probability of user confusion if more than one of the strings is delegated into the root zone.

Applicants are encouraged to resolve string contention cases among themselves prior to the string contention resolution stage. In the absence of resolution by the contending applicants, string contention cases are resolved either through a community priority evaluation (if a community-based applicant elects it) or through an auction.

In the event of contention between applied-for gTLD strings that represent geographic names, the parties may be required to follow a different process to resolve the contention. See subsection 2.2.1.4 of Module 2 for more information.

Groups of applied-for strings that are either identical or similar are called contention sets. All applicants should be aware that if an application is identified as being part of a contention set, string contention resolution procedures will not begin until all applications in the contention set have completed all aspects of evaluation, including dispute resolution, if applicable.

To illustrate, as shown in Figure 1-2, Applicants A, B, and C all apply for .EXAMPLE and are identified as a contention set. Applicants A and C pass Initial Evaluation, but Applicant B does not. Applicant B requests Extended Evaluation. A third party files an objection to Applicant C’s application, and Applicant C enters the dispute resolution process. Applicant A must wait to see whether Applicants B and C successfully complete the Extended Evaluation and dispute resolution phases, respectively, before it can proceed to the string contention resolution stage. In this example, Applicant B passes the Extended Evaluation, but Applicant C does not prevail in the dispute resolution proceeding. String contention resolution then proceeds between Applicants A and B.

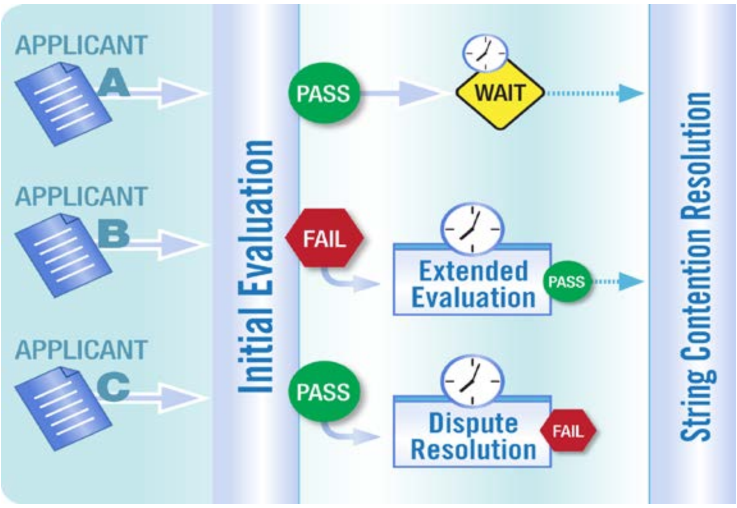

Figure 1-2 – All applications in a contention set must complete all previous evaluation and dispute resolution stages before string contention resolution can begin.

Applicants prevailing in a string contention resolution procedure will proceed toward delegation of the applied-for gTLDs.

String contention resolution for a contention set is estimated to take from 2.5 to 6 months to complete. The time required will vary per case because some contention cases may be resolved in either a community priority evaluation or an auction, while others may require both processes.

1.1.2.11 Transition to Delegation

Applicants successfully completing all the relevant stages outlined in this subsection 1.1.2 are required to carry out a series of concluding steps before delegation of the applied-for gTLD into the root zone. These steps include execution of a registry agreement with ICANN and completion of a pre-delegation technical test to validate information provided in the application.

Following execution of a registry agreement, the prospective registry operator must complete technical set-up and show satisfactory performance on a set of technical tests before delegation of the gTLD into the root zone may be initiated. If the pre-delegation testing requirements are not satisfied so that the gTLD can be delegated into the root zone within the time frame specified in the registry agreement, ICANN may in its sole and absolute discretion elect to terminate the registry agreement.

Once all of these steps have been successfully completed, the applicant is eligible for delegation of its applied-for gTLD into the DNS root zone.

It is expected that the transition to delegation steps can be completed in approximately 2 months, though this could take more time depending on the applicant's level of preparedness for the pre-delegation testing and the volume of applications undergoing these steps concurrently.

1.1.3 Lifecycle Timelines

Based on the estimates for each stage described in this section, the lifecycle for a straightforward application could be approximately 9 months, as follows:

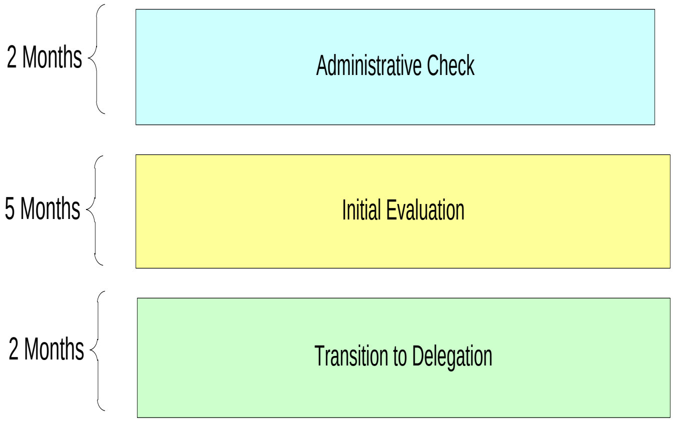

Figure 1-3 – A straightforward application could have an approximate 9-month lifecycle.

The lifecycle for a highly complex application could be much longer, such as 20 months in the example below:

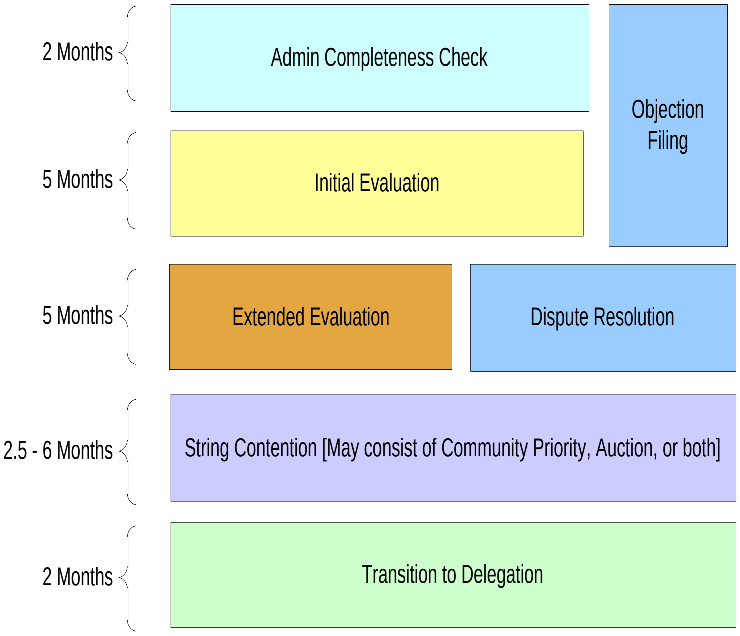

Figure 1-4 – A complex application could have an approximate 20-month lifecycle.

1.1.4 Posting Periods

The results of application reviews will be made available to the public at various stages in the process, as shown below.

Period	Posting Content
During Administrative Completeness Check	Public portions of all applications (posted within 2 weeks of the start of the Administrative Completeness Check).
End of Administrative Completeness Check	Results of Administrative Completeness Check.
GAC Early Warning Period	GAC Early Warnings received.
During Initial Evaluation	Status updates for applications withdrawn or ineligible for further review. Contention sets resulting from String Similarity review.

Period	Posting Content
End of Initial Evaluation	Application status updates with all Initial Evaluation results.
GAC Advice on New gTLDs	GAC Advice received.
End of Extended Evaluation	Application status updates with all Extended Evaluation results. Evaluation summary reports from the Initial and Extended Evaluation periods.
During Objection Filing/Dispute Resolution	Information on filed objections and status updates available via Dispute Resolution Service Provider websites. Notice of all objections posted by ICANN after close of objection filing period.
During Contention Resolution (Community Priority Evaluation)	Results of each Community Priority Evaluation posted as completed.
During Contention Resolution (Auction)	Results from each auction posted as completed.
Transition to Delegation	Registry Agreements posted when executed. Pre-delegation testing status updated.

1.1.5 Sample Application Scenarios

The following scenarios briefly show a variety of ways in which an application may proceed through the evaluation process. The table that follows exemplifies various processes and outcomes. This is not intended to be an exhaustive list of possibilities. There are other possible combinations of paths an application could follow.

Estimated time frames for each scenario are also included, based on current knowledge. Actual time frames may vary depending on several factors, including the total number of applications received by ICANN during the application submission period. It should be emphasized that most applications are expected to pass through the process in the shortest period of time, i.e., they will not go through extended evaluation, dispute resolution, or string contention resolution processes. Although most of the scenarios below are for processes extending beyond nine months, it is expected that most applications will complete the process within the nine-month timeframe.

Scenario Number	Initial Eval-uation	Extended Eval-uation	Objec-tion(s) Filed	String Conten-tion	Ap-proved for Dele-gation Steps	Esti-mated Elapsed Time
1	Pass	N/A	None	No	Yes	9 months
2	Fail	Pass	None	No	Yes	14 months
3	Pass	N/A	None	Yes	Yes	11.5 – 15 months
4	Pass	N/A	Applicant prevails	No	Yes	14 months
5	Pass	N/A	Objector prevails	N/A	No	12 months
6	Fail	Quit	N/A	N/A	No	7 months
7	Fail	Fail	N/A	N/A	No	12 months
8	Fail	Pass	Applicant prevails	Yes	Yes	16.5 – 20 months
9	Fail	Pass	Applicant prevails	Yes	No	14.5 – 18 months

Scenario 1 – Pass Initial Evaluation, No Objection, No Contention – In the most straightforward case, the application passes Initial Evaluation and there is no need for an Extended Evaluation. No objections are filed during the objection period, so there is no dispute to resolve. As there is no contention for the applied-for gTLD string, the applicant can enter into a registry agreement and the application can proceed toward delegation of the applied-for gTLD. Most applications are expected to complete the process within this timeframe.

Scenario 2 – Extended Evaluation, No Objection, No Contention – In this case, the application fails one or more aspects of the Initial Evaluation. The applicant is eligible for and requests an Extended Evaluation for the appropriate elements. Here, the application passes the Extended Evaluation. As with Scenario 1, no objections are filed during the objection period, so there is no dispute to resolve. As there is no contention for the gTLD string, the applicant can enter into a registry agreement and the application can proceed toward delegation of the applied-for gTLD.

Scenario 3 – Pass Initial Evaluation, No Objection, Contention – In this case, the application passes the Initial Evaluation so there is no need for Extended Evaluation. No objections are filed during the objection period, so there is no dispute to resolve. However, there are other applications for the same or a similar gTLD string, so there is contention. In this case, the application prevails in the contention resolution, so the applicant can enter into a registry agreement and the application can proceed toward delegation of the applied-for gTLD.

Scenario 4 – Pass Initial Evaluation, Win Objection, No Contention – In this case, the application passes the Initial Evaluation so there is no need for Extended Evaluation. During the objection filing period, an objection is filed on one of the four enumerated grounds by an objector with standing (refer to Module 3, Objection Procedures). The objection is heard by a dispute resolution service provider panel that finds in favor of the applicant. The applicant can enter into a registry agreement and the application can proceed toward delegation of the applied-for gTLD.

Scenario 5 – Pass Initial Evaluation, Lose Objection – In this case, the application passes the Initial Evaluation so there is no need for Extended Evaluation. During the objection period, multiple objections are filed by one or more objectors with standing for one or more of the four enumerated objection grounds. Each objection is heard by a dispute resolution service provider panel. In this case, the panels find in favor of the applicant for most of the objections, but one finds in favor of the objector. As one of the objections has been upheld, the application does not proceed.

Scenario 6 – Fail Initial Evaluation, Applicant Withdraws – In this case, the application fails one or more aspects of the Initial Evaluation. The applicant decides to withdraw the application rather than continuing with Extended Evaluation. The application does not proceed.

Scenario 7 – Fail Initial Evaluation, Fail Extended Evaluation -- In this case, the application fails one or more aspects of the Initial Evaluation. The applicant requests Extended Evaluation for the appropriate elements. However, the application fails Extended Evaluation also. The application does not proceed.

Scenario 8 – Extended Evaluation, Win Objection, Pass Contention – In this case, the application fails one or more aspects of the Initial Evaluation. The applicant is eligible for and requests an Extended Evaluation for the appropriate elements. Here, the application passes the Extended Evaluation. During the objection filing period, an objection is filed on one of the four enumerated grounds by an objector with standing. The objection is heard by a dispute resolution service provider panel that finds in favor of the applicant. However, there are other applications for the same or a similar gTLD string, so there is contention. In this case, the applicant prevails over other applications in the contention resolution procedure, the applicant can enter into a registry agreement, and the application can proceed toward delegation of the applied-for gTLD.

Scenario 9 – Extended Evaluation, Objection, Fail Contention – In this case, the application fails one or more aspects of the Initial Evaluation. The applicant is eligible for and requests an Extended Evaluation for the appropriate elements. Here, the application passes the Extended Evaluation. During the objection filing period, an objection is filed on one of the four enumerated grounds by an objector with standing. The objection is heard by a dispute resolution service provider that finds in favor of the applicant. However, there are other applications for the same or a similar gTLD string, so there is contention. In this case, another applicant prevails in the contention resolution procedure, and the application does not proceed.

Transition to Delegation – After an application has successfully completed Initial Evaluation, and other stages as applicable, the applicant is required to complete a set of steps leading to delegation of the gTLD, including execution of a registry agreement with ICANN, and completion of pre-delegation testing. Refer to Module 5 for a description of the steps required in this stage.

1.1.6 Subsequent Application Rounds

ICANN's goal is to launch subsequent gTLD application rounds as quickly as possible. The exact timing will be based on experiences gained and changes required after this round is completed. The goal is for the next application round to begin within one year of the close of the application submission period for the initial round.

ICANN has committed to reviewing the effects of the New gTLD Program on the operations of the root zone system after the first application round, and will defer the delegations in a second application round until it is determined that the delegations resulting from the first round did not jeopardize root zone system security or stability.

It is the policy of ICANN that there be subsequent application rounds, and that a systemized manner of applying for gTLDs be developed in the long term.

1.2 Information for All Applicants

1.2.1 Eligibility

Established corporations, organizations, or institutions in good standing may apply for a new gTLD. Applications from individuals or sole proprietorships will not be considered. Applications from or on behalf of yet-to-be-formed legal entities, or applications presupposing the future formation of a legal entity (for example, a pending Joint Venture) will not be considered.

ICANN has designed the New gTLD Program with multiple stakeholder protection mechanisms. Background screening, features of the gTLD Registry Agreement, data and financial escrow mechanisms are all intended to provide registrant and user protections.

The application form requires applicants to provide information on the legal establishment of the applying entity, as well as the identification of directors, officers, partners, and major shareholders of that entity. The names and positions of individuals included in the application will be published as part of the application; other information collected about the individuals will not be published.

Background screening at both the entity level and the individual level will be conducted for all applications to confirm eligibility. This inquiry is conducted on the basis of the information provided in questions 1-11 of the application form. ICANN may take into account information received from any source if it is relevant to the criteria in this section. If requested by ICANN, all applicants will be required to obtain and deliver to ICANN and ICANN's background screening vendor any consents or agreements of the entities and/or individuals named in questions 1-11 of the application form necessary to conduct background screening activities.

ICANN will perform background screening in only two areas: (1) General business diligence and criminal history; and (2) History of cybersquatting behavior. The criteria used for criminal history are aligned with the "crimes of trust" standard sometimes used in the banking and finance industry.

In the absence of exceptional circumstances, applications from any entity with or including any individual with convictions or decisions of the types listed in (a) – (m) below will be automatically disqualified from the program.

a. within the past ten years, has been convicted of any crime related to financial or corporate governance activities, or has been judged by a court to have committed fraud or breach of fiduciary duty, or has been the subject of a judicial determination that ICANN deems as the substantive equivalent of any of these;

b. within the past ten years, has been disciplined by any government or industry regulatory body for conduct involving dishonesty or misuse of the funds of others;

c. within the past ten years has been convicted of any willful tax-related fraud or willful evasion of tax liabilities;

d. within the past ten years has been convicted of perjury, forswearing, failing to cooperate with a law enforcement investigation, or making false statements to a law enforcement agency or representative;

e. has ever been convicted of any crime involving the use of computers, telephony systems, telecommunications or the Internet to facilitate the commission of crimes;

f. has ever been convicted of any crime involving the use of a weapon, force, or the threat of force;

g. has ever been convicted of any violent or sexual offense victimizing children, the elderly, or individuals with disabilities;

h. has ever been convicted of the illegal sale, manufacture, or distribution of pharmaceutical drugs, or been convicted or successfully extradited for any offense described in Article 3 of the United Nations Convention Against Illicit Traffic in Narcotic Drugs and Psychotropic Substances of 1988[3];

i. has ever been convicted or successfully extradited for any offense described in the United Nations Convention against Transnational Organized Crime (all Protocols)[4] [5];

j. has been convicted, within the respective timeframes, of aiding, abetting, facilitating, enabling, conspiring to commit, or failing to report any of the listed crimes above (i.e., within the past 10 years for crimes listed in (a) - (d) above, or ever for the crimes listed in (e) – (i) above);

k. has entered a guilty plea as part of a plea agreement or has a court case in any jurisdiction with a disposition of Adjudicated Guilty or Adjudication Withheld (or regional equivalents), within the respective timeframes listed above for any of the listed crimes (i.e., within the past 10 years for crimes listed in (a) – (d) above, or ever for the crimes listed in (e) – (i) above);

l. is the subject of a disqualification imposed by ICANN and in effect at the time the application is considered;

m. has been involved in a pattern of adverse, final decisions indicating that the applicant

---

[3] http://www.unodc.org/unodc/en/treaties/illicit-trafficking.html

[4] http://www.unodc.org/unodc/en/treaties/CTOC/index.html

[5] It is recognized that not all countries have signed on to the UN conventions referenced above. These conventions are being used solely for identification of a list of crimes for which background screening will be performed. It is not necessarily required that an applicant would have been convicted pursuant to the UN convention but merely convicted of a crime listed under these conventions, to trigger these criteria.

or individual named in the application was engaged in cybersquatting as defined in the Uniform Domain Name Dispute Resolution Policy (UDRP), the Anti-Cybersquatting Consumer Protection Act (ACPA), or other equivalent legislation, or was engaged in reverse domain name hijacking under the UDRP or bad faith or reckless disregard under the ACPA or other equivalent legislation. Three or more such decisions with one occurring in the last four years will generally be considered to constitute a pattern.

n. fails to provide ICANN with the identifying information necessary to confirm identity at the time of application or to resolve questions of identity during the background screening process;

o. fails to provide a good faith effort to disclose all relevant information relating to items (a) – (m).

Background screening is in place to protect the public interest in the allocation of critical Internet resources, and ICANN reserves the right to deny an otherwise qualified application based on any information identified during the background screening process. For example, a final and legally binding decision obtained by a national law enforcement or consumer protection authority finding that the applicant was engaged in fraudulent and deceptive commercial practices as defined in the Organization for Economic Co-operation and Development (OECD) Guidelines for Protecting Consumers from Fraudulent and Deceptive Commercial Practices Across Borders[6] may cause an application to be rejected. ICANN may also contact the applicant with additional questions based on information obtained in the background screening process.

All applicants are required to provide complete and detailed explanations regarding any of the above events as part of the application. Background screening information will not be made publicly available by ICANN.

***Registrar Cross-Ownership* --** ICANN-accredited registrars are eligible to apply for a gTLD. However, all gTLD registries

---

[6] http://www.oecd.org/document/56/0,3746,en_2649_34267_2515000_1_1_1_1,00.html

are required to abide by a Code of Conduct addressing, *inter alia*, non-discriminatory access for all authorized registrars. ICANN reserves the right to refer any application to the appropriate competition authority relative to any cross-ownership issues.

Legal Compliance -- ICANN must comply with all U.S. laws, rules, and regulations. One such set of regulations is the economic and trade sanctions program administered by the Office of Foreign Assets Control (OFAC) of the U.S. Department of the Treasury. These sanctions have been imposed on certain countries, as well as individuals and entities that appear on OFAC's List of Specially Designated Nationals and Blocked Persons (the SDN List). ICANN is prohibited from providing most goods or services to residents of sanctioned countries or their governmental entities or to SDNs without an applicable U.S. government authorization or exemption. ICANN generally will not seek a license to provide goods or services to an individual or entity on the SDN List. In the past, when ICANN has been requested to provide services to individuals or entities that are not SDNs, but are residents of sanctioned countries, ICANN has sought and been granted licenses as required. In any given case, however, OFAC could decide not to issue a requested license.

1.2.2 Required Documents

All applicants should be prepared to submit the following documents, which are required to accompany each application:

1. **Proof of legal establishment –** Documentation of the applicant's establishment as a specific type of entity in accordance with the applicable laws of its jurisdiction.
2. **Financial statements –** Applicants must provide audited or independently certified financial statements for the most recently completed fiscal year for the applicant. In some cases, unaudited financial statements may be provided.

As indicated in the relevant questions, supporting documentation should be submitted in the original language. English translations are not required.

All documents must be valid at the time of submission. Refer to the Evaluation Criteria, attached to Module 2, for additional details on the requirements for these documents.

Some types of supporting documentation are required only in certain cases:

1. ***Community endorsement* –** If an applicant has designated its application as community-based (see section 1.2.3), it will be asked to submit a written endorsement of its application by one or more established institutions representing the community it has named. An applicant may submit written endorsements from multiple institutions. If applicable, this will be submitted in the section of the application concerning the community-based designation.

   At least one such endorsement is required for a complete application. The form and content of the endorsement are at the discretion of the party providing the endorsement; however, the letter must identify the applied-for gTLD string and the applying entity, include an express statement of support for the application, and supply the contact information of the entity providing the endorsement.

   Written endorsements from individuals need not be submitted with the application, but may be submitted in the application comment forum.

2. ***Government support or non-objection*** – If an applicant has applied for a gTLD string that is a geographic name (as defined in this Guidebook), the applicant is required to submit documentation of support for or non-objection to its application from the relevant governments or public authorities. Refer to subsection 2.2.1.4 for more information on the requirements for geographic names. If applicable, this will be submitted in the geographic names section of the application.

3. ***Documentation of third-party funding commitments* –** If an applicant lists funding from third parties in its application, it must provide evidence of commitment by the party committing the funds. If applicable, this will be submitted in the financial section of the application.

1.2.3 Community-Based Designation

All applicants are required to designate whether their application is **community-based**.

1.2.3.1 Definitions

For purposes of this Applicant Guidebook, a **community-based gTLD** is a gTLD that is operated for the benefit of a clearly delineated community. Designation or non-designation of an application as community-based is entirely at the discretion of the applicant. Any applicant may designate its application as community-based; however, each applicant making this designation is asked to substantiate its status as representative of the community it names in the application by submission of written endorsements in support of the application. Additional information may be requested in the event of a community priority evaluation (refer to section 4.2 of Module 4). An applicant for a community-based gTLD is expected to:

1. Demonstrate an ongoing relationship with a clearly delineated community.
2. Have applied for a gTLD string strongly and specifically related to the community named in the application.
3. Have proposed dedicated registration and use policies for registrants in its proposed gTLD, including appropriate security verification procedures, commensurate with the community-based purpose it has named.
4. Have its application endorsed in writing by one or more established institutions representing the community it has named.

For purposes of differentiation, an application that has not been designated as community-based will be referred to hereinafter in this document as a **standard application.** A standard gTLD can be used for any purpose consistent with the requirements of the application and evaluation criteria, and with the registry agreement. A standard applicant may or may not have a formal relationship with an exclusive registrant or user population. It may or may not employ eligibility or use restrictions. Standard simply means here that the applicant has not designated the application as community-based.

1.2.3.2 Implications of Application Designation

Applicants should understand how their designation as community-based or standard will affect application processing at particular stages, and, if the application is successful, execution of the registry agreement and subsequent obligations as a gTLD registry operator, as described in the following paragraphs.

Objection / Dispute Resolution – All applicants should understand that a formal objection may be filed against any application on community grounds, even if the applicant has not designated itself as community-based or declared the gTLD to be aimed at a particular community. Refer to Module 3, Objection Procedures.

String Contention – Resolution of string contention may include one or more components, depending on the composition of the contention set and the elections made by community-based applicants.

- A **settlement between the parties** can occur at any time after contention is identified. The parties will be encouraged to meet with an objective to settle the contention. Applicants in contention always have the opportunity to resolve the contention voluntarily, resulting in the withdrawal of one or more applications, before reaching the contention resolution stage.
- A **community priority evaluation** will take place only if a community-based applicant in a contention set elects this option. All community-based applicants in a contention set will be offered this option in the event that there is contention remaining after the applications have successfully completed all previous evaluation stages.
- An **auction** will result for cases of contention not resolved by community priority evaluation or agreement between the parties. Auction occurs as a contention resolution means of last resort. If a community priority evaluation occurs but does not produce a clear winner, an auction will take place to resolve the contention.

Refer to Module 4, String Contention Procedures, for detailed discussions of contention resolution procedures.

Contract Execution and Post-Delegation – A community-based applicant will be subject to certain post-delegation contractual obligations to operate the gTLD in a manner consistent with the restrictions associated with its community-based designation. Material changes to the contract, including changes to the community-based nature of the gTLD and any associated provisions, may only be made with ICANN's approval. The determination of whether to approve changes requested by the applicant will be at ICANN's discretion. Proposed criteria for approving such changes are the subject of policy discussions.

Community-based applications are intended to be a narrow category, for applications where there are unambiguous associations among the applicant, the community served, and the applied-for gTLD string. Evaluation of an applicant's designation as community-based will occur only in the event of a contention situation that results in a community priority evaluation. However, any applicant designating its application as community-based will, if the application is approved, be bound by the registry agreement to implement the community-based restrictions it has specified in the application. This is true even if there are no contending applicants.

1.2.3.3 Changes to Application Designation

An applicant may not change its designation as standard or community-based once it has submitted a gTLD application for processing.

1.2.4 Notice concerning Technical Acceptance Issues with New gTLDs

All applicants should be aware that approval of an application and entry into a registry agreement with ICANN do not guarantee that a new gTLD will immediately function throughout the Internet. Past experience indicates that network operators may not immediately fully support new top-level domains, even when these domains have been delegated in the DNS root zone, since third-party software modification may be required and may not happen immediately.

Similarly, software applications sometimes attempt to validate domain names and may not recognize new or unknown top-level domains. ICANN has no authority or ability to require that software accept new top-level domains, although it does prominently publicize which top-level domains are valid and has developed a basic tool to assist application providers in the use of current root-zone data.

ICANN encourages applicants to familiarize themselves with these issues and account for them in their startup and launch plans. Successful applicants may find themselves expending considerable efforts working with providers to achieve acceptance of their new top-level domains.

Applicants should review http://www.icann.org/en/topics/TLD-acceptance/ for background. IDN applicants should also review the material concerning experiences with IDN test strings in the root zone (see http://idn.icann.org/).

1.2.5 *Notice concerning TLD Delegations*

ICANN is only able to create TLDs as delegations in the DNS root zone, expressed using NS records with any corresponding DS records and glue records. There is no policy enabling ICANN to place TLDs as other DNS record types (such as A, MX, or DNAME records) in the root zone.

1.2.6 *Terms and Conditions*

All applicants must agree to a standard set of Terms and Conditions for the application process. The Terms and Conditions are available in Module 6 of this guidebook.

1.2.7 *Notice of Changes to Information*

If at any time during the evaluation process information previously submitted by an applicant becomes untrue or inaccurate, the applicant must promptly notify ICANN via submission of the appropriate forms. This includes applicant-specific information such as changes in financial position and changes in ownership or control of the applicant.

ICANN reserves the right to require a re-evaluation of the application in the event of a material change. This could involve additional fees or evaluation in a subsequent application round.

Failure to notify ICANN of any change in circumstances that would render any information provided in the application false or misleading may result in denial of the application.

1.2.8 *Voluntary Designation for High Security Zones*

An ICANN stakeholder group has considered development of a possible special designation for "High Security Zone Top Level Domains" ("HSTLDs"). The group's Final Report can be found at http://www.icann.org/en/topics/new-gtlds/hstld-final-report-11mar11-en.pdf.

The Final Report may be used to inform further work. ICANN will support independent efforts toward developing voluntary high-security TLD designations, which may be available to gTLD applicants wishing to pursue such designations.

1.2.9 *Security and Stability*

Root Zone Stability: There has been significant study, analysis, and consultation in preparation for launch of the

New gTLD Program, indicating that the addition of gTLDs to the root zone will not negatively impact the security or stability of the DNS.

It is estimated that 200-300 TLDs will be delegated annually, and determined that in no case will more than 1000 new gTLDs be added to the root zone in a year. The delegation rate analysis, consultations with the technical community, and anticipated normal operational upgrade cycles all lead to the conclusion that the new gTLD delegations will have no significant impact on the stability of the root system. Modeling and reporting will continue during, and after, the first application round so that root-scaling discussions can continue and the delegation rates can be managed as the program goes forward.

All applicants should be aware that delegation of any new gTLDs is conditional on the continued absence of significant negative impact on the security or stability of the DNS and the root zone system (including the process for delegating TLDs in the root zone). In the event that there is a reported impact in this regard and processing of applications is delayed, the applicants will be notified in an orderly and timely manner.

1.2.10 Resources for Applicant Assistance

A variety of support resources are available to gTLD applicants. Financial assistance will be available to a limited number of eligible applicants. To request financial assistance, applicants must submit a separate financial assistance application in addition to the gTLD application form.

To be eligible for consideration, all financial assistance applications must be received by **23:59 UTC 12 April 2012.** Financial assistance applications will be evaluated and scored against pre-established criteria.

In addition, ICANN maintains a webpage as an informational resource for applicants seeking assistance, and organizations offering support.

See http://newgtlds.icann.org/applicants/candidate-support for details on these resources.

1.2.11 Updates to the Applicant Guidebook

As approved by the ICANN Board of Directors, this Guidebook forms the basis of the New gTLD Program. ICANN reserves the right to make reasonable updates and changes to the Applicant Guidebook at any time, including as the possible result of new technical standards, reference documents, or policies that might be adopted during the course of the application process. Any such updates or revisions will be posted on ICANN's website.

1.3 Information for Internationalized Domain Name Applicants

Some applied-for gTLD strings are expected to be Internationalized Domain Names (IDNs). IDNs are domain names including characters used in the local representation of languages not written with the basic Latin alphabet (a - z), European-Arabic digits (0 - 9), and the hyphen (-). As described below, IDNs require the insertion of A-labels into the DNS root zone.

1.3.1 IDN-Specific Requirements

An applicant for an IDN string must provide information indicating compliance with the IDNA protocol and other technical requirements. The IDNA protocol and its documentation can be found at http://icann.org/en/topics/idn/rfcs.htm.

Applicants must provide applied-for gTLD strings in the form of both a **U-label** (the IDN TLD in local characters) and an **A-label**.

An A-label is the ASCII form of an IDN label. Every IDN A-label begins with the IDNA ACE prefix, "xn--", followed by a string that is a valid output of the Punycode algorithm, making a maximum of 63 total ASCII characters in length. The prefix and string together must conform to all requirements for a label that can be stored in the DNS including conformance to the LDH (host name) rule described in RFC 1034, RFC 1123, and elsewhere.

A U-label is the Unicode form of an IDN label, which a user expects to see displayed in applications.

For example, using the current IDN test string in Cyrillic script, the U-label is <**испытание**> and the A-label is <**xn--80akhbyknj4f>.** An A-label must be capable of being produced by conversion from a U-label and a U-label must be capable of being produced by conversion from an A-label.

Applicants for IDN gTLDs will also be required to provide the following at the time of the application:

1. Meaning or restatement of string in English. The applicant will provide a short description of what the string would mean or represent in English.
2. Language of label (ISO 639-1). The applicant will specify the language of the applied-for gTLD string, both according to the ISO codes for the representation of names of languages, and in English.
3. Script of label (ISO 15924). The applicant will specify the script of the applied-for gTLD string, both according to the ISO codes for the representation of names of scripts, and in English.
4. Unicode code points. The applicant will list all the code points contained in the U-label according to its Unicode form.
5. Applicants must further demonstrate that they have made reasonable efforts to ensure that the encoded IDN string does not cause any rendering or operational problems. For example, problems have been identified in strings with characters of mixed right-to-left and left-to-right directionality when numerals are adjacent to the path separator (i.e., the dot).[7]

   If an applicant is applying for a string with known issues, it should document steps that will be taken to mitigate these issues in applications. While it is not possible to ensure that all rendering problems are avoided, it is important that as many as possible are identified early and that the potential registry operator is aware of these issues. Applicants can become familiar with these issues by understanding the IDNA protocol (see http://www.icann.org/en/topics/idn/rfcs.htm), and by active participation in the IDN wiki (see http://idn.icann.org/) where some rendering problems are demonstrated.
6. **[Optional]** - Representation of label in phonetic alphabet. The applicant may choose to provide its applied-for gTLD string notated according to the International Phonetic Alphabet (http://www.langsci.ucl.ac.uk/ipa/). Note that this information will not be evaluated or scored. The information, if provided, will be used as a guide to ICANN in responding to inquiries or speaking of the application in public presentations.

---

[7] See examples at http://stupid.domain.name/node/683

1.3.2 IDN Tables

An IDN table provides the list of characters eligible for registration in domain names according to the registry's policy. It identifies any multiple characters that are considered equivalent for domain name registration purposes ("variant characters"). Variant characters occur where two or more characters can be used interchangeably.

Examples of IDN tables can be found in the Internet Assigned Numbers Authority (IANA) IDN Repository at http://www.iana.org/procedures/idn-repository.html.

In the case of an application for an IDN gTLD, IDN tables must be submitted for the language or script for the applied-for gTLD string (the "top level tables"). IDN tables must also be submitted for each language or script in which the applicant intends to offer IDN registrations at the second or lower levels.

Each applicant is responsible for developing its IDN Tables, including specification of any variant characters. Tables must comply with ICANN's IDN Guidelines[8] and any updates thereto, including:

- Complying with IDN technical standards.
- Employing an inclusion-based approach (i.e., code points not explicitly permitted by the registry are prohibited).
- Defining variant characters.
- Excluding code points not permissible under the guidelines, e.g., line-drawing symbols, pictographic dingbats, structural punctuation marks.
- Developing tables and registration policies in collaboration with relevant stakeholders to address common issues.
- Depositing IDN tables with the IANA Repository for IDN Practices (once the TLD is delegated).

An applicant's IDN tables should help guard against user confusion in the deployment of IDN gTLDs. Applicants are strongly urged to consider specific linguistic and writing system issues that may cause problems when characters are used in domain names, as part of their work of defining variant characters.

---

[8] *See* http://www.icann.org/en/topics/idn/implementation-guidelines.htm

To avoid user confusion due to differing practices across TLD registries, it is recommended that applicants cooperate with TLD operators that offer domain name registration with the same or visually similar characters.

As an example, languages or scripts are often shared across geographic boundaries. In some cases, this can cause confusion among the users of the corresponding language or script communities. Visual confusion can also exist in some instances between different scripts (for example, Greek, Cyrillic and Latin).

Applicants will be asked to describe the process used in developing the IDN tables submitted. ICANN may compare an applicant's IDN table with IDN tables for the same languages or scripts that already exist in the IANA repository or have been otherwise submitted to ICANN. If there are inconsistencies that have not been explained in the application, ICANN may ask the applicant to detail the rationale for differences. For applicants that wish to conduct and review such comparisons prior to submitting a table to ICANN, a table comparison tool will be available.

ICANN will accept the applicant's IDN tables based on the factors above.

Once the applied-for string has been delegated as a TLD in the root zone, the applicant is required to submit IDN tables for lodging in the IANA Repository of IDN Practices. For additional information, see existing tables at http://iana.org/domains/idn-tables/, and submission guidelines at http://iana.org/procedures/idn-repository.html.

1.3.3 IDN Variant TLDs

A variant TLD string results from the substitution of one or more characters in the applied-for gTLD string with variant characters based on the applicant's top level tables.

Each application contains one applied-for gTLD string. The applicant may also declare any variant strings for the TLD in its application. However, no variant gTLD strings will be delegated through the New gTLD Program until variant management solutions are developed and implemented.[9] Declaring variant strings is informative only and will not imply any right or claim to the declared variant strings.

---

[9] The ICANN Board directed that work be pursued on variant management in its resolution on 25 Sep 2010, http://www.icann.org/en/minutes/resolutions-25sep10-en.htm#2.5.

When a variant delegation process is established, applicants may be required to submit additional information such as implementation details for the variant TLD management mechanism, and may need to participate in a subsequent evaluation process, which could contain additional fees and review steps.

The following scenarios are possible during the gTLD evaluation process:

a. Applicant declares variant strings to the applied-for gTLD string in its application. If the application is successful, the applied-for gTLD string will be delegated to the applicant. The declared variant strings are noted for future reference. These declared variant strings will not be delegated to the applicant along with the applied-for gTLD string, nor will the applicant have any right or claim to the declared variant strings.

   Variant strings listed in successful gTLD applications will be tagged to the specific application and added to a "Declared Variants List" that will be available on ICANN's website. A list of pending (i.e., declared) variant strings from the IDN ccTLD Fast Track is available at http://icann.org/en/topics/idn/fast-track/string-evaluation-completion-en.htm.

   ICANN may perform independent analysis on the declared variant strings, and will not necessarily include all strings listed by the applicant on the Declared Variants List.

b. Multiple applicants apply for strings that are identified by ICANN as variants of one another. These applications will be placed in a contention set and will follow the contention resolution procedures in Module 4.

c. Applicant submits an application for a gTLD string and does not indicate variants to the applied-for gTLD string. ICANN will not identify variant strings unless scenario (b) above occurs.

Each variant string declared in the application must also conform to the string requirements in section 2.2.1.3.2.

Variant strings declared in the application will be reviewed for consistency with the top-level tables submitted in the application. Should any declared variant strings not be based on use of variant characters according to the submitted top-level tables, the applicant will be notified and the declared string will no longer be considered part of the application.

Declaration of variant strings in an application does not provide the applicant any right or reservation to a particular string. Variant strings on the Declared Variants List may be subject to subsequent additional review per a process and criteria to be defined.

It should be noted that while variants for second and lower-level registrations are defined freely by the local communities without any ICANN validation, there may be specific rules and validation criteria specified for variant strings to be allowed at the top level. It is expected that the variant information provided by applicants in the first application round will contribute to a better understanding of the issues and assist in determining appropriate review steps and fee levels going forward.

1.4 Submitting an Application

Applicants may complete the application form and submit supporting documents using ICANN's TLD Application System (TAS). To access the system, each applicant must first register as a TAS user.

As TAS users, applicants will be able to provide responses in open text boxes and submit required supporting documents as attachments. Restrictions on the size of attachments as well as the file formats are included in the instructions on the TAS site.

Except where expressly provided within the question, all application materials must be submitted in English.

ICANN will not accept application forms or supporting materials submitted through other means than TAS (that is, hard copy, fax, email), unless such submission is in accordance with specific instructions from ICANN to applicants.

1.4.1 Accessing the TLD Application System

The TAS site will be accessible from the New gTLD webpage (http://www.icann.org/en/topics/new-gtld-program.htm), and will be highlighted in communications regarding the opening of the application submission period. Users of TAS will be expected to agree to a standard set of terms of use including user rights, obligations, and restrictions in relation to the use of the system.

1.4.1.1 User Registration

TAS user registration (creating a TAS user profile) requires submission of preliminary information, which will be used to validate the identity of the parties involved in the application. An overview of the information collected in the user registration process is below:

No.	Questions
1	Full legal name of Applicant
2	Principal business address
3	Phone number of Applicant
4	Fax number of Applicant
5	Website or URL, if applicable
6	Primary Contact: Name, Title, Address, Phone, Fax, Email
7	Secondary Contact: Name, Title, Address, Phone, Fax, Email
8	Proof of legal establishment
9	Trading, subsidiary, or joint venture information
10	Business ID, Tax ID, VAT registration number, or equivalent of Applicant
11	Applicant background: previous convictions, cybersquatting activities
12	Deposit payment confirmation and payer information

A subset of identifying information will be collected from the entity performing the user registration, in addition to the applicant information listed above. The registered user could be, for example, an agent, representative, or employee who would be completing the application on behalf of the applicant.

The registration process will require the user to request the desired number of application slots. For example, a user intending to submit five gTLD applications would complete five application slot requests, and the system would assign the user a unique ID number for each of the five applications.

Users will also be required to submit a deposit of USD 5,000 per application slot. This deposit amount will be credited against the evaluation fee for each application. The deposit requirement is in place to help reduce the risk of frivolous access to the online application system.

After completing the registration, TAS users will receive access enabling them to enter the rest of the application information into the system. Application slots will be populated with the registration information provided by the applicant, which may not ordinarily be changed once slots have been assigned.

No new user registrations will be accepted after **23:59 UTC 29 March 2012.**

ICANN will take commercially reasonable steps to protect all applicant data submitted from unauthorized access, but cannot warrant against the malicious acts of third parties who may, through system corruption or other means, gain unauthorized access to such data.

1.4.1.2 Application Form

Having obtained the requested application slots, the applicant will complete the remaining application questions. An overview of the areas and questions contained in the form is shown here:

No.	Application and String Information
12	Payment confirmation for remaining evaluation fee amount
13	Applied-for gTLD string
14	IDN string information, if applicable
15	IDN tables, if applicable

16	Mitigation of IDN operational or rendering problems, if applicable
17	Representation of string in International Phonetic Alphabet (Optional)
18	Mission/purpose of the TLD
19	Is the application for a community-based TLD?
20	If community based, describe elements of community and proposed policies
21	Is the application for a geographic name? If geographic, documents of support required
22	Measures for protection of geographic names at second level
23	Registry Services: name and full description of all registry services to be provided
	Technical and Operational Questions (External)
24	Shared registration system (SRS) performance
25	EPP
26	Whois
27	Registration life cycle
28	Abuse prevention & mitigation
29	Rights protection mechanisms
30(a)	Security
	Technical and Operational Questions (Internal)
30(b)	Security
31	Technical overview of proposed registry
32	Architecture

33	Database capabilities
34	Geographic diversity
35	DNS service compliance
36	IPv6 reachability
37	Data backup policies and procedures
38	Escrow
39	Registry continuity
40	Registry transition
41	Failover testing
42	Monitoring and fault escalation processes
43	DNSSEC
44	IDNs (Optional)
	Financial Questions
45	Financial statements
46	Projections template: costs and funding
47	Costs: setup and operating
48	Funding and revenue
49	Contingency planning: barriers, funds, volumes
50	Continuity: continued operations instrument

1.4.2 Customer Service during the Application Process

Assistance will be available to applicants throughout the application process via the Applicant Service Center (ASC). The ASC will be staffed with customer service agents to answer questions relating to the New gTLD Program, the application process, and TAS.

1.4.3 Backup Application Process

If the online application system is not available, ICANN will provide alternative instructions for submitting applications.

1.5 Fees and Payments

This section describes the fees to be paid by the applicant. Payment instructions are also included here.

1.5.1 gTLD Evaluation Fee

The gTLD evaluation fee is required from all applicants. This fee is in the amount of USD 185,000. The evaluation fee is payable in the form of a 5,000 deposit submitted at the time the user requests an application slot within TAS, and a payment of the remaining 180,000 submitted with the full application. ICANN will not begin its evaluation of an application unless it has received the full gTLD evaluation fee by **23:59 UTC 12 April 2012**.

The gTLD evaluation fee is set to recover costs associated with the new gTLD program. The fee is set to ensure that the program is fully funded and revenue neutral and is not subsidized by existing contributions from ICANN funding sources, including generic TLD registries and registrars, ccTLD contributions and RIR contributions.

The gTLD evaluation fee covers all required reviews in Initial Evaluation and, in most cases, any required reviews in Extended Evaluation. If an extended Registry Services review takes place, an additional fee will be incurred for this review (see section 1.5.2). There is no additional fee to the applicant for Extended Evaluation for geographic names, technical and operational, or financial reviews.

Refunds -- In certain cases, refunds of a portion of the evaluation fee may be available for applications that are withdrawn before the evaluation process is complete. An applicant may request a refund at any time until it has executed a registry agreement with ICANN. The amount of the refund will depend on the point in the process at which the withdrawal is requested, as follows:

Refund Available to Applicant	**Percentage of Evaluation Fee**	**Amount of Refund**
Within 21 calendar days of a GAC Early	80%	USD 148,000

Refund Available to Applicant	**Percentage of Evaluation Fee**	**Amount of Refund**
Warning		
After posting of applications until posting of Initial Evaluation results	70%	USD 130,000
After posting Initial Evaluation results	35%	USD 65,000
After the applicant has completed Dispute Resolution, Extended Evaluation, or String Contention Resolution(s)	20%	USD 37,000
After the applicant has entered into a registry agreement with ICANN		None

Thus, any applicant that has not been successful is eligible for at least a 20% refund of the evaluation fee if it withdraws its application.

An applicant that wishes to withdraw an application must initiate the process through TAS. Withdrawal of an application is final and irrevocable. Refunds will only be issued to the organization that submitted the original payment. All refunds are paid by wire transfer. Any bank transfer or transaction fees incurred by ICANN, or any unpaid evaluation fees, will be deducted from the amount paid. Any refund paid will be in full satisfaction of ICANN's obligations to the applicant. The applicant will have no entitlement to any additional amounts, including for interest or currency exchange rate changes.

Note on 2000 proof-of-concept round applicants -- Participants in ICANN's proof-of-concept application process in 2000 may be eligible for a credit toward the evaluation fee. The credit is in the amount of USD 86,000 and is subject to:

- submission of documentary proof by the applicant that it is the same entity, a successor in interest to the same entity, or an affiliate of the same entity that applied previously;
- a confirmation that the applicant was not awarded any TLD string pursuant to the 2000 proof–of-concept application round and that the applicant has no legal claims arising from the 2000 proof-of-concept process; and
- submission of an application, which may be modified from the application originally submitted in 2000, for the same TLD string that such entity applied for in the 2000 proof-of-concept application round.

Each participant in the 2000 proof-of-concept application process is eligible for at most one credit. A maximum of one credit may be claimed for any new gTLD application submitted according to the process in this guidebook. Eligibility for this credit is determined by ICANN.

1.5.2 Fees Required in Some Cases

Applicants may be required to pay additional fees in certain cases where specialized process steps are applicable. Those possible additional fees[10] include:

- ***Registry Services Review Fee –*** If applicable, this fee is payable for additional costs incurred in referring an application to the Registry Services Technical Evaluation Panel (RSTEP) for an extended review. Applicants will be notified if such a fee is due. The fee for a three-member RSTEP review team is anticipated to be USD 50,000. In some cases, five-member panels might be required, or there might be increased scrutiny at a greater cost. The amount of the fee will cover the cost of the RSTEP review. In the event that reviews of proposed registry services can be consolidated across multiple applications or applicants, ICANN will apportion the fees in an equitable manner. In every case, the applicant will be advised of the cost before initiation of the review. Refer to subsection 2.2.3 of Module 2 on Registry Services review.

---

[10] The estimated fee amounts provided in this section 1.5.2 will be updated upon engagement of panel service providers and establishment of fees.

- ***Dispute Resolution Filing Fee –*** This amount must accompany any filing of a formal objection and any response that an applicant files to an objection. This fee is payable directly to the applicable dispute resolution service provider in accordance with the provider's payment instructions. ICANN estimates that filing fees could range from approximately USD 1,000 to USD 5,000 (or more) per party per proceeding. Refer to the appropriate provider for the relevant amount. Refer to Module 3 for dispute resolution procedures.

- ***Advance Payment of Costs –*** In the event of a formal objection, this amount is payable directly to the applicable dispute resolution service provider in accordance with that provider's procedures and schedule of costs. Ordinarily, both parties in the dispute resolution proceeding will be required to submit an advance payment of costs in an estimated amount to cover the entire cost of the proceeding. This may be either an hourly fee based on the estimated number of hours the panelists will spend on the case (including review of submissions, facilitation of a hearing, if allowed, and preparation of a decision), or a fixed amount. In cases where disputes are consolidated and there are more than two parties involved, the advance payment will occur according to the dispute resolution service provider's rules.

  The prevailing party in a dispute resolution proceeding will have its advance payment refunded, while the non-prevailing party will not receive a refund and thus will bear the cost of the proceeding. In cases where disputes are consolidated and there are more than two parties involved, the refund of fees will occur according to the dispute resolution service provider's rules.

  ICANN estimates that adjudication fees for a proceeding involving a fixed amount could range from USD 2,000 to USD 8,000 (or more) per proceeding. ICANN further estimates that an hourly rate based proceeding with a one-member panel could range from USD 32,000 to USD 56,000 (or more) and with a three-member panel it could range from USD 70,000 to USD 122,000 (or more). These estimates may be lower if the panel does not call for written submissions beyond the objection and response, and does not allow a hearing. Please refer to the appropriate provider for the relevant amounts or fee structures.

- ***Community Priority Evaluation Fee*** **–** In the event that the applicant participates in a community priority evaluation, this fee is payable as a deposit in an amount to cover the cost of the panel's review of that application (currently estimated at USD 10,000). The deposit is payable to the provider appointed to handle community priority evaluations. Applicants will be notified if such a fee is due. Refer to Section 4.2 of Module 4 for circumstances in which a community priority evaluation may take place. An applicant who scores at or above the threshold for the community priority evaluation will have its deposit refunded.

ICANN will notify the applicants of due dates for payment in respect of additional fees (if applicable). This list does not include fees (annual registry fees) that will be payable to ICANN following execution of a registry agreement.

1.5.3 Payment Methods

Payments to ICANN should be submitted by **wire transfer**. Instructions for making a payment by wire transfer will be available in TAS.[11]

Payments to Dispute Resolution Service Providers should be submitted in accordance with the provider's instructions.

1.5.4 Requesting a Remittance Form

The TAS interface allows applicants to request issuance of a remittance form for any of the fees payable to ICANN. This service is for the convenience of applicants that require an invoice to process payments.

1.6 Questions about this Applicant Guidebook

For assistance and questions an applicant may have in the process of completing the application form, applicants should use the customer support resources available via the ASC. Applicants who are unsure of the information being sought in a question or the parameters for acceptable documentation are encouraged to communicate these questions through the appropriate

---

[11] Wire transfer is the preferred method of payment as it offers a globally accessible and dependable means for international transfer of funds. This enables ICANN to receive the fee and begin processing applications as quickly as possible.

support channels before the application is submitted. This helps avoid the need for exchanges with evaluators to clarify information, which extends the timeframe associated with processing the application.

Currently, questions may be submitted via <newgtld@icann.org>. To provide all applicants equitable access to information, ICANN will make all questions and answers publicly available.

All requests to ICANN for information about the process or issues surrounding preparation of an application must be submitted to the ASC. ICANN will not grant requests from applicants for personal or telephone consultations regarding the preparation of an application. Applicants that contact ICANN for clarification about aspects of the application will be referred to the ASC.

Answers to inquiries will only provide clarification about the application forms and procedures. ICANN will not provide consulting, financial, or legal advice.

gTLD Applicant Guidebook

(v. 2012-06-04)

Module 2

4 June 2012

Module 2

Evaluation Procedures

This module describes the evaluation procedures and criteria used to determine whether applied-for gTLDs are approved for delegation. All applicants will undergo an Initial Evaluation and those that do not pass all elements may request Extended Evaluation.

The first, required evaluation is the **Initial Evaluation**, during which ICANN assesses an applied-for gTLD string, an applicant's qualifications, and its proposed registry services.

The following assessments are performed in the **Initial Evaluation**:

- String Reviews
    - String similarity
    - Reserved names
    - DNS stability
    - Geographic names
- Applicant Reviews
    - Demonstration of technical and operational capability
    - Demonstration of financial capability
    - Registry services reviews for DNS stability issues

An application must pass all these reviews to pass the Initial Evaluation. Failure to pass any one of these reviews will result in a failure to pass the Initial Evaluation.

Extended Evaluation may be applicable in cases in which an applicant does not pass the Initial Evaluation. See Section 2.3 below.

2.1 Background Screening

Background screening will be conducted in two areas:

(a) General business diligence and criminal history; and

(b) History of cybersquatting behavior.

The application must pass both background screening areas to be eligible to proceed. Background screening results are evaluated according to the criteria described in section 1.2.1. Due to the potential sensitive nature of the material, applicant background screening reports will not be published.

The following sections describe the process ICANN will use to perform background screening.

2.1.1 General business diligence and criminal history

Applying entities that are publicly traded corporations listed and in good standing on any of the world's largest 25 stock exchanges (as listed by the World Federation of Exchanges) will be deemed to have passed the general business diligence and criminal history screening. The largest 25 will be based on the domestic market capitalization reported at the end of the most recent calendar year prior to launching each round.[1]

Before an entity is listed on an exchange, it must undergo significant due diligence including an investigation by the exchange, regulators, and investment banks. As a publicly listed corporation, an entity is subject to ongoing scrutiny from shareholders, analysts, regulators, and exchanges. All exchanges require monitoring and disclosure of material information about directors, officers, and other key personnel, including criminal behavior. In totality, these requirements meet or exceed the screening ICANN will perform.

For applicants not listed on one of these exchanges, ICANN will submit identifying information for the entity, officers, directors, and major shareholders to an international background screening service. The service provider(s) will use the criteria listed in section 1.2.1 and return results that match these criteria. Only publicly available information will be used in this inquiry.

ICANN is in discussions with INTERPOL to identify ways in which both organizations can collaborate in background screenings of individuals, entities and their identity documents consistent with both organizations' rules and regulations. Note that the applicant is expected to disclose potential problems in meeting the criteria in the application, and provide any clarification or explanation at the time of application submission. Results returned from

---

[1] See http://www.world-exchanges.org/statistics/annual/2010/equity-markets/domestic-market-capitalization

the background screening process will be matched with the disclosures provided by the applicant and those cases will be followed up to resolve issues of discrepancies or potential false positives.

If no hits are returned, the application will generally pass this portion of the background screening.

2.1.2 History of cybersquatting

ICANN will screen applicants against UDRP cases and legal databases as financially feasible for data that may indicate a pattern of cybersquatting behavior pursuant to the criteria listed in section 1.2.1.

The applicant is required to make specific declarations regarding these activities in the application. Results returned during the screening process will be matched with the disclosures provided by the applicant and those instances will be followed up to resolve issues of discrepancies or potential false positives.

If no hits are returned, the application will generally pass this portion of the background screening.

2.2 Initial Evaluation

The Initial Evaluation consists of two types of review. Each type is composed of several elements.

String review: The first review focuses on the applied-for gTLD string to test:

- Whether the applied-for gTLD string is so similar to other strings that it would create a probability of user confusion;
- Whether the applied-for gTLD string might adversely affect DNS security or stability; and
- Whether evidence of requisite government approval is provided in the case of certain geographic names.

Applicant review: The second review focuses on the applicant to test:

- Whether the applicant has the requisite technical, operational, and financial capability to operate a registry; and
- Whether the registry services offered by the applicant might adversely affect DNS security or stability.

2.2.1 String Reviews

In the Initial Evaluation, ICANN reviews every applied-for gTLD string. Those reviews are described in greater detail in the following subsections.

2.2.1.1 String Similarity Review

This review involves a preliminary comparison of each applied-for gTLD string against existing TLDs, Reserved Names (see subsection 2.2.1.2), and other applied-for strings. The objective of this review is to prevent user confusion and loss of confidence in the DNS resulting from delegation of many similar strings.

Note: In this Applicant Guidebook, "similar" means strings so similar that they create a probability of user confusion if more than one of the strings is delegated into the root zone.

The visual similarity check that occurs during Initial Evaluation is intended to augment the objection and dispute resolution process (see Module 3, Dispute Resolution Procedures) that addresses all types of similarity.

This similarity review will be conducted by an independent String Similarity Panel.

2.2.1.1.1 Reviews Performed

The String Similarity Panel's task is to identify visual string similarities that would create a probability of user confusion.

The panel performs this task of assessing similarities that would lead to user confusion in four sets of circumstances, when comparing:

- Applied-for gTLD strings against existing TLDs and reserved names;
- Applied-for gTLD strings against other applied-for gTLD strings;
- Applied-for gTLD strings against strings requested as IDN ccTLDs; and
- Applied-for 2-character IDN gTLD strings against:
    - Every other single character.
    - Any other 2-character ASCII string (to protect possible future ccTLD delegations).

Similarity to Existing TLDs or Reserved Names – This review involves cross-checking between each applied-for string and the lists of existing TLD strings and Reserved Names to determine whether two strings are so similar to one another that they create a probability of user confusion.

In the simple case in which an applied-for gTLD string is identical to an existing TLD or reserved name, the online application system will not allow the application to be submitted.

Testing for identical strings also takes into consideration the code point variants listed in any relevant IDN table. For example, protocols treat equivalent labels as alternative forms of the same label, just as “foo” and “Foo” are treated as alternative forms of the same label (RFC 3490).

All TLDs currently in the root zone can be found at http://iana.org/domains/root/db/.

IDN tables that have been submitted to ICANN are available at http://www.iana.org/domains/idn-tables/.

Similarity to Other Applied-for gTLD Strings (String Contention Sets) – All applied-for gTLD strings will be reviewed against one another to identify any similar strings. In performing this review, the String Similarity Panel will create contention sets that may be used in later stages of evaluation.

A contention set contains at least two applied-for strings identical or similar to one another. Refer to Module 4, String Contention Procedures, for more information on contention sets and contention resolution.

ICANN will notify applicants who are part of a contention set as soon as the String Similarity review is completed. (This provides a longer period for contending applicants to reach their own resolution before reaching the contention resolution stage.) These contention sets will also be published on ICANN’s website.

Similarity to TLD strings requested as IDN ccTLDs -- Applied-for gTLD strings will also be reviewed for similarity to TLD strings requested in the IDN ccTLD Fast Track process (see http://www.icann.org/en/topics/idn/fast-track/). Should a conflict with a prospective fast-track IDN ccTLD be identified, ICANN will take the following approach to resolving the conflict.

If one of the applications has completed its respective process before the other is lodged, that TLD will be delegated. A gTLD application that has successfully completed all relevant evaluation stages, including dispute resolution and string contention, if applicable, and is eligible for entry into a registry agreement will be considered complete, and therefore would not be disqualified by a newly-filed IDN ccTLD request. Similarly, an IDN ccTLD request that has completed evaluation (i.e., is validated) will be considered complete and therefore would not be disqualified by a newly-filed gTLD application.

In the case where neither application has completed its respective process, where the gTLD application does not have the required approval from the relevant government or public authority, a validated request for an IDN ccTLD will prevail and the gTLD application will not be approved. The term "validated" is defined in the IDN ccTLD Fast Track Process Implementation, which can be found at http://www.icann.org/en/topics/idn.

In the case where a gTLD applicant has obtained the support or non-objection of the relevant government or public authority, but is eliminated due to contention with a string requested in the IDN ccTLD Fast Track process, a full refund of the evaluation fee is available to the applicant if the gTLD application was submitted prior to the publication of the ccTLD request.

Review of 2-character IDN strings — In addition to the above reviews, an applied-for gTLD string that is a 2-character IDN string is reviewed by the String Similarity Panel for visual similarity to:

a) Any one-character label (in any script), and

b) Any possible two-character ASCII combination.

An applied-for gTLD string that is found to be too similar to a) or b) above will not pass this review.

2.2.1.1.2 Review Methodology

The String Similarity Panel is informed in part by an algorithmic score for the visual similarity between each applied-for string and each of other existing and applied-for TLDs and reserved names. The score will provide one objective measure for consideration by the panel, as part of the process of identifying strings likely to result in user confusion. In general, applicants should expect that a higher visual similarity score suggests a higher probability that the application will not pass the String Similarity review. However, it should be noted that the score is only indicative and that the final determination of similarity is entirely up to the Panel's judgment.

The algorithm, user guidelines, and additional background information are available to applicants for testing and informational purposes.[2] Applicants will have the ability to test their strings and obtain algorithmic results through the application system prior to submission of an application.

The algorithm supports the common characters in Arabic, Chinese, Cyrillic, Devanagari, Greek, Japanese, Korean, and Latin scripts. It can also compare strings in different scripts to each other.

The panel will also take into account variant characters, as defined in any relevant language table, in its determinations. For example, strings that are not visually similar but are determined to be variant TLD strings based on an IDN table would be placed in a contention set. Variant TLD strings that are listed as part of the application will also be subject to the string similarity analysis.[3]

The panel will examine all the algorithm data and perform its own review of similarities between strings and whether they rise to the level of string confusion. In cases of strings in scripts not yet supported by the algorithm, the panel's assessment process is entirely manual.

The panel will use a common standard to test for whether string confusion exists, as follows:

Standard for String Confusion – String confusion exists where a string so nearly resembles another visually that it is likely to deceive or cause confusion. For the likelihood of confusion to exist, it must be probable, not merely possible that confusion will arise in the mind of the average, reasonable Internet user. Mere association, in the sense that the string brings another string to mind, is insufficient to find a likelihood of confusion.

2.2.1.1.3 Outcomes of the String Similarity Review

An application that fails the String Similarity review due to similarity to an existing TLD will not pass the Initial Evaluation,

---

[2] *See* http://icann.sword-group.com/algorithm/

[3] In the case where an applicant has listed Declared Variants in its application (see subsection 1.3.3), the panel will perform an analysis of the listed strings to confirm that the strings are variants according to the applicant's IDN table. This analysis may include comparison of applicant IDN tables with other existing tables for the same language or script, and forwarding any questions to the applicant.

and no further reviews will be available. Where an application does not pass the String Similarity review, the applicant will be notified as soon as the review is completed.

An application for a string that is found too similar to another applied-for gTLD string will be placed in a contention set.

An application that passes the String Similarity review is still subject to objection by an existing TLD operator or by another gTLD applicant in the current application round. That process requires that a string confusion objection be filed by an objector having the standing to make such an objection. Such category of objection is not limited to visual similarity. Rather, confusion based on any type of similarity (including visual, aural, or similarity of meaning) may be claimed by an objector. Refer to Module 3, Dispute Resolution Procedures, for more information about the objection process.

An applicant may file a formal objection against another gTLD application on string confusion grounds. Such an objection may, if successful, change the configuration of the preliminary contention sets in that the two applied-for gTLD strings will be considered in direct contention with one another (see Module 4, String Contention Procedures). The objection process will not result in removal of an application from a contention set.

2.2.1.2 Reserved Names and Other Unavailable Strings

Certain names are not available as gTLD strings, as detailed in this section.

2.2.1.2.1 Reserved Names

All applied-for gTLD strings are compared with the list of top-level Reserved Names to ensure that the applied-for gTLD string does not appear on that list.

Top-Level Reserved Names List

AFRINIC	*IANA-SERVERS*	*NRO*
ALAC	*ICANN*	*RFC-EDITOR*
APNIC	*IESG*	*RIPE*
ARIN	*IETF*	*ROOT-SERVERS*
ASO	*INTERNIC*	*RSSAC*
CCNSO	*INVALID*	*SSAC*
*EXAMPLE**	*IRTF*	*TEST**
GAC	*ISTF*	*TLD*

GNSO	*LACNIC*	*WHOIS*
GTLD-SERVERS	*LOCAL*	*WWW*
IAB	*LOCALHOST*	
IANA	*NIC*	
*Note that in addition to the above strings, ICANN will reserve translations of the terms "test" and "example" in multiple languages. The remainder of the strings are reserved only in the form included above.		

If an applicant enters a Reserved Name as its applied-for gTLD string, the application system will recognize the Reserved Name and will not allow the application to be submitted.

In addition, applied-for gTLD strings are reviewed during the String Similarity review to determine whether they are similar to a Reserved Name. An application for a gTLD string that is identified as too similar to a Reserved Name will not pass this review.

2.2.1.2.2 Declared Variants

Names appearing on the Declared Variants List (see section 1.3.3) will be posted on ICANN's website and will be treated essentially the same as Reserved Names, until such time as variant management solutions are developed and variant TLDs are delegated. That is, an application for a gTLD string that is identical or similar to a string on the Declared Variants List will not pass this review.

2.2.1.2.3 Strings Ineligible for Delegation

The following names are prohibited from delegation as gTLDs in the initial application round. Future application rounds may differ according to consideration of further policy advice.

These names are not being placed on the Top-Level Reserved Names List, and thus are not part of the string similarity review conducted for names on that list. Refer to subsection 2.2.1.1: where applied-for gTLD strings are reviewed for similarity to existing TLDs and reserved names, the strings listed in this section are not reserved names and accordingly are not incorporated into this review.

Applications for names appearing on the list included in this section will not be approved.

2.2.1.3 DNS Stability Review

This review determines whether an applied-for gTLD string might cause instability to the DNS. In all cases, this will involve a review for conformance with technical and other requirements for gTLD strings (labels). In some exceptional cases, an extended review may be necessary to investigate possible technical stability problems with the applied-for gTLD string.

Note: All applicants should recognize issues surrounding invalid TLD queries at the root level of the DNS.

Any new TLD registry operator may experience unanticipated queries, and some TLDs may experience a non-trivial load of unanticipated queries. For more information, see the Security and Stability Advisory Committee (SSAC)'s report on this topic at http://www.icann.org/en/committees/security/sac045.pdf. Some publicly available statistics are also available at http://stats.l.root-servers.org/.

ICANN will take steps to alert applicants of the issues raised in SAC045, and encourage the applicant to prepare to minimize the possibility of operational difficulties that would pose a stability or availability problem for its registrants and users. However, this notice is merely an advisory to applicants and is not part of the evaluation, unless the string raises significant security or stability issues as described in the following section.

2.2.1.3.1 DNS Stability: String Review Procedure

New gTLD labels must not adversely affect the security or stability of the DNS. During the Initial Evaluation period, ICANN will conduct a preliminary review on the set of applied-for gTLD strings to:

- ensure that applied-for gTLD strings comply with the requirements provided in section 2.2.1.3.2, and
- determine whether any strings raise significant security or stability issues that may require further review.

There is a very low probability that extended analysis will be necessary for a string that fully complies with the string requirements in subsection 2.2.1.3.2 of this module. However, the string review process provides an additional safeguard if unanticipated security or stability issues arise concerning an applied-for gTLD string.

In such a case, the DNS Stability Panel will perform an extended review of the applied-for gTLD string during the Initial Evaluation period. The panel will determine whether the string fails to comply with relevant standards or creates a condition that adversely affects the throughput, response time, consistency, or coherence of responses to Internet servers or end systems, and will report on its findings.

If the panel determines that the string complies with relevant standards and does not create the conditions described above, the application will pass the DNS Stability review.

If the panel determines that the string does not comply with relevant technical standards, or that it creates a condition that adversely affects the throughput, response time, consistency, or coherence of responses to Internet servers or end systems, the application will not pass the Initial Evaluation, and no further reviews are available. In the case where a string is determined likely to cause security or stability problems in the DNS, the applicant will be notified as soon as the DNS Stability review is completed.

2.2.1.3.2 String Requirements

ICANN will review each applied-for gTLD string to ensure that it complies with the requirements outlined in the following paragraphs.

If an applied-for gTLD string is found to violate any of these rules, the application will not pass the DNS Stability review. No further reviews are available.

Part I -- Technical Requirements for all Labels (Strings) – The technical requirements for top-level domain labels follow.

1.1 The ASCII label (i.e., the label as transmitted on the wire) must be valid as specified in technical standards *Domain Names: Implementation and Specification* (RFC 1035), and *Clarifications to the DNS Specification* (RFC 2181) and any updates thereto. This includes the following:

  1.1.1 The label must have no more than 63 characters.

  1.1.2 Upper and lower case characters are treated as identical.

1.2 The ASCII label must be a valid host name, as specified in the technical standards *DOD Internet Host Table Specification* (RFC 952), *Requirements for Internet Hosts — Application and Support* (RFC 1123), and *Application Techniques for Checking and Transformation of Names (RFC 3696), Internationalized Domain Names in Applications (IDNA)(RFCs 5890-5894), and any updates thereto.* This includes the following:

  1.2.1 The ASCII label must consist entirely of letters (alphabetic characters a-z), or

1.2.2 The label must be a valid IDNA A-label (further restricted as described in Part II below).

Part II -- Requirements for Internationalized Domain Names – These requirements apply only to prospective top-level domains that contain non-ASCII characters. Applicants for these internationalized top-level domain labels are expected to be familiar with the Internet Engineering Task Force (IETF) IDNA standards, Unicode standards, and the terminology associated with Internationalized Domain Names.

2.1 The label must be an A-label as defined in IDNA, converted from (and convertible to) a U-label that is consistent with the definition in IDNA, and further restricted by the following, non-exhaustive, list of limitations:

2.1.1 Must be a valid A-label according to IDNA.

2.1.2 The derived property value of all codepoints used in the U-label, as defined by IDNA, must be PVALID or CONTEXT (accompanied by unambiguous contextual rules).[4]

2.1.3 The general category of all codepoints, as defined by IDNA, must be one of (Ll, Lo, Lm, Mn, Mc).

2.1.4 The U-label must be fully compliant with Normalization Form C, as described in *Unicode Standard Annex #15: Unicode Normalization Forms.* See also examples in http://unicode.org/faq/normalization.html.

2.1.5 The U-label must consist entirely of characters with the same directional property, or fulfill the requirements of the Bidi rule per RFC 5893.

2.2 The label must meet the relevant criteria of the ICANN *Guidelines for the Implementation of Internationalised Domain Names*. See http://www.icann.org/en/topics/idn/implementatio

---

[4] It is expected that conversion tools for IDNA will be available before the Application Submission period begins, and that labels will be checked for validity under IDNA. In this case, labels valid under the previous version of the protocol (IDNA2003) but not under IDNA will not meet this element of the requirements. Labels that are valid under both versions of the protocol will meet this element of the requirements. Labels valid under IDNA but not under IDNA2003 may meet the requirements; however, applicants are strongly advised to note that the duration of the transition period between the two protocols cannot presently be estimated nor guaranteed in any specific timeframe. The development of support for IDNA in the broader software applications environment will occur gradually. During that time, TLD labels that are valid under IDNA, but not under IDNA2003, will have limited functionality.

n-guidelines.htm. This includes the following, non-exhaustive, list of limitations:

2.2.1 All code points in a single label must be taken from the same script as determined by the Unicode Standard Annex #24: Unicode Script Property (See http://www.unicode.org/reports/tr24/).

2.2.2 Exceptions to 2.2.1 are permissible for languages with established orthographies and conventions that require the commingled use of multiple scripts. However, even with this exception, visually confusable characters from different scripts will not be allowed to co-exist in a single set of permissible code points unless a corresponding policy and character table are clearly defined.

Part III - Policy Requirements for Generic Top-Level Domains – These requirements apply to all prospective top-level domain strings applied for as gTLDs.

3.1 Applied-for gTLD strings in ASCII must be composed of three or more visually distinct characters. Two-character ASCII strings are not permitted, to avoid conflicting with current and future country codes based on the ISO 3166-1 standard.

3.2 Applied-for gTLD strings in IDN scripts must be composed of two or more visually distinct characters in the script, as appropriate.[5] Note, however, that a two-character IDN string will not be approved if:

3.2.1 It is visually similar to any one-character label (in any script); or

3.2.2 It is visually similar to any possible two-character ASCII combination.

See the String Similarity review in subsection 2.2.1.1 for additional information on this requirement.

---

[5] Note that the Joint ccNSO-GNSO IDN Working Group (JIG) has made recommendations that this section be revised to allow for single-character IDN gTLD labels. See the JIG Final Report at http://gnso.icann.org/drafts/jig-final-report-30mar11-en.pdf. Implementation models for these recommendations are being developed for community discussion.

2.2.1.4 Geographic Names Review

Applications for gTLD strings must ensure that appropriate consideration is given to the interests of governments or public authorities in geographic names. The requirements and procedure ICANN will follow in the evaluation process are described in the following paragraphs. Applicants should review these requirements even if they do not believe their intended gTLD string is a geographic name. All applied-for gTLD strings will be reviewed according to the requirements in this section, regardless of whether the application indicates it is for a geographic name.

2.2.1.4.1 Treatment of Country or Territory Names[6]

Applications for strings that are <u>country or territory names</u> will not be approved, as they are not available under the New gTLD Program in this application round. A string shall be considered to be a country or territory name if:

i. it is an alpha-3 code listed in the ISO 3166-1 standard.

ii. it is a long-form name listed in the ISO 3166-1 standard, or a translation of the long-form name in any language.

iii. it is a short-form name listed in the ISO 3166-1 standard, or a translation of the short-form name in any language.

iv. it is the short- or long-form name association with a code that has been designated as "exceptionally reserved" by the ISO 3166 Maintenance Agency.

v. it is a separable component of a country name designated on the "Separable Country Names List," or is a translation of a name appearing on the list, in any language. See the Annex at the end of this module.

vi. it is a permutation or transposition of any of the names included in items (i) through (v). Permutations include removal of spaces, insertion of punctuation, and addition or

---

[6] Country and territory names are excluded from the process based on advice from the Governmental Advisory Committee in recent communiqués providing interpretation of Principle 2.2 of the GAC Principles regarding New gTLDs to indicate that strings which are a meaningful representation or abbreviation of a country or territory name should be handled through the forthcoming ccPDP, and other geographic strings could be allowed in the gTLD space if in agreement with the relevant government or public authority.

removal of grammatical articles like "the." A transposition is considered a change in the sequence of the long or short–form name, for example, "RepublicCzech" or "IslandsCayman."

vii. it is a name by which a country is commonly known, as demonstrated by evidence that the country is recognized by that name by an intergovernmental or treaty organization.

2.2.1.4.2 Geographic Names Requiring Government Support

The following types of applied-for strings are considered geographic names and must be accompanied by documentation of support or non-objection from the relevant governments or public authorities:

1. An application for any string that is a representation, in any language, of the ***capital city name*** of any country or territory listed in the ISO 3166-1 standard.

2. An application for a ***city name***, where the applicant declares that it intends to use the gTLD for purposes associated with the city name.

   City names present challenges because city names may also be generic terms or brand names, and in many cases city names are not unique. Unlike other types of geographic names, there are no established lists that can be used as objective references in the evaluation process. Thus, city names are not universally protected. However, the process does provide a means for cities and applicants to work together where desired.

   An application for a city name will be subject to the geographic names requirements (i.e., will require documentation of support or non-objection from the relevant governments or public authorities) if:

   (a) It is clear from applicant statements within the application that the applicant will use the TLD primarily for purposes associated with the city name; and

(b) The applied-for string is a city name as listed on official city documents.[7]

3. An application for any string that is an exact match of a *sub-national place name*, such as a county, province, or state, listed in the ISO 3166-2 standard.

4. An application for a string listed as a UNESCO region[8] or appearing on the "Composition of macro geographical (continental) regions, geographical sub-regions, and selected economic and other groupings" list.[9]

   In the case of an application for a string appearing on either of the lists above, documentation of support will be required from at least 60% of the respective national governments in the region, and there may be no more than one written statement of objection to the application from relevant governments in the region and/or public authorities associated with the continent or the region.

   Where the 60% rule is applied, and there are common regions on both lists, the regional composition contained in the "Composition of macro geographical (continental) regions, geographical sub-regions, and selected economic and other groupings" takes precedence.

An applied-for gTLD string that falls into any of 1 through 4 listed above is considered to represent a geographic name. In the event of any doubt, it is in the applicant's interest to consult with relevant governments and public authorities and enlist their support or non-objection prior to submission of the application, in order to preclude possible objections and pre-address any ambiguities concerning the string and applicable requirements.

Strings that include but do not match a geographic name (as defined in this section) will not be considered geographic names as defined by section 2.2.1.4.2, and therefore will not require documentation of government support in the evaluation process.

---

[7] City governments with concerns about strings that are duplicates, nicknames or close renderings of a city name should not rely on the evaluation process as the primary means of protecting their interests in a string. Rather, a government may elect to file a formal objection to an application that is opposed by the relevant community, or may submit its own application for the string.

[8] *See* http://www.unesco.org/new/en/unesco/worldwide/.

[9] *See* http://unstats.un.org/unsd/methods/m49/m49regin.htm.

For each application, the Geographic Names Panel will determine which governments are relevant based on the inputs of the applicant, governments, and its own research and analysis. In the event that there is more than one relevant government or public authority for the applied-for gTLD string, the applicant must provide documentation of support or non-objection from all the relevant governments or public authorities. It is anticipated that this may apply to the case of a sub-national place name.

It is the applicant's responsibility to:

- identify whether its applied-for gTLD string falls into any of the above categories; and
- identify and consult with the relevant governments or public authorities; and
- identify which level of government support is required.

Note: the level of government and which administrative agency is responsible for the filing of letters of support or non-objection is a matter for each national administration to determine. Applicants should consult within the relevant jurisdiction to determine the appropriate level of support.

The requirement to include documentation of support for certain applications does not preclude or exempt applications from being the subject of objections on community grounds (refer to subsection 3.1.1 of Module 3), under which applications may be rejected based on objections showing substantial opposition from the targeted community.

2.2.1.4.3 Documentation Requirements

The documentation of support or non-objection should include a signed letter from the relevant government or public authority. Understanding that this will differ across the respective jurisdictions, the letter could be signed by the minister with the portfolio responsible for domain name administration, ICT, foreign affairs, or the Office of the Prime Minister or President of the relevant jurisdiction; or a senior representative of the agency or department responsible for domain name administration, ICT, foreign affairs, or the Office of the Prime Minister. To assist the applicant in determining who the relevant government or public authority may be for a potential geographic name, the applicant may wish to consult with the relevant

Governmental Advisory Committee (GAC) representative.[10]

The letter must clearly express the government's or public authority's support for or non-objection to the applicant's application and demonstrate the government's or public authority's understanding of the string being requested and its intended use.

The letter should also demonstrate the government's or public authority's understanding that the string is being sought through the gTLD application process and that the applicant is willing to accept the conditions under which the string will be available, i.e., entry into a registry agreement with ICANN requiring compliance with consensus policies and payment of fees. (See Module 5 for a discussion of the obligations of a gTLD registry operator.)

A sample letter of support is available as an attachment to this module.

Applicants and governments may conduct discussions concerning government support for an application at any time. Applicants are encouraged to begin such discussions at the earliest possible stage, and enable governments to follow the processes that may be necessary to consider, approve, and generate a letter of support or non-objection.

It is important to note that a government or public authority is under no obligation to provide documentation of support or non-objection in response to a request by an applicant.

It is also possible that a government may withdraw its support for an application at a later time, including after the new gTLD has been delegated, if the registry operator has deviated from the conditions of original support or non-objection. Applicants should be aware that ICANN has committed to governments that, in the event of a dispute between a government (or public authority) and a registry operator that submitted documentation of support from that government or public authority, **ICANN will comply with a legally binding order** from a court in the jurisdiction of the government or public authority that has given support to an application.

2.2.1.4.4 Review Procedure for Geographic Names

A Geographic Names Panel (GNP) will determine whether each applied-for gTLD string represents a geographic

---

[10] *See* https://gacweb.icann.org/display/gacweb/GAC+Members

name, and verify the relevance and authenticity of the supporting documentation where necessary.

The GNP will review all applications received, not only those where the applicant has noted its applied-for gTLD string as a geographic name. For any application where the GNP determines that the applied-for gTLD string is a country or territory name (as defined in this module), the application will not pass the Geographic Names review and will be denied. No additional reviews will be available.

For any application where the GNP determines that the applied-for gTLD string is not a geographic name requiring government support (as described in this module), the application will pass the Geographic Names review with no additional steps required.

For any application where the GNP determines that the applied-for gTLD string is a geographic name requiring government support, the GNP will confirm that the applicant has provided the required documentation from the relevant governments or public authorities, and that the communication from the government or public authority is legitimate and contains the required content. ICANN may confirm the authenticity of the communication by consulting with the relevant diplomatic authorities or members of ICANN's Governmental Advisory Committee for the government or public authority concerned on the competent authority and appropriate point of contact within their administration for communications.

The GNP may communicate with the signing entity of the letter to confirm their intent and their understanding of the terms on which the support for an application is given.

In cases where an applicant has not provided the required documentation, the applicant will be contacted and notified of the requirement, and given a limited time frame to provide the documentation. If the applicant is able to provide the documentation before the close of the Initial Evaluation period, and the documentation is found to meet the requirements, the applicant will pass the Geographic Names review. If not, the applicant will have additional time to obtain the required documentation; however, if the applicant has not produced the required documentation by the required date (at least 90 calendar days from the date of notice), the application will be considered incomplete and will be ineligible for further review. The applicant may reapply in subsequent application rounds, if desired, subject to the fees and requirements of the specific application rounds.

If there is more than one application for a string representing a certain geographic name as described in this section, and the applications have requisite government approvals, the applications will be suspended pending resolution by the applicants. If the applicants have not reached a resolution by either the date of the end of the application round (as announced by ICANN), or the date on which ICANN opens a subsequent application round, whichever comes first, the applications will be rejected and applicable refunds will be available to applicants according to the conditions described in section 1.5.

However, in the event that a contention set is composed of multiple applications with documentation of support from the same government or public authority, the applications will proceed through the contention resolution procedures described in Module 4 when requested by the government or public authority providing the documentation.

If an application for a string representing a geographic name is in a contention set with applications for similar strings that have not been identified as geographical names, the string contention will be resolved using the string contention procedures described in Module 4.

2.2.2 Applicant Reviews

Concurrent with the applied-for gTLD string reviews described in subsection 2.2.1, ICANN will review the applicant's technical and operational capability, its financial capability, and its proposed registry services. Those reviews are described in greater detail in the following subsections.

2.2.2.1 Technical/Operational Review

In its application, the applicant will respond to a set of questions (see questions 24 – 44 in the Application Form) intended to gather information about the applicant's technical capabilities and its plans for operation of the proposed gTLD.

Applicants are not required to have deployed an actual gTLD registry to pass the Technical/Operational review. It will be necessary, however, for an applicant to demonstrate a clear understanding and accomplishment of some groundwork toward the key technical and operational aspects of a gTLD registry operation. Subsequently, each applicant that passes the technical evaluation and all other steps will be required to complete a pre-delegation technical test prior to delegation of the new gTLD. Refer to Module 5, Transition to Delegation, for additional information.

2.2.2.2 Financial Review

In its application, the applicant will respond to a set of questions (see questions 45-50 in the Application Form) intended to gather information about the applicant's financial capabilities for operation of a gTLD registry and its financial planning in preparation for long-term stability of the new gTLD.

Because different registry types and purposes may justify different responses to individual questions, evaluators will pay particular attention to the consistency of an application across all criteria. For example, an applicant's scaling plans identifying system hardware to ensure its capacity to operate at a particular volume level should be consistent with its financial plans to secure the necessary equipment. That is, the evaluation criteria scale with the applicant plans to provide flexibility.

2.2.2.3 Evaluation Methodology

Dedicated technical and financial evaluation panels will conduct the technical/operational and financial reviews, according to the established criteria and scoring mechanism included as an attachment to this module. These reviews are conducted on the basis of the information each applicant makes available to ICANN in its response to the questions in the Application Form.

The evaluators may request clarification or additional information during the Initial Evaluation period. For each application, clarifying questions will be consolidated and sent to the applicant from each of the panels. The applicant will thus have an opportunity to clarify or supplement the application in those areas where a request is made by the evaluators. These communications will occur via TAS. Unless otherwise noted, such communications will include a 2-week deadline for the applicant to respond. Any supplemental information provided by the applicant will become part of the application.

It is the applicant's responsibility to ensure that the questions have been fully answered and the required documentation is attached. Evaluators are entitled, but not obliged, to request further information or evidence from an applicant, and are not obliged to take into account any information or evidence that is not made available in the application and submitted by the due date, unless explicitly requested by the evaluators.

2.2.3 Registry Services Review

Concurrent with the other reviews that occur during the Initial Evaluation period, ICANN will review the applicant's proposed registry services for any possible adverse impact on security or stability. The applicant will be required to provide a list of proposed registry services in its application.

2.2.3.1 Definitions

Registry services are defined as:

1. operations of the registry critical to the following tasks: the receipt of data from registrars concerning registrations of domain names and name servers; provision to registrars of status information relating to the zone servers for the TLD; dissemination of TLD zone files; operation of the registry zone servers; and dissemination of contact and other information concerning domain name server registrations in the TLD as required by the registry agreement;

2. other products or services that the registry operator is required to provide because of the establishment of a consensus policy; and

3. any other products or services that only a registry operator is capable of providing, by reason of its designation as the registry operator.

Proposed registry services will be examined to determine if they might raise significant stability or security issues. Examples of services proposed by existing registries can be found at http://www.icann.org/en/registries/rsep/. In most cases, these proposed services successfully pass this inquiry.

Registry services currently provided by gTLD registries can be found in registry agreement appendices. See http://www.icann.org/en/registries/agreements.htm.

A full definition of registry services can be found at http://www.icann.org/en/registries/rsep/rsep.html.

For purposes of this review, security and stability are defined as follows:

Security – an effect on security by the proposed registry service means (1) the unauthorized disclosure, alteration, insertion or destruction of registry data, or (2) the unauthorized access to or disclosure of information or resources on the Internet by systems operating in accordance with all applicable standards.

Stability – an effect on stability means that the proposed registry service (1) does not comply with applicable relevant standards that are authoritative and published by a well-established, recognized, and authoritative standards body, such as relevant standards-track or best current practice RFCs sponsored by the IETF, or (2) creates a condition that adversely affects the throughput, response time, consistency, or coherence of responses to Internet servers or end systems, operating in accordance with applicable relevant standards that are authoritative and published by a well-established, recognized and authoritative standards body, such as relevant standards-track or best current practice RFCs and relying on registry operator's delegation information or provisioning services.

2.2.3.2 *Customary Services*

The following registry services are customary services offered by a registry operator:

- Receipt of data from registrars concerning registration of domain names and name servers
- Dissemination of TLD zone files
- Dissemination of contact or other information concerning domain name registrations (e.g., port-43 WHOIS, Web-based Whois, RESTful Whois)
- DNS Security Extensions

The applicant must describe whether any of these registry services are intended to be offered in a manner unique to the TLD.

Any additional registry services that are unique to the proposed gTLD registry should be described in detail. Directions for describing the registry services are provided at http://www.icann.org/en/registries/rsep/rrs_sample.html.

2.2.3.3 *TLD Zone Contents*

ICANN receives a number of inquiries about use of various record types in a registry zone, as entities contemplate different business and technical models. Permissible zone contents for a TLD zone are:

- Apex SOA record.
- Apex NS records and in-bailiwick glue for the TLD's DNS servers.

- NS records and in-bailiwick glue for DNS servers of registered names in the TLD.
- DS records for registered names in the TLD.
- Records associated with signing the TLD zone (i.e., RRSIG, DNSKEY, NSEC, and NSEC3).

An applicant wishing to place any other record types into its TLD zone should describe in detail its proposal in the registry services section of the application. This will be evaluated and could result in an extended evaluation to determine whether the service would create a risk of a meaningful adverse impact on security or stability of the DNS. Applicants should be aware that a service based on use of less-common DNS resource records in the TLD zone, even if approved in the registry services review, might not work as intended for all users due to lack of application support.

2.2.3.4 Methodology

Review of the applicant's proposed registry services will include a preliminary determination of whether any of the proposed registry services could raise significant security or stability issues and require additional consideration.

If the preliminary determination reveals that there may be significant security or stability issues (as defined in subsection 2.2.3.1) surrounding a proposed service, the application will be flagged for an extended review by the Registry Services Technical Evaluation Panel (RSTEP), see http://www.icann.org/en/registries/rsep/rstep.html). This review, if applicable, will occur during the Extended Evaluation period (refer to Section 2.3).

In the event that an application is flagged for extended review of one or more registry services, an additional fee to cover the cost of the extended review will be due from the applicant. Applicants will be advised of any additional fees due, which must be received before the additional review begins.

2.2.4 Applicant's Withdrawal of an Application

An applicant who does not pass the Initial Evaluation may withdraw its application at this stage and request a partial refund (refer to subsection 1.5 of Module 1).

2.3 Extended Evaluation

An applicant may request an Extended Evaluation if the application has failed to pass the Initial Evaluation elements concerning:

- Geographic names (refer to subsection 2.2.1.4). There is no additional fee for an extended evaluation in this instance.
- Demonstration of technical and operational capability (refer to subsection 2.2.2.1). There is no additional fee for an extended evaluation in this instance.
- Demonstration of financial capability (refer to subsection 2.2.2.2). There is no additional fee for an extended evaluation in this instance.
- Registry services (refer to subsection 2.2.3). Note that this investigation incurs an additional fee (the Registry Services Review Fee) if the applicant wishes to proceed. See Section 1.5 of Module 1 for fee and payment information.

An Extended Evaluation does not imply any change of the evaluation criteria. The same criteria used in the Initial Evaluation will be used to review the application in light of clarifications provided by the applicant.

From the time an applicant receives notice of failure to pass the Initial Evaluation, eligible applicants will have 15 calendar days to submit to ICANN the Notice of Request for Extended Evaluation. If the applicant does not explicitly request the Extended Evaluation (and pay an additional fee in the case of a Registry Services inquiry) the application will not proceed.

2.3.1 Geographic Names Extended Evaluation

In the case of an application that has been identified as a geographic name requiring government support, but where the applicant has not provided sufficient evidence of support or non-objection from all relevant governments or public authorities by the end of the Initial Evaluation period, the applicant has additional time in the Extended Evaluation period to obtain and submit this documentation.

If the applicant submits the documentation to the Geographic Names Panel by the required date, the GNP will perform its review of the documentation as detailed in section 2.2.1.4. If the applicant has not provided the documentation by the required date (at least 90 calendar days from the date of the notice), the application will not pass the Extended Evaluation, and no further reviews are available.

2.3.2 Technical/Operational or Financial Extended Evaluation

The following applies to an Extended Evaluation of an applicant's technical and operational capability or financial capability, as described in subsection 2.2.2.

An applicant who has requested Extended Evaluation will again access the online application system (TAS) and clarify its answers to those questions or sections on which it received a non-passing score (or, in the case of an application where individual questions were passed but the total score was insufficient to pass Initial Evaluation, those questions or sections on which additional points are possible). The answers should be responsive to the evaluator report that indicates the reasons for failure, or provide any amplification that is not a material change to the application. Applicants may not use the Extended Evaluation period to substitute portions of new information for the information submitted in their original applications, i.e., to materially change the application.

An applicant participating in an Extended Evaluation on the Technical / Operational or Financial reviews will have the option to have its application reviewed by the same evaluation panelists who performed the review during the Initial Evaluation period, or to have a different set of panelists perform the review during Extended Evaluation.

The Extended Evaluation allows an additional exchange of information between the evaluators and the applicant to further clarify information contained in the application. This supplemental information will become part of the application record. Such communications will include a deadline for the applicant to respond.

ICANN will notify applicants at the end of the Extended Evaluation period as to whether they have passed. If an application passes Extended Evaluation, it continues to the next stage in the process. If an application does not pass Extended Evaluation, it will proceed no further. No further reviews are available.

2.3.3 Registry Services Extended Evaluation

This section applies to Extended Evaluation of registry services, as described in subsection 2.2.3.

If a proposed registry service has been referred to the Registry Services Technical Evaluation Panel (RSTEP) for an extended review, the RSTEP will form a review team of members with the appropriate qualifications.

The review team will generally consist of three members, depending on the complexity of the registry service proposed. In a 3-member panel, the review could be conducted within 30 to 45 calendar days. In cases where a 5-member panel is needed, this will be identified before the extended evaluation starts. In a 5-member panel, the review could be conducted in 45 calendar days or fewer.

The cost of an RSTEP review will be covered by the applicant through payment of the Registry Services Review Fee. Refer to payment procedures in section 1.5 of Module 1. The RSTEP review will not commence until payment has been received.

If the RSTEP finds that one or more of the applicant's proposed registry services may be introduced without risk of a meaningful adverse effect on security or stability, these services will be included in the applicant's registry agreement with ICANN. If the RSTEP finds that the proposed service would create a risk of a meaningful adverse effect on security or stability, the applicant may elect to proceed with its application without the proposed service, or withdraw its application for the gTLD. In this instance, an applicant has 15 calendar days to notify ICANN of its intent to proceed with the application. If an applicant does not explicitly provide such notice within this time frame, the application will proceed no further.

2.4 Parties Involved in Evaluation

A number of independent experts and groups play a part in performing the various reviews in the evaluation process. A brief description of the various panels, their evaluation roles, and the circumstances under which they work is included in this section.

2.4.1 Panels and Roles

The **String Similarity Panel** will assess whether a proposed gTLD string creates a probability of user confusion due to similarity with any reserved name, any existing TLD, any requested IDN ccTLD, or any new gTLD string applied for in the current application round. This occurs during the String Similarity review in Initial Evaluation. The panel may also review IDN tables submitted by applicants as part of its work.

The **DNS Stability Panel** will determine whether a proposed string might adversely affect the security or stability of the DNS. This occurs during the DNS Stability String review in Initial Evaluation.

The **Geographic Names Panel** will review each application to determine whether the applied-for gTLD represents a geographic name, as defined in this guidebook. In the event that the string is a geographic name requiring government support, the panel will ensure that the required documentation is provided with the application and verify that the documentation is from the relevant governments or public authorities and is authentic.

The **Technical Evaluation Panel** will review the technical components of each application against the criteria in the Applicant Guidebook, along with proposed registry operations, in order to determine whether the applicant is technically and operationally capable of operating a gTLD registry as proposed in the application. This occurs during the Technical/Operational reviews in Initial Evaluation, and may also occur in Extended Evaluation if elected by the applicant.

The **Financial Evaluation Panel** will review each application against the relevant business, financial and organizational criteria contained in the Applicant Guidebook, to determine whether the applicant is financially capable of maintaining a gTLD registry as proposed in the application. This occurs during the Financial review in Initial Evaluation, and may also occur in Extended Evaluation if elected by the applicant.

The **Registry Services Technical Evaluation Panel (RSTEP)** will review proposed registry services in the application to determine if they pose a risk of a meaningful adverse impact on security or stability. This occurs, if applicable, during the Extended Evaluation period.

Members of all panels are required to abide by the established Code of Conduct and Conflict of Interest guidelines included in this module.

2.4.2 Panel Selection Process

ICANN has selected qualified third-party providers to perform the various reviews, based on an extensive selection process.[11] In addition to the specific subject matter expertise required for each panel, specified qualifications are required, including:

- The provider must be able to convene – or have the capacity to convene - globally diverse panels and be able to evaluate applications from all regions of the world, including applications for IDN gTLDs.
- The provider should be familiar with the IETF IDNA standards, Unicode standards, relevant RFCs and the terminology associated with IDNs.
- The provider must be able to scale quickly to meet the demands of the evaluation of an unknown number of applications. At present it is not known how many applications will be received, how complex they will be, and whether they will be predominantly for ASCII or non-ASCII gTLDs.
- The provider must be able to evaluate the applications within the required timeframes of Initial and Extended Evaluation.

2.4.3 Code of Conduct Guidelines for Panelists

The purpose of the New gTLD Program ("Program") Code of Conduct ("Code") is to prevent real and apparent conflicts of interest and unethical behavior by any Evaluation Panelist ("Panelist").

Panelists shall conduct themselves as thoughtful, competent, well prepared, and impartial professionals throughout the application process. Panelists are expected to comply with equity and high ethical standards while assuring the Internet community, its constituents, and the public of objectivity, integrity, confidentiality, and credibility. Unethical actions, or even the appearance of compromise, are not acceptable. Panelists are expected

---

[11] http://newgtlds.icann.org/about/evaluation-panels-selection-process

to be guided by the following principles in carrying out their respective responsibilities. This Code is intended to summarize the principles and nothing in this Code should be considered as limiting duties, obligations or legal requirements with which Panelists must comply.

Bias -- Panelists shall:

- not advance personal agendas or non-ICANN approved agendas in the evaluation of applications;
- examine facts as they exist and not be influenced by past reputation, media accounts, or unverified statements about the applications being evaluated;
- exclude themselves from participating in the evaluation of an application if, to their knowledge, there is some predisposing factor that could prejudice them with respect to such evaluation; and
- exclude themselves from evaluation activities if they are philosophically opposed to or are on record as having made generic criticism about a specific type of applicant or application.

Compensation/Gifts -- Panelists shall not request or accept any compensation whatsoever or any gifts of substance from the Applicant being reviewed or anyone affiliated with the Applicant. (Gifts of substance would include any gift greater than USD 25 in value).

If the giving of small tokens is important to the Applicant's culture, Panelists may accept these tokens; however, the total of such tokens must not exceed USD 25 in value. If in doubt, the Panelist should err on the side of caution by declining gifts of any kind.

Conflicts of Interest -- Panelists shall act in accordance with the "New gTLD Program Conflicts of Interest Guidelines" (see subsection 2.4.3.1).

Confidentiality -- Confidentiality is an integral part of the evaluation process. Panelists must have access to sensitive information in order to conduct evaluations. Panelists must maintain confidentiality of information entrusted to them by ICANN and the Applicant and any other confidential information provided to them from whatever source, except when disclosure is legally mandated or has been authorized by ICANN. "Confidential information" includes all elements of the Program and information gathered as part of the process – which includes but is not limited to: documents, interviews, discussions, interpretations, and analyses – related to the review of any new gTLD application.

Affirmation -- All Panelists shall read this Code prior to commencing evaluation services and shall certify in writing that they have done so and understand the Code.

2.4.3.1 Conflict of Interest Guidelines for Panelists

It is recognized that third-party providers may have a large number of employees in several countries serving numerous clients. In fact, it is possible that a number of Panelists may be very well known within the registry / registrar community and have provided professional services to a number of potential applicants.

To safeguard against the potential for inappropriate influence and ensure applications are evaluated in an objective and independent manner, ICANN has established detailed Conflict of Interest guidelines and procedures that will be followed by the Evaluation Panelists. To help ensure that the guidelines are appropriately followed ICANN will:

- Require each Evaluation Panelist (provider and individual) to acknowledge and document understanding of the Conflict of Interest guidelines.
- Require each Evaluation Panelist to disclose all business relationships engaged in at any time during the past six months.
- Where possible, identify and secure primary and backup providers for evaluation panels.
- In conjunction with the Evaluation Panelists, develop and implement a process to identify conflicts and re-assign applications as appropriate to secondary or contingent third party providers to perform the reviews.

Compliance Period -- All Evaluation Panelists must comply with the Conflict of Interest guidelines beginning with the opening date of the Application Submission period and ending with the public announcement by ICANN of the final outcomes of all the applications from the Applicant in question.

Guidelines -- The following guidelines are the minimum standards with which all Evaluation Panelists must comply. It is recognized that it is impossible to foresee and cover all circumstances in which a potential conflict of interest might arise. In these cases the Evaluation Panelist should evaluate whether the existing facts and circumstances would lead a reasonable person to conclude that there is an actual conflict of interest.

Evaluation Panelists and Immediate Family Members:

- Must not be under contract, have or be included in a current proposal to provide Professional Services for or on behalf of the Applicant during the Compliance Period.
- Must not currently hold or be committed to acquire any interest in a privately-held Applicant.
- Must not currently hold or be committed to acquire more than 1% of any publicly listed Applicant's outstanding equity securities or other ownership interests.
- Must not be involved or have an interest in a joint venture, partnership or other business arrangement with the Applicant.
- Must not have been named in a lawsuit with or against the Applicant.
- Must not be a:
    - Director, officer, or employee, or in any capacity equivalent to that of a member of management of the Applicant;
    - Promoter, underwriter, or voting trustee of the Applicant; or
    - Trustee for any pension or profit-sharing trust of the Applicant.

Definitions--

Evaluation Panelist: An Evaluation Panelist is any individual associated with the review of an application. This includes any primary, secondary, and contingent third party Panelists engaged by ICANN to review new gTLD applications.

Immediate Family Member: Immediate Family Member is a spouse, spousal equivalent, or dependent (whether or not related) of an Evaluation Panelist.

Professional Services: include, but are not limited to legal services, financial audit, financial planning / investment, outsourced services, consulting services such as business / management / internal audit, tax, information technology, registry / registrar services.

2.4.3.2 Code of Conduct Violations

Evaluation panelist breaches of the Code of Conduct, whether intentional or not, shall be reviewed by ICANN, which may make recommendations for corrective action, if deemed necessary. Serious breaches of the Code may be cause for dismissal of the person, persons or provider committing the infraction.

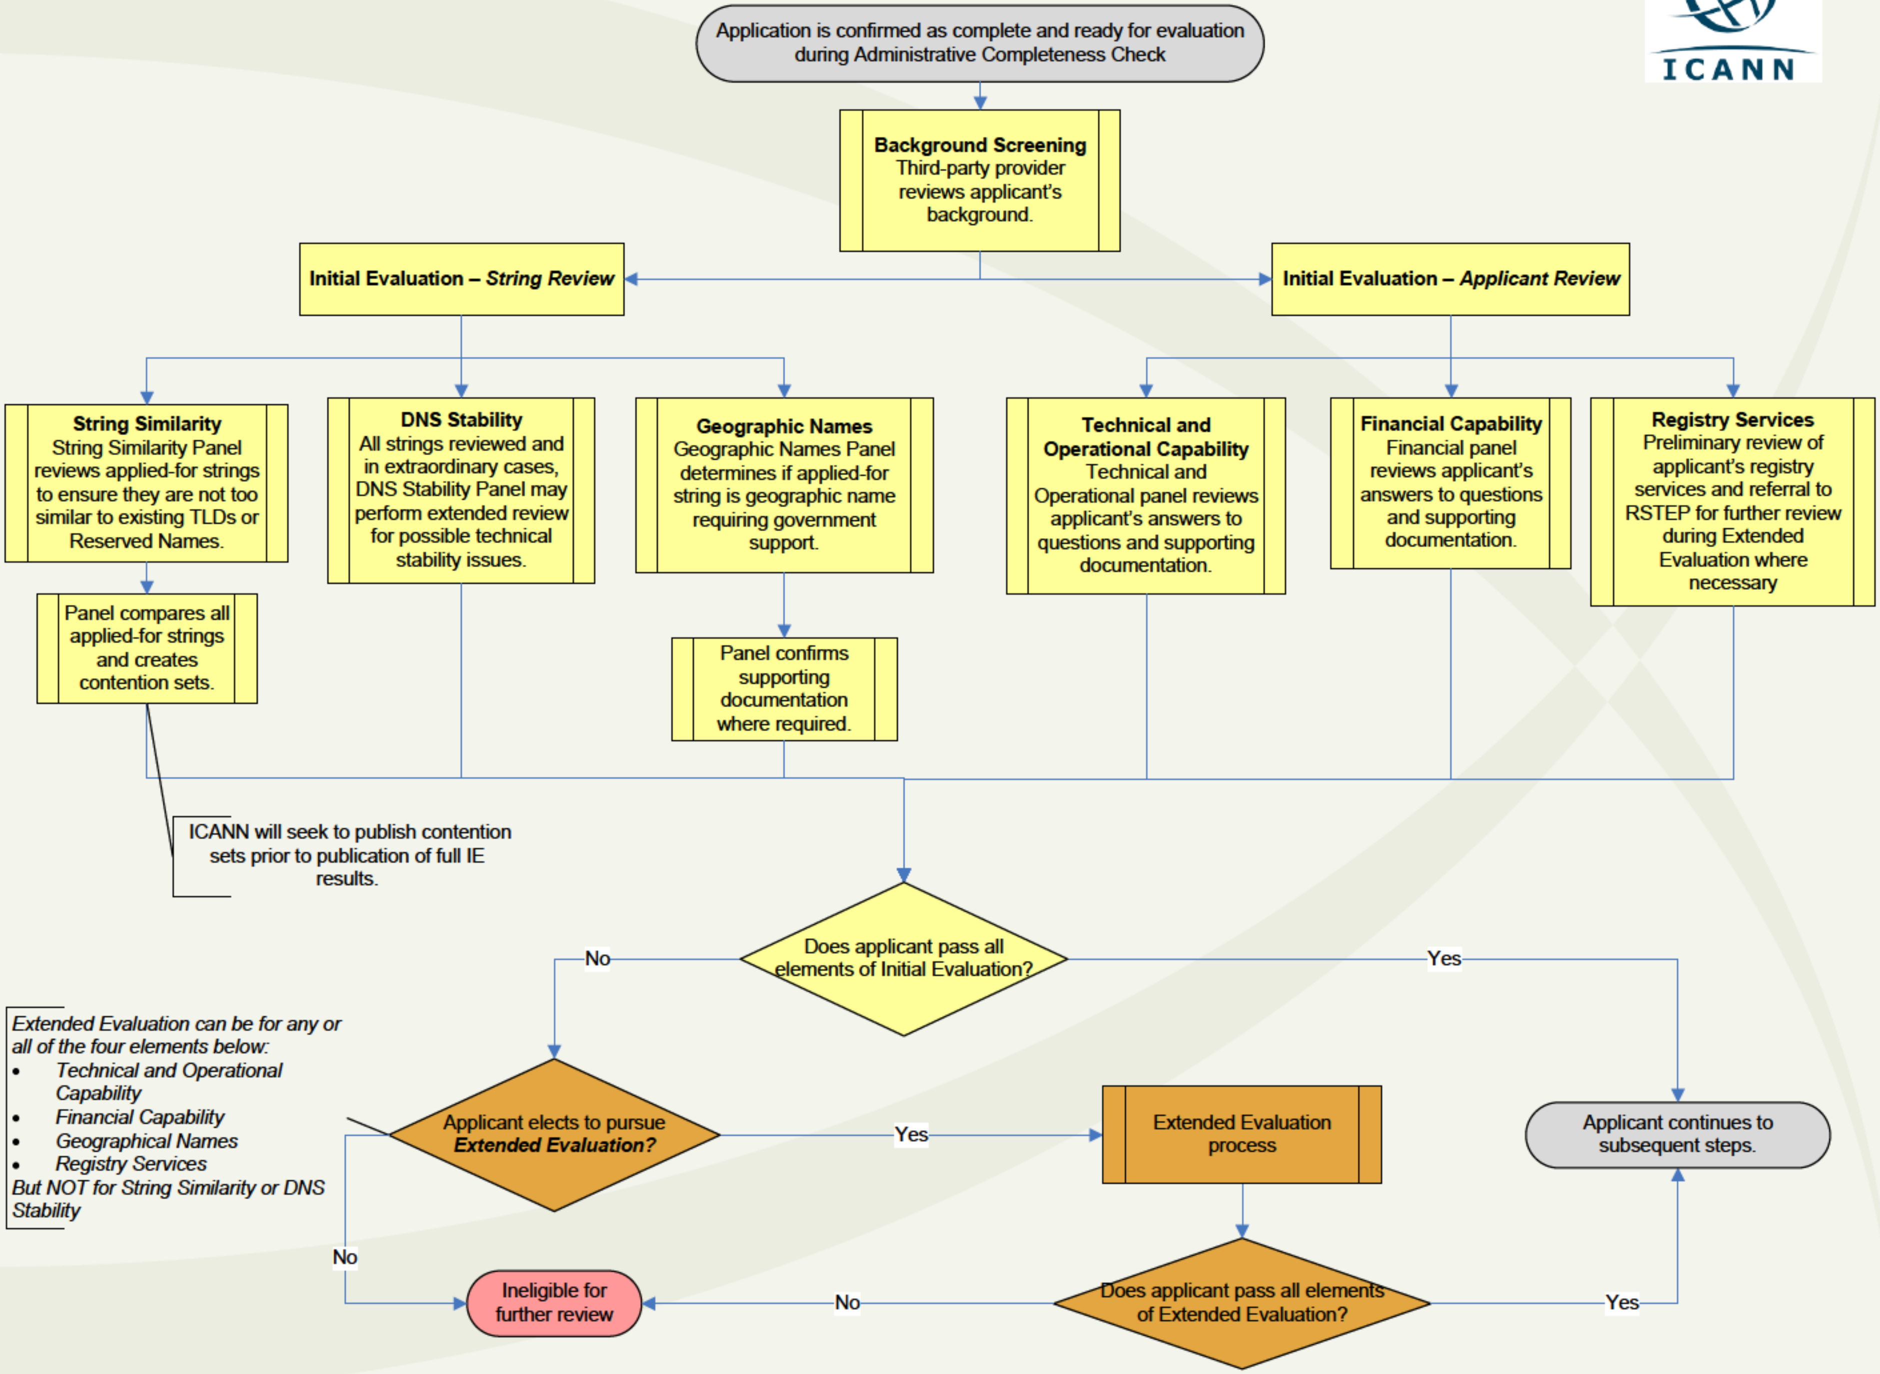
In a case where ICANN determines that a Panelist has failed to comply with the Code of Conduct, the results of that Panelist's review for all assigned applications will be discarded and the affected applications will undergo a review by new panelists.

Complaints about violations of the Code of Conduct by a Panelist may be brought to the attention of ICANN via the public comment and applicant support mechanisms, throughout the evaluation period. Concerns of applicants regarding panels should be communicated via the defined support channels (see subsection 1.4.2). Concerns of the general public (i.e., non-applicants) can be raised via the public comment forum, as described in Module 1.

2.4.4 Communication Channels

Defined channels for technical support or exchanges of information with ICANN and with evaluation panels are available to applicants during the Initial Evaluation and Extended Evaluation periods. Contacting individual ICANN staff members, Board members, or individuals engaged by ICANN to perform an evaluation role in order to lobby for a particular outcome or to obtain confidential information about applications under review is not appropriate. In the interests of fairness and equivalent treatment for all applicants, any such individual contacts will be referred to the appropriate communication channels.

DRAFT - New gTLD Program – Initial Evaluation and Extended Evaluation



Application is confirmed as complete and ready for evaluation during Administrative Completeness Check

Background Screening
Third-party provider reviews applicant's background.

Initial Evaluation – *String Review*

Initial Evaluation – *Applicant Review*

String Similarity
String Similarity Panel reviews applied-for strings to ensure they are not too similar to existing TLDs or Reserved Names.

Panel compares all applied-for strings and creates contention sets.

ICANN will seek to publish contention sets prior to publication of full IE results.

DNS Stability
All strings reviewed and in extraordinary cases, DNS Stability Panel may perform extended review for possible technical stability issues.

Geographic Names
Geographic Names Panel determines if applied-for string is geographic name requiring government support.

Panel confirms supporting documentation where required.

Technical and Operational Capability
Technical and Operational panel reviews applicant's answers to questions and supporting documentation.

Financial Capability
Financial panel reviews applicant's answers to questions and supporting documentation.

Registry Services
Preliminary review of applicant's registry services and referral to RSTEP for further review during Extended Evaluation where necessary

Does applicant pass all elements of Initial Evaluation?

No

Yes

Applicant elects to pursue ***Extended Evaluation?***

Yes

No

Extended Evaluation process

Does applicant pass all elements of Extended Evaluation?

No

Yes

Ineligible for further review

Applicant continues to subsequent steps.

Extended Evaluation can be for any or all of the four elements below:

- *Technical and Operational Capability*
- *Financial Capability*
- *Geographical Names*
- *Registry Services*

But NOT for String Similarity or DNS Stability

Annex: Separable Country Names List

gTLD application restrictions on country or territory names are tied to listing in property fields of the ISO 3166-1 standard. Notionally, the ISO 3166-1 standard has an “English short name” field which is the common name for a country and can be used for such protections; however, in some cases this does not represent the common name. This registry seeks to add additional protected elements which are derived from definitions in the ISO 3166-1 standard. An explanation of the various classes is included below.

Separable Country Names List

Code	English Short Name	Cl.	Separable Name

Maintenance

A Separable Country Names Registry will be maintained and published by ICANN Staff.

Each time the ISO 3166-1 standard is updated with a new entry, this registry will be reappraised to identify if the changes to the standard warrant changes to the entries in this registry. Appraisal will be based on the criteria listing in the “Eligibility” section of this document.

Codes reserved by the ISO 3166 Maintenance Agency do not have any implication on this registry, only entries derived from normally assigned codes appearing in ISO 3166-1 are eligible.

If an ISO code is struck off the ISO 3166-1 standard, any entries in this registry deriving from that code must be struck.

Eligibility

Each record in this registry is derived from the following possible properties:

Class A:	The ISO 3166-1 English Short Name is comprised of multiple, separable parts whereby the country is comprised of distinct sub-entities. Each of these separable parts is eligible in its own right for consideration as a country name. For example, “Antigua and Barbuda” is comprised of “Antigua” and “Barbuda.”
Class B:	The ISO 3166-1 English Short Name (1) or the ISO 3166-1 English Full Name (2) contains additional language as to the type of country the entity is, which is often not used in common usage when referencing the country. For example, one such short name is “The Bolivarian Republic of Venezuela” for a country in common usage referred to as “Venezuela.” ** Macedonia is a separable name in the context of this list; however, due to the ongoing dispute listed in UN documents between the Hellenic Republic (Greece) and the Former Yugoslav Republic of Macedonia over the name, no country will be afforded attribution or rights to the name “Macedonia” until the dispute over the name has been resolved. See http://daccess-dds-ny.un.org/doc/UNDOC/GEN/N93/240/37/IMG/N9324037.pdf.
Class C:	The ISO 3166-1 Remarks column containing synonyms of the country name, or sub-national entities, as denoted by “often referred to as,” “includes”, “comprises”, “variant” or “principal islands”.

In the first two cases, the registry listing must be directly derivative from the English Short Name by excising words and articles. These registry listings do not include vernacular or other non-official terms used to denote the country.

Eligibility is calculated in class order. For example, if a term can be derived both from Class A and Class C, it is only listed as Class A.

Attachment to Module 2

Sample Letter of Government Support

[This letter should be provided on official letterhead]

ICANN
Suite 330, 4676 Admiralty Way
Marina del Rey, CA 90292

Attention: New gTLD Evaluation Process

Subject: Letter for support for [TLD requested]

This letter is to confirm that [government entity] fully supports the application for [TLD] submitted to ICANN by [applicant] in the New gTLD Program. As the [Minister/Secretary/position] I confirm that I have the authority of the [x government/public authority] to be writing to you on this matter. [Explanation of government entity, relevant department, division, office, or agency, and what its functions and responsibilities are]

The gTLD will be used to [explain your understanding of how the name will be used by the applicant. This could include policies developed regarding who can register a name, pricing regime and management structures.] [Government/public authority/department] has worked closely with the applicant in the development of this proposal.

The [x government/public authority] supports this application, and in doing so, understands that in the event that the application is successful, [applicant] will be required to enter into a Registry Agreement with ICANN. In doing so, they will be required to pay fees to ICANN and comply with consensus policies developed through the ICANN multi-stakeholder policy processes.

[Government / public authority] further understands that, in the event of a dispute between [government/public authority] and the applicant, ICANN will comply with a legally binding order from a court in the jurisdiction of [government/public authority].

[Optional] This application is being submitted as a community-based application, and as such it is understood that the Registry Agreement will reflect the community restrictions proposed in the application. In the event that we believe the registry is not complying with these restrictions, possible avenues of recourse include the Registry Restrictions Dispute Resolution Procedure.

[Optional] I can advise that in the event that this application is successful [government/public authority] will enter into a separate agreement with the applicant. This agreement will outline the conditions under which we support them in the operation of the TLD, and circumstances under which we would withdraw that support. ICANN will not be a party to this agreement, and enforcement of this agreement lies fully with [government/public authority].

[Government / public authority] understands that the Geographic Names Panel engaged by ICANN will, among other things, conduct due diligence on the authenticity of this documentation. I would request that if additional information is required during this process, that [name and contact details] be contacted in the first instance.

Thank you for the opportunity to support this application.

Yours sincerely

Signature from relevant government/public authority

Evaluation Questions and Criteria

Since ICANN was founded in 1998 as a not-for-profit, multi-stakeholder organization, one of its key mandates has been to promote competition in the domain name market. ICANN's mission specifically calls for the corporation to maintain and build on processes that will ensure competition and consumer interests – without compromising Internet security and stability. This includes the consideration and implementation of new gTLDs. It is ICANN's goal to make the criteria and evaluation as objective as possible.

While new gTLDs are viewed by ICANN as important to fostering choice, innovation and competition in domain registration services, the decision to launch these coming new gTLD application rounds followed a detailed and lengthy consultation process with all constituencies of the global Internet community.

Any public or private sector organization can apply to create and operate a new gTLD. However the process is not like simply registering or buying a second-level domain name. Instead, the application process is to evaluate and select candidates capable of running a registry, a business that manages top level domains such as, for example, .COM or .INFO. Any successful applicant will need to meet published operational and technical criteria in order to preserve Internet stability and interoperability.

I. *Principles of the Technical and Financial New gTLD Evaluation Criteria*

- Principles of conservatism. This is the first round of what is to be an ongoing process for the introduction of new TLDs, including Internationalized Domain Names. Therefore, the criteria in this round require applicants to provide a thorough and thoughtful analysis of the technical requirements to operate a registry and the proposed business model.

- The criteria and evaluation should be as objective as possible.

    - With that goal in mind, an important objective of the new TLD process is to diversify the namespace, with different registry business models and target audiences. In some cases, criteria that are objective, but that ignore the differences in business models and target audiences of new registries, will tend to make the process exclusionary. For example, the business model for a registry targeted to a small community need not possess the same robustness in funding and technical infrastructure as a registry intending to compete with large gTLDs. Therefore purely objective criteria such as a requirement for a certain amount of cash on hand will not provide for the flexibility to consider different business models. The process must provide for an objective evaluation framework, but allow for adaptation according to the differing models applicants will present. Within that framework, applicant responses will be evaluated against the criteria in light of the proposed model.

    - Therefore the criteria should be flexible: able to scale with the overall business approach, providing that the planned approach is consistent and coherent, and can withstand highs and lows.

  - Criteria can be objective in areas of registrant protection, for example:
    - Providing for funds to continue operations in the event of a registry failure.
    - Adherence to data escrow, registry failover, and continuity planning requirements.

- The evaluation must strike the correct balance between establishing the business and technical competence of the applicant to operate a registry (to serve the interests of registrants), while not asking for the detailed sort of information or making the judgment that a venture capitalist would. ICANN is not seeking to certify business success but instead seeks to encourage innovation while providing certain safeguards for registrants.

- New registries must be added in a way that maintains DNS stability and security. Therefore, ICANN asks several questions so that the applicant can demonstrate an understanding of the technical requirements to operate a registry. ICANN will ask the applicant to demonstrate actual operational technical compliance prior to delegation. This is in line with current prerequisites for the delegation of a TLD.

- Registrant protection is emphasized in both the criteria and the scoring. Examples of this include asking the applicant to:

  - Plan for the occurrence of contingencies and registry failure by putting in place financial resources to fund the ongoing resolution of names while a replacement operator is found or extended notice can be given to registrants,
  - Demonstrate a capability to understand and plan for business contingencies to afford some protections through the marketplace,
  - Adhere to DNS stability and security requirements as described in the technical section, and
  - Provide access to the widest variety of services.

II. Aspects of the Questions Asked in the Application and Evaluation Criteria

The technical and financial questions are intended to inform and guide the applicant in aspects of registry start-up and operation. The established registry operator should find the questions straightforward while inexperienced applicants should find them a natural part of planning.

Evaluation and scoring (detailed below) will emphasize:

- How thorough are the answers? Are they well thought through and do they provide a sufficient basis for evaluation?

- Demonstration of the ability to operate and fund the registry on an ongoing basis:

  - Funding sources to support technical operations in a manner that ensures stability and security and supports planned expenses,
  - Resilience and sustainability in the face of ups and downs, anticipation of contingencies,
  - Funding to carry on operations in the event of failure.

- Demonstration that the technical plan will likely deliver on best practices for a registry and identification of aspects that might raise DNS stability and security issues.

- Ensures plan integration, consistency and compatibility (responses to questions are not evaluated individually but in comparison to others):
  - Funding adequately covers technical requirements,
  - Funding covers costs,
  - Risks are identified and addressed, in comparison to other aspects of the plan.

III. Scoring

Evaluation

- The questions, criteria, scoring and evaluation methodology are to be conducted in accordance with the principles described earlier in section I. With that in mind, globally diverse evaluation panelists will staff evaluation panels. The diversity of evaluators and access to experts in all regions of the world will ensure application evaluations take into account cultural, technical and business norms in the regions from which applications originate.

- Evaluation teams will consist of two independent panels. One will evaluate the applications against the financial criteria. The other will evaluate the applications against the technical & operational criteria. Given the requirement that technical and financial planning be well integrated, the panels will work together and coordinate information transfer where necessary. Other relevant experts (e.g., technical, audit, legal, insurance, finance) in pertinent regions will provide advice as required.

- Precautions will be taken to ensure that no member of the Evaluation Teams will have any interest or association that may be viewed as a real or potential conflict of interest with an applicant or application. All members must adhere to the Code of Conduct and Conflict of Interest guidelines that are found in Module 2.

- Communications between the evaluation teams and the applicants will be through an online interface. During the evaluation, evaluators may pose a set of clarifying questions to an applicant, to which the applicant may respond through the interface.

Confidentiality: ICANN will post applications after the close of the application submission period. The application form notes which parts of the application will be posted.

Scoring

- Responses will be evaluated against each criterion. A score will be assigned according to the scoring schedule linked to each question or set of questions. In several questions, 1 point is the maximum score that may be awarded. In several other questions, 2 points are awarded for a response that exceeds requirements, 1 point is awarded for a response that meets requirements and 0 points are awarded for a response that fails to meet requirements. Each question must receive at least a score of “1,” making each a “pass/fail” question.

- In the Continuity question in the financial section(see Question #50), up to 3 points are awarded if an applicant provides, at the application stage, a financial instrument that will guarantee ongoing registry operations in the event of a business failure. This extra point can serve to guarantee passing the financial criteria for applicants who score the minimum passing score for each of the individual criteria. The purpose of this weighting is to reward applicants who make early arrangements for the protection of registrants and to accept relatively riskier business plans where registrants are protected.

- There are 21 Technical & Operational questions. Each question has a criterion and scoring associated with it. The scoring for each is 0, 1, or 2 points as described above. One of the questions (IDN implementation) is optional. Other than the optional questions, all Technical & Operational criteria must be scored a 1 or more or the application will fail the evaluation.

- The total technical score must be equal to or greater than 22 for the application to pass. That means the applicant can pass by:

    - Receiving a 1 on all questions, including the optional question, and a 2 on at least one mandatory question; or
    - Receiving a 1 on all questions, excluding the optional question and a 2 on at least two mandatory questions.

  This scoring methodology requires a minimum passing score for each question and a slightly higher average score than the per question minimum to pass.

- There are six Financial questions and six sets of criteria that are scored by rating the answers to one or more of the questions. For example, the question concerning registry operation costs requires consistency between the technical plans (described in the answers to the Technical & Operational questions) and the costs (described in the answers to the costs question).

- The scoring for each of the Financial criteria is 0, 1 or 2 points as described above with the exception of the Continuity question, for which up to 3 points are possible. All questions must receive at least a 1 or the application will fail the evaluation.

- The total financial score on the six criteria must be 8 or greater for the application to pass. That means the applicant can pass by:

    - Scoring a 3 on the continuity criteria, or
    - Scoring a 2 on any two financial criteria.

- Applications that do not pass Initial Evaluation can enter into an extended evaluation process as described in Module 2. The scoring is the same.

	#	Question	Included in public posting	Notes	Scoring Range	Criteria	Scoring
Applicant Information	1	Full legal name of the Applicant (the established entity that would enter into a Registry Agreement with ICANN)	Y	Responses to Questions 1 - 12 are required for a complete application. Responses are not scored.			
	2	Address of the principal place of business of the Applicant. This address will be used for contractual purposes. No Post Office boxes are allowed.	Y				
	3	Phone number for the Applicant's principal place of business.	Y				
	4	Fax number for the Applicant's principal place of business.	Y				
	5	Website or URL, if applicable.	Y				
Primary Contact for this Application	6	Name	Y	The primary contact is the individual designated with the primary responsibility for management of the application, including responding to tasks in the TLD Application System (TAS) during the various application phases. Both contacts listed should also be prepared to receive inquiries from the public.			
		Title	Y				
		Date of birth	N				
		Country of birth	N				
		Address	N				
		Phone number	Y				
		Fax number	Y				
		Email address	Y				
Secondary Contact for this Application	7	Name	Y	The secondary contact is listed in the event the primary contact is unavailable to continue with the application process.			
		Title	Y				
		Date of birth	N				
		Country of birth	N				
		Address	N				
		Phone number	Y				
		Fax number	Y				

	#	Question	Included in public posting	Notes	Scoring Range	Criteria	Scoring
		Email address	Y				
Proof of Legal Establishment	8	(a) Legal form of the Applicant. (e.g., partnership, corporation, non-profit institution).	Y				
		(b) State the specific national or other jurisdiction that defines the type of entity identified in 8(a).	Y	In the event of questions regarding proof of establishment, the applicant may be asked for additional details, such as the specific national or other law applying to this type of entity			
		(c) Attach evidence of the applicant's establishment as the type of entity identified in Question 8(a) above, in accordance with the applicable laws identified in Question 8(b).	Y	Applications without valid proof of legal establishment will not be evaluated further. Supporting documentation for proof of legal establishment should be submitted in the original language.			
	9	(a) If the applying entity is publicly traded, provide the exchange and symbol.	Y				
		(b) If the applying entity is a subsidiary, provide the parent company.	Y				
		(c) If the applying entity is a joint venture, list all joint venture partners.	Y				
	10	Business ID, Tax ID, VAT registration number, or equivalent of the Applicant.	N				
Applicant Background	11	(a) Enter the full name, date and country of birth, contact information (permanent residence), and position of all directors (i.e., members of the applicant's Board of Directors, if applicable).	Partial	Applicants should be aware that the names and positions of the individuals listed in response to this question will be published as part of the application. The contact information listed for individuals is for identification purposes only and will not be published as part of the application. Background checks may be conducted on individuals named in the applicant's response to question 11. Any material misstatement or misrepresentation (or omission of material information) may cause the application to be rejected. The applicant certifies that it has obtained permission for the posting of the names and positions of individuals included in this application.			

	#	Question	Included in public posting	Notes	Scoring Range	Criteria	Scoring
		(b) Enter the full name, date and country of birth, contact information (permanent residence), and position of all officers and partners. Officers are high-level management officials of a corporation or business, for example, a CEO, vice president, secretary, chief financial officer. Partners would be listed in the context of a partnership or other such form of legal entity.	Partial				
		(c) Enter the full name and contact information of all shareholders holding at least 15% of shares, and percentage held by each. For a shareholder entity, enter the principal place of business. For a shareholder individual, enter the date and country of birth and contact information (permanent residence).	Partial				
		(d) For an applying entity that does not have directors, officers, partners, or shareholders, enter the full name, date and country of birth, contact information (permanent residence), and position of all individuals having overall legal or executive responsibility for the applying entity.	Partial				
		(e) Indicate whether the applicant or any of the individuals named above: i. within the past ten years, has been convicted of any crime related to financial or corporate governance activities, or has been judged by a court to have committed fraud or breach of fiduciary duty, or has been the subject of a judicial determination that is the substantive equivalent of any of these; ii. within the past ten years, has been disciplined by any government or industry regulatory body for conduct involving dishonesty or misuse of funds of others; iii. within the past ten years has been convicted of any willful tax-related fraud or willful evasion of tax liabilities; iv. within the past ten years has been convicted of perjury, forswearing, failing to cooperate with a law enforcement investigation, or making false statements to a law enforcement agency or representative;	N	ICANN may deny an otherwise qualified application based on the background screening process. See section 1.2.1 of the guidebook.			

	#	Question	Included in public posting	Notes	Scoring Range	Criteria	Scoring
		v. has ever been convicted of any crime involving the use of computers, telephony systems, telecommunications or the Internet to facilitate the commission of crimes; vi. has ever been convicted of any crime involving the use of a weapon, force, or the threat of force; vii. has ever been convicted of any violent or sexual offense victimizing children, the elderly, or individuals with disabilities; viii. has ever been convicted of the illegal sale, manufacture, or distribution of pharmaceutical drugs, or been convicted or successfully extradited for any offense described in Article 3 of the United Nations Convention Against Illicit Traffic in Narcotic Drugs and Psychotropic Substances of 1988; ix. has ever been convicted or successfully extradited for any offense described in the United Nations Convention against Transnational Organized Crime (all Protocols); x. has been convicted, within the respective timeframes, of aiding, abetting, facilitating, enabling, conspiring to commit, or failing to report any of the listed crimes (i.e., within the past 10 years for crimes listed in (i) - (iv) above, or ever for the crimes listed in (v) – (ix) above); xi. has entered a guilty plea as part of a plea agreement or has a court case in any jurisdiction with a disposition of Adjudicated Guilty or Adjudication Withheld (or regional equivalents) within the respective timeframes listed above for any of the listed crimes (i.e., within the past 10 years for crimes listed in (i) – (iv) above, or ever for the crimes listed in (v) – (ix) above); xii. is the subject of a disqualification imposed by ICANN and in effect at the time of this application. If any of the above events have occurred, please provide details.					

	#	Question	Included in public posting	Notes	Scoring Range	Criteria	Scoring
		(f) Indicate whether the applicant or any of the individuals named above have been involved in any decisions indicating that the applicant or individual named in the application was engaged in cybersquatting, as defined in the Uniform Domain Name Dispute Resolution Policy (UDRP), Anti-cybersquatting Consumer Protection Act (ACPA), or other equivalent legislation, or was engaged in reverse domain name hijacking under the UDRP or bad faith or reckless disregard under the ACPA or equivalent legislation.	N	ICANN may deny an otherwise qualified application based on the background screening process. See section 1.2.1 of the guidebook for details.			
		(g) Disclose whether the applicant or any of the individuals named above has been involved in any administrative or other legal proceeding in which allegations of intellectual property infringement relating to registration or use of a domain name have been made. Provide an explanation related to each such instance.	N	ICANN may deny an otherwise qualified application based on the background screening process. See section 1.2.1 of the guidebook for details.			
		(h) Provide an explanation for any additional background information that may be found concerning the applicant or any individual named in the application, which may affect eligibility, including any criminal convictions not identified above.	N				
Evaluation Fee	12	(a) Enter the confirmation information for payment of the evaluation fee (e.g., wire transfer confirmation number).	N	The evaluation fee is paid in the form of a deposit at the time of user registration, and submission of the remaining amount at the time the full application is submitted. The information in question 12 is required for each payment. The full amount in USD must be received by ICANN. Applicant is responsible for all transaction fees and exchange rate fluctuation. Fedwire is the preferred wire mechanism; SWIFT is also acceptable. ACH is not recommended as these funds will take longer to clear and could affect timing of the application processing.			
		(b) Payer name	N				
		(c) Payer address	N				

	#	Question	Included in public posting	Notes	Scoring Range	Criteria	Scoring
		(d) Wiring bank	N				
		(e) Bank address	N				
		(f) Wire date	N				
Applied-for gTLD string	13	Provide the applied-for gTLD string. If applying for an IDN, provide the U-label.	Y	Responses to Questions 13-17 are not scored, but are used for database and validation purposes. The U-label is an IDNA-valid string of Unicode characters, including at least one non-ASCII character.			
	14	(a) If applying for an IDN, provide the A-label (beginning with "xn--").	Y				
		(b) If an IDN, provide the meaning, or restatement of the string in English, that is, a description of the literal meaning of the string in the opinion of the applicant.	Y				
		(c) If an IDN, provide the language of the label (both in English and as referenced by ISO-639-1).	Y				
		(d) If an IDN, provide the script of the label (both in English and as referenced by ISO 15924).	Y				
		(e) If an IDN, list all code points contained in the U-label according to Unicode form.	Y	For example, the string "HELLO" would be listed as U+0048 U+0065 U+006C U+006C U+006F.			
	15	(a) If an IDN, upload IDN tables for the proposed registry. An IDN table must include: 1. the applied-for gTLD string relevant to the tables, 2. the script or language designator (as defined in BCP 47), 3. table version number, 4. effective date (DD Month YYYY), and 5. contact name, email address, and phone number. Submission of IDN tables in a standards-based format is encouraged.	Y	In the case of an application for an IDN gTLD, IDN tables must be submitted for the language or script for the applied-for gTLD string. IDN tables must also be submitted for each language or script in which the applicant intends to offer IDN registrations at the second level (see question 44). IDN tables should be submitted in a machine-readable format. The model format described in Section 5 of RFC 4290 would be ideal. The format used by RFC 3743 is an acceptable alternative. Variant generation algorithms that are more complex (such as those with contextual			

	#	Question	Included in public posting	Notes	Scoring Range	Criteria	Scoring
				rules) and cannot be expressed using these table formats should be specified in a manner that could be re-implemented programmatically by ICANN. Ideally, for any complex table formats, a reference code implementation should be provided in conjunction with a description of the generation rules.			
		(b) Describe the process used for development of the IDN tables submitted, including consultations and sources used.	Y				
		(c) List any variants to the applied-for gTLD string according to the relevant IDN tables.	Y	Variant TLD strings will not be delegated as a result of this application. Variant strings will be checked for consistency and, if the application is approved, will be entered on a Declared IDN Variants List to allow for future allocation once a variant management mechanism is established for the top level. Inclusion of variant TLD strings in this application is for information only and confers no right or claim to these strings upon the applicant.			
	16	Describe the applicant's efforts to ensure that there are no known operational or rendering problems concerning the applied-for gTLD string. If such issues are known, describe steps that will be taken to mitigate these issues in software and other applications.	Y				
	17	OPTIONAL. Provide a representation of the label according to the International Phonetic Alphabet (http://www.langsci.ucl.ac.uk/ipa/).	Y	If provided, this information will be used as a guide to ICANN in communications regarding the application.			
Mission/Purpose	18	(a) Describe the mission/purpose of your proposed gTLD.	Y	The information gathered in response to Question 18 is intended to inform the post-launch review of the New gTLD Program, from the perspective of assessing the relative costs and benefits achieved in the expanded gTLD space. For the application to be considered complete, answers to this section must be fulsome and sufficiently quantitative and detailed to inform future study on plans vs. results.			

	#	Question	Included in public posting	Notes	Scoring Range	Criteria	Scoring
				The New gTLD Program will be reviewed, as specified in section 9.3 of the Affirmation of Commitments. This will include consideration of the extent to which the introduction or expansion of gTLDs has promoted competition, consumer trust and consumer choice, as well as effectiveness of (a) the application and evaluation process, and (b) safeguards put in place to mitigate issues involved in the introduction or expansion. The information gathered in this section will be one source of input to help inform this review. This information is not used as part of the evaluation or scoring of the application, except to the extent that the information may overlap with questions or evaluation areas that are scored. An applicant wishing to designate this application as community-based should ensure that these responses are consistent with its responses for question 20 below.			
		(b) How do you expect that your proposed gTLD will benefit registrants, Internet users, and others?	Y	Answers should address the following points: i. What is the goal of your proposed gTLD in terms of areas of specialty, service levels, or reputation? ii. What do you anticipate your proposed gTLD will add to the current space, in terms of competition, differentiation, or innovation? iii. What goals does your proposed gTLD have in terms of user experience? iv. Provide a complete description of the applicant's intended registration policies in support of the goals listed above. v. Will your proposed gTLD impose any measures for			

	#	Question	Included in public posting	Notes	Scoring Range	Criteria	Scoring
				protecting the privacy or confidential information of registrants or users? If so, please describe any such measures. Describe whether and in what ways outreach and communications will help to achieve your projected benefits.			
	18	(c) What operating rules will you adopt to eliminate or minimize social costs (e.g., time or financial resource costs, as well as various types of consumer vulnerabilities)? What other steps will you take to minimize negative consequences/costs imposed upon consumers?	Y	Answers should address the following points: i. How will multiple applications for a particular domain name be resolved, for example, by auction or on a first-come/first-serve basis? ii. Explain any cost benefits for registrants you intend to implement (e.g., advantageous pricing, introductory discounts, bulk registration discounts). iii. Note that the Registry Agreement requires that registrars be offered the option to obtain initial domain name registrations for periods of one to ten years at the discretion of the registrar, but no greater than ten years. Additionally, the Registry Agreement requires advance written notice of price increases. Do you intend to make contractual commitments to registrants regarding the magnitude of price escalation? If so, please describe your plans.			
Community-based Designation	19	Is the application for a community-based TLD?	Y	There is a presumption that the application is a standard application (as defined in the Applicant Guidebook) if this question is left unanswered.			

	#	Question	Included in public posting	Notes	Scoring Range	Criteria	Scoring
				The applicant's designation as standard or community-based cannot be changed once the application is submitted.			
	20	(a) Provide the name and full description of the community that the applicant is committing to serve. In the event that this application is included in a community priority evaluation, it will be scored based on the community identified in response to this question. The name of the community does not have to be formally adopted for the application to be designated as community-based.	Y	Descriptions should include: • How the community is delineated from Internet users generally. Such descriptions may include, but are not limited to, the following: membership, registration, or licensing processes, operation in a particular industry, use of a language. • How the community is structured and organized. For a community consisting of an alliance of groups, details about the constituent parts are required. • When the community was established, including the date(s) of formal organization, if any, as well as a description of community activities to date. • The current estimated size of the community, both as to membership and geographic extent.		Responses to Question 20 will be regarded as firm commitments to the specified community and reflected in the Registry Agreement, provided the application is successful. Responses are not scored in the Initial Evaluation. Responses may be scored in a community priority evaluation, if applicable. Criteria and scoring methodology for the community priority evaluation are described in Module 4 of the Applicant Guidebook.	
		(b) Explain the applicant's relationship to the community identified in 20(a).	Y	Explanations should clearly state: • Relations to any community organizations. • Relations to the community and its constituent parts/groups. • Accountability mechanisms of the applicant to the community.			
		(c) Provide a description of the community-based purpose of the applied-for gTLD.	Y	Descriptions should include: • Intended registrants in the TLD. • Intended end-users of the TLD. • Related activities the applicant has carried out or intends to carry out in service of this purpose. • Explanation of how the purpose is of a lasting nature.			
		(d) Explain the relationship between the applied-for gTLD string and the community identified in 20(a).	Y	Explanations should clearly state: • relationship to the established name, if any, of the community.			

	#	Question	Included in public posting	Notes	Scoring Range	Criteria	Scoring
				- relationship to the identification of community members. - any connotations the string may have beyond the community.			
		(e) Provide a complete description of the applicant's intended registration policies in support of the community-based purpose of the applied-for gTLD. Policies and enforcement mechanisms are expected to constitute a coherent set.	Y	Descriptions should include proposed policies, if any, on the following: - Eligibility: who is eligible to register a second-level name in the gTLD, and how will eligibility be determined. - Name selection: what types of second-level names may be registered in the gTLD. - Content/Use: what restrictions, if any, the registry operator will impose on how a registrant may use its registered name. - Enforcement: what investigation practices and mechanisms exist to enforce the policies above, what resources are allocated for enforcement, and what appeal mechanisms are available to registrants.			
		(f) Attach any written endorsements for the application from established institutions representative of the community identified in 20(a). An applicant may submit written endorsements by multiple institutions, if relevant to the community.	Y	At least one such endorsement is required for a complete application. The form and content of the endorsement are at the discretion of the party providing the endorsement; however, the letter must identify the applied-for gTLD string and the applying entity, include an express statement support for the application, and the supply the contact information of the entity providing the endorsement. Endorsements from institutions not mentioned in the response to 20(b) should be accompanied by a clear description of each such institution's relationship to the community. Endorsements presented as supporting documentation for this question should be submitted in the original language.			

	#	Question	Included in public posting	Notes	Scoring Range	Criteria	Scoring
Geographic Names	21	(a) Is the application for a geographic name?	Y	An applied-for gTLD string is considered a geographic name requiring government support if it is: (a) the capital city name of a country or territory listed in the ISO 3166-1 standard; (b) a city name, where it is clear from statements in the application that the applicant intends to use the gTLD for purposes associated with the city name; (c) a sub-national place name listed in the ISO 3166-2 standard; or (d) a name listed as a UNESCO region or appearing on the "Composition of macro geographic (continental) or regions, geographic sub-regions, and selected economic and other groupings" list. See Module 2 for complete definitions and criteria. An application for a country or territory name, as defined in the Applicant Guidebook, will not be approved.			
		(b) If a geographic name, attach documentation of support or non-objection from all relevant governments or public authorities.	N	See the documentation requirements in Module 2 of the Applicant Guidebook. Documentation presented in response to this question should be submitted in the original language.			
Protection of Geographic Names	22	Describe proposed measures for protection of geographic names at the second and other levels in the applied-for gTLD. This should include any applicable rules and procedures for reservation and/or release of such names.	Y	Applicants should consider and describe how they will incorporate Governmental Advisory Committee (GAC) advice in their management of second-level domain name registrations. See "Principles regarding New gTLDs" at https://gacweb.icann.org/display/GACADV/New+gTLDs. For reference, applicants may draw on existing methodology developed for the reservation and release of country names in the .INFO top-level domain. See the Dot Info Circular at https://gacweb.icann.org/display/GACADV/New+gTLDs . Proposed measures will be posted for public comment as part of the application. However, note that procedures for release of geographic names at the second level			

	#	Question	Included in public posting	Notes	Scoring Range	Criteria	Scoring
				must be separately approved according to Specification 5 of the Registry Agreement. That is, approval of a gTLD application does not constitute approval for release of any geographic names under the Registry Agreement. Such approval must be granted separately by ICANN.			
Registry Services	23	Provide name and full description of all the Registry Services to be provided. Descriptions should include both technical and business components of each proposed service, and address any potential security or stability concerns. The following registry services are customary services offered by a registry operator: A. Receipt of data from registrars concerning registration of domain names and name servers. B. Dissemination of TLD zone files. C. Dissemination of contact or other information concerning domain name registrations (e.g., port-43 WHOIS, Web-based Whois, RESTful Whois service). D. Internationalized Domain Names, where offered. E. DNS Security Extensions (DNSSEC). The applicant must describe whether any of these registry services are intended to be offered in a manner unique to the TLD. Additional proposed registry services that are unique to the registry must also be described.	Y	Registry Services are defined as the following: (1) operations of the Registry critical to the following tasks: (i) the receipt of data from registrars concerning registrations of domain names and name servers; (ii) provision to registrars of status information relating to the zone servers for the TLD; (iii) dissemination of TLD zone files; (iv) operation of the Registry zone servers; and (v) dissemination of contact and other information concerning domain name server registrations in the TLD as required by the Registry Agreement; and (2) other products or services that the Registry Operator is required to provide because of the establishment of a Consensus Policy; (3) any other products or services that only a Registry Operator is capable of providing, by reason of its designation as the Registry Operator. A full definition of Registry Services can be found at http://www.icann.org/en/registries/rsep/rsep.html. Security: For purposes of this Applicant Guidebook, an effect on security by the proposed Registry Service means (1) the unauthorized disclosure, alteration, insertion or destruction of Registry Data, or (2) the unauthorized access to or disclosure of information or resources on the Internet by systems operating in accordance with applicable standards. Stability: For purposes of this Applicant Guidebook, an effect on stability shall mean that the proposed Registry Service (1) is not compliant with applicable relevant standards that are authoritative and published by a well-established, recognized and		Responses are not scored. A preliminary assessment will be made to determine if there are potential security or stability issues with any of the applicant's proposed Registry Services. If any such issues are identified, the application will be referred for an extended review. See the description of the Registry Services review process in Module 2 of the Applicant Guidebook. Any information contained in the application may be considered as part of the Registry Services review. If its application is approved, applicant may engage in only those registry services defined in the application, unless a new request is submitted to ICANN in accordance with the Registry Agreement.	

	#	Question	Included in public posting	Notes	Scoring Range	Criteria	Scoring
				authoritative standards body, such as relevant Standards-Track or Best Current Practice RFCs sponsored by the IETF, or (2) creates a condition that adversely affects the throughput, response time, consistency or coherence of responses to Internet servers or end systems, operating in accordance with applicable relevant standards that are authoritative and published by a well-established, recognized and authoritative standards body, such as relevant Standards-Track or Best Current Practice RFCs and relying on Registry Operator's delegation information or provisioning.			
Demonstration of Technical & Operational Capability (External)	24	Shared Registration System (SRS) Performance: describe • the plan for operation of a robust and reliable SRS. SRS is a critical registry function for enabling multiple registrars to provide domain name registration services in the TLD. SRS must include the EPP interface to the registry, as well as any other interfaces intended to be provided, if they are critical to the functioning of the registry. Please refer to the requirements in Specification 6 (section 1.2) and Specification 10 (SLA Matrix) attached to the Registry Agreement; and • resourcing plans for the initial implementation of, and ongoing maintenance for, this aspect of the criteria (number and description of personnel roles allocated to this area). A complete answer should include, but is not limited to: • A high-level SRS system description; • Representative network diagram(s); • Number of servers; • Description of interconnectivity with other registry systems; • Frequency of synchronization between servers; and • Synchronization scheme (e.g., hot standby, cold standby).	Y	The questions in this section (24-44) are intended to give applicants an opportunity to demonstrate their technical and operational capabilities to run a registry. In the event that an applicant chooses to outsource one or more parts of its registry operations, the applicant should still provide the full details of the technical arrangements. Note that the resource plans provided in this section assist in validating the technical and operational plans as well as informing the cost estimates in the Financial section below. Questions 24-30(a) are designed to provide a description of the applicant's intended technical and operational approach for those registry functions that are outward-facing, i.e., interactions with registrars, registrants, and various DNS users. Responses to these questions will be published to allow review by affected parties.	0-1	Complete answer demonstrates: (1) a plan for operating a robust and reliable SRS, one of the five critical registry functions; (2) scalability and performance consistent with the overall business approach, and planned size of the registry; (3) a technical plan that is adequately resourced in the planned costs detailed in the financial section; and (4) evidence of compliance with Specification 6 (section 1.2) to the Registry Agreement.	**1 - meets requirements**: Response includes (1) An adequate description of SRS that substantially demonstrates the applicant's capabilities and knowledge required to meet this element; (2) Details of a well-developed plan to operate a robust and reliable SRS; (3) SRS plans are sufficient to result in compliance with Specification 6 and Specification 10 to the Registry Agreement; (4) SRS is consistent with the technical, operational and financial approach described in the application; and (5) Demonstrates that adequate technical resources are already on hand, or committed or readily available to carry out this function. **0 - fails requirements**: Does not meet all the requirements to score 1.

	#	Question	Included in public posting	Notes	Scoring Range	Criteria	Scoring
		A complete answer is expected to be no more than 5 pages. (As a guide, one page contains approximately 4000 characters).					
	25	Extensible Provisioning Protocol (EPP): provide a detailed description of the interface with registrars, including how the applicant will comply with EPP in RFCs 3735 (if applicable), and 5730-5734. If intending to provide proprietary EPP extensions, provide documentation consistent with RFC 3735, including the EPP templates and schemas that will be used. Describe resourcing plans (number and description of personnel roles allocated to this area). A complete answer is expected to be no more than 5 pages. If there are proprietary EPP extensions, a complete answer is also expected to be no more than 5 pages per EPP extension.	Y		0-1	Complete answer demonstrates: (1) complete knowledge and understanding of this aspect of registry technical requirements; (2) a technical plan scope/scale consistent with the overall business approach and planned size of the registry; and (3) a technical plan that is adequately resourced in the planned costs detailed in the financial section; (4) ability to comply with relevant RFCs; (5) if applicable, a well-documented implementation of any proprietary EPP extensions; and (6) if applicable, how proprietary EPP extensions are consistent with the registration lifecycle as described in Question 27.	**1 - meets requirements**: Response includes (1) Adequate description of EPP that substantially demonstrates the applicant's capability and knowledge required to meet this element; (2) Sufficient evidence that any proprietary EPP extensions are compliant with RFCs and provide all necessary functionalities for the provision of registry services; (3) EPP interface is consistent with the technical, operational, and financial approach as described in the application; and (4) Demonstrates that technical resources are already on hand, or committed or readily available. **0 - fails requirements**: Does not meet all the requirements to score 1.
	26	Whois: describe • how the applicant will comply with Whois specifications for data objects, bulk access, and lookups as defined in Specifications 4 and 10 to the Registry Agreement; • how the Applicant's Whois service will comply with RFC 3912; and • resourcing plans for the initial implementation of, and ongoing maintenance for, this aspect of the criteria (number and description of personnel roles allocated to this area). A complete answer should include, but is not limited to:	Y	The Registry Agreement (Specification 4) requires provision of Whois lookup services for all names registered in the TLD. This is a minimum requirement. Provision for Searchable Whois as defined in the scoring column is a requirement for achieving a score of 2 points.	0-2	Complete answer demonstrates: (1) complete knowledge and understanding of this aspect of registry technical requirements, (one of the five critical registry functions); (2) a technical plan scope/scale consistent with the overall business approach and planned size of the registry; (3) a technical plan that is adequately resourced in the	**2 – exceeds requirements**: Response meets all the attributes for a score of 1 and includes: (1) A Searchable Whois service: Whois service includes web-based search capabilities by domain name, registrant name, postal address, contact names, registrar IDs, and Internet Protocol addresses without arbitrary limit. Boolean search capabilities may be offered. The service shall include appropriate precautions to avoid abuse of this feature (e.g., limiting access to legitimate authorized users), and the

	#	Question	Included in public posting	Notes	Scoring Range	Criteria	Scoring
		• A high-level Whois system description; • Relevant network diagram(s); • IT and infrastructure resources (e.g., servers, switches, routers and other components); • Description of interconnectivity with other registry systems; and • Frequency of synchronization between servers. To be eligible for a score of 2, answers must also include: • Provision for Searchable Whois capabilities; and • A description of potential forms of abuse of this feature, how these risks will be mitigated, and the basis for these descriptions. A complete answer is expected to be no more than 5 pages.				planned costs detailed in the financial section; (4) ability to comply with relevant RFCs; (5) evidence of compliance with Specifications 4 and 10 to the Registry Agreement; and (6) if applicable, a well-documented implementation of Searchable Whois.	application demonstrates compliance with any applicable privacy laws or policies. **1 - meets requirements:** Response includes (1) adequate description of Whois service that substantially demonstrates the applicant's capability and knowledge required to meet this element; (2) Evidence that Whois services are compliant with RFCs, Specifications 4 and 10 to the Registry Agreement, and any other contractual requirements including all necessary functionalities for user interface; (3) Whois capabilities consistent with the technical, operational, and financial approach as described in the application; and (4) demonstrates an adequate level of resources that are already on hand or readily available to carry out this function. **0 - fails requirements:** Does not meet all the requirements to score 1.
	27	Registration Life Cycle: provide a detailed description of the proposed registration lifecycle for domain names in the proposed gTLD. The description must: • explain the various registration states as well as the criteria and procedures that are used to change state; • describe the typical registration lifecycle of create/update/delete and all intervening steps such as pending, locked, expired, and transferred that may apply; • clearly explain any time elements that are involved - for instance details of add-grace or redemption grace periods, or notice periods for renewals or transfers; and • describe resourcing plans for this aspect of the criteria (number and	Y		0-1	Complete answer demonstrates: (1) complete knowledge and understanding of registration lifecycles and states; (2) consistency with any specific commitments made to registrants as adapted to the overall business approach for the proposed gTLD; and (3) the ability to comply with relevant RFCs.	**1 - meets requirements:** Response includes (1) An adequate description of the registration lifecycle that substantially demonstrates the applicant's capabilities and knowledge required to meet this element; (2) Details of a fully developed registration life cycle with definition of various registration states, transition between the states, and trigger points; (3) A registration lifecycle that is consistent with any commitments to registrants and with technical, operational, and financial plans described in the application; and (4) Demonstrates an adequate level of

	#	Question	Included in public posting	Notes	Scoring Range	Criteria	Scoring
		description of personnel roles allocated to this area). The description of the registration lifecycle should be supplemented by the inclusion of a state diagram, which captures definitions, explanations of trigger points, and transitions from state to state. If applicable, provide definitions for aspects of the registration lifecycle that are not covered by standard EPP RFCs. A complete answer is expected to be no more than 5 pages.					resources that are already on hand or committed or readily available to carry out this function. **0 - fails requirements**: Does not meet all the requirements to score 1.
	28	Abuse Prevention and Mitigation: Applicants should describe the proposed policies and procedures to minimize abusive registrations and other activities that have a negative impact on Internet users. A complete answer should include, but is not limited to: • An implementation plan to establish and publish on its website a single abuse point of contact responsible for addressing matters requiring expedited attention and providing a timely response to abuse complaints concerning all names registered in the TLD through all registrars of record, including those involving a reseller; • Policies for handling complaints regarding abuse; • Proposed measures for removal of orphan glue records for names removed from the zone when provided with evidence in written form that the glue is present in connection with malicious conduct (see Specification 6); and • Resourcing plans for the initial implementation of, and ongoing maintenance for, this aspect of the criteria (number and description of personnel roles allocated to this area). To be eligible for a score of 2, answers must include measures to promote Whois accuracy as well as measures from one other area as	Y	Note that, while orphan glue often supports correct and ordinary operation of the DNS, registry operators will be required to take action to remove orphan glue records (as defined at http://www.icann.org/en/committees/security/sac048.pdf) when provided with evidence in written form that such records are present in connection with malicious conduct.	0-2	Complete answer demonstrates: (1) Comprehensive abuse policies, which include clear definitions of what constitutes abuse in the TLD, and procedures that will effectively minimize potential for abuse in the TLD; (2) Plans are adequately resourced in the planned costs detailed in the financial section; (3) Policies and procedures identify and address the abusive use of registered names at startup and on an ongoing basis; and (4) When executed in accordance with the Registry Agreement, plans will result in compliance with contractual requirements.	**2 – exceeds requirements**: Response meets all the attributes for a score of 1 and includes: (1) Details of measures to promote Whois accuracy, using measures specified here or other measures commensurate in their effectiveness; and (2) Measures from at least one additional area to be eligible for 2 points as described in the question. **1 - meets requirements** Response includes: (1) An adequate description of abuse prevention and mitigation policies and procedures that substantially demonstrates the applicant's capabilities and knowledge required to meet this element; (2) Details of well-developed abuse policies and procedures; (3) Plans are sufficient to result in compliance with contractual requirements; (4) Plans are consistent with the technical, operational, and financial approach described in the application, and any commitments made to registrants; and (5) Demonstrates an adequate level of resources that are on hand, committed, or readily available to

	#	Question	Included in public posting	Notes	Scoring Range	Criteria	Scoring
		described below. • Measures to promote Whois accuracy (can be undertaken by the registry directly or by registrars via requirements in the Registry-Registrar Agreement (RRA)) may include, but are not limited to: o Authentication of registrant information as complete and accurate at time of registration. Measures to accomplish this could include performing background checks, verifying all contact information of principals mentioned in registration data, reviewing proof of establishment documentation, and other means. o Regular monitoring of registration data for accuracy and completeness, employing authentication methods, and establishing policies and procedures to address domain names with inaccurate or incomplete Whois data; and o If relying on registrars to enforce measures, establishing policies and procedures to ensure compliance, which may include audits, financial incentives, penalties, or other means. Note that the requirements of the RAA will continue to apply to all ICANN-accredited registrars. • A description of policies and procedures that define malicious or abusive behavior, capture metrics, and establish Service Level Requirements for resolution, including service levels for responding to law enforcement requests. This may include rapid takedown or suspension systems and sharing information regarding malicious or abusive behavior with industry partners; • Adequate controls to ensure proper access to domain functions (can be undertaken by the registry directly or by					carry out this function. 0 – fails requirements Does not meet all the requirements to score 1.

	#	Question	Included in public posting	Notes	Scoring Range	Criteria	Scoring
		registrars via requirements in the Registry-Registrar Agreement (RRA)) may include, but are not limited to: o Requiring multi-factor authentication (i.e., strong passwords, tokens, one-time passwords) from registrants to process update, transfers, and deletion requests; o Requiring multiple, unique points of contact to request and/or approve update, transfer, and deletion requests; and o Requiring the notification of multiple, unique points of contact when a domain has been updated, transferred, or deleted. A complete answer is expected to be no more than 20 pages.					
	29	Rights Protection Mechanisms: Applicants must describe how their registry will comply with policies and practices that minimize abusive registrations and other activities that affect the legal rights of others, such as the Uniform Domain Name Dispute Resolution Policy (UDRP), Uniform Rapid Suspension (URS) system, and Trademark Claims and Sunrise services at startup. A complete answer should include: • A description of how the registry operator will implement safeguards against allowing unqualified registrations (e.g., registrations made in violation of the registry's eligibility restrictions or policies), and reduce opportunities for behaviors such as phishing or pharming. At a minimum, the registry operator must offer a Sunrise period and a Trademark Claims service during the required time periods, and implement decisions rendered under the URS on an ongoing basis; and • A description of resourcing plans for the	Y		0-2	Complete answer describes mechanisms designed to: (1) prevent abusive registrations, and (2) identify and address the abusive use of registered names on an ongoing basis.	**2 - exceeds requirements**: Response meets all attributes for a score of 1 and includes: (1) Identification of rights protection as a core objective, supported by a well-developed plan for rights protection; and (2) Mechanisms for providing effective protections that exceed minimum requirements (e.g., RPMs in addition to those required in the registry agreement). **1 - meets requirements:** Response includes (1) An adequate description of RPMs that substantially demonstrates the applicant's capabilities and knowledge required to meet this element; (2) A commitment from the applicant to implement of rights protection mechanisms sufficient to comply with minimum requirements in Specification 7; (3) Plans that are sufficient to result in compliance with contractual requirements;

	#	Question	Included in public posting	Notes	Scoring Range	Criteria	Scoring
		initial implementation of, and ongoing maintenance for, this aspect of the criteria (number and description of personnel roles allocated to this area). To be eligible for a score of 2, answers must also include additional measures specific to rights protection, such as abusive use policies, takedown procedures, registrant pre-verification, or authentication procedures, or other covenants. A complete answer is expected to be no more than 10 pages.					(4) Mechanisms that are consistent with the technical, operational, and financial approach described in the application; and (5) Demonstrates an adequate level of resources that are on hand, committed, or readily available to carry out this function. 0 - fails requirements: Does not meet all the requirements to score a 1.
	30	(a) Security Policy: provide a summary of the security policy for the proposed registry, including but not limited to: • indication of any independent assessment reports demonstrating security capabilities, and provisions for periodic independent assessment reports to test security capabilities; • description of any augmented security levels or capabilities commensurate with the nature of the applied for gTLD string, including the identification of any existing international or industry relevant security standards the applicant commits to following (reference site must be provided); • list of commitments made to registrants concerning security levels. To be eligible for a score of 2, answers must also include: • Evidence of an independent assessment report demonstrating effective security controls (e.g., ISO 27001). A summary of the above should be no more than 20 pages. Note that the complete security policy for the registry is required to be submitted in accordance with 30(b).	Y	Criterion 5 calls for security levels to be appropriate for the use and level of trust associated with the TLD string, such as, for example, financial services oriented TLDs. "Financial services" are activities performed by financial institutions, including: 1) the acceptance of deposits and other repayable funds; 2) lending; 3) payment and remittance services; 4) insurance or reinsurance services; 5) brokerage services; 6) investment services and activities; 7) financial leasing; 8) issuance of guarantees and commitments; 9) provision of financial advice; 10) portfolio management and advice; or 11) acting as a financial clearinghouse. Financial services is used as an example only; other strings with exceptional potential to cause harm to consumers would also be expected to deploy appropriate levels of security.	0-2	Complete answer demonstrates: (1) detailed description of processes and solutions deployed to manage logical security across infrastructure and systems, monitoring and detecting threats and security vulnerabilities and taking appropriate steps to resolve them; (2) security capabilities are consistent with the overall business approach and planned size of the registry; (3) a technical plan adequately resourced in the planned costs detailed in the financial section; (4) security measures are consistent with any commitments made to registrants regarding security levels; and (5) security measures are appropriate for the applied-for gTLD string (For example, applications for strings with unique trust implications, such as financial services-oriented strings, would be expected to provide a commensurate level of security).	2 - exceeds requirements: Response meets all attributes for a score of 1 and includes: (1) Evidence of highly developed and detailed security capabilities, with various baseline security levels, independent benchmarking of security metrics, robust periodic security monitoring, and continuous enforcement; and (2) an independent assessment report is provided demonstrating effective security controls are either in place or have been designed, and are commensurate with the applied-for gTLD string. (This could be ISO 27001 certification or other well-established and recognized industry certifications for the registry operation. If new independent standards for demonstration of effective security controls are established, such as the High Security Top Level Domain (HSTLD) designation, this could also be included. An illustrative example of an independent standard is the proposed set of requirements described in http://www.icann.org/en/correspondence/aba-bits-to-beckstrom-crocker-20dec11-en.pdf.) 1 - meets requirements: Response includes:

	#	Question	Included in public posting	Notes	Scoring Range	Criteria	Scoring
							(1) Adequate description of security policies and procedures that substantially demonstrates the applicant's capability and knowledge required to meet this element; (2) A description of adequate security capabilities, including enforcement of logical access control, threat analysis, incident response and auditing. Ad-hoc oversight and governance and leading practices being followed; (3) Security capabilities consistent with the technical, operational, and financial approach as described in the application, and any commitments made to registrants; (4) Demonstrates that an adequate level of resources are on hand, committed or readily available to carry out this function; and (5) Proposed security measures are commensurate with the nature of the applied-for gTLD string. **0 - fails requirements**: Does not meet all the requirements to score 1.
Demonstration of Technical & Operational Capability (Internal)	30	(b) Security Policy: provide the complete security policy and procedures for the proposed registry, including but not limited to: • system (data, server, application / services) and network access control, ensuring systems are maintained in a secure fashion, including details of how they are monitored, logged and backed up; • resources to secure integrity of updates between registry systems and nameservers, and between nameservers, if any; • independent assessment reports demonstrating security capabilities (submitted as attachments), if any; • provisioning and other measures that mitigate risks posed by denial of service attacks; • computer and network incident response	N	Questions 30(b) – 44 are designed to provide a description of the applicant's intended technical and operational approach for those registry functions that are internal to the infrastructure and operations of the registry. To allow the applicant to provide full details and safeguard proprietary information, responses to these questions will not be published.			

	#	Question	Included in public posting	Notes	Scoring Range	Criteria	Scoring
		policies, plans, and processes; • plans to minimize the risk of unauthorized access to its systems or tampering with registry data; • intrusion detection mechanisms, a threat analysis for the proposed registry, the defenses that will be deployed against those threats, and provision for periodic threat analysis updates; • details for auditing capability on all network access; • physical security approach; • identification of department or group responsible for the registry's security organization; • background checks conducted on security personnel; • description of the main security threats to the registry operation that have been identified; and • resourcing plans for the initial implementation of, and ongoing maintenance for, this aspect of the criteria (number and description of personnel roles allocated to this area).					
	31	Technical Overview of Proposed Registry: provide a technical overview of the proposed registry. The technical plan must be adequately resourced, with appropriate expertise and allocation of costs. The applicant will provide financial descriptions of resources in the next section and those resources must be reasonably related to these technical requirements. The overview should include information on the estimated scale of the registry's technical operation, for example, estimates for the number of registration transactions and DNS queries per month should be provided for the first two years of operation. In addition, the overview should account for geographic dispersion of incoming network traffic such as DNS, Whois, and registrar transactions.	N	To the extent this answer is affected by the applicant's intent to outsource various registry operations, the applicant should describe these plans (e.g., taking advantage of economies of scale or existing facilities). However, the response must include specifying the technical plans, estimated scale, and geographic dispersion as required by the question.	0-1	Complete answer demonstrates: (1) complete knowledge and understanding of technical aspects of registry requirements; (2) an adequate level of resiliency for the registry's technical operations; (3) consistency with planned or currently deployed technical/operational solutions; (4) consistency with the overall business approach and planned size of the registry; (5) adequate resourcing for technical plan in the	**1 - meets requirements**: Response includes: (1) A description that substantially demonstrates the applicant's capabilities and knowledge required to meet this element; (2) Technical plans consistent with the technical, operational, and financial approach as described in the application; (3) Demonstrates an adequate level of resources that are on hand, committed, or readily available to carry out this function. **0 - fails requirements:** Does not meet all the requirements to score 1.

	#	Question	Included in public posting	Notes	Scoring Range	Criteria	Scoring
		If the registry serves a highly localized registrant base, then traffic might be expected to come mainly from one area. This high-level summary should not repeat answers to questions below. Answers should include a visual diagram(s) to highlight dataflows, to provide context for the overall technical infrastructure. Detailed diagrams for subsequent questions should be able to map back to this high-level diagram(s). The visual diagram(s) can be supplemented with documentation, or a narrative, to explain how all of the Technical & Operational components conform. A complete answer is expected to be no more than 10 pages.				planned costs detailed in the financial section; and (6) consistency with subsequent technical questions.	
	32	Architecture: provide documentation for the system and network architecture that will support registry operations for the proposed scale of the registry. System and network architecture documentation must clearly demonstrate the applicant's ability to operate, manage, and monitor registry systems. Documentation should include multiple diagrams or other components including but not limited to: • Detailed network diagram(s) showing the full interplay of registry elements, including but not limited to SRS, DNS, Whois, data escrow, and registry database functions; • Network and associated systems necessary to support registry operations, including: ▪ Anticipated TCP / IP addressing scheme, ▪ Hardware (i.e., servers, routers, networking components, virtual machines and key characteristics (CPU and RAM, Disk space, internal network connectivity, and make and model)), ▪ Operating system and versions, and ▪ Software and applications (with version information) necessary to support registry operations, management, and monitoring • General overview of capacity planning, including bandwidth allocation plans; • List of providers / carriers; and • Resourcing plans for the initial	N		0-2	Complete answer demonstrates: (1) detailed and coherent network architecture; (2) architecture providing resiliency for registry systems; (3) a technical plan scope/scale that is consistent with the overall business approach and planned size of the registry; and (4) a technical plan that is adequately resourced in the planned costs detailed in the financial section.	2 - exceeds requirements: Response meets all attributes for a score of 1 and includes (1) Evidence of highly developed and detailed network architecture that is able to scale well above stated projections for high registration volumes, thereby significantly reducing the risk from unexpected volume surges and demonstrates an ability to adapt quickly to support new technologies and services that are not necessarily envisaged for initial registry startup; and (2) Evidence of a highly available, robust, and secure infrastructure. 1 - meets requirements: Response includes (1) An adequate description of the architecture that substantially demonstrates the applicant's capabilities and knowledge required to meet this element; (2) Plans for network architecture describe all necessary elements; (3) Descriptions demonstrate adequate network architecture providing robustness and security of the

	#	Question	Included in public posting	Notes	Scoring Range	Criteria	Scoring
		implementation of, and ongoing maintenance for, this aspect of the criteria (number and description of personnel roles allocated to this area). To be eligible for a score of 2, answers must also include evidence of a network architecture design that greatly reduces the risk profile of the proposed registry by providing a level of scalability and adaptability (e.g., protection against DDoS attacks) that far exceeds the minimum configuration necessary for the expected volume. A complete answer is expected to be no more than 10 pages.					registry; (4) Bandwidth and SLA are consistent with the technical, operational, and financial approach as described in the application; and (5) Demonstrates an adequate level of resources that are on hand, or committed or readily available to carry out this function. **0 - fails requirements:** Does not meet all the requirements to score 1.
	33	Database Capabilities: provide details of database capabilities including but not limited to: • database software; • storage capacity (both in raw terms [e.g., MB, GB] and in number of registrations / registration transactions); • maximum transaction throughput (in total and by type of transaction); • scalability; • procedures for object creation, editing, and deletion, and user and credential management; • high availability; • change management procedures; • reporting capabilities; and • resourcing plans for the initial implementation of, and ongoing maintenance for, this aspect of the criteria (number and description of personnel roles allocated to this area). A registry database data model can be included to provide additional clarity to this response. Note: Database capabilities described should be in reference to registry services and not necessarily related support functions such as Personnel or Accounting, unless such services are inherently intertwined with the delivery of registry services. To be eligible for a score of 2, answers must also	N		0-2	Complete answer demonstrates: (1) complete knowledge and understanding of database capabilities to meet the registry technical requirements; (2) database capabilities consistent with the overall business approach and planned size of the registry; and (3) a technical plan that is adequately resourced in the planned costs detailed in the financial section.	**2 - exceeds requirements**: Response meets all attributes for a score of 1 and includes (1) Highly developed and detailed description of database capabilities that are able to scale well above stated projections for high registration volumes, thereby significantly reducing the risk from unexpected volume surges and demonstrates an ability to adapt quickly to support new technologies and services that are not necessarily envisaged for registry startup; and (2) Evidence of comprehensive database capabilities, including high scalability and redundant database infrastructure, regularly reviewed operational and reporting procedures following leading practices. **1 - meets requirements**: Response includes (1) An adequate description of database capabilities that substantially demonstrates the applicant's capabilities and knowledge required to meet this element; (2) Plans for database capabilities

	#	Question	Included in public posting	Notes	Scoring Range	Criteria	Scoring
		include evidence of database capabilities that greatly reduce the risk profile of the proposed registry by providing a level of scalability and adaptability that far exceeds the minimum configuration necessary for the expected volume. A complete answer is expected to be no more than 5 pages.					describe all necessary elements; (3) Descriptions demonstrate adequate database capabilities, with database throughput, scalability, and database operations with limited operational governance; (4) Database capabilities are consistent with the technical, operational, and financial approach as described in the application; and (5) Demonstrates that an adequate level of resources that are on hand, or committed or readily available to carry out this function. **0 - fails requirements**: Does not meet all the requirements to score 1.
	34	Geographic Diversity: provide a description of plans for geographic diversity of: a. name servers, and b. operations centers. Answers should include, but are not limited to: • the intended physical locations of systems, primary and back-up operations centers (including security attributes), and other infrastructure; • any registry plans to use Anycast or other topological and geographical diversity measures, in which case, the configuration of the relevant service must be included; • resourcing plans for the initial implementation of, and ongoing maintenance for, this aspect of the criteria (number and description of personnel roles allocated to this area). To be eligible for a score of 2, answers must also include evidence of a geographic diversity plan that greatly reduces the risk profile of the proposed registry by ensuring the continuance of all vital business functions (as identified in the applicant's continuity plan in Question 39) in the event of a natural or other disaster) at the principal place of business or point of presence.	N		0-2	Complete answer demonstrates: (1) geographic diversity of nameservers and operations centers; (2) proposed geo-diversity measures are consistent with the overall business approach and planned size of the registry; and (3) a technical plan that is adequately resourced in the planned costs detailed in the financial section.	**2 - exceeds requirements**: Response meets all attributes for a score of 1 and includes (1) Evidence of highly developed measures for geo-diversity of operations, with locations and functions to continue all vital business functions in the event of a natural or other disaster at the principal place of business or point of presence; and (2) A high level of availability, security, and bandwidth. **1 - meets requirements**: Response includes (1) An adequate description of Geographic Diversity that substantially demonstrates the applicant's capabilities and knowledge required to meet this element; (2) Plans provide adequate geo-diversity of name servers and operations to continue critical registry functions in the event of a temporary outage at the principal place of business or point of presence; (3) Geo-diversity plans are consistent

	#	Question	Included in public posting	Notes	Scoring Range	Criteria	Scoring
		A complete answer is expected to be no more than 5 pages.					with technical, operational, and financial approach as described in the application; and (4) Demonstrates adequate resources that are on hand, or committed or readily available to carry out this function. **0 - fails requirements:** Does not meet all the requirements to score 1.
	35	DNS Service: describe the configuration and operation of nameservers, including how the applicant will comply with relevant RFCs. All name servers used for the new gTLD must be operated in compliance with the DNS protocol specifications defined in the relevant RFCs, including but not limited to: 1034, 1035, 1982, 2181, 2182, 2671, 3226, 3596, 3597, 3901, 4343, and 4472. • Provide details of the intended DNS Service including, but not limited to: A description of the DNS services to be provided, such as query rates to be supported at initial operation, and reserve capacity of the system. Describe how your nameserver update methods will change at various scales. Describe how DNS performance will change at various scales. • RFCs that will be followed – describe how services are compliant with RFCs and if these are dedicated or shared with any other functions (capacity/performance) or DNS zones. • The resources used to implement the services - describe complete server hardware and software, including network bandwidth and addressing plans for servers. Also include resourcing plans for the initial implementation of, and ongoing maintenance for, this aspect of the criteria (number and description of personnel roles allocated to this area). • Demonstrate how the system will	N	Note that the use of DNS wildcard resource records as described in RFC 4592 or any other method or technology for synthesizing DNS resource records or using redirection within the DNS by the registry is prohibited in the Registry Agreement. Also note that name servers for the new gTLD must comply with IANA Technical requirements for authoritative name servers: http://www.iana.org/procedures/nameserver-requirements.html.	0-1	Complete answer demonstrates: (1) adequate description of configurations of nameservers and compliance with respective DNS protocol-related RFCs; (2) a technical plan scope/scale that is consistent with the overall business approach and planned size of the registry; (3) a technical plan that is adequately resourced in the planned costs detailed in the financial section; (4) evidence of compliance with Specification 6 to the Registry Agreement; and (5) evidence of complete knowledge and understanding of requirements for DNS service, one of the five critical registry functions.	**1 - meets requirements**: Response includes: (1) Adequate description of DNS service that that substantially demonstrates the applicant's capability and knowledge required to meet this element; (2) Plans are sufficient to result in compliance with DNS protocols (Specification 6, section 1.1) and required performance specifications Specification 10, Service Level Matrix; (3) Plans are consistent with technical, operational, and financial approach as described in the application; and (4) Demonstrates an adequate level of resources that are on hand, or committed or readily available to carry out this function. **0 - fails requirements**: Does not meet all the requirements to score 1.

	#	Question	Included in public posting	Notes	Scoring Range	Criteria	Scoring
		function - describe how the proposed infrastructure will be able to deliver the performance described in Specification 10 (section 2) attached to the Registry Agreement. Examples of evidence include: • Server configuration standard (i.e., planned configuration). • Network addressing and bandwidth for query load and update propagation. • Headroom to meet surges. A complete answer is expected to be no more than 10 pages.					
	36	IPv6 Reachability: provide a description of plans for providing IPv6 transport including, but not limited to: • How the registry will support IPv6 access to Whois, Web-based Whois and any other Registration Data Publication Service as described in Specification 6 (section 1.5) to the Registry Agreement. • How the registry will comply with the requirement in Specification 6 for having at least two nameservers reachable over IPv6. • List all services that will be provided over IPv6, and describe the IPv6 connectivity and provider diversity that will be used. • Resourcing plans for the initial implementation of, and ongoing maintenance for, this aspect of the criteria (number and description of personnel roles allocated to this area). A complete answer is expected to be no more than 5 pages.	N	IANA nameserver requirements are available at http://www.iana.org/procedures/nameserver-requirements.html.	0-1	Complete answer demonstrates: (1) complete knowledge and understanding of this aspect of registry technical requirements; (2) a technical plan scope/scale that is consistent with the overall business approach and planned size of the registry; (3) a technical plan that is adequately resourced in the planned costs detailed in the financial section; and (4) evidence of compliance with Specification 6 to the Registry Agreement.	**1 - meets requirements**: Response includes (1) Adequate description of IPv6 reachability that substantially demonstrates the applicant's capability and knowledge required to meet this element; (2) A description of an adequate implementation plan addressing requirements for IPv6 reachability, indicating IPv6 reachability allowing IPv6 transport in the network over two independent IPv6 capable networks in compliance to IPv4 IANA specifications, and Specification 10; (3) IPv6 plans consistent with the technical, operational, and financial approach as described in the application; and (4) Demonstrates an adequate level of resources that are on hand, committed or readily available to carry out this function. **0 - fails requirements:** Does not meet all the requirements to score 1.

	#	Question	Included in public posting	Notes	Scoring Range	Criteria	Scoring
	37	Data Backup Policies & Procedures: provide • details of frequency and procedures for backup of data, • hardware, and systems used for backup, • data format, • data backup features, • backup testing procedures, • procedures for retrieval of data/rebuild of database, • storage controls and procedures, and • resourcing plans for the initial implementation of, and ongoing maintenance for, this aspect of the criteria (number and description of personnel roles allocated to this area). A complete answer is expected to be no more than 5 pages.	N		0-1	Complete answer demonstrates: (1) detailed backup and retrieval processes deployed; (2) backup and retrieval process and frequency are consistent with the overall business approach and planned size of the registry; and (3) a technical plan that is adequately resourced in the planned costs detailed in the financial section.	1 - meets requirements: Response includes (1) Adequate description of backup policies and procedures that substantially demonstrate the applicant's capabilities and knowledge required to meet this element; (2) A description of leading practices being or to be followed; (3) Backup procedures consistent with the technical, operational, and financial approach as described in the application; and (4) Demonstrates an adequate level of resources that are on hand, or committed or readily available to carry out this function. 0 - fails requirements: Does not meet all the requirements to score a 1.
	38	Data Escrow: describe • how the applicant will comply with the data escrow requirements documented in the Registry Data Escrow Specification (Specification 2 of the Registry Agreement); and • resourcing plans for the initial implementation of, and ongoing maintenance for, this aspect of the criteria (number and description of personnel roles allocated to this area). A complete answer is expected to be no more than 5 pages	N		0-1	Complete answer demonstrates: (1) complete knowledge and understanding of data escrow, one of the five critical registry functions; (2) compliance with Specification 2 of the Registry Agreement; (3) a technical plan that is adequately resourced in the planned costs detailed in the financial section; and (4) the escrow arrangement is consistent with the overall business approach and size/scope of the registry.	1 – meets requirements: Response includes (1) Adequate description of a Data Escrow process that substantially demonstrates the applicant's capability and knowledge required to meet this element; (2) Data escrow plans are sufficient to result in compliance with the Data Escrow Specification (Specification 2 to the Registry Agreement); (3) Escrow capabilities are consistent with the technical, operational, and financial approach as described in the application; and (4) Demonstrates an adequate level of resources that are on hand, committed, or readily available to carry out this function. 0 – fails requirements: Does not meet all the requirements to score a 1.

	#	Question	Included in public posting	Notes	Scoring Range	Criteria	Scoring
	39	Registry Continuity: describe how the applicant will comply with registry continuity obligations as described in Specification 6 (section 3) to the registry agreement. This includes conducting registry operations using diverse, redundant servers to ensure continued operation of critical functions in the case of technical failure. Describe resourcing plans for the initial implementation of, and ongoing maintenance for, this aspect of the criteria (number and description of personnel roles allocated to this area). The response should include, but is not limited to, the following elements of the business continuity plan: • Identification of risks and threats to compliance with registry continuity obligations; • Identification and definitions of vital business functions (which may include registry services beyond the five critical registry functions) versus other registry functions and supporting operations and technology; • Definitions of Recovery Point Objectives and Recovery Time Objective; and • Descriptions of testing plans to promote compliance with relevant obligations. To be eligible for a score of 2, answers must also include: • A highly detailed plan that provides for leading practice levels of availability; and • Evidence of concrete steps such as a contract with a backup provider (in addition to any currently designated service operator) or a maintained hot site. A complete answer is expected to be no more than 15 pages.	N	For reference, applicants should review the ICANN gTLD Registry Continuity Plan at http://www.icann.org/en/registries/continuity/gtld-registry-continuity-plan-25apr09-en.pdf. A Recovery Point Objective (RPO) refers to the point in time to which data should be recovered following a business disruption or disaster. The RPO allows an organization to define a window of time before a disruption or disaster during which data may be lost and is independent of the time it takes to get a system back on-line.If the RPO of a company is two hours, then when a system is brought back on-line after a disruption/disaster, all data must be restored to a point within two hours before the disaster. A Recovery Time Objective (RTO) is the duration of time within which a process must be restored after a business disruption or disaster to avoid what the entity may deem as unacceptable consequences. For example, pursuant to the draft Registry Agreement DNS service must not be down for longer than 4 hours. At 4 hours ICANN may invoke the use of an Emergency Back End Registry Operator to take over this function. The entity may deem this to be an unacceptable consequence therefore they may set their RTO to be something less than 4 hours and would build continuity plans accordingly. Vital business functions are functions that are critical to the success of the operation. For example, if a registry operator provides an additional service beyond the five critical registry functions, that it deems as central to its TLD, or supports an operation that is central to the TLD, this might be identified as a vital business function.	0-2	Complete answer demonstrates: (1) detailed description showing plans for compliance with registry continuity obligations; (2) a technical plan scope/scale that is consistent with the overall business approach and planned size of the registry; (3) a technical plan that is adequately resourced in the planned costs detailed in the financial section; and (4) evidence of compliance with Specification 6 to the Registry Agreement.	**2 - exceeds requirements**: Response meets all attributes for a score of 1 and includes: (1) Highly developed and detailed processes for maintaining registry continuity; and (2) Evidence of concrete steps, such as a contract with a backup service provider or a maintained hot site. **1 - meets requirements:** Response includes: (1) Adequate description of a Registry Continuity plan that substantially demonstrates capability and knowledge required to meet this element; (2) Continuity plans are sufficient to result in compliance with requirements (Specification 6); (3) Continuity plans are consistent with the technical, operational, and financial approach as described in the application; and (4) Demonstrates an adequate level of resources that are on hand, committed readily available to carry out this function. **0 - fails requirements**: Does not meet all the requirements to score a 1.
	40	Registry Transition: provide a Service Migration plan (as described in the Registry Transition Processes) that could be followed in the event	N		0-1	Complete answer demonstrates: (1) complete knowledge and	**1 - meets requirements**: Response includes (1) Adequate description of a registry

	#	Question	Included in public posting	Notes	Scoring Range	Criteria	Scoring
		that it becomes necessary to permanently transition the proposed gTLD to a new operator. The plan must take into account, and be consistent with the vital business functions identified in the previous question. Elements of the plan may include, but are not limited to: • Preparatory steps needed for the transition of critical registry functions; • Monitoring during registry transition and efforts to minimize any interruption to critical registry functions during this time; and • Contingency plans in the event that any part of the registry transition is unable to move forward according to the plan. A complete answer is expected to be no more than 10 pages.				understanding of the Registry Transition Processes; and (2) a technical plan scope/scale consistent with the overall business approach and planned size of the registry.	transition plan that substantially demonstrates the applicant's capability and knowledge required to meet this element; (2) A description of an adequate registry transition plan with appropriate monitoring during registry transition; and (3) Transition plan is consistent with the technical, operational, and financial approach as described in the application. **0 - fails requirements**: Does not meet all the requirements to score a 1.
	41	Failover Testing: provide • a description of the failover testing plan, including mandatory annual testing of the plan. Examples may include a description of plans to test failover of data centers or operations to alternate sites, from a hot to a cold facility, registry data escrow testing, or other mechanisms. The plan must take into account and be consistent with the vital business functions identified in Question 39; and • resourcing plans for the initial implementation of, and ongoing maintenance for, this aspect of the criteria (number and description of personnel roles allocated to this area). The failover testing plan should include, but is not limited to, the following elements: • Types of testing (e.g., walkthroughs, takedown of sites) and the frequency of testing; • How results are captured, what is done	N		0-1	Complete answer demonstrates: (1) complete knowledge and understanding of this aspect of registry technical requirements; (2) a technical plan scope/scale consistent with the overall business approach and planned size of the registry; and (3) a technical plan that is adequately resourced in the planned costs detailed in the financial section.	**1 - meets requirements**: Response includes (1) An adequate description of a failover testing plan that substantially demonstrates the applicant's capability and knowledge required to meet this element; (2) A description of an adequate failover testing plan with an appropriate level of review and analysis of failover testing results; (3) Failover testing plan is consistent with the technical, operational, and financial approach as described in the application; and (4) Demonstrates an adequate level of resources that are on hand, committed or readily available to carry out this function. **0 – fails requirements** Does not meet all the requirements to score a 1.

	#	Question	Included in public posting	Notes	Scoring Range	Criteria	Scoring
		with the results, and with whom results are shared; • How test plans are updated (e.g., what triggers an update, change management processes for making updates); • Length of time to restore critical registry functions; • Length of time to restore all operations, inclusive of critical registry functions; and • Length of time to migrate from one site to another. A complete answer is expected to be no more than10 pages.					
	42	Monitoring and Fault Escalation Processes: provide • a description of the proposed (or actual) arrangements for monitoring critical registry systems (including SRS, database systems, DNS servers, Whois service, network connectivity, routers and firewalls). This description should explain how these systems are monitored and the mechanisms that will be used for fault escalation and reporting, and should provide details of the proposed support arrangements for these registry systems. • resourcing plans for the initial implementation of, and ongoing maintenance for, this aspect of the criteria (number and description of personnel roles allocated to this area). To be eligible for a score of 2, answers must also include: • Meeting the fault tolerance / monitoring guidelines described • Evidence of commitment to provide a 24x7 fault response team. A complete answer is expected to be no more than 10 pages.	N		0-2	Complete answer demonstrates: (1) complete knowledge and understanding of this aspect of registry technical requirements; (2) a technical plan scope/scale that is consistent with the overall business approach and planned size of the registry; (3) a technical plan that is adequately resourced in the planned costs detailed in the financial section; and (4) consistency with the commitments made to registrants and registrars regarding system maintenance.	2 - exceeds requirements: Response meets all attributes for a score of 1 and includes (1) Evidence showing highly developed and detailed fault tolerance/monitoring and redundant systems deployed with real-time monitoring tools / dashboard (metrics) deployed and reviewed regularly; (2) A high level of availability that allows for the ability to respond to faults through a 24x7 response team. 1 - meets requirements: Response includes (1) Adequate description of monitoring and fault escalation processes that substantially demonstrates the applicant's capability and knowledge required to meet this element; (2) Evidence showing adequate fault tolerance/monitoring systems planned with an appropriate level of monitoring and limited periodic review being performed; (3) Plans are consistent with the technical, operational, and financial approach described in the application; and (4) Demonstrates an adequate level of resources that are on hand,

	#	Question	Included in public posting	Notes	Scoring Range	Criteria	Scoring
							committed or readily available to carry out this function. **0 - fails requirements**: Does not meet all the requirements to score 1.
	43	DNSSEC: Provide • The registry's DNSSEC policy statement (DPS), which should include the policies and procedures the proposed registry will follow, for example, for signing the zone file, for verifying and accepting DS records from child domains, and for generating, exchanging, and storing keying material; • Describe how the DNSSEC implementation will comply with relevant RFCs, including but not limited to: RFCs 4033, 4034, 4035, 5910, 4509, 4641, and 5155 (the latter will only be required if Hashed Authenticated Denial of Existence will be offered); and • resourcing plans for the initial implementation of, and ongoing maintenance for, this aspect of the criteria (number and description of personnel roles allocated to this area). A complete answer is expected to be no more than 5 pages. Note, the DPS is required to be submitted as part of the application	N		0-1	Complete answer demonstrates: (1) complete knowledge and understanding of this aspect of registry technical requirements, one of the five critical registry functions; (2) a technical plan scope/scale that is consistent with the overall business approach and planned size of the registry; (3) a technical plan that is adequately resourced in the planned costs detailed in the financial section; and (4) an ability to comply with relevant RFCs.	**1 - meets requirements**: Response includes (1) An adequate description of DNSSEC that substantially demonstrates the applicant's capability and knowledge required to meet this element; (2) Evidence that TLD zone files will be signed at time of launch, in compliance with required RFCs, and registry offers provisioning capabilities to accept public key material from registrants through the SRS ; (3) An adequate description of key management procedures in the proposed TLD, including providing secure encryption key management (generation, exchange, and storage); (4) Technical plan is consistent with the technical, operational, and financial approach as described in the application; and (5) Demonstrates an adequate level of resources that are already on hand, committed or readily available to carry out this function. **0 - fails requirements**: Does not meet all the requirements to score 1.

	#	Question	Included in public posting	Notes	Scoring Range	Criteria	Scoring
	44	OPTIONAL. IDNs: • State whether the proposed registry will support the registration of IDN labels in the TLD, and if so, how. For example, explain which characters will be supported, and provide the associated IDN Tables with variant characters identified, along with a corresponding registration policy. This includes public interfaces to the databases such as Whois and EPP. • Describe how the IDN implementation will comply with RFCs 5809-5893 as well as the ICANN IDN Guidelines at http://www.icann.org/en/topics/idn/implementation-guidelines.htm. • Describe resourcing plans for the initial implementation of, and ongoing maintenance for, this aspect of the criteria (number and description of personnel roles allocated to this area). A complete answer is expected to be no more than 10 pages plus attachments.	N	IDNs are an optional service at time of launch. Absence of IDN implementation or plans will not detract from an applicant's score. Applicants who respond to this question with plans for implementation of IDNs at time of launch will be scored according to the criteria indicated here. IDN tables should be submitted in a machine-readable format. The model format described in Section 5 of RFC 4290 would be ideal. The format used by RFC 3743 is an acceptable alternative. Variant generation algorithms that are more complex (such as those with contextual rules) and cannot be expressed using these table formats should be specified in a manner that could be re-implemented programmatically by ICANN. Ideally, for any complex table formats, a reference code implementation should be provided in conjunction with a description of the generation rules.	0-1	IDNs are an optional service. Complete answer demonstrates: (1) complete knowledge and understanding of this aspect of registry technical requirements; (2) a technical plan that is adequately resourced in the planned costs detailed in the financial section; (3) consistency with the commitments made to registrants and the technical, operational, and financial approach described in the application; (4) issues regarding use of scripts are settled and IDN tables are complete and publicly available; and (5) ability to comply with relevant RFCs.	1 - meets requirements for this optional element: Response includes (1) Adequate description of IDN implementation that substantially demonstrates the applicant's capability and knowledge required to meet this element; (2) An adequate description of the IDN procedures, including complete IDN tables, compliance with IDNA/IDN guidelines and RFCs, and periodic monitoring of IDN operations; (3) Evidence of ability to resolve rendering and known IDN issues or spoofing attacks; (4) IDN plans are consistent with the technical, operational, and financial approach as described in the application; and (5) Demonstrates an adequate level of resources that are on hand, committed readily available to carry out this function. 0 - fails requirements: Does not meet all the requirements to score a 1.
Demonstration of Financial Capability	45	Financial Statements: provide • audited or independently certified financial statements for the most recently completed fiscal year for the applicant, and • audited or unaudited financial statements for the most recently ended interim financial period for the applicant for which this information may be released. For newly-formed applicants, or where financial statements are not audited, provide: • the latest available unaudited financial statements; and • an explanation as to why audited or independently certified financial statements are not available. At a minimum, the financial statements should be provided for the legal entity listed as the applicant.	N	The questions in this section (45-50) are intended to give applicants an opportunity to demonstrate their financial capabilities to run a registry. Supporting documentation for this question should be submitted in the original language.	0-1	Audited or independently certified financial statements are prepared in accordance with International Financial Reporting Standards (IFRS) adopted by the International Accounting Standards Board (IASB) or nationally recognized accounting standards (e.g., GAAP). This will include a balance sheet and income statement reflecting the applicant's financial position and results of operations, a statement of shareholders equity/partner capital, and a cash flow statement. In the event the applicant is an entity newly formed for the purpose of applying for a gTLD and with little to no operating history	1 - meets requirements: Complete audited or independently certified financial statements are provided, at the highest level available in the applicant's jurisdiction. Where such audited or independently certified financial statements are not available, such as for newly-formed entities, the applicant has provided an explanation and has provided, at a minimum, unaudited financial statements. 0 - fails requirements: Does not meet all the requirements to score 1.

	#	Question	Included in public posting	Notes	Scoring Range	Criteria	Scoring
		Financial statements are used in the analysis of projections and costs. A complete answer should include: • balance sheet; • income statement; • statement of shareholders equity/partner capital; • cash flow statement, and • letter of auditor or independent certification, if applicable.				(less than one year), the applicant must submit, at a minimum, pro forma financial statements including all components listed in the question. Where audited or independently certified financial statements are not available, applicant has provided an adequate explanation as to the accounting practices in its jurisdiction and has provided, at a minimum, unaudited financial statements.	
	46	Projections Template: provide financial projections for costs and funding using Template 1, Most Likely Scenario (attached). Note, if certain services are outsourced, reflect this in the relevant cost section of the template. The template is intended to provide commonality among TLD applications and thereby facilitate the evaluation process. A complete answer is expected to be no more than 10 pages in addition to the template.	N		0-1	Applicant has provided a thorough model that demonstrates a sustainable business (even if break-even is not achieved through the first three years of operation). Applicant's description of projections development is sufficient to show due diligence.	**1 - meets requirements**: (1) Financial projections adequately describe the cost, funding and risks for the application (2) Demonstrates resources and plan for sustainable operations; and (3) Financial assumptions about the registry operations, funding and market are identified, explained, and supported. **0 - fails requirements**: Does not meet all of the requirements to score a 1.
	47	Costs and capital expenditures: in conjunction with the financial projections template, describe and explain: • the expected operating costs and capital expenditures of setting up and operating the proposed registry; • any functions to be outsourced, as indicated in the cost section of the template, and the reasons for outsourcing; • any significant variances between years in any category of expected costs; and • a description of the basis / key assumptions including rationale for the costs provided in the projections template. This may include an	N	This question is based on the template submitted in question 46.	0-2	Costs identified are consistent with the proposed registry services, adequately fund technical requirements, and are consistent with proposed mission/purpose of the registry. Costs projected are reasonable for a registry of size and scope described in the application. Costs identified include the funding costs (interest expenses and fees) related to the continued operations instrument described in Question 50 below.	**2 - exceeds requirements**: Response meets all of the attributes for a score of 1 and: (1) Estimated costs and assumptions are conservative and consistent with an operation of the registry volume/scope/size as described by the applicant; (2) Estimates are derived from actual examples of previous or existing registry operations or equivalent; and (3) Conservative estimates are based on those experiences and describe a range of anticipated costs and use the high end of those estimates.

	#	Question	Included in public posting	Notes	Scoring Range	Criteria	Scoring
		executive summary or summary outcome of studies, reference data, or other steps taken to develop the responses and validate any assumptions made. As described in the Applicant Guidebook, the information provided will be considered in light of the entire application and the evaluation criteria. Therefore, this answer should agree with the information provided in Template 1 to: 1) maintain registry operations, 2) provide registry services described above, and 3) satisfy the technical requirements described in the Demonstration of Technical & Operational Capability section. Costs should include both fixed and variable costs. To be eligible for a score of two points, answers must demonstrate a conservative estimate of costs based on actual examples of previous or existing registry operations with similar approach and projections for growth and costs or equivalent. Attach reference material for such examples. A complete answer is expected to be no more than 10 pages.				Key assumptions and their rationale are clearly described and may include, but are not limited to: • Key components of capital expenditures; • Key components of operating costs, unit operating costs, headcount, number of technical/operating/ equipment units, marketing, and other costs; and • Costs of outsourcing, if any.	**1 - meets requirements**: (1) Cost elements are reasonable and complete (i.e., cover all of the aspects of registry operations: registry services, technical requirements and other aspects as described by the applicant); (2) Estimated costs and assumptions are consistent and defensible with an operation of the registry volume/scope/size as described by the applicant; and (3) Projections are reasonably aligned with the historical financial statements provided in Question 45. **0 - fails requirements**: Does not meet all the requirements to score a 1.
		(b) Describe anticipated ranges in projected costs. Describe factors that affect those ranges. A complete answer is expected to be no more than 10 pages.	N				
	48	(a) Funding and Revenue: Funding can be derived from several sources (e.g., existing capital or proceeds/revenue from operation of the proposed registry). Describe: I) How existing funds will provide resources for both: a) start-up of operations, and b) ongoing operations; II) the revenue model including projections for transaction volumes and price (if the applicant does not intend to rely on registration revenue in order to cover the costs of the registry's	N	Supporting documentation for this question should be submitted in the original language.	0-2	Funding resources are clearly identified and adequately provide for registry cost projections. Sources of capital funding are clearly identified, held apart from other potential uses of those funds and available. The plan for transition of funding sources from available capital to revenue from operations (if applicable) is described.	**2 - exceeds requirements**: Response meets all the attributes for a score of 1 and (1) Existing funds (specifically all funds required for start-up) are quantified, on hand, segregated in an account available only to the applicant for purposes of the application only, ; (2) If on-going operations are to be at least partially resourced from existing funds (rather than revenue from on-going operations) that funding is segregated and

	#	Question	Included in public posting	Notes	Scoring Range	Criteria	Scoring
		operation, it must clarify how the funding for the operation will be developed and maintained in a stable and sustainable manner); III) outside sources of funding (the applicant must, where applicable, provide evidence of the commitment by the party committing the funds). Secured vs unsecured funding should be clearly identified, including associated sources of funding (i.e., different types of funding, level and type of security/collateral, and key items) for each type of funding; IV) Any significant variances between years in any category of funding and revenue; and V) A description of the basis / key assumptions including rationale for the funding and revenue provided in the projections template. This may include an executive summary or summary outcome of studies, reference data, or other steps taken to develop the responses and validate any assumptions made; and VI) Assurances that funding and revenue projections cited in this application are consistent with other public and private claims made to promote the business and generate support. To be eligible for a score of 2 points, answers must demonstrate: I) A conservative estimate of funding and revenue; and II) Ongoing operations that are not dependent on projected revenue. A complete answer is expected to be no more than 10 pages.				Outside sources of funding are documented and verified. Examples of evidence for funding sources include, but are not limited to: • Executed funding agreements; • A letter of credit; • A commitment letter; or • A bank statement. Funding commitments may be conditional on the approval of the application. Sources of capital funding required to sustain registry operations on an on-going basis are identified. The projected revenues are consistent with the size and projected penetration of the target markets. Key assumptions and their rationale are clearly described and address, at a minimum: • Key components of the funding plan and their key terms; and • Price and number of registrations.	earmarked for this purpose only in an amount adequate for three years operation; (3) If ongoing operations are to be at least partially resourced from revenues, assumptions made are conservative and take into consideration studies, reference data, or other steps taken to develop the response and validate any assumptions made; and (4) Cash flow models are prepared which link funding and revenue assumptions to projected actual business activity. 1 - meets requirements: (1) Assurances provided that materials provided to investors and/or lenders are consistent with the projections and assumptions included in the projections templates; (2) Existing funds (specifically all funds required for start-up) are quantified, committed, identified as available to the applicant; (3) If on-going operations are to be at least partially resourced from existing funds (rather than revenue from on-going operations) that funding is quantified and its sources identified in an amount adequate for three years operation; (4) If ongoing operations are to be at least partially resourced from revenues, assumptions made are reasonable and are directly related to projected business volumes, market size and penetration; and (5) Projections are reasonably aligned with the historical financial statements provided in Question 45. 0 - fails requirements: Does not meet all the requirements to score a 1.

	#	Question	Included in public posting	Notes	Scoring Range	Criteria	Scoring
		(b) Describe anticipated ranges in projected funding and revenue. Describe factors that affect those ranges. A complete answer is expected to be no more than 10 pages.	N				
	49	(a) Contingency Planning: describe your contingency planning: • Identify any projected barriers/risks to implementation of the business approach described in the application and how they affect cost, funding, revenue, or timeline in your planning; • Identify the impact of any particular regulation, law or policy that might impact the Registry Services offering; and • Describe the measures to mitigate the key risks as described in this question. A complete answer should include, for each contingency, a clear description of the impact to projected revenue, funding, and costs for the 3-year period presented in Template 1 (Most Likely Scenario). To be eligible for a score of 2 points, answers must demonstrate that action plans and operations are adequately resourced in the existing funding and revenue plan even if contingencies occur. A complete answer is expected to be no more than10 pages.	N		0-2	Contingencies and risks are identified, quantified, and included in the cost, revenue, and funding analyses. Action plans are identified in the event contingencies occur. The model is resilient in the event those contingencies occur. Responses address the probability and resource impact of the contingencies identified.	2 - exceeds requirements: Response meets all attributes for a score of 1 and: (1) Action plans and operations are adequately resourced in the existing funding and revenue plan even if contingencies occur. 1 - meets requirements: (1) Model adequately identifies the key risks (including operational, business, legal, jurisdictional, financial, and other relevant risks); (2) Response gives consideration to probability and resource impact of contingencies identified; and (3) If resources are not available to fund contingencies in the existing plan, funding sources and a plan for obtaining them are identified. 0 - fails requirements: Does not meet all the requirements to score a 1.
		(b) Describe your contingency planning where funding sources are so significantly reduced that material deviations from the implementation model are required. In particular, describe: • how on-going technical requirements will be met; and • what alternative funding can be reasonably raised at a later time. Provide an explanation if you do not believe there is any chance of reduced funding.	N				

	#	Question	Included in public posting	Notes	Scoring Range	Criteria	Scoring
		Complete a financial projections template (Template 2, Worst Case Scenario) A complete answer is expected to be no more than 10 pages, in addition to the template.					
		(c) Describe your contingency planning where activity volumes so significantly exceed the high projections that material deviation from the implementation model are required. In particular, how will on-going technical requirements be met? A complete answer is expected to be no more than 10 pages.	N				
	50	(a) Provide a cost estimate for funding critical registry functions on an annual basis, and a rationale for these cost estimates commensurate with the technical, operational, and financial approach described in the application. The critical functions of a registry which must be supported even if an applicant's business and/or funding fails are: (1) DNS resolution for registered domain names Applicants should consider ranges of volume of daily DNS queries (e.g., 0-100M, 100M-1B, 1B+), the incremental costs associated with increasing levels of such queries, and the ability to meet SLA performance metrics. (2) Operation of the Shared Registration System Applicants should consider ranges of volume of daily EPP transactions (e.g., 0-200K, 200K-2M, 2M+), the incremental costs associated with	N	Registrant protection is critical and thus new gTLD applicants are requested to provide evidence indicating that the critical functions will continue to be performed even if the registry fails. Registrant needs are best protected by a clear demonstration that the basic registry functions are sustained for an extended period even in the face of registry failure. Therefore, this section is weighted heavily as a clear, objective measure to protect and serve registrants. The applicant has two tasks associated with adequately making this demonstration of continuity for critical registry functions. First, costs for maintaining critical registrant protection functions are to be estimated (Part a). In evaluating the application, the evaluators will adjudge whether the estimate is reasonable given the systems architecture and overall business approach described elsewhere in the application. The Continuing Operations Instrument (COI) is invoked by ICANN if necessary to pay for an Emergency Back End Registry Operator (EBERO) to maintain the five critical registry functions for a period of three to five years. Thus, the cost estimates are tied to the cost for a third party to provide the functions, not	0-3	Figures provided are based on an accurate estimate of costs. Documented evidence or detailed plan for ability to fund on-going critical registry functions for registrants for a period of three years in the event of registry failure, default or until a successor operator can be designated. Evidence of financial wherewithal to fund this requirement prior to delegation. This requirement must be met prior to or concurrent with the execution of the Registry Agreement.	**3 - exceeds requirements**: Response meets all the attributes for a score of 1 and: (1) Financial instrument is secured and in place to provide for on-going operations for at least three years in the event of failure. **1 - meets requirements**: (1) Costs are commensurate with technical, operational, and financial approach as described in the application; and (2) Funding is identified and instrument is described to provide for on-going operations of at least three years in the event of failure. **0 - fails requirements**: Does not meet all the requirements to score a 1.

	#	Question	Included in public posting	Notes	Scoring Range	Criteria	Scoring
		increasing levels of such queries, and the ability to meet SLA performance metrics. (3) Provision of Whois service Applicants should consider ranges of volume of daily Whois queries (e.g., 0-100K, 100k-1M, 1M+), the incremental costs associated with increasing levels of such queries, and the ability to meet SLA performance metrics for both web-based and port-43 services. (4) Registry data escrow deposits Applicants should consider administration, retention, and transfer fees as well as daily deposit (e.g., full or incremental) handling. Costs may vary depending on the size of the files in escrow (i.e., the size of the registry database). (5) Maintenance of a properly signed zone in accordance with DNSSEC requirements. Applicants should consider ranges of volume of daily DNS queries (e.g., 0-100M, 100M-1B, 1B+), the incremental costs associated with increasing levels of such queries, and the ability to meet SLA performance metrics. List the estimated annual cost for each of these functions (specify currency used). A complete answer is expected to be no more than 10 pages.		to the applicant's actual in-house or subcontracting costs for provision of these functions. Refer to guidelines at http://www.icann.org/en/announcements/announcement-3-23dec11-en.htm regarding estimation of costs. However, the applicant must provide its own estimates and explanation in response to this question.			
		(b) Applicants must provide evidence as to how the funds required for performing these critical registry functions will be available and guaranteed to fund registry operations (for the protection of registrants in the new gTLD) for a	N	Second (Part b), methods of securing the funds required to perform those functions for at least three years are to be described by the applicant in accordance with the criteria below. Two types of instruments will fulfill			

	#	Question	Included in public posting	Notes	Scoring Range	Criteria	Scoring
		minimum of three years following the termination of the Registry Agreement. ICANN has identified two methods to fulfill this requirement: (i) Irrevocable standby letter of credit (LOC) issued by a reputable financial institution. • The amount of the LOC must be equal to or greater than the amount required to fund the registry operations specified above for at least three years. In the event of a draw upon the letter of credit, the actual payout would be tied to the cost of running those functions. • The LOC must name ICANN or its designee as the beneficiary. Any funds paid out would be provided to the designee who is operating the required registry functions. • The LOC must have a term of at least five years from the delegation of the TLD. The LOC may be structured with an annual expiration date if it contains an evergreen provision providing for annual extensions, without amendment, for an indefinite number of periods until the issuing bank informs the beneficiary of its final expiration or until the beneficiary releases the LOC as evidenced in writing. If the expiration date occurs prior to the fifth anniversary of the delegation of the TLD, applicant will be required to obtain a replacement instrument. • The LOC must be issued by a reputable financial institution insured at the highest level in its jurisdiction. Documentation should indicate by whom the issuing institution is insured (i.e., as opposed to by whom the institution is rated). • The LOC will provide that ICANN or its designee shall be unconditionally entitled to a release of funds (full or partial) thereunder upon delivery of written notice by ICANN or its designee. • Applicant should attach an original copy of the executed letter of credit or a draft of the letter of credit containing the full terms and conditions. If not yet executed, the Applicant will be required to provide ICANN with an original copy of the executed LOC prior to or concurrent with the execution of the Registry Agreement. • The LOC must contain at least the following required elements: o Issuing bank and date of issue. o Beneficiary: ICANN / 4676 Admiralty		this requirement. The applicant must identify which of the two methods is being described. The instrument is required to be in place at the time of the execution of the Registry Agreement. Financial Institution Ratings: The instrument must be issued or held by a financial institution with a rating beginning with “A” (or the equivalent) by any of the following rating agencies: A.M. Best, Dominion Bond Rating Service, Egan-Jones, Fitch Ratings, Kroll Bond Rating Agency, Moody’s, Morningstar, Standard & Poor’s, and Japan Credit Rating Agency. If an applicant cannot access a financial institution with a rating beginning with “A,” but a branch or subsidiary of such an institution exists in the jurisdiction of the applying entity, then the instrument may be issued by the branch or subsidiary or by a local financial institution with an equivalent or higher rating to the branch or subsidiary. If an applicant cannot access any such financial institutions, the instrument may be issued by the highest-rated financial institution in the national jurisdiction of the applying entity, if accepted by ICANN. Execution by ICANN: For any financial instruments that contemplate ICANN being a party, upon the written request of the applicant, ICANN may (but is not obligated to) execute such agreement prior to submission of the applicant's application if the agreement is on terms acceptable to ICANN. ICANN encourages applicants to deliver a written copy of any such agreement (only if it requires ICANN's signature) to ICANN as soon as possible to facilitate ICANN's review. If the financial instrument requires ICANN's signature, then the applicant will receive 3 points for question 50 (for the instrument being "secured and in place") only if ICANN executes the agreement prior to submission of the application. ICANN will determine, in			

	#	Question	Included in public posting	Notes	Scoring Range	Criteria	Scoring
		Way, Suite 330 / Marina del Rey, CA 90292 / US, or its designee. o Applicant's complete name and address. o LOC identifying number. o Exact amount in USD. o Expiry date. o Address, procedure, and required forms whereby presentation for payment is to be made. o Conditions: ▪ Partial drawings from the letter of credit may be made provided that such payment shall reduce the amount under the standby letter of credit. ▪ All payments must be marked with the issuing bank name and the bank's standby letter of credit number. ▪ LOC may not be modified, amended, or amplified by reference to any other document, agreement, or instrument. ▪ The LOC is subject to the International Standby Practices (ISP 98) International Chamber of Commerce (Publication No. 590), or to an alternative standard that has been demonstrated to be reasonably equivalent. (ii) A <u>deposit into an irrevocable cash escrow account</u> held by a reputable financial institution. • The amount of the deposit must be equal to or greater than the amount required to fund registry operations for at least three years. • Cash is to be held by a third party financial institution which will not allow the funds to be commingled with the Applicant's operating funds or other funds and may only be accessed by ICANN or its designee if certain conditions are met. • The account must be held by a reputable financial institution insured at the highest level in its jurisdiction. Documentation should indicate by whom the issuing institution is insured (i.e., as opposed to by whom the institution is rated). • The escrow agreement relating to the escrow account will provide that ICANN or its designee shall be unconditionally entitled to a release of funds (full or partial) thereunder upon delivery of written notice by ICANN or its designee. • The escrow agreement must have a term		its sole discretion, whether to execute and become a party to a financial instrument. The financial instrument should be submitted in the original language.			

	#	Question	Included in public posting	Notes	Scoring Range	Criteria	Scoring
		of five years from the delegation of the TLD. • The funds in the deposit escrow account are not considered to be an asset of ICANN. • Any interest earnings less bank fees are to accrue to the deposit, and will be paid back to the applicant upon liquidation of the account to the extent not used to pay the costs and expenses of maintaining the escrow. • The deposit plus accrued interest, less any bank fees in respect of the escrow, is to be returned to the applicant if the funds are not used to fund registry functions due to a triggering event or after five years, whichever is greater. • The Applicant will be required to provide ICANN an explanation as to the amount of the deposit, the institution that will hold the deposit, and the escrow agreement for the account at the time of submitting an application. • Applicant should attach evidence of deposited funds in the escrow account, or evidence of provisional arrangement for deposit of funds. Evidence of deposited funds and terms of escrow agreement must be provided to ICANN prior to or concurrent with the execution of the Registry Agreement.					

Instructions: TLD Applicant – Financial Projections

The application process requires the applicant to submit two cash basis Financial Projections.

The first projection (Template 1) should show the Financial Projections associated with the Most Likely scenario expected. This projection should include the forecasted registration volume, registration fee, and all costs and capital expenditures expected during the start-up period and during the first three years of operations. Template 1 relates to Question 46 (Projections Template) in the application.

We also ask that applicants show as a separate projection (Template 2) the Financial Projections associated with a realistic Worst Case scenario. Template 2 relates to Question 49 (Contingency Planning) in the application.

For each Projection prepared, please include Comments and Notes on the bottom of the projection (in the area provided) to provide those reviewing these projections with information regarding:

1. Assumptions used, significant variances in Operating Cash Flows and Capital Expenditures from year-to-year;
2. How you plan to fund operations;
3. Contingency planning

As you complete Template 1 and Template 2, please reference data points and/or formulas used in your calculations (where appropriate).

Section I – Projected Cash inflows and outflows

Projected Cash Inflows

Lines A and B. Provide the number of forecasted registrations and the registration fee for years 1, 2, and 3. Leave the *Start-up* column blank. The start-up period is for cash costs and capital expenditures only; there should be no cash projections input to this column.

Line C. Multiply lines A and B to arrive at the *Registration Cash Inflow* for line C.

Line D. Provide projected cash inflows from any other revenue source for years 1, 2, and 3. For any figures provided on line *D*, please disclose the source in the *Comments/Notes* box of Section I. Note, do not include funding in Line *D as that is covered in Section VI*.

Line E. Add lines *C* and *D* to arrive at the total cash inflow.

Projected Operating Cash Outflows

Start up costs - For all line items (F thru L) Please describe the total period of time this start-up cost is expected to cover in the *Comments/Notes* box.

Line F. Provide the projected labor costs for marketing, customer support, and technical support for start-up, year 1, year 2, and year 3. Note, other labor costs should be put in line *L* (*Other Costs*) and specify the type of labor and associated projected costs in the *Comments/Notes* box of this section.

Line G. *Marketing Costs* represent the amount spent on advertising, promotions, and other marketing activities. This amount should not include labor costs included in Marketing Labor (line *F)*.

Lines H through K. Provide projected costs for facilities, G&A, interests and taxes, and Outsourcing for start-up as well as for years 1, 2, and 3. Be sure to list the type of activities that are being outsourced. You may combine certain activities from the same provider as long as an appropriate description of the services being combined is listed in the *Comments/Notes* box.

Line L. Provide any other projected operating costs for start-up, year 1, year 2, year 3. Be sure to specify the type of cost in the *Comments/Notes* box.

Line M. Add lines *F* through *L* to arrive at the total costs for line *M*.

Line N. Subtract line *E* from line *M* to arrive at the projected net operation number for line *N*.

Section IIa – Breakout of Fixed and Variable Operating Cash Outflows

Line A. Provide the projected variable operating cash outflows including labor and other costs that are not fixed in nature. Variable operating cash outflows are expenditures that fluctuate in relationship with increases or decreases in production or level of operations.

Line B. Provide the projected fixed operating cash outflows. Fixed operating cash outflows are expenditures that do not generally fluctuate in relationship with increases or decreases in production or level of operations. Such costs are generally necessary to be incurred in order to operate the base line operations of the organization or are expected to be incurred based on contractual commitments.

Line C – Add lines *A* and *B* to arrive at total Fixed and Variable Operating Cash Outflows for line *C*. This must equal Total Operating Cash Outflows from Section I, Line *M*.

Section IIb – Breakout of Critical Registry Function Operating Cash Outflows

Lines A – E. Provide the projected cash outflows for the five critical registry functions. If these functions are outsourced, the component of the outsourcing fee representing these functions must be separately identified and provided. These costs are based on the applicant's cost to manage these functions and should be calculated separately from the Continued Operations Instrument (COI) for Question 50.

Line F. If there are other critical registry functions based on the applicant's registry business model then the projected cash outflow for this function must be provided with a description added to the *Comment/Notes* box. This projected cash outflow may also be included in the 3-year reserve.

Line G. Add lines *A* through *F* to arrive at the Total Critical Registry Function Cash Outflows.

Section III – Projected Capital Expenditures

Lines A through C. Provide projected hardware, software, and furniture & equipment capital expenditures for start-up as well as for years 1, 2, and 3. Please describe the total period of time the start-up cost is expected to cover in the *Comments/Notes* box.

Line D. Provide any projected capital expenditures as a result of outsourcing. This should be included for start-up and years 1, 2, and 3. Specify the type of expenditure and describe the total period of time the start-up cost is expected to cover in the *Comments/Notes* box of Section III.

Line E – Please describe "other" capital expenditures in the *Comments/Notes* box.

Line F. Add lines *A* through *E* to arrive at the Total Capital Expenditures.

Section IV – Projected Assets & Liabilities

Lines A through C. Provide projected cash, account receivables, and other current assets for start-up as well as for years 1, 2, and 3. For *Other Current Assets*, specify the type of asset and describe the total period of time the start-up cost is expected to cover in the *Comments/Notes* box.

Line D. Add lines *A*, *B*, *C* to arrive at the Total Current Assets.

Lines E through G. Provide projected accounts payable, short-term debt, and other current liabilities for start-up as well as for years 1, 2, and 3. For *Other Current Liabilities*, specify the type of liability and describe the total period of time the start-up up cost is expected to cover in the *Comments/Notes* box.

Line H. Ad lines *E* through *G* to arrive at the total current liabilities.

Lines I through K. Provide the projected fixed assets (PP&E), the 3-year reserve, and long-term assets for start-up as well as for years 1, 2, and 3. Please describe the total period of time the start-up cost is expected to cover in the *Comments/Notes* box.

Line L. Ad lines *I* through *K* to arrive at the total long-term assets.

Line M. Provide the projected long-term debt for start-up as well as for years 1, 2, and 3. Please describe the total period of time the start-up cost is expected to cover in the *Comments/Notes* box

Section V – Projected Cash Flow

Cash flow is driven by *Projected Net Operations* (Section I), *Projected Capital Expenditures* (Section III), and *Projected Assets & Liabilities* (Section IV).

Line A. Provide the projected net operating cash flows for start-up as well as for years 1, 2, and 3. Please describe the total period of time the start-up cost is expected to cover in the *Comments/Notes* box.

Line B. Provide the projected capital expenditures for start-up as well as for years 1, 2, and 3. Please describe the total period of time the start-up cost is expected to cover in the *Comments/Notes* box of Section V.

Lines C through F. Provide the projected change in non-cash current assets, total current liabilities, debt adjustments, and other adjustments for start-up as well as for years 1, 2, and 3. Please describe the total period of time the start-up cost is expected to cover in the *Comments/Notes* box.

Line G. Add lines *A* through *F* to arrive at the projected net cash flow for line *H*.

Section VI – Sources of Funds

Lines A & B. Provide projected funds from debt and equity at start-up. Describe the sources of debt and equity funding as well as the total period of time the start-up is expected to cover in the *Comments/Notes* box. Please also provide evidence the funding (e.g., letter of commitment).

Line C. Add lines *A* and *B* to arrive at the total sources of funds for line *C*.

General Comments – Regarding Assumptions Used, Significant Variances Between Years, etc.

Provide explanations for any significant variances between years (or expected in years beyond the timeframe of the template) in any category of costing or funding.

General Comments – Regarding how the Applicant Plans to Fund Operations

Provide general comments explaining how you will fund operations. Funding should be explained in detail in response to question 48.

General Comments – Regarding Contingencies

Provide general comments to describe your contingency planning. Contingency planning should be explained in detail in response to question 49.

TLD Applicant -- Financial Projections : **Sample**

In local currency (unless noted otherwise)

Sec.	Reference / Formula	Start-up Costs	Live / Operational			Comments / Notes
			Year 1	Year 2	Year 3	Provide name of local currency used.
I) Projected Cash Inflows and Outflows						
A) Forecasted registration volume		-	62 000	81 600	105 180	Registration was forecasted based on recent market surveys which we have attached and disccused below.
B) Registration fee		$ -	$ 5.00	$ 5.50	$ 6.05	We do not anticipate significant increases in Registration Fees subsequent to year 3.
C) Registration cash inflows	**A * B**	-	310 000	448 800	636 339	
D) Other cash inflows		-	35 000	48 000	62 000	Other cash inflows represent advertising monies expected from display ads on our website.
E) Total Cash Inflows		-	345 000	496 800	698 339	
Projected Operating Cash Outflows						
F) Labor:						
i) Marketing Labor		25 000	66 000	72 000	81 000	Costs are further detailed and explained in response to question 47.
ii) Customer Support Labor		5 000	68 000	71 000	74 000	
iii) Technical Labor		32 000	45 000	47 000	49 000	
G) Marketing		40 000	44 000	26 400	31 680	
H) Facilities		7 000	10 000	12 000	14 400	
I) General & Administrative		14 000	112 000	122 500	136 000	
J) Interest and Taxes		27 500	29 000	29 800	30 760	
K) Outsourcing Operating Costs, if any (list the type of activities being outsourced):						Provide a list and associated cost for each outsourced function.
i) Hot site maintenance		5 000	7 500	7 500	7 500	Outsourcing hot site to ABC Company cost based on number of servers hosted and customer support
ii) Partial Registry Functions		32 000	37 500	41 000	43 000	Outsourced certain registry and other functions to ABC registry {*applicant should list outsourced functions*}. Costs for each year are based on expected domains under management
iii) {list type of activities being outsourced}		-	-	-	-	
iv) {list type of activities being outsourced}		-	-	-	-	
v) {list type of activities being outsourced}		-	-	-	-	
vi) {list type of activities being outsourced}		-	-	-	-	
L) Other Operating Costs		12 200	18 000	21 600	25 920	
M) Total Operating Cash Outflows		199 700	437 000	450 800	493 260	
N) Projected Net Operating Cash flow	**E - M**	(199 700)	(92 000)	46 000	205 079	
IIa) Break out of Fixed and Variable Operating Cash Outflows						
A) Total Variable Operating Costs		92 000	195 250	198 930	217 416	Variable Costs: -Start Up equals all labor plus 75% of marketing. -Years 1 through 3 equal 75% of all labor plus 50% of Marketing and 30% of G&A and Other Operating Costs
B) Total Fixed Operating Costs		107 700	241 750	251 870	275 844	Fixed Costs: equals Total Costs less Variable Costs
C) Total Operating Cash Outflows	**= Sec. I) M**	199 700	437 000	450 800	493 260	
	CHECK	-	-	-	-	Check that II) C equals I) N.
IIb) Break out of Critical Registry Function Operating Cash Outflows						Note: these are based on the applicant's cost to manage these functions and should be calculated separately from the Continued Operations Instrument (COI) for Question 50
A) Operation of SRS			5 000	5 500	6 050	Commensurate with Question 24
B) Provision of Whois			6 000	6 600	7 260	Commensurate with Question 26
C) DNS Resolution for Registered Domain Names			7 000	7 700	8 470	Commensurate with Question 35
D) Registry Data Escrow			8 000	8 800	9 680	Commensurate with Question 38
E) Maintenance of Zone in accordance with DNSSEC			9 000	9 900	10 890	Commensurate with Question 43
F) Other						
G) Total Critical Function Cash Outflows		-	35 000	38 500	42 350	
	-	-				
III) Projected Capital Expenditures						
A) Hardware		98 000	21 000	16 000	58 000	-Hardware & Software have a useful life of 3 years
B) Software		32 000	18 000	24 000	11 000	
C) Furniture & Other Equipment		43 000	22 000	14 000	16 000	-Furniture & other equipment have a useful life of 5 years
D) Outsourcing Capital Expenditures, if any (list the type of capital expenditures)						
i)		-	-	-	-	List and describe each identifiable type of outsourcing.
ii)		-	-	-	-	List and describe each identifiable type of outsourcing.
iii)		-	-	-	-	List and describe each identifiable type of outsourcing.
iv)		-	-	-	-	List and describe each identifiable type of outsourcing.
v)		-	-	-	-	List and describe each identifiable type of outsourcing.
vi)		-	-	-	-	List and describe each identifiable type of outsourcing.
E) Other Capital Expenditures						
F) Total Capital Expenditures		173 000	61 000	54 000	85 000	
IV) Projected Assets & Liabilities						
A) Cash		668 300	474 300	413 00	471 679	
B) Accounts receivable			70 000	106 000	160 000	
C) Other current assets			40 000	60 000	80 000	
D) Total Current Assets		668 300	584 300	579 00	711 679	
E) Accounts payable		41 000	110 000	113 000	125 300	
F) Short-term Debt						
G) Other Current Liabilities						
H) Total Current Liabilities		41 000	110 000	113 000	125 300	
I) Total Property, Plant & Equipment (PP&E)	**= Sec III) F: cumulative Prior Years Cur Yr**	173 000	234 000	288 000	373 000	
J) 3-year Reserve		186 000	186 000	186 000	186 000	Should equal amount calculated for Question 50
K) Other Long-term Assets						
L) Total Long-term Assets		359 000	420 000	474 000	559 000	
M) Total Long-term Debt		1 000 000	1 000 000	1 000 000	1 000 000	Principal payments on the line of credit with XYZ Bank will not be incurred until Year 5. Interest will be paid as incurred and is reflected in Sec I) J.
V) Projected Cash flow (excl. 3-year Reserve)						
A) Net operating cash flows	**= Sec. I) N**	(199 700)	(92 000)	46 000	205 079	
B) Capital expenditures	**= Sec. III) FE**	(173 000)	(61 000)	(54 000)	(85 000)	
C) Change in Non Cash Current Assets	**= Sec. IV) (B C): Prior Yr - Cur Yr**	n/a	(110 000)	(56 000)	(74 000)	
D) Change in Total Current Liabilities	**= Sec. IV) H: Cur Yr - Prior Yr**	41 000	69 000	3 000	12 300	The $41k in Start Up Costs represents an offset of the Accounts Payable reflected in the Projected balance sheet. Subsequent years are based on changes in Current Liabilities where Prior Year is subtracted from the Current year
E) Debt Adjustments	**= Sec IV) F and M: Cur Yr - Prior Yr**	n/a	-	-	-	
F) Other Adjustments						
G) Projected Net Cash flow		**(331,700)**	**(194,000)**	**(61,000)**	**58,379**	
VI) Sources of funds						
A) Debt:						
i) On-hand at time of application		1 000 000				See below for comments on funding. Revenues are further detailed and explained in response to question 48.
ii) Contingent and/or committed but not yet on-hand						
B) Equity:						
i) On-hand at time of application						
ii) Contingent and/or committed but not yet on-hand		-				
C) Total Sources of funds		1 000 000				

General Comments (Notes Regarding Assumptions Used, Significant Variances Between Years, etc.):

We expect the number of registrations to grow at approximately 30% per year with an increase in the registration fee of $1 per year for the first three years. These volume assumptions are based on the attached (i) market data and (ii) published benchmark regsitry growth. Fee assumptions are aligned with the growth plan and anticipated demand based on the regsitration curve. We anticipate our costs will increase at a controlled pace over the first three years except for marketing costs which will be higher in the start-up and first year as we establish our brand name and work to increase registrations. Operating costs are supported by the attached (i) benchmark report for a basket of similar registries and (ii) a build-up of costs based on our current operations. Our capital expenditures will be greatest in the start-up phase and then our need to invest in computer hardware and software will level off after the start-up period. Capital expenses are based on contract drafts and discussions held with vendors. We have included and referenced the hardware costs to support the estimates. Our investment in Furniture and Equipment will be greatest in the start-up period as we build our infrastructure and then decrease in the following periods.

Start-up: Our start-up phase is anticpated to comprise [X] months in line with benchmark growth curves indicated by prior start-ups and published market data. Our assumptions were derived from the attached support.

Comments regarding how the Applicant plans to Fund operations:

We have recently negotiated a line of credit with XYZ Bank (a copy of the fully executed line of credit agreement has been included with our application) and this funding will allow us to purchase necessary equipment and pay for employees and other Operating Costs during our start-up period and the first few years of operations. We expect that our business operation will be self funded (i.e. revenue from operations will cover all anticipated costs and capital expenditures) by the second half of our second year in operation; we also expect to become profitable with positive cash flow in year three.

General Comments regarding contingencies:

Although we expect to be cash flow positive by the end of year 2 the recently negotiated line of credit will cover our operating costs for the first 4 years of operation if necessary. We have also entered into an agreement with XYZ Co. to assume our registrants should our business model not have the ability to sustain itself in future years. Agreement with XYZ Co. has been included with our application. A full description of risks and a range of potential outcomes and impacts are included in our responses to Question 49. These responses have quantified the impacts of certain probabilites and our negotiated funding and action plans as shown are adequate to fund our our Worst Case Scenerio

Comments regarding how the Applicant plans to Fund operations:

General Comments regarding contingencies:

ICANN

gTLD Applicant Guidebook

(v. 2012-06-04)

Module 3

4 June 2012

Module 3

Objection Procedures

This module describes two types of mechanisms that may affect an application:

I. The procedure by which ICANN's Governmental Advisory Committee may provide GAC Advice on New gTLDs to the ICANN Board of Directors concerning a specific application. This module describes the purpose of this procedure, and how GAC Advice on New gTLDs is considered by the ICANN Board once received.

II. The dispute resolution procedure triggered by a formal objection to an application by a third party. This module describes the purpose of the objection and dispute resolution mechanisms, the grounds for lodging a formal objection to a gTLD application, the general procedures for filing or responding to an objection, and the manner in which dispute resolution proceedings are conducted.

    This module also discusses the guiding principles, or standards, that each dispute resolution panel will apply in reaching its expert determination.

    All applicants should be aware of the possibility that a formal objection may be filed against any application, and of the procedures and options available in the event of such an objection.

3.1 GAC Advice on New gTLDs

ICANN's Governmental Advisory Committee was formed to consider and provide advice on the activities of ICANN as they relate to concerns of governments, particularly matters where there may be an interaction between ICANN's policies and various laws and international agreements or where they may affect public policy issues.

The process for GAC Advice on New gTLDs is intended to address applications that are identified by governments to be problematic, e.g., that potentially violate national law or raise sensitivities.

GAC members can raise concerns about any application to the GAC. The GAC as a whole will consider concerns raised by GAC members, and agree on GAC advice to forward to the ICANN Board of Directors.

The GAC can provide advice on any application. For the Board to be able to consider the GAC advice during the evaluation process, the GAC advice would have to be submitted by the close of the Objection Filing Period (see Module 1).

GAC Advice may take one of the following forms:

I. The GAC advises ICANN that it is the consensus of the GAC that a particular application should not proceed. This will create a strong presumption for the ICANN Board that the application should not be approved.

II. The GAC advises ICANN that there are concerns about a particular application "dot-example." The ICANN Board is expected to enter into dialogue with the GAC to understand the scope of concerns. The ICANN Board is also expected to provide a rationale for its decision.

III. The GAC advises ICANN that an application should not proceed unless remediated. This will raise a strong presumption for the Board that the application should not proceed unless there is a remediation method available in the Guidebook (such as securing the approval of one or more governments), that is implemented by the applicant.

Where GAC Advice on New gTLDs is received by the Board concerning an application, ICANN will publish the Advice and endeavor to notify the relevant applicant(s) promptly. The applicant will have a period of 21 calendar days from the publication date in which to submit a response to the ICANN Board.

ICANN will consider the GAC Advice on New gTLDs as soon as practicable. The Board may consult with independent experts, such as those designated to hear objections in the New gTLD Dispute Resolution Procedure, in cases where the issues raised in the GAC advice are pertinent to one of the subject matter areas of the objection procedures. The receipt of GAC advice will not toll the processing of any application (i.e., an application will not be suspended but will continue through the stages of the application process).

3.2 Public Objection and Dispute Resolution Process

The independent dispute resolution process is designed to protect certain interests and rights. The process provides a path for formal objections during evaluation of the applications. It allows a party with standing to have its objection considered before a panel of qualified experts.

A formal objection can be filed only on four enumerated grounds, as described in this module. A formal objection initiates a dispute resolution proceeding. In filing an application for a gTLD, the applicant agrees to accept the applicability of this gTLD dispute resolution process. Similarly, an objector accepts the applicability of this gTLD dispute resolution process by filing its objection.

As described in section 3.1 above, ICANN's Governmental Advisory Committee has a designated process for providing advice to the ICANN Board of Directors on matters affecting public policy issues, and these objection procedures would not be applicable in such a case. The GAC may provide advice on any topic and is not limited to the grounds for objection enumerated in the public objection and dispute resolution process.

3.2.1 Grounds for Objection

A formal objection may be filed on any one of the following four grounds:

String Confusion Objection – The applied-for gTLD string is confusingly similar to an existing TLD or to another applied-for gTLD string in the same round of applications.

Legal Rights Objection – The applied-for gTLD string infringes the existing legal rights of the objector.

Limited Public Interest Objection – The applied-for gTLD string is contrary to generally accepted legal norms of morality and public order that are recognized under principles of international law.

Community Objection – There is substantial opposition to the gTLD application from a significant portion of the community to which the gTLD string may be explicitly or implicitly targeted.

The rationales for these objection grounds are discussed in the final report of the ICANN policy development process for new gTLDs. For more information on this process, see http://gnso.icann.org/issues/new-gtlds/pdp-dec05-fr-parta-08aug07.htm.

3.2.2 Standing to Object

Objectors must satisfy standing requirements to have their objections considered. As part of the dispute proceedings, all objections will be reviewed by a panel of experts designated by the applicable Dispute Resolution Service Provider (DRSP) to determine whether the objector has standing to object. Standing requirements for the four objection grounds are:

Objection ground	Who may object
String confusion	Existing TLD operator or gTLD applicant in current round. In the case where an IDN ccTLD Fast Track request has been submitted before the public posting of gTLD applications received, and the Fast Track requestor wishes to file a string confusion objection to a gTLD application, the Fast Track requestor will be granted standing.
Legal rights	Rightsholders
Limited public interest	No limitations on who may file – however, subject to a "quick look" designed for early conclusion of frivolous and/or abusive objections
Community	Established institution associated with a clearly delineated community

3.2.2.1 String Confusion Objection

Two types of entities have standing to object:

- An existing TLD operator may file a string confusion objection to assert string confusion between an applied-for gTLD and the TLD that it currently operates.
- Any gTLD applicant in this application round may file a string confusion objection to assert string confusion between an applied-for gTLD and the gTLD for which it has applied, where string confusion between the two applicants has not already been found in the Initial Evaluation. That is, an applicant does not have standing to object to another application with which it is already in a contention set as a result of the Initial Evaluation.

In the case where an existing TLD operator successfully asserts string confusion with an applicant, the application will be rejected.

In the case where a gTLD applicant successfully asserts string confusion with another applicant, the only possible outcome is for both applicants to be placed in a contention set and to be referred to a contention resolution procedure (refer to Module 4, String Contention Procedures). If an objection by one gTLD applicant to another gTLD application is unsuccessful, the applicants may both move forward in the process without being considered in direct contention with one another.

3.2.2.2 Legal Rights Objection

A rightsholder has standing to file a legal rights objection. The source and documentation of the existing legal rights the objector is claiming (which may include either registered or unregistered trademarks) are infringed by the applied-for gTLD must be included in the filing.

An intergovernmental organization (IGO) is eligible to file a legal rights objection if it meets the criteria for registration of a .INT domain name[1]:

a) An international treaty between or among national governments must have established the organization; and

b) The organization that is established must be widely considered to have independent international legal personality and must be the subject of and governed by international law.

The specialized agencies of the UN and the organizations having observer status at the UN General Assembly are also recognized as meeting the criteria.

3.2.2.3 Limited Public Interest Objection

Anyone may file a Limited Public Interest Objection. Due to the inclusive standing base, however, objectors are subject to a "quick look" procedure designed to identify and eliminate frivolous and/or abusive objections. An objection found to be manifestly unfounded and/or an abuse of the right to object may be dismissed at any time.

A Limited Public Interest objection would be manifestly unfounded if it did not fall within one of the categories that have been defined as the grounds for such an objection (see subsection 3.5.3).

A Limited Public Interest objection that is manifestly unfounded may also be an abuse of the right to object. An objection may be framed to fall within one of the

---

[1] See also http://www.iana.org/domains/int/policy/.

accepted categories for Limited Public Interest objections, but other facts may clearly show that the objection is abusive. For example, multiple objections filed by the same or related parties against a single applicant may constitute harassment of the applicant, rather than a legitimate defense of legal norms that are recognized under general principles of international law. An objection that attacks the applicant, rather than the applied-for string, could be an abuse of the right to object.[2]

The quick look is the Panel's first task, after its appointment by the DRSP and is a review on the merits of the objection. The dismissal of an objection that is manifestly unfounded and/or an abuse of the right to object would be an Expert Determination, rendered in accordance with Article 21 of the New gTLD Dispute Resolution Procedure.

In the case where the quick look review does lead to the dismissal of the objection, the proceedings that normally follow the initial submissions (including payment of the full advance on costs) will not take place, and it is currently contemplated that the filing fee paid by the applicant would be refunded, pursuant to Procedure Article 14(e).

3.2.2.4 Community Objection

Established institutions associated with clearly delineated communities are eligible to file a community objection. The community named by the objector must be a community strongly associated with the applied-for gTLD string in the application that is the subject of the objection. To qualify for standing for a community objection, the objector must prove both of the following:

---

[2] The jurisprudence of the European Court of Human Rights offers specific examples of how the term "manifestly ill-founded" has been interpreted in disputes relating to human rights. Article 35(3) of the European Convention on Human Rights provides: "The Court shall declare inadmissible any individual application submitted under Article 34 which it considers incompatible with the provisions of the Convention or the protocols thereto, manifestly ill-founded, or an abuse of the right of application." The ECHR renders reasoned decisions on admissibility, pursuant to Article 35 of the Convention. (Its decisions are published on the Court's website http://www.echr.coe.int.) In some cases, the Court briefly states the facts and the law and then announces its decision, without discussion or analysis. E.g., Decision as to the Admissibility of Application No. 34328/96 by Egbert Peree against the Netherlands (1998). In other cases, the Court reviews the facts and the relevant legal rules in detail, providing an analysis to support its conclusion on the admissibility of an application. Examples of such decisions regarding applications alleging violations of Article 10 of the Convention (freedom of expression) include: Décision sur la recevabilité de la requête no 65831/01 présentée par Roger Garaudy contre la France (2003); Décision sur la recevabilité de la requête no 65297/01 présentée par Eduardo Fernando Alves Costa contre le Portugal (2004).

The jurisprudence of the European Court of Human Rights also provides examples of the abuse of the right of application being sanctioned, in accordance with ECHR Article 35(3). See, for example, Décision partielle sur la recevabilité de la requête no 61164/00 présentée par Gérard Duringer et autres contre la France et de la requête no 18589/02 contre la France (2003).

It is an established institution – Factors that may be considered in making this determination include, but are not limited to:

- Level of global recognition of the institution;
- Length of time the institution has been in existence; and
- Public historical evidence of its existence, such as the presence of a formal charter or national or international registration, or validation by a government, inter-governmental organization, or treaty. The institution must not have been established solely in conjunction with the gTLD application process.

It has an ongoing relationship with a clearly delineated community – Factors that may be considered in making this determination include, but are not limited to:

- The presence of mechanisms for participation in activities, membership, and leadership;
- Institutional purpose related to the benefit of the associated community;
- Performance of regular activities that benefit the associated community; and
- The level of formal boundaries around the community.

The panel will perform a balancing of the factors listed above, as well as other relevant information, in making its determination. It is not expected that an objector must demonstrate satisfaction of each and every factor considered in order to satisfy the standing requirements.

3.2.3 Dispute Resolution Service Providers

To trigger a dispute resolution proceeding, an objection must be filed by the posted deadline date, directly with the appropriate DRSP for each objection ground.

- The International Centre for Dispute Resolution has agreed to administer disputes brought pursuant to string confusion objections.
- The Arbitration and Mediation Center of the World Intellectual Property Organization has agreed to administer disputes brought pursuant to legal rights objections.

- The International Center of Expertise of the International Chamber of Commerce has agreed to administer disputes brought pursuant to Limited Public Interest and Community Objections.

ICANN selected DRSPs on the basis of their relevant experience and expertise, as well as their willingness and ability to administer dispute proceedings in the new gTLD Program. The selection process began with a public call for expressions of interest[3] followed by dialogue with those candidates who responded. The call for expressions of interest specified several criteria for providers, including established services, subject matter expertise, global capacity, and operational capabilities. An important aspect of the selection process was the ability to recruit panelists who will engender the respect of the parties to the dispute.

3.2.4 Options in the Event of Objection

Applicants whose applications are the subject of an objection have the following options:

The applicant can work to reach a settlement with the objector, resulting in withdrawal of the objection or the application;

The applicant can file a response to the objection and enter the dispute resolution process (refer to Section 3.2); or

The applicant can withdraw, in which case the objector will prevail by default and the application will not proceed further.

If for any reason the applicant does not file a response to an objection, the objector will prevail by default.

3.2.5 Independent Objector

A formal objection to a gTLD application may also be filed by the Independent Objector (IO). The IO does not act on behalf of any particular persons or entities, but acts solely in the best interests of the public who use the global Internet.

In light of this public interest goal, the Independent Objector is limited to filing objections on the grounds of Limited Public Interest and Community.

---

[3] *See* http://www.icann.org/en/announcements/announcement-21dec07.htm.

Neither ICANN staff nor the ICANN Board of Directors has authority to direct or require the IO to file or not file any particular objection. If the IO determines that an objection should be filed, he or she will initiate and prosecute the objection in the public interest.

Mandate and Scope - The IO may file objections against "highly objectionable" gTLD applications to which no objection has been filed. The IO is limited to filing two types of objections: (1) Limited Public Interest objections and (2) Community objections. The IO is granted standing to file objections on these enumerated grounds, notwithstanding the regular standing requirements for such objections (see subsection 3.1.2).

The IO may file a Limited Public Interest objection against an application even if a Community objection has been filed, and vice versa.

The IO may file an objection against an application, notwithstanding the fact that a String Confusion objection or a Legal Rights objection was filed.

Absent extraordinary circumstances, the IO is not permitted to file an objection to an application where an objection has already been filed on the same ground.

The IO may consider public comment when making an independent assessment whether an objection is warranted. The IO will have access to application comments received during the comment period.

In light of the public interest goal noted above, the IO shall not object to an application unless at least one comment in opposition to the application is made in the public sphere.

Selection – The IO will be selected by ICANN, through an open and transparent process, and retained as an independent consultant. The Independent Objector will be an individual with considerable experience and respect in the Internet community, unaffiliated with any gTLD applicant.

Although recommendations for IO candidates from the community are welcomed, the IO must be and remain independent and unaffiliated with any of the gTLD applicants. The various rules of ethics for judges and international arbitrators provide models for the IO to declare and maintain his/her independence.

The IO's (renewable) tenure is limited to the time necessary to carry out his/her duties in connection with a single round of gTLD applications.

Budget and Funding – The IO's budget would comprise two principal elements: (a) salaries and operating expenses, and (b) dispute resolution procedure costs – both of which should be funded from the proceeds of new gTLD applications.

As an objector in dispute resolution proceedings, the IO is required to pay filing and administrative fees, as well as advance payment of costs, just as all other objectors are required to do. Those payments will be refunded by the DRSP in cases where the IO is the prevailing party.

In addition, the IO will incur various expenses in presenting objections before DRSP panels that will not be refunded, regardless of the outcome. These expenses include the fees and expenses of outside counsel (if retained) and the costs of legal research or factual investigations.

3.3 Filing Procedures

The information included in this section provides a summary of procedures for filing:

- Objections; and
- Responses to objections.

For a comprehensive statement of filing requirements applicable generally, refer to the New gTLD Dispute Resolution Procedure ("Procedure") included as an attachment to this module. In the event of any discrepancy between the information presented in this module and the Procedure, the Procedure shall prevail.

Note that the rules and procedures of each DRSP specific to each objection ground must also be followed. See http://newgtlds.icann.org/en/program-status/objection-dispute-resolution.

3.3.1 Objection Filing Procedures

The procedures outlined in this subsection must be followed by any party wishing to file a formal objection to an application that has been posted by ICANN. Should an applicant wish to file a formal objection to another gTLD application, it would follow these same procedures.

- All objections must be filed electronically with the appropriate DRSP by the posted deadline date.

Objections will not be accepted by the DRSPs after this date.

- All objections must be filed in English.
- Each objection must be filed separately. An objector wishing to object to several applications must file a separate objection and pay the accompanying filing fees for each application that is the subject of an objection. If an objector wishes to object to an application on more than one ground, the objector must file separate objections and pay the accompanying filing fees for each objection ground.

Each objection filed by an objector must include:

- The name and contact information of the objector.
- A statement of the objector's basis for standing; that is, why the objector believes it meets the standing requirements to object.
- A description of the basis for the objection, including:
    - A statement giving the specific ground upon which the objection is being filed.
    - A detailed explanation of the validity of the objection and why it should be upheld.
- Copies of any documents that the objector considers to be a basis for the objection.

Objections are limited to 5000 words or 20 pages, whichever is less, excluding attachments.

An objector must provide copies of all submissions to the DRSP associated with the objection proceedings to the applicant.

The DRSP will publish, and regularly update a list on its website identifying all objections as they are filed. ICANN will post on its website a notice of all objections filed once the objection filing period has closed.

3.3.2 Objection Filing Fees

At the time an objection is filed, the objector is required to pay a filing fee in the amount set and published by the relevant DRSP. If the filing fee is not paid, the DRSP will dismiss the objection without prejudice. See Section 1.5 of Module 1 regarding fees.

Funding from ICANN for objection filing fees, as well as for advance payment of costs (see subsection 3.4.7 below) is available to the At-Large Advisory Committee (ALAC). Funding for ALAC objection filing and dispute resolution fees is contingent on publication by ALAC of its approved process for considering and making objections. At a minimum, the process for objecting to a gTLD application will require: bottom-up development of potential objections, discussion and approval of objections at the Regional At-Large Organization (RALO) level, and a process for consideration and approval of the objection by the At-Large Advisory Committee.

Funding from ICANN for objection filing fees, as well as for advance payment of costs, is available to individual national governments in the amount of USD 50,000 with the guarantee that a minimum of one objection per government will be fully funded by ICANN where requested. ICANN will develop a procedure for application and disbursement of funds.

Funding available from ICANN is to cover costs payable to the dispute resolution service provider and made directly to the dispute resolution service provider; it does not cover other costs such as fees for legal advice.

3.3.3 Response Filing Procedures

Upon notification that ICANN has published the list of all objections filed (refer to subsection 3.3.1), the DRSPs will notify the parties that responses must be filed within 30 calendar days of receipt of that notice. DRSPs will not accept late responses. Any applicant that fails to respond to an objection within the 30-day response period will be in default, which will result in the objector prevailing.

- All responses must be filed in English.
- Each response must be filed separately. That is, an applicant responding to several objections must file a separate response and pay the accompanying filing fee to respond to each objection.
- Responses must be filed electronically.

Each response filed by an applicant must include:

- The name and contact information of the applicant.

- A point-by-point response to the claims made by the objector.
- Any copies of documents that it considers to be a basis for the response.

Responses are limited to 5000 words or 20 pages, whichever is less, excluding attachments.

Each applicant must provide copies of all submissions to the DRSP associated with the objection proceedings to the objector.

3.3.4 Response Filing Fees

At the time an applicant files its response, it is required to pay a filing fee in the amount set and published by the relevant DRSP, which will be the same as the filing fee paid by the objector. If the filing fee is not paid, the response will be disregarded, which will result in the objector prevailing.

3.4 Objection Processing Overview

The information below provides an overview of the process by which DRSPs administer dispute proceedings that have been initiated. For comprehensive information, please refer to the New gTLD Dispute Resolution Procedure (included as an attachment to this module).

3.4.1 Administrative Review

Each DRSP will conduct an administrative review of each objection for compliance with all procedural rules within 14 calendar days of receiving the objection. Depending on the number of objections received, the DRSP may ask ICANN for a short extension of this deadline.

If the DRSP finds that the objection complies with procedural rules, the objection will be deemed filed, and the proceedings will continue. If the DRSP finds that the objection does not comply with procedural rules, the DRSP will dismiss the objection and close the proceedings without prejudice to the objector's right to submit a new objection that complies with procedural rules. The DRSP's review or rejection of the objection will not interrupt the time limit for filing an objection.

3.4.2 Consolidation of Objections

Once the DRSP receives and processes all objections, at its discretion the DRSP may elect to consolidate certain objections. The DRSP shall endeavor to decide upon consolidation prior to issuing its notice to applicants that the response should be filed and, where appropriate, shall inform the parties of the consolidation in that notice.

An example of a circumstance in which consolidation might occur is multiple objections to the same application based on the same ground.

In assessing whether to consolidate objections, the DRSP will weigh the efficiencies in time, money, effort, and consistency that may be gained by consolidation against the prejudice or inconvenience consolidation may cause. The DRSPs will endeavor to have all objections resolved on a similar timeline. It is intended that no sequencing of objections will be established.

New gTLD applicants and objectors also will be permitted to propose consolidation of objections, but it will be at the DRSP's discretion whether to agree to the proposal.

ICANN continues to strongly encourage all of the DRSPs to consolidate matters whenever practicable.

3.4.3 Mediation

The parties to a dispute resolution proceeding are encouraged—but not required—to participate in mediation aimed at settling the dispute. Each DRSP has experts who can be retained as mediators to facilitate this process, should the parties elect to do so, and the DRSPs will communicate with the parties concerning this option and any associated fees.

If a mediator is appointed, that person may not serve on the panel constituted to issue an expert determination in the related dispute.

There are no automatic extensions of time associated with the conduct of negotiations or mediation. The parties may submit joint requests for extensions of time to the DRSP according to its procedures, and the DRSP or the panel, if appointed, will decide whether to grant the requests, although extensions will be discouraged. Absent exceptional circumstances, the parties must limit their requests for extension to 30 calendar days.

The parties are free to negotiate without mediation at any time, or to engage a mutually acceptable mediator of their own accord.

3.4.4 Selection of Expert Panels

A panel will consist of appropriately qualified experts appointed to each proceeding by the designated DRSP. Experts must be independent of the parties to a dispute resolution proceeding. Each DRSP will follow its adopted procedures for requiring such independence, including procedures for challenging and replacing an expert for lack of independence.

There will be one expert in proceedings involving a string confusion objection.

There will be one expert, or, if all parties agree, three experts with relevant experience in intellectual property rights disputes in proceedings involving an existing legal rights objection.

There will be three experts recognized as eminent jurists of international reputation, with expertise in relevant fields as appropriate, in proceedings involving a Limited Public Interest objection.

There will be one expert in proceedings involving a community objection.

Neither the experts, the DRSP, ICANN, nor their respective employees, directors, or consultants will be liable to any party in any action for damages or injunctive relief for any act or omission in connection with any proceeding under the dispute resolution procedures.

3.4.5 Adjudication

The panel may decide whether the parties shall submit any written statements in addition to the filed objection and response, and may specify time limits for such submissions.

In order to achieve the goal of resolving disputes rapidly and at reasonable cost, procedures for the production of documents shall be limited. In exceptional cases, the panel may require a party to produce additional evidence.

Disputes will usually be resolved without an in-person hearing. The panel may decide to hold such a hearing only in extraordinary circumstances.

3.4.6 Expert Determination

The DRSPs' final expert determinations will be in writing and will include:

- A summary of the dispute and findings;

- An identification of the prevailing party; and
- The reasoning upon which the expert determination is based.

Unless the panel decides otherwise, each DRSP will publish all decisions rendered by its panels in full on its website.

The findings of the panel will be considered an expert determination and advice that ICANN will accept within the dispute resolution process.

3.4.7 Dispute Resolution Costs

Before acceptance of objections, each DRSP will publish a schedule of costs or statement of how costs will be calculated for the proceedings that it administers under this procedure. These costs cover the fees and expenses of the members of the panel and the DRSP's administrative costs.

ICANN expects that string confusion and legal rights objection proceedings will involve a fixed amount charged by the panelists while Limited Public Interest and community objection proceedings will involve hourly rates charged by the panelists.

Within ten (10) calendar days of constituting the panel, the DRSP will estimate the total costs and request advance payment in full of its costs from both the objector and the applicant. Each party must make its advance payment within ten (10) calendar days of receiving the DRSP's request for payment and submit to the DRSP evidence of such payment. The respective filing fees paid by the parties will be credited against the amounts due for this advance payment of costs.

The DRSP may revise its estimate of the total costs and request additional advance payments from the parties during the resolution proceedings.

Additional fees may be required in specific circumstances; for example, if the DRSP receives supplemental submissions or elects to hold a hearing.

If an objector fails to pay these costs in advance, the DRSP will dismiss its objection and no fees paid by the objector will be refunded.

If an applicant fails to pay these costs in advance, the DSRP will sustain the objection and no fees paid by the applicant will be refunded.

After the hearing has taken place and the panel renders its expert determination, the DRSP will refund the advance payment of costs to the prevailing party.

3.5 Dispute Resolution Principles (Standards)

Each panel will use appropriate general principles (standards) to evaluate the merits of each objection. The principles for adjudication on each type of objection are specified in the paragraphs that follow. The panel may also refer to other relevant rules of international law in connection with the standards.

The objector bears the burden of proof in each case.

The principles outlined below are subject to evolution based on ongoing consultation with DRSPs, legal experts, and the public.

3.5.1 String Confusion Objection

A DRSP panel hearing a string confusion objection will consider whether the applied-for gTLD string is likely to result in string confusion. String confusion exists where a string so nearly resembles another that it is likely to deceive or cause confusion. For a likelihood of confusion to exist, it must be probable, not merely possible that confusion will arise in the mind of the average, reasonable Internet user. Mere association, in the sense that the string brings another string to mind, is insufficient to find a likelihood of confusion.

3.5.2 Legal Rights Objection

In interpreting and giving meaning to GNSO Recommendation 3 ("Strings must not infringe the existing legal rights of others that are recognized or enforceable under generally accepted and internationally recognized principles of law"), a DRSP panel of experts presiding over a legal rights objection will determine whether the potential use of the applied-for gTLD by the applicant takes unfair advantage of the distinctive character or the reputation of the objector's registered or unregistered trademark or service mark ("mark") or IGO name or acronym (as identified in the treaty establishing the organization), or unjustifiably impairs the distinctive character or the reputation of the objector's mark or IGO name or acronym, or otherwise creates an impermissible likelihood of confusion between the applied-for gTLD and the objector's mark or IGO name or acronym.

In the case where the objection is based on trademark rights, the panel will consider the following non-exclusive factors:

1. Whether the applied-for gTLD is identical or similar, including in appearance, phonetic sound, or meaning, to the objector's existing mark.
2. Whether the objector's acquisition and use of rights in the mark has been bona fide.
3. Whether and to what extent there is recognition in the relevant sector of the public of the sign corresponding to the gTLD, as the mark of the objector, of the applicant or of a third party.
4. Applicant's intent in applying for the gTLD, including whether the applicant, at the time of application for the gTLD, had knowledge of the objector's mark, or could not have reasonably been unaware of that mark, and including whether the applicant has engaged in a pattern of conduct whereby it applied for or operates TLDs or registrations in TLDs which are identical or confusingly similar to the marks of others.
5. Whether and to what extent the applicant has used, or has made demonstrable preparations to use, the sign corresponding to the gTLD in connection with a bona fide offering of goods or services or a bona fide provision of information in a way that does not interfere with the legitimate exercise by the objector of its mark rights.
6. Whether the applicant has marks or other intellectual property rights in the sign corresponding to the gTLD, and, if so, whether any acquisition of such a right in the sign, and use of the sign, has been bona fide, and whether the purported or likely use of the gTLD by the applicant is consistent with such acquisition or use.
7. Whether and to what extent the applicant has been commonly known by the sign corresponding to the gTLD, and if so, whether any purported or likely use of the gTLD by the applicant is consistent therewith and bona fide.
8. Whether the applicant's intended use of the gTLD would create a likelihood of confusion with the objector's mark as to the source, sponsorship, affiliation, or endorsement of the gTLD.

In the case where a legal rights objection has been filed by an IGO, the panel will consider the following non-exclusive factors:

1. Whether the applied-for gTLD is identical or similar, including in appearance, phonetic sound or meaning, to the name or acronym of the objecting IGO;
2. Historical coexistence of the IGO and the applicant's use of a similar name or acronym. Factors considered may include:
    a. Level of global recognition of both entities;
    b. Length of time the entities have been in existence;
    c. Public historical evidence of their existence, which may include whether the objecting IGO has communicated its name or abbreviation under Article 6*ter* of the Paris Convention for the Protection of Industrial Property.
3. Whether and to what extent the applicant has used, or has made demonstrable preparations to use, the sign corresponding to the TLD in connection with a bona fide offering of goods or services or a bona fide provision of information in a way that does not interfere with the legitimate exercise of the objecting IGO's name or acronym;
4. Whether and to what extent the applicant has been commonly known by the sign corresponding to the applied-for gTLD, and if so, whether any purported or likely use of the gTLD by the applicant is consistent therewith and bona fide; and
5. Whether the applicant's intended use of the applied-for gTLD would create a likelihood of confusion with the objecting IGO's name or acronym as to the source, sponsorship, affiliation, or endorsement of the TLD.

3.5.3 Limited Public Interest Objection

An expert panel hearing a Limited Public Interest objection will consider whether the applied-for gTLD string is contrary to general principles of international law for morality and public order.

Examples of instruments containing such general principles include:

- The Universal Declaration of Human Rights (UDHR)

- The International Covenant on Civil and Political Rights (ICCPR)
- The Convention on the Elimination of All Forms of Discrimination Against Women (CEDAW)
- The International Convention on the Elimination of All Forms of Racial Discrimination
- Declaration on the Elimination of Violence against Women
- The International Covenant on Economic, Social, and Cultural Rights
- The Convention against Torture and Other Cruel, Inhuman, or Degrading Treatment or Punishment
- The International Convention on the Protection of the Rights of all Migrant Workers and Members of their Families
- Slavery Convention
- Convention on the Prevention and Punishment of the Crime of Genocide
- Convention on the Rights of the Child

Note that these are included to serve as examples, rather than an exhaustive list. It should be noted that these instruments vary in their ratification status. Additionally, states may limit the scope of certain provisions through reservations and declarations indicating how they will interpret and apply certain provisions. National laws not based on principles of international law are not a valid ground for a Limited Public Interest objection.

Under these principles, everyone has the right to freedom of expression, but the exercise of this right carries with it special duties and responsibilities. Accordingly, certain limited restrictions may apply.

The grounds upon which an applied-for gTLD string may be considered contrary to generally accepted legal norms relating to morality and public order that are recognized under principles of international law are:

- Incitement to or promotion of violent lawless action;
- Incitement to or promotion of discrimination based upon race, color, gender, ethnicity, religion or national origin, or other similar types of

discrimination that violate generally accepted legal norms recognized under principles of international law;

- Incitement to or promotion of child pornography or other sexual abuse of children; or
- A determination that an applied-for gTLD string would be contrary to specific principles of international law as reflected in relevant international instruments of law.

The panel will conduct its analysis on the basis of the applied-for gTLD string itself. The panel may, if needed, use as additional context the intended purpose of the TLD as stated in the application.

3.5.4 Community Objection

The four tests described here will enable a DRSP panel to determine whether there is substantial opposition from a significant portion of the community to which the string may be targeted. For an objection to be successful, the objector must prove that:

- The community invoked by the objector is a clearly delineated community; and
- Community opposition to the application is substantial; and
- There is a strong association between the community invoked and the applied-for gTLD string; and
- The application creates a likelihood of material detriment to the rights or legitimate interests of a significant portion of the community to which the string may be explicitly or implicitly targeted. Each of these tests is described in further detail below.

Community – The objector must prove that the community expressing opposition can be regarded as a clearly delineated community. A panel could balance a number of factors to determine this, including but not limited to:

- The level of public recognition of the group as a community at a local and/or global level;
- The level of formal boundaries around the community and what persons or entities are considered to form the community;

- The length of time the community has been in existence;
- The global distribution of the community (this may not apply if the community is territorial); and
- The number of people or entities that make up the community.

If opposition by a number of people/entities is found, but the group represented by the objector is not determined to be a clearly delineated community, the objection will fail.

Substantial Opposition – The objector must prove substantial opposition within the community it has identified itself as representing. A panel could balance a number of factors to determine whether there is substantial opposition, including but not limited to:

- Number of expressions of opposition relative to the composition of the community;
- The representative nature of entities expressing opposition;
- Level of recognized stature or weight among sources of opposition;
- Distribution or diversity among sources of expressions of opposition, including:
  - Regional
  - Subsectors of community
  - Leadership of community
  - Membership of community
- Historical defense of the community in other contexts; and
- Costs incurred by objector in expressing opposition, including other channels the objector may have used to convey opposition.

If some opposition within the community is determined, but it does not meet the standard of substantial opposition, the objection will fail.

Targeting – The objector must prove a strong association between the applied-for gTLD string and the community represented by the objector. Factors that could be balanced by a panel to determine this include but are not limited to:

- Statements contained in application;
- Other public statements by the applicant;
- Associations by the public.

If opposition by a community is determined, but there is no strong association between the community and the applied-for gTLD string, the objection will fail.

Detriment – The objector must prove that the application creates a likelihood of material detriment to the rights or legitimate interests of a significant portion of the community to which the string may be explicitly or implicitly targeted. An allegation of detriment that consists only of the applicant being delegated the string instead of the objector will not be sufficient for a finding of material detriment.

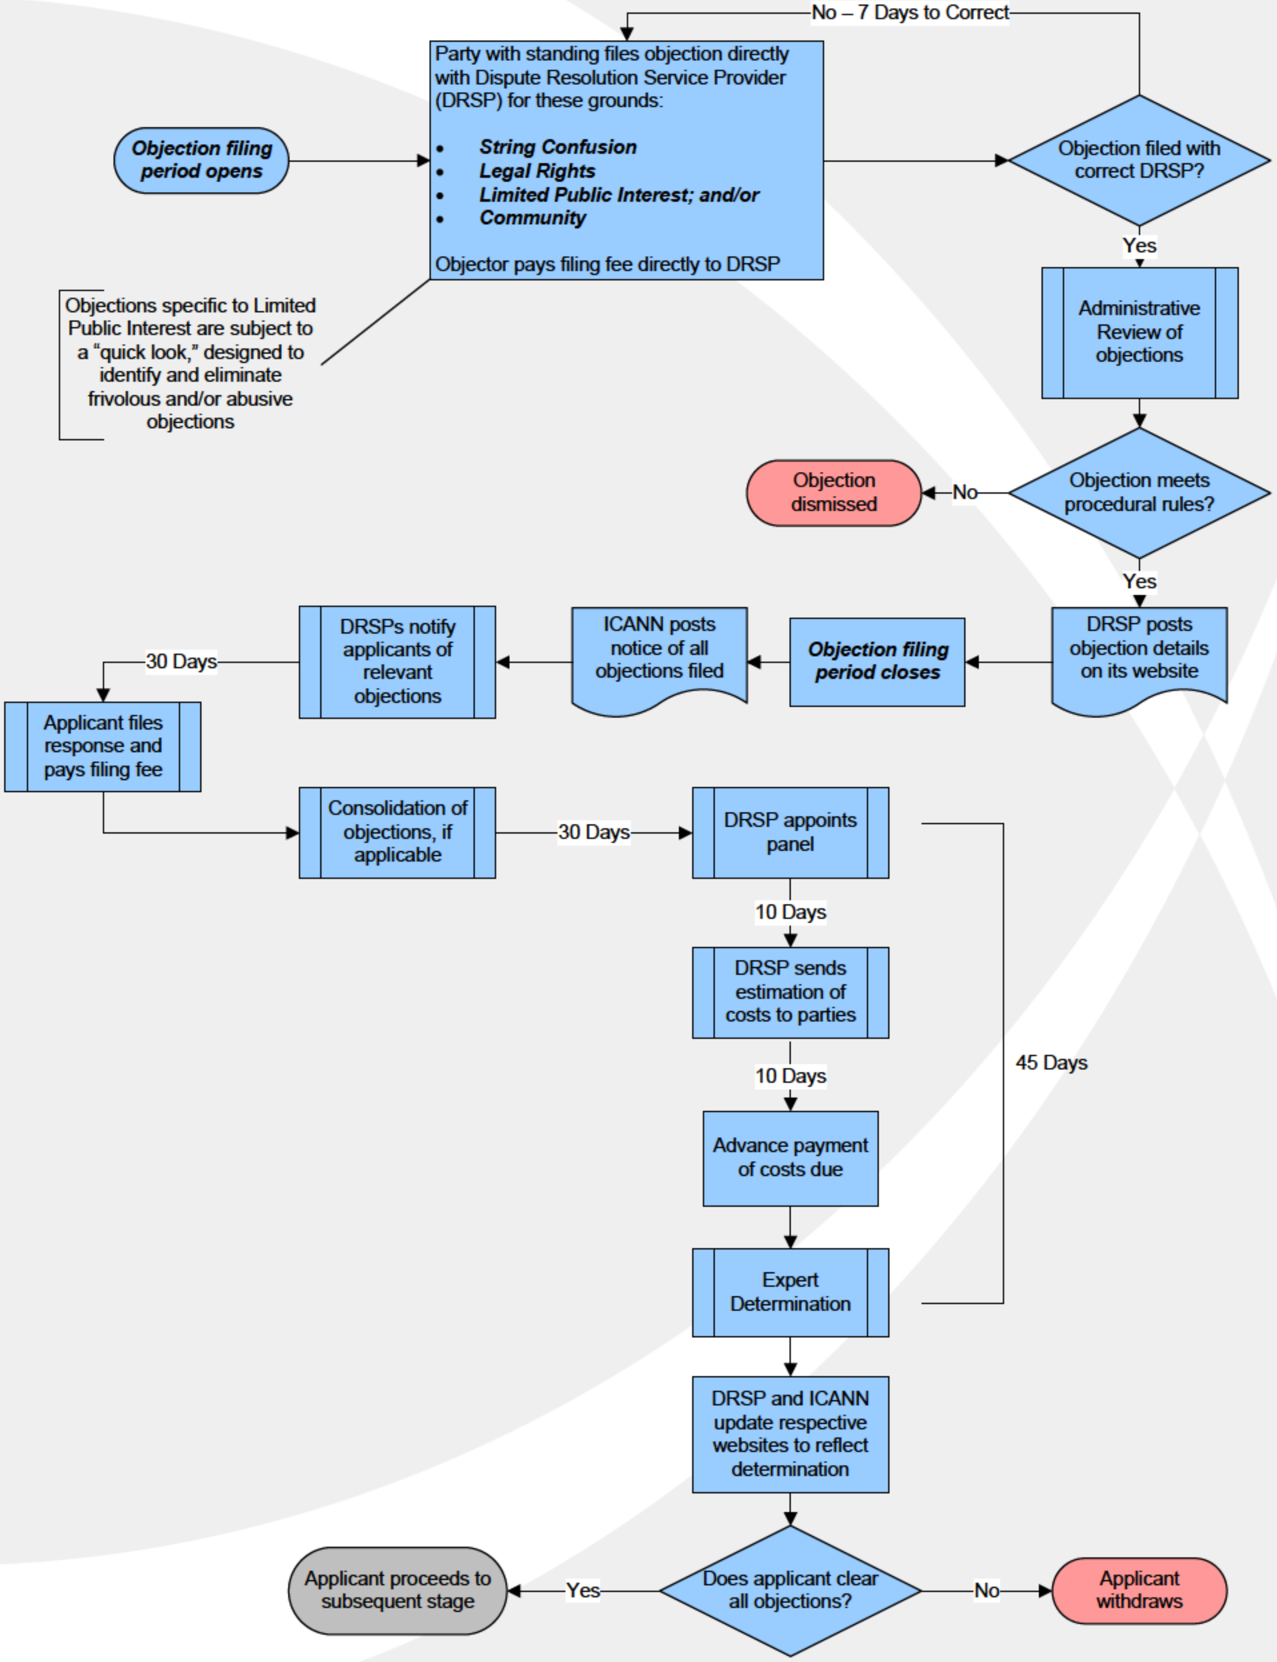
Factors that could be used by a panel in making this determination include but are not limited to:

- Nature and extent of damage to the reputation of the community represented by the objector that would result from the applicant's operation of the applied-for gTLD string;
- Evidence that the applicant is not acting or does not intend to act in accordance with the interests of the community or of users more widely, including evidence that the applicant has not proposed or does not intend to institute effective security protection for user interests;
- Interference with the core activities of the community that would result from the applicant's operation of the applied-for gTLD string;
- Dependence of the community represented by the objector on the DNS for its core activities;
- Nature and extent of concrete or economic damage to the community represented by the objector that would result from the applicant's operation of the applied-for gTLD string; and
- Level of certainty that alleged detrimental outcomes would occur.

If opposition by a community is determined, but there is no likelihood of material detriment to the targeted community resulting from the applicant's operation of the applied-for gTLD, the objection will fail.

The objector must meet all four tests in the standard for the objection to prevail.

DRAFT - New gTLD Program – Objection and Dispute Resolution



Attachment to Module 3

New gTLD Dispute Resolution Procedure

These Procedures were designed with an eye toward timely and efficient dispute resolution. As part of the New gTLD Program, these Procedures apply to all proceedings administered by each of the dispute resolution service providers (DRSP). Each of the DRSPs has a specific set of rules that will also apply to such proceedings.

NEW GTLD DISPUTE RESOLUTION PROCEDURE

Article 1. ICANN's New gTLD Program

(a) The Internet Corporation for Assigned Names and Numbers ("ICANN") has implemented a program for the introduction of new generic Top-Level Domain Names ("gTLDs") in the internet. There will be a succession of rounds, during which applicants may apply for new gTLDs, in accordance with terms and conditions set by ICANN.

(b) The new gTLD program includes a dispute resolution procedure, pursuant to which disputes between a person or entity who applies for a new gTLD and a person or entity who objects to that gTLD are resolved in accordance with this New gTLD Dispute Resolution Procedure (the "Procedure").

(c) Dispute resolution proceedings shall be administered by a Dispute Resolution Service Provider ("DRSP") in accordance with this Procedure and the applicable DRSP Rules that are identified in Article 4(b).

(d) By applying for a new gTLD, an applicant accepts the applicability of this Procedure and the applicable DRSP's Rules that are identified in Article 4(b); by filing an objection to a new gTLD, an objector accepts the applicability of this Procedure and the applicable DRSP's Rules that are identified in Article 4(b). The parties cannot derogate from this Procedure without the express approval of ICANN and from the applicable DRSP Rules without the express approval of the relevant DRSP.

Article 2. Definitions

(a) The "Applicant" or "Respondent" is an entity that has applied to ICANN for a new gTLD and that will be the party responding to the Objection.

(b) The "Objector" is one or more persons or entities who have filed an objection against a new gTLD for which an application has been submitted.

(c) The "Panel" is the panel of Experts, comprising one or three "Experts," that has been constituted by a DRSP in accordance with this Procedure and the applicable DRSP Rules that are identified in Article 4(b).

(d) The "Expert Determination" is the decision upon the merits of the Objection that is rendered by a Panel in a proceeding conducted under this Procedure and the applicable DRSP Rules that are identified in Article 4(b).

(e) The grounds upon which an objection to a new gTLD may be filed are set out in full in Module 3 of the Applicant Guidebook. Such grounds are identified in this Procedure, and are based upon the Final Report on the Introduction of New Generic Top-Level Domains, dated 7 August 2007, issued by the ICANN Generic Names Supporting Organization (GNSO), as follows:

   (i) "String Confusion Objection" refers to the objection that the string comprising the potential gTLD is confusingly similar to an existing top-level domain or another string applied for in the same round of applications.

   (ii) "Existing Legal Rights Objection" refers to the objection that the string comprising the potential new gTLD infringes the existing legal rights of others that are recognized or enforceable under generally accepted and internationally recognized principles of law.

(iii) "Limited Public Interest Objection" refers to the objection that the string comprising the potential new gTLD is contrary to generally accepted legal norms relating to morality and public order that are recognized under principles of international law.

(iv) "Community Objection" refers to the objection that there is substantial opposition to the application from a significant portion of the community to which the string may be explicitly or implicitly targeted.

(f) "DRSP Rules" are the rules of procedure of a particular DRSP that have been identified as being applicable to objection proceedings under this Procedure.

Article 3. Dispute Resolution Service Providers

The various categories of disputes shall be administered by the following DRSPs:

(a) String Confusion Objections shall be administered by the International Centre for Dispute Resolution.

(b) Existing Legal Rights Objections shall be administered by the Arbitration and Mediation Center of the World Intellectual Property Organization.

(c) Limited Public Interest Objections shall be administered by the International Centre for Expertise of the International Chamber of Commerce.

(d) Community Objections shall be administered by the International Centre for Expertise of the International Chamber of Commerce.

Article 4. Applicable Rules

(a) All proceedings before the Panel shall be governed by this Procedure and by the DRSP Rules that apply to a particular category of objection. The outcome of the proceedings shall be deemed an Expert Determination, and the members of the Panel shall act as experts.

(b) The applicable DRSP Rules are the following:

(i) For a String Confusion Objection, the applicable DRSP Rules are the ICDR Supplementary Procedures for ICANN's New gTLD Program.

(ii) For an Existing Legal Rights Objection, the applicable DRSP Rules are the WIPO Rules for New gTLD Dispute Resolution.

(iii) For a Limited Public Interest Objection, the applicable DRSP Rules are the Rules for Expertise of the International Chamber of Commerce (ICC), as supplemented by the ICC as needed.

(iv) For a Community Objection, the applicable DRSP Rules are the Rules for Expertise of the International Chamber of Commerce (ICC), as supplemented by the ICC as needed.

(c) In the event of any discrepancy between this Procedure and the applicable DRSP Rules, this Procedure shall prevail.

(d) The place of the proceedings, if relevant, shall be the location of the DRSP that is administering the proceedings.

(e) In all cases, the Panel shall ensure that the parties are treated with equality, and that each party is given a reasonable opportunity to present its position.

Article 5. Language

(a) The language of all submissions and proceedings under this Procedure shall be English.

(b) Parties may submit supporting evidence in its original language, provided and subject to the authority of the Panel to determine otherwise, that such evidence is accompanied by a certified or otherwise official English translation of all relevant text.

Article 6. Communications and Time Limits

(a) All communications by the Parties with the DRSPs and Panels must be submitted electronically. A Party that wishes to make a submission that is not available in electronic form (e.g., evidentiary models) shall request leave from the Panel to do so, and the Panel, in its sole discretion, shall determine whether to accept the non-electronic submission.

(b) The DRSP, Panel, Applicant, and Objector shall provide copies to one another of all correspondence (apart from confidential correspondence between the Panel and the DRSP and among the Panel) regarding the proceedings.

(c) For the purpose of determining the date of commencement of a time limit, a notice or other communication shall be deemed to have been received on the day that it is transmitted in accordance with paragraphs (a) and (b) of this Article.

(d) For the purpose of determining compliance with a time limit, a notice or other communication shall be deemed to have been sent, made or transmitted if it is dispatched in accordance with paragraphs (a) and (b) of this Article prior to or on the day of the expiration of the time limit.

(e) For the purpose of calculating a period of time under this Procedure, such period shall begin to run on the day following the day when a notice or other communication is received.

(f) Unless otherwise stated, all time periods provided in the Procedure are calculated on the basis of calendar days

Article 7. Filing of the Objection

(a) A person wishing to object to a new gTLD for which an application has been submitted may file an objection ("Objection"). Any Objection to a proposed new gTLD must be filed before the published closing date for the Objection Filing period.

(b) The Objection must be filed with the appropriate DRSP, using a model form made available by that DRSP, with copies to ICANN and the Applicant.

(c) The electronic addresses for filing Objections (the specific addresses shall be made available once they are created by providers):

  (i) A String Confusion Objection must be filed at: [●].

(ii) An Existing Legal Rights Objection must be filed at: [●].

(iii) A Limited Public Interest Objection must be filed at: [●].

(iv) A Community Objection must be filed at: [●].

(d) All Objections must be filed separately:

(i) An Objector who wishes to object to an application on more than one ground must file separate objections with the appropriate DRSP(s).

(ii) An Objector who wishes to object to more than one gTLD must file separate objections to each gTLD with the appropriate DRSP(s).

(e) If an Objection is filed with the wrong DRSP, that DRSP shall promptly notify the Objector of the error and that DRSP shall not process the incorrectly filed Objection. The Objector may then cure the error by filing its Objection with the correct DRSP within seven (7) days of receipt of the error notice, failing which the Objection shall be disregarded. If the Objection is filed with the correct DRSP within seven (7) days of receipt of the error notice but after the lapse of the time for submitting an Objection stipulation by Article 7(a) of this Procedure, it shall be deemed to be within this time limit.

Article 8. Content of the Objection

(a) The Objection shall contain, *inter alia*, the following information:

(i) The names and contact information (address, telephone number, email address, etc.) of the Objector;

(ii) A statement of the Objector's basis for standing; and

(iii) A description of the basis for the Objection, including:

(aa) A statement of the ground upon which the Objection is being filed, as stated in Article 2(e) of this Procedure;

(bb) An explanation of the validity of the Objection and why the objection should be upheld.

(b) The substantive portion of the Objection shall be limited to 5,000 words or 20 pages, whichever is less, excluding attachments. The Objector shall also describe and provide copies of any supporting or official documents upon which the Objection is based.

(c) At the same time as the Objection is filed, the Objector shall pay a filing fee in the amount set in accordance with the applicable DRSP Rules and include evidence of such payment in the Objection. In the event that the filing fee is not paid within ten (10) days of the receipt of the Objection by the DRSP, the Objection shall be dismissed without prejudice.

Article 9. Administrative Review of the Objection

(a) The DRSP shall conduct an administrative review of the Objection for the purpose of verifying compliance with Articles 5-8 of this Procedure and the applicable DRSP Rules, and inform the Objector, the Applicant and ICANN of the result of its review within fourteen (14) days of its receipt of the Objection. The DRSP may extend this time limit for reasons explained in the notification of such extension.

(b) If the DRSP finds that the Objection complies with Articles 5-8 of this Procedure and the applicable DRSP Rules, the DRSP shall confirm that the Objection shall be registered for processing.

(c) If the DRSP finds that the Objection does not comply with Articles 5-8 of this Procedure and the applicable DRSP Rules, the DRSP shall have the discretion to request that any administrative deficiencies in the Objection be corrected within five (5) days. If the deficiencies in the Objection are cured within the specified period but after the lapse of the time limit for submitting an Objection stipulated by Article 7(a) of this Procedure, the Objection shall be deemed to be within this time limit.

(d) If the DRSP finds that the Objection does not comply with Articles 5-8 of this Procedure and the applicable DRSP Rules, and the deficiencies in the Objection are not corrected within the period specified in Article 9(c), the DRSP shall dismiss the Objection and close the proceedings, without prejudice to the Objector's submission of a new Objection that complies with this Procedure, provided that the Objection is filed within the deadline for filing such Objections. The DRSP's review of the Objection shall not interrupt the running of the time limit for submitting an Objection stipulated by Article 7(a) of this Procedure.

(e) Immediately upon registering an Objection for processing, pursuant to Article 9(b), the DRSP shall post the following information about the Objection on its website: (i) the proposed string to which the Objection is directed; (ii) the names of the Objector and the Applicant; (ii) the grounds for the Objection; and (iv) the dates of the DRSP's receipt of the Objection.

Article 10. ICANN's Dispute Announcement

(a) Within thirty (30) days of the deadline for filing Objections in relation to gTLD applications in a given round, ICANN shall publish a document on its website identifying all of the admissible Objections that have been filed (the "Dispute Announcement"). ICANN shall also directly inform each DRSP of the posting of the Dispute Announcement.

(b) ICANN shall monitor the progress of all proceedings under this Procedure and shall take steps, where appropriate, to coordinate with any DRSP in relation to individual applications for which objections are pending before more than one DRSP.

Article 11. Response to the Objection

(a) Upon receipt of the Dispute Announcement, each DRSP shall promptly send a notice to: (i) each Applicant for a new gTLD to which one or more admissible Objections have been filed with that DRSP; and (ii) the respective Objector(s).

(b) The Applicant shall file a response to each Objection (the "Response"). The Response shall be filed within thirty (30) days of the transmission of the notice by the DRSP pursuant to Article 11(a).

(c) The Response must be filed with the appropriate DRSP, using a model form made available by that DRSP, with copies to ICANN and the Objector.

(d) The Response shall contain, inter alia, the following information:

(i) The names and contact information (address, telephone number, email address, etc.) of the Applicant; and

(ii) A point-by-point response to the statements made in the Objection.

(e) The substantive portion of the Response shall be limited to 5,000 words or 20 pages, whichever is less, excluding attachments. The Applicant shall also describe and provide copies of any supporting or official documents upon which the Response is based.

(f) At the same time as the Response is filed, the Applicant shall pay a filing fee in the amount set and published by the relevant DRSP (which shall be the same as the filing fee paid by the Objector) and include evidence of such payment in the Response. In the event that the filing fee is not paid within ten (10) days of the receipt of the Response by the DRSP, the Applicant shall be deemed to be in default, any Response disregarded and the Objection shall be deemed successful.

(g) If the DRSP finds that the Response does not comply with Articles 11(c) and (d)(1) of this Procedure and the applicable DRSP Rules, the DRSP shall have the discretion to request that any administrative deficiencies in the Response be corrected within five (5) days. If the administrative deficiencies in the Response are cured within the specified period but after the lapse of the time limit for submitting a Response pursuant to this Procedure, the Response shall be deemed to be within this time limit.

(g) If the Applicant fails to file a Response to the Objection within the 30-day time limit, the Applicant shall be deemed to be in default and the Objection shall be deemed successful. No fees paid by the Applicant will be refunded in case of default.

Article 12. Consolidation of Objections

(a) The DRSP is encouraged, whenever possible and practicable, and as may be further stipulated in the applicable DRSP Rules, to consolidate Objections, for example, when more than one Objector has filed an Objection to the same gTLD on the same grounds. The DRSP shall endeavor to decide upon consolidation prior to issuing its notice pursuant to Article 11(a) and, where appropriate, shall inform the parties of the consolidation in that notice.

(b) If the DRSP itself has not decided to consolidate two or more Objections, any Applicant or Objector may propose the consolidation of Objections within seven (7) days of the notice given by the DRSP pursuant to Article 11(a). If, following such a proposal, the DRSP decides to consolidate certain Objections, which decision must be made within 14 days of the notice given by the DRSP pursuant to Article 11(a), the deadline for the Applicant's Response in the consolidated proceeding shall be thirty (30) days from the Applicant's receipt of the DRSP's notice of consolidation.

(c) In deciding whether to consolidate Objections, the DRSP shall weigh the benefits (in terms of time, cost, consistency of decisions, etc.) that may result from the consolidation against the possible prejudice or inconvenience that the consolidation may cause. The DRSP's determination on consolidation shall be final and not subject to appeal.

(d) Objections based upon different grounds, as summarized in Article 2(e), shall not be consolidated.

Article 13. The Panel

(a) The DRSP shall select and appoint the Panel of Expert(s) within thirty (30) days after receiving the Response.

(b) Number and specific qualifications of Expert(s):

- (i) There shall be one Expert in proceedings involving a String Confusion Objection.
- (ii) There shall be one Expert or, if all of the Parties so agree, three Experts with relevant experience in intellectual property rights disputes in proceedings involving an Existing Legal Rights Objection.
- (iii) There shall be three Experts recognized as eminent jurists of international reputation, one of whom shall be designated as the Chair. The Chair shall be of a nationality different from the nationalities of the Applicant and of the Objector, in proceedings involving a Limited Public Interest Objection.
- (iv) There shall be one Expert in proceedings involving a Community Objection.

(c) All Experts acting under this Procedure shall be impartial and independent of the parties. The applicable DRSP Rules stipulate the manner by which each Expert shall confirm and maintain their impartiality and independence.

(d) The applicable DRSP Rules stipulate the procedures for challenging an Expert and replacing an Expert.

(e) Unless required by a court of law or authorized in writing by the parties, an Expert shall not act in any capacity whatsoever, in any pending or future proceedings, whether judicial, arbitral or otherwise, relating to the matter referred to expert determination under this Procedure.

Article 14. Costs

(a) Each DRSP shall determine the costs for the proceedings that it administers under this Procedure in accordance with the applicable DRSP Rules. Such costs shall cover the fees and expenses of the members of the Panel, as well as the administrative fees of the DRSP (the “Costs”).

(b) Within ten (10) days of constituting the Panel, the DRSP shall estimate the total Costs and request the Objector and the Applicant/Respondent each to pay in advance the full amount of the Costs to the DRSP. Each party shall make its advance payment of Costs within ten (10) days of receiving the DRSP’s request for payment and submit to the DRSP evidence of such payment. The respective filing fees paid by the Parties shall be credited against the amounts due for this advance payment of Costs.

(c) The DRSP may revise its estimate of the total Costs and request additional advance payments from the parties during the proceedings.

(d) Failure to make an advance payment of Costs:

- (i) If the Objector fails to make the advance payment of Costs, its Objection shall be dismissed and no fees that it has paid shall be refunded.

(ii) If the Applicant fails to make the advance payment of Costs, the Objection will be deemed to have been sustained and no fees that the Applicant has paid shall be refunded.

(e) Upon the termination of the proceedings, after the Panel has rendered its Expert Determination, the DRSP shall refund to the prevailing party, as determined by the Panel, its advance payment(s) of Costs.

Article 15. Representation and Assistance

(a) The parties may be represented or assisted by persons of their choice.

(b) Each party or party representative shall communicate the name, contact information and function of such persons to the DRSP and the other party (or parties in case of consolidation).

Article 16. Negotiation and Mediation

(a) The parties are encouraged, but not required, to participate in negotiations and/or mediation at any time throughout the dispute resolution process aimed at settling their dispute amicably.

(b) Each DRSP shall be able to propose, if requested by the parties, a person who could assist the parties as mediator.

(c) A person who acts as mediator for the parties shall not serve as an Expert in a dispute between the parties under this Procedure or any other proceeding under this Procedure involving the same gTLD.

(d) The conduct of negotiations or mediation shall not, *ipso facto*, be the basis for a suspension of the dispute resolution proceedings or the extension of any deadline under this Procedure. Upon the joint request of the parties, the DRSP or (after it has been constituted) the Panel may grant the extension of a deadline or the suspension of the proceedings. Absent exceptional circumstances, such extension or suspension shall not exceed thirty (30) days and shall not delay the administration of any other Objection.

(e) If, during negotiations and/or mediation, the parties agree on a settlement of the matter referred to the DRSP under this Procedure, the parties shall inform the DRSP, which shall terminate the proceedings, subject to the parties' payment obligation under this Procedure having been satisfied, and inform ICANN and the parties accordingly.

Article 17. Additional Written Submissions

(a) The Panel may decide whether the parties shall submit any written statements in addition to the Objection and the Response, and it shall fix time limits for such submissions.

(b) The time limits fixed by the Panel for additional written submissions shall not exceed thirty (30) days, unless the Panel, having consulted the DRSP, determines that exceptional circumstances justify a longer time limit.

Article 18. Evidence

In order to achieve the goal of resolving disputes over new gTLDs rapidly and at reasonable cost, procedures for the production of documents shall be limited. In exceptional cases, the Panel may require a party to provide additional evidence.

Article 19. Hearings

(a) Disputes under this Procedure and the applicable DRSP Rules will usually be resolved without a hearing.

(b) The Panel may decide, on its own initiative or at the request of a party, to hold a hearing only in extraordinary circumstances.

(c) In the event that the Panel decides to hold a hearing:

  (i) The Panel shall decide how and where the hearing shall be conducted.

  (ii) In order to expedite the proceedings and minimize costs, the hearing shall be conducted by videoconference if possible.

  (iii) The hearing shall be limited to one day, unless the Panel decides, in exceptional circumstances, that more than one day is required for the hearing.

  (iv) The Panel shall decide whether the hearing will be open to the public or conducted in private.

Article 20. Standards

(a) For each category of Objection identified in Article 2(e), the Panel shall apply the standards that have been defined by ICANN.

(b) In addition, the Panel may refer to and base its findings upon the statements and documents submitted and any rules or principles that it determines to be applicable.

(c) The Objector bears the burden of proving that its Objection should be sustained in accordance with the applicable standards.

Article 21. The Expert Determination

(a) The DRSP and the Panel shall make reasonable efforts to ensure that the Expert Determination is rendered within forty-five (45) days of the constitution of the Panel. In specific circumstances such as consolidated cases and in consultation with the DRSP, if significant additional documentation is requested by the Panel, a brief extension may be allowed.

(b) The Panel shall submit its Expert Determination in draft form to the DRSP's scrutiny as to form before it is signed, unless such scrutiny is specifically excluded by the applicable DRSP Rules. The modifications proposed by the DRSP to the Panel, if any, shall address only the form of the Expert Determination. The signed Expert Determination shall be communicated to the DRSP, which in turn will communicate that Expert Determination to the Parties and ICANN.

(c) When the Panel comprises three Experts, the Expert Determination shall be made by a majority of the Experts.

(d) The Expert Determination shall be in writing, shall identify the prevailing party and shall state the reasons upon which it is based. The remedies available to an Applicant or an Objector pursuant to any proceeding before a Panel shall be limited to the success or dismissal of an Objection and to the refund by the DRSP to the prevailing party, as determined by the Panel in its Expert Determination, of its advance payment(s) of Costs pursuant to Article 14(e) of this Procedure and any relevant provisions of the applicable DRSP Rules.

(e) The Expert Determination shall state the date when it is made, and it shall be signed by the Expert(s). If any Expert fails to sign the Expert Determination, it shall be accompanied by a statement of the reason for the absence of such signature.

(f) In addition to providing electronic copies of its Expert Determination, the Panel shall provide a signed hard copy of the Expert Determination to the DRSP, unless the DRSP Rules provide for otherwise.

(g) Unless the Panel decides otherwise, the Expert Determination shall be published in full on the DRSP's website.

Article 22. Exclusion of Liability

In addition to any exclusion of liability stipulated by the applicable DRSP Rules, neither the Expert(s), nor the DRSP and its employees, nor ICANN and its Board members, employees and consultants shall be liable to any person for any act or omission in connection with any proceeding conducted under this Procedure.

Article 23. Modification of the Procedure

(a) ICANN may from time to time, in accordance with its Bylaws, modify this Procedure.

(b) The version of this Procedure that is applicable to a dispute resolution proceeding is the version that was in effect on the day when the relevant application for a new gTLD is submitted.

ICANN

gTLD Applicant Guidebook

(v. 2012-06-04)

Module 4

4 June 2012

Module 4

String Contention Procedures

This module describes situations in which contention over applied-for gTLD strings occurs, and the methods available to applicants for resolving such contention cases.

4.1 String Contention

String contention occurs when either:

1. Two or more applicants for an identical gTLD string successfully complete all previous stages of the evaluation and dispute resolution processes; or

2. Two or more applicants for similar gTLD strings successfully complete all previous stages of the evaluation and dispute resolution processes, and the similarity of the strings is identified as creating a probability of user confusion if more than one of the strings is delegated.

ICANN will not approve applications for proposed gTLD strings that are identical or that would result in user confusion, called contending strings. If either situation above occurs, such applications will proceed to contention resolution through either community priority evaluation, in certain cases, or through an auction. Both processes are described in this module. A group of applications for contending strings is referred to as a contention set.

(In this Applicant Guidebook, “similar” means strings so similar that they create a probability of user confusion if more than one of the strings is delegated into the root zone.)

4.1.1 Identification of Contention Sets

Contention sets are groups of applications containing identical or similar applied-for gTLD strings. Contention sets are identified during Initial Evaluation, following review of all applied-for gTLD strings. ICANN will publish preliminary contention sets once the String Similarity review is completed, and will update the contention sets as necessary during the evaluation and dispute resolution stages.

Applications for identical gTLD strings will be automatically assigned to a contention set. For example, if Applicant A and Applicant B both apply for .TLDSTRING, they will be identified as being in a contention set. Such testing for identical strings also takes into consideration the code point variants listed in any relevant IDN table. That is, two or more applicants whose applied-for strings or designated variants are variant strings according to an IDN table submitted to ICANN would be considered in direct contention with one another. For example, if one applicant applies for string A and another applies for string B, and strings A and B are variant TLD strings as defined in Module 1, then the two applications are in direct contention.

The String Similarity Panel will also review the entire pool of applied-for strings to determine whether the strings proposed in any two or more applications are so similar that they would create a probability of user confusion if allowed to coexist in the DNS. The panel will make such a determination for each pair of applied-for gTLD strings. The outcome of the String Similarity review described in Module 2 is the identification of contention sets among applications that have direct or indirect contention relationships with one another.

Two strings are in **direct contention** if they are identical or similar to one another. More than two applicants might be represented in a direct contention situation: if four different applicants applied for the same gTLD string, they would all be in direct contention with one another.

Two strings are in **indirect contention** if they are both in direct contention with a third string, but not with one another. The example that follows explains direct and indirect contention in greater detail.

In Figure 4-1, Strings A and B are an example of direct contention. Strings C and G are an example of indirect contention. C and G both contend with B, but not with one another. The figure as a whole is one contention set. A contention set consists of all applications that are linked by string contention to one another, directly or indirectly.

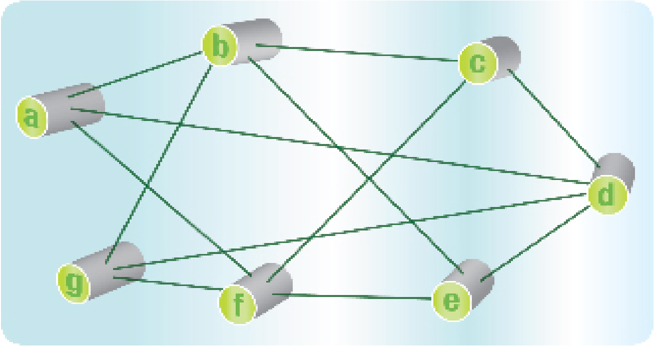


Figure 4-1 – This diagram represents one contention set, featuring both directly and indirectly contending strings.

While preliminary contention sets are determined during Initial Evaluation, the final configuration of the contention sets can only be established once the evaluation and dispute resolution process stages have concluded. This is because any application excluded through those processes might modify a contention set identified earlier.

A contention set may be augmented, split into two sets, or eliminated altogether as a result of an Extended Evaluation or dispute resolution proceeding. The composition of a contention set may also be modified as some applications may be voluntarily withdrawn throughout the process.

Refer to Figure 4-2: In contention set 1, applications D and G are eliminated. Application A is the only remaining application, so there is no contention left to resolve.

In contention set 2, all applications successfully complete Extended Evaluation and Dispute Resolution, so the original contention set remains to be resolved.

In contention set 3, application F is eliminated. Since application F was in direct contention with E and J, but E and J are not in contention with one other, the original contention set splits into two sets: one containing E and K in direct contention, and one containing I and J.

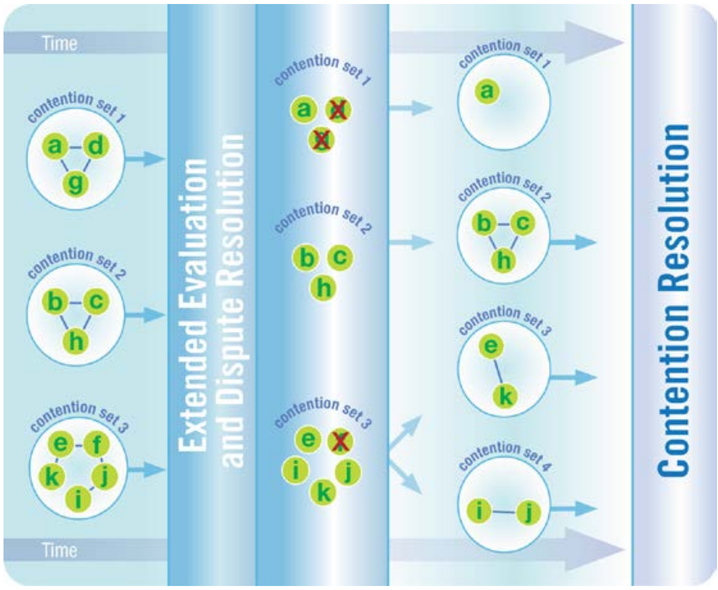

Figure 4-2 – Resolution of string contention cannot begin until all applicants within a contention set have completed all applicable previous stages.

The remaining contention cases must then be resolved through community priority evaluation or by other means, depending on the circumstances. In the string contention resolution stage, ICANN addresses each contention set to achieve an unambiguous resolution.

As described elsewhere in this guidebook, cases of contention might be resolved by community priority evaluation or an agreement among the parties. Absent that, the last-resort contention resolution mechanism will be an auction.

4.1.2 Impact of String Confusion Dispute Resolution Proceedings on Contention Sets

If an applicant files a string confusion objection against another application (refer to Module 3), and the panel finds that user confusion is probable (that is, finds in favor of the objector), the two applications will be placed in direct contention with each other. Thus, the outcome of a dispute resolution proceeding based on a string confusion objection would be a new contention set structure for the relevant applications, augmenting the original contention set.

If an applicant files a string confusion objection against another application, and the panel finds that string confusion does not exist (that is, finds in favor of the responding applicant), the two applications will not be considered in direct contention with one another.

A dispute resolution outcome in the case of a string confusion objection filed by another applicant will not result in removal of an application from a previously established contention set.

4.1.3 Self-Resolution of String Contention

Applicants that are identified as being in contention are encouraged to reach a settlement or agreement among themselves that resolves the contention. This may occur at any stage of the process, once ICANN publicly posts the applications received and the preliminary contention sets on its website.

Applicants may resolve string contention in a manner whereby one or more applicants withdraw their applications. An applicant may not resolve string contention by selecting a new string or by replacing itself with a joint venture. It is understood that applicants may seek to establish joint ventures in their efforts to resolve string contention. However, material changes in applications (for example, combinations of applicants to resolve contention) will require re-evaluation. This might require additional fees or evaluation in a subsequent application round. Applicants are encouraged to resolve contention by combining in a way that does not materially affect the remaining application. Accordingly, new joint ventures must take place in a manner that does not materially change the application, to avoid being subject to re-evaluation.

4.1.4 Possible Contention Resolution Outcomes

An application that has successfully completed all previous stages and is no longer part of a contention set due to changes in the composition of the contention set (as described in subsection 4.1.1) or self-resolution by applicants in the contention set (as described in subsection 4.1.3) may proceed to the next stage.

An application that prevails in a contention resolution procedure, either community priority evaluation or auction, may proceed to the next stage.

In some cases, an applicant who is not the outright winner of a string contention resolution process can still proceed. This situation is explained in the following paragraphs.

If the strings within a given contention set are all identical, the applications are in direct contention with each other and there can only be one winner that proceeds to the next step.

However, where there are both direct and indirect contention situations within a set, more than one string may survive the resolution.

For example, consider a case where string A is in contention with B, and B is in contention with C, but C is not in contention with A. If A wins the contention resolution procedure, B is eliminated but C can proceed since C is not in direct contention with the winner and both strings can coexist in the DNS without risk for confusion.

4.2 Community Priority Evaluation

Community priority evaluation will only occur if a community-based applicant selects this option. Community priority evaluation can begin once all applications in the contention set have completed all previous stages of the process.

The community priority evaluation is an independent analysis. Scores received in the applicant reviews are not carried forward to the community priority evaluation. Each application participating in the community priority evaluation begins with a score of zero.

4.2.1 Eligibility for Community Priority Evaluation

As described in subsection 1.2.3 of Module 1, all applicants are required to identify whether their application type is:

- Community-based; or
- Standard.

Applicants designating their applications as community-based are also asked to respond to a set of questions in the application form to provide relevant information if a community priority evaluation occurs.

Only community-based applicants are eligible to participate in a community priority evaluation.

At the start of the contention resolution stage, all community-based applicants within remaining contention sets will be notified of the opportunity to opt for a community priority evaluation via submission of a deposit by a specified date. Only those applications for which a deposit has been received by the deadline will be scored in the community priority evaluation. Following the evaluation, the deposit will be refunded to applicants that score 14 or higher.

Before the community priority evaluation begins, the applicants who have elected to participate may be asked to provide additional information relevant to the community priority evaluation.

4.2.2 Community Priority Evaluation Procedure

Community priority evaluations for each eligible contention set will be performed by a community priority panel appointed by ICANN to review these applications. The panel's role is to determine whether any of the community-based applications fulfills the community priority criteria. Standard applicants within the contention set, if any, will not participate in the community priority evaluation.

If a single community-based application is found to meet the community priority criteria (see subsection 4.2.3 below), that applicant will be declared to prevail in the community priority evaluation and may proceed. If more than one community-based application is found to meet the criteria, the remaining contention between them will be resolved as follows:

- In the case where the applications are in indirect contention with one another (see subsection 4.1.1), they will both be allowed to proceed to the next stage. In this case, applications that are in direct contention with any of these community-based applications will be eliminated.
- In the case where the applications are in direct contention with one another, these applicants will proceed to an auction. If all parties agree and present a joint request, ICANN may postpone the auction for a three-month period while the parties attempt to reach a settlement before proceeding to auction. This is a one-time option; ICANN will grant no more than one such request for each set of contending applications.

If none of the community-based applications are found to meet the criteria, then all of the parties in the contention set (both standard and community-based applicants) will proceed to an auction.

Results of each community priority evaluation will be posted when completed.

Applicants who are eliminated as a result of a community priority evaluation are eligible for a partial refund of the gTLD evaluation fee (see Module 1).

4.2.3 Community Priority Evaluation Criteria

The Community Priority Panel will review and score the one or more community-based applications having elected the community priority evaluation against four criteria as listed below.

The scoring process is conceived to identify qualified community-based applications, while preventing both “false positives” (awarding undue priority to an application that refers to a “community” construed merely to get a sought-after generic word as a gTLD string) and “false negatives” (not awarding priority to a qualified community application). This calls for a holistic approach, taking multiple criteria into account, as reflected in the process. The scoring will be performed by a panel and be based on information provided in the application plus other relevant information available (such as public information regarding the community represented). The panel may also perform independent research, if deemed necessary to reach informed scoring decisions.

It should be noted that a qualified community application eliminates all directly contending standard applications, regardless of how well qualified the latter may be. This is a fundamental reason for very stringent requirements for qualification of a community-based application, as embodied in the criteria below. Accordingly, a finding by the panel that an application does not meet the scoring threshold to prevail in a community priority evaluation is not necessarily an indication the community itself is in some way inadequate or invalid.

The sequence of the criteria reflects the order in which they will be assessed by the panel. The utmost care has been taken to avoid any "double-counting" - any negative aspect found in assessing an application for one criterion should only be counted there and should not affect the assessment for other criteria.

An application must score at least 14 points to prevail in a community priority evaluation. The outcome will be determined according to the procedure described in subsection 4.2.2.

Criterion #1: Community Establishment (0-4 points)

A maximum of 4 points is possible on the Community Establishment criterion:

4	3	2	1	0
Community Establishment				

High ←——————→ Low

As measured by:

A. Delineation (2)

2	1	0
Clearly delineated, organized, and pre-existing community.	Clearly delineated and pre-existing community, but not fulfilling the requirements for a score of 2.	Insufficient delineation and pre-existence for a score of 1.

B. Extension (2)

2	1	0
Community of considerable size and longevity.	Community of either considerable size or longevity, but not fulfilling the requirements for a score of 2.	Community of neither considerable size nor longevity.

This section relates to the community as explicitly identified and defined according to statements in the application. (The implicit reach of the applied-for string is not considered here, but taken into account when scoring Criterion #2, "Nexus between Proposed String and Community.")

Criterion 1 Definitions

- "Community" - Usage of the expression "community" has evolved considerably from its Latin origin – "communitas" meaning "fellowship" – while still implying more of cohesion than a mere commonality of interest. Notably, as "community" is used throughout the application, there should be: (a) an awareness and recognition of a community among its members; (b) some understanding of the community's existence prior to September 2007 (when the new gTLD policy recommendations were completed); and (c) extended tenure or longevity—non-transience—into the future.
- "Delineation" relates to the membership of a community, where a clear and straight-forward membership definition scores high, while an unclear, dispersed or unbound definition scores low.
- "Pre-existing" means that a community has been active as such since before the new gTLD policy recommendations were completed in September 2007.
- "Organized" implies that there is at least one entity mainly dedicated to the community, with documented evidence of community activities.
- "Extension" relates to the dimensions of the community, regarding its number of members, geographical reach, and foreseeable activity lifetime, as further explained in the following.
- "Size" relates both to the number of members and the geographical reach of the community, and will be scored depending on the context rather than on absolute numbers - a geographic location community may count millions of members in a limited location, a language community may have a million members with some spread over the globe, a community of service providers may have "only" some hundred members although well spread over the globe, just to mention some examples - all these can be regarded as of "considerable size."

- "Longevity" means that the pursuits of a community are of a lasting, non-transient nature.

Criterion 1 Guidelines

With respect to "Delineation" and "Extension," it should be noted that a community can consist of legal entities (for example, an association of suppliers of a particular service), of individuals (for example, a language community) or of a logical alliance of communities (for example, an international federation of national communities of a similar nature). All are viable as such, provided the requisite awareness and recognition of the community is at hand among the members. Otherwise the application would be seen as not relating to a real community and score 0 on both "Delineation" and "Extension."

With respect to "Delineation," if an application satisfactorily demonstrates all three relevant parameters (delineation, pre-existing and organized), then it scores a 2.

With respect to "Extension," if an application satisfactorily demonstrates both community size and longevity, it scores a 2.

Criterion #2: Nexus between Proposed String and Community (0-4 points)

A maximum of 4 points is possible on the Nexus criterion:

4	3	2	1	0
Nexus between String & Community				

High ←→ Low

As measured by:

A. Nexus (3)

3	2	0
The string matches the name of the community or is a well-known short-form or abbreviation of the community	String identifies the community, but does not qualify for a score of 3.	String nexus does not fulfill the requirements for a score of 2.

3	2	0
name.		

B. Uniqueness (1)

1	0
String has no other significant meaning beyond identifying the community described in the application.	String does not fulfill the requirement for a score of 1.

This section evaluates the relevance of the string to the specific community that it claims to represent.

Criterion 2 Definitions

- "Name" of the community means the established name by which the community is commonly known by others. It may be, but does not need to be, the name of an organization dedicated to the community.
- "Identify" means that the applied for string closely describes the community or the community members, without over-reaching substantially beyond the community.

Criterion 2 Guidelines

With respect to "Nexus," for a score of 3, the essential aspect is that the applied-for string is commonly known by others as the identification / name of the community.

With respect to "Nexus," for a score of 2, the applied-for string should closely describe the community or the community members, without over-reaching substantially beyond the community. As an example, a string could qualify for a score of 2 if it is a noun that the typical community member would naturally be called in the context. If the string appears excessively broad (such as, for example, a globally well-known but local tennis club applying for ".TENNIS") then it would not qualify for a 2.

With respect to "Uniqueness," "significant meaning" relates to the public in general, with consideration of the community language context added.

"Uniqueness" will be scored both with regard to the community context and from a general point of view. For example, a string for a particular geographic location community may seem unique from a general perspective, but would not score a 1 for uniqueness if it carries another significant meaning in the common language used in the relevant community location. The phrasing "...beyond identifying the community" in the score of 1 for "uniqueness" implies a requirement that the string does identify the community, i.e. scores 2 or 3 for "Nexus," in order to be eligible for a score of 1 for "Uniqueness."

It should be noted that "Uniqueness" is only about the *meaning* of the string - since the evaluation takes place to resolve contention there will obviously be other applications, community-based and/or standard, with identical or confusingly similar strings in the contention set to resolve, so the string will clearly not be "unique" in the sense of "alone."

Criterion #3: Registration Policies (0-4 points)

A maximum of 4 points is possible on the Registration Policies criterion:

<table>
<tr><th>4</th><th>3</th><th>2</th><th>1</th><th>0</th></tr>
<tr><td colspan="5">Registration Policies</td></tr>
</table>

High ←——→ Low

As measured by:

A. Eligibility (1)

1	0
Eligibility restricted to community members.	Largely unrestricted approach to eligibility.

B. Name selection (1)

1	0
Policies include name selection rules consistent with the articulated community-based purpose of the applied-for gTLD.	Policies do not fulfill the requirements for a score of 1.

C. Content and use (1)

1	0
Policies include rules for content and use consistent with the articulated community-based purpose of the applied-for gTLD.	Policies do not fulfill the requirements for a score of 1.

D. Enforcement (1)

1	0
Policies include specific enforcement measures (e.g. investigation practices, penalties, takedown procedures) constituting a coherent set with appropriate appeal mechanisms.	Policies do not fulfill the requirements for a score of 1.

This section evaluates the applicant's registration policies as indicated in the application. Registration policies are the conditions that the future registry will set for prospective registrants, i.e. those desiring to register second-level domain names under the registry.

Criterion 3 Definitions

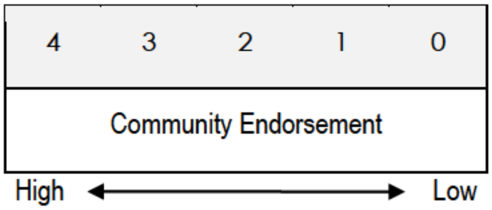
- "Eligibility" means the qualifications that entities or individuals must have in order to be allowed as registrants by the registry.
- "Name selection" means the conditions that must be fulfilled for any second-level domain name to be deemed acceptable by the registry.
- "Content and use" means the restrictions stipulated by the registry as to the content provided in and the use of any second-level domain name in the registry.
- "Enforcement" means the tools and provisions set out by the registry to prevent and remedy any breaches of the conditions by registrants.

Criterion 3 Guidelines

With respect to “Eligibility,” the limitation to community "members" can invoke a formal membership but can also be satisfied in other ways, depending on the structure and orientation of the community at hand. For example, for a geographic location community TLD, a limitation to members of the community can be achieved by requiring that the registrant's physical address is within the boundaries of the location.

With respect to “Name selection,” “Content and use,” and “Enforcement,” scoring of applications against these sub-criteria will be done from a holistic perspective, with due regard for the particularities of the community explicitly addressed. For example, an application proposing a TLD for a language community may feature strict rules imposing this language for name selection as well as for content and use, scoring 1 on both B and C above. It could nevertheless include forbearance in the enforcement measures for tutorial sites assisting those wishing to learn the language and still score 1 on D. More restrictions do not automatically result in a higher score. The restrictions and corresponding enforcement mechanisms proposed by the applicant should show an alignment with the community-based purpose of the TLD and demonstrate continuing accountability to the community named in the application.

Criterion #4: Community Endorsement (0-4 points)



As measured by:

A. Support (2)

2	1	0
Applicant is, or has documented support from, the recognized community institution(s)/ member organization(s) or has otherwise documented authority to represent the community.	Documented support from at least one group with relevance, but insufficient support for a score of 2.	Insufficient proof of support for a score of 1.

B. Opposition (2)

2	1	0
No opposition of relevance.	Relevant opposition from one group of non-negligible size.	Relevant opposition from two or more groups of non-negligible size.

This section evaluates community support and/or opposition to the application. Support and opposition will be scored in relation to the communities explicitly addressed as stated in the application, with due regard for the communities implicitly addressed by the string.

Criterion 4 Definitions

- "Recognized" means the institution(s)/organization(s) that, through membership or otherwise, are clearly recognized by the community members as representative of the community.

- "Relevance" and "relevant" refer to the communities explicitly and implicitly addressed. This means that opposition from communities not identified in the application but with an association to the applied-for string would be considered relevant.

Criterion 4 Guidelines

With respect to "Support," it follows that documented support from, for example, the only national association relevant to a particular community on a national level would score a 2 if the string is clearly oriented to that national level, but only a 1 if the string implicitly addresses similar communities in other nations.

Also with respect to "Support," the plurals in brackets for a score of 2, relate to cases of multiple institutions/organizations. In such cases there must be documented support from institutions/organizations representing a majority of the overall community addressed in order to score 2.

The applicant will score a 1 for "Support" if it does not have support from the majority of the recognized community institutions/member organizations, or does not provide full documentation that it has authority to represent the community with its application. A 0 will be scored on "Support" if the applicant fails to provide documentation showing support from recognized community institutions/community member organizations, or does not provide documentation showing that it has the authority to represent the community. It should be noted, however, that documented support from groups or communities that may be seen as implicitly addressed but have completely different orientations compared to the applicant community will not be required for a score of 2 regarding support.

To be taken into account as relevant support, such documentation must contain a description of the process and rationale used in arriving at the expression of support. Consideration of support is not based merely on the number of comments or expressions of support received.

When scoring "Opposition," previous objections to the application as well as public comments during the same application round will be taken into account and assessed in this context. There will be no presumption that such objections or comments would prevent a score of 2 or lead to any particular score for "Opposition." To be taken into account as relevant opposition, such objections or comments must be of a reasoned nature. Sources of opposition that are clearly spurious, unsubstantiated, made for a purpose incompatible with competition objectives, or filed for the purpose of obstruction will not be considered relevant.

4.3 Auction: Mechanism of Last Resort

It is expected that most cases of contention will be resolved by the community priority evaluation, or through voluntary agreement among the involved applicants. Auction is a tie-breaker method for resolving string contention among the applications within a contention set, if the contention has not been resolved by other means.

An auction will not take place to resolve contention in the case where the contending applications are for geographic names (as defined in Module 2). In this case, the applications will be suspended pending resolution by the applicants.

An auction will take place, where contention has not already been resolved, in the case where an application for a geographic name is in a contention set with applications for similar strings that have not been identified as geographic names.

In practice, ICANN expects that most contention cases will be resolved through other means before reaching the auction stage. However, there is a possibility that significant funding will accrue to ICANN as a result of one or more auctions.[1]

---

[1] The purpose of an auction is to resolve contention in a clear, objective manner. It is planned that costs of the new gTLD program will offset by fees, so any funds coming from a last resort contention resolution mechanism such as auctions would result (after paying for the auction process) in additional funding. Any proceeds from auctions will be reserved and earmarked until the uses of funds are determined. Funds must be used in a manner that supports directly ICANN's Mission and Core Values and also allows ICANN to maintain its not for profit status.

Possible uses of auction funds include formation of a foundation with a clear mission and a transparent way to allocate funds to projects that are of interest to the greater Internet community, such as grants to support new gTLD applications or registry operators from communities in subsequent gTLD rounds, the creation of an ICANN-administered/community-based fund for specific projects for the benefit of the Internet community, the creation of a registry continuity fund for the protection of registrants (ensuring that funds would be in place to support the operation of a gTLD registry until a successor could be found), or establishment of a security fund to expand use of secure protocols, conduct research, and support standards development organizations in accordance with ICANN's security and stability mission.

4.3.1 Auction Procedures

An auction of two or more applications within a contention set is conducted as follows. The auctioneer successively increases the prices associated with applications within the contention set, and the respective applicants indicate their willingness to pay these prices. As the prices rise, applicants will successively choose to exit from the auction. When a sufficient number of applications have been eliminated so that no direct contentions remain (i.e., the remaining applications are no longer in contention with one another and all the relevant strings can be delegated as TLDs), the auction will be deemed to conclude. At the auction's conclusion, the applicants with remaining applications will pay the resulting prices and proceed toward delegation. This procedure is referred to as an "ascending-clock auction."

This section provides applicants an informal introduction to the practicalities of participation in an ascending-clock auction. It is intended only as a general introduction and is only preliminary. The detailed set of Auction Rules will be available prior to the commencement of any auction proceedings. If any conflict arises between this module and the auction rules, the auction rules will prevail.

For simplicity, this section will describe the situation where a contention set consists of two or more applications for identical strings.

All auctions will be conducted over the Internet, with participants placing their bids remotely using a web-based software system designed especially for auction. The auction software system will be compatible with current versions of most prevalent browsers, and will not require the local installation of any additional software.

Auction participants ("bidders") will receive instructions for access to the online auction site. Access to the site will be password-protected and bids will be encrypted through SSL. If a bidder temporarily loses connection to the Internet, that bidder may be permitted to submit its bids in a given auction round by fax, according to procedures described

---

The amount of funding resulting from auctions, if any, will not be known until all relevant applications have completed this step. Thus, a detailed mechanism for allocation of these funds is not being created at present. However, a process can be pre-established to enable community consultation in the event that such funds are collected. This process will include, at a minimum, publication of data on any funds collected, and public comment on any proposed models.

in the auction rules. The auctions will generally be conducted to conclude quickly, ideally in a single day.

The auction will be carried out in a series of auction rounds, as illustrated in Figure 4-3. The sequence of events is as follows:

1. For each auction round, the auctioneer will announce in advance: (1) the start-of-round price, (2) the end-of-round price, and (3) the starting and ending times of the auction round. In the first auction round, the start-of-round price for all bidders in the auction will be USD 0. In later auction rounds, the start-of-round price will be its end-of-round price from the previous auction round.

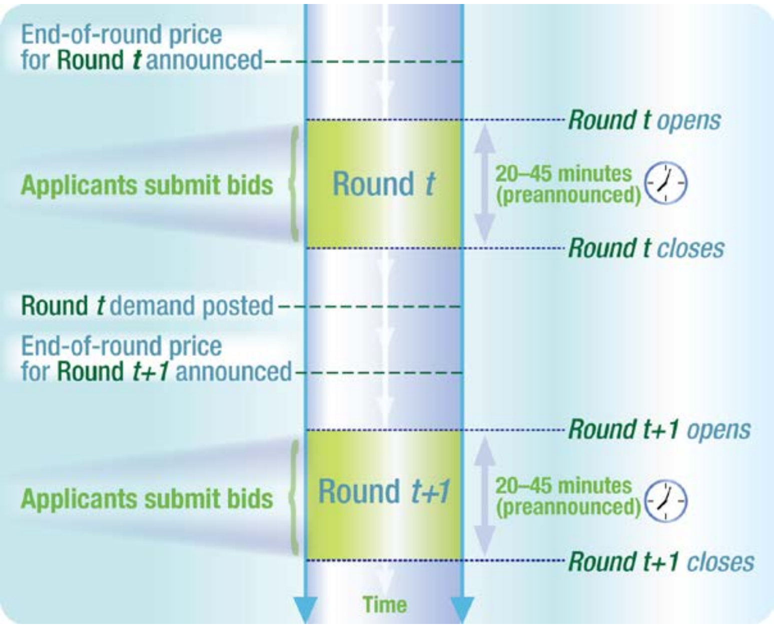


Figure 4-3 – Sequence of events during an ascending-clock auction.

2. During each auction round, bidders will be required to submit a bid or bids representing their willingness to pay within the range of intermediate prices between the start-of-round and end-of-round prices. In this way a bidder indicates its willingness to stay in the auction at all prices through and including the end-of-auction round price, or its wish to exit the auction at a price less than the end-of-auction round price, called the exit bid.

3. Exit is irrevocable. If a bidder exited the auction in a previous auction round, the bidder is not permitted to re-enter in the current auction round.

4. Bidders may submit their bid or bids at any time during the auction round.

5. Only bids that comply with all aspects of the auction rules will be considered valid. If more than one valid bid is submitted by a given bidder within the time limit of the auction round, the auctioneer will treat the last valid submitted bid as the actual bid.

6. At the end of each auction round, bids become the bidders' legally-binding offers to secure the relevant gTLD strings at prices up to the respective bid amounts, subject to closure of the auction in accordance with the auction rules. In later auction rounds, bids may be used to exit from the auction at subsequent higher prices.

7. After each auction round, the auctioneer will disclose the aggregate number of bidders remaining in the auction at the end-of-round prices for the auction round, and will announce the prices and times for the next auction round.

    - Each bid should consist of a single price associated with the application, and such price must be greater than or equal to the start-of-round price.

    - If the bid amount is strictly less than the end-of-round price, then the bid is treated as an exit bid at the specified amount, and it signifies the bidder's binding commitment to pay up to the bid amount if its application is approved.

    - If the bid amount is greater than or equal to the end-of-round price, then the bid signifies that the bidder wishes to remain in the auction at all prices in the current auction round, and it signifies the bidder's binding commitment to pay up to the end-of-round price if its application is approved. Following such bid, the application cannot be eliminated within the current auction round.

    - To the extent that the bid amount exceeds the end-of-round price, then the bid is also treated as a proxy bid to be carried forward to the next auction round. The bidder will be permitted to change the proxy bid amount in the next auction round, and the amount of the proxy bid will not constrain the bidder's ability to submit any valid bid amount in the next auction round.

- No bidder is permitted to submit a bid for any application for which an exit bid was received in a prior auction round. That is, once an application has exited the auction, it may not return.

- If no valid bid is submitted within a given auction round for an application that remains in the auction, then the bid amount is taken to be the amount of the proxy bid, if any, carried forward from the previous auction round or, if none, the bid is taken to be an exit bid at the start-of-round price for the current auction round.

8. This process continues, with the auctioneer increasing the price range for each given TLD string in each auction round, until there is one remaining bidder at the end-of-round price. After an auction round in which this condition is satisfied, the auction concludes and the auctioneer determines the clearing price. The last remaining application is deemed the successful application, and the associated bidder is obligated to pay the clearing price.

Figure 4-4 illustrates how an auction for five contending applications might progress.

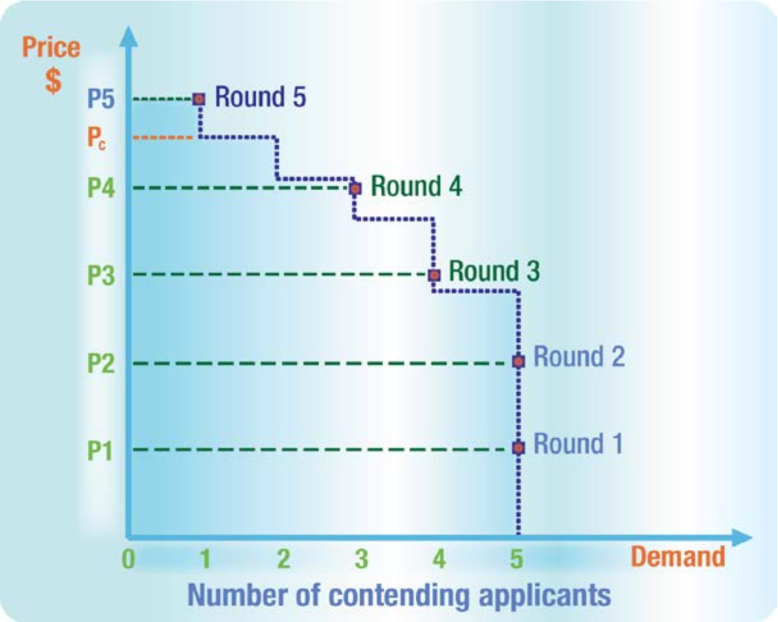

Figure 4-4 – Example of an auction for five mutually-contending applications.

- Before the first auction round, the auctioneer announces the end-of-round price P_1.
- During Auction round 1, a bid is submitted for each application. In Figure 4-4, all five bidders submit bids of at least P_1. Since the aggregate demand exceeds one, the auction proceeds to Auction round 2. The auctioneer discloses that five contending applications remained at P_1 and announces the end-of-round price P_2.
- During Auction round 2, a bid is submitted for each application. In Figure 4-4, all five bidders submit bids of at least P_2. The auctioneer discloses that five contending applications remained at P_2 and announces the end-of-round price P_3.
- During Auction round 3, one of the bidders submits an exit bid at slightly below P_3, while the other four bidders submit bids of at least P_3. The auctioneer discloses that four contending applications remained at P_3 and announces the end-of-round price P_4.
- During Auction round 4, one of the bidders submits an exit bid midway between P_3 and P_4, while the other three remaining bidders submit bids of at least P_4. The auctioneer discloses that three contending applications remained at P_4 and announces the end-of-auction round price P_5.
- During Auction round 5, one of the bidders submits an exit bid at slightly above P_4, and one of the bidders submits an exit bid at P_c midway between P_4 and P_5. The final bidder submits a bid greater than P_c. Since the aggregate demand at P_5 does not exceed one, the auction concludes in Auction round 5. The application associated with the highest bid in Auction round 5 is deemed the successful application. The clearing price is P_c, as this is the lowest price at which aggregate demand can be met.

To the extent possible, auctions to resolve multiple string contention situations will be conducted simultaneously.

4.3.1.1 Currency

For bids to be comparable, all bids in the auction will be submitted in any integer (whole) number of US dollars.

4.3.1.2 Fees

A bidding deposit will be required of applicants participating in the auction, in an amount to be determined. The bidding deposit must be transmitted by wire transfer to a specified bank account specified by ICANN or its auction provider at a major international bank, to be received in advance of the auction date. The amount of the deposit will determine a bidding limit for each bidder: the bidding deposit will equal 10% of the bidding limit; and the bidder will not be permitted to submit any bid in excess of its bidding limit.

In order to avoid the need for bidders to pre-commit to a particular bidding limit, bidders may be given the option of making a specified deposit that will provide them with unlimited bidding authority for a given application. The amount of the deposit required for unlimited bidding authority will depend on the particular contention set and will be based on an assessment of the possible final prices within the auction.

All deposits from non-defaulting losing bidders will be returned following the close of the auction.

4.3.2 Winning Bid Payments

Any applicant that participates in an auction will be required to sign a bidder agreement that acknowledges its rights and responsibilities in the auction, including that its bids are legally binding commitments to pay the amount bid if it wins (i.e., if its application is approved), and to enter into the prescribed registry agreement with ICANN—together with a specified penalty for defaulting on payment of its winning bid or failing to enter into the required registry agreement.

The winning bidder in any auction will be required to pay the full amount of the final price within 20 business days of the end of the auction. Payment is to be made by wire transfer to the same international bank account as the bidding deposit, and the applicant's bidding deposit will be credited toward the final price.

In the event that a bidder anticipates that it would require a longer payment period than 20 business days due to verifiable government-imposed currency restrictions, the bidder may advise ICANN well in advance of the auction and ICANN will consider applying a longer payment period to all bidders within the same contention set.

Any winning bidder for whom the full amount of the final price is not received within 20 business days of the end of an auction is subject to being declared in default. At their sole discretion, ICANN and its auction provider may delay the declaration of default for a brief period, but only if they are convinced that receipt of full payment is imminent.

Any winning bidder for whom the full amount of the final price is received within 20 business days of the end of an auction retains the obligation to execute the required registry agreement within 90 days of the end of auction. Such winning bidder who does not execute the agreement within 90 days of the end of the auction is subject to being declared in default. At their sole discretion, ICANN and its auction provider may delay the declaration of default for a brief period, but only if they are convinced that execution of the registry agreement is imminent.

4.3.3 Post-Default Procedures

Once declared in default, any winning bidder is subject to immediate forfeiture of its position in the auction and assessment of default penalties. After a winning bidder is declared in default, the remaining bidders will receive an offer to have their applications accepted, one at a time, in descending order of their exit bids. In this way, the next bidder would be declared the winner subject to payment of its last bid price. The same default procedures and penalties are in place for any runner-up bidder receiving such an offer.

Each bidder that is offered the relevant gTLD will be given a specified period—typically, four business days—to respond as to whether it wants the gTLD. A bidder who responds in the affirmative will have 20 business days to submit its full payment. A bidder who declines such an offer cannot revert on that statement, has no further obligations in this context and will not be considered in default.

The penalty for defaulting on a winning bid will equal 10% of the defaulting bid.[2] Default penalties will be charged against any defaulting applicant's bidding deposit before the associated bidding deposit is returned.

---

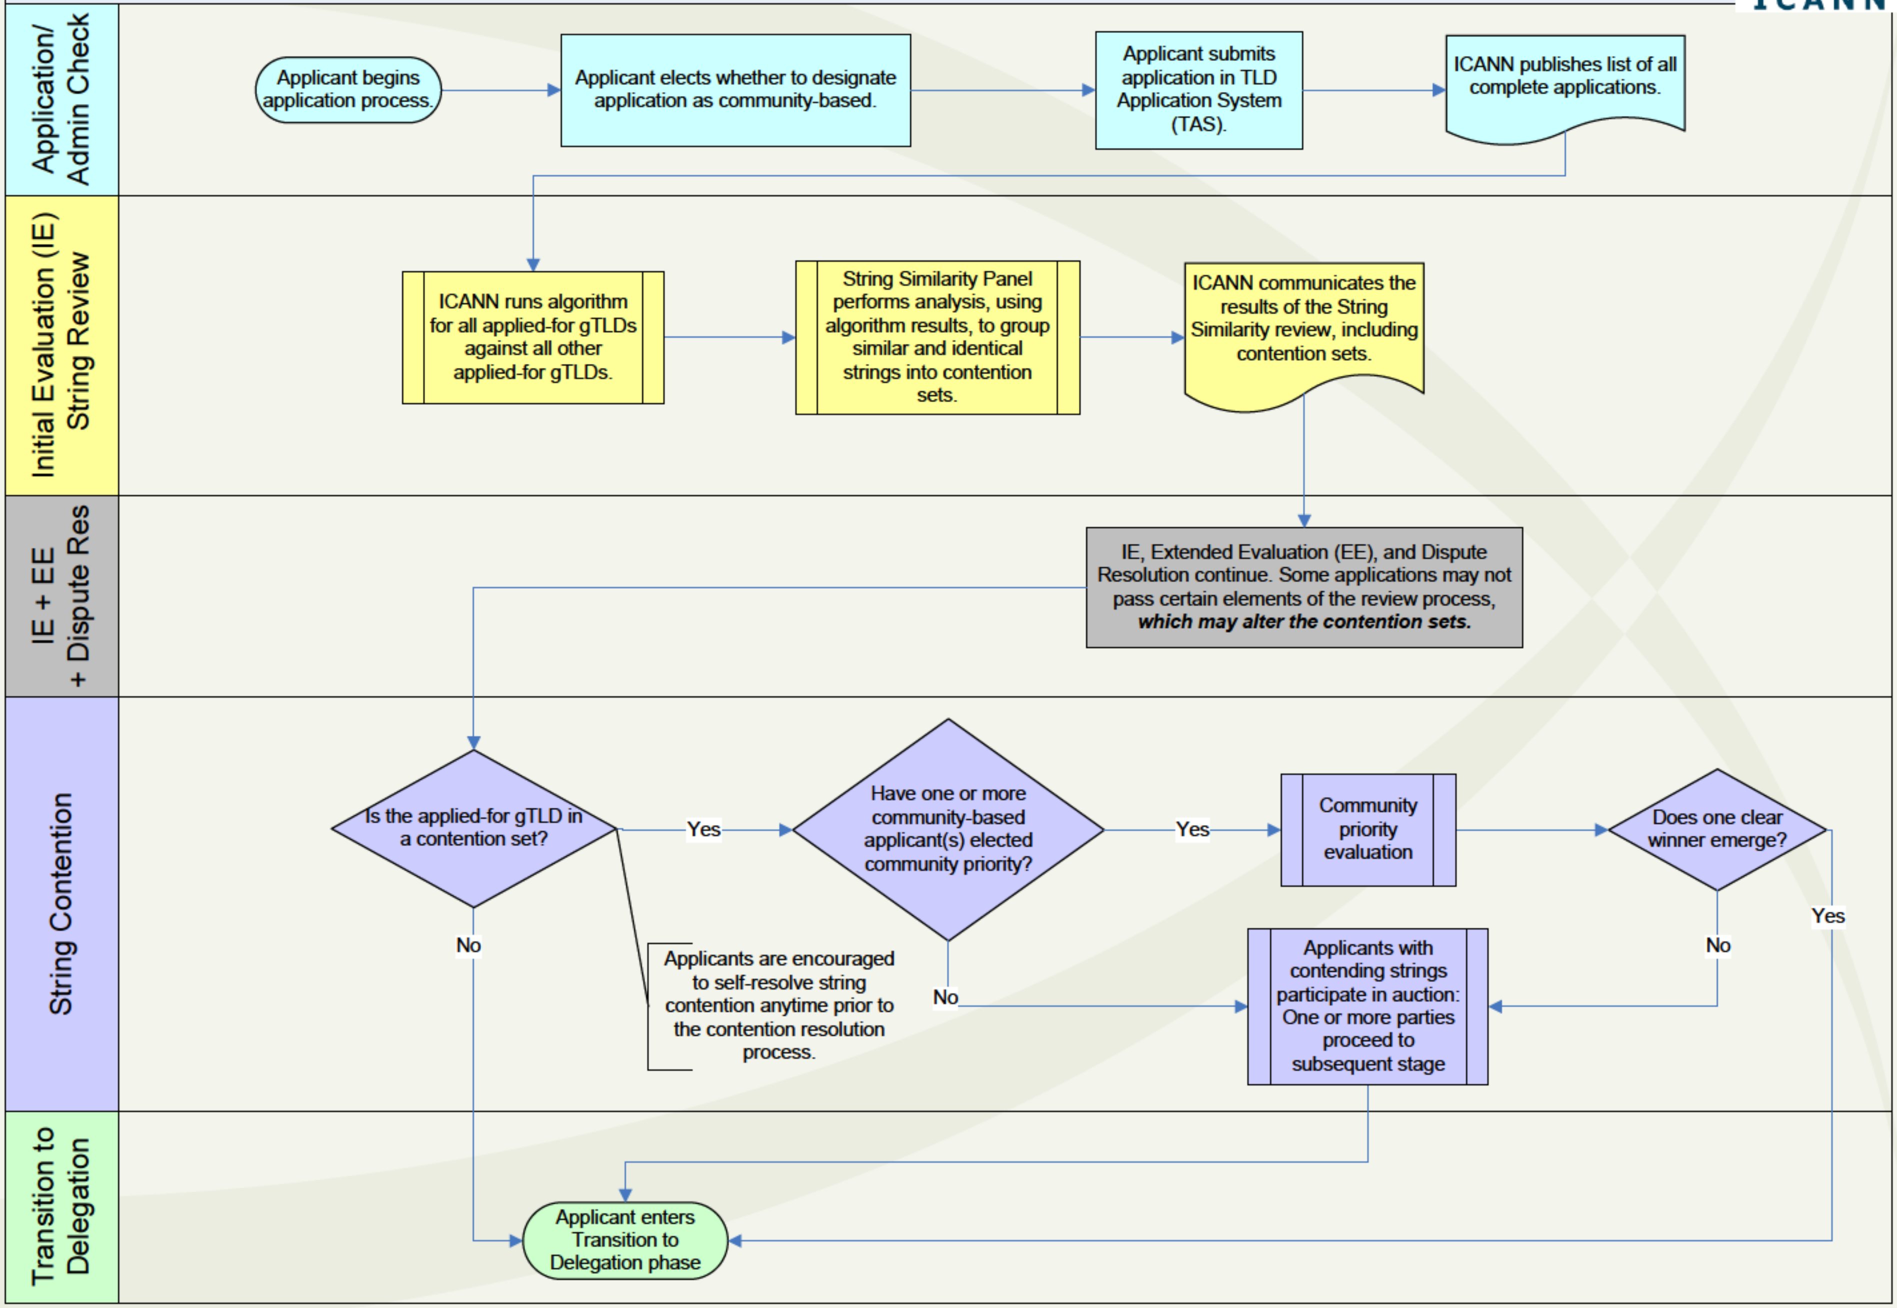
[2] If bidders were given the option of making a specified deposit that provided them with unlimited bidding authority for a given application and if the winning bidder utilized this option, then the penalty for defaulting on a winning bid will be the lesser of the following: (1) 10% of the defaulting bid, or (2) the specified deposit amount that provided the bidder with unlimited bidding authority.

4.4 Contention Resolution and Contract Execution

An applicant that has been declared the winner of a contention resolution process will proceed by entering into the contract execution step. (Refer to section 5.1 of Module 5.)

If a winner of the contention resolution procedure has not executed a contract within 90 calendar days of the decision, ICANN has the right to deny that application and extend an offer to the runner-up applicant, if any, to proceed with its application. For example, in an auction, another applicant who would be considered the runner-up applicant might proceed toward delegation. This offer is at ICANN's option only. The runner-up applicant in a contention resolution process has no automatic right to an applied-for gTLD string if the first place winner does not execute a contract within a specified time. If the winning applicant can demonstrate that it is working diligently and in good faith toward successful completion of the steps necessary for entry into the registry agreement, ICANN may extend the 90-day period at its discretion. Runner-up applicants have no claim of priority over the winning application, even after what might be an extended period of negotiation.

DRAFT - New gTLD Program - String Contention



Application/ Admin Check

Applicant begins application process.

Applicant elects whether to designate application as community-based.

Applicant submits application in TLD Application System (TAS).

ICANN publishes list of all complete applications.

Initial Evaluation (IE) String Review

ICANN runs algorithm for all applied-for gTLDs against all other applied-for gTLDs.

String Similarity Panel performs analysis, using algorithm results, to group similar and identical strings into contention sets.

ICANN communicates the results of the String Similarity review, including contention sets.

IE + EE + Dispute Res

IE, Extended Evaluation (EE), and Dispute Resolution continue. Some applications may not pass certain elements of the review process, ***which may alter the contention sets.***

String Contention

Is the applied-for gTLD in a contention set?

Yes

Have one or more community-based applicant(s) elected community priority?

Yes

Community priority evaluation

Does one clear winner emerge?

Yes

No

No

No

Applicants are encouraged to self-resolve string contention anytime prior to the contention resolution process.

Applicants with contending strings participate in auction: One or more parties proceed to subsequent stage

Transition to Delegation

Applicant enters Transition to Delegation phase

gTLD Applicant Guidebook

(v. 2012-06-04)

Module 5

4 June 2012

Module 5

Transition to Delegation

This module describes the final steps required of an applicant for completion of the process, including execution of a registry agreement with ICANN and preparing for delegation of the new gTLD into the root zone.

5.1 Registry Agreement

All applicants that have successfully completed the evaluation process—including, if necessary, the dispute resolution and string contention processes—are required to enter into a registry agreement with ICANN before proceeding to delegation.

After the close of each stage in the process, ICANN will send a notification to those successful applicants that are eligible for execution of a registry agreement at that time.

To proceed, applicants will be asked to provide specified information for purposes of executing the registry agreement:

1. Documentation of the applicant's continued operations instrument (see Specification 8 to the agreement).

2. Confirmation of contact information and signatory to the agreement.

3. Notice of any material changes requested to the terms of the agreement.

4. The applicant must report: (i) any ownership interest it holds in any registrar or reseller of registered names, (ii) if known, any ownership interest that a registrar or reseller of registered names holds in the applicant, and (iii) if the applicant controls, is controlled by, or is under common control with any registrar or reseller of registered names. ICANN retains the right to refer an application to a competition authority prior to entry into the registry agreement if it is determined that the registry-registrar cross-ownership

> arrangements might raise competition issues. For this purpose "control" (including the terms "controlled by" and "under common control with") means the possession, directly or indirectly, of the power to direct or cause the direction of the management or policies of a person or entity, whether through the ownership of securities, as trustee or executor, by serving as a member of a board of directors or equivalent governing body, by contract, by credit arrangement or otherwise.

To ensure that an applicant continues to be a going concern in good legal standing, ICANN reserves the right to ask the applicant to submit additional updated documentation and information before entering into the registry agreement.

ICANN will begin processing registry agreements one month after the date of the notification to successful applicants. Requests will be handled in the order the complete information is received.

Generally, the process will include formal approval of the agreement without requiring additional Board review, so long as: the application passed all evaluation criteria; there are no material changes in circumstances; and there are no material changes to the base agreement. There may be other cases where the Board requests review of an application.

Eligible applicants are expected to have executed the registry agreement within nine (9) months of the notification date. Failure to do so may result in loss of eligibility, at ICANN's discretion. An applicant may request an extension of this time period for up to an additional nine (9) months if it can demonstrate, to ICANN's reasonable satisfaction, that it is working diligently and in good faith toward successfully completing the steps necessary for entry into the registry agreement.

The registry agreement can be reviewed in the attachment to this module. Certain provisions in the agreement are labeled as applicable to governmental and intergovernmental entities only. Private entities, even if supported by a government or IGO, would not ordinarily be eligible for these special provisions.

All successful applicants are expected to enter into the agreement substantially as written. Applicants may request and negotiate terms by exception; however, this extends the time involved in executing the agreement. In the event that material changes to the agreement are requested, these must first be approved by the ICANN Board of Directors before execution of the agreement.

ICANN's Board of Directors has ultimate responsibility for the New gTLD Program. The Board reserves the right to individually consider an application for a new gTLD to determine whether approval would be in the best interest of the Internet community. Under exceptional circumstances, the Board may individually consider a gTLD application. For example, the Board might individually consider an application as a result of GAC Advice on New gTLDs or of the use of an ICANN accountability mechanism.

5.2 Pre-Delegation Testing

Each applicant will be required to complete pre-delegation technical testing as a prerequisite to delegation into the root zone. This pre-delegation test must be completed within the time period specified in the registry agreement.

The purpose of the pre-delegation technical test is to verify that the applicant has met its commitment to establish registry operations in accordance with the technical and operational criteria described in Module 2.

The test is also intended to indicate that the applicant can operate the gTLD in a stable and secure manner. All applicants will be tested on a pass/fail basis according to the requirements that follow.

The test elements cover both the DNS server operational infrastructure and registry system operations. In many cases the applicant will perform the test elements as instructed and provide documentation of the results to ICANN to demonstrate satisfactory performance. At ICANN's discretion, aspects of the applicant's self-certification documentation can be audited either on-site at the services delivery point of the registry or elsewhere as determined by ICANN.

5.2.1 Testing Procedures

The applicant may initiate the pre-delegation test by submitting to ICANN the Pre-Delegation form and accompanying documents containing all of the following information:

- All name server names and IPv4/IPv6 addresses to be used in serving the new TLD data;
- If using anycast, the list of names and IPv4/IPv6 unicast addresses allowing the identification of each individual server in the anycast sets;
- If IDN is supported, the complete IDN tables used in the registry system;
- A test zone for the new TLD must be signed at test time and the valid key-set to be used at the time of testing must be provided to ICANN in the documentation, as well as the TLD DNSSEC Policy Statement (DPS);
- The executed agreement between the selected escrow agent and the applicant; and
- Self-certification documentation as described below for each test item.

ICANN will review the material submitted and in some cases perform tests in addition to those conducted by the applicant. After testing, ICANN will assemble a report with the outcome of the tests and provide that report to the applicant.

Any clarification request, additional information request, or other request generated in the process will be highlighted and listed in the report sent to the applicant.

ICANN may request the applicant to complete load tests considering an aggregated load where a single entity is performing registry services for multiple TLDs.

Once an applicant has met all of the pre-delegation testing requirements, it is eligible to request delegation of its applied-for gTLD.

If an applicant does not complete the pre-delegation steps within the time period specified in the registry agreement, ICANN reserves the right to terminate the registry agreement.

5.2.2 Test Elements: DNS Infrastructure

The first set of test elements concerns the DNS infrastructure of the new gTLD. In all tests of the DNS infrastructure, all requirements are independent of whether IPv4 or IPv6 is used. All tests shall be done both over IPv4 and IPv6, with reports providing results according to both protocols.

UDP Support -- The DNS infrastructure to which these tests apply comprises the complete set of servers and network infrastructure to be used by the chosen providers to deliver DNS service for the new gTLD to the Internet. The documentation provided by the applicant must include the results from a system performance test indicating available network and server capacity and an estimate of expected capacity during normal operation to ensure stable service as well as to adequately address Distributed Denial of Service (DDoS) attacks.

Self-certification documentation shall include data on load capacity, latency and network reachability.

Load capacity shall be reported using a table, and a corresponding graph, showing percentage of queries responded against an increasing number of queries per second generated from local (to the servers) traffic generators. The table shall include at least 20 data points and loads of UDP-based queries that will cause up to 10% query loss against a randomly selected subset of servers within the applicant's DNS infrastructure. Responses must either contain zone data or be NXDOMAIN or NODATA responses to be considered valid.

Query latency shall be reported in milliseconds as measured by DNS probes located just outside the border routers of the physical network hosting the name servers, from a network topology point of view.

Reachability will be documented by providing information on the transit and peering arrangements for the DNS server locations, listing the AS numbers of the transit providers or peers at each point of presence and available bandwidth at those points of presence.

TCP support -- TCP transport service for DNS queries and responses must be enabled and provisioned for expected load. ICANN will review the capacity self-certification documentation provided by the applicant and will perform TCP reachability and transaction capability tests across a randomly selected subset of the name servers within the applicant's DNS infrastructure. In case of use of anycast, each individual server in each anycast set will be tested.

Self-certification documentation shall include data on load capacity, latency and external network reachability.

Load capacity shall be reported using a table, and a corresponding graph, showing percentage of queries that generated a valid (zone data, NODATA, or NXDOMAIN) response against an increasing number of queries per second generated from local (to the name servers) traffic generators. The table shall include at least 20 data points and loads that will cause up to 10% query loss (either due to connection timeout or connection reset) against a randomly selected subset of servers within the applicant's DNS infrastructure.

Query latency will be reported in milliseconds as measured by DNS probes located just outside the border routers of the physical network hosting the name servers, from a network topology point of view.

Reachability will be documented by providing records of TCP-based DNS queries from nodes external to the network hosting the servers. These locations may be the same as those used for measuring latency above.

DNSSEC support -- Applicant must demonstrate support for EDNS(0) in its server infrastructure, the ability to return correct DNSSEC-related resource records such as DNSKEY, RRSIG, and NSEC/NSEC3 for the signed zone, and the ability to accept and publish DS resource records from second-level domain administrators. In particular, the applicant must demonstrate its ability to support the full life cycle of KSK and ZSK keys. ICANN will review the self-certification materials as well as test the reachability, response sizes, and DNS transaction capacity for DNS queries using the EDNS(0) protocol extension with the "DNSSEC OK" bit set for a randomly selected subset of all name servers within the applicant's DNS infrastructure. In case of use of anycast, each individual server in each anycast set will be tested.

Load capacity, query latency, and reachability shall be documented as for UDP and TCP above.

5.2.3 Test Elements: Registry Systems

As documented in the registry agreement, registries must provide support for EPP within their Shared Registration System, and provide Whois service both via port 43 and a web interface, in addition to support for the DNS. This section details the requirements for testing these registry systems.

System performance -- The registry system must scale to meet the performance requirements described in Specification 10 of the registry agreement and ICANN will require self-certification of compliance. ICANN will review the self-certification documentation provided by the applicant to verify adherence to these minimum requirements.

Whois support -- Applicant must provision Whois services for the anticipated load. ICANN will verify that Whois data is accessible over IPv4 and IPv6 via both TCP port 43 and via a web interface and review self-certification documentation regarding Whois transaction capacity. Response format according to Specification 4 of the registry agreement and access to Whois (both port 43 and via web) will be tested by ICANN remotely from various points on the Internet over both IPv4 and IPv6.

Self-certification documents shall describe the maximum number of queries per second successfully handled by both the port 43 servers as well as the web interface, together with an applicant-provided load expectation.

Additionally, a description of deployed control functions to detect and mitigate data mining of the Whois database shall be documented.

EPP Support -- As part of a shared registration service, applicant must provision EPP services for the anticipated load. ICANN will verify conformance to appropriate RFCs (including EPP extensions for DNSSEC). ICANN will also review self-certification documentation regarding EPP transaction capacity.

Documentation shall provide a maximum Transaction per Second rate for the EPP interface with 10 data points corresponding to registry database sizes from 0 (empty) to the expected size after one year of operation, as determined by applicant.

Documentation shall also describe measures taken to handle load during initial registry operations, such as a land-rush period.

IPv6 support -- The ability of the registry to support registrars adding, changing, and removing IPv6 DNS records supplied by registrants will be tested by ICANN. If the registry supports EPP access via IPv6, this will be tested by ICANN remotely from various points on the Internet.

DNSSEC support -- ICANN will review the ability of the registry to support registrars adding, changing, and removing DNSSEC-related resource records as well as the registry's overall key management procedures. In particular, the applicant must demonstrate its ability to support the full life cycle of key changes for child domains. Inter-operation of the applicant's secure communication channels with the IANA for trust anchor material exchange will be verified.

The practice and policy document (also known as the DNSSEC Policy Statement or DPS), describing key material storage, access and usage for its own keys is also reviewed as part of this step.

IDN support -- ICANN will verify the complete IDN table(s) used in the registry system. The table(s) must comply with the guidelines in http://iana.org/procedures/idn-repository.html.

Requirements related to IDN for Whois are being developed. After these requirements are developed, prospective registries will be expected to comply with published IDN-related Whois requirements as part of pre-delegation testing.

Escrow deposit -- The applicant-provided samples of data deposit that include both a full and an incremental deposit showing correct type and formatting of content will be reviewed. Special attention will be given to the agreement with the escrow provider to ensure that escrowed data can be released within 24 hours should it be necessary. ICANN may, at its option, ask an independent third party to demonstrate the reconstitutability of the registry from escrowed data. ICANN may elect to test the data release process with the escrow agent.

5.3 Delegation Process

Upon notice of successful completion of the ICANN pre-delegation testing, applicants may initiate the process for delegation of the new gTLD into the root zone database.

This will include provision of additional information and completion of additional technical steps required for delegation. Information about the delegation process is available at http://iana.org/domains/root/.

5.4 Ongoing Operations

An applicant that is successfully delegated a gTLD will become a "Registry Operator." In being delegated the role of operating part of the Internet's domain name system, the applicant will be assuming a number of significant responsibilities. ICANN will hold all new gTLD operators accountable for the performance of their obligations under the registry agreement, and it is important that all applicants understand these responsibilities.

5.4.1 What is Expected of a Registry Operator

The registry agreement defines the obligations of gTLD registry operators. A breach of the registry operator's obligations may result in ICANN compliance actions up to and including termination of the registry agreement. Prospective applicants are encouraged to review the following brief description of some of these responsibilities.

Note that this is a non-exhaustive list provided to potential applicants as an introduction to the responsibilities of a registry operator. For the complete and authoritative text, please refer to the registry agreement.

A registry operator is obligated to:

Operate the TLD in a stable and secure manner. The registry operator is responsible for the entire technical operation of the TLD. As noted in RFC 1591[1]:

"The designated manager must do a satisfactory job of operating the DNS service for the domain. That is, the actual management of the assigning of domain names, delegating subdomains and operating nameservers must be done with technical competence. This includes keeping

---

[1] See http://www.rfc-editor.org/rfc/rfc1591.txt

the central IR[2] (in the case of top-level domains) or other higher-level domain manager advised of the status of the domain, responding to requests in a timely manner, and operating the database with accuracy, robustness, and resilience."

The registry operator is required to comply with relevant technical standards in the form of RFCs and other guidelines. Additionally, the registry operator must meet performance specifications in areas such as system downtime and system response times (see Specifications 6 and 10 of the registry agreement).

***Comply with consensus policies and temporary policies*.** gTLD registry operators are required to comply with consensus policies. Consensus policies may relate to a range of topics such as issues affecting interoperability of the DNS, registry functional and performance specifications, database security and stability, or resolution of disputes over registration of domain names.

To be adopted as a consensus policy, a policy must be developed by the Generic Names Supporting Organization (GNSO)[3] following the process in Annex A of the ICANN Bylaws.[4] The policy development process involves deliberation and collaboration by the various stakeholder groups participating in the process, with multiple opportunities for input and comment by the public, and can take significant time.

Examples of existing consensus policies are the Inter-Registrar Transfer Policy (governing transfers of domain names between registrars), and the Registry Services Evaluation Policy (establishing a review of proposed new registry services for security and stability or competition concerns), although there are several more, as found at http://www.icann.org/en/general/consensus-policies.htm.

gTLD registry operators are obligated to comply with both existing consensus policies and those that are developed in the future. Once a consensus policy has been formally adopted, ICANN will provide gTLD registry operators with notice of the requirement to implement the new policy and the effective date.

---

[2] IR is a historical reference to "Internet Registry," a function now performed by ICANN.

[3] http://gnso.icann.org

[4] http://www.icann.org/en/general/bylaws.htm#AnnexA

In addition, the ICANN Board may, when required by circumstances, establish a temporary policy necessary to maintain the stability or security of registry services or the DNS. In such a case, all gTLD registry operators will be required to comply with the temporary policy for the designated period of time.

For more information, see Specification 1 of the registry agreement.

Implement start-up rights protection measures. The registry operator must implement, at a minimum, a Sunrise period and a Trademark Claims service during the start-up phases for registration in the TLD, as provided in the registry agreement. These mechanisms will be supported by the established Trademark Clearinghouse as indicated by ICANN.

The Sunrise period allows eligible rightsholders an early opportunity to register names in the TLD.

The Trademark Claims service provides notice to potential registrants of existing trademark rights, as well as notice to rightsholders of relevant names registered. Registry operators may continue offering the Trademark Claims service after the relevant start-up phases have concluded.

For more information, see Specification 7 of the registry agreement and the Trademark Clearinghouse model accompanying this module.

Implement post-launch rights protection measures. The registry operator is required to implement decisions made under the Uniform Rapid Suspension (URS) procedure, including suspension of specific domain names within the registry. The registry operator is also required to comply with and implement decisions made according to the Trademark Post-Delegation Dispute Resolution Policy (PDDRP).

The required measures are described fully in the URS and PDDRP procedures accompanying this module. Registry operators may introduce additional rights protection measures relevant to the particular gTLD.

Implement measures for protection of country and territory names in the new gTLD. All new gTLD registry operators are required to provide certain minimum protections for country and territory names, including an initial reservation requirement and establishment of applicable rules and procedures for release of these names. The rules for release can be developed or agreed to by governments, the GAC, and/or approved by ICANN after a community discussion. Registry operators are encouraged to implement measures for protection of geographical names in addition to those required by the agreement, according to the needs and interests of each gTLD's particular circumstances. (See Specification 5 of the registry agreement).

Pay recurring fees to ICANN. In addition to supporting expenditures made to accomplish the objectives set out in ICANN's mission statement, these funds enable the support required for new gTLDs, including: contractual compliance, registry liaison, increased registrar accreditations, and other registry support activities. The fees include both a fixed component (USD 25,000 annually) and, where the TLD exceeds a transaction volume, a variable fee based on transaction volume. See Article 6 of the registry agreement.

Regularly deposit data into escrow. This serves an important role in registrant protection and continuity for certain instances where the registry or one aspect of the registry operations experiences a system failure or loss of data. (See Specification 2 of the registry agreement.)

Deliver monthly reports in a timely manner. A registry operator must submit a report to ICANN on a monthly basis. The report includes registrar transactions for the month and is used by ICANN for calculation of registrar fees. (See Specification 3 of the registry agreement.)

Provide Whois service. A registry operator must provide a publicly available Whois service for registered domain names in the TLD. (See Specification 4 of the registry agreement.)

Maintain partnerships with ICANN-accredited registrars. A registry operator creates a Registry-Registrar Agreement (RRA) to define requirements for its registrars. This must include certain terms that are specified in the Registry Agreement, and may include additional terms specific to the TLD. A registry operator must provide non-discriminatory access to its registry services to all ICANN-accredited registrars with whom it has entered into an RRA, and who are in compliance with the requirements. This includes providing advance notice of pricing changes to all registrars, in compliance with the time frames specified in the agreement. (See Article 2 of the registry agreement.)

Maintain an abuse point of contact*.* A registry operator must maintain and publish on its website a single point of contact responsible for addressing matters requiring expedited attention and providing a timely response to abuse complaints concerning all names registered in the TLD through all registrars of record, including those involving a reseller. A registry operator must also take reasonable steps to investigate and respond to any reports from law enforcement, governmental and quasi-governmental agencies of illegal conduct in connection with the use of the TLD. (See Article 2 and Specification 6 of the registry agreement.)

Cooperate with contractual compliance audits*.* To maintain a level playing field and a consistent operating environment, ICANN staff performs periodic audits to assess contractual compliance and address any resulting problems. A registry operator must provide documents and information requested by ICANN that are necessary to perform such audits. (See Article 2 of the registry agreement.)

Maintain a Continued Operations Instrument. A registry operator must, at the time of the agreement, have in place a continued operations instrument sufficient to fund basic registry operations for a period of three (3) years. This requirement remains in place for five (5) years after delegation of the TLD, after which time the registry operator is no longer required to maintain the continued operations instrument. (See Specification 8 to the registry agreement.)

Maintain community-based policies and procedures*.* If the registry operator designated its application as community-based at the time of the application, the registry operator has requirements in its registry agreement to maintain the community-based policies and procedures it specified in its application. The registry operator is bound by the Registry Restrictions Dispute Resolution Procedure with respect to disputes regarding execution of its community-based policies and procedures. (See Article 2 to the registry agreement.)

Have continuity and transition plans in place. This includes performing failover testing on a regular basis. In the event that a transition to a new registry operator becomes necessary, the registry operator is expected to cooperate by consulting with ICANN on the appropriate successor, providing the data required to enable a smooth transition, and complying with the applicable registry transition procedures. (See Articles 2 and 4 of the registry agreement.)

Make TLD zone files available via a standardized process. This includes provision of access to the registry's zone file to credentialed users, according to established access, file, and format standards. The registry operator will enter into a standardized form of agreement with zone file users and will accept credential information for users via a clearinghouse. (See Specification 4 of the registry agreement.)

Implement DNSSEC. The registry operator is required to sign the TLD zone files implementing Domain Name System Security Extensions (DNSSEC) in accordance with the relevant technical standards. The registry must accept public key material from registrars for domain names registered in the TLD, and publish a DNSSEC Policy Statement describing key material storage, access, and usage for the registry's keys. (See Specification 6 of the registry agreement.)

5.4.2 What is Expected of ICANN

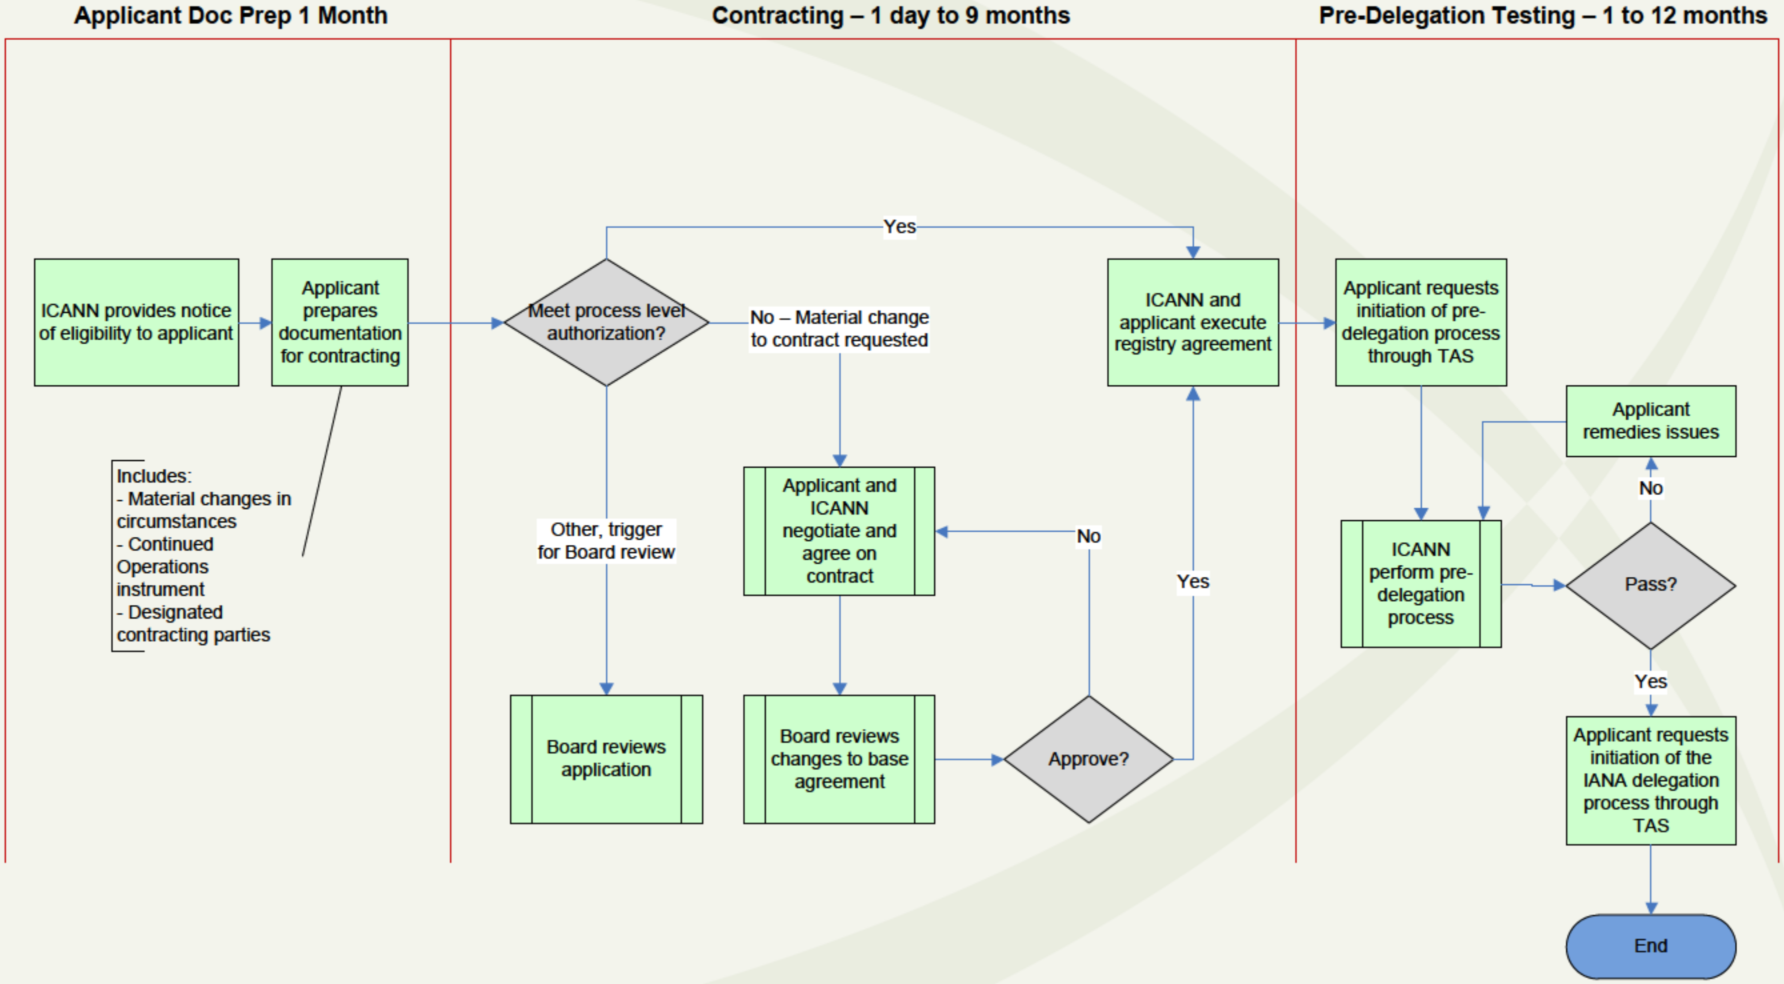
ICANN will continue to provide support for gTLD registry operators as they launch and maintain registry operations. ICANN's gTLD registry liaison function provides a point of contact for gTLD registry operators for assistance on a continuing basis.

ICANN's contractual compliance function will perform audits on a regular basis to ensure that gTLD registry operators remain in compliance with agreement obligations, as well as investigate any complaints from the community regarding the registry operator's adherence to its contractual obligations. See http://www.icann.org/en/compliance/ for more information on current contractual compliance activities.

ICANN's Bylaws require ICANN to act in an open and transparent manner, and to provide equitable treatment among registry operators. ICANN is responsible for maintaining the security and stability of the global Internet, and looks forward to a constructive and cooperative relationship with future gTLD registry operators in furtherance of this goal.

Draft – New gTLD Program - Transition to Delegation

(Timeframes are estimates only)



New gTLD Agreement

This document contains the registry agreement associated with the Applicant Guidebook for New gTLDs.

Successful gTLD applicants would enter into this form of registry agreement with ICANN prior to delegation of the new gTLD. (Note: ICANN reserves the right to make reasonable updates and changes to this proposed agreement during the course of the application process, including as the possible result of new policies that might be adopted during the course of the application process).

REGISTRY AGREEMENT

This REGISTRY AGREEMENT (this “Agreement”) is entered into as of ___________ (the “Effective Date”) between Internet Corporation for Assigned Names and Numbers, a California nonprofit public benefit corporation (“ICANN”), and __________, a _____________ (“Registry Operator”).

ARTICLE 1.

DELEGATION AND OPERATION OF TOP–LEVEL DOMAIN; REPRESENTATIONS AND WARRANTIES

1.1 Domain and Designation. The Top-Level Domain to which this Agreement applies is ____ (the “TLD”). Upon the Effective Date and until the end of the Term (as defined in Section 4.1), ICANN designates Registry Operator as the registry operator for the TLD, subject to the requirements and necessary approvals for delegation of the TLD and entry into the root-zone.

1.2 Technical Feasibility of String. While ICANN has encouraged and will continue to encourage universal acceptance of all top-level domain strings across the Internet, certain top-level domain strings may encounter difficulty in acceptance by ISPs and webhosters and/or validation by web applications. Registry Operator shall be responsible for ensuring to its satisfaction the technical feasibility of the TLD string prior to entering into this Agreement.

1.3 Representations and Warranties.

(a) Registry Operator represents and warrants to ICANN as follows:

(i) all material information provided and statements made in the registry TLD application, and statements made in writing during the negotiation of this Agreement, were true and correct in all material respects at the time made, and such information or statements continue to be true and correct in all material respects as of the Effective Date except as otherwise previously disclosed in writing by Registry Operator to ICANN;

(ii) Registry Operator is duly organized, validly existing and in good standing under the laws of the jurisdiction set forth in the preamble hereto, and Registry Operator has all requisite power and authority and obtained all necessary approvals to enter into and duly execute and deliver this Agreement; and

(iii) Registry Operator has delivered to ICANN a duly executed instrument that secures the funds required to perform registry functions for the TLD in the event of the termination or expiration of this Agreement (the “Continued Operations Instrument”), and such instrument is a binding obligation of the parties thereto, enforceable against the parties thereto in accordance with its terms.

(b) ICANN represents and warrants to Registry Operator that ICANN is a nonprofit public benefit corporation duly organized, validly existing and in good standing under the laws of the State of California, United States of America. ICANN has all requisite power and authority and obtained all necessary corporate approvals to enter into and duly execute and deliver this Agreement.

ARTICLE 2.

COVENANTS OF REGISTRY OPERATOR

Registry Operator covenants and agrees with ICANN as follows:

2.1 Approved Services; Additional Services. Registry Operator shall be entitled to provide the Registry Services described in clauses (a) and (b) of the first paragraph of Section 2.1 in the specification at [*see specification 6*] ("Specification 6") and such other Registry Services set forth on Exhibit A (collectively, the "Approved Services"). If Registry Operator desires to provide any Registry Service that is not an Approved Service or is a modification to an Approved Service (each, an "Additional Service"), Registry Operator shall submit a request for approval of such Additional Service pursuant to the Registry Services Evaluation Policy at http://www.icann.org/en/registries/rsep/rsep.html, as such policy may be amended from time to time in accordance with the bylaws of ICANN (as amended from time to time, the "ICANN Bylaws") applicable to Consensus Policies (the "RSEP"). Registry Operator may offer Additional Services only with the written approval of ICANN, and, upon any such approval, such Additional Services shall be deemed Registry Services under this Agreement. In its reasonable discretion, ICANN may require an amendment to this Agreement reflecting the provision of any Additional Service which is approved pursuant to the RSEP, which amendment shall be in a form reasonably acceptable to the parties.

2.2 Compliance with Consensus Policies and Temporary Policies. Registry Operator shall comply with and implement all Consensus Policies and Temporary Policies found at <http://www.icann.org/general/consensus-policies.htm>, as of the Effective Date and as may in the future be developed and adopted in accordance with the ICANN Bylaws, provided such future Consensus Polices and Temporary Policies are adopted in accordance with the procedure and relate to those topics and subject to those limitations set forth at [*see specification 1*]* ("Specification 1").

2.3 Data Escrow. Registry Operator shall comply with the registry data escrow procedures posted at [*see specification 2*]*.

2.4 Monthly Reporting. Within twenty (20) calendar days following the end of each calendar month, Registry Operator shall deliver to ICANN reports in the format posted in the specification at [*see specification 3*]*.

2.5 Publication of Registration Data. Registry Operator shall provide public access to registration data in accordance with the specification posted at [*see specification 4*]* ("Specification 4").

2.6 Reserved Names. Except to the extent that ICANN otherwise expressly authorizes in writing, Registry Operator shall comply with the restrictions on registration of character strings set forth at [*see specification 5*]* ("Specification 5"). Registry Operator may establish policies concerning the reservation or blocking of additional character strings within the TLD at its discretion. If Registry Operator is the registrant for any domain names in the Registry TLD (other than the Second-Level Reservations for Registry Operations from Specification 5), such registrations must be through an ICANN accredited registrar. Any such registrations will be considered Transactions (as defined in Section 6.1) for purposes of calculating the Registry-Level Transaction Fee to be paid to ICANN by Registry Operator pursuant to Section 6.1.

2.7 Registry Interoperability and Continuity. Registry Operator shall comply with the Registry Interoperability and Continuity Specifications as set forth in Specification 6.

* Final text will be posted on ICANN website; agreement reference to be replaced by hyperlink.

2.8 Protection of Legal Rights of Third Parties. Registry Operator must specify, and comply with, a process and procedures for launch of the TLD and initial registration-related and ongoing protection of the legal rights of third parties as set forth in the specification at [*see specification 7*]* ("Specification 7"). Registry Operator may, at its election, implement additional protections of the legal rights of third parties. Any changes or modifications to the process and procedures required by Specification 7 following the Effective Date must be approved in advance by ICANN in writing. Registry Operator must comply with all remedies imposed by ICANN pursuant to Section 2 of Specification 7, subject to Registry Operator's right to challenge such remedies as set forth in the applicable procedure described therein. Registry Operator shall take reasonable steps to investigate and respond to any reports from law enforcement and governmental and quasi-governmental agencies of illegal conduct in connection with the use of the TLD. In responding to such reports, Registry Operator will not be required to take any action in contravention of applicable law.

2.9 Registrars.

(a) Registry Operator must use only ICANN accredited registrars in registering domain names. Registry Operator must provide non-discriminatory access to Registry Services to all ICANN accredited registrars that enter into and are in compliance with the registry-registrar agreement for the TLD; provided, that Registry Operator may establish non-discriminatory criteria for qualification to register names in the TLD that are reasonably related to the proper functioning of the TLD. Registry Operator must use a uniform non-discriminatory agreement with all registrars authorized to register names in the TLD. Such agreement may be revised by Registry Operator from time to time; provided, however, that any such revisions must be approved in advance by ICANN.

(b) If Registry Operator (i) becomes an Affiliate or reseller of an ICANN accredited registrar, or (ii) subcontracts the provision of any Registry Services to an ICANN accredited registrar, registrar reseller or any of their respective Affiliates, then, in either such case of (i) or (ii) above, Registry Operator will give ICANN prompt notice of the contract, transaction or other arrangement that resulted in such affiliation, reseller relationship or subcontract, as applicable, including, if requested by ICANN, copies of any contract relating thereto; provided, that ICANN will not disclose such contracts to any third party other than relevant competition authorities. ICANN reserves the right, but not the obligation, to refer any such contract, transaction or other arrangement to relevant competition authorities in the event that ICANN determines that such contract, transaction or other arrangement might raise competition issues.

(c) For the purposes of this Agreement: (i) "Affiliate" means a person or entity that, directly or indirectly, through one or more intermediaries, controls, is controlled by, or is under common control with, the person or entity specified, and (ii) "control" (including the terms "controlled by" and "under common control with") means the possession, directly or indirectly, of the power to direct or cause the direction of the management or policies of a person or entity, whether through the ownership of securities, as trustee or executor, by serving as an employee or a member of a board of directors or equivalent governing body, by contract, by credit arrangement or otherwise.

2.10 Pricing for Registry Services.

(a) With respect to initial domain name registrations, Registry Operator shall provide ICANN and each ICANN accredited registrar that has executed the registry-registrar agreement for the TLD advance written notice of any price increase (including as a result of the elimination of any refunds, rebates, discounts, product tying or other programs which had the effect of reducing the price charged to registrars, unless such refunds, rebates, discounts, product tying or other programs are of a limited

---

* Final text will be posted on ICANN website; agreement reference to be replaced by hyperlink.

duration that is clearly and conspicuously disclosed to the registrar when offered) of no less than thirty (30) calendar days. Registry Operator shall offer registrars the option to obtain initial domain name registrations for periods of one to ten years at the discretion of the registrar, but no greater than ten years.

(b) With respect to renewal of domain name registrations, Registry Operator shall provide ICANN and each ICANN accredited registrar that has executed the registry-registrar agreement for the TLD advance written notice of any price increase (including as a result of the elimination of any refunds, rebates, discounts, product tying, Qualified Marketing Programs or other programs which had the effect of reducing the price charged to registrars) of no less than one hundred eighty (180) calendar days. Notwithstanding the foregoing sentence, with respect to renewal of domain name registrations: (i) Registry Operator need only provide thirty (30) calendar days notice of any price increase if the resulting price is less than or equal to (A) for the period beginning on the Effective Date and ending twelve (12) months following the Effective Date, the initial price charged for registrations in the TLD, or (B) for subsequent periods, a price for which Registry Operator provided a notice pursuant to the first sentence of this Section 2.10(b) within the twelve (12) month period preceding the effective date of the proposed price increase; and (ii) Registry Operator need not provide notice of any price increase for the imposition of the Variable Registry-Level Fee set forth in Section 6.3. Registry Operator shall offer registrars the option to obtain domain name registration renewals at the current price (i.e. the price in place prior to any noticed increase) for periods of one to ten years at the discretion of the registrar, but no greater than ten years.

(c) In addition, Registry Operator must have uniform pricing for renewals of domain name registrations (“Renewal Pricing”). For the purposes of determining Renewal Pricing, the price for each domain registration renewal must be identical to the price of all other domain name registration renewals in place at the time of such renewal, and such price must take into account universal application of any refunds, rebates, discounts, product tying or other programs in place at the time of renewal. The foregoing requirements of this Section 2.10(c) shall not apply for (i) purposes of determining Renewal Pricing if the registrar has provided Registry Operator with documentation that demonstrates that the applicable registrant expressly agreed in its registration agreement with registrar to higher Renewal Pricing at the time of the initial registration of the domain name following clear and conspicuous disclosure of such Renewal Pricing to such registrant, and (ii) discounted Renewal Pricing pursuant to a Qualified Marketing Program (as defined below). The parties acknowledge that the purpose of this Section 2.10(c) is to prohibit abusive and/or discriminatory Renewal Pricing practices imposed by Registry Operator without the written consent of the applicable registrant at the time of the initial registration of the domain and this Section 2.10(c) will be interpreted broadly to prohibit such practices. For purposes of this Section 2.10(c), a “Qualified Marketing Program” is a marketing program pursuant to which Registry Operator offers discounted Renewal Pricing, provided that each of the following criteria is satisfied: (i) the program and related discounts are offered for a period of time not to exceed one hundred eighty (180) calendar days (with consecutive substantially similar programs aggregated for purposes of determining the number of calendar days of the program), (ii) all ICANN accredited registrars are provided the same opportunity to qualify for such discounted Renewal Pricing; and (iii) the intent or effect of the program is not to exclude any particular class(es) of registrations (e.g., registrations held by large corporations) or increase the renewal price of any particular class(es) of registrations. Nothing in this Section 2.10(c) shall limit Registry Operator’s obligations pursuant to Section 2.10(b).

(d) Registry Operator shall provide public query-based DNS lookup service for the TLD (that is, operate the Registry TLD zone servers) at its sole expense.

2.11 Contractual and Operational Compliance Audits.

---

* Final text will be posted on ICANN website; agreement reference to be replaced by hyperlink.

(a) ICANN may from time to time (not to exceed twice per calendar year) conduct, or engage a third party to conduct, contractual compliance audits to assess compliance by Registry Operator with its representations and warranties contained in Article 1 of this Agreement and its covenants contained in Article 2 of this Agreement. Such audits shall be tailored to achieve the purpose of assessing compliance, and ICANN will (a) give reasonable advance notice of any such audit, which notice shall specify in reasonable detail the categories of documents, data and other information requested by ICANN, and (b) use commercially reasonable efforts to conduct such audit in such a manner as to not unreasonably disrupt the operations of Registry Operator. As part of such audit and upon request by ICANN, Registry Operator shall timely provide all responsive documents, data and any other information necessary to demonstrate Registry Operator's compliance with this Agreement. Upon no less than five (5) business days notice (unless otherwise agreed to by Registry Operator), ICANN may, as part of any contractual compliance audit, conduct site visits during regular business hours to assess compliance by Registry Operator with its representations and warranties contained in Article 1 of this Agreement and its covenants contained in Article 2 of this Agreement.

(b) Any audit conducted pursuant to Section 2.11(a) will be at ICANN's expense, unless (i) Registry Operator (A) controls, is controlled by, is under common control or is otherwise Affiliated with, any ICANN accredited registrar or registrar reseller or any of their respective Affiliates, or (B) has subcontracted the provision of Registry Services to an ICANN accredited registrar or registrar reseller or any of their respective Affiliates, and, in either case of (A) or (B) above, the audit relates to Registry Operator's compliance with Section 2.14, in which case Registry Operator shall reimburse ICANN for all reasonable costs and expenses associated with the portion of the audit related to Registry Operator's compliance with Section 2.14, or (ii) the audit is related to a discrepancy in the fees paid by Registry Operator hereunder in excess of 5% to ICANN's detriment, in which case Registry Operator shall reimburse ICANN for all reasonable costs and expenses associated with the entirety of such audit. In either such case of (i) or (ii) above, such reimbursement will be paid together with the next Registry-Level Fee payment due following the date of transmittal of the cost statement for such audit.

(c) Notwithstanding Section 2.11(a), if Registry Operator is found not to be in compliance with its representations and warranties contained in Article 1 of this Agreement or its covenants contained in Article 2 of this Agreement in two consecutive audits conducted pursuant to this Section 2.11, ICANN may increase the number of such audits to one per calendar quarter.

(d) Registry Operator will give ICANN immediate notice of the commencement of any of the proceedings referenced in Section 4.3(d) or the occurrence of any of the matters specified in Section 4.3(f).

2.12 Continued Operations Instrument. Registry Operator shall comply with the terms and conditions relating to the Continued Operations Instrument set forth in the specification at [*see specification 8*].

2.13 Emergency Transition. Registry Operator agrees that in the event that any of the registry functions set forth in Section 6 of Specification 10 fails for a period longer than the emergency threshold for such function set forth in Section 6 of Specification 10, ICANN may designate an emergency interim registry operator of the registry for the TLD (an "Emergency Operator") in accordance with ICANN's registry transition process (available at ____________) (as the same may be amended from time to time, the "Registry Transition Process") until such time as Registry Operator has demonstrated to ICANN's reasonable satisfaction that it can resume operation of the registry for the TLD without the reoccurrence of such failure. Following such demonstration, Registry Operator may transition back into operation of the registry for the TLD pursuant to the procedures set out in the Registry Transition Process, provided that Registry Operator pays all reasonable costs incurred (i) by ICANN as a result of the designation of the Emergency Operator and (ii) by the Emergency Operator in connection with the operation of the registry for the TLD, which costs shall be documented in reasonable detail in records that shall be made available to Registry Operator. In the event ICANN designates an Emergency Operator pursuant to this Section 2.13 and the Registry Transition Process, Registry Operator shall provide ICANN or any such Emergency Operator with all data (including the data escrowed in accordance with Section 2.3) regarding operations of the registry for the TLD necessary to maintain operations and registry functions that may be reasonably requested by ICANN or such Emergency Operator. Registry Operator agrees that ICANN may make any changes it deems necessary to the IANA database for DNS and WHOIS records with respect to the TLD in the event that an Emergency Operator is designated pursuant to this Section 2.13. In addition, in the event of such failure, ICANN shall retain and may enforce its rights under the Continued Operations Instrument and Alternative Instrument, as applicable.

2.14 Registry Code of Conduct. In connection with the operation of the registry for the TLD, Registry Operator shall comply with the Registry Code of Conduct as set forth in the specification at [*see specification 9*].

2.15 Cooperation with Economic Studies. If ICANN initiates or commissions an economic study on the impact or functioning of new generic top-level domains on the Internet, the DNS or related matters, Registry Operator shall reasonably cooperate with such study, including by delivering to ICANN or its designee conducting such study all data reasonably necessary for the purposes of such study requested by ICANN or its designee, provided, that Registry Operator may withhold any internal analyses or evaluations prepared by Registry Operator with respect to such data. Any data delivered to ICANN or its designee pursuant to this Section 2.15 shall be fully aggregated and anonymized by ICANN or its designee prior to any disclosure of such data to any third party.

2.16 Registry Performance Specifications. Registry Performance Specifications for operation of the TLD will be as set forth in the specification at [*see specification 10*]*. Registry Operator shall comply with such Performance Specifications and, for a period of at least one year, shall keep technical and operational records sufficient to evidence compliance with such specifications for each calendar year during the Term.

2.17 Personal Data. Registry Operator shall (i) notify each ICANN-accredited registrar that is a party to the registry-registrar agreement for the TLD of the purposes for which data about any identified or identifiable natural person ("Personal Data") submitted to Registry Operator by such registrar is collected and used under this Agreement or otherwise and the intended recipients (or categories of recipients) of such Personal Data, and (ii) require such registrar to obtain the consent of each registrant in the TLD for such collection and use of Personal Data. Registry Operator shall take reasonable steps to protect Personal Data collected from such registrar from loss, misuse, unauthorized disclosure, alteration or destruction. Registry Operator shall not use or authorize the use of Personal Data in a way that is incompatible with the notice provided to registrars.

2.18 ***[Note: For Community-Based TLDs Only]*** **Obligations of Registry Operator to TLD Community.** Registry Operator shall establish registration policies in conformity with the application submitted with respect to the TLD for: (i) naming conventions within the TLD, (ii) requirements for registration by members of the TLD community, and (iii) use of registered domain names in conformity with the stated purpose of the community-based TLD. Registry Operator shall operate the TLD in a manner that allows the TLD community to discuss and participate in the development and modification of policies and practices for the TLD. Registry Operator shall establish procedures for the enforcement of registration policies for the TLD, and resolution of disputes concerning compliance with TLD registration

---

* Final text will be posted on ICANN website; agreement reference to be replaced by hyperlink.

policies, and shall enforce such registration policies. Registry Operator agrees to implement and be bound by the Registry Restrictions Dispute Resolution Procedure as set forth at [*insert applicable URL*] with respect to disputes arising pursuant to this Section 2.18.]

ARTICLE 3.

COVENANTS OF ICANN

ICANN covenants and agrees with Registry Operator as follows:

3.1 Open and Transparent. Consistent with ICANN's expressed mission and core values, ICANN shall operate in an open and transparent manner.

3.2 Equitable Treatment. ICANN shall not apply standards, policies, procedures or practices arbitrarily, unjustifiably, or inequitably and shall not single out Registry Operator for disparate treatment unless justified by substantial and reasonable cause.

3.3 TLD Nameservers. ICANN will use commercially reasonable efforts to ensure that any changes to the TLD nameserver designations submitted to ICANN by Registry Operator (in a format and with required technical elements specified by ICANN at http://www.iana.org/domains/root/ will be implemented by ICANN within seven (7) calendar days or as promptly as feasible following technical verifications.

3.4 Root-zone Information Publication. ICANN's publication of root-zone contact information for the TLD will include Registry Operator and its administrative and technical contacts. Any request to modify the contact information for the Registry Operator must be made in the format specified from time to time by ICANN at http://www.iana.org/domains/root/.

3.5 Authoritative Root Database. To the extent that ICANN is authorized to set policy with regard to an authoritative root server system, ICANN shall use commercially reasonable efforts to (a) ensure that the authoritative root will point to the top-level domain nameservers designated by Registry Operator for the TLD, (b) maintain a stable, secure, and authoritative publicly available database of relevant information about the TLD, in accordance with ICANN publicly available policies and procedures, and (c) coordinate the Authoritative Root Server System so that it is operated and maintained in a stable and secure manner; provided, that ICANN shall not be in breach of this Agreement and ICANN shall have no liability in the event that any third party (including any governmental entity or internet service provider) blocks or restricts access to the TLD in any jurisdiction.

ARTICLE 4.

TERM AND TERMINATION

4.1 Term. The term of this Agreement will be ten years from the Effective Date (as such term may be extended pursuant to Section 4.2, the "Term").

4.2 Renewal.

(a) This Agreement will be renewed for successive periods of ten years upon the expiration of the initial Term set forth in Section 4.1 and each successive Term, unless:

(i) Following notice by ICANN to Registry Operator of a fundamental and material breach of Registry Operator's covenants set forth in Article 2 or breach of its payment obligations under Article 6 of this Agreement, which notice shall include with specificity the details of the alleged breach, and such breach has not been cured within thirty (30) calendar days of such notice, (A) an arbitrator or court has finally determined that Registry Operator has been in fundamental and material breach of such covenant(s) or in breach of its payment obligations, and (B) Registry Operator has failed to comply with such determination and cure such breach within ten (10) calendar days or such other time period as may be determined by the arbitrator or court; or

(ii) During the then current Term, Registry Operator shall have been found by an arbitrator (pursuant to Section 5.2 of this Agreement) on at least three (3) separate occasions to have been in fundamental and material breach (whether or not cured) of Registry Operator's covenants set forth in Article 2 or breach of its payment obligations under Article 6 of this Agreement.

(b) Upon the occurrence of the events set forth in Section 4.2(a) (i) or (ii), the Agreement shall terminate at the expiration of the then current Term.

4.3 Termination by ICANN.

(a) ICANN may, upon notice to Registry Operator, terminate this Agreement if: (i) Registry Operator fails to cure (A) any fundamental and material breach of Registry Operator's representations and warranties set forth in Article 1 or covenants set forth in Article 2, or (B) any breach of Registry Operator's payment obligations set forth in Article 6 of this Agreement, each within thirty (30) calendar days after ICANN gives Registry Operator notice of such breach, which notice will include with specificity the details of the alleged breach, (ii) an arbitrator or court has finally determined that Registry Operator is in fundamental and material breach of such covenant(s) or in breach of its payment obligations, and (iii) Registry Operator fails to comply with such determination and cure such breach within ten (10) calendar days or such other time period as may be determined by the arbitrator or court.

(b) ICANN may, upon notice to Registry Operator, terminate this Agreement if Registry Operator fails to complete all testing and procedures (identified by ICANN in writing to Registry Operator prior to the date hereof) for delegation of the TLD into the root zone within twelve (12) months of the Effective Date. Registry Operator may request an extension for up to additional twelve (12) months for delegation if it can demonstrate, to ICANN's reasonable satisfaction, that Registry Operator is working diligently and in good faith toward successfully completing the steps necessary for delegation of the TLD. Any fees paid by Registry Operator to ICANN prior to such termination date shall be retained by ICANN in full.

(c) ICANN may, upon notice to Registry Operator, terminate this Agreement if (i) Registry Operator fails to cure a material breach of Registry Operator's obligations set forth in Section 2.12 of this Agreement within thirty (30) calendar days of delivery of notice of such breach by ICANN, or if the Continued Operations Instrument is not in effect for greater than sixty (60) consecutive calendar days at any time following the Effective Date, (ii) an arbitrator or court has finally determined that Registry Operator is in material breach of such covenant, and (iii) Registry Operator fails to cure such breach within ten (10) calendar days or such other time period as may be determined by the arbitrator or court.

(d) ICANN may, upon notice to Registry Operator, terminate this Agreement if (i) Registry Operator makes an assignment for the benefit of creditors or similar act, (ii) attachment, garnishment or similar proceedings are commenced against Registry Operator, which proceedings are a material threat to Registry Operator's ability to operate the registry for the TLD, and are not dismissed within sixty (60) days of their commencement, (iii) a trustee, receiver, liquidator or equivalent is appointed in place of Registry Operator or maintains control over any of Registry Operator's property, (iv) execution is levied upon any property of Registry Operator, (v) proceedings are instituted by or against Registry Operator under any bankruptcy, insolvency, reorganization or other laws relating to the relief of debtors and such proceedings are not dismissed within thirty (30) days of their commencement, or (vi) Registry Operator files for protection under the United States Bankruptcy Code, 11 U.S.C. Section 101 et seq., or a foreign equivalent or liquidates, dissolves or otherwise discontinues its operations or the operation of the TLD.

(e) ICANN may, upon thirty (30) calendar days' notice to Registry Operator, terminate this Agreement pursuant to Section 2 of Specification 7, subject to Registry Operator's right to challenge such termination as set forth in the applicable procedure described therein.

(f) ICANN may, upon notice to Registry Operator, terminate this Agreement if (i) Registry Operator knowingly employs any officer that is convicted of a misdemeanor related to financial activities or of any felony, or is judged by a court of competent jurisdiction to have committed fraud or breach of fiduciary duty, or is the subject of a judicial determination that ICANN reasonably deems as the substantive equivalent of any of the foregoing and such officer is not terminated within thirty (30) calendar days of Registry Operator's knowledge of the foregoing, or (ii) any member of Registry Operator's board of directors or similar governing body is convicted of a misdemeanor related to financial activities or of any felony, or is judged by a court of competent jurisdiction to have committed fraud or breach of fiduciary duty, or is the subject of a judicial determination that ICANN reasonably deems as the substantive equivalent of any of the foregoing and such member is not removed from Registry Operator's board of directors or similar governing body within thirty (30) calendar days of Registry Operator's knowledge of the foregoing.

(g) [*Applicable to intergovernmental organizations or governmental entities only*.] ICANN may terminate this Agreement pursuant to Section 7.14.

4.4 Termination by Registry Operator.

(a) Registry Operator may terminate this Agreement upon notice to ICANN if, (i) ICANN fails to cure any fundamental and material breach of ICANN's covenants set forth in Article 3, within thirty (30) calendar days after Registry Operator gives ICANN notice of such breach, which notice will include with specificity the details of the alleged breach, (ii) an arbitrator or court has finally determined that ICANN is in fundamental and material breach of such covenants, and (iii) ICANN fails to comply with such determination and cure such breach within ten (10) calendar days or such other time period as may be determined by the arbitrator or court.

(b) Registry Operator may terminate this Agreement for any reason upon one hundred eighty (180) calendar day advance notice to ICANN.

4.5 Transition of Registry upon Termination of Agreement. Upon expiration of the Term pursuant to Section 4.1 or Section 4.2 or any termination of this Agreement pursuant to Section 4.3 or Section 4.4, Registry Operator shall provide ICANN or any successor registry operator that may be designated by ICANN for the TLD in accordance with this Section 4.5 with all data (including the data escrowed in accordance with Section 2.3) regarding operations of the registry for the TLD necessary to maintain operations and registry functions that may be reasonably requested by ICANN or such successor registry operator. After consultation with Registry Operator, ICANN shall determine whether or not to transition operation of the TLD to a successor registry operator in its sole discretion and in conformance with the Registry Transition Process; provided, however, that if Registry Operator demonstrates to ICANN's reasonable satisfaction that (i) all domain name registrations in the TLD are registered to, and maintained by, Registry Operator for its own exclusive use, (ii) Registry Operator does not sell, distribute or transfer control or use of any registrations in the TLD to any third party that is not an Affiliate of Registry Operator, and (iii) transitioning operation of the TLD is not necessary to protect the public interest, then ICANN may not transition operation of the TLD to a successor registry operator upon the expiration or termination of this Agreement without the consent of Registry Operator (which shall not be unreasonably withheld, conditioned or delayed). For the avoidance of doubt, the foregoing sentence shall not prohibit ICANN from delegating the TLD pursuant to a future application process for the delegation of top-level domains, subject to any processes and objection procedures instituted by ICANN in connection with such application process intended to protect the rights of third parties. Registry Operator agrees that ICANN may make any changes it deems necessary to the IANA database for DNS and WHOIS records with respect to the TLD in the event of a transition of the TLD pursuant to this Section 4.5. In addition, ICANN or its designee shall retain and may enforce its rights under the Continued Operations Instrument and Alternative Instrument, as applicable, regardless of the reason for termination or expiration of this Agreement.

[*Alternative* ***Section 4.5 Transition of Registry upon Termination of Agreement*** *text for intergovernmental organizations or governmental entities or other special circumstances*:

"**Transition of Registry upon Termination of Agreement.** Upon expiration of the Term pursuant to Section 4.1 or Section 4.2 or any termination of this Agreement pursuant to Section 4.3 or Section 4.4, in connection with ICANN's designation of a successor registry operator for the TLD, Registry Operator and ICANN agree to consult each other and work cooperatively to facilitate and implement the transition of the TLD in accordance with this Section 4.5. After consultation with Registry Operator, ICANN shall determine whether or not to transition operation of the TLD to a successor registry operator in its sole discretion and in conformance with the Registry Transition Process. In the event ICANN determines to transition operation of the TLD to a successor registry operator, upon Registry Operator's consent (which shall not be unreasonably withheld, conditioned or delayed), Registry Operator shall provide ICANN or such successor registry operator for the TLD with any data regarding operations of the TLD necessary to maintain operations and registry functions that may be reasonably requested by ICANN or such successor registry operator in addition to data escrowed in accordance with Section 2.3 hereof. In the event that Registry Operator does not consent to provide such data, any registry data related to the TLD shall be returned to Registry Operator, unless otherwise agreed upon by the parties. Registry Operator agrees that ICANN may make any changes it deems necessary to the IANA database for DNS and WHOIS records with respect to the TLD in the event of a transition of the TLD pursuant to this Section 4.5. In addition, ICANN or its designee shall retain and may enforce its rights under the Continued Operations Instrument and Alternative Instrument, as applicable, regardless of the reason for termination or expiration of this Agreement."]

4.6 Effect of Termination. Upon any expiration of the Term or termination of this Agreement, the obligations and rights of the parties hereto shall cease, provided that such expiration or termination of this Agreement shall not relieve the parties of any obligation or breach of this Agreement accruing prior to such expiration or termination, including, without limitation, all accrued payment obligations arising under Article 6. In addition, Article 5, Article 7, Section 2.12, Section 4.5, and this

Section 4.6 shall survive the expiration or termination of this Agreement. For the avoidance of doubt, the rights of Registry Operator to operate the registry for the TLD shall immediately cease upon any expiration of the Term or termination of this Agreement.

ARTICLE 5.

DISPUTE RESOLUTION

5.1 Cooperative Engagement. Before either party may initiate arbitration pursuant to Section 5.2 below, ICANN and Registry Operator, following initiation of communications by either party, must attempt to resolve the dispute by engaging in good faith discussion over a period of at least fifteen (15) calendar days.

5.2 Arbitration. Disputes arising under or in connection with this Agreement, including requests for specific performance, will be resolved through binding arbitration conducted pursuant to the rules of the International Court of Arbitration of the International Chamber of Commerce. The arbitration will be conducted in the English language and will occur in Los Angeles County, California. Any arbitration will be in front of a single arbitrator, unless (i) ICANN is seeking punitive or exemplary damages, or operational sanctions, or (ii) the parties agree in writing to a greater number of arbitrators. In either case of clauses (i) or (ii) in the preceding sentence, the arbitration will be in front of three arbitrators with each party selecting one arbitrator and the two selected arbitrators selecting the third arbitrator. In order to expedite the arbitration and limit its cost, the arbitrator(s) shall establish page limits for the parties' filings in conjunction with the arbitration, and should the arbitrator(s) determine that a hearing is necessary, the hearing shall be limited to one (1) calendar day, provided that in any arbitration in which ICANN is seeking punitive or exemplary damages, or operational sanctions, the hearing may be extended for one (1) additional calendar day if agreed upon by the parties or ordered by the arbitrator(s) based on the arbitrator(s) independent determination or the reasonable request of one of the parties thereto. The prevailing party in the arbitration will have the right to recover its costs and reasonable attorneys' fees, which the arbitrator(s) shall include in the awards. In the event the arbitrators determine that Registry Operator has been repeatedly and willfully in fundamental and material breach of its obligations set forth in Article 2, Article 6 or Section 5.4 of this Agreement, ICANN may request the arbitrators award punitive or exemplary damages, or operational sanctions (including without limitation an order temporarily restricting Registry Operator's right to sell new registrations). In any litigation involving ICANN concerning this Agreement, jurisdiction and exclusive venue for such litigation will be in a court located in Los Angeles County, California; however, the parties will also have the right to enforce a judgment of such a court in any court of competent jurisdiction.

[Alternative **Section 5.2 Arbitration** text for intergovernmental organizations or governmental entities or other special circumstances:

"**Arbitration.** Disputes arising under or in connection with this Agreement, including requests for specific performance, will be resolved through binding arbitration conducted pursuant to the rules of the International Court of Arbitration of the International Chamber of Commerce. The arbitration will be conducted in the English language and will occur in Geneva, Switzerland, unless another location is mutually agreed upon by Registry Operator and ICANN. Any arbitration will be in front of a single arbitrator, unless (i) ICANN is seeking punitive or exemplary damages, or operational sanctions, or (ii) the parties agree in writing to a greater number of arbitrators. In either case of clauses (i) or (ii) in the preceding sentence, the arbitration will be in front of three arbitrators with each party selecting one arbitrator and the two selected arbitrators selecting the third arbitrator. In order to expedite the arbitration and limit its cost, the arbitrator(s) shall establish page limits for the parties' filings in conjunction with the arbitration, and should the arbitrator(s) determine that a hearing is necessary, the hearing shall be limited to one (1) calendar day, provided that in any arbitration in which ICANN is seeking punitive or exemplary damages, or operational sanctions, the hearing may be extended for one (1) additional calendar day if agreed upon by the parties or ordered by the arbitrator(s) based on the arbitrator(s) independent determination or the reasonable request of one of the parties thereto. The prevailing party in the arbitration will have the right to recover its costs and reasonable attorneys' fees, which the arbitrator(s) shall include in the awards. In the event the arbitrators determine that Registry Operator has been repeatedly and willfully in fundamental and material breach of its obligations set forth in Article 2, Article 6 or Section 5.4 of this Agreement, ICANN may request the arbitrators award punitive or exemplary damages, or operational sanctions (including without limitation an order temporarily restricting Registry Operator's right to sell new registrations). In any litigation involving ICANN concerning this Agreement, jurisdiction and exclusive venue for such litigation will be in a court located in Geneva, Switzerland, unless an another location is mutually agreed upon by Registry Operator and ICANN; however, the parties will also have the right to enforce a judgment of such a court in any court of competent jurisdiction."]

5.3 Limitation of Liability. ICANN's aggregate monetary liability for violations of this Agreement will not exceed an amount equal to the Registry-Level Fees paid by Registry Operator to ICANN within the preceding twelve-month period pursuant to this Agreement (excluding the Variable Registry-Level Fee set forth in Section 6.3, if any). Registry Operator's aggregate monetary liability to ICANN for breaches of this Agreement will be limited to an amount equal to the fees paid to ICANN during the preceding twelve-month period (excluding the Variable Registry-Level Fee set forth in Section 6.3, if any), and punitive and exemplary damages, if any, awarded in accordance with Section 5.2. In no event shall either party be liable for special, punitive, exemplary or consequential damages arising out of or in connection with this Agreement or the performance or nonperformance of obligations undertaken in this Agreement, except as provided in Section 5.2. Except as otherwise provided in this Agreement, neither party makes any warranty, express or implied, with respect to the services rendered by itself, its servants or agents, or the results obtained from their work, including, without limitation, any implied warranty of merchantability, non-infringement or fitness for a particular purpose.

5.4 Specific Performance. Registry Operator and ICANN agree that irreparable damage could occur if any of the provisions of this Agreement was not performed in accordance with its specific terms. Accordingly, the parties agree that they each shall be entitled to seek from the arbitrator specific performance of the terms of this Agreement (in addition to any other remedy to which each party is entitled).

ARTICLE 6.

FEES

6.1 Registry-Level Fees. Registry Operator shall pay ICANN a Registry-Level Fee equal to (i) the Registry Fixed Fee of US$6,250 per calendar quarter and (ii) the Registry-Level Transaction Fee. The Registry-Level Transaction Fee will be equal to the number of annual increments of an initial or renewal domain name registration (at one or more levels, and including renewals associated with transfers from one ICANN-accredited registrar to another, each a "Transaction"), during the applicable calendar quarter multiplied by US$0.25; provided, however that the Registry-Level Transaction Fee shall not apply until and unless more than 50,000 Transactions have occurred in the TLD during any calendar quarter or any four calendar quarter period (the "Transaction Threshold") and shall apply to each Transaction that occurred during each quarter in which the Transaction Threshold has been met, but shall not apply to each quarter in which the Transaction Threshold has not been met. Registry Operator shall pay the Registry-

* Final text will be posted on ICANN website; agreement reference to be replaced by hyperlink.

Level Fees on a quarterly basis by the 20th day following the end of each calendar quarter (i.e., on April 20, July 20, October 20 and January 20 for the calendar quarters ending March 31, June 30, September 30 and December 31) of the year to an account designated by ICANN.

6.2 Cost Recovery for RSTEP. Requests by Registry Operator for the approval of Additional Services pursuant to Section 2.1 may be referred by ICANN to the Registry Services Technical Evaluation Panel ("RSTEP") pursuant to that process at http://www.icann.org/en/registries/rsep/. In the event that such requests are referred to RSTEP, Registry Operator shall remit to ICANN the invoiced cost of the RSTEP review within ten (10) business days of receipt of a copy of the RSTEP invoice from ICANN, unless ICANN determines, in its sole and absolute discretion, to pay all or any portion of the invoiced cost of such RSTEP review.

6.3 Variable Registry-Level Fee.

(a) If the ICANN accredited registrars (as a group) do not approve pursuant to the terms of their registrar accreditation agreements with ICANN the variable accreditation fees established by the ICANN Board of Directors for any ICANN fiscal year, upon delivery of notice from ICANN, Registry Operator shall pay to ICANN a Variable Registry-Level Fee, which shall be paid on a fiscal quarter basis, and shall accrue as of the beginning of the first fiscal quarter of such ICANN fiscal year. The fee will be calculated and invoiced by ICANN on a quarterly basis, and shall be paid by Registry Operator within sixty (60) calendar days with respect to the first quarter of such ICANN fiscal year and within twenty (20) calendar days with respect to each remaining quarter of such ICANN fiscal year, of receipt of the invoiced amount by ICANN. The Registry Operator may invoice and collect the Variable Registry-Level Fees from the registrars who are party to a registry-registrar agreement with Registry Operator (which agreement may specifically provide for the reimbursement of Variable Registry-Level Fees paid by Registry Operator pursuant to this Section 6.3); provided, that the fees shall be invoiced to all ICANN accredited registrars if invoiced to any. The Variable Registry-Level Fee, if collectible by ICANN, shall be an obligation of Registry Operator and shall be due and payable as provided in this Section 6.3 irrespective of Registry Operator’s ability to seek and obtain reimbursement of such fee from registrars. In the event ICANN later collects variable accreditation fees for which Registry Operator has paid ICANN a Variable Registry-Level Fee, ICANN shall reimburse the Registry Operator an appropriate amount of the Variable Registry-Level Fee, as reasonably determined by ICANN. If the ICANN accredited registrars (as a group) do approve pursuant to the terms of their registrar accreditation agreements with ICANN the variable accreditation fees established by the ICANN Board of Directors for a fiscal year, ICANN shall not be entitled to a Variable-Level Fee hereunder for such fiscal year, irrespective of whether the ICANN accredited registrars comply with their payment obligations to ICANN during such fiscal year.

(b) The amount of the Variable Registry-Level Fee will be specified for each registrar, and may include both a per-registrar component and a transactional component. The per-registrar component of the Variable Registry-Level Fee shall be specified by ICANN in accordance with the budget adopted by the ICANN Board of Directors for each ICANN fiscal year. The transactional component of the Variable Registry-Level Fee shall be specified by ICANN in accordance with the budget adopted by the ICANN Board of Directors for each ICANN fiscal year but shall not exceed US$0.25 per domain name registration (including renewals associated with transfers from one ICANN-accredited registrar to another) per year.

6.4 Adjustments to Fees. Notwithstanding any of the fee limitations set forth in this Article 6, commencing upon the expiration of the first year of this Agreement, and upon the expiration of each year thereafter during the Term, the then current fees set forth in Section 6.1 and Section 6.3 may be adjusted, at ICANN's discretion, by a percentage equal to the percentage change, if any, in (i) the Consumer Price Index for All Urban Consumers, U.S. City Average (1982-1984 = 100) published by the United States Department of Labor, Bureau of Labor Statistics, or any successor index (the "CPI") for the month which is one (1) month prior to the commencement of the applicable year, over (ii) the CPI published for the month which is one (1) month prior to the commencement of the immediately prior year. In the event of any such increase, ICANN shall provide notice to Registry Operator specifying the amount of such adjustment. Any fee adjustment under this Section 6.4 shall be effective as of the first day of the year in which the above calculation is made.

6.5 Additional Fee on Late Payments. For any payments thirty (30) calendar days or more overdue under this Agreement, Registry Operator shall pay an additional fee on late payments at the rate of 1.5% per month or, if less, the maximum rate permitted by applicable law.

ARTICLE 7.

MISCELLANEOUS

7.1 Indemnification of ICANN.

(a) Registry Operator shall indemnify and defend ICANN and its directors, officers, employees, and agents (collectively, "Indemnitees") from and against any and all third-party claims, damages, liabilities, costs, and expenses, including reasonable legal fees and expenses, arising out of or relating to intellectual property ownership rights with respect to the TLD, the delegation of the TLD to Registry Operator, Registry Operator's operation of the registry for the TLD or Registry Operator's provision of Registry Services, provided that Registry Operator shall not be obligated to indemnify or defend any Indemnitee to the extent the claim, damage, liability, cost or expense arose: (i) due to the actions or omissions of ICANN, its subcontractors, panelists or evaluators specifically related to and occurring during the registry TLD application process (other than actions or omissions requested by or for the benefit of Registry Operator), or (ii) due to a breach by ICANN of any obligation contained in this Agreement or any willful misconduct by ICANN. This Section shall not be deemed to require Registry Operator to reimburse or otherwise indemnify ICANN for costs associated with the negotiation or execution of this Agreement, or with monitoring or management of the parties' respective obligations hereunder. Further, this Section shall not apply to any request for attorney's fees in connection with any litigation or arbitration between or among the parties, which shall be governed by Article 5 or otherwise awarded by a court or arbitrator.

[Alternative **Section 7.1(a)** text for intergovernmental organizations or governmental entities:

"Registry Operator shall use its best efforts to cooperate with ICANN in order to ensure that ICANN does not incur any costs associated with claims, damages, liabilities, costs and expenses, including reasonable legal fees and expenses, arising out of or relating to intellectual property ownership rights with respect to the TLD, the delegation of the TLD to Registry Operator, Registry Operator's operation of the registry for the TLD or Registry Operator's provision of Registry Services, provided that Registry Operator shall not be obligated to provide such cooperation to the extent the claim, damage, liability, cost or expense arose due to a breach by ICANN of any of its obligations contained in this Agreement or any willful misconduct by ICANN. This Section shall not be deemed to require Registry Operator to reimburse or otherwise indemnify ICANN for costs associated with the negotiation or execution of this Agreement, or with monitoring or management of the parties' respective obligations hereunder. Further, this Section shall not apply to any request for attorney's fees in connection with any litigation or arbitration between or among the parties, which shall be governed by Article 5 or otherwise awarded by a court or arbitrator.”]

(b) For any claims by ICANN for indemnification whereby multiple registry operators (including Registry Operator) have engaged in the same actions or omissions that gave rise to the claim, Registry Operator’s aggregate liability to indemnify ICANN with respect to such claim shall be limited to a percentage of ICANN’s total claim, calculated by dividing the number of total domain names under registration with Registry Operator within the TLD (which names under registration shall be calculated consistently with Article 6 hereof for any applicable quarter) by the total number of domain names under registration within all top level domains for which the registry operators thereof are engaging in the same acts or omissions giving rise to such claim. For the purposes of reducing Registry Operator’s liability under Section 7.1(a) pursuant to this Section 7.1(b), Registry Operator shall have the burden of identifying the other registry operators that are engaged in the same actions or omissions that gave rise to the claim, and demonstrating, to ICANN’s reasonable satisfaction, such other registry operators’ culpability for such actions or omissions. For the avoidance of doubt, in the event that a registry operator is engaged in the same acts or omissions giving rise to the claims, but such registry operator(s) do not have the same or similar indemnification obligations to ICANN as set forth in Section 7.1(a) above, the number of domains under management by such registry operator(s) shall nonetheless be included in the calculation in the preceding sentence. [***Note: This Section 7.1(b) is inapplicable to intergovernmental organizations or governmental entities.***]

7.2 Indemnification Procedures. If any third-party claim is commenced that is indemnified under Section 7.1 above, ICANN shall provide notice thereof to Registry Operator as promptly as practicable. Registry Operator shall be entitled, if it so elects, in a notice promptly delivered to ICANN, to immediately take control of the defense and investigation of such claim and to employ and engage attorneys reasonably acceptable to ICANN to handle and defend the same, at Registry Operator’s sole cost and expense, provided that in all events ICANN will be entitled to control at its sole cost and expense the litigation of issues concerning the validity or interpretation of ICANN’s policies, Bylaws or conduct. ICANN shall cooperate, at Registry Operator’s cost and expense, in all reasonable respects with Registry Operator and its attorneys in the investigation, trial, and defense of such claim and any appeal arising therefrom, and may, at its own cost and expense, participate, through its attorneys or otherwise, in such investigation, trial and defense of such claim and any appeal arising therefrom. No settlement of a claim that involves a remedy affecting ICANN other than the payment of money in an amount that is fully indemnified by Registry Operator will be entered into without the consent of ICANN. If Registry Operator does not assume full control over the defense of a claim subject to such defense in accordance with this Section 7.2, ICANN will have the right to defend the claim in such manner as it may deem appropriate, at the cost and expense of Registry Operator and Registry Operator shall cooperate in such defense. [***Note: This Section 7.2 is inapplicable to intergovernmental organizations or governmental entities.***]

7.3 Defined Terms. For purposes of this Agreement, unless such definitions are amended pursuant to a Consensus Policy at a future date, in which case the following definitions shall be deemed amended and restated in their entirety as set forth in such Consensus Policy, Security and Stability shall be defined as follows:

(a) For the purposes of this Agreement, an effect on “Security” shall mean (1) the unauthorized disclosure, alteration, insertion or destruction of registry data, or (2) the unauthorized access to or disclosure of information or resources on the Internet by systems operating in accordance with all applicable standards.

(b) For purposes of this Agreement, an effect on “Stability” shall refer to (1) lack of compliance with applicable relevant standards that are authoritative and published by a well-established and recognized Internet standards body, such as the relevant Standards-Track or Best Current Practice Requests for Comments (“RFCs”) sponsored by the Internet Engineering Task Force; or (2) the creation of a condition that adversely affects the throughput, response time, consistency or coherence of responses to Internet servers or end systems operating in accordance with applicable relevant standards that are authoritative and published by a well-established and recognized Internet standards body, such as the relevant Standards-Track or Best Current Practice RFCs, and relying on Registry Operator's delegated information or provisioning of services.

7.4 No Offset. All payments due under this Agreement will be made in a timely manner throughout the Term and notwithstanding the pendency of any dispute (monetary or otherwise) between Registry Operator and ICANN.

7.5 Change in Control; Assignment and Subcontracting. Neither party may assign this Agreement without the prior written approval of the other party, which approval will not be unreasonably withheld. Notwithstanding the foregoing, ICANN may assign this Agreement in conjunction with a reorganization or re-incorporation of ICANN to another nonprofit corporation or similar entity organized in the same legal jurisdiction in which ICANN is currently organized for the same or substantially the same purposes. For purposes of this Section 7.5, a direct or indirect change of control of Registry Operator or any material subcontracting arrangement with respect to the operation of the registry for the TLD shall be deemed an assignment. ICANN shall be deemed to have reasonably withheld its consent to any such a direct or indirect change of control or subcontracting arrangement in the event that ICANN reasonably determines that the person or entity acquiring control of Registry Operator or entering into such subcontracting arrangement (or the ultimate parent entity of such acquiring or subcontracting entity) does not meet the ICANN-adopted registry operator criteria or qualifications then in effect. In addition, without limiting the foregoing, Registry Operator must provide no less than thirty (30) calendar days advance notice to ICANN of any material subcontracting arrangements, and any agreement to subcontract portions of the operations of the TLD must mandate compliance with all covenants, obligations and agreements by Registry Operator hereunder, and Registry Operator shall continue to be bound by such covenants, obligations and agreements. Without limiting the foregoing, Registry Operator must also provide no less than thirty (30) calendar days advance notice to ICANN prior to the consummation of any transaction anticipated to result in a direct or indirect change of control of Registry Operator. Such change of control notification shall include a statement that affirms that the ultimate parent entity of the party acquiring such control meets the ICANN-adopted specification or policy on registry operator criteria then in effect, and affirms that Registry Operator is in compliance with its obligations under this Agreement. Within thirty (30) calendar days of such notification, ICANN may request additional information from Registry Operator establishing compliance with this Agreement, in which case Registry Operator must supply the requested information within fifteen (15) calendar days. If ICANN fails to expressly provide or withhold its consent to any direct or indirect change of control of Registry Operator or any material subcontracting arrangement within thirty (30) (or, if ICANN has requested additional information from Registry Operator as set forth above, sixty (60)) calendar days of the receipt of written notice of such transaction from Registry Operator, ICANN shall be deemed to have consented to such transaction. In connection with any such transaction, Registry Operator shall comply with the Registry Transition Process.

7.6 Amendments and Waivers.

(a) If ICANN determines that an amendment to this Agreement (including to the Specifications referred to herein) and all other registry agreements between ICANN and the Applicable

Registry Operators (the "Applicable Registry Agreements") is desirable (each, a "Special Amendment"), ICANN may submit a Special Amendment for approval by the Applicable Registry Operators pursuant to the process set forth in this Section 7.6, provided that a Special Amendment is not a Restricted Amendment (as defined below). Prior to submitting a Special Amendment for such approval, ICANN shall first consult in good faith with the Working Group (as defined below) regarding the form and substance of a Special Amendment. The duration of such consultation shall be reasonably determined by ICANN based on the substance of the Special Amendment. Following such consultation, ICANN may propose the adoption of a Special Amendment by publicly posting such amendment on its website for no less than thirty (30) calendar days (the "Posting Period") and providing notice of such amendment by ICANN to the Applicable Registry Operators in accordance with Section 7.8. ICANN will consider the public comments submitted on a Special Amendment during the Posting Period (including comments submitted by the Applicable Registry Operators).

(b) If, within two (2) calendar years of the expiration of the Posting Period (the "Approval Period"), (i) the ICANN Board of Directors approves a Special Amendment (which may be in a form different than submitted for public comment) and (ii) such Special Amendment receives Registry Operator Approval (as defined below), such Special Amendment shall be deemed approved (an "Approved Amendment") by the Applicable Registry Operators (the last date on which such approvals are obtained is herein referred to as the "Amendment Approval Date") and shall be effective and deemed an amendment to this Agreement upon sixty (60) calendar days notice from ICANN to Registry Operator (the "Amendment Effective Date"). In the event that a Special Amendment is not approved by the ICANN Board of Directors or does not receive Registry Operator Approval within the Approval Period, the Special Amendment will have no effect. The procedure used by ICANN to obtain Registry Operator Approval shall be designed to document the written approval of the Applicable Registry Operators, which may be in electronic form.

(c) During the thirty (30) calendar day period following the Amendment Approval Date, Registry Operator (so long as it did not vote in favor of the Approved Amendment) may apply in writing to ICANN for an exemption from the Approved Amendment (each such request submitted by Registry Operator hereunder, an "Exemption Request"). Each Exemption Request will set forth the basis for such request and provide detailed support for an exemption from the Approved Amendment. An Exemption Request may also include a detailed description and support for any alternatives to, or a variation of, the Approved Amendment proposed by such Registry Operator. An Exemption Request may only be granted upon a clear and convincing showing by Registry Operator that compliance with the Approved Amendment conflicts with applicable laws or would have a material adverse effect on the long-term financial condition or results of operations of Registry Operator. No Exemption Request will be granted if ICANN determines, in its reasonable discretion, that granting such Exemption Request would be materially harmful to registrants or result in the denial of a direct benefit to registrants. Within ninety (90) calendar days of ICANN's receipt of an Exemption Request, ICANN shall either approve (which approval may be conditioned or consist of alternatives to or a variation of the Approved Amendment) or deny the Exemption Request in writing, during which time the Approved Amendment will not amend this Agreement; provided, that any such conditions, alternatives or variations shall be effective and, to the extent applicable, will amend this Agreement as of the Amendment Effective Date. If the Exemption Request is approved by ICANN, the Approved Amendment will not amend this Agreement. If such Exemption Request is denied by ICANN, the Approved Amendment will amend this Agreement as of the Amendment Effective Date (or, if such date has passed, such Approved Amendment shall be deemed effective immediately on the date of such denial), provided that Registry Operator may, within thirty (30) calendar days following receipt of ICANN's determination, appeal ICANN's decision to deny the Exemption Request pursuant to the dispute resolution procedures set forth in Article 5. The Approved

Amendment will be deemed not to have amended this Agreement during the pendency of the dispute resolution process. For avoidance of doubt, only Exemption Requests submitted by Registry Operator that are approved by ICANN pursuant to this Section 7.6(c) or through an arbitration decision pursuant to Article 5 shall exempt Registry Operator from any Approved Amendment, and no exemption request granted to any other Applicable Registry Operator (whether by ICANN or through arbitration) shall have any effect under this Agreement or exempt Registry Operator from any Approved Amendment.

(d) Except as set forth in this Section 7.6, no amendment, supplement or modification of this Agreement or any provision hereof shall be binding unless executed in writing by both parties, and nothing in this Section 7.6 shall restrict ICANN and Registry Operator from entering into bilateral amendments and modifications to this Agreement negotiated solely between the two parties. No waiver of any provision of this Agreement shall be binding unless evidenced by a writing signed by the party waiving compliance with such provision. No waiver of any of the provisions of this Agreement or failure to enforce any of the provisions hereof shall be deemed or shall constitute a waiver of any other provision hereof, nor shall any such waiver constitute a continuing waiver unless otherwise expressly provided. For the avoidance of doubt, nothing in this Section 7.6 shall be deemed to limit Registry Operator's obligation to comply with Section 2.2.

(e) For purposes of this Section 7.6, the following terms shall have the following meanings:

(i) "Applicable Registry Operators" means, collectively, the registry operators of the top-level domains party to a registry agreement that contains a provision similar to this Section 7.6, including Registry Operator.

(ii) "Registry Operator Approval" means the receipt of each of the following: (A) the affirmative approval of the Applicable Registry Operators whose payments to ICANN accounted for two-thirds of the total amount of fees (converted to U.S. dollars, if applicable) paid to ICANN by all the Applicable Registry Operators during the immediately previous calendar year pursuant to the Applicable Registry Agreements, and (B) the affirmative approval of a majority of the Applicable Registry Operators at the time such approval is obtained. For avoidance of doubt, with respect to clause (B), each Applicable Registry Operator shall have one vote for each top-level domain operated by such Registry Operator pursuant to an Applicable Registry Agreement.

(iii) "Restricted Amendment" means the following: (i) an amendment of Specification 1, (ii) except to the extent addressed in Section 2.10 hereof, an amendment that specifies the price charged by Registry Operator to registrars for domain name registrations, (iii) an amendment to the definition of Registry Services as set forth in the first paragraph of Section 2.1 of Specification 6, or (iv) an amendment to the length of the Term.

(iv) "Working Group" means representatives of the Applicable Registry Operators and other members of the community that ICANN appoints, from time to time, to serve as a working group to consult on amendments to the Applicable Registry Agreements (excluding bilateral amendments pursuant to Section 7.6(d)).

7.7 No Third-Party Beneficiaries. This Agreement will not be construed to create any obligation by either ICANN or Registry Operator to any non-party to this Agreement, including any registrar or registered name holder.

7.8 General Notices. Except for notices pursuant to Section 7.6, all notices to be given under or in relation to this Agreement will be given either (i) in writing at the address of the appropriate party as set forth below or (ii) via facsimile or electronic mail as provided below, unless that party has given a notice of change of postal or email address, or facsimile number, as provided in this agreement. All notices under Section 7.6 shall be given by both posting of the applicable information on ICANN's web site and transmission of such information to Registry Operator by electronic mail. Any change in the contact information for notice below will be given by the party within thirty (30) calendar days of such change. Notices, designations, determinations, and specifications made under this Agreement will be in the English language. Other than notices under Section 7.6, any notice required by this Agreement will be deemed to have been properly given (i) if in paper form, when delivered in person or via courier service with confirmation of receipt or (ii) if via facsimile or by electronic mail, upon confirmation of receipt by the recipient's facsimile machine or email server, provided that such notice via facsimile or electronic mail shall be followed by a copy sent by regular postal mail service within two (2) business days. Any notice required by Section 7.6 will be deemed to have been given when electronically posted on ICANN's website and upon confirmation of receipt by the email server. In the event other means of notice become practically achievable, such as notice via a secure website, the parties will work together to implement such notice means under this Agreement.

Attention:

With a Required Copy to:
Email: (As specified from time to time.)

7.9 Entire Agreement. This Agreement (including those specifications and documents incorporated by reference to URL locations which form a part of it) constitutes the entire agreement of the parties hereto pertaining to the operation of the TLD and supersedes all prior agreements, understandings, negotiations and discussions, whether oral or written, between the parties on that subject.

7.10 English Language Controls. Notwithstanding any translated version of this Agreement and/or specifications that may be provided to Registry Operator, the English language version of this Agreement and all referenced specifications are the official versions that bind the parties hereto. In the event of any conflict or discrepancy between any translated version of this Agreement and the English language version, the English language version controls. Notices, designations, determinations, and specifications made under this Agreement shall be in the English language.

7.11 Ownership Rights. Nothing contained in this Agreement shall be construed as establishing or granting to Registry Operator any property ownership rights or interests in the TLD or the letters, words, symbols or other characters making up the TLD string.

7.12 Severability. This Agreement shall be deemed severable; the invalidity or unenforceability of any term or provision of this Agreement shall not affect the validity or enforceability of the balance of this Agreement or of any other term hereof, which shall remain in full force and effect. If any of the provisions hereof are determined to be invalid or unenforceable, the parties shall negotiate in good faith to modify this Agreement so as to effect the original intent of the parties as closely as possible.

7.13 Court Orders. ICANN will respect any order from a court of competent jurisdiction, including any orders from any jurisdiction where the consent or non-objection of the government was a requirement for the delegation of the TLD. Notwithstanding any other provision of this Agreement, ICANN's implementation of any such order will not be a breach of this Agreement.

[Note: The following section is applicable to intergovernmental organizations or governmental entities only.]

7.14 Special Provision Relating to Intergovernmental Organizations or Governmental Entities.

(a) ICANN acknowledges that Registry Operator is an entity subject to public international law, including international treaties applicable to Registry Operator (such public international law and treaties, collectively hereinafter the “Applicable Laws”). Nothing in this Agreement and its related specifications shall be construed or interpreted to require Registry Operator to violate Applicable Laws or prevent compliance therewith. The Parties agree that Registry Operator’s compliance with Applicable Laws shall not constitute a breach of this Agreement.

(b) In the event Registry Operator reasonably determines that any provision of this Agreement and its related specifications, or any decisions or policies of ICANN referred to in this Agreement, including but not limited to Temporary Policies and Consensus Policies (such provisions, specifications and policies, collectively hereinafter, “ICANN Requirements”), may conflict with or violate Applicable Law (hereinafter, a “Potential Conflict”), Registry Operator shall provide detailed notice (a “Notice”) of such Potential Conflict to ICANN as early as possible and, in the case of a Potential Conflict with a proposed Consensus Policy, no later than the end of any public comment period on such proposed Consensus Policy. In the event Registry Operator determines that there is Potential Conflict between a proposed Applicable Law and any ICANN Requirement, Registry Operator shall provide detailed Notice of such Potential Conflict to ICANN as early as possible and, in the case of a Potential Conflict with a proposed Consensus Policy, no later than the end of any public comment period on such proposed Consensus Policy.

(c) As soon as practicable following such review, the parties shall attempt to resolve the Potential Conflict by cooperative engagement pursuant to the procedures set forth in Section 5.1. In

* Final text will be posted on ICANN website; agreement reference to be replaced by hyperlink.

addition, Registry Operator shall use its best efforts to eliminate or minimize any impact arising from such Potential Conflict between Applicable Laws and any ICANN Requirement. If, following such cooperative engagement, Registry Operator determines that the Potential Conflict constitutes an actual conflict between any ICANN Requirement, on the one hand, and Applicable Laws, on the other hand, then ICANN shall waive compliance with such ICANN Requirement (provided that the parties shall negotiate in good faith on a continuous basis thereafter to mitigate or eliminate the effects of such non-compliance on ICANN), unless ICANN reasonably and objectively determines that the failure of Registry Operator to comply with such ICANN Requirement would constitute a threat to the Security and Stability of Registry Services, the Internet or the DNS (hereinafter, an "ICANN Determination"). Following receipt of notice by Registry Operator of such ICANN Determination, Registry Operator shall be afforded a period of ninety (90) calendar days to resolve such conflict with an Applicable Law. If the conflict with an Applicable Law is not resolved to ICANN's complete satisfaction during such period, Registry Operator shall have the option to submit, within ten (10) calendar days thereafter, the matter to binding arbitration as defined in subsection (d) below. If during such period, Registry Operator does not submit the matter to arbitration pursuant to subsection (d) below, ICANN may, upon notice to Registry Operator, terminate this Agreement with immediate effect.

(d) If Registry Operator disagrees with an ICANN Determination, Registry Operator may submit the matter to binding arbitration pursuant to the provisions of Section 5.2, except that the sole issue presented to the arbitrator for determination will be whether or not ICANN reasonably and objectively reached the ICANN Determination. For the purposes of such arbitration, ICANN shall present evidence to the arbitrator supporting the ICANN Determination. If the arbitrator determines that ICANN did not reasonably and objectively reach the ICANN Determination, then ICANN shall waive Registry Operator's compliance with the subject ICANN Requirement. If the arbitrators or pre-arbitral referee, as applicable, determine that ICANN did reasonably and objectively reach the ICANN Determination, then, upon notice to Registry Operator, ICANN may terminate this Agreement with immediate effect.

(e) Registry Operator hereby represents and warrants that, to the best of its knowledge as of the date of execution of this Agreement, no existing ICANN Requirement conflicts with or violates any Applicable Law.

(f) Notwithstanding any other provision of this Section 7.14, following an ICANN Determination and prior to a finding by an arbitrator pursuant to Section 7.14(d) above, ICANN may, subject to prior consultations with Registry Operator, take such reasonable technical measures as it deems necessary to ensure the Security and Stability of Registry Services, the Internet and the DNS. These reasonable technical measures shall be taken by ICANN on an interim basis, until the earlier of the date of conclusion of the arbitration procedure referred to in Section 7.14(d) above or the date of complete resolution of the conflict with an Applicable Law. In case Registry Operator disagrees with such technical measures taken by ICANN, Registry Operator may submit the matter to binding arbitration pursuant to the provisions of Section 5.2 above, during which process ICANN may continue to take such technical measures. In the event that ICANN takes such measures, Registry Operator shall pay all costs incurred by ICANN as a result of taking such measures. In addition, in the event that ICANN takes such measures, ICANN shall retain and may enforce its rights under the Continued Operations Instrument and Alternative Instrument, as applicable.

EXHIBIT A

<u>Approved Services</u>

SPECIFICATION 1

CONSENSUS POLICIES AND TEMPORARY POLICIES SPECIFICATION

1. **Consensus Policies.**

1.1. "***Consensus Policies***" are those policies established (1) pursuant to the procedure set forth in ICANN's Bylaws and due process, and (2) covering those topics listed in Section 1.2 of this document. The Consensus Policy development process and procedure set forth in ICANN's Bylaws may be revised from time to time in accordance with the process set forth therein.

1.2. Consensus Policies and the procedures by which they are developed shall be designed to produce, to the extent possible, a consensus of Internet stakeholders, including the operators of gTLDs. Consensus Policies shall relate to one or more of the following:

1.2.1. issues for which uniform or coordinated resolution is reasonably necessary to facilitate interoperability, security and/or stability of the Internet or Domain Name System ("DNS");

1.2.2. functional and performance specifications for the provision of Registry Services;

1.2.3. Security and Stability of the registry database for the TLD;

1.2.4. registry policies reasonably necessary to implement Consensus Policies relating to registry operations or registrars;

1.2.5. resolution of disputes regarding the registration of domain names (as opposed to the use of such domain names); or

1.2.6. restrictions on cross-ownership of registry operators and registrars or registrar resellers and regulations and restrictions with respect to registry operations and the use of registry and registrar data in the event that a registry operator and a registrar or registrar reseller are affiliated.

1.3. Such categories of issues referred to in Section 1.2 shall include, without limitation:

1.3.1. principles for allocation of registered names in the TLD (e.g., first-come/first-served, timely renewal, holding period after expiration);

1.3.2. prohibitions on warehousing of or speculation in domain names by registries or registrars;

1.3.3. reservation of registered names in the TLD that may not be registered initially or that may not be renewed due to reasons reasonably related to (i) avoidance of confusion among or misleading of users, (ii) intellectual property, or (iii) the technical management of the DNS or the Internet (e.g., establishment of reservations of names from registration); and

1.3.4. maintenance of and access to accurate and up-to-date information concerning domain name registrations; and procedures to avoid disruptions of domain name registrations due to suspension or termination of operations by a registry operator or a registrar, including procedures for allocation of responsibility for serving registered domain names in a TLD affected by such a suspension or termination.

1.4. In addition to the other limitations on Consensus Policies, they shall not:

1.4.1. prescribe or limit the price of Registry Services;

1.4.2. modify the terms or conditions for the renewal or termination of the Registry Agreement;

1.4.3. modify the limitations on Temporary Policies (defined below) or Consensus Policies;

1.4.4. modify the provisions in the registry agreement regarding fees paid by Registry Operator to ICANN; or

1.4.5. modify ICANN's obligations to ensure equitable treatment of registry operators and act in an open and transparent manner.

2. **Temporary Policies.** Registry Operator shall comply with and implement all specifications or policies established by the Board on a temporary basis, if adopted by the Board by a vote of at least two-thirds of its members, so long as the Board reasonably determines that such modifications or amendments are justified and that immediate temporary establishment of a specification or policy on the subject is necessary to maintain the stability or security of Registry Services or the DNS ("***Temporary Policies***").

2.1. Such proposed specification or policy shall be as narrowly tailored as feasible to achieve those objectives. In establishing any Temporary Policy, the Board shall state the period of time for which the Temporary Policy is adopted and shall immediately implement the Consensus Policy development process set forth in ICANN's Bylaws.

2.1.1. ICANN shall also issue an advisory statement containing a detailed explanation of its reasons for adopting the Temporary Policy and why the Board believes such Temporary Policy should receive the consensus support of Internet stakeholders.

2.1.2. If the period of time for which the Temporary Policy is adopted exceeds 90 days, the Board shall reaffirm its temporary adoption every 90 days for a total period not to exceed one year, in order to maintain such Temporary Policy in effect until such time as it becomes a Consensus Policy. If the one year period expires or, if during such one year period, the Temporary Policy does not become a Consensus Policy and is not reaffirmed by the Board, Registry Operator shall no longer be required to comply with or implement such Temporary Policy.

3. **Notice and Conflicts.** Registry Operator shall be afforded a reasonable period of time following notice of the establishment of a Consensus Policy or Temporary Policy in which to comply with such policy or specification, taking into account any urgency involved. In the event of a conflict between Registry Services and Consensus Policies or any Temporary Policy, the Consensus Polices or Temporary Policy shall control, but only with respect to subject matter in conflict.

SPECIFICATION 2
DATA ESCROW REQUIREMENTS

Registry Operator will engage an independent entity to act as data escrow agent ("***Escrow Agent***") for the provision of data escrow services related to the Registry Agreement. The following Technical Specifications set forth in Part A, and Legal Requirements set forth in Part B, will be included in any data escrow agreement between Registry Operator and the Escrow Agent, under which ICANN must be named a third-party beneficiary. In addition to the following requirements, the data escrow agreement may contain other provisions that are not contradictory or intended to subvert the required terms provided below.

PART A – TECHNICAL SPECIFICATIONS

1. **Deposits**. There will be two types of Deposits: Full and Differential. For both types, the universe of Registry objects to be considered for data escrow are those objects necessary in order to offer all of the approved Registry Services.
   1.1 "**Full Deposit**" will consist of data that reflects the state of the registry as of 00:00:00 UTC on each Sunday.
   1.2 "**Differential Deposit**" means data that reflects all transactions that were not reflected in the last previous Full or Differential Deposit, as the case may be. Each Differential Deposit will contain all database transactions since the previous Deposit was completed as of 00:00:00 UTC of each day, but Sunday. Differential Deposits must include complete Escrow Records as specified below that were not included or changed since the most recent full or Differential Deposit (i.e., newly added or modified domain names).

2. **Schedule for Deposits**. Registry Operator will submit a set of escrow files on a daily basis as follows:
   2.1 Each Sunday, a Full Deposit must be submitted to the Escrow Agent by 23:59 UTC.
   2.2 The other six days of the week, the corresponding Differential Deposit must be submitted to Escrow Agent by 23:59 UTC.

3. **Escrow Format Specification.**
   3.1 **Deposit's Format.** Registry objects, such as domains, contacts, name servers, registrars, etc. will be compiled into a file constructed as described in draft-arias-noguchi-registry-data-escrow, see [1]. The aforementioned document describes some elements as optional; Registry Operator will include those elements in the Deposits if they are available. Registry Operator will use the draft version available at the time of signing the Agreement, if not already an RFC. Once the specification is published as an RFC, Registry Operator will implement that specification, no later than 180 days after. UTF-8 character encoding will be used.

   3.2 **Extensions.** If a Registry Operator offers additional Registry Services that require submission of additional data, not included above, additional "extension schemas" shall be defined in a case by case base to represent that data. These "extension schemas" will be specified as described in [1]. Data related to the "extensions schemas" will be included in the deposit file described in section 3.1. ICANN and the respective Registry shall work together to agree on such new objects' data escrow specifications.

4. **<u>Processing of Deposit files</u>.** The use of compression is recommended in order to reduce electronic data transfer times, and storage capacity requirements. Data encryption will be used to ensure the privacy of registry escrow data. Files processed for compression and encryption will be in the binary OpenPGP format as per OpenPGP Message Format - RFC 4880, see [2]. Acceptable algorithms for Public-key cryptography, Symmetric-key cryptography, Hash and Compression are those enumerated in RFC 4880, not marked as deprecated in OpenPGP IANA Registry, see [3], that are also royalty-free. The process to follow for a data file in original text format is:
   (1) The file should be compressed. The suggested algorithm for compression is ZIP as per RFC 4880.
   (2) The compressed data will be encrypted using the escrow agent's public key. The suggested algorithms for Public-key encryption are Elgamal and RSA as per RFC 4880. The suggested algorithms for Symmetric-key encryption are TripleDES, AES128 and CAST5 as per RFC 4880.
   (3) The file may be split as necessary if, once compressed and encrypted is larger than the file size limit agreed with the escrow agent. Every part of a split file, or the whole file if split is not used, will be called a processed file in this section.
   (4) A digital signature file will be generated for every processed file using the Registry's private key. The digital signature file will be in binary OpenPGP format as per RFC 4880 [2], and will not be compressed or encrypted. The suggested algorithms for Digital signatures are DSA and RSA as per RFC 4880. The suggested algorithm for Hashes in Digital signatures is SHA256.
   (5) The processed files and digital signature files will then be transferred to the Escrow Agent through secure electronic mechanisms, such as, SFTP, SCP, HTTPS file upload, etc. as agreed between the Escrow Agent and the Registry Operator. Non-electronic delivery through a physical medium such as CD-ROMs, DVD-ROMs, or USB storage devices may be used if authorized by ICANN.
   (6) The Escrow Agent will then validate every (processed) transferred data file using the procedure described in section 8.

5. **<u>File Naming Conventions</u>.** Files will be named according to the following convention: {gTLD}_{YYYY-MM-DD}_{type}_S{#}_R{rev}.{ext} where:
   5.1 {gTLD} is replaced with the gTLD name; in case of an IDN-TLD, the ASCII-compatible form (A-Label) must be used;
   5.2 {YYYY-MM-DD} is replaced by the date corresponding to the time used as a timeline watermark for the transactions; i.e. for the Full Deposit corresponding to 2009-08-02T00:00Z, the string to be used would be “2009-08-02”;
   5.3 {type} is replaced by:
      (1) “full”, if the data represents a Full Deposit;
      (2) “diff”, if the data represents a Differential Deposit;
      (3) “thin”, if the data represents a Bulk Registration Data Access file, as specified in section 3 of Specification 4;
   5.4 {#} is replaced by the position of the file in a series of files, beginning with “1”; in case of a lone file, this must be replaced by “1”.
   5.5 {rev} is replaced by the number of revision (or resend) of the file beginning with “0”:
   5.6 {ext} is replaced by “sig” if it is a digital signature file of the quasi-homonymous file. Otherwise it is replaced by “ryde”.

6. **Distribution of Public Keys.** Each of Registry Operator and Escrow Agent will distribute its public key to the other party (Registry Operator or Escrow Agent, as the case may be) via email to an email address to be specified. Each party will confirm receipt of the other party's public key with a reply email, and the distributing party will subsequently reconfirm the authenticity of the key transmitted via offline methods, like in person meeting, telephone, etc. In this way, public key transmission is authenticated to a user able to send and receive mail via a mail server operated by the distributing party. Escrow Agent, Registry and ICANN will exchange keys by the same procedure.

7. **Notification of Deposits**. Along with the delivery of each Deposit, Registry Operator will deliver to Escrow Agent and to ICANN a written statement (which may be by authenticated e-mail) that includes a copy of the report generated upon creation of the Deposit and states that the Deposit has been inspected by Registry Operator and is complete and accurate. Registry Operator will include the Deposit's "id" and "resend" attributes in its statement. The attributes are explained in [1].

8. **Verification Procedure**.
   (1) The signature file of each processed file is validated.
   (2) If processed files are pieces of a bigger file, the latter is put together.
   (3) Each file obtained in the previous step is then decrypted and uncompressed.
   (4) Each data file contained in the previous step is then validated against the format defined in [1].
   (5) If [1] includes a verification process, that will be applied at this step.
   If any discrepancy is found in any of the steps, the Deposit will be considered incomplete.

PART B – LEGAL REQUIREMENTS

1. **Escrow Agent**. Prior to entering into an escrow agreement, the Registry Operator must provide notice to ICANN as to the identity of the Escrow Agent, and provide ICANN with contact information and a copy of the relevant escrow agreement, and all amendment thereto. In addition, prior to entering into an escrow agreement, Registry Operator must obtain the consent of ICANN to (a) use the specified Escrow Agent, and (b) enter into the form of escrow agreement provided. ICANN must be expressly designated a third-party beneficiary of the escrow agreement. ICANN reserves the right to withhold its consent to any Escrow Agent, escrow agreement, or any amendment thereto, all in its sole discretion.

2. **Fees**. Registry Operator must pay, or have paid on its behalf, fees to the Escrow Agent directly. If Registry Operator fails to pay any fee by the due date(s), the Escrow Agent will give ICANN written notice of such non-payment and ICANN may pay the past-due fee(s) within ten business days after receipt of the written notice from Escrow Agent. Upon payment of the past-due fees by ICANN, ICANN shall have a claim for such amount against Registry Operator, which Registry Operator shall be required to submit to ICANN together with the next fee payment due under the Registry Agreement.

3. **Ownership**. Ownership of the Deposits during the effective term of the Registry Agreement shall remain with Registry Operator at all times. Thereafter, Registry Operator shall assign any such ownership rights (including intellectual property rights, as the case may be) in such Deposits to ICANN. In the event that during the term of the Registry Agreement any Deposit is released from escrow to ICANN, any intellectual property rights held by Registry Operator in the Deposits will automatically be licensed on a non-exclusive, perpetual, irrevocable, royalty-free, paid-up basis to ICANN or to a party designated in writing by ICANN.

4. **Integrity and Confidentiality**. Escrow Agent will be required to (i) hold and maintain the Deposits in a secure, locked, and environmentally safe facility, which is accessible only to authorized representatives of Escrow Agent, (ii) protect the integrity and confidentiality of the Deposits using commercially reasonable measures and (iii) keep and safeguard each Deposit for one year. ICANN and Registry Operator will be provided the right to inspect Escrow Agent's applicable records upon reasonable prior notice and during normal business hours. Registry Operator and ICANN will be provided with the right to designate a third-party auditor to audit Escrow Agent’s compliance with the technical specifications and maintenance requirements of this Specification 2 from time to time.

   If Escrow Agent receives a subpoena or any other order from a court or other judicial tribunal pertaining to the disclosure or release of the Deposits, Escrow Agent will promptly notify the Registry Operator and ICANN unless prohibited by law. After notifying the Registry Operator and ICANN, Escrow Agent shall allow sufficient time for Registry Operator or ICANN to challenge any such order, which shall be the responsibility of Registry Operator or ICANN; provided, however, that Escrow Agent does not waive its rights to present its position with respect to any such order. Escrow Agent will cooperate with the Registry Operator or ICANN to support efforts to quash or limit any subpoena, at such party’s expense. Any party requesting additional assistance shall pay Escrow Agent’s standard charges or as quoted upon submission of a detailed request.

5. **Copies**. Escrow Agent may be permitted to duplicate any Deposit, in order to comply with the terms and provisions of the escrow agreement.

6. **Release of Deposits**. Escrow Agent will make available for electronic download (unless otherwise requested) to ICANN or its designee, within twenty-four hours, at the Registry Operator's expense, all Deposits in Escrow Agent's possession in the event that the Escrow Agent receives a request from Registry Operator to effect such delivery to ICANN, or receives one of the following written notices by ICANN stating that:
   6.1 the Registry Agreement has expired without renewal, or been terminated; or
   6.2 ICANN failed, with respect to (a) any Full Deposit or (b) five Differential Deposits within any calendar month, to receive, within five calendar days after the Deposit's scheduled delivery date, notification of receipt from Escrow Agent; (x) ICANN gave notice to Escrow Agent and Registry Operator of that failure; and (y) ICANN has not, within seven calendar days after such notice, received notice from Escrow Agent that the Deposit has been received; or
   6.3 ICANN has received notification from Escrow Agent of failed verification of a Full Deposit or of failed verification of five Differential Deposits within any calendar month and (a) ICANN gave notice to Registry Operator of that receipt; and (b) ICANN has not, within seven calendar days after such notice, received notice from Escrow Agent of verification of a remediated version of such Full Deposit or Differential Deposit; or
   6.4 Registry Operator has: (i) ceased to conduct its business in the ordinary course; or (ii) filed for bankruptcy, become insolvent or anything analogous to any of the foregoing under the laws of any jurisdiction anywhere in the world; or
   6.5 Registry Operator has experienced a failure of critical registry functions and ICANN has asserted its rights pursuant to Section 2.13 of the Registry Agreement; or
   6.6 a competent court, arbitral, legislative, or government agency mandates the release of the Deposits to ICANN.

   Unless Escrow Agent has previously released the Registry Operator's Deposits to ICANN or its designee, Escrow Agent will deliver all Deposits to ICANN upon termination of the Registry Agreement or the Escrow Agreement.

7. **Verification of Deposits**.
   7.1 Within twenty-four hours after receiving each Deposit or corrected Deposit, Escrow Agent must verify the format and completeness of each Deposit and deliver to ICANN a copy of the verification report generated for each Deposit. Reports will be delivered electronically, as specified from time to time by ICANN.
   7.2 If Escrow Agent discovers that any Deposit fails the verification procedures, Escrow Agent must notify, either by email, fax or phone, Registry Operator and ICANN of such nonconformity within twenty-four hours after receiving the non-conformant Deposit. Upon notification of such verification failure, Registry Operator must begin developing modifications, updates, corrections, and other fixes of the Deposit necessary for the Deposit to pass the verification procedures and deliver such fixes to Escrow Agent as promptly as possible.

8. **Amendments.** Escrow Agent and Registry Operator shall amend the terms of the Escrow Agreement to conform to this Specification 2 within ten (10) calendar days of any amendment or modification to this Specification 2. In the event of a conflict between this Specification 2 and the Escrow Agreement, this Specification 2 shall control.

9. **Indemnity.** Registry Operator shall indemnify and hold harmless Escrow Agent and each of its directors, officers, agents, employees, members, and stockholders ("Escrow Agent Indemnitees") absolutely and forever from and against any and all claims, actions, damages, suits, liabilities, obligations, costs, fees, charges, and any other expenses whatsoever, including reasonable attorneys' fees and costs, that may be asserted by a third party against any Escrow Agent Indemnitees in connection with the Escrow Agreement or the performance of Escrow Agent or any Escrow Agent Indemnitees thereunder (with the exception of any claims based on the misrepresentation, negligence, or misconduct of Escrow Agent, its directors, officers, agents, employees, contractors, members, and stockholders). Escrow Agent shall indemnify and hold harmless Registry Operator and ICANN, and each of their respective directors, officers, agents, employees, members, and stockholders ("Indemnitees") absolutely and forever from and against any and all claims, actions, damages, suits, liabilities, obligations, costs, fees, charges, and any other expenses whatsoever, including reasonable attorneys' fees and costs, that may be asserted by a third party against any Indemnitee in connection with the misrepresentation, negligence or misconduct of Escrow Agent, its directors, officers, agents, employees and contractors.

SPECIFICATION 3

FORMAT AND CONTENT FOR REGISTRY OPERATOR MONTHLY REPORTING

Registry Operator shall provide one set of monthly reports per gTLD to ____________ with the following content. ICANN may request in the future that the reports be delivered by other means and using other formats. ICANN will use reasonable commercial efforts to preserve the confidentiality of the information reported until three months after the end of the month to which the reports relate.

1. Per-Registrar Transactions Report. This report shall be compiled in a comma separated-value formatted file as specified in RFC 4180. The file shall be named “gTLD-transactions-yyyymm.csv”, where “gTLD” is the gTLD name; in case of an IDN-TLD, the A-label shall be used; “yyyymm” is the year and month being reported. The file shall contain the following fields per registrar:

Field #	Field Name	Description
01	registrar-name	registrar's full corporate name as registered with IANA
02	iana-id	http://www.iana.org/assignments/registrar-ids
03	total-domains	total domains under sponsorship
04	total-nameservers	total name servers registered for TLD
05	net-adds-1-yr	number of domains successfully registered with an initial term of one year (and not deleted within the add grace period)
06	net-adds-2-yr	number of domains successfully registered with an initial term of two years (and not deleted within the add grace period)
07	net-adds-3-yr	number of domains successfully registered with an initial term of three years (and not deleted within the add grace period)
08	net-adds-4-yr	number of domains successfully registered with an initial term of four years (and not deleted within the add grace period)
09	net-adds-5-yr	number of domains successfully registered with an initial term of five years (and not deleted within the add grace period)
10	net-adds-6-yr	number of domains successfully registered with an initial term of six years (and not deleted within the add grace period)
11	net-adds-7-yr	number of domains successfully registered with an initial term of seven years (and not deleted within the add grace period)

12	net-adds-8-yr	number of domains successfully registered with an initial term of eight years (and not deleted within the add grace period)
13	net-adds-9-yr	number of domains successfully registered with an initial term of nine years (and not deleted within the add grace period)
14	net-adds-10-yr	number of domains successfully registered with an initial term of ten years (and not deleted within the add grace period)
15	net-renews-1-yr	number of domains successfully renewed either automatically or by command with a new renewal period of one year (and not deleted within the renew grace period)
16	net-renews-2-yr	number of domains successfully renewed either automatically or by command with a new renewal period of two years (and not deleted within the renew grace period)
17	net-renews-3-yr	number of domains successfully renewed either automatically or by command with a new renewal period of three years (and not deleted within the renew grace period)
18	net-renews-4-yr	number of domains successfully renewed either automatically or by command with a new renewal period of four years (and not deleted within the renew grace period)
19	net-renews-5-yr	number of domains successfully renewed either automatically or by command with a new renewal period of five years (and not deleted within the renew grace period)
20	net-renews-6-yr	number of domains successfully renewed either automatically or by command with a new renewal period of six years (and not deleted within the renew grace period)
21	net-renews-7-yr	number of domains successfully renewed either automatically or by command with a new renewal period of seven years (and not deleted within the renew grace period)
22	net-renews-8-yr	number of domains successfully renewed either automatically or by command with a new renewal period of eight years (and not deleted within the renew grace period)
23	net-renews-9-yr	number of domains successfully renewed either

		automatically or by command with a new renewal period of nine years (and not deleted within the renew grace period)
24	net-renews-10-yr	number of domains successfully renewed either automatically or by command with a new renewal period of ten years (and not deleted within the renew grace period)
25	transfer-gaining-successful	transfers initiated by this registrar that were ack'd by the other registrar – either by command or automatically
26	transfer-gaining-nacked	transfers initiated by this registrar that were n'acked by the other registrar
27	transfer-losing-successful	transfers initiated by another registrar that this registrar ack'd – either by command or automatically
28	transfer-losing-nacked	transfers initiated by another registrar that this registrar n'acked
29	transfer-disputed-won	number of transfer disputes in which this registrar prevailed
30	transfer-disputed-lost	number of transfer disputes this registrar lost
31	transfer-disputed-nodecision	number of transfer disputes involving this registrar with a split or no decision
32	deleted-domains-grace	domains deleted within the add grace period
33	deleted-domains-nograce	domains deleted outside the add grace period
34	restored-domains	domain names restored from redemption period
35	restored-noreport	total number of restored names for which the registrar failed to submit a restore report
36	agp-exemption-requests	total number of AGP (add grace period) exemption requests
37	agp-exemptions-granted	total number of AGP (add grace period) exemption requests granted
38	agp-exempted-domains	total number of names affected by granted AGP (add grace period) exemption requests
39	attempted-adds	number of attempted (successful and failed) domain name create commands

The first line shall include the field names exactly as described in the table above as a “header line” as described in section 2 of RFC 4180. The last line of each report shall include totals for each column across all registrars; the first field of this line shall read “Totals” while the second field shall be left empty in that line. No other lines besides the ones described above shall be included. Line breaks shall be <U+000D, U+000A> as described in RFC 4180.

2. Registry Functions Activity Report. This report shall be compiled in a comma separated-value formatted file as specified in RFC 4180. The file shall be named "gTLD-activity-yyyymm.csv", where "gTLD" is the gTLD name; in case of an IDN-TLD, the A-label shall be used; "yyyymm" is the year and month being reported. The file shall contain the following fields:

Field #	Field Name	Description
01	operational-registrars	number of operational registrars at the end of the reporting period
02	ramp-up-registrars	number of registrars that have received a password for access to OT&E at the end of the reporting period
03	pre-ramp-up-registrars	number of registrars that have requested access, but have not yet entered the ramp-up period at the end of the reporting period
04	zfa-passwords	number of active zone file access passwords at the end of the reporting period
05	whois-43-queries	number of WHOIS (port-43) queries responded during the reporting period
06	web-whois-queries	number of Web-based Whois queries responded during the reporting period, not including searchable Whois
07	searchable-whois-queries	number of searchable Whois queries responded during the reporting period, if offered
08	dns-udp-queries-received	number of DNS queries received over UDP transport during the reporting period
09	dns-udp-queries-responded	number of DNS queries received over UDP transport that were responded during the reporting period
10	dns-tcp-queries-received	number of DNS queries received over TCP transport during the reporting period
11	dns-tcp-queries-responded	number of DNS queries received over TCP transport that were responded during the reporting period
12	srs-dom-check	number of SRS (EPP and any other interface) domain name "check" requests responded during the reporting period
13	srs-dom-create	number of SRS (EPP and any other interface) domain name "create" requests responded during the reporting period
14	srs-dom-delete	number of SRS (EPP and any other interface) domain name "delete" requests responded during the reporting period
15	srs-dom-info	number of SRS (EPP and any other interface) domain name "info" requests responded during the reporting period
16	srs-dom-renew	number of SRS (EPP and any other interface) domain name

		“renew” requests responded during the reporting period
17	srs-dom-rgp-restore-report	number of SRS (EPP and any other interface) domain name RGP “restore” requests responded during the reporting period
18	srs-dom-rgp-restore-request	number of SRS (EPP and any other interface) domain name RGP “restore” requests delivering a restore report responded during the reporting period
19	srs-dom-transfer-approve	number of SRS (EPP and any other interface) domain name “transfer” requests to approve transfers responded during the reporting period
20	srs-dom-transfer-cancel	number of SRS (EPP and any other interface) domain name “transfer” requests to cancel transfers responded during the reporting period
21	srs-dom-transfer-query	number of SRS (EPP and any other interface) domain name “transfer” requests to query about a transfer responded during the reporting period
22	srs-dom-transfer-reject	number of SRS (EPP and any other interface) domain name “transfer” requests to reject transfers responded during the reporting period
23	srs-dom-transfer-request	number of SRS (EPP and any other interface) domain name “transfer” requests to request transfers responded during the reporting period
24	srs-dom-update	number of SRS (EPP and any other interface) domain name “update” requests (not including RGP restore requests) responded during the reporting period
25	srs-host-check	number of SRS (EPP and any other interface) host “check” requests responded during the reporting period
26	srs-host-create	number of SRS (EPP and any other interface) host “create” requests responded during the reporting period
27	srs-host-delete	number of SRS (EPP and any other interface) host “delete” requests responded during the reporting period
28	srs-host-info	number of SRS (EPP and any other interface) host “info” requests responded during the reporting period
29	srs-host-update	number of SRS (EPP and any other interface) host “update” requests responded during the reporting period
30	srs-cont-check	number of SRS (EPP and any other interface) contact “check” requests responded during the reporting period
31	srs-cont-create	number of SRS (EPP and any other interface) contact “create” requests responded during the reporting period

32	srs-cont-delete	number of SRS (EPP and any other interface) contact “delete” requests responded during the reporting period
33	srs-cont-info	number of SRS (EPP and any other interface) contact “info” requests responded during the reporting period
34	srs-cont-transfer-approve	number of SRS (EPP and any other interface) contact “transfer” requests to approve transfers responded during the reporting period
35	srs-cont-transfer-cancel	number of SRS (EPP and any other interface) contact “transfer” requests to cancel transfers responded during the reporting period
36	srs-cont-transfer-query	number of SRS (EPP and any other interface) contact “transfer” requests to query about a transfer responded during the reporting period
37	srs-cont-transfer-reject	number of SRS (EPP and any other interface) contact “transfer” requests to reject transfers responded during the reporting period
38	srs-cont-transfer-request	number of SRS (EPP and any other interface) contact “transfer” requests to request transfers responded during the reporting period
39	srs-cont-update	number of SRS (EPP and any other interface) contact “update” requests responded during the reporting period

The first line shall include the field names exactly as described in the table above as a “header line” as described in section 2 of RFC 4180. No other lines besides the ones described above shall be included. Line breaks shall be <U+000D, U+000A> as described in RFC 4180.

SPECIFICATION 4

SPECIFICATION FOR REGISTRATION DATA PUBLICATION SERVICES

1. **Registration Data Directory Services.** Until ICANN requires a different protocol, Registry Operator will operate a WHOIS service available via port 43 in accordance with RFC 3912, and a web-based Directory Service at <whois.nic.TLD> providing free public query-based access to at least the following elements in the following format. ICANN reserves the right to specify alternative formats and protocols, and upon such specification, the Registry Operator will implement such alternative specification as soon as reasonably practicable.

1.1. The format of responses shall follow a semi-free text format outline below, followed by a blank line and a legal disclaimer specifying the rights of Registry Operator, and of the user querying the database.

1.2. Each data object shall be represented as a set of key/value pairs, with lines beginning with keys, followed by a colon and a space as delimiters, followed by the value.

1.3. For fields where more than one value exists, multiple key/value pairs with the same key shall be allowed (for example to list multiple name servers). The first key/value pair after a blank line should be considered the start of a new record, and should be considered as identifying that record, and is used to group data, such as hostnames and IP addresses, or a domain name and registrant information, together.

1.4. **Domain Name Data:**

1.4.1. **Query format:** whois EXAMPLE.TLD

1.4.2. **Response format:**

>>> Last update of WHOIS database: 2009-05-29T20:15:00Z <<<
```

1.7. The format of the following data fields: domain status, individual and organizational names, address, street, city, state/province, postal code, country, telephone and fax numbers, email addresses, date and times should conform to the mappings specified in EPP RFCs 5730-5734 so that the display of this information (or values return in WHOIS responses) can be uniformly processed and understood.

1.8. **Searchability**. Offering searchability capabilities on the Directory Services is optional but if offered by the Registry Operator it shall comply with the specification described in this section.

1.8.1. Registry Operator will offer searchability on the web-based Directory Service.

1.8.2. Registry Operator will offer partial match capabilities, at least, on the following fields: domain name, contacts and registrant's name, and contact and registrant's postal address, including all the sub-fields described in EPP (e.g., street, city, state or province, etc.).

1.8.3. Registry Operator will offer exact-match capabilities, at least, on the following fields: registrar id, name server name, and name server's IP address (only applies to IP addresses stored by the registry, i.e., glue records).

1.8.4. Registry Operator will offer Boolean search capabilities supporting, at least, the following logical operators to join a set of search criteria: AND, OR, NOT.

1.8.5. Search results will include domain names matching the search criteria.

1.8.6. Registry Operator will: 1) implement appropriate measures to avoid abuse of this feature (e.g., permitting access only to legitimate authorized users); and 2) ensure the feature is in compliance with any applicable privacy laws or policies.

2. **Zone File Access**

2.1. **Third-Party Access**

2.1.1. **Zone File Access Agreement.** Registry Operator will enter into an agreement with any Internet user that will allow such user to access an Internet host server or servers designated by Registry Operator and download zone file data. The agreement will be standardized, facilitated and administered by a Centralized Zone Data Access Provider (the "CZDA Provider"). Registry Operator will provide access to zone file data per Section 2.1.3 and do so using the file format described in Section 2.1.4. Notwithstanding the foregoing, (a) the CZDA Provider may reject the request for access of any user that does not satisfy the credentialing requirements in Section 2.1.2 below; (b) Registry Operator may reject the request for access of any user that does not provide correct or legitimate credentials under Section 2.1. 2 or where Registry Operator reasonably believes will violate the terms of Section 2.1.5. below; and, (c) Registry Operator may revoke access of any user if Registry Operator has evidence to support that the user has violated the terms of Section 2.1.5.

2.1.2. **Credentialing Requirements.** Registry Operator, through the facilitation of the CZDA Provider, will request each user to provide it with information sufficient to correctly identify and locate the user. Such user information will include, without limitation, company name, contact name, address, telephone number, facsimile number, email address, and the Internet host machine name and IP address.

2.1.3. **Grant of Access.** Each Registry Operator will provide the Zone File FTP (or other Registry supported) service for an ICANN-specified and managed URL (specifically, <TLD>.zda.icann.org where <TLD> is the TLD for which the registry is responsible) for the user to access the Registry's zone data archives. Registry Operator will grant the user a non-exclusive, non-transferable, limited right to access Registry Operator's Zone File FTP server, and to transfer a copy of the top-level domain zone files, and any associated cryptographic checksum files no more than once per 24 hour period using FTP, or other data transport and access protocols that may be prescribed by ICANN. For every zone file access server, the zone files are in the top-level directory called <zone>.zone.gz, with <zone>.zone.gz.md5 and <zone>.zone.gz.sig to verify downloads. If the Registry Operator also provides historical data, it will use the naming pattern <zone>-yyyymmdd.zone.gz, etc.

2.1.4. **File Format Standard**. Registry Operator will provide zone files using a sub-format of the standard Master File format as originally defined in RFC 1035, Section 5, including all the records present in the actual zone used in the public DNS. Sub-format is as follows:

1. Each record must include all fields in one line as: <domain-name> <TTL> <class> <type> <RDATA>.
2. Class and Type must use the standard mnemonics and must be in lower case.

3. TTL must be present as a decimal integer.
4. Use of /X and /DDD inside domain names is allowed.
5. All domain names must be in lower case.
6. Must use exactly one tab as separator of fields inside a record.
7. All domain names must be fully qualified.
8. No $ORIGIN directives.
9. No use of "@" to denote current origin.
10. No use of "blank domain names" at the beginning of a record to continue the use of the domain name in the previous record.
11. No $INCLUDE directives.
12. No $TTL directives.
13. No use of parentheses, e.g., to continue the list of fields in a record across a line boundary.
14. No use of comments.
15. No blank lines.
16. The SOA record should be present at the top and (duplicated at) the end of the zone file.
17. With the exception of the SOA record, all the records in a file must be in alphabetical order.
18. One zone per file. If a TLD divides its DNS data into multiple zones, each goes into a separate file named as above, with all the files combined using tar into a file called <tld>.zone.tar.

2.1.5. **Use of Data by User.** Registry Operator will permit user to use the zone file for lawful purposes; provided that, (a) user takes all reasonable steps to protect against unauthorized access to and use and disclosure of the data, and (b) under no circumstances will Registry Operator be required or permitted to allow user to use the data to, (i) allow, enable, or otherwise support the transmission by e-mail, telephone, or facsimile of mass unsolicited, commercial advertising or solicitations to entities other than user's own existing customers, or (ii) enable high volume, automated, electronic processes that send queries or data to the systems of Registry Operator or any ICANN-accredited registrar.

2.1.6. **Term of Use.** Registry Operator, through CZDA Provider, will provide each user with access to the zone file for a period of not less than three (3) months. Registry Operator will allow users to renew their Grant of Access.

2.1.7. **No Fee for Access.** Registry Operator will provide, and CZDA Provider will facilitate, access to the zone file to user at no cost.

2.2 Co-operation

2.2.1. **Assistance**. Registry Operator will co-operate and provide reasonable assistance to ICANN and the CZDA Provider to facilitate and maintain the efficient access of zone file data by permitted users as contemplated under this Schedule.

2.3 ICANN Access. Registry Operator shall provide bulk access to the zone files for the TLD to ICANN or its designee on a continuous basis in the manner ICANN may reasonably specify from time to time.

2.4 Emergency Operator Access. Registry Operator shall provide bulk access to the zone files for the TLD to the Emergency Operators designated by ICANN on a continuous basis in the manner ICANN may reasonably specify from time to time.

3. **Bulk Registration Data Access to ICANN**

3.1. **Periodic Access to Thin Registration Data.** In order to verify and ensure the operational stability of Registry Services as well as to facilitate compliance checks on accredited registrars, Registry Operator will provide ICANN on a weekly basis (the day to be designated by ICANN) with up-to-date Registration Data as specified below. Data will include data committed as of 00:00:00 UTC on the day previous to the one designated for retrieval by ICANN.

3.1.1. **Contents**. Registry Operator will provide, at least, the following data for all registered domain names: domain name, domain name repository object id (roid), registrar id (IANA ID), statuses, last updated date, creation date, expiration date, and name server names. For sponsoring registrars, at least, it will provide: registrar name, registrar repository object id (roid), hostname of registrar Whois server, and URL of registrar.

3.1.2. **Format**. The data will be provided in the format specified in Specification 2 for Data Escrow (including encryption, signing, etc.) but including only the fields mentioned in the previous section, i.e., the file will only contain Domain and Registrar objects with the fields mentioned above. Registry Operator has the option to provide a full deposit file instead as specified in Specification 2.

3.1.3, **Access**. Registry Operator will have the file(s) ready for download as of 00:00:00 UTC on the day designated for retrieval by ICANN. The file(s) will be made available for download by SFTP, though ICANN may request other means in the future.

3.2. **Exceptional Access to Thick Registration Data.** In case of a registrar failure, de-accreditation, court order, etc. that prompts the temporary or definitive transfer of its domain names to another registrar, at the request of ICANN, Registry Operator will provide ICANN with up-to-date data for the domain names of the losing registrar. The data will be provided in the format specified in Specification 2 for Data Escrow. The file will only contain data related to the domain names of the losing registrar. Registry Operator will provide the data within 2 business days. Unless otherwise agreed by Registry Operator and ICANN, the file will be made available for download by ICANN in the same manner as the data specified in Section 3.1. of this Specification.

SPECIFICATION 5

SCHEDULE OF RESERVED NAMES AT THE SECOND LEVEL IN GTLD REGISTRIES

Except to the extent that ICANN otherwise expressly authorizes in writing, Registry Operator shall reserve (i.e., Registry Operator shall not register, delegate, use or otherwise make available such labels to any third party, but may register such labels in its own name in order to withhold them from delegation or use) names formed with the following labels from initial (i.e. other than renewal) registration within the TLD:

1. **Example. The label "EXAMPLE**" shall be reserved at the second level and at all other levels within the TLD at which Registry Operator makes registrations.

2. **Two-character labels**. All two-character labels shall be initially reserved. The reservation of a two-character label string may be released to the extent that Registry Operator reaches agreement with the government and country-code manager. The Registry Operator may also propose release of these reservations based on its implementation of measures to avoid confusion with the corresponding country codes.

3. **Tagged Domain Names.** Labels may only include hyphens in the third and fourth position if they represent valid internationalized domain names in their ASCII encoding (for example "xn--ndk061n").

4. **Second-Level Reservations for Registry Operations.** The following names are reserved for use in connection with the operation of the registry for the TLD. Registry Operator may use them, but upon conclusion of Registry Operator's designation as operator of the registry for the TLD they shall be transferred as specified by ICANN: NIC, WWW, IRIS and WHOIS.

5. **Country and Territory Names.** The country and territory names contained in the following internationally recognized lists shall be initially reserved at the second level and at all other levels within the TLD at which the Registry Operator provides for registrations:

   5.1. the short form (in English) of all country and territory names contained on the ISO 3166-1 list, as updated from time to time, including the European Union, which is exceptionally reserved on the ISO 3166-1 list, and its scope extended in August 1999 to any application needing to represent the name European Union <http://www.iso.org/iso/support/country_codes/iso_3166_code_lists/iso-3166-1_decoding_table.htm#EU>;

   5.2. the United Nations Group of Experts on Geographical Names, Technical Reference Manual for the Standardization of Geographical Names, Part III Names of Countries of the World; and

   5.3. the list of United Nations member states in 6 official United Nations languages prepared by the Working Group on Country Names of the United Nations Conference on the Standardization of Geographical Names;

   provided, that the reservation of specific country and territory names may be released to the extent that Registry Operator reaches agreement with the applicable government(s), provided, further, that

Registry Operator may also propose release of these reservations, subject to review by ICANN’s Governmental Advisory Committee and approval by ICANN.

SPECIFICATION 6

REGISTRY INTEROPERABILITY AND CONTINUITY SPECIFICATIONS

1. Standards Compliance

1.1. **DNS.** Registry Operator shall comply with relevant existing RFCs and those published in the future by the Internet Engineering Task Force (IETF) including all successor standards, modifications or additions thereto relating to the DNS and name server operations including without limitation RFCs 1034, 1035, 1982, 2181, 2182, 2671, 3226, 3596, 3597, 4343, and 5966.

1.2. **EPP**. Registry Operator shall comply with relevant existing RFCs and those published in the future by the Internet Engineering Task Force (IETF) including all successor standards, modifications or additions thereto relating to the provisioning and management of domain names using the Extensible Provisioning Protocol (EPP) in conformance with RFCs 5910, 5730, 5731, 5732, 5733 and 5734. If Registry Operator implements Registry Grace Period (RGP), it will comply with RFC 3915 and its successors. If Registry Operator requires the use of functionality outside the base EPP RFCs, Registry Operator must document EPP extensions in Internet-Draft format following the guidelines described in RFC 3735. Registry Operator will provide and update the relevant documentation of all the EPP Objects and Extensions supported to ICANN prior to deployment.

1.3. **DNSSEC**. Registry Operator shall sign its TLD zone files implementing Domain Name System Security Extensions (“DNSSEC”). During the Term, Registry Operator shall comply with RFCs 4033, 4034, 4035, 4509 and their successors, and follow the best practices described in RFC 4641 and its successors. If Registry Operator implements Hashed Authenticated Denial of Existence for DNS Security Extensions, it shall comply with RFC 5155 and its successors. Registry Operator shall accept public-key material from child domain names in a secure manner according to industry best practices. Registry shall also publish in its website the DNSSEC Practice Statements (DPS) describing critical security controls and procedures for key material storage, access and usage for its own keys and secure acceptance of registrants’ public-key material. Registry Operator shall publish its DPS following the format described in “DPS-framework” (currently in draft format, see http://tools.ietf.org/html/draft-ietf-dnsop-dnssec-dps-framework) within 180 days after the “DPS-framework” becomes an RFC.

1.4. **IDN**. If the Registry Operator offers Internationalized Domain Names (“IDNs”), it shall comply with RFCs 5890, 5891, 5892, 5893 and their successors. Registry Operator shall comply with the ICANN IDN Guidelines at <http://www.icann.org/en/topics/idn/implementation-guidelines.htm>, as they may be amended, modified, or superseded from time to time. Registry Operator shall publish and keep updated its IDN Tables and IDN Registration Rules in the IANA Repository of IDN Practices as specified in the ICANN IDN Guidelines.

1.5. **IPv6**. Registry Operator shall be able to accept IPv6 addresses as glue records in its Registry System and publish them in the DNS. Registry Operator shall offer public IPv6 transport for, at least, two of the Registry’s name servers listed in the root zone with the corresponding IPv6 addresses registered with IANA. Registry Operator should follow “DNS IPv6 Transport Operational Guidelines” as described in BCP 91 and the recommendations and considerations described in RFC 4472. Registry Operator shall offer public IPv6 transport for its Registration Data Publication Services as defined in Specification 4 of this Agreement; e.g. Whois (RFC 3912), Web based Whois. Registry Operator shall offer public IPv6 transport for its Shared Registration System (SRS) to any Registrar, no later than six months after receiving the first request in writing from a gTLD accredited Registrar willing to operate with the SRS over IPv6.

2. Registry Services

2.1. **Registry Services**. "Registry Services" are, for purposes of the Registry Agreement, defined as the following: (a) those services that are operations of the registry critical to the following tasks: the receipt of data from registrars concerning registrations of domain names and name servers; provision to registrars of status information relating to the zone servers for the TLD; dissemination of TLD zone files; operation of the registry DNS servers; and dissemination of contact and other information concerning domain name server registrations in the TLD as required by this Agreement; (b) other products or services that the Registry Operator is required to provide because of the establishment of a Consensus Policy as defined in Specification 1; (c) any other products or services that only a registry operator is capable of providing, by reason of its designation as the registry operator; and (d) material changes to any Registry Service within the scope of (a), (b) or (c) above.

2.2. **Wildcard Prohibition**. For domain names which are either not registered, or the registrant has not supplied valid records such as NS records for listing in the DNS zone file, or their status does not allow them to be published in the DNS, the use of DNS wildcard Resource Records as described in RFCs 1034 and 4592 or any other method or technology for synthesizing DNS Resources Records or using redirection within the DNS by the Registry is prohibited. When queried for such domain names the authoritative name servers must return a "Name Error" response (also known as NXDOMAIN), RCODE 3 as described in RFC 1035 and related RFCs. This provision applies for all DNS zone files at all levels in the DNS tree for which the Registry Operator (or an affiliate engaged in providing Registration Services) maintains data, arranges for such maintenance, or derives revenue from such maintenance.

3. Registry Continuity

3.1. **High Availability**. Registry Operator will conduct its operations using network and geographically diverse, redundant servers (including network-level redundancy, end-node level redundancy and the implementation of a load balancing scheme where applicable) to ensure continued operation in the case of technical failure (widespread or local), or an extraordinary occurrence or circumstance beyond the control of the Registry Operator.

3.2. **Extraordinary Event**. Registry Operator will use commercially reasonable efforts to restore the critical functions of the registry within 24 hours after the termination of an extraordinary event beyond the control of the Registry Operator and restore full system functionality within a maximum of 48 hours following such event, depending on the type of critical function involved. Outages due to such an event will not be considered a lack of service availability.

3.3. **Business Continuity**. Registry Operator shall maintain a business continuity plan, which will provide for the maintenance of Registry Services in the event of an extraordinary event beyond the control of the Registry Operator or business failure of Registry Operator, and may include the designation of a Registry Services continuity provider. If such plan includes the designation of a Registry Services continuity provider, Registry Operator shall provide the name and contact information for such Registry Services continuity provider to ICANN. In the case of an extraordinary event beyond the control of the Registry Operator where the Registry Operator cannot be contacted, Registry Operator consents that ICANN may contact the designated Registry Services continuity provider, if one exists. Registry Operator shall conduct Registry Services Continuity testing at least once per year.

4. Abuse Mitigation

4.1. **Abuse Contact**. Registry Operator shall provide to ICANN and publish on its website its accurate contact details including a valid email and mailing address as well as a primary contact for handling inquires related to malicious conduct in the TLD, and will provide ICANN with prompt notice of any changes to such contact details.

4.2. **Malicious Use of Orphan Glue Records**. Registry Operators shall take action to remove orphan glue records (as defined at http://www.icann.org/en/committees/security/sac048.pdf) when provided with evidence in written form that such records are present in connection with malicious conduct.

5. Supported Initial and Renewal Registration Periods

5.1. **Initial Registration Periods**. Initial registrations of registered names may be made in the registry in one (1) year increments for up to a maximum of ten (10) years. For the avoidance of doubt, initial registrations of registered names may not exceed ten (10) years.

5.2. **Renewal Periods**. Renewal of registered names may be made in one (1) year increments for up to a maximum of ten (10) years. For the avoidance of doubt, renewal of registered names may not extend their registration period beyond ten (10) years from the time of the renewal.

SPECIFICATION 7

MINIMUM REQUIREMENTS FOR RIGHTS PROTECTION MECHANISMS

1. **Rights Protection Mechanisms.** Registry Operator shall implement and adhere to any rights protection mechanisms ("RPMs") that may be mandated from time to time by ICANN. In addition to such RPMs, Registry Operator may develop and implement additional RPMs that discourage or prevent registration of domain names that violate or abuse another party's legal rights. Registry Operator will include all ICANN mandated and independently developed RPMs in the registry-registrar agreement entered into by ICANN-accredited registrars authorized to register names in the TLD. Registry Operator shall implement in accordance with requirements established by ICANN each of the mandatory RPMs set forth in the Trademark Clearinghouse (posted at [url to be inserted when final Trademark Clearinghouse is adopted]), which may be revised by ICANN from time to time. Registry Operator shall not mandate that any owner of applicable intellectual property rights use any other trademark information aggregation, notification, or validation service in addition to or instead of the ICANN-designated Trademark Clearinghouse.

2. **Dispute Resolution Mechanisms.** Registry Operator will comply with the following dispute resolution mechanisms as they may be revised from time to time:

   a. the Trademark Post-Delegation Dispute Resolution Procedure (PDDRP) and the Registration Restriction Dispute Resolution Procedure (RRDRP) adopted by ICANN (posted at [urls to be inserted when final procedure is adopted]). Registry Operator agrees to implement and adhere to any remedies ICANN imposes (which may include any reasonable remedy, including for the avoidance of doubt, the termination of the Registry Agreement pursuant to Section 4.3(e) of the Registry Agreement) following a determination by any PDDRP or RRDRP panel and to be bound by any such determination; and

   b. the Uniform Rapid Suspension system ("URS") adopted by ICANN (posted at [url to be inserted]), including the implementation of determinations issued by URS examiners.

SPECIFICATION 8

CONTINUED OPERATIONS INSTRUMENT

1. The Continued Operations Instrument shall (a) provide for sufficient financial resources to ensure the continued operation of the critical registry functions related to the TLD set forth in Section [__] of the Applicant Guidebook posted at [url to be inserted upon finalization of Applicant Guidebook] (which is hereby incorporated by reference into this Specification 8) for a period of three (3) years following any termination of this Agreement on or prior to the fifth anniversary of the Effective Date or for a period of one (1) year following any termination of this Agreement after the fifth anniversary of the Effective Date but prior to or on the sixth (6th) anniversary of the Effective Date, and (b) be in the form of either (i) an irrevocable standby letter of credit, or (ii) an irrevocable cash escrow deposit, each meeting the requirements set forth in Section [__] of the Applicant Guidebook posted at [url to be inserted upon finalization of Applicant Guidebook] (which is hereby incorporated by reference into this Specification 8). Registry Operator shall use its best efforts to take all actions necessary or advisable to maintain in effect the Continued Operations Instrument for a period of six (6) years from the Effective Date, and to maintain ICANN as a third party beneficiary thereof. Registry Operator shall provide to ICANN copies of all final documents relating to the Continued Operations Instrument and shall keep ICANN reasonably informed of material developments relating to the Continued Operations Instrument. Registry Operator shall not agree to, or permit, any amendment of, or waiver under, the Continued Operations Instrument or other documentation relating thereto without the prior written consent of ICANN (such consent not to be unreasonably withheld). The Continued Operations Instrument shall expressly state that ICANN may access the financial resources of the Continued Operations Instrument pursuant to Section 2.13 or Section 4.5 [*insert for government entity*: or Section 7.14] of the Registry Agreement.

2. If, notwithstanding the use of best efforts by Registry Operator to satisfy its obligations under the preceding paragraph, the Continued Operations Instrument expires or is terminated by another party thereto, in whole or in part, for any reason, prior to the sixth anniversary of the Effective Date, Registry Operator shall promptly (i) notify ICANN of such expiration or termination and the reasons therefor and (ii) arrange for an alternative instrument that provides for sufficient financial resources to ensure the continued operation of the Registry Services related to the TLD for a period of three (3) years following any termination of this Agreement on or prior to the fifth anniversary of the Effective Date or for a period of one (1) year following any termination of this Agreement after the fifth anniversary of the Effective Date but prior to or on the sixth (6) anniversary of the Effective Date (an “Alternative Instrument”). Any such Alternative Instrument shall be on terms no less favorable to ICANN than the Continued Operations Instrument and shall otherwise be in form and substance reasonably acceptable to ICANN.

3. Notwithstanding anything to the contrary contained in this Specification 8, at any time, Registry Operator may replace the Continued Operations Instrument with an alternative

instrument that (i) provides for sufficient financial resources to ensure the continued operation of the Registry Services related to the TLD for a period of three (3) years following any termination of this Agreement on or prior to the fifth anniversary of the Effective Date or for a period one (1) year following any termination of this Agreement after the fifth anniversary of the Effective Date but prior to or on the sixth (6) anniversary of the Effective Date, and (ii) contains terms no less favorable to ICANN than the Continued Operations Instrument and is otherwise in form and substance reasonably acceptable to ICANN. In the event Registry Operation replaces the Continued Operations Instrument either pursuant to paragraph 2 or this paragraph 3, the terms of this Specification 8 shall no longer apply with respect to the original Continuing Operations Instrument, but shall thereafter apply with respect to such replacement instrument(s).

SPECIFICATION 9

Registry Operator Code of Conduct

1. In connection with the operation of the registry for the TLD, Registry Operator will not, and will not allow any parent, subsidiary, Affiliate, subcontractor or other related entity, to the extent such party is engaged in the provision of Registry Services with respect to the TLD (each, a “Registry Related Party”), to:

   a. directly or indirectly show any preference or provide any special consideration to any registrar with respect to operational access to registry systems and related registry services, unless comparable opportunities to qualify for such preferences or considerations are made available to all registrars on substantially similar terms and subject to substantially similar conditions;

   b. register domain names in its own right, except for names registered through an ICANN accredited registrar that are reasonably necessary for the management, operations and purpose of the TLD, provided, that Registry Operator may reserve names from registration pursuant to Section 2.6 of the Registry Agreement;

   c. register names in the TLD or sub-domains of the TLD based upon proprietary access to information about searches or resolution requests by consumers for domain names not yet registered (commonly known as, "front-running");

   d. allow any Affiliated registrar to disclose user data to Registry Operator or any Registry Related Party, except as necessary for the management and operations of the TLD, unless all unrelated third parties (including other registry operators) are given equivalent access to such user data on substantially similar terms and subject to substantially similar conditions; or

   e. disclose confidential registry data or confidential information about its Registry Services or operations to any employee of any DNS services provider, except as necessary for the management and operations of the TLD, unless all unrelated third parties (including other registry operators) are given equivalent access to such confidential registry data or confidential information on substantially similar terms and subject to substantially similar conditions.

2. If Registry Operator or a Registry Related Party also operates as a provider of registrar or registrar-reseller services, Registry Operator will, or will cause such Registry Related Party to, ensure that such services are offered through a legal entity separate from Registry Operator, and maintain separate books of accounts with respect to its registrar or registrar-reseller operations.

3. Registry Operator will conduct internal reviews at least once per calendar year to

ensure compliance with this Code of Conduct. Within twenty (20) calendar days following the end of each calendar year, Registry Operator will provide the results of the internal review, along with a certification executed by an executive officer of Registry Operator certifying as to Registry Operator's compliance with this Code of Conduct, via email to an address to be provided by ICANN. (ICANN may specify in the future the form and contents of such reports or that the reports be delivered by other reasonable means.) Registry Operator agrees that ICANN may publicly post such results and certification.

4. Nothing set forth herein shall: (i) limit ICANN from conducting investigations of claims of Registry Operator's non-compliance with this Code of Conduct; or (ii) provide grounds for Registry Operator to refuse to cooperate with ICANN investigations of claims of Registry Operator's non-compliance with this Code of Conduct.

5. Nothing set forth herein shall limit the ability of Registry Operator or any Registry Related Party, to enter into arms-length transactions in the ordinary course of business with a registrar or reseller with respect to products and services unrelated in all respects to the TLD.

6. Registry Operator may request an exemption to this Code of Conduct, and such exemption may be granted by ICANN in ICANN's reasonable discretion, if Registry Operator demonstrates to ICANN's reasonable satisfaction that (i) all domain name registrations in the TLD are registered to, and maintained by, Registry Operator for its own exclusive use, (ii) Registry Operator does not sell, distribute or transfer control or use of any registrations in the TLD to any third party that is not an Affiliate of Registry Operator, and (iii) application of this Code of Conduct to the TLD is not necessary to protect the public interest.

SPECIFICATION 10

REGISTRY PERFORMANCE SPECIFICATIONS

1. **Definitions**

1.1. **DNS.** Refers to the Domain Name System as specified in RFCs 1034, 1035, and related RFCs.

1.2. **DNSSEC proper resolution.** There is a valid DNSSEC chain of trust from the root trust anchor to a particular domain name, e.g., a TLD, a domain name registered under a TLD, etc.

1.3. **EPP.** Refers to the Extensible Provisioning Protocol as specified in RFC 5730 and related RFCs.

1.4. **IP address.** Refers to IPv4 or IPv6 addresses without making any distinction between the two. When there is need to make a distinction, IPv4 or IPv6 is used.

1.5. **Probes.** Network hosts used to perform (DNS, EPP, etc.) tests (see below) that are located at various global locations.

1.6. **RDDS.** Registration Data Directory Services refers to the collective of WHOIS and Web-based WHOIS services as defined in Specification 4 of this Agreement.

1.7. **RTT.** Round-Trip Time or **RTT** refers to the time measured from the sending of the first bit of the first packet of the sequence of packets needed to make a request until the reception of the last bit of the last packet of the sequence needed to receive the response. If the client does not receive the whole sequence of packets needed to consider the response as received, the request will be considered unanswered.

1.8. **SLR.** Service Level Requirement is the level of service expected for a certain parameter being measured in a Service Level Agreement (SLA).

2. **Service Level Agreement Matrix**

	Parameter	**SLR (monthly basis)**
DNS	DNS service availability	0 min downtime = 100% availability
	DNS name server availability	≤ 432 min of downtime (≈ 99%)
	TCP DNS resolution RTT	≤ 1500 ms, for at least 95% of the queries
	UDP DNS resolution RTT	≤ 500 ms, for at least 95% of the queries
	DNS update time	≤ 60 min, for at least 95% of the probes
RDDS	RDDS availability	≤ 864 min of downtime (≈ 98%)
	RDDS query RTT	≤ 2000 ms, for at least 95% of the queries
	RDDS update time	≤ 60 min, for at least 95% of the probes
EPP	EPP service availability	≤ 864 min of downtime (≈ 98%)
	EPP session-command RTT	≤ 4000 ms, for at least 90% of the commands
	EPP query-command RTT	≤ 2000 ms, for at least 90% of the commands
	EPP transform-command RTT	≤ 4000 ms, for at least 90% of the commands

Registry Operator is encouraged to do maintenance for the different services at the times and dates of statistically lower traffic for each service. However, note that there is no provision for planned outages or similar; any downtime, be it for maintenance or due to system failures, will be noted simply as downtime and counted for SLA purposes.

3. DNS

3.1. **DNS service availability**. Refers to the ability of the group of listed-as-authoritative name servers of a particular domain name (e.g., a TLD), to answer DNS queries from DNS probes. For the service to be considered available at a particular moment, at least, two of the delegated name servers registered in the DNS must have successful results from "**DNS tests**" to each of their public-DNS registered "**IP addresses**" to which the name server resolves. If 51% or more of the DNS testing probes see the service as unavailable during a given time, the DNS service will be considered unavailable.

3.2. **DNS name server availability.** Refers to the ability of a public-DNS registered "**IP address**" of a particular name server listed as authoritative for a domain name, to answer DNS queries from an Internet user. All the public DNS-registered "**IP address**" of all name servers of the domain name being monitored shall be tested individually. If 51% or more of the DNS testing probes get undefined/unanswered results from "**DNS tests**" to a name server "**IP address**" during a given time, the name server "**IP address**" will be considered unavailable.

3.3. **UDP DNS resolution RTT.** Refers to the **RTT** of the sequence of two packets, the UDP DNS query and the corresponding UDP DNS response. If the **RTT** is 5 times greater than the time specified in the relevant **SLR**, the **RTT** will be considered undefined.

3.4. **TCP DNS resolution RTT.** Refers to the **RTT** of the sequence of packets from the start of the TCP connection to its end, including the reception of the DNS response for only one DNS query. If the **RTT** is 5 times greater than the time specified in the relevant **SLR**, the **RTT** will be considered undefined.

3.5. **DNS resolution RTT.** Refers to either "**UDP DNS resolution RTT**" or "**TCP DNS resolution RTT**".

3.6. **DNS update time.** Refers to the time measured from the reception of an EPP confirmation to a transform command on a domain name, until the name servers of the parent domain name answer "**DNS queries**" with data consistent with the change made. This only applies for changes to DNS information.

3.7. **DNS test.** Means one non-recursive DNS query sent to a particular "**IP address**" (via UDP or TCP). If DNSSEC is offered in the queried DNS zone, for a query to be considered answered, the signatures must be positively verified against a corresponding DS record published in the parent zone or, if the parent is not signed, against a statically configured Trust Anchor. The answer to the query must contain the corresponding information from the Registry System, otherwise the query will be considered unanswered. A query with a "**DNS resolution RTT**" 5 times higher than the corresponding SLR, will be considered unanswered. The possible results to a DNS test are: a number in milliseconds corresponding to the "**DNS resolution RTT**" or, undefined/unanswered.

3.8. **Measuring DNS parameters.** Every minute, every DNS probe will make an UDP or TCP "**DNS test**" to each of the public-DNS registered "**IP addresses**" of the name servers of the domain name being monitored. If a "**DNS test**" result is undefined/unanswered, the tested IP will be considered unavailable from that probe until it is time to make a new test.

3.9. **Collating the results from DNS probes.** The minimum number of active testing probes to consider a measurement valid is 20 at any given measurement period, otherwise the measurements will be discarded and will be considered inconclusive; during this situation no fault will be flagged against the SLRs.

3.10. **Distribution of UDP and TCP queries.** DNS probes will send UDP or TCP "**DNS test**" approximating the distribution of these queries.

3.11. **Placement of DNS probes.** Probes for measuring DNS parameters shall be placed as near as possible to the DNS resolvers on the networks with the most users across the different geographic regions; care shall be taken not to deploy probes behind high propagation-delay links, such as satellite links.

4. <u>RDDS</u>

4.1. **RDDS availability.** Refers to the ability of all the RDDS services for the TLD, to respond to queries from an Internet user with appropriate data from the relevant Registry System. If 51% or more of the RDDS testing probes see any of the RDDS services as unavailable during a given time, the RDDS will be considered unavailable.

4.2. **WHOIS query RTT.** Refers to the **RTT** of the sequence of packets from the start of the TCP connection to its end, including the reception of the WHOIS response. If the **RTT** is 5-times or more the corresponding SLR, the **RTT** will be considered undefined.

4.3. **Web-based-WHOIS query RTT.** Refers to the **RTT** of the sequence of packets from the start of the TCP connection to its end, including the reception of the HTTP response for only one HTTP request. If Registry Operator implements a multiple-step process to get to the information, only the last step shall be measured. If the **RTT** is 5-times or more the corresponding SLR, the **RTT** will be considered undefined.

4.4. **RDDS query RTT.** Refers to the collective of "**WHOIS query RTT**" and "**Web-based-WHOIS query RTT**".

4.5. **RDDS update time**. Refers to the time measured from the reception of an EPP confirmation to a transform command on a domain name, host or contact, up until the servers of the RDDS services reflect the changes made.

4.6. **RDDS test.** Means one query sent to a particular "**IP address**" of one of the servers of one of the RDDS services. Queries shall be about existing objects in the Registry System and the responses must contain the corresponding information otherwise the query will be considered unanswered. Queries with an **RTT** 5 times higher than the corresponding SLR will be considered as unanswered. The possible results to an RDDS test are: a number in milliseconds corresponding to the **RTT** or undefined/unanswered.

4.7. **Measuring RDDS parameters.** Every 5 minutes, RDDS probes will select one IP address from all the public-DNS registered "**IP addresses**" of the servers for each RDDS service of the TLD being monitored and make an "**RDDS test**" to each one. If an "**RDDS test**" result is undefined/unanswered, the corresponding RDDS service will be considered as unavailable from that probe until it is time to make a new test.

4.8. **Collating the results from RDDS probes.** The minimum number of active testing probes to consider a measurement valid is 10 at any given measurement period, otherwise the measurements will be discarded and will be considered inconclusive; during this situation no fault will be flagged against the SLRs.

4.9. **Placement of RDDS probes.** Probes for measuring RDDS parameters shall be placed inside the networks with the most users across the different geographic regions; care shall be taken not to deploy probes behind high propagation-delay links, such as satellite links.

5. EPP

5.1. **EPP service availability.** Refers to the ability of the TLD EPP servers as a group, to respond to commands from the Registry accredited Registrars, who already have credentials to the servers. The response shall include appropriate data from the Registry System. An EPP command with "**EPP command RTT**" 5 times higher than the corresponding SLR will be considered as unanswered. If 51% or more of the EPP testing probes see the EPP service as unavailable during a given time, the EPP service will be considered unavailable.

5.2. **EPP session-command RTT.** Refers to the **RTT** of the sequence of packets that includes the sending of a session command plus the reception of the EPP response for only one EPP session command. For the login command it will include packets needed for starting the TCP session. For the logout command it will include packets needed for closing the TCP session. EPP session commands are those described in section 2.9.1 of EPP RFC 5730. If the **RTT** is 5 times or more the corresponding SLR, the **RTT** will be considered undefined.

5.3. **EPP query-command RTT.** Refers to the **RTT** of the sequence of packets that includes the sending of a query command plus the reception of the EPP response for only one EPP query command. It does not include packets needed for the start or close of either the EPP or the TCP session. EPP query commands are those described in section 2.9.2 of EPP RFC 5730. If the **RTT** is 5-times or more the corresponding SLR, the **RTT** will be considered undefined.

5.4. **EPP transform-command RTT.** Refers to the **RTT** of the sequence of packets that includes the sending of a transform command plus the reception of the EPP response for only one EPP transform command. It does not include packets needed for the start or close of either the EPP or the TCP session. EPP transform commands are those described in section 2.9.3 of EPP RFC 5730. If the **RTT** is 5 times or more the corresponding SLR, the **RTT** will be considered undefined.

5.5. **EPP command RTT.** Refers to "**EPP session-command RTT**", "**EPP query-command RTT**" or "**EPP transform-command RTT**".

5.6. **EPP test.** Means one EPP command sent to a particular "**IP address**" for one of the EPP servers. Query and transform commands, with the exception of "create", shall be about existing objects in the Registry System. The response shall include appropriate data from the Registry System. The possible results to an EPP test are: a number in milliseconds corresponding to the "**EPP command RTT**" or undefined/unanswered.

5.7. **Measuring EPP parameters.** Every 5 minutes, EPP probes will select one "**IP address**" of the EPP servers of the TLD being monitored and make an "**EPP test**"; every time they should alternate between the 3 different types of commands and between the commands inside each category. If an "**EPP test**" result is undefined/unanswered, the EPP service will be considered as unavailable from that probe until it is time to make a new test.

5.8. **Collating the results from EPP probes.** The minimum number of active testing probes to consider a measurement valid is 5 at any given measurement period, otherwise the measurements will be discarded and will be considered inconclusive; during this situation no fault will be flagged against the SLRs.

5.9. **Placement of EPP probes.** Probes for measuring EPP parameters shall be placed inside or close to Registrars points of access to the Internet across the different geographic regions; care shall be taken not to deploy probes behind high propagation-delay links, such as satellite links.

6. Emergency Thresholds

The following matrix presents the Emergency Thresholds that, if reached by any of the services mentioned above for a TLD, would cause the Emergency Transition of the Critical Functions as specified in Section 2.13. of this Agreement.

Critical Function	Emergency Threshold
DNS service (all servers)	4-hour downtime / week
DNSSEC proper resolution	4-hour downtime / week
EPP	24-hour downtime / week
RDDS (WHOIS/Web-based WHOIS)	24-hour downtime / week
Data Escrow	Breach of the Registry Agreement caused by missing escrow deposits as described in Specification 2, Part B, Section 6.

7. Emergency Escalation

Escalation is strictly for purposes of notifying and investigating possible or potential issues in relation to monitored services. The initiation of any escalation and the subsequent cooperative investigations do not in themselves imply that a monitored service has failed its performance requirements.

Escalations shall be carried out between ICANN and Registry Operators, Registrars and Registry Operator, and Registrars and ICANN. Registry Operators and ICANN must provide said emergency operations departments. Current contacts must be maintained between ICANN and Registry Operators and published to Registrars, where relevant to their role in escalations, prior to any processing of an Emergency Escalation by all related parties, and kept current at all times.

7.1. Emergency Escalation initiated by ICANN

Upon reaching 10% of the Emergency thresholds as described in Section 6, ICANN's emergency operations will initiate an Emergency Escalation with the relevant Registry Operator. An Emergency Escalation consists of the following minimum elements: electronic (i.e., email or SMS) and/or voice contact notification to the Registry Operator's emergency operations department with detailed information concerning the issue being escalated, including evidence of monitoring failures, cooperative trouble-shooting of the monitoring failure between ICANN staff and the Registry Operator, and the commitment to begin the process of rectifying issues with either the monitoring service or the service being monitoring.

7.2. Emergency Escalation initiated by Registrars

Registry Operator will maintain an emergency operations departments prepared to handle emergency requests from registrars. In the event that a registrar is unable to conduct EPP transactions with the Registry because of a fault with the Registry Service and is unable to either contact (through ICANN mandated methods of communication) the Registry Operator, or the Registry Operator is unable or unwilling to address the fault, the registrar may initiate an Emergency Escalation to the emergency operations department of ICANN. ICANN then may initiate an Emergency Escalation with the Registry Operator as explained above.

7.3. Notifications of Outages and Maintenance

In the event that a Registry Operator plans maintenance, they will provide related notice to the ICANN emergency operations department, at least, 24 hours ahead of that maintenance. ICANN's emergency operations department will note planned maintenance times, and suspend Emergency Escalation services for the monitored services during the expected maintenance outage period.

If Registry Operator declares an outage, as per their contractual obligations with ICANN, on services under SLA and performance requirements, it will notify the ICANN emergency operations department. During that declared outage, ICANN's emergency operations department will note and suspend Emergency Escalation services for the monitored services involved.

8. Covenants of Performance Measurement

8.1. **No interference.** Registry Operator shall not interfere with measurement **Probes**, including any form of preferential treatment of the requests for the monitored services. Registry Operator shall respond to the measurement tests described in this Specification as it would do with any other request from Internet users (for DNS and RDDS) or registrars (for EPP).

8.2. **ICANN testing registrar.** Registry Operator agrees that ICANN will have a testing registrar used for purposes of measuring the **SLR**s described above. Registry Operator agrees to not provide any differentiated treatment for the testing registrar other than no billing of the transactions. ICANN shall not use the registrar for registering domain names (or other registry objects) for itself or others, except for the purposes of verifying contractual compliance with the conditions described in this Agreement.

TRADEMARK CLEARINGHOUSE
4 JUNE 2012

1. PURPOSE OF CLEARINGHOUSE

1.1 The Trademark Clearinghouse is a central repository for information to be authenticated, stored, and disseminated, pertaining to the rights of trademark holders. ICANN will enter into an arms-length contract with service provider or providers, awarding the right to serve as a Trademark Clearinghouse Service Provider, i.e., to accept, authenticate, validate and facilitate the transmission of information related to certain trademarks.

1.2 The Clearinghouse will be required to separate its two primary functions: (i) authentication and validation of the trademarks in the Clearinghouse; and (ii) serving as a database to provide information to the new gTLD registries to support pre-launch Sunrise or Trademark Claims Services. Whether the same provider could serve both functions or whether two providers will be determined in the tender process.

1.3 The Registry shall only need to connect with one centralized database to obtain the information it needs to conduct its Sunrise or Trademark Claims Services regardless of the details of the Trademark Clearinghouse Service Provider’s contract(s) with ICANN.

1.4 Trademark Clearinghouse Service Provider may provide ancillary services, as long as those services and any data used for those services are kept separate from the Clearinghouse database.

1.5 The Clearinghouse database will be a repository of authenticated information and disseminator of the information to a limited number of recipients. Its functions will be performed in accordance with a limited charter, and will not have any discretionary powers other than what will be set out in the charter with respect to authentication and validation. The Clearinghouse administrator(s) cannot create policy. Before material changes are made to the Clearinghouse functions, they will be reviewed through the ICANN public participation model.

1.6 Inclusion in the Clearinghouse is not proof of any right, nor does it create any legal rights. Failure to submit trademarks into the Clearinghouse should not be perceived to be lack of vigilance by trademark holders or a waiver of any rights, nor can any negative influence be drawn from such failure.

2. SERVICE PROVIDERS

2.1 The selection of Trademark Clearinghouse Service Provider(s) will be subject to predetermined criteria, but the foremost considerations will be the ability to store, authenticate, validate and disseminate the data at the highest level of technical stability and security without interference with the integrity or timeliness of the registration process or registry operations.

2.2 Functions – Authentication/Validation; Database Administration. Public commentary has suggested that the best way to protect the integrity of the data and to avoid concerns that arise through sole-source providers would be to separate the functions of database administration and data authentication/validation.

2.2.1 One entity will authenticate registrations ensuring the word marks qualify as registered or are court-validated word marks or word marks that are protected by statute or treaty. This entity would also be asked to ensure that proof of use of marks is provided, which can be demonstrated by furnishing a signed declaration and one specimen of current use.

2.2.2 The second entity will maintain the database and provide Sunrise and Trademark Claims Services (described below).

2.3 Discretion will be used, balancing effectiveness, security and other important factors, to determine whether ICANN will contract with one or two entities - one to authenticate and validate, and the other to, administer in order to preserve integrity of the data.

2.4 Contractual Relationship.

2.4.1 The Clearinghouse shall be separate and independent from ICANN. It will operate based on market needs and collect fees from those who use its services. ICANN may coordinate or specify interfaces used by registries and registrars, and provide some oversight or quality assurance function to ensure rights protection goals are appropriately met.

2.4.2 The Trademark Clearinghouse Service Provider(s) (authenticator/validator and administrator) will be selected through an open and transparent process to ensure low costs and reliable, consistent service for all those utilizing the Clearinghouse services.

2.4.3 The Service Provider(s) providing the authentication of the trademarks submitted into the Clearinghouse shall adhere to rigorous standards and requirements that would be specified in an ICANN contractual agreement.

2.4.4 The contract shall include service level requirements, customer service availability (with the goal of seven days per week, 24 hours per day, 365 days per year), data escrow requirements, and equal access requirements for all persons and entities required to access the Trademark Clearinghouse database.

2.4.5 To the extent practicable, the contract should also include indemnification by Service Provider for errors such as false positives for participants such as Registries, ICANN, Registrants and Registrars.

2.5. Service Provider Requirements. The Clearinghouse Service Provider(s) should utilize regional marks authentication service providers (whether directly or through sub-contractors) to take advantage of local experts who understand the nuances of the trademark in question. Examples of specific performance criteria details in the contract award criteria and service-level-agreements are:

2.5.1 provide 24 hour accessibility seven days a week (database administrator);
2.5.2 employ systems that are technically reliable and secure (database administrator);
2.5.3 use globally accessible and scalable systems so that multiple marks from multiple sources in multiple languages can be accommodated and sufficiently cataloged (database administrator and validator);
2.5.4 accept submissions from all over the world - the entry point for trademark holders to submit their data into the Clearinghouse database could be regional entities or one entity;
2.5.5 allow for multiple languages, with exact implementation details to be determined;
2.5.6 provide access to the Registrants to verify and research Trademark Claims Notices;
2.5.7 have the relevant experience in database administration, validation or authentication, as well as accessibility to and knowledge of the various relevant trademark laws (database administrator and authenticator); and
2.5.8 ensure through performance requirements, including those involving interface with registries and registrars, that neither domain name registration timeliness, nor registry or registrar operations will be hindered (database administrator).

3. CRITERIA FOR TRADEMARK INCLUSION IN CLEARINGHOUSE

3.1 The trademark holder will submit to one entity – a single entity for entry will facilitate access to the entire Clearinghouse database. If regional entry points are used, ICANN will publish an information page describing how to locate regional submission points. Regardless of the entry point into the Clearinghouse, the authentication procedures established will be uniform.

3.2 The standards for inclusion in the Clearinghouse are:

3.2.1 Nationally or regionally registered word marks from all jurisdictions.
3.2.2 Any word mark that has been validated through a court of law or other judicial proceeding.

3.2.3 Any word mark protected by a statute or treaty in effect at the time the mark is submitted to the Clearinghouse for inclusion.

3.2.4 Other marks that constitute intellectual property.

3.2.5 Protections afforded to trademark registrations do not extend to applications for registrations, marks within any opposition period or registered marks that were the subject of successful invalidation, cancellation or rectification proceedings.

3.3 The type of data supporting entry of a registered word mark into the Clearinghouse must include a copy of the registration or the relevant ownership information, including the requisite registration number(s), the jurisdictions where the registrations have issued, and the name of the owner of record.

3.4 Data supporting entry of a judicially validated word mark into the Clearinghouse must include the court documents, properly entered by the court, evidencing the validation of a given word mark.

3.5 Data supporting entry into the Clearinghouse of word marks protected by a statute or treaty in effect at the time the mark is submitted to the Clearinghouse for inclusion, must include a copy of the relevant portion of the statute or treaty and evidence of its effective date.

3.6 Data supporting entry into the Clearinghouse of marks that constitute intellectual property of types other than those set forth in sections 3.2.1-3.2.3 above shall be determined by the registry operator and the Clearinghouse based on the services any given registry operator chooses to provide.

3.7 Registrations that include top level extensions such as "icann.org" or ".icann" as the word mark will not be permitted in the Clearinghouse regardless of whether that mark has been registered or it has been otherwise validated or protected (e.g., if a mark existed for icann.org or .icann, neither will not be permitted in the Clearinghouse).

3.8 All mark holders seeking to have their marks included in the Clearinghouse will be required to submit a declaration, affidavit, or other sworn statement that the information provided is true and current and has not been supplied for an improper purpose. The mark holder will also be required to attest that it will keep the information supplied to the Clearinghouse current so that if, during the time the mark is included in the Clearinghouse, a registration gets cancelled or is transferred to another entity, or in the case of a court- or Clearinghouse-validated mark the holder abandons use of the mark, the mark holder has an affirmative obligation to notify the Clearinghouse. There will be penalties for failing to keep information current. Moreover, it is anticipated that there will be a process whereby registrations can be removed from the Clearinghouse if it is discovered that the marks are procured by fraud or if the data is inaccurate.

3.9 As an additional safeguard, the data will have to be renewed periodically by any mark holder wishing to remain in the Clearinghouse. Electronic submission should facilitate this process and minimize the cost associated with it. The reason for periodic authentication is to streamline the efficiencies of the Clearinghouse and the information the registry operators will need to process and limit the marks at issue to the ones that are in use.

4. USE OF CLEARINGHOUSE DATA

4.1 All mark holders seeking to have their marks included in the Clearinghouse will have to consent to the use of their information by the Clearinghouse. However, such consent would extend only to use in connection with the stated purpose of the Trademark Clearinghouse Database for Sunrise or Trademark Claims services. The reason for such a provision would be to presently prevent the Clearinghouse from using the data in other ways without permission. There shall be no bar on the Trademark Clearinghouse Service Provider or other third party service providers providing ancillary services on a non-exclusive basis.

4.2 In order not to create a competitive advantage, the data in the Trademark Clearinghouse should be licensed to competitors interested in providing ancillary services on equal and non-discriminatory terms and on commercially reasonable terms if the mark holders agree. Accordingly, two licensing options will be offered to the mark holder: (a) a license to use its data for all required features of the Trademark Clearinghouse, with no permitted use of such data for ancillary services either by the Trademark Clearinghouse Service Provider or any other entity; or (b) license to use its data for the mandatory features of the Trademark Clearinghouse and for any ancillary uses reasonably related to the protection of marks in new gTLDs, which would include a license to allow the Clearinghouse to license the use and data in the Trademark Clearinghouse to competitors that also provide those ancillary services. The specific implementation details will be determined, and all terms and conditions related to the provision of such services shall be included in the Trademark Clearinghouse Service Provider's contract with ICANN and subject to ICANN review.

4.3 Access by a prospective registrant to verify and research Trademark Claims Notices shall not be considered an ancillary service, and shall be provided at no cost to the Registrant. Misuse of the data by the service providers would be grounds for immediate termination.

5. DATA AUTHENTICATION AND VALIDATION GUIDELINES

5.1 One core function for inclusion in the Clearinghouse would be to authenticate that the data meets certain minimum criteria. As such, the following minimum criteria are suggested:

5.1.1 An acceptable list of data authentication sources, i.e. the web sites of patent and trademark offices throughout the world, third party providers who can obtain information from various trademark offices;

5.1.2 Name, address and contact information of the applicant is accurate, current and matches that of the registered owner of the trademarks listed;

5.1.3 Electronic contact information is provided and accurate;

5.1.4 The registration numbers and countries match the information in the respective trademark office database for that registration number.

5.2 For validation of marks by the Clearinghouse that were not protected via a court, statute or treaty, the mark holder shall be required to provide evidence of use of the mark in connection with the bona fide offering for sale of goods or services prior to application for inclusion in the Clearinghouse. Acceptable evidence of use will be a signed declaration and a single specimen of current use, which might consist of labels, tags, containers, advertising, brochures, screen shots, or something else that evidences current use.

6. MANDATORY RIGHTS PROTECTION MECHANISMS

All new gTLD registries will be required to use the Trademark Clearinghouse to support its pre-launch or initial launch period rights protection mechanisms (RPMs). These RPMs, at a minimum, must consist of a Trademark Claims service and a Sunrise process.

6.1 Trademark Claims service

6.1.1 New gTLD Registry Operators must provide Trademark Claims services during an initial launch period for marks in the Trademark Clearinghouse. This launch period must occur for at least the first 60 days that registration is open for general registration.

6.1.2 A Trademark Claims service is intended to provide clear notice to the prospective registrant of the scope of the mark holder’s rights in order to minimize the chilling effect on registrants (Trademark Claims Notice). A form that describes the required elements is attached. The specific statement by prospective registrant warrants that: (i) the prospective registrant has received notification that the mark(s) is included in the Clearinghouse; (ii) the prospective registrant has received and understood the notice; and (iii) to the best of the prospective registrant's knowledge, the registration and use of the requested domain name will not infringe on the rights that are the subject of the notice.

6.1.3 The Trademark Claims Notice should provide the prospective registrant access to the Trademark Clearinghouse Database information referenced in the Trademark Claims Notice to enhance understanding of the Trademark rights being claimed by the trademark holder. These links (or other sources) shall be provided in real time without cost to the prospective registrant. Preferably, the Trademark Claims Notice should be provided in the language used for the rest of the interaction with the registrar or registry, but it is anticipated that at the very least in the most appropriate UN-sponsored language (as specified by the prospective registrant or registrar/registry).

6.1.4 If the domain name is registered in the Clearinghouse, the registrar (again through an interface with the Clearinghouse) will promptly notify the mark holders(s) of the registration after it is effectuated.

6.1.5 The Trademark Clearinghouse Database will be structured to report to registries when registrants are attempting to register a domain name that is considered an "Identical Match" with the mark in the Clearinghouse. "Identical Match" means that the domain name consists of the complete and identical textual elements of the mark. In this regard: (a) spaces contained within a mark that are either replaced by hyphens (and vice versa) or omitted; (b) only certain special characters contained within a trademark are spelled out with appropriate words describing it (@ and &); (c) punctuation or special characters contained within a mark that are unable to be used in a second-level domain name may either be (i) omitted or (ii) replaced by spaces, hyphens or underscores and still be considered identical matches; and (d) no plural and no "marks contained" would qualify for inclusion.

6.2 Sunrise service

6.2.1 Sunrise registration services must be offered for a minimum of 30 days during the pre-launch phase and notice must be provided to all trademark holders in the Clearinghouse if someone is seeking a sunrise registration. This notice will be provided to holders of marks in the Clearinghouse that are an Identical Match to the name to be registered during Sunrise.

6.2.2 Sunrise Registration Process. For a Sunrise service, sunrise eligibility requirements (SERs) will be met as a minimum requirement, verified by Clearinghouse data, and incorporate a Sunrise Dispute Resolution Policy (SDRP).

6.2.3 The proposed SERs include: (i) ownership of a mark (that satisfies the criteria in section 7.2 below), (ii) optional registry elected requirements re: international class of goods or services covered by registration; (iii) representation that all provided information is true and correct; and (iv) provision of data sufficient to document rights in the trademark.

6.2.4 The proposed SDRP must allow challenges based on at least the following four grounds: (i) at time the challenged domain name was registered, the registrant did not hold a trademark registration of national effect (or regional effect) or the trademark had not been court-validated or protected by statute or treaty; (ii) the domain name is not identical to the mark on which the registrant based its Sunrise registration; (iii) the trademark registration on which the registrant based its Sunrise registration is not of national effect (or regional effect) or the trademark had not been court-validated or protected by statute or treaty; or (iv) the trademark registration on which the domain name registrant based its Sunrise registration did not issue on or before the effective date of the Registry Agreement and was not applied for on or before ICANN announced the applications received.

6.2.5 The Clearinghouse will maintain the SERs, validate and authenticate marks, as applicable, and hear challenges.

7. PROTECTION FOR MARKS IN CLEARINGHOUSE

The scope of registered marks that must be honored by registries in providing Trademarks Claims services is broader than those that must be honored by registries in Sunrise services.

7.1 For Trademark Claims services - Registries must recognize and honor all word marks that have been or are: (i) nationally or regionally registered; (ii) court-validated; or (iii) specifically protected by a statute or treaty in effect at the time the mark is submitted to the Clearinghouse for inclusion. No demonstration of use is required.

7.2 For Sunrise services - Registries must recognize and honor all word marks: (i) nationally or regionally registered and for which proof of use – which can be a declaration and a single specimen of current use – was submitted to, and validated by, the Trademark Clearinghouse; or (ii) that have been court-validated; or (iii) that are specifically protected by a statute or treaty currently in effect and that was in effect on or before 26 June 2008.

8. COSTS OF CLEARINGHOUSE

Costs should be completely borne by the parties utilizing the services. Trademark holders will pay to register the Clearinghouse, and registries will pay for Trademark Claims and Sunrise services. Registrars and others who avail themselves of Clearinghouse services will pay the Clearinghouse directly.

TRADEMARK NOTICE

[In English and the language of the registration agreement]

You have received this Trademark Notice because you have applied for a domain name which matches at least one trademark record submitted to the Trademark Clearinghouse.

You may or may not be entitled to register the domain name depending on your intended use and whether it is the same or significantly overlaps with the trademarks listed below. ***Your rights to register this domain name may or may not be protected as noncommercial use or "fair use" by the laws of your country. [in bold italics or all caps]***

Please read the trademark information below carefully, including the trademarks, jurisdictions, and goods and service for which the trademarks are registered. Please be aware that not all jurisdictions review trademark applications closely, so some of the trademark information below may exist in a national or regional registry which does not conduct a thorough or substantive review of trademark rights prior to registration.
If you have questions, you may want to consult an attorney or legal expert on trademarks and intellectual property for guidance.

If you continue with this registration, you represent that, you have received and you understand this notice and to the best of your knowledge, your registration and use of the requested domain name will not infringe on the trademark rights listed below.
The following [number] Trademarks are listed in the Trademark Clearinghouse:

1. Mark: Jurisdiction: Goods: [click here for more if maximum character count is exceeded] International Class of Goods and Services or Equivalent if applicable: Trademark Registrant: Trademark Registrant Contact:

[with links to the TM registrations as listed in the TM Clearinghouse]

2. Mark: Jurisdiction: Goods: [click here for more if maximum character count is exceeded] International Class of Goods and Services or Equivalent if applicable: Trademark Registrant:

Trademark Registrant Contact:
****** [with links to the TM registrations as listed in the TM Clearinghouse]

X. 1. Mark: Jurisdiction: Goods: [click here for more if maximum character count is exceeded] International Class of Goods and Services or Equivalent if applicable: Trademark Registrant: Trademark Registrant Contact:

UNIFORM RAPID SUSPENSION SYSTEM ("URS")

DRAFT PROCEDURE

1. Complaint

1.1 Filing the Complaint

a) Proceedings are initiated by electronically filing with a URS Provider a Complaint outlining the trademark rights and the actions complained of entitling the trademark holder to relief.

b) Each Complaint must be accompanied by the appropriate fee, which is under consideration. The fees will be non-refundable.

c) One Complaint is acceptable for multiple related companies against one Registrant, but only if the companies complaining are related. Multiple Registrants can be named in one Complaint only if it can be shown that they are in some way related. There will not be a minimum number of domain names imposed as a prerequisite to filing.

1.2 Contents of the Complaint

The form of the Complaint will be simple and as formulaic as possible. There will be a Form Complaint. The Form Complaint shall include space for the following:

1.2.1 Name, email address and other contact information for the Complaining Party (Parties).

1.2.2 Name, email address and contact information for any person authorized to act on behalf of Complaining Parties.

1.2.3 Name of Registrant (i.e. relevant information available from Whois) and Whois listed available contact information for the relevant domain name(s).

1.2.4 The specific domain name(s) that are the subject of the Complaint. For each domain name, the Complainant shall include a copy of the currently available Whois information and a description and copy, if available, of the offending portion of the website content associated with each domain name that is the subject of the Complaint.

1.2.5 The specific trademark/service marks upon which the Complaint is based and pursuant to which the Complaining Parties are asserting their rights to them, for which goods and in connection with what services.

1.2.6 A statement of the grounds upon which the Complaint is based setting forth facts showing that the Complaining Party is entitled to relief, namely:

1.2.6.1. that the registered domain name is identical or confusingly similar to a word mark: (i) for which the Complainant holds a valid national or regional registration and that is in current use; or (ii) that has been validated through court proceedings; or (iii) that is specifically protected by a statute or treaty in effect at the time the URS complaint is filed.

a. Use can be shown by demonstrating that evidence of use – which can be a declaration and one specimen of current use in commerce - was submitted to, and validated by, the Trademark Clearinghouse)

b. Proof of use may also be submitted directly with the URS Complaint.

and

1.2.6.2. that the Registrant has no legitimate right or interest to the domain name; and

1.2.6.3. that the domain was registered and is being used in bad faith.

A non-exclusive list of circumstances that demonstrate bad faith registration and use by the Registrant include:

a. Registrant has registered or acquired the domain name primarily for the purpose of selling, renting or otherwise transferring the domain name registration to the complainant who is the owner of the trademark or service mark or to a competitor of that complainant, for valuable consideration in excess of documented out-of pocket costs directly related to the domain name; or

b. Registrant has registered the domain name in order to prevent the trademark holder or service mark from reflecting the mark in a corresponding domain name, provided that Registrant has engaged in a pattern of such conduct; or

c. Registrant registered the domain name primarily for the purpose of disrupting the business of a competitor; or

d. By using the domain name Registrant has intentionally attempted to attract for commercial gain, Internet users to Registrant’s web site or other on-line location, by creating a likelihood of confusion with the complainant’s mark as to the source, sponsorship, affiliation, or endorsement of Registrant’s web site or location or of a product or service on that web site or location.

1.2.7 A box in which the Complainant may submit up to 500 words of explanatory free form text.

1.2.8. An attestation that the Complaint is not being filed for any improper basis and that there is a sufficient good faith basis for filing the Complaint.

2. Fees

2.1 URS Provider will charge fees to the Complainant. Fees are thought to be in the range of USD 300 per proceeding, but will ultimately be set by the Provider.

2.2 Complaints listing fifteen (15) or more disputed domain names registered by the same registrant will be subject to a Response Fee which will be refundable to the prevailing party. Under no circumstances shall the Response Fee exceed the fee charged to the Complainant.

3. Administrative Review

3.1 Complaints will be subjected to an initial administrative review by the URS Provider for compliance with the filing requirements. This is a review to determine that the Complaint contains all of the necessary information, and is not a determination as to whether a *prima facie* case has been established.

3.2 The Administrative Review shall be conducted within two (2) business days of submission of the Complaint to the URS Provider.

3.3 Given the rapid nature of this Procedure, and the intended low level of required fees, there will be no opportunity to correct inadequacies in the filing requirements.

3.4 If a Complaint is deemed non-compliant with filing requirements, the Complaint will be dismissed without prejudice to the Complainant filing a new complaint. The initial filing fee shall not be refunded in these circumstances.

4. Notice and Locking of Domain

4.1 Upon completion of the Administrative Review, the URS Provider must immediately notify the registry operator (via email) ("Notice of Complaint") after the Complaint has been deemed compliant with the filing requirements. Within 24 hours of receipt of the Notice of Complaint from the URS Provider, the registry operator shall "lock" the domain, meaning the registry shall restrict all changes to the registration data, including transfer and deletion of the domain names, but the name will continue to resolve. The registry operator will notify the URS Provider immediately upon locking the domain name ("Notice of Lock").

4.2 Within 24 hours after receiving Notice of Lock from the registry operator, the URS Provider shall notify the Registrant of the Complaint, sending a hard copy of the Notice of Complaint to the addresses listed in the Whois contact information, and providing an electronic copy of the Complaint, advising of the locked status, as well as the potential effects if the Registrant fails to respond and defend against the Complaint. Notices must be clear and understandable to Registrants located globally. The Notice of Complaint shall be in English and translated by the Provider into the predominant language used in the registrant's country or territory.

4.3 All Notices to the Registrant shall be sent through email, fax (where available) and postal mail. The Complaint and accompanying exhibits, if any, shall be served electronically.

4.4 The URS Provider shall also electronically notify the registrar of record for the domain name at issue via the addresses the registrar has on file with ICANN.

5. The Response

5.1 A Registrant will have 14 calendar days from the date the URS Provider sent its Notice of Complaint to the Registrant to electronically file a Response with the URS Provider. Upon receipt, the Provider will electronically send a copy of the Response, and accompanying exhibits, if any, to the Complainant.

5.2 No filing fee will be charged if the Registrant files its Response prior to being declared in default or not more than thirty (30) days following a Determination. For Responses filed more than thirty (30) days after a Determination, the Registrant should pay a reasonable non-refundable fee for re-examination, plus a Response Fee as set forth in section 2.2 above if the Complaint lists twenty-six (26) or more disputed domain names against the same registrant. The Response Fee will be refundable to the prevailing party.

5.3 Upon request by the Registrant, a limited extension of time to respond may be granted by the URS Provider if there is a good faith basis for doing so. In no event shall the extension be for more than seven (7) calendar days.

5.4 The Response shall be no longer than 2,500 words, excluding attachments, and the content of the Response should include the following:

5.4.1 Confirmation of Registrant data.

5.4.2 Specific admission or denial of each of the grounds upon which the Complaint is based.

5.4.3 Any defense which contradicts the Complainant's claims.

5.4.4 A statement that the contents are true and accurate.

5.5 In keeping with the intended expedited nature of the URS and the remedy afforded to a successful Complainant, affirmative claims for relief by the Registrant will not be permitted except for an allegation that the Complainant has filed an abusive Complaint.

5.6 Once the Response is filed, and the URS Provider determines that the Response is compliant with the filing requirements of a Response (which shall be on the same day), the Complaint, Response and supporting materials will immediately be sent to a qualified Examiner, selected by the URS Provider, for review and Determination. All materials submitted are considered by the Examiner.

5.7 The Response can contain any facts refuting the claim of bad faith registration by setting out any of the following circumstances:

5.7.1 Before any notice to Registrant of the dispute, Registrant's use of, or demonstrable preparations to use, the domain name or a name corresponding to the domain name in connection with a bona fide offering of goods or services; or

5.7.2 Registrant (as an individual, business or other organization) has been commonly known by the domain name, even if Registrant has acquired no trademark or service mark rights; or

5.7.3 Registrant is making a legitimate or fair use of the domain name, without intent for commercial gain to misleadingly divert consumers or to tarnish the trademark or service mark at issue.

Such claims, if found by the Examiner to be proved based on its evaluation of all evidence, shall result in a finding in favor of the Registrant.

5.8 The Registrant may also assert Defenses to the Complaint to demonstrate that the Registrant's use of the domain name is not in bad faith by showing, for example, one of the following:

5.8.1 The domain name is generic or descriptive and the Registrant is making fair use of it.

5.8.2 The domain name sites are operated solely in tribute to or in criticism of a person or business that is found by the Examiner to be fair use.

5.8.3 Registrant's holding of the domain name is consistent with an express term of a written agreement entered into by the disputing Parties and that is still in effect.

5.8.4 The domain name is not part of a wider pattern or series of abusive registrations because the Domain Name is of a significantly different type or character to other domain names registered by the Registrant.

5.9 Other factors for the Examiner to consider:

5.9.1 Trading in domain names for profit, and holding a large portfolio of domain names, are of themselves not indicia of bad faith under the URS. Such conduct, however, may be abusive in a given case depending on the circumstances of the dispute. The Examiner must review each case on its merits.

5.9.2 Sale of traffic (i.e. connecting domain names to parking pages and earning click-per-view revenue) does not in and of itself constitute bad faith under the URS.

Such conduct, however, may be abusive in a given case depending on the circumstances of the dispute. The Examiner will take into account:

5.9.2.1. the nature of the domain name;

5.9.2.2. the nature of the advertising links on any parking page associated with the domain name; and

5.9.2.3. that the use of the domain name is ultimately the Registrant's responsibility.

6. Default

6.1 If at the expiration of the 14-day answer period (or extended period if granted), the Registrant does not submit an answer, the Complaint proceeds to Default.

6.2 In either case, the Provider shall provide Notice of Default via email to the Complainant and Registrant, and via mail and fax to Registrant. During the Default period, the Registrant will be prohibited from changing content found on the site to argue that it is now a legitimate use and will also be prohibited from changing the Whois information.

6.3 All Default cases proceed to Examination for review on the merits of the claim.

6.4 If after Examination in Default cases, the Examiner rules in favor of Complainant, Registrant shall have the right to seek relief from Default via de novo review by filing a Response at any time up to six months after the date of the Notice of Default. The Registrant will also be entitled to request an extension of an additional six months if the extension is requested before the expiration of the initial six-month period.

6.5 If a Response is filed after: (i) the Respondent was in Default (so long as the Response is filed in accordance with 6.4 above); and (ii) proper notice is provided in accordance with the notice requirements set forth above, the domain name shall again resolve to the original IP address as soon as practical, but shall remain locked as if the Response had been filed in a timely manner before Default. The filing of a Response after Default is not an appeal; the case is considered as if responded to in a timely manner.

6.5 If after Examination in Default case, the Examiner rules in favor of Registrant, the Provider shall notify the Registry Operator to unlock the name and return full control of the domain name registration to the Registrant.

7. Examiners

7.1 One Examiner selected by the Provider will preside over a URS proceeding.

7.2 Examiners should have demonstrable relevant legal background, such as in trademark law, and shall be trained and certified in URS proceedings. Specifically, Examiners shall be provided with instructions on the URS elements and defenses and how to conduct the examination of a URS proceeding.

7.3 Examiners used by any given URS Provider shall be rotated to the extent feasible to avoid "forum or examiner shopping." URS Providers are strongly encouraged to work equally with all certified Examiners, with reasonable exceptions (such as language needs, non-performance, or malfeasance) to be determined on a case by case analysis.

8. Examination Standards and Burden of Proof

8.1 The standards that the qualified Examiner shall apply when rendering its Determination are whether:

8.1.2 The registered domain name is identical or confusingly similar to a word mark: (i) for which the Complainant holds a valid national or regional registration and that is in current use; or (ii) that has been validated through court proceedings; or (iii) that is specifically protected by a statute or treaty currently in effect and that was in effect at the time the URS Complaint is filed; and

8.1.2.1 Use can be shown by demonstrating that evidence of use – which can be a declaration and one specimen of current use – was submitted to, and validated by, the Trademark Clearinghouse.

8.1.2.2 Proof of use may also be submitted directly with the URS Complaint.

8.1.2 The Registrant has no legitimate right or interest to the domain name; and

8.1.3 The domain was registered and is being used in a bad faith.

8.2 The burden of proof shall be clear and convincing evidence.

8.3 For a URS matter to conclude in favor of the Complainant, the Examiner shall render a Determination that there is no genuine issue of material fact. Such Determination may include that: (i) the Complainant has rights to the name; and (ii) the Registrant has no rights or legitimate interest in the name. This means that the Complainant must present adequate evidence to substantiate its trademark rights in the domain name (e.g., evidence of a trademark registration and evidence that the domain name was registered and is being used in bad faith in violation of the URS).

8.4 If the Examiner finds that the Complainant has not met its burden, or that genuine issues of material fact remain in regards to any of the elements, the Examiner will reject the Complaint under the relief available under the URS. That is, the Complaint shall be dismissed if the Examiner finds that evidence was presented or is available to the Examiner to indicate that the use of the domain name in question is a non-infringing use or fair use of the trademark.

8.5 Where there is any genuine contestable issue as to whether a domain name registration and use of a trademark are in bad faith, the Complaint will be denied, the URS proceeding will be terminated without prejudice, e.g., a UDRP, court proceeding or another URS may be filed. The URS is not intended for use in any proceedings with open questions of fact, but only clear cases of trademark abuse.

8.6 To restate in another way, if the Examiner finds that all three standards are satisfied by clear and convincing evidence and that there is no genuine contestable issue, then the Examiner shall issue a Determination in favor of the Complainant. If the Examiner finds that any of the standards have not been satisfied, then the Examiner shall deny the relief requested, thereby terminating the URS proceeding without prejudice to the Complainant to proceed with an action in court of competent jurisdiction or under the UDRP.

9. Determination

9.1 There will be no discovery or hearing; the evidence will be the materials submitted with the Complaint and the Response, and those materials will serve as the entire record used by the Examiner to make a Determination.

9.2 If the Complainant satisfies the burden of proof, the Examiner will issue a Determination in favor of the Complainant. The Determination will be published on the URS Provider's website. However, there should be no other preclusive effect of the Determination other than the URS proceeding to which it is rendered.

9.3 If the Complainant does not satisfy the burden of proof, the URS proceeding is terminated and full control of the domain name registration shall be returned to the Registrant.

9.4 Determinations resulting from URS proceedings will be published by the service provider in a format specified by ICANN.

9.5 Determinations shall also be emailed by the URS Provider to the Registrant, the Complainant, the Registrar, and the Registry Operator, and shall specify the remedy and required actions of the registry operator to comply with the Determination.

9.6 To conduct URS proceedings on an expedited basis, examination should begin immediately upon the earlier of the expiration of a fourteen (14) day Response period (or extended period if granted), or upon the submission of the Response. A Determination shall be rendered on an expedited basis, with the stated goal that it be rendered within three (3) business days from when Examination began. Absent extraordinary circumstances, however, Determinations must be issued no later than five (5) days after the Response is filed. Implementation details will be developed to accommodate the needs of service providers once they are selected. (The tender offer for potential service providers will indicate that timeliness will be a factor in the award decision.)

10. Remedy

10.1 If the Determination is in favor of the Complainant, the decision shall be immediately transmitted to the registry operator.

10.2 Immediately upon receipt of the Determination, the registry operator shall suspend the domain name, which shall remain suspended for the balance of the registration period and would not resolve to the original web site. The nameservers shall be redirected to an informational web page provided by the URS Provider about the URS. The URS Provider shall not be allowed to offer any other services on such page, nor shall it directly or indirectly use the web page for advertising purposes (either for itself or any other third party). The Whois for the domain name shall continue to display all of the information of the original Registrant except for the redirection of the nameservers. In addition, the Whois shall reflect that the domain name will not be able to be transferred, deleted or modified for the life of the registration.

10.3 There shall be an option for a successful Complainant to extend the registration period for one additional year at commercial rates.

10.4 No other remedies should be available in the event of a Determination in favor of the Complainant.

11. Abusive Complaints

11.1 The URS shall incorporate penalties for abuse of the process by trademark holders.

11.2 In the event a party is deemed to have filed two (2) abusive Complaints, or one (1) "deliberate material falsehood," that party shall be barred from utilizing the URS for one-year following the date of issuance of a Determination finding a complainant to have: (i) filed its second abusive complaint; or (ii) filed a deliberate material falsehood.

11.3 A Complaint may be deemed abusive if the Examiner determines:

11.3.1 it was presented solely for improper purpose such as to harass, cause unnecessary delay, or needlessly increase the cost of doing business; and

11.3.2 (i) the claims or other assertions were not warranted by any existing law or the URS standards; or (ii) the factual contentions lacked any evidentiary support

11.4 An Examiner may find that Complaint contained a deliberate material falsehood if it contained an assertion of fact, which at the time it was made, was made with the knowledge that it was false and which, if true, would have an impact on the outcome on the URS proceeding.

11.5 Two findings of "deliberate material falsehood" shall permanently bar the party from utilizing the URS.

11.6 URS Providers shall be required to develop a process for identifying and tracking barred parties, and parties whom Examiners have determined submitted abusive complaints or deliberate material falsehoods.

11.7 The dismissal of a complaint for administrative reasons or a ruling on the merits, in itself, shall not be evidence of filing an abusive complaint.

11.8 A finding that filing of a complaint was abusive or contained a deliberate materially falsehood can be appealed solely on the grounds that an Examiner abused his/her discretion, or acted in an arbitrary or capricious manner.

12. Appeal

12.1 Either party shall have a right to seek a de novo appeal of the Determination based on the existing record within the URS proceeding for a reasonable fee to cover the costs of the appeal. An appellant must identify the specific grounds on which the party is appealing, including why the appellant claims the Examiner's Determination was incorrect.

12.2 The fees for an appeal shall be borne by the appellant. A limited right to introduce new admissible evidence that is material to the Determination will be allowed upon payment of an additional fee, provided the evidence clearly pre-dates the filing of the Complaint. The Appeal Panel, to be selected by the Provider, may request, in its sole discretion, further statements or documents from either of the Parties.

12.3 Filing an appeal shall not change the domain name's resolution. For example, if the domain name no longer resolves to the original nameservers because of a Determination in favor or the Complainant, the domain name shall continue to point to the informational page provided by the URS Provider. If the domain name resolves to the original nameservers because of a Determination in favor of the registrant, it shall continue to resolve during the appeal process.

12.4 An appeal must be filed within 14 days after a Determination is issued and any Response must be filed 14 days after an appeal is filed.

12.5 If a respondent has sought relief from Default by filing a Response within six months (or the extended period if applicable) of issuance of initial Determination, an appeal must be filed within 14 days from date the second Determination is issued and any Response must be filed 14 days after the appeal is filed.

12.6 Notice of appeal and findings by the appeal panel shall be sent by the URS Provider via e-mail to the Registrant, the Complainant, the Registrar, and the Registry Operator.

12.7 The Providers' rules and procedures for appeals, other than those stated above, shall apply.

13. Other Available Remedies

The URS Determination shall not preclude any other remedies available to the appellant, such as UDRP (if appellant is the Complainant), or other remedies as may be available in a court of competition jurisdiction. A URS Determination for or against a party shall not prejudice the party in UDRP or any other proceedings.

14. Review of URS

A review of the URS procedure will be initiated one year after the first Examiner Determination is issued. Upon completion of the review, a report shall be published regarding the usage of the procedure, including statistical information, and posted for public comment on the usefulness and effectiveness of the procedure.

TRADEMARK POST-DELEGATION DISPUTE RESOLUTION PROCEDURE (TRADEMARK PDDRP)
4 JUNE 2012

1. Parties to the Dispute

The parties to the dispute will be the trademark holder and the gTLD registry operator. ICANN shall not be a party.

2. Applicable Rules

2.1 This procedure is intended to cover Trademark post-delegation dispute resolution proceedings generally. To the extent more than one Trademark PDDRP provider (“Provider”) is selected to implement the Trademark PDDRP, each Provider may have additional rules that must be followed when filing a Complaint. The following are general procedures to be followed by all Providers.

2.2 In the Registry Agreement, the registry operator agrees to participate in all post-delegation procedures and be bound by the resulting Determinations.

3. Language

3.1 The language of all submissions and proceedings under the procedure will be English.

3.2 Parties may submit supporting evidence in their original language, provided and subject to the authority of the Expert Panel to determine otherwise, that such evidence is accompanied by an English translation of all relevant text.

4. Communications and Time Limits

4.1 All communications with the Provider must be submitted electronically.

4.2 For the purpose of determining the date of commencement of a time limit, a notice or other communication will be deemed to have been received on the day that it is transmitted to the appropriate contact person designated by the parties.

4.3 For the purpose of determining compliance with a time limit, a notice or other communication will be deemed to have been sent, made or transmitted on the day that it is dispatched.

4.4 For the purpose of calculating a period of time under this procedure, such period will begin to run on the day following the date of receipt of a notice or other communication.

4.5 All references to day limits shall be considered as calendar days unless otherwise specified.

5. Standing

5.1 The mandatory administrative proceeding will commence when a third-party complainant ("Complainant") has filed a Complaint with a Provider asserting that the Complainant is a trademark holder (which may include either registered or unregistered marks as defined below) claiming that one or more of its marks have been infringed, and thereby the Complainant has been harmed, by the registry operator's manner of operation or use of the gTLD.

5.2 Before proceeding to the merits of a dispute, and before the Respondent is required to submit a substantive Response, or pay any fees, the Provider shall appoint a special one-person Panel to perform an initial "threshold" review ("Threshold Review Panel").

6. Standards

For purposes of these standards, "registry operator" shall include entities directly or indirectly controlling, controlled by or under common control with a registry operator, whether by ownership or control of voting securities, by contract or otherwise where 'control' means the possession, directly or indirectly, of the power to direct or cause the direction of the management and policies of an entity, whether by ownership or control of voting securities, by contract or otherwise.

6.1 Top Level:

A complainant must assert and prove, by clear and convincing evidence, that the registry operator's affirmative conduct in its operation or use of its gTLD string that is identical or confusingly similar to the complainant's mark, causes or materially contributes to the gTLD doing one of the following*:*

(a) taking unfair advantage of the distinctive character or the reputation of the complainant's mark; or

(b) impairing the distinctive character or the reputation of the complainant's mark; or

(c) creating a likelihood of confusion with the complainant's mark.

An example of infringement at the top-level is where a TLD string is identical to a trademark and then the registry operator holds itself out as the beneficiary of the mark.

6.2 Second Level

Complainants are required to prove, by clear and convincing evidence that, through the registry operator's affirmative conduct:

(a) there is a substantial pattern or practice of specific bad faith intent by the registry operator to profit from the sale of trademark infringing domain names; and

(b) the registry operator's bad faith intent to profit from the systematic registration of domain names within the gTLD that are identical or confusingly similar to the complainant's mark, which:

(i) takes unfair advantage of the distinctive character or the reputation of the complainant's mark; or

(ii) impairs the distinctive character or the reputation of the complainant's mark, or

(iii) creates a likelihood of confusion with the complainant's mark.

In other words, it is not sufficient to show that the registry operator is on notice of possible trademark infringement through registrations in the gTLD. The registry operator is not liable under the PDDRP solely because: (i) infringing names are in its registry; or (ii) the registry operator knows that infringing names are in its registry; or (iii) the registry operator did not monitor the registrations within its registry.

A registry operator is not liable under the PDDRP for any domain name registration that: (i) is registered by a person or entity that is unaffiliated with the registry operator; (ii) is registered without the direct or indirect encouragement, inducement, initiation or direction of any person or entity affiliated with the registry operator; and (iii) provides no direct or indirect benefit to the registry operator other than the typical registration fee (which may include other fees collected incidental to the registration process for value added services such enhanced registration security).

An example of infringement at the second level is where a registry operator has a pattern or practice of actively and systematically encouraging registrants to register second level domain names and to take unfair advantage of the trademark to the extent and degree that bad faith is apparent. Another example of infringement at the second level is where a registry operator has a pattern or practice of acting as the registrant or beneficial user of infringing registrations, to monetize and profit in bad faith.

7. Complaint

7.1 Filing:

The Complaint will be filed electronically. Once the Administrative Review has been completed and the Provider deems the Complaint be in compliance, the Provider will electronically serve the Complaint and serve a paper notice on the registry operator that is the subject of the Complaint ("Notice of Complaint") consistent with the contact information listed in the Registry Agreement.

7.2 Content:

7.2.1 The name and contact information, including address, phone, and email address, of the Complainant, and, to the best of Complainant's knowledge, the name and address of the current owner of the registration.

7.2.2 The name and contact information, including address, phone, and email address of any person authorized to act on behalf of Complainant.

7.2.3 A statement of the nature of the dispute, and any relevant evidence, which shall include:

(a) The particular legal rights claim being asserted, the marks that form the basis for the dispute and a short and plain statement of the basis upon which the Complaint is being filed.

(b) A detailed explanation of how the Complainant's claim meets the requirements for filing a claim pursuant to that particular ground or standard.

(c) A detailed explanation of the validity of the Complaint and why the Complainant is entitled to relief.

(d) A statement that the Complainant has at least 30 days prior to filing the Complaint notified the registry operator in writing of: (i) its specific concerns and specific conduct it believes is resulting in infringement of Complainant's trademarks and (ii) it willingness to meet to resolve the issue.

(e) An explanation of how the mark is used by the Complainant (including the type of goods/services, period and territory of use – including all on-line usage) or otherwise protected by statute, treaty or has been validated by a court or the Clearinghouse.

(f) Copies of any documents that the Complainant considers to evidence its basis for relief, including evidence of current use of the Trademark at issue in the Complaint and domain name registrations.

(g) A statement that the proceedings are not being brought for any improper purpose.

(h) A statement describing how the registration at issue has harmed the trademark owner.

7.3 Complaints will be limited 5,000 words and 20 pages, excluding attachments, unless the Provider determines that additional material is necessary.

7.4 At the same time the Complaint is filed, the Complainant will pay a non-refundable filing fee in the amount set in accordance with the applicable Provider rules. In the event that the filing fee is not paid within 10 days of the receipt of the Complaint by the Provider, the Complaint will be dismissed without prejudice.

8. Administrative Review of the Complaint

8.1 All Complaints will be reviewed by the Provider within five (5) business days of submission to the Provider to determine whether the Complaint contains all necessary information and complies with the procedural rules.

8.2 If the Provider finds that the Complaint complies with procedural rules, the Complaint will be deemed filed, and the proceedings will continue to the Threshold Review. If the Provider finds that the Complaint does not comply with procedural rules, it will electronically notify the Complainant of such non-compliant and provide the Complainant five (5) business days to submit an amended Complaint. If the Provider does not receive an amended Complaint within the five (5) business days provided, it will dismiss the Complaint and close the proceedings without prejudice to the Complainant's submission of a new Complaint that complies with procedural rules. Filing fees will not be refunded.

8.3 If deemed compliant, the Provider will electronically serve the Complaint on the registry operator and serve the Notice of Complaint consistent with the contact information listed in the Registry Agreement.

9. Threshold Review

9.1 Provider shall establish a Threshold Review Panel, consisting of one panelist selected by the Provider, for each proceeding within five (5) business days after completion of Administrative Review and the Complaint has been deemed compliant with procedural rules.

9.2 The Threshold Review Panel shall be tasked with determining whether the Complainant satisfies the following criteria:

9.2.1 The Complainant is a holder of a word mark that: (i) is nationally or regionally registered and that is in current use; or (ii) has been validated through court proceedings; or (iii) that is specifically protected by a statute or treaty at the time the PDDRP complaint is filed;

9.2.1.1 Use can be shown by demonstrating that evidence of use – which can be a declaration and one specimen of current use – was submitted to, and validated by, the Trademark Clearinghouse

9.2.1.2 Proof of use may also be submitted directly with the Complaint.

9.2.2 The Complainant has asserted that it has been materially harmed as a result of trademark infringement;

9.2.3 The Complainant has asserted facts with sufficient specificity that, if everything the Complainant asserted is true, states a claim under the Top Level Standards herein
OR

The Complainant has asserted facts with sufficient specificity that, if everything the Complainant asserted is true, states a claim under the Second Level Standards herein;

9.2.4 The Complainant has asserted that: (i) at least 30 days prior to filing the Complaint the Complainant notified the registry operator in writing of its specific concerns and specific conduct it believes is resulting in infringement of Complainant's trademarks, and it willingness to meet to resolve the issue; (ii) whether the registry operator responded to the Complainant's notice of specific concerns; and (iii) if the registry operator did respond, that the Complainant attempted to engage in good faith discussions to resolve the issue prior to initiating the PDDRP.

9.3 Within ten (10) business days of date Provider served Notice of Complaint, the registry operator shall have the opportunity, but is not required, to submit papers to support its position as to the Complainant's standing at the Threshold Review stage. If the registry operator chooses to file such papers, it must pay a filing fee.

9.4 If the registry operator submits papers, the Complainant shall have ten (10) business days to submit an opposition.

9.5 The Threshold Review Panel shall have ten (10) business days from due date of Complainant's opposition or the due date of the registry operator's papers if none were filed, to issue Threshold Determination.

9.6 Provider shall electronically serve the Threshold Determination on all parties.

9.7 If the Complainant has not satisfied the Threshold Review criteria, the Provider will dismiss the proceedings on the grounds that the Complainant lacks standing and declare that the registry operator is the prevailing party.

9.8 If the Threshold Review Panel determines that the Complainant has standing and satisfied the criteria then the Provider to will commence the proceedings on the merits.

10. Response to the Complaint

10.1 The registry operator must file a Response to each Complaint within forty-five (45) days after the date of the Threshold Review Panel Declaration.

10.2 The Response will comply with the rules for filing of a Complaint and will contain the name and contact information for the registry operator, as well as a point-by-point response to the statements made in the Complaint.

10.3 The Response must be filed with the Provider and the Provider must serve it upon the Complainant in electronic form with a hard-copy notice that it has been served.

10.4 Service of the Response will be deemed effective, and the time will start to run for a Reply, upon confirmation that the electronic Response and hard-copy notice of the Response was sent by the Provider to the addresses provided by the Complainant.

10.5 If the registry operator believes the Complaint is without merit, it will affirmatively plead in its Response the specific grounds for the claim.

11. Reply

11.1 The Complainant is permitted ten (10) days from Service of the Response to submit a Reply addressing the statements made in the Response showing why the Complaint is not "without merit." A Reply may not introduce new facts or evidence into the record, but shall only be used to address statements made in the Response. Any new facts or evidence introduced in a Response shall be disregarded by the Expert Panel.

11.2 Once the Complaint, Response and Reply (as necessary) are filed and served, a Panel will be appointed and provided with all submissions.

12. Default

12.1 If the registry operator fails to respond to the Complaint, it will be deemed to be in default.

12.2 Limited rights to set aside the finding of default will be established by the Provider, but in no event will they be permitted absent a showing of good cause to set aside the finding of default.

12.3 The Provider shall provide notice of Default via email to the Complainant and registry operator.

12.4 All Default cases shall proceed to Expert Determination on the merits.

13. Expert Panel

13.1 The Provider shall establish an Expert Panel within 21 days after receiving the Reply, or if no Reply is filed, within 21 days after the Reply was due to be filed.

13.2 The Provider shall appoint a one-person Expert Panel, unless any party requests a three- member Expert Panel. No Threshold Panel member shall serve as an Expert Panel member in the same Trademark PDDRP proceeding.

13.3 In the case where either party requests a three-member Expert Panel, each party (or each side of the dispute if a matter has been consolidated) shall select an Expert and the two selected Experts shall select the third Expert Panel member. Such selection shall be made pursuant to the Providers rules or procedures. Trademark PDDRP panelists within a Provider shall be rotated to the extent feasible.

13.4 Expert Panel member must be independent of the parties to the post-delegation challenge. Each Provider will follow its adopted procedures for requiring such independence, including procedures for challenging and replacing a panelist for lack of independence.

14. Costs

14.1 The Provider will estimate the costs for the proceedings that it administers under this procedure in accordance with the applicable Provider rules. Such costs will be estimated to cover the administrative fees of the Provider, the Threshold Review Panel and the Expert Panel, and are intended to be reasonable.

14.2 The Complainant shall be required to pay the filing fee as set forth above in the "Complaint" section, and shall be required to submit the full amount of the Provider estimated administrative fees, the Threshold Review Panel fees and the Expert Panel fees at the outset of the proceedings. Fifty percent of that full amount shall be in cash (or cash equivalent) to cover the Complainant's share of the proceedings and the other 50% shall be in either cash (or cash equivalent), or in bond, to cover the registry operator's share if the registry operator prevails.

14.3 If the Panel declares the Complainant to be the prevailing party, the registry operator is required to reimburse Complainant for all Panel and Provider fees incurred. Failure to do shall be deemed a violation of the Trademark PDDRP and a breach of the Registry Agreement, subject to remedies available under the Agreement up to and including termination.

15. Discovery

15.1 Whether and to what extent discovery is allowed is at the discretion of the Panel, whether made on the Panel's own accord, or upon request from the Parties.

15.2 If permitted, discovery will be limited to that for which each Party has a substantial need.

15.3 In extraordinary circumstances, the Provider may appoint experts to be paid for by the Parties, request live or written witness testimony, or request limited exchange of documents.

15.4 At the close of discovery, if permitted by the Expert Panel, the Parties will make a final evidentiary submission, the timing and sequence to be determined by the Provider in consultation with the Expert Panel.

16. Hearings

16.1 Disputes under this Procedure will be resolved without a hearing unless either party requests a hearing or the Expert Panel determines on its own initiative that one is necessary.

16.2 If a hearing is held, videoconferences or teleconferences should be used if at all possible. If not possible, then the Expert Panel will select a place for hearing if the Parties cannot agree.

16.3 Hearings should last no more than one day, except in the most extraordinary circumstances.

16.4 All dispute resolution proceedings will be conducted in English.

17. Burden of Proof

The Complainant bears the burden of proving the allegations in the Complaint; the burden must be by clear and convincing evidence.

18. Remedies

18.1 Since registrants are not a party to the action, a recommended remedy cannot take the form of deleting, transferring or suspending registrations (except to the extent registrants have been shown to be officers, directors, agents, employees, or entities under common control with a registry operator).

18.2 Recommended remedies will not include monetary damages or sanctions to be paid to any party other than fees awarded pursuant to section 14.

18.3 The Expert Panel may recommend a variety of graduated enforcement tools against the registry operator if it the Expert Panel determines that the registry operator is liable under this Trademark PDDRP, including:

18.3.1 Remedial measures for the registry to employ to ensure against allowing future infringing registrations, which may be in addition to what is required under the registry agreement, except that the remedial measures shall not:

(a) Require the Registry Operator to monitor registrations not related to the names at issue in the PDDRP proceeding; or

(b) Direct actions by the registry operator that are contrary to those required under the Registry Agreement;

18.3.2 Suspension of accepting new domain name registrations in the gTLD until such time as the violation(s) identified in the Determination is(are) cured or a set period of time;

OR,

18.3.3 In extraordinary circumstances where the registry operator acted with malice, providing for the termination of a Registry Agreement.

18.4 In making its recommendation of the appropriate remedy, the Expert Panel will consider the ongoing harm to the Complainant, as well as the harm the remedies will create for other, unrelated, good faith domain name registrants operating within the gTLD.

18.5 The Expert Panel may also determine whether the Complaint was filed "without merit," and, if so, award the appropriate sanctions on a graduated scale, including:

18.5.1 Temporary bans from filing Complaints;

18.5.2 Imposition of costs of registry operator, including reasonable attorney fees; and

18.5.3 Permanent bans from filing Complaints after being banned temporarily.

18.6 Imposition of remedies shall be at the discretion of ICANN, but absent extraordinary circumstances, those remedies will be in line with the remedies recommended by the Expert Panel.

19. The Expert Panel Determination

19.1 The Provider and the Expert Panel will make reasonable efforts to ensure that the Expert Determination is issued within 45 days of the appointment of the Expert Panel and absent good cause, in no event later than 60 days after the appointment of the Expert Panel.

19.2 The Expert Panel will render a written Determination. The Expert Determination will state whether or not the Complaint is factually founded and provide the reasons for that Determination. The Expert Determination should be publicly available and searchable on the Provider's web site.

19.3 The Expert Determination may further include a recommendation of specific remedies. Costs and fees to the Provider, to the extent not already paid, will be paid within thirty (30) days of the Expert Panel's Determination.

19.4 The Expert Determination shall state which party is the prevailing party.

19.5 While the Expert Determination that a registry operator is liable under the standards of the Trademark PDDRP shall be taken into consideration, ICANN will have the authority to impose the remedies, if any, that ICANN deems appropriate given the circumstances of each matter.

20. Appeal of Expert Determination

20.1 Either party shall have a right to seek a de novo appeal of the Expert Determination of liability or recommended remedy based on the existing record within the Trademark PDDRP proceeding for a reasonable fee to cover the costs of the appeal.

20.2 An appeal must be filed with the Provider and served on all parties within 20 days after an Expert Determination is issued and a response to the appeal must be filed within 20 days after the appeal. Manner and calculation of service deadlines shall in consistent with those set forth in Section 4 above, “Communication and Time Limits.”

20.3 A three-member Appeal Panel is to be selected by the Provider, but no member of the Appeal Panel shall also have been an Expert Panel member.

20.4 The fees for an appeal in the first instance shall be borne by the appellant.

20.5 A limited right to introduce new admissible evidence that is material to the Determination will be allowed upon payment of an additional fee, provided the evidence clearly pre-dates the filing of the Complaint.

20.6 The Appeal Panel may request at its sole discretion, further statements or evidence from any party regardless of whether the evidence pre-dates the filing of the Complaint if the Appeal Panel determines such evidence is relevant.

20.7 The prevailing party shall be entitled to an award of costs of appeal.

20.8 The Providers rules and procedures for appeals, other than those stated above, shall apply.

21. Challenge of a Remedy

21.1 ICANN shall not implement a remedy for violation of the Trademark PDDRP for at least 20 days after the issuance of an Expert Determination, providing time for an appeal to be filed.

21.2 If an appeal is filed, ICANN shall stay its implementation of a remedy pending resolution of the appeal.

21.3 If ICANN decides to implement a remedy for violation of the Trademark PDDRP, ICANN will wait ten (10) business days (as observed in the location of its principal office) after notifying the registry operator of its decision. ICANN will then implement the decision unless it has received from the registry operator during that ten (10) business-day period official documentation that the registry operator has either: (a) commenced a lawsuit against the Complainant in a court of competent jurisdiction challenging the Expert Determination of liability against the registry operator, or (b) challenged the intended remedy by initiating dispute resolution under the provisions of its Registry Agreement. If ICANN receives such documentation within the ten (10) business day period, it will not seek to implement the remedy in furtherance of the Trademark PDDRP until it receives: (i) evidence of a resolution between the Complainant and the registry operator; (ii) evidence that registry operator’s lawsuit against Complainant has been dismissed or withdrawn; or (iii) a copy of an order from the dispute resolution provider selected pursuant to the Registry Agreement dismissing the dispute against ICANN whether by reason of agreement of the parties or upon determination of the merits.

21.4 The registry operator may challenge ICANN's imposition of a remedy imposed in furtherance of an Expert Determination that the registry operator is liable under the PDDRP, to the extent a challenge is warranted, by initiating dispute resolution under the provisions of its Registry Agreement. Any arbitration shall be determined in accordance with the parties' respective rights and duties under the Registry Agreement. Neither the Expert Determination nor the decision of ICANN to implement a remedy is intended to prejudice the registry operator in any way in the determination of the arbitration dispute. Any remedy involving a termination of the Registry Agreement must be according to the terms and conditions of the termination provision of the Registry Agreement.

21.5 Nothing herein shall be deemed to prohibit ICANN from imposing remedies at any time and of any nature it is otherwise entitled to impose for a registry operator's non-compliance with its Registry Agreement.

22. Availability of Court or Other Administrative Proceedings

22.1 The Trademark PDDRP is not intended as an exclusive procedure and does not preclude individuals from seeking remedies in courts of law, including, as applicable, review of an Expert Determination as to liability.

22.2 In those cases where a Party submits documented proof to the Provider that a Court action involving the same Parties, facts and circumstances as the Trademark PDDRP was instituted prior to the filing date of the Complaint in the Trademark PDDRP, the Provider shall suspend or terminate the Trademark PDDRP.

REGISTRY RESTRICTIONS DISPUTE RESOLUTION PROCEDURE (RRDRP)[1]
4 JUNE 2012

1. Parties to the Dispute

The parties to the dispute will be the harmed established institution and the gTLD registry operator. ICANN shall not be a party.

2. Applicable Rules

2.1 This procedure is intended to cover these dispute resolution proceedings generally. To the extent more than one RRDRP provider ("Provider") is selected to implement the RRDRP, each Provider may have additional rules and procedures that must be followed when filing a Complaint. The following are the general procedure to be followed by all Providers.

2.2 In any new community-based gTLD registry agreement, the registry operator shall be required to agree to participate in the RRDRP and be bound by the resulting Determinations.

3. Language

3.1 The language of all submissions and proceedings under the procedure will be English.

3.2 Parties may submit supporting evidence in their original language, provided and subject to the authority of the RRDRP Expert Panel to determine otherwise, that such evidence is accompanied by an English translation of all relevant text.

4. Communications and Time Limits

4.1 All communications with the Provider must be filed electronically.

4.2 For the purpose of determining the date of commencement of a time limit, a notice or other communication will be deemed to have been received on the day that it is transmitted to the appropriate contact person designated by the parties.

4.3 For the purpose of determining compliance with a time limit, a notice or other communication will be deemed to have been sent, made or transmitted on the day that it is dispatched.

---

[1] Initial complaints that a Registry has failed to comply with registration restrictions shall be processed through a Registry Restriction Problem Report System (RRPRS) using an online form similar to the Whois Data Problem Report System (WDPRS) at InterNIC.net. A nominal processing fee could serve to decrease frivolous complaints. The registry operator shall receive a copy of the complaint and will be required to take reasonable steps to investigate (and remedy if warranted) the reported non-compliance. The Complainant will have the option to escalate the complaint in accordance with this RRDRP, if the alleged non-compliance continues. Failure by the Registry to address the complaint to complainant's satisfaction does not itself give the complainant standing to file an RRDRP complaint.

4.4 For the purpose of calculating a period of time under this procedure, such period will begin to run on the day following the date of receipt of a notice or other communication.

4.5 All references to day limits shall be considered as calendar days unless otherwise specified.

5. Standing

5.1 The mandatory administrative proceeding will commence when a third-party complainant ("Complainant") has filed a Complaint with a Provider asserting that the Complainant is a harmed established institution as a result of the community-based gTLD registry operator not complying with the registration restrictions set out in the Registry Agreement.

5.2 Established institutions associated with defined communities are eligible to file a community objection. The "defined community" must be a community related to the gTLD string in the application that is the subject of the dispute. To qualify for standing for a community claim, the Complainant must prove both: it is an established institution, and has an ongoing relationship with a defined community that consists of a restricted population that the gTLD supports.

5.3 Complainants must have filed a claim through the Registry Restriction Problem Report System (RRPRS) to have standing to file an RRDRP.

5.4 The Panel will determine standing and the Expert Determination will include a statement of the Complainant's standing.

6. Standards

6.1 For a claim to be successful, the claims must prove that:

6.1.1 The community invoked by the objector is a defined community;

6.1.2 There is a strong association between the community invoked and the gTLD label or string;

6.1.3 The TLD operator violated the terms of the community-based restrictions in its agreement;

6.1.4 There is a measureable harm to the Complainant and the community named by the objector.

7. Complaint

7.1 Filing:

The Complaint will be filed electronically. Once the Administrative Review has been completed and the Provider deems the Complaint to be in compliance, the Provider will electronically serve the Complaint and serve a hard copy and fax notice on the registry operator consistent with the contact information listed in the Registry Agreement.

7.2 Content:

7.2.1 The name and contact information, including address, phone, and email address, of the Complainant, the registry operator and, to the best of Complainant's knowledge, the name and address of the current owner of the registration.

7.2.2 The name and contact information, including address, phone, and email address of any person authorized to act on behalf of Complainant.

7.2.3 A statement of the nature of the dispute, which must include:

7.2.3.1 The particular registration restrictions in the Registry Agreement with which the registry operator is failing to comply; and

7.2.3.2 A detailed explanation of how the registry operator's failure to comply with the identified registration restrictions has caused harm to the complainant.

7.2.4 A statement that the proceedings are not being brought for any improper purpose.

7.2.5 A statement that the Complainant has filed a claim through the RRPRS and that the RRPRS process has concluded.

7.2.6 A statement that Complainant has not filed a Trademark Post-Delegation Dispute Resolution Procedure (PDDRP) complaint relating to the same or similar facts or circumstances.

7.3 Complaints will be limited to 5,000 words and 20 pages, excluding attachments, unless the Provider determines that additional material is necessary.

7.4 Any supporting documents should be filed with the Complaint.

7.5 At the same time the Complaint is filed, the Complainant will pay a filing fee in the amount set in accordance with the applicable Provider rules. In the event that the filing fee is not paid within 10 days of the receipt of the Complaint by the Provider, the Complaint will be dismissed without prejudice to the Complainant to file another complaint.

8. Administrative Review of the Complaint

8.1 All Complaints will be reviewed within five (5) business days of submission by panelists designated by the applicable Provider to determine whether the Complainant has complied with the procedural rules.

8.2 If the Provider finds that the Complaint complies with procedural rules, the Complaint will be deemed filed, and the proceedings will continue. If the Provider finds that the Complaint does not comply with procedural rules, it will electronically notify the Complainant of such non-compliance and provide the Complainant five (5) business days to submit an amended Complaint. If the Provider does not receive an amended Complaint within the five (5) business days provided, it will dismiss the Complaint and close the proceedings without prejudice to the Complainant's submission of a new Complaint that complies with procedural rules. Filing fees will not be refunded if the Complaint is deemed not in compliance.

8.3 If deemed compliant, the Provider will electronically serve the Complaint on the registry operator and serve a paper notice on the registry operator that is the subject of the Complaint consistent with the contact information listed in the Registry Agreement.

9. Response to the Complaint

9.1 The registry operator must file a response to each Complaint within thirty (30) days of service the Complaint.

9.2 The Response will comply with the rules for filing of a Complaint and will contain the names and contact information for the registry operator, as well as a point by point response to the statements made in the Complaint.

9.3 The Response must be electronically filed with the Provider and the Provider must serve it upon the Complainant in electronic form with a hard-copy notice that it has been served.

9.4 Service of the Response will be deemed effective, and the time will start to run for a Reply, upon electronic transmission of the Response.

9.5 If the registry operator believes the Complaint is without merit, it will affirmatively plead in it Response the specific grounds for the claim.

9.6 At the same time the Response is filed, the registry operator will pay a filing fee in the amount set in accordance with the applicable Provider rules. In the event that the filing fee is not paid within ten (10) days of the receipt of the Response by the Provider, the Response will be deemed improper and not considered in the proceedings, but the matter will proceed to Determination.

10 Reply

10.1 The Complainant is permitted ten (10) days from Service of the Response to submit a Reply addressing the statements made in the Response showing why the Complaint is not "without merit." A Reply may not introduce new facts or evidence into the record, but shall only be used to address statements made in the Response. Any new facts or evidence introduced in a Response shall be disregarded by the Expert Panel.

10.2 Once the Complaint, Response and Reply (as necessary) are filed and served, a Panel will be appointed and provided with all submissions.

11. Default

11.1 If the registry operator fails to respond to the Complaint, it will be deemed to be in default.

11.2 Limited rights to set aside the finding of default will be established by the Provider, but in no event will it be permitted absent a showing of good cause to set aside the finding of Default.

11.3 The Provider shall provide Notice of Default via email to the Complainant and registry operator.

11.4 All Default cases shall proceed to Expert Determination on the merits.

12. Expert Panel

12.1 The Provider shall select and appoint a single-member Expert Panel within (21) days after receiving the Reply, or if no Reply is filed, within 21 days after the Reply was due to be filed.

12.2 The Provider will appoint a one-person Expert Panel unless any party requests a three-member Expert Panel.

12.3 In the case where either party requests a three-member Expert Panel, each party (or each side of the dispute if a matter has been consolidated) shall select an Expert and the two selected Experts shall select the third Expert Panel member. Such selection shall be made pursuant to the Provider's rules or procedures. RRDRP panelists within a Provider shall be rotated to the extent feasible.

12.4 Expert Panel members must be independent of the parties to the post-delegation challenge. Each Provider will follow its adopted procedures for requiring such independence, including procedures for challenging and replacing an Expert for lack of independence.

13. Costs

13.1 The Provider will estimate the costs for the proceedings that it administers under this procedure in accordance with the applicable Provider Rules. Such costs will cover the administrative fees, including the Filing and Response Fee, of the Provider, and the Expert Panel fees, and are intended to be reasonable.

13.2 The Complainant shall be required to pay the Filing fee as set forth above in the "Complaint" section, and shall be required to submit the full amount of the other Provider-estimated administrative fees, including the Response Fee, and the Expert Panel fees at the outset of the proceedings. Fifty percent of that full amount shall be in cash (or cash equivalent) to cover the Complainant's share of the proceedings and the other 50% shall be in either cash (or cash equivalent), or in bond, to cover the registry operator's share if the registry operator prevails.

13.3 If the Panel declares the Complainant to be the prevailing party, the registry operator is required to reimburse Complainant for all Panel and Provider fees incurred, including the Filing Fee. Failure to do shall be deemed a violation of the RRDRP and a breach of the Registry Agreement, subject to remedies available under the Agreement up to and including termination.

13.4 If the Panel declares the registry operator to be the prevailing party, the Provider shall reimburse the registry operator for its Response Fee.

14. Discovery/Evidence

14.1 In order to achieve the goal of resolving disputes rapidly and at a reasonable cost, discovery will generally not be permitted. In exceptional cases, the Expert Panel may require a party to provide additional evidence.

14.2 If permitted, discovery will be limited to that for which each Party has a substantial need.

14.3 Without a specific request from the Parties, but only in extraordinary circumstances, the Expert Panel may request that the Provider appoint experts to be paid for by the Parties, request live or written witness testimony, or request limited exchange of documents.

15. Hearings

15.1 Disputes under this RRDRP will usually be resolved without a hearing.

15.2 The Expert Panel may decide on its own initiative, or at the request of a party, to hold a hearing. However, the presumption is that the Expert Panel will render Determinations based on written submissions and without a hearing.

15.3 If a request for a hearing is granted, videoconferences or teleconferences should be used if at all possible. If not possible, then the Expert Panel will select a place for hearing if the parties cannot agree.

15.4 Hearings should last no more than one day, except in the most exceptional circumstances.

15.5 If the Expert Panel grants one party’s request for a hearing, notwithstanding the other party’s opposition, the Expert Panel is encouraged to apportion the hearing costs to the requesting party as the Expert Panel deems appropriate.

15.6 All dispute resolution proceedings will be conducted in English.

16. Burden of Proof

The Complainant bears the burden of proving its claim; the burden should be by a preponderance of the evidence.

17. Recommended Remedies

17.1 Since registrants of domain names registered in violation of the agreement restriction are not a party to the action, a recommended remedy cannot take the form of deleting, transferring or suspending registrations that were made in violation of the agreement restrictions (except to the extent registrants have been shown to be officers, directors, agents, employees, or entities under common control with a registry operator).

17.2 Recommended remedies will not include monetary damages or sanctions to be paid to any party other than fees awarded pursuant to section 13.

17.3 The Expert Panel may recommend a variety of graduated enforcement tools against the registry operator if the Expert Panel determines that the registry operator allowed registrations outside the scope of its promised limitations, including:

17.3.1 Remedial measures, which may be in addition to requirements under the registry agreement, for the registry to employ to ensure against allowing future registrations that do not comply with community-based limitations; except that the remedial measures shall not:

(a) Require the registry operator to monitor registrations not related to the names at issue in the RRDRP proceeding, or

(b) direct actions by the registry operator that are contrary to those required under the registry agreement

17.3.2 Suspension of accepting new domain name registrations in the gTLD until such time as the violation(s) identified in the Determination is(are) cured or a set period of time;

OR,

17.3.3 In extraordinary circumstances where the registry operator acted with malice providing for the termination of a registry agreement.

17.3 In making its recommendation of the appropriate remedy, the Expert Panel will consider the ongoing harm to the Complainant, as well as the harm the remedies will create for other, unrelated, good faith domain name registrants operating within the gTLD.

18. The Expert Determination

18.1 The Provider and the Expert Panel will make reasonable efforts to ensure that the Expert Determination is rendered within 45 days of the appointment of the Expert Panel and absent good cause, in no event later than 60 days after the appointment of the Expert Panel.

18.2 The Expert Panel will render a written Determination. The Expert Determination will state whether or not the Complaint is factually founded and provide the reasons for its

Determination. The Expert Determination should be publicly available and searchable on the Provider's web site.

18.3 The Expert Determination may further include a recommendation of specific remedies. Costs and fees to the Provider, to the extent not already paid, will be paid within thirty (30) days of the Expert Determination.

18.4 The Expert Determination shall state which party is the prevailing party.

18.5 While the Expert Determination that a community-based restricted gTLD registry operator was not meeting its obligations to police the registration and use of domains within the applicable restrictions shall be considered, ICANN shall have the authority to impose the remedies ICANN deems appropriate, given the circumstances of each matter.

19. Appeal of Expert Determination

19.1 Either party shall have a right to seek a de novo appeal of the Expert Determination based on the existing record within the RRDRP proceeding for a reasonable fee to cover the costs of the appeal.

19.2 An appeal must be filed with the Provider and served on all parties within 20 days after an Expert Determination is issued and a response to the appeal must be filed within 20 days after the appeal. Manner and calculation of service deadlines shall in consistent with those set forth in Section 4 above, "Communication and Time Limits."

19.3 A three-member Appeal Panel is to be selected by the Provider, but no member of the Appeal Panel shall also have been an Expert Panel member.

19.4 The fees for an appeal in the first instance shall be borne by the appellant.

19.5 A limited right to introduce new admissible evidence that is material to the Determination will be allowed upon payment of an additional fee, provided the evidence clearly pre-dates the filing of the Complaint.

19.6 The Appeal Panel may request at its sole discretion, further statements or evidence from any party regardless of whether the evidence pre-dates the filing of the Complaint if the Appeal Panel determines such evidence is relevant.

19.7 The prevailing party shall be entitled to an award of costs of appeal.

19.8 The Providers rules and procedures for appeals, other than those stated above, shall apply.

20. Breach

20.1 If the Expert determines that the registry operator is in breach, ICANN will then proceed to notify the registry operator that it is in breach. The registry operator will be given the opportunity to cure the breach as called for in the Registry Agreement.

20.2 If registry operator fails to cure the breach then both parties are entitled to utilize the options available to them under the registry agreement, and ICANN may consider the recommended remedies set forth in the Expert Determination when taking action.

20.3 Nothing herein shall be deemed to prohibit ICANN from imposing remedies at any time and of any nature it is otherwise entitled to impose for a registry operator's non-compliance with its Registry Agreement.

21. Availability of Court or Other Administrative Proceedings

21.1 The RRDRP is not intended as an exclusive procedure and does not preclude individuals from seeking remedies in courts of law, including, as applicable, review of an Expert Determination as to liability.

21.2 The parties are encouraged, but not required to participate in informal negotiations and/or mediation at any time throughout the dispute resolution process but the conduct of any such settlement negotiation is not, standing alone, a reason to suspend any deadline under the proceedings.

ICANN

gTLD Applicant Guidebook

(v. 2012-06-04)

Module 6

4 June 2012

Module 6

Top-Level Domain Application – Terms and Conditions

By submitting this application through ICANN's online interface for a generic Top Level Domain (gTLD) (this application), applicant (including all parent companies, subsidiaries, affiliates, agents, contractors, employees and any and all others acting on its behalf) agrees to the following terms and conditions (these terms and conditions) without modification. Applicant understands and agrees that these terms and conditions are binding on applicant and are a material part of this application.

1. Applicant warrants that the statements and representations contained in the application (including any documents submitted and oral statements made and confirmed in writing in connection with the application) are true and accurate and complete in all material respects, and that ICANN may rely on those statements and representations fully in evaluating this application. Applicant acknowledges that any material misstatement or misrepresentation (or omission of material information) may cause ICANN and the evaluators to reject the application without a refund of any fees paid by Applicant. Applicant agrees to notify ICANN in writing of any change in circumstances that would render any information provided in the application false or misleading.

2. Applicant warrants that it has the requisite organizational power and authority to make this application on behalf of applicant, and is able to make all agreements, representations, waivers, and understandings stated in these terms and conditions and to enter into the form of registry agreement as posted with these terms and conditions.

3. Applicant acknowledges and agrees that ICANN has the right to determine not to proceed with any and all applications for new gTLDs, and that there is no assurance that any additional gTLDs will be created. The decision to review, consider and approve an application to establish one or more

gTLDs and to delegate new gTLDs after such approval is entirely at ICANN's discretion. ICANN reserves the right to reject any application that ICANN is prohibited from considering under applicable law or policy, in which case any fees submitted in connection with such application will be returned to the applicant.

4. Applicant agrees to pay all fees that are associated with this application. These fees include the evaluation fee (which is to be paid in conjunction with the submission of this application), and any fees associated with the progress of the application to the extended evaluation stages of the review and consideration process with respect to the application, including any and all fees as may be required in conjunction with the dispute resolution process as set forth in the application. Applicant acknowledges that the initial fee due upon submission of the application is only to obtain consideration of an application. ICANN makes no assurances that an application will be approved or will result in the delegation of a gTLD proposed in an application. Applicant acknowledges that if it fails to pay fees within the designated time period at any stage of the application review and consideration process, applicant will forfeit any fees paid up to that point and the application will be cancelled. Except as expressly provided in this Application Guidebook, ICANN is not obligated to reimburse an applicant for or to return any fees paid to ICANN in connection with the application process.

5. Applicant shall indemnify, defend, and hold harmless ICANN (including its affiliates, subsidiaries, directors, officers, employees, consultants, evaluators, and agents, collectively the ICANN Affiliated Parties) from and against any and all third-party claims, damages, liabilities, costs, and expenses, including legal fees and expenses, arising out of or relating to: (a) ICANN's or an ICANN Affiliated Party's consideration of the application, and any approval rejection or withdrawal of the application; and/or (b) ICANN's or an ICANN Affiliated Party's reliance on information provided by applicant in the application.

6. Applicant hereby releases ICANN and the ICANN Affiliated Parties from any and all claims by applicant that arise out of, are based upon, or are in any way related to, any action, or failure to act, by ICANN or any ICANN Affiliated Party in connection with ICANN's or an ICANN Affiliated Party's review of this application, investigation or verification, any characterization or description of applicant or the information in this application, any withdrawal of this application or the decision by ICANN to recommend, or not to recommend, the approval of applicant's gTLD application. APPLICANT AGREES NOT TO CHALLENGE, IN COURT OR IN ANY OTHER JUDICIAL FORA, ANY FINAL DECISION MADE BY ICANN WITH RESPECT TO THE APPLICATION, AND IRREVOCABLY WAIVES ANY RIGHT TO SUE OR PROCEED IN COURT OR ANY OTHER JUDICIAL FOR A ON THE BASIS OF ANY OTHER LEGAL CLAIM AGAINST ICANN AND ICANN AFFILIATED PARTIES WITH RESPECT TO THE APPLICATION. APPLICANT ACKNOWLEDGES AND ACCEPTS THAT APPLICANT'S NONENTITLEMENT TO PURSUE ANY RIGHTS, REMEDIES, OR LEGAL CLAIMS AGAINST ICANN OR THE ICANN AFFILIATED PARTIES IN COURT OR ANY OTHER JUDICIAL FORA WITH RESPECT TO THE APPLICATION SHALL MEAN THAT APPLICANT WILL FOREGO ANY RECOVERY OF ANY APPLICATION FEES, MONIES INVESTED IN BUSINESS INFRASTRUCTURE OR OTHER STARTUP COSTS AND ANY AND ALL PROFITS THAT APPLICANT MAY EXPECT TO REALIZE FROM THE OPERATION OF A REGISTRY FOR THE TLD; PROVIDED, THAT APPLICANT MAY UTILIZE ANY ACCOUNTABILITY MECHANISM SET FORTH IN ICANN'S BYLAWS FOR PURPOSES OF CHALLENGING ANY FINAL DECISION MADE BY ICANN WITH RESPECT TO THE APPLICATION. APPLICANT ACKNOWLEDGES THAT ANY ICANN AFFILIATED PARTY IS AN EXPRESS THIRD PARTY BENEFICIARY OF THIS SECTION 6 AND MAY ENFORCE EACH PROVISION OF THIS SECTION 6 AGAINST APPLICANT.

7. Applicant hereby authorizes ICANN to publish on ICANN's website, and to disclose or publicize in any other manner, any materials submitted to, or obtained or generated by, ICANN and the ICANN Affiliated Parties in connection with the application, including evaluations, analyses and any other

materials prepared in connection with the evaluation of the application; provided, however, that information will not be disclosed or published to the extent that this Applicant Guidebook expressly states that such information will be kept confidential, except as required by law or judicial process. Except for information afforded confidential treatment, applicant understands and acknowledges that ICANN does not and will not keep the remaining portion of the application or materials submitted with the application confidential.

8. Applicant certifies that it has obtained permission for the posting of any personally identifying information included in this application or materials submitted with this application. Applicant acknowledges that the information that ICANN posts may remain in the public domain in perpetuity, at ICANN's discretion. Applicant acknowledges that ICANN will handle personal information collected in accordance with its gTLD Program privacy statement http://newgtlds.icann.org/en/applicants/agb/program-privacy, which is incorporated herein by this reference. If requested by ICANN, Applicant will be required to obtain and deliver to ICANN and ICANN's background screening vendor any consents or agreements of the entities and/or individuals named in questions 1-11 of the application form necessary to conduct these background screening activities. In addition, Applicant acknowledges that to allow ICANN to conduct thorough background screening investigations:

    a. Applicant may be required to provide documented consent for release of records to ICANN by organizations or government agencies;

    b. Applicant may be required to obtain specific government records directly and supply those records to ICANN for review;

    c. Additional identifying information may be required to resolve questions of identity of individuals within the applicant organization;

d. Applicant may be requested to supply certain information in the original language as well as in English.

9. Applicant gives ICANN permission to use applicant's name in ICANN's public announcements (including informational web pages) relating to Applicant's application and any action taken by ICANN related thereto.

10. Applicant understands and agrees that it will acquire rights in connection with a gTLD only in the event that it enters into a registry agreement with ICANN, and that applicant's rights in connection with such gTLD will be limited to those expressly stated in the registry agreement. In the event ICANN agrees to recommend the approval of the application for applicant's proposed gTLD, applicant agrees to enter into the registry agreement with ICANN in the form published in connection with the application materials. (Note: ICANN reserves the right to make reasonable updates and changes to this proposed draft agreement during the course of the application process, including as the possible result of new policies that might be adopted during the course of the application process). Applicant may not resell, assign, or transfer any of applicant's rights or obligations in connection with the application.

11. Applicant authorizes ICANN to:

a. Contact any person, group, or entity to request, obtain, and discuss any documentation or other information that, in ICANN's sole judgment, may be pertinent to the application;

b. Consult with persons of ICANN's choosing regarding the information in the application or otherwise coming into ICANN's possession, provided, however, that ICANN will use reasonable efforts to ensure that such persons maintain the confidentiality of information in the application that this Applicant Guidebook expressly states will be kept confidential.

12. For the convenience of applicants around the world, the application materials published by ICANN in the English language have been translated into certain other languages frequently used around the world. Applicant recognizes that the English language version of the application materials (of which these terms and conditions is a part) is the version that binds the parties, that such translations are non-official interpretations and may not be relied upon as accurate in all respects, and that in the event of any conflict between the translated versions of the application materials and the English language version, the English language version controls.

13. Applicant understands that ICANN has a long-standing relationship with Jones Day, an international law firm, and that ICANN intends to continue to be represented by Jones Day throughout the application process and the resulting delegation of TLDs. ICANN does not know whether any particular applicant is or is not a client of Jones Day. To the extent that Applicant is a Jones Day client, by submitting this application, Applicant agrees to execute a waiver permitting Jones Day to represent ICANN adverse to Applicant in the matter. Applicant further agrees that by submitting its Application, Applicant is agreeing to execute waivers or take similar reasonable actions to permit other law and consulting firms retained by ICANN in connection with the review and evaluation of its application to represent ICANN adverse to Applicant in the matter.

14. ICANN reserves the right to make reasonable updates and changes to this applicant guidebook and to the application process, including the process for withdrawal of applications, at any time by posting notice of such updates and changes to the ICANN website, including as the possible result of new policies that might be adopted or advice to ICANN from ICANN advisory committees during the course of the application process. Applicant acknowledges that ICANN may make such updates and changes and agrees that its application will be subject to any such updates and changes. In the event that Applicant has completed and submitted its application prior to

such updates or changes and Applicant can demonstrate to ICANN that compliance with such updates or changes would present a material hardship to Applicant, then ICANN will work with Applicant in good faith to attempt to make reasonable accommodations in order to mitigate any negative consequences for Applicant to the extent possible consistent with ICANN's mission to ensure the stable and secure operation of the Internet's unique identifier systems.

ICANN Resolutions » 2008-06-26 - GNSO Recommendations on New gTLDs

Important note: The Board Resolutions are as reported in the Board Meeting Transcripts, Minutes & Resolutions portion of ICANN's website. Only the words contained in the Resolutions themselves represent the official acts of the Board. The explanatory text provided through this database (including the summary, implementation actions, identification of related resolutions, and additional information) is an interpretation or an explanation that has no official authority and does not represent the purpose behind the Board actions, nor does any explanations or interpretations modify or override the Resolutions themselves. Resolutions can only be modified through further act of the ICANN Board.

2008-06-26 - GNSO Recommendations on New gTLDs

Resolution of the ICANN Board

Topic:

GNSO recommendations on New gTLDs

Summary:

Board adopts GNSO policy recommendations on new gTLDs and directs staff to complete detailed implementation plan in consultation with the community, subject to final approval before the New gTLD Program is launched.

Category:

gTLDs

Meeting Date:

Thu, 26 Jun 2008

Resolution Number:

2008.06.26.02, 2008.06.26.03

URL for Resolution:

http://www.icann.org/en/minutes/resolutions-26jun08.htm

Status:

Complete

Implementation Actions:

- Publish first Applicant Guidebook draft for public comment and discussion.
    - Responsible entity: Cross-departmental team for policy implementation
    - Due date: None provided
    - Completion date: 23 October 2008
- Publish Applicant Guidebook draft v2 for public comment and discussion.
    - Responsible entity: Cross-departmental team for policy implementation
    - Due date: None provided
    - Completion date: 19 February 2009
- Publish updated Applicant Guidebook excerpts for public comment and discussion.
    - Responsible entity: Cross-departmental team for policy implementation
    - Due date: None provided
    - Completion date: 31 May 2009
- Attend global consultation on overarching issues / outreach events in New York, London, Hong Kong, and Abu Dhabi.
    - Responsible entity: Cross-departmental team for policy implementation
    - Due date: None provided
    - Completion date: 4 August 2009
- Publish Applicant Guidebook draft v3 for public comment and discussion.
    - Responsible entity: Cross-departmental team for policy implementation
    - Due date: None provided
    - Completion date: 4 October 2009
- Publish updated Applicant Guidebook excerpts for public comment and discussion.
    - Responsible entity: Cross-departmental team for policy implementation
    - Due date: None provided
    - Completion date: 15 February 2010

- Publish Applicant Guidebook draft v4 for public comment and discussion.
    - Responsible entity: Cross-departmental team for policy implementation
    - Due date: None provided
    - Completion date: 31 May 2010
- Publish proposed final version of Applicant Guidebook for public comment, discussion, and possible adoption.
    - Responsible entity: Cross-departmental team for policy implementation
    - Due date: None provided
    - Completion date: 12 November 2010

Resolution Text:

Whereas, the GNSO initiated a policy development process on the introduction of New gTLDs in December 2005. <http://gnso.icann.org/issues/new-gtlds/>

Whereas, the GNSO Committee on the Introduction of New gTLDs addressed a range of difficult technical, operational, legal, economic, and policy questions, and facilitated widespread participation and public comment throughout the process.

Whereas, the GNSO successfully completed its policy development process on the Introduction of New gTLDs and on 7 September 2007, and achieved a Supermajority vote on its 19 policy recommendations. <http://gnso.icann.org/meetings/minutes-gnso-06sep07.shtml>

Whereas, the Board instructed staff to review the GNSO recommendations and determine whether they were capable of implementation.

Whereas, staff has engaged international technical, operational and legal expertise to provide counsel on details to support the implementation of the Policy recommendations and as a result, ICANN cross-functional teams have developed implementation details in support of the GNSO's policy recommendations, and have concluded that the recommendations are capable of implementation.

Whereas, staff has provided regular updates to the community and the Board on the implementation plan. <http://icann.org/topics/new-gtld-program.htm>

Whereas, consultation with the DNS technical community has led to the conclusion that there is not currently any evidence to support establishing a limit to how many TLDs can be inserted in the root based on technical stability concerns. <http://www.icann.org/topics/dns-stability-draft-

paper-06feb08.pdf>

Whereas, the Board recognizes that the process will need to be resilient to unforeseen circumstances.

Whereas, the Board has listened to the concerns about the recommendations that have been raised by the community, and will continue to take into account the advice of ICANN's supporting organizations and advisory committees in the implementation plan.

Resolved (2008.06.26.02), based on both the support of the community for New gTLDs and the advice of staff that the introduction of new gTLDs is capable of implementation, the Board adopts the GNSO policy recommendations for the introduction of new gTLDs <http://gnso.icann.org/issues/new-gtlds/pdp-dec05-fr-parta-08aug07.htm>.

Resolved (2008.06.26.03), the Board directs staff to continue to further develop and complete its detailed implementation plan, continue communication with the community on such work, and provide the Board with a final version of the implementation proposals for the board and community to approve before the new gTLD introduction process is launched.

Other Related Resolutions:

- Resolutions 06.22, 06.23, and 06.24 authorize ICANN Staff to post "Notice of Intent to Advance Implementation of New gTLD Process"; request GNSO to complete initial report on new gTLDs at or before ICANN's next public meeting in Marrakech, Morocco:http://www.icann.org/en/minutes/minutes-31mar06.htm.
- Resolution 06.49 and 06.50 call for GNSO to complete PDP on new gTLDs (requesting GNSO to publish its report for public comment by November 2006) and call for Community to comment on the reports published by the New TLDs Committee:http://www.icann.org/en/minutes/minutes-30jun06.htm.
- Resolution 07.93, 07.94, and 07.95 acknowledge the GNSO Committee's work and ask staff to continue working on implementation analysis of policy recommendations and report to Board:http://www.icann.org/en/minutes/resolutions-02nov07.htm.
- Resolution 2008.02.15.06 directs staff to continue consultation with Board, GNSO, and community on implementation issues and progress concerning GNSO policy recommendations on new gTLDs:http://www.icann.org/en/minutes/resolutions-15feb08.htm.
- Other resolutions TBD.

Additional Information:

- Information on the New gTLD Program, available at:http://www.icann.org/en/topics/new-gtld-program.htm.
- GNSO Policy Work on new gTLDs, available at:http://gnso.icann.org/issues/new-gtlds/.
- Recommendations on Policy Development for introduction of new gTLDs, available at: http://gnso.icann.org/issues/new-gtlds/goel-mehta-01feb06.pdf.
- A copy of the Final Report regarding Introduction of New Generic Top-Level Domains is available at: http://gnso.icann.org/issues/new-gtlds/pdp-dec05-fr-parta-08aug07.htm.
- The resolution does not address funding for the items identified therein.

ICANN Generic Names Supporting Organisation

Final Report

Introduction of New Generic Top-Level Domains

8 August 2007

Part A Final Report

Introduction of New Generic Top-Level Domains

ABSTRACT

This is the Generic Names Supporting Organization's Final Report on the Introduction of New Top-Level Domains. The Report is in two parts. Part A contains the substantive discussion of the Principles, Policy Recommendations and Implementation Guidelines and Part B contains a range of supplementary materials that have been used by the Committee during the course of the Policy Development Process.

The GNSO Committee on New Top-Level Domains consisted of all GNSO Council members. All meetings were open to a wide range of interested stakeholders and observers. A set of participation data is found in Part B.

Many of the terms found here have specific meaning within the context of ICANN and new top-level domains discussion. A full glossary of terms is available in the Reference Material section at the end of Part A.

BACKGROUND

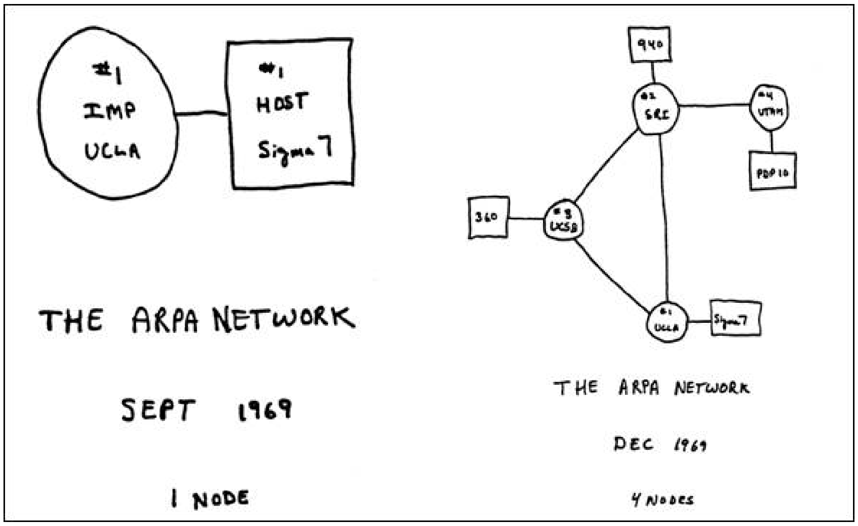
1. The Internet Corporation for Assigned Names and Numbers (ICANN) is responsible for the overall coordination of "the global Internet's system of unique identifiers" and ensuring the "stable and secure operation of the Internet's unique identifier systems. In particular, ICANN coordinates the "allocation and assignment of the three sets of unique identifiers for the Internet". These are "domain names"(forming a system called the DNS); Internet protocol (IP) addresses and autonomous system (AS) numbers and Protocol port and parameter numbers". ICANN is also responsible for the "operation and evolution of the DNS root name server system and policy development reasonably and appropriately related to these technical functions". These elements are all contained in ICANN's Mission and Core Values[1] in addition to provisions which enable policy development work that, once approved by the ICANN Board, become binding on the organization. The results of the policy development process found here relate to the introduction of new generic top-level domains.

2. This document is the *Final Report* of the Generic Names Supporting Organisation's (GNSO) Policy Development Process (PDP) that has been conducted using ICANN's Bylaws and policy development guidelines that relate to the work of the GNSO. This *Report* reflects a comprehensive examination of four Terms of Reference designed to establish a stable and ongoing process that facilitates the introduction of new top-level domains. The policy development process (PDP) is part of the Generic Names Supporting Organisation's (GNSO) mandate within the ICANN structure. However, close consultation with other ICANN Supporting Organisations and Advisory Committees has been an integral part of the process. The

consultations and negotiations have also included a wide range of interested stakeholders from within and outside the ICANN community[2].

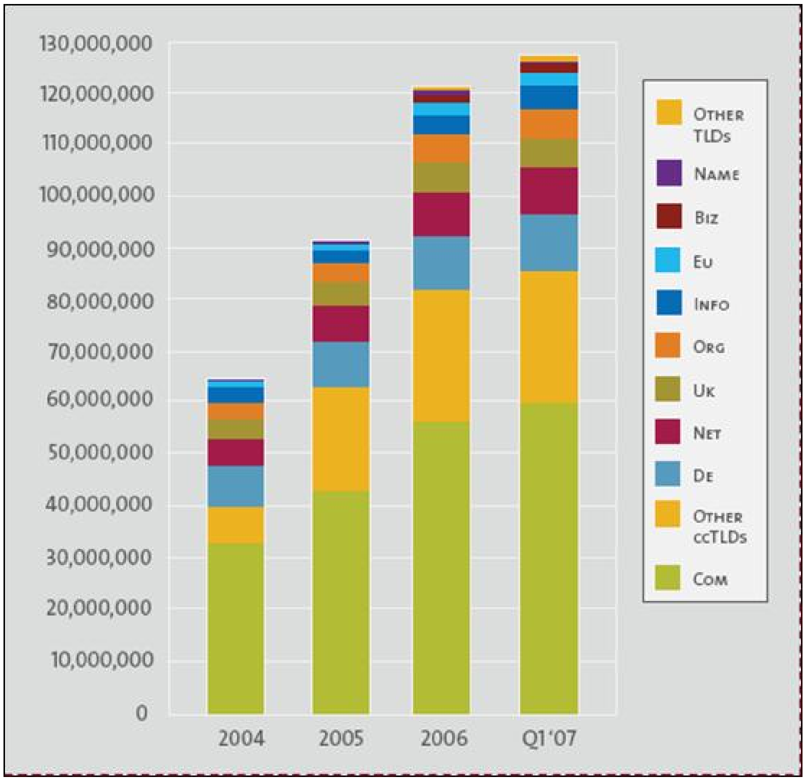
3. The *Final Report* is in two parts. This document is Part A and contains the full explanation of each of the Principles, Recommendations and Implementation Guidelines that the Committee has developed since December 2005[3]. Part B of the *Report* contains a wide range of supplementary materials which have been used in the policy development process including Constituency Impact Statements (CIS), a series of Working Group Reports on important sub-elements of the Committee's deliberations, a collection of external reference materials, and the procedural documentation of the policy development process[4].

4. The finalisation of the policy for the introduction of new top-level domains is part of a long series of events that have dramatically changed the nature of the Internet. The 1969 ARPANET diagram shows the initial design of a network that is now global in its reach and an integral part of many lives and businesses. The policy recommendations found here illustrate the complexity of the Internet of 2007 and, as a package, propose a system to add new top-level domains in an orderly and transparent way. The ICANN Staff Implementation Team, consisting of policy, operational and legal staff members, has worked closely with the Committee on all aspects of the policy development process[5]. The ICANN Board has received regular information and updates about the process and the substantive results of the Committee's work.



5. The majority of the early work on the introduction of new top-level domains is found in the ETF's Request for Comment series. RFC 1034[6] is a fundamental resource that explains key concepts of the naming system. Read in conjunction with RFC920[7], an historical picture emerges of how and why the domain name system hierarchy has been organised. Postel & Reynolds set out in their RFC920 introduction about the "General Purpose Domains" that ..."While the initial domain name "ARPA" arises from the history of the development of this system and environment, in the future most of the top level names will be very general categories like "government", "education", or "commercial". The motivation is to provide an organization name that is free of undesirable semantics."

6. In 2007, the Internet is multi-dimensional and its development is driven by widespread access to inexpensive communications technologies in many parts of the world. In addition, global travel is now relatively inexpensive, efficient and readily available to a diverse range of travellers. As a consequence, citizens no longer automatically associate themselves with countries but with international communities of linguistic, cultural or professional interests independent of physical location. Many people now exercise multiple citizenship rights, speak many different languages and quite often live far from where they were born or educated. The 2007 OECD *Factbook*[8] provides comprehensive statistics about the impact of migration on OECD member countries. In essence, many populations are fluid and changing due in part to easing labour movement restrictions but also because technology enables workers to live in one place and work in another relatively easily. As a result, companies and organizations are now global and operate across many geographic borders and jurisdictions. The following illustration[9] shows how rapidly the number of domain names under registration has increased and one could expect that trend to continue with the introduction of new top-level domains.



7. A key driver of change has been the introduction of competition in the registration of domain names through ICANN Accredited Registrars[10]. In June 2007, there were more than 800 accredited registrars who register names for end users with ongoing downward pressure on the prices end-users pay for domain name registration.

8. ICANN's work on the introduction of new top-level domains has been underway since 1999. By mid-1999, Working Group C[11] had quickly reached consensus on two issues, namely that "...ICANN should add new gTLDs to the root. The second is that ICANN should begin the deployment of new gTLDs with an initial rollout of six to ten new gTLDs, followed by an evaluation period". This work was undertaken throughout 2000 and saw the introduction of, for example, coop, .aero and .biz.

9. After an evaluation period, a further round of sponsored TLDs was introduced during 2003 and 2004 which included, amongst others, mobi and travel[12].

10. The July 2007 zone file survey statistics from www.registrarstats.com[13] shows that there are slightly more than 96,000,000 top level domains registered across a selection of seven top-level domains including .com, .net and info. Evidence from potential new applicants provides more impetus to implement a system that enables the ongoing introduction of new top level domains[14]. In addition, interest from Internet users who could use Internationalised Domain Names (DNs) in a wide variety of scripts beyond ASCII is growing rapidly.

11. To arrive at the full set of policy recommendations which are found here, the Committee considered the responses to a Call for Expert Papers issued at the beginning of the policy development process[15], and which was augmented by a full set of GNSO Constituency Statements[16]. These are all found in Part B of the *Final Report* and should be read in conjunction with this document. In addition, the Committee received detailed responses from the Implementation Team about proposed policy recommendations and the implementation of the recommendations package as an on-line application process that could be used by a wide array of potential applicants.

12. The Committee reviewed and analysed a wide variety of materials including Working Group C's findings, the evaluation reports from the 2003 & 2004 round of sponsored top-level domains and a full range of other historic materials[17].

13. In the past, a number of different approaches to new top level domains have been considered including the formulation of a structured taxonomy[18] of names, for example, auto, .books, .travel and music. The Committee has opted to enable potential applicants to self-select strings that are either the most appropriate for their customers or potentially the most marketable. It is expected that applicants will apply for targeted community strings such as .travel for the travel industry and .cat for the Catalan community as well as some generic strings. The Committee identified five key drivers for the introduction of new top-level domains.

(i) t is consistent with the reasons articulated in 1999 when the first proof-of-concept round was initiated

(ii) There are no technical impediments to the introduction of new top-level domains as evidenced by the two previous rounds

(iii) Expanding the domain name space to accommodate the introduction of both new ASCII and internationalised domain name (IDN) top-level domains will give end users more choice about the nature of their presence on the Internet. In addition, users will be able to use domain names in their language of choice.

(iv) There is demand for additional top-level domains as a business opportunity. The GNSO Committee expects that this business opportunity will stimulate competition at the registry service level which is consistent with ICANN's Core Value 6.

(v) No compelling reason has been articulated to not proceed with accepting applications for new top-level domains.

14. The remainder of this Report is structured around the four *Terms of Reference.* This includes an explanation of the Principles that have guided the work taking into account the Governmental Advisory Committee's March 2007 *Public Policy Principles for New gTLDs*[19]; a comprehensive set of Recommendations which has majority Committee support and a set of Implementation Guidelines which has been discussed in great detail with the ICANN Staff Implementation Team. The Implementation Team has released two *ICANN Staff Discussion Points* documents (in November 2006 and June 2007). Version 2 provides detailed analysis of the proposed recommendations from an implementation standpoint and provides suggestions about the way in which the implementation plan may come together. The ICANN Board will make the final decision about the actual structure of the application and evaluation process.

15. In each of the sections below the Committee's recommendations are discussed in more detail with an explanation of the rationale for the decisions. The recommendations have been the subject of numerous public comment periods and intensive discussion across a range of stakeholders including ICANN's GNSO Constituencies, ICANN Supporting Organisations and Advisory Committees and members of the broader Internet-using public that is interested in ICANN's work[20]. In particular, detailed work has been conducted through the Internationalised Domain Names Working Group (IDN-WG)[21], the Reserved Names Working Group (RN-WG)[22] and the Protecting the Rights of Others Working Group (PRO-WG) [23]. The Working Group Reports are found in full in Part B of the *Final Report* along with the March 2007 GAC Public Policy Principles for New Top-Level Domains, Constituency Impact Statements. A minority statement from the NCUC about Recommendations 6 & 20 are found Annexes for this document along with individual comments from Nominating Committee appointee Ms Avri Doria.

SUMMARY -- PRINCIPLES, RECOMMENDATIONS & IMPLEMENTATION GUIDELINES

1. This section sets out, in table form, the set of Principles, proposed Policy Recommendations and Guidelines that the Committee has derived through its work. The addition of new gTLDs will be done in accordance with ICANN's primary mission which is to ensure the security and stability of the DNS and, in particular, the Internet's root server system[24].

2. The Principles are a combination of GNSO Committee priorities, ICANN staff implementation principles developed in tandem with the Committee and the March 2007 GAC Public Policy Principles on New Top-Level Domains. The Principles are supported by all GNSO Constituencies [25]

3. ICANN's Mission and Core Values were key reference points for the development of the Committee's Principles, Recommendations and Implementation Guidelines. These are referenced in the right-hand column of the tables below.

4. The Principles have support from all GNSO Constituencies.

	PRINCIPLES	**MISSION & CORE VALUES**
A	**New generic top-level domains (gTLDs) must be introduced in an orderly, timely and predictable way.**	**M1 & CV1 & 2, 4-10**
B	Some new generic top-level domains should be internationalised domain names (IDNs) subject to the approval of DNs being available in the root.	M1-3 & CV 1, 4 & 6
C	The reasons for introducing new top-level domains include that there is demand from potential applicants for new top-level domains in both ASCII and IDN formats. In addition the introduction of new top-level domain application process has the potential to promote competition in the provision of registry services, to add to consumer choice, market differentiation and geographical and service-provider diversity.	M3 & CV 4-10
D	A set of technical criteria must be used for assessing a new gTLD registry applicant to minimise the risk of harming the operational stability, security and global interoperability of the Internet.	M1-3 & CV 1
E	A set of capability criteria for a new gTLD registry applicant must be used to provide an assurance that an applicant has the capability to meets its obligations under the terms of ICANN's registry agreement.	M1-3 & CV 1
F	**A set of operational criteria must be set out in contractual conditions in the registry agreement to ensure compliance with ICANN policies.**	**M1-3 & CV 1**
G	**The string evaluation process must not infringe the applicant's freedom of expression rights that are protected under internationally recognized principles of law.**	

	RECOMMENDATIONS[26]	**MISSION & CORE VALUES**
1	**ICANN must implement a process that allows the introduction of new top-level domains.** **The evaluation and selection procedure for new gTLD registries should respect the principles of fairness, transparency and non-discrimination.** **All applicants for a new gTLD registry should therefore be evaluated against transparent and predictable criteria, fully available to the applicants prior to the initiation of the process. Normally, therefore, no subsequent additional selection criteria should be used in the selection process.**	**M1-3 & CV1-11**

2	Strings must not be confusingly similar to an existing top-level domain or a Reserved Name.	M1-3 & C1-6-11
3	Strings must not infringe the existing legal rights of others that are recognized or enforceable under generally accepted and internationally recognized principles of law. Examples of these legal rights that are internationally recognized include, but are not limited to, rights defined in the Paris Convention for the Protection of Industry Property (in particular trademark rights), the Universal Declaration of Human Rights (UDHR) and the International Covenant on Civil and Political Rights (ICCPR) (in particular freedom of expression rights).	CV3
4	Strings must not cause any technical instability.	M1-3 & CV 1
5	Strings must not be a Reserved Word[27].	M1-3 & CV 1 & 3
6*	**Strings must not be contrary to generally accepted legal norms relating to morality and public order that are recognized under international principles of law.** **Examples of such principles of law include, but are not limited to, the Universal Declaration of Human Rights (UDHR), the International Covenant on Civil and Political Rights (ICCPR), the Convention on the Elimination of All Forms of Discrimination Against Women (CEDAW) and the International Convention on the Elimination of All Forms of Racial Discrimination, intellectual property treaties administered by the World Intellectual Property Organisation (WIPO) and the WTO Agreement on Trade-Related Aspects of Intellectual Property (TRIPS).**	**M3 & CV 4**
7	**Applicants must be able to demonstrate their technical capability to run a registry operation for the purpose that the applicant sets out.**	**M1-3 & CV1**
8	Applicants must be able to demonstrate their financial and organisational operational capability.	M1-3 & CV1
9	**There must be a clear and pre-published application process using objective and measurable criteria.**	**M3 & CV6-9**
10	**There must be a base contract provided to applicants at the beginning of the application process.**	**CV7-9**
11	**[Replaced with Recommendation 20 and Implementation Guideline P and inserted into Term of Reference 3 Allocation Methods section]**	
12	**Dispute resolution and challenge processes must be established prior to the start of the process.**	**CV7-9**
13	Applications must initially be assessed in rounds until the scale of demand is clear.	**CV7-9**
14	The initial registry agreement term must be of a commercially reasonable length**.**	**CV5-9**
15	**There must be renewal expectancy.**	**CV5-9**
16	**Registries must apply existing Consensus Policies and adopt new Consensus Policies as they are approved.**	**CV5-9**
17	**A clear compliance and sanctions process must be set out in the base contract which could lead to contract termination.**	**M1 & CV1**
18	If an applicant offers an IDN service, then ICANN's DN guidelines[28] must be followed.	M1 & CV1
19	Registries must use only ICANN accredited registrars in registering domain names and may not discriminate among such accredited registrars.	M1 & CV1
20*	An application will be rejected if an expert panel determines that there is substantial opposition to it from a significant portion of the community to which the string may be explicitly or implicitly targeted.	

* The NCUC submitted Minority Statements on Recommendations 6 and 20. The remainder of the Recommendations have support from all GNSO Constituencies.

	IMPLEMENTATION GUIDELINES	**MISSION & CORE VALUES**
IG A	The application process will provide a pre-defined roadmap for applicants that encourages the submission of applications for new top-level domains.	CV 2, 5, 6, 8 & 9
IG B	Application fees will be designed to ensure that adequate resources exist to cover the total cost to administer the new gTLD process. Application fees may differ for applicants.	CV 5, 6, 8 & 9

IG C	ICANN will provide frequent communications with applicants and the public including comment forums.	CV 9 & 10
IG D	A first come first served processing schedule within the application round will be implemented and will continue for an ongoing process, if necessary. Applications will be time and date stamped on receipt.	CV 8-10
IG E	The application submission date will be at least four months after the issue of the Request for Proposal and ICANN will promote the opening of the application round.	CV 9 & 10
IG F*	**If there is contention for strings, applicants may[29]** **i) resolve contention between them within a pre-established timeframe** **ii) if there is no mutual agreement, a claim to support a community by one party will be a reason to award priority to that application. If there is no such claim, and no mutual agreement a process will be put in place to enable efficient resolution of contention and** **iii) the ICANN Board may be used to make a final decision, using advice from staff and expert panels.**	CV 7-10
IG H*	Where an applicant lays any claim that the TLD is intended to support a particular community such as a sponsored TLD, or any other TLD intended for a specified community, that claim will be taken on trust with the following exceptions: (i) the claim relates to a string that is also subject to another application and the claim to support a community is being used to gain priority for the application; and (ii) a formal objection process is initiated. Under these exceptions, Staff Evaluators will devise criteria and procedures to investigate the claim. Under exception (ii), an expert panel will apply the process, guidelines, and definitions set forth in IG P.	CV 7 - 10
IG H	External dispute providers will give decisions on objections.	CV 10
IG I	An applicant granted a TLD string must use it within a fixed timeframe which will be specified in the application process.	CV 10
IG J	The base contract should balance market certainty and flexibility for ICANN to accommodate a rapidly changing market place.	CV 4-10
IG K	ICANN should take a consistent approach to the establishment of registry fees.	CV 5
IG L	The use of personal data must be limited to the purpose for which it is collected.	CV 8
IG M	ICANN may establish a capacity building and support mechanism aiming at facilitating effective communication on important and technical Internet governance functions in a way that no longer requires all participants in the conversation to be able to read and write English[30].	CV 3 - 7
IG N	ICANN may put in place a fee reduction scheme for gTLD applicants from economies classified by the UN as least developed.	CV 3 - 7
IG O	ICANN may put in place systems that could provide information about the gTLD process in major languages other than English, for example, in the six working languages of the United Nations.	CV 8 -10
IG P*	The following process, definitions and guidelines refer to Recommendation 20. **Process** Opposition must be objection based. Determination will be made by a dispute resolution panel constituted for the purpose. The objector must provide verifiable evidence that it is an established institution of the community (perhaps like the RSTEP pool of panelists from which a small panel would be constituted for each objection). **Guidelines** The task of the panel is the determination of substantial opposition. a) **substantial** – in determining substantial the panel will assess the following: signification portion, community, explicitly targeting, implicitly targeting, established institution, formal existence, detriment b) **significant portion** – in determining significant portion the panel will assess the balance between the level of objection submitted by one or more established institutions and the level of support provided in the application from one or more established institutions. The panel will assess significance proportionate to the	

	explicit or implicit targeting. c) **community** – community should be interpreted broadly and will include, for example, an economic sector, a cultural community, or a linguistic community. t may be a closely related community which believes it is impacted. d) **explicitly targeting** – explicitly targeting means there is a description of the intended use of the TLD in the application. e) i**mplicitly targeting** – implicitly targeting means that the objector makes an assumption of targeting or that the objector believes there may be confusion by users over its intended use. f) **established institution** – an institution that has been in formal existence for at least 5 years. In exceptional cases, standing may be granted to an institution that has been in existence for fewer than 5 years. Exceptional circumstances include but are not limited to a re-organization, merger or an inherently younger community. The following ICANN organizations are defined as established institutions: GAC, ALAC, GNSO, ccNSO, ASO. g) **formal existence** – formal existence may be demonstrated by appropriate public registration, public historical evidence, validation by a government, intergovernmental organization, international treaty organization or similar. **h) detriment** – the objector must provide sufficient evidence to allow the panel to determine that there would be a likelihood of detriment to the rights or legitimate interests of the community or to users more widely.	
IG Q	ICANN staff will provide an automatic reply to all those who submit public comments that will explain the objection procedure.	
IG R	Once formal objections or disputes are accepted for review there will be a cooling off period to allow parties to resolve the dispute or objection before review by the panel is initiated.	

* The NCUC submitted Minority Statements on Implementation Guidelines F, H & P. The remainder of the Implementation Guidelines have support from all GNSO Constituencies.

1. This set of implementation guidelines is the result of detailed discussion, particularly with respect to the two *ICANN Staff Discussion Points*[31] documents that were prepared to facilitate consultation with the GNSO Committee about the implementation impacts of the proposed policy Recommendations. The Implementation Guidelines will be used to inform the final Implementation Plan which is approved by the ICANN Board

2. The *Discussion Points* documents contain draft flowcharts which have been developed by the Implementation Team and which will be updated, based on the final vote of the GNSO Council and the direction of the ICANN Board. The *Discussion Points* documents have been used in the ongoing internal implementation discussions that have focused on ensuring that draft recommendations proposed by the Committee are implementable in an efficient and transparent manner[32]. The flowchart setting out the proposed Contention Evaluation Process is a more detailed component within the Application Evaluation Process and will be amended to take into account the inputs from Recommendation 20 and its related Implementation Guidelines.

3. This policy development process has been designed to produce a systemised and ongoing mechanism for applicants to propose new top-level domains. The Request for Proposals (RFP) for the first round will include scheduling information for the subsequent rounds to occur within one year. After the first round of new applications, the application system will be evaluated by ICANN's TLDs Project Office to assess the effectiveness of the application system. Success metrics will be developed and any necessary adjustments made to the process for subsequent rounds.

4. The following sections set out in detail the explanation for the Committee's recommendations for each Term of Reference.

TERM OF REFERENCE ONE -- WHETHER TO INTRODUCE NEW TOP-LEVEL DOMAINS

1. **Recommendation 1 Discussion – All GNSO Constituencies supported the introduction of new top-level domains.**

2. The GNSO Committee was asked to address the question of whether to introduce new top-level domains. The Committee recommends that ICANN should implement a process that allows the introduction of new top level domains and that work should proceed to develop policies that will enable the introduction of new generic top-level domains, taking into account the recommendations found in the latter sections of the *Report* concerning Selection Criteria (Term of Reference 2), Allocation Methods (Term of Reference 3) and Policies for Contractual Conditions (Term of Reference 4).

3. ICANN's work on the introduction of new top-level domains has been ongoing since 1999. The early work included the 2000 Working Group C Report[33] that also asked the question of "whether there should be new TLDs". By mid-1999, the Working Group had quickly reached consensus on two issues, namely that "...ICANN should add new gTLDs to the root. The second is that ICANN should begin the deployment of new gTLDs with an initial rollout of six to ten new

gTLDs, followed by an evaluation period". This work was undertaken throughout 2000 and saw the introduction of, for example, coop, .aero and .biz.

4. After an evaluation period, a further round of sponsored TLDs was introduced during 2003 and 2004 which included, amongst others, mobi and travel.

5. In addressing Term of Reference One, the Committee arrived at its recommendation by reviewing and analysing a wide variety of materials including Working Group C's findings; the evaluation reports from the 2003-2004 round of sponsored top-level domains and full range of other historic materials which are posted athttp://gnso icann org/issues/new-gtlds//

6. In addition, the Committee considered the responses to a Call for Expert Papers issued at the beginning of the policy development process[34]. These papers augmented a full set of GNSO Constituency Statements[35] and a set of Constituency Impact Statements[36] that addressed specific elements of the Principles, Recommendations and Implementation Guidelines.

7. The Committee was asked, at its February 2007 Los Angeles meeting, to confirm its rationale for recommending that ICANN introduce new top-level domains. In summary, there are five threads which have emerged:

(i) t is consistent with the reasons articulated in 1999 when the first proof-of-concept round was initiated

(ii) There are no technical impediments to the introduction of new top-level domains as evidenced by the two previous rounds

(iii) It is hoped that expanding the domain name space to accommodate the introduction of both new ASCII and internationalised domain name (IDN) top-level domains will give end users more choice about the nature of their presence on the Internet. In addition, users will be able to use domain names in their language of choice.

(iv) In addition, the introduction of a new top-level domain application process has the potential to promote competition in the provision of registry services, and to add to consumer choice, market differentiation and geographic and service-provider diversity which is consistent with ICANN's Core Value 6.

(v) No compelling reason has been articulated to not proceed with accepting applications for new top-level domains.

8. Article X, Part 7, Section E of the GNSO's Policy Development Process requires the submission of "constituency impact statements" which reflect the potential implementation impact of policy recommendations. By 4 July 2007 all GNSO Constituencies had submitted Constituency Impact Statements (CIS) to the gtld-council mailing list[37]. Each of those statements is referred to throughout the next sections[38] and are found in full in Part B of the *Report*. The NCUC submitted Minority Statements on Recommendations 6 & 20 and on Implementation Guidelines F, H & P. These statements are found in full here in Annex A & C, respectively, as they relate specifically to the finalised text of those two recommendations. GNSO Committee Chair and Nominating Committee appointee Ms Avri Doria also submitted individual comments on the recommendation package. Her comments are found in Annex B here.

9. All Constituencies support the introduction of new TLDs particularly if the application process is transparent and objective. For example, the ISPCP said that, "...the ISPCP is highly supportive of the principles defined in this section, especially with regards to the statement in [principle A] (A): New generic top-level domains must be introduced in an orderly, timely and predictable way. Network operators and ISPs must ensure their customers do not encounter problems in addressing their emails, and in their web searching and access activities, since this can cause customer dissatisfaction and overload help-desk complaints. Hence this principle is a vital component of any addition sequence to the gTLD namespace. The various criteria as defined in D, E and F, are also of great importance in contributing to minimise the risk of moving forward with any new gTLDs, and our constituency urges ICANN to ensure they are scrupulously observed during the applications evaluation process". The Business Constituency's (BC) CIS said that "...If the outcome is the best possible there will be a beneficial impact on business users from: a reduction in the competitive concentration in the Registry sector; increased choice of domain names; lower fees for registration and ownership; increased opportunities for innovative on-line business models." The Registrar Constituency (RC) agreed with this view stating that "...new gTLDs present an opportunity to Registrars in the form of additional products and associated services to offer to its customers. However, that opportunity comes with the costs if implementing the new gTLDs as well as the efforts required to do the appropriate business analysis to determine which of the new gTLDs are appropriate for its particular business model."

10. The Registry Constituency (RyC) said that ".. Regarding increased competition, the RyC has consistently supported the introduction of new gTLDs because we believe that: there is a clear demand for new TLDs; competition creates more choices for potential registrants; introducing new TLDs with different purposes increases the public benefit; new gTLDS will result in creativity and differentiation in the domain name industry; the total market for all TLDs, new and old, will be expanded." In summary, the Committee recommended, "ICANN must implement a process that allows the introduction of new top-level domains. The evaluation and selection procedure for new gTLD registries should respect the principles of fairness, transparency and non-discrimination. All applicants for a new gTLD registry should therefore be evaluated against transparent and predictable criteria, fully available to the applicants prior to the initiation of the process. Normally, therefore, no subsequent additional selection criteria should be used in the selection process". Given that this recommendation has support from all Constituencies, the following sections set out the other Terms of Reference recommendations.

TERM OF REFERENCE -- SELECTION CRITERIA

1. **Recommendation 2 Discussion -- Strings must not be confusingly similar to an existing top-level domain.**

i) This recommendation has support from all the GNSO Constituencies. Ms Doria accepted the recommendation with the concern expressed below[39].

ii) The list of existing top-level domains is maintained by IANA and is listed in full on ICANN's website[40]. Naturally, as the application process enables the operation of new top-level domains this list will get much longer and the test more complex. The RyC, in its Impact Statement, said that "...This recommendation is especially important to the RyC. ... t is of prime concern for the RyC that the introduction of new gTLDs results in a ubiquitous experience for Internet users that minimizes user confusion. gTLD registries will be impacted operationally and financially if new gTLDs are introduced that create confusion with currently existing gTLD strings or with strings that are introduced in the future. There is a strong possibility of significant impact on gTLD registries if IDN versions of existing ASCII gTLDs are introduced by registries different than the ASCII gTLD registries. Not only could there be user confusion in both email and web applications, but dispute resolution processes could be greatly complicated." The ISPCP also stated that this recommendation was "especially important in the avoidance of any negative impact on network activities." The RC stated that ".. Registrars would likely be hesitant to offer confusingly similar gTLDs due to customer demand and support concerns. On the other hand, applying the concept too broadly would inhibit gTLD applicants and ultimately limit choice to Registrars and their customers".

iii) There are two other key concepts within this recommendation. The first is the issue of "confusingly similar" [41]and the second "likelihood of confusion". There is extensive experience within the Committee with respect to trademark law and the issues found below have been discussed at length, both within the Committee and amongst the Implementation Team.

iv) The Committee used a wide variety of existing law[42], international treaty agreements and covenants to arrive at a common understanding that strings should not be confusingly similar either to existing top-level domains like .com and net or to existing trademarks[43]. For example, the Committee considered the World Trade Organisation's TRIPS agreement, in particular Article 16 which discusses the rights which are conferred to a trademark owner [44] In particular, the Committee agreed upon an expectation that strings must avoid increasing opportunities for entities or individuals, who operate in bad faith and who wish to defraud consumers. The Committee also considered the Universal Declaration of Human Rights[45] and the International Covenant on Civil and Political Rights which address the "freedom of expression" element of the Committee's deliberations.

v) The Committee also benefited from the work of the Protecting the Rights of Others Working Group (PRO-WG). The PRO-WG presented its *Final Report*[46] to the Committee at the June 2007 San Juan meeting. The Committee agreed that the Working Group could develop some reference implementation guidelines on rights protection mechanisms that may inform potential new TLD applicants during the application process. A small ad-hoc group of interested volunteers are preparing those materials for consideration by the Council by mid-October 2007.

vi) The Committee had access to a wide range of differing approaches to rights holder protection mechanisms including the United Kingdom, the USA, Jordan, Egypt and Australia[47].

vii) In addition, the Committee referred to the 1883 *Paris Convention on the Protection of Industrial Property*[48]. t describes the notion of confusion and describes creating confusion as "to create confusion by any means whatever" {Article 10bis (3) (1} and, further, being "liable to mislead the public" {Article 10bis (3) (3)}. The treatment of confusingly similar is also contained in European Union law (currently covering twenty-seven countries) and is structured as follows. "...because of its identity with or similarity to.. there exists a likelihood of confusion on the part of the public...; the likelihood of confusion includes the likelihood of association..." {Article 4 (1) (b) of the 1988 EU Trade Mark directive 89/104/EEC}. Article 8 (1) (b) of the 1993 European Union Trade Mark regulation 40/94 is also relevant.

viii)In the United States, existing trade mark law requires applicants for trademark registration to state under penalty of perjury that "...to the best of the verifier's knowledge and belief, no other person has the right to use such mark in commerce either in the identical form thereof or in such near resemblance thereto as to be likely, when used on or in connection with the goods of such other person, to cause confusion, or to cause mistake, or to deceive..." which is contained in Section 1051 (3) (d) of the US Trademark Act 2005 (found athttp://www bitlaw com/source/15usc/1051 html.)[49]

ix) In Australia, the Australian Trade Marks Act 1995 Section 10 says that "...For the purposes of this Act, a trade mark is taken to be deceptively similar to another trade mark if it so nearly resembles that other trade mark that it is likely to deceive or cause confusion" (found athttp://www ipaustralia.gov au/resources/legislation_index shtml)

x) A number of different trademark offices provide guidance on how to interpret confusion. For example, the European Union Trade Mark Office provides guidance on how to interpret confusion. *"...confusion may be visual, phonetic or conceptual. A mere aural similarity may create a likelihood of confusion. A mere visual similarity may create a likelihood of confusion. Confusion is based on the fact that the relevant public does not tend to analyse a word in detail but pays more attention to the distinctive and dominant components. Similarities are more significant than dissimilarities. The visual comparison is based on an analysis of the number and sequence of the letters, the number of words and the structure of the signs. Further particularities may be of relevance, such as the existence of special letters or accents that may be perceived as an indication of a specific language. For words, the visual comparison coincides with the phonetic comparison unless in the relevant language the word is not pronounced as it is written. It should be assumed that the relevant public is either unfamiliar with that foreign language, or even if it understands the meaning in that foreign language, will still tend to pronounce it in accordance with the phonetic rules of their native language. The length of a name may influence the effect of differences. The shorter a name, the more easily the public is able to perceive all its single elements. Thus, small differences may frequently lead in short words to a different overall impression. In contrast, the public is less aware of differences between long names. The overall phonetic impression is particularly influenced by the number and sequence of syllables."* (found athttp://oami europa.eu/en/mark/marque/direc htm).

xi) An extract from the United Kingdom's Trade Mark Office's Examiner's Guidance Manual is useful in explaining further the Committee's approach to developing its Recommendation. *"For likelihood of confusion to exist, it must be probable, not merely possible that confusion will arise in the mind of the average consumer.*

Likelihood of association is not an alternative to likelihood of confusion, "but serves to define its scope". Mere association, in the sense that the later mark brings the earlier mark to mind is insufficient to find a likelihood of confusion, unless the average consumer, in bringing the earlier mark to mind, is led to expect the goods or services of both marks to be under the control of one single trade source. "The risk that the public might believe that the goods/services in question come from the same undertaking or, as the case may be, from economically-linked undertakings, constitutes a likelihood of confusion...". (found athttp://www patent gov.uk/tm/t-decisionmaking/t-law/t-law-manual.htm)

xii) The Committee also looked in detail at the existing provisions of ICANN's Registrar Accreditation Agreement, particularly Section 3.7.7 9[50] which says that "...The Registered Name Holder shall represent that, to the best of the Registered Name Holder's knowledge and belief, neither the registration of the Registered Name nor the manner in which it is directly or indirectly used infringes the legal rights of any third party."

xiii)The implications of the introduction of Internationalised Domain Names (IDNs) are, in the main, the same as for ASCII top-level domains. On 22 March 2007 the IDN-WG released its *Outcomes Report*[51] that the Working Group presented to the GNSO Committee. The Working Group's exploration of IDN-specific issues confirmed that the new TLD recommendations are valid for IDN TLDs. The full IDN WG Report is found in Part B of the*Report*.

xiv) The technical testing for IDNs at the top-level is not yet completed although strong progress is being made. Given this and the other work that is taking place around the introduction of IDNs at the top-level, there are some critical factors that may impede the immediate acceptance of new IDN TLD applications. The conditions under which those applications would be assessed would remain the same as for ASCII TLDs.

xv) Detailed work continues on the preparation of an Implementation Plan that reflects both the Principles and the Recommendations. The proposed Implementation Plan deals with a comprehensive range of potentially controversial (for whatever reason) string applications which balances the need for reasonable protection of existing legal rights and the capacity to innovate with new uses for top level domains that may be attractive to a wide range of users[52].

xvi) The draft Implementation Plan (included in the *Discussion Points* document), illustrates the flow of the application and evaluation process and includes a detailed dispute resolution and extended evaluation tracks designed to resolve objections to applicants or applications.

xvii) There is tension between those on the Committee who are concerned about the protection of existing TLD strings and those concerned with the protection of trademark and other rights as compared to those who wish, as far as possible, to preserve freedom of expression and creativity. The *Implementation Plan* sets out a series of tests to apply the recommendation during the application evaluation process.

2. **Recommendation 3 Discussion -- Strings must not infringe the existing legal rights of others that are recognized or enforceable under generally accepted and internationally recognized principles of law. Examples of these legal rights that are internationally recognized include, but are not limited to, rights defined in the Paris Convention for the Protection of Industry Property (in particular trademark rights), the Universal Declaration of Human Rights (UDHR) and the International Covenant on Civil and Political Rights (ICCPR) (in particular freedom of expression rights).**

i. This recommendation has support from all GNSO Constituencies. Ms Doria supported the recommendation with concern expressed below[53].

ii. This recommendation was discussed in detail in the lead up to the Committee's 7 June 2007 conference call and it was agreed that further work would be beneficial. That work was conducted through a series of teleconferences and email exchanges. The Committee decided to leave the recommendation text as it had been drafted and insert a new Principle G that reads "...The string evaluation process must not infringe the applicant's freedom of expression rights that are protected under internationally recognized principles of law."

iii. Prior to this, the Committee engaged in comprehensive discussion about this recommendation and took advice from a number of experts within the group[54]. The original text of the recommendation has been modified to recognise that an applicant would be bound by the laws of the country where they are located and an applicant may be bound by another country that has jurisdiction over them. In addition, the original formulation that included "freedom of speech" was modified to read the more generally applicable "freedom of expression".

iv. Before reaching agreement on the final text, the IPC and the NCUC, in their respective Constituency Impact Statements (CIS), had differing views. The NCUC argued that "...there is no recognition that trade marks (and other legal rights have legal limits and *defenses*." The IPC says "agreed [to the recommendation], and, as stated before, appropriate mechanisms must be in place to address conflicts that may arise between any proposed new string and the IP rights of others."

3. **Recommendation 4 Discussion -- Strings must not cause any technical instability.**

i. This recommendation is supported by all GNSO Constituencies and Ms Doria.

ii. It was agreed by the Committee that the string should not cause any technical issues that threatened the stability and security of the Internet.

iii. In its CIS, the ISPCP stated that ".. this is especially important in the avoidance of any negative impact on network activities...The ISPCP considers recommendations 7 and 8 to be fundamental. The technical, financial, organizational and operational capability of the applicant are the evaluators' instruments for preventing potential negative impact on a new string on the activities of our sector (and indeed of many other sectors)." The IPC also agreed that "technical and operational stability are imperative to any new gTLD introduction." The

RC said "...This is important to Registrars in that unstable registry and/or zone operations would have a serious and costly impact on its operations and customer service and support."

iv. The Security and Stability Advisory Committee (SSAC) has been involved in general discussions about new top level domains and will be consulted formally to confirm that the implementation of the recommendations will not cause any technical instability.

v. A reserved word list, which includes strings which are reserved for technical reasons, has been recommended by the RN-WG. This table is found in the section below.

4. **Recommendation 5 Discussion -- Strings must not be a Reserved Word.**[55]

i. This recommendation is supported by all GNSO Constituencies. Ms Doria supported the recommendation but expressed some concerns outlined in the footnote below.[56]

ii. The RN WG developed a definition of "reserved word" in the context of new TLDs which said ".. depending on the specific reserved name category as well as the type (ASCII or IDN), the reserved name requirements recommended may apply in any one or more of the following levels as indicated:

1. At the top level regarding gTLD string restrictions
2. At the second-level as contractual conditions
3. At the third-level as contractual conditions for any new gTLDs that offer domain name registrations at the third-level.

iii. The notion of "reserved words" has a specific meaning within the ICANN context. Each of the existing ICANN registry contracts has provisions within it that govern the use of reserved words. Some of these recommendations will become part of the contractual conditions for new registry operators.

iv. The Reserved Names Working Group (RN-WG) developed a series of recommendations across a broad spectrum of reserved words. The Working Group's *Final Report*[57] was reviewed and the recommendations updated by the Committee at ICANN's Puerto Rico meeting and, with respect to the recommendations relating to IDNs, with IDN experts. The final recommendations are included in the following table.

	Reserved Name Category	**Domain Name Level(s)**	**Recommendation**
1	ICANN & IANA	All ASCII	The names listed as ICANN and IANA names will be reserved at all levels.
2	ICANN & IANA	Top level, IDN	Any names that appear in the IDN evaluation facility[58] which consist exclusively of translations of 'example' or 'test' that appear in the document at http //www.icann org/topics/idn/idn-evaluation-plan-v2%209.pdf shall be reserved.
3	ICANN & IANA	2nd & 3rd levels, IDN	Any names that appear in the IDN evaluation facility which consist exclusively of translations of 'example' or 'test' that appear in the document at http //www.icann.org/topics/idn/idn-evaluation-plan-v2%209.pdf shall be reserved.
4	Symbols	All	We recommend that the current practice be maintained, so that no symbols other than the '-' [hyphen] be considered for use, with further allowance for any equivalent marks that may explicitly be made available in future revisions of the IDNA protocol.
5	Single and Two Character IDNs	IDNA-valid strings at all levels	Single and two-character U-labels on the top level and second level of a domain name should not be restricted in general. At the top level, requested strings should be analyzed on a case-by-case basis in the new gTLD process depending on the script and language used in order to determine whether the string should be granted for allocation in the DNS with particular caution applied to U-labels in Latin script (see Recommendation 10 below). Single and two character labels at the second level and the third level if applicable should be available for registration, provided they are consistent with the IDN Guidelines.
6	Single Letters	Top Level	We recommend reservation of single letters at the top level based on technical questions raised. If sufficient research at a later date demonstrates that the technical issues and concerns are addressed, the topic of releasing reservation status can be reconsidered.
7	Single Letters and Digits	2nd Level	In future gTLDS we recommend that single letters and single digits be available at the second (and third level if applicable).
8	Single and Two Digits	Top Level	A top-level label must not be a plausible component of an IPv4 or IPv6 address. (e g., .3, 99, .123, .1035, .0xAF, .1578234)
9	Single Letter, Single Digit Combinations	Top Level	Applications may be considered for single letter, single digit combinations at the top level in accordance with the terms set forth in the new gTLD process.

			Examples include .3F, A1, u7.
10	Two Letters	Top Level	We recommend that the current practice of allowing two letter names at the top level, only for ccTLDs, remains at this time.[59] Examples include .AU, .DE, .UK.
11	Any combination of Two Letters, Digits	2nd Level	Registries may propose release provided that measures to avoid confusion with any corresponding country codes are implemented.[60] Examples include ba.aero, ub.cat, 53.com, 3M com, e8.org.
12	Tagged Names	Top Level ASCII	In the absence of standardization activity and appropriate IANA registration, all labels with hyphens in both the third and fourth character positions (e.g., "bq--1k2n4h4b" or "xn--ndk061n") must be reserved at the top-level.[61]
13	N/A	Top Level IDN	For each IDN gTLD proposed, applicant must provide both the "ASCII compatible encoding" ("A-label") and the "Unicode display form" ("U-label")[62] For example: • If the Chinese word for 'Beijing' is proposed as a new gTLD, the applicant would be required to provide the A-label (xn--1lq90i) and the U-label (北京). • If the Japanese word for 'Tokyo' is proposed as a new gTLD, the applicant would be required to provide the A-label (xn--1lqs71d) and the U-label (東京).
14	Tagged Names	2nd Level ASCII	The current reservation requirement be reworded to say, "*In the absence of standardization activity and appropriate IANA registration,* all labels with hyphens in both the third and fourth character positions (e.g., "bq--1k2n4h4b" or "xn--ndk061n") must be reserved in ASCII at the second (2nd) level.[63] – added words in*italics*. (Note that names starting with "xn--" may only be used if the current ICANN IDN Guidelines are followed by a gTLD registry.)
15	Tagged Names	3rd Level ASCII	All labels with hyphens in both the third and fourth character positions (e.g., "bq--1k2n4h4b" or "xn--ndk061n") must be reserved in ASCII at the third (3rd level) for gTLD registries that register names at the third level."[64] – added words in *italics*. (Note that names starting with "xn--" may only be used if the current ICANN IDN Guidelines are followed by a gTLD registry.)
16	NIC, WHOIS, WWW	Top ASCII	The following names must be reserved: nic, whois, www.
17	NIC, WHOIS, WWW	Top IDN	Do not try to translate nic, whois and www into Unicode versions for various scripts or to reserve any ACE versions of such translations or transliterations if they exist.
18	NIC, WHOIS, WWW	Second and Third* ASCII	The following names must be reserved for use in connection with the operation of the registry for the Registry TLD: nic, whois, www Registry Operator may use them, but upon conclusion of Registry Operator's designation as operator of the registry for the Registry TLD, they shall be transferred as specified by ICANN. (*Third level only applies in cases where a registry offers registrations at the third level.)
19	NIC, WHOIS, WWW	Second and Third* IDN	Do not try to translate nic, whois and www into Unicode versions for various scripts or to reserve any ACE versions of such translations or transliterations if they exist, except on a case by case basis as proposed by given registries. (*Third level only applies in cases where a registry offers registrations at the third level.)
20	Geographic and geopolitical	Top Level ASCII and IDN	There should be no geographical reserved names (i.e., no exclusionary list, no presumptive right of registration, no separate administrative procedure, etc.). The proposed challenge mechanisms currently being proposed in the draft new gTLD process would allow national or local governments to initiate a challenge, therefore no additional protection mechanisms are needed. Potential applicants for a new TLD need to represent that the use of the proposed string is not in violation of the national laws in which the applicant is incorporated. However, new TLD applicants interested in applying for a TLD that incorporates a country, territory, or place name should be advised of the GAC Principles, and the advisory role vested to it under the ICANN Bylaws. Additionally, a summary overview of the obstacles encountered by previous applicants involving similar TLDs should be provided to allow an applicant to make an informed decision.

			Potential applicants should also be advised that the failure of the GAC, or an individual GAC member, to file a challenge during the TLD application process, does not constitute a waiver of the authority vested to the GAC under the ICANN Bylaws. *Note New gTLD Recommendation 20*
21	Geographic and geopolitical	All Levels ASCII and IDN	The term 'geopolitical names' should be avoided until such time that a useful definition can be adopted. The basis for this recommendation is founded on the potential ambiguity regarding the definition of the term, and the lack of any specific definition of it in the WIPO Second Report on Domain Names or GAC recommendations. *Note New gTLD Recommendation 20*
22	Geographic and geopolitical	Second Level & Third Level if applicable, ASCII & IDN	The consensus view of the working group is given the lack of any established international law on the subject, conflicting legal opinions, and conflicting recommendations emerging from various governmental fora, the current geographical reservation provision contained in the sTLD contracts during the 2004 Round should be removed, and harmonized with the more recently executed .COM, .NET, .ORG, .BIZ and .INFO registry contracts. The only exception to this consensus recommendation is those registries incorporated/organized under countries that require additional protection for geographical identifiers. In this instance, the registry would have to incorporate appropriate mechanisms to comply with their national/local laws. For those registries incorporated/organized under the laws of those countries that have expressly supported the guidelines of the WIPO Standing Committee on the Law of Trademarks, Industrial Designs and Geographical Indications as adopted by the WIPO General Assembly, it is strongly recommended (but not mandated) that these registries take appropriate action to promptly implement protections that are in line with these WIPO guidelines and are in accordance with the relevant national laws of the applicable Member State. *Note New gTLD Recommendation 20*
23	gTLD Reserved Names	Second & Third Level ASCII and IDN (when applicable)	Absent justification for user confusion[65], the recommendation is that gTLD strings should no longer be reserved from registration for new gTLDs at the second or when applicable at the third level.Applicants for new gTLDs should take into consideration possible abusive or confusing uses of existing gTLD strings at the second level of their corresponding gTLD, based on the nature of their gTLD, when developing the startup process for their gTLD.
24	Controversial Names	All Levels, ASCII & IDN	There should not be a new reserved names category for Controversial Names.
25	Controversial Names	Top Level, ASCII & IDN	There should be a list of disputed names created as a result of the dispute process to be created by the new gTLD process. *Note New gTLD Recommendation 6*
26	Controversial Names	Top Level, ASCII & IDN	In the event of the initiation of a CN-DRP process, applications for that label will be placed in a HOLD status that would allow for the dispute to be further examined. If the dispute is dismissed or otherwise resolved favorably, the applications will reenter the processing queue. The period of time allowed for dispute should be finite and should be relegated to the CN-DRP process. The external dispute process should be defined to be objective, neutral, and transparent. The outcome of any dispute shall not result in the development of new categories of Reserved Names.[66] *Note New gTLD Recommendation 6*
27	Controversial Names	Top Level, ASCII & IDN	The new GTLD Controversial Names Dispute Resolution Panel should be established as a standing mechanism that is convened at the time a dispute is initiated. Preliminary elements of that process are provided in this report but further work is needed in this area. *Note New gTLD Recommendation 6*
28	Controversial Names	Top Level, ASCII & IDN	Within the dispute process, disputes would be initiated by the ICANN Advisory Committees (e.g, ALAC or GAC) or supporting organizations (e g, GNSO or ccNSO). As these organizations do not currently have formal processes for receiving, and deciding on such activities, these processes would need to be defined: o The Advisory Groups and the Supporting Organizations, using their own processes and consistent with their organizational structure, will need to define procedures for deciding on any requests for dispute initiation.

			o Any consensus or other formally supported position from an ICANN Advisory Committee or ICANN Supporting Organization must document the position of each member within that committee or organization (i.e., support, opposition, abstention) in compliance with both the spirit and letter of the ICANN bylaws regarding openness and transparency. *Note New gTLD Recommendation 6*
29	Controversial Names	Top Level, ASCII & IDN	Further work is needed to develop predictable and transparent criteria that can be used by the Controversial Resolution Panel. These criteria must take into account the need to: ▪·⚐❒□⧫♏♍⧫ ♐❒♏♏♎□❍ □♐ ♏⌧◻❒♏⬧⬧♓□■ ▪·✌♐♐♓❒❍ ⧫♒♏ ♐◆■♎♋❍♏■⧫♋● ♒◆❍♋■ ❒♓♑♒⧫⬧📪 ♓■ ⧫♒♏ ♎♓♑■♓⧫⍓ ♋■♎ ⬥□❒⧫♒ □♐ ⧫♒♏ ♒◆❍♋■ ◻♏❒⬧□■ ♋■♎ ⧫♒♏ ♏❑◆♋● ❒♓♑♒⧫⬧ □♐ ❍♏■ ♋■♎ ⬥□❍♏■ ▪·❄♋🙵♏ ♓■⧫□ ♋♍♍□◆■⧫ ⬧♏■⬧♓⧫♓❖♓⧫♓♏⬧ ❒♏♑♋❒♎♓■♑ ⧫♏❒❍⬧ ⬥♓⧫♒ ♍◆●⧫◆❒♋● ♋■♎ ❒♏●♓♑♓□◆⬧ ⬧♓♑■♓♐♓♍♋■♍♏📭 *Note New gTLD Recommendation 6*
30	Controversial Names	Top Level, ASCII & IDN	In any dispute resolution process, or sequence of issue resolution processes, the Controversial name category should be the last category considered. *Note New gTLD Recommendation 6*

v. With respect to geographic terms, the NCUC's CIS stated that "...We oppose any attempts to create lists of reserved names. Even examples are to be avoided as they can only become prescriptive. We are concerned that geographic names should not be fenced off from the commons of language and rather should be free for the use of all.. Moreover, the proposed recommendation does not make allowance for the duplication of geographic names outside the ccTLDs – where the real issues arise and the means of resolving competing use and fair and nominative use."

vi. The GAC's Public Policy Principle 2.2 states that "ICANN should avoid country, territory or place names, and country, territory or regional language or people descriptions, unless in agreement with the relevant government or public authorities."

vii. The Implementation Team has developed some suggestions about how this recommendation may be implemented. Those suggestions and the process flow were incorporated into the Version 2 of the ICANN Staff *Discussion Points* document for consideration by the Committee.

5. **Recommendation 6 Discussion -- Strings must not be contrary to generally accepted legal norms relating to morality and public order that are recognized under international principles of law.**
Examples of such principles of law include, but are not limited to, the Universal Declaration of Human Rights (UDHR), the International Covenant on Civil and Political Rights (ICCPR), the Convention on the Elimination of All Forms of Discrimination Against Women (CEDAW) and the International Convention of the Elimination of All Forms of Racial Discrimination, intellectual property treaties administered by the World Intellectual Property Organisation (WIPO) and the WTO Agreement on Trade-Related Aspects of Intellectual Property (TRIPS).

i. This Recommendation is supported by all GNSO Constituencies except the NCUC. The NCUC has submitted a Minority Statement which is found in full in Annex A. The NCUC's earlier Constituency Impact Statement is found, along with all the GNSO Constituency Impact Statements, in Part B of this report. Ms Doria has submitted individual comments[67]. The Committee has discussed this recommendation in great detail and has attempted to address the experiences of the 2003-2004 sTLD round and the complex issues surrounding the .xxx application. The Committee has also recognised the GAC's Public Policy Principles, most notably Principle 2.1 a) and b) which refer to both freedom of expression and terms with significance in a variety of contexts. In addition, the Committee recognises the tension respecting freedom of expression and being sensitive to the legitimate concerns others have about offensive terms. The NCUC's earlier CIS says "...we oppose any string criteria based on morality and public order".

ii. Other Constituencies did not address this recommendation in their CISs. The Implementation Team has tried to balance these views by establishing an Implementation Plan that recognises the practical effect of opening a new top-level domain application system that will attract applications that some members of the community do not agree with. Whilst ICANN does have a technical co-ordination remit, it must also put in place a system of handling objections to strings or to applicants, using pre-published criteria, that is fair and predictable for applicants. t is also necessary to develop guidance for independent evaluators tasked with making decisions about objections.

iii. In its consideration of public policy aspects of new top-level domains the Committee examined the approach taken in a wide variety of jurisdictions to issues of morality and public order. This was done not to make decisions about acceptable strings but to provide a series of potential tests for independent evaluators to use should an objection be raised to an application. The use of the phrase "morality and public order" within the recommendation was done to set some guidelines for potential applicants about areas that may raise objections. The phrasing was also intended to set parameters for potential objectors so that any objection to an application could be analysed within the framework of broadly accepted legal norms that independent evaluators could use across a broad spectrum of possible objections. The Committee also sought to ensure that the objections process would have parameters set for who could object. Those suggested parameters are found within the Implementation Guidelines.

iv. In reaching its decision about the recommendation, the Committee sought to be consistent with, for example, Article 3 (1) (f) of the 1988 European Union Trade Mark Directive 89/104/EEC and within Article 7 (1) (f) of the 1993 European Union Trade Mark Regulation 40/94. In addition, the phrasing "contrary to morality or public order and in particular of such a nature as to deceive the public" comes from Article 6quinques (B)(3) of the 1883*Paris Convention*. The reference to the *Paris Convention* remains relevant to domain names even though, when it was drafted, domain names were completely unheard of.

v. The concept of "morality" is captured in Article 19 United Nations Convention on Human Rights (http://www unhchr ch/udhr/lang/eng.htm) says ".. Everyone has the right to freedom of opinion and expression; this right includes freedom to hold opinions without interference and to seek, receive and impart information and ideas through any media and regardless of frontiers." Article 29 continues by saying that "...In the exercise of his rights and freedoms, everyone shall be subject only to such limitations as are determined by law solely for the purpose of securing due recognition and respect for the rights and freedoms of others and of meeting the just requirements of morality, public order and the general welfare in a democratic society".

vi. The EU Trade Mark Office's Examiner's guidelines provides assistance on how to interpret morality and deceit. "...Contrary to morality or public order. Words or images which are offensive, such as swear words or racially derogatory images, or which are blasphemous are not acceptable. There is a dividing line between this and words which might be considered in poor taste. The latter do not offend against this provision." The further element is deception of the public which is treated in the following way. "...Deceive the public. To deceive the public, is for instance as to the nature, quality or geographical origin. For example, a word may give rise to a real expectation of a particular locality which is untrue." For more information, see Sections 8.7 and 8 8 athttp://oami europa.eu/en/mark/marque/direc htm

vii. The UK Trade Mark office provides similar guidance in its Examiner's Guidance Manual. "Marks which offend fall broadly into three types: those with criminal connotations, those with religious connotations and explicit/taboo signs. Marks offending public policy are likely to offend accepted principles of morality, e.g. illegal drug terminology, although the question of public policy may not arise against marks offending accepted principles of morality, for example, taboo swear words. If a mark is merely distasteful, an objection is unlikely to be justified, whereas if it would cause outrage or would be likely significantly to undermine religious, family or social values, then an objection will be appropriate. Offence may be caused on matters of race, sex, religious belief or general matters of taste and decency. Care should be taken when words have a religious significance and which may provoke greater offence than mere distaste, or even outrage, if used to parody a religion or its values. Where a sign has a very sacred status to members of a religion, mere use may be enough to cause outrage." For more information, see http //www.patent.gov.uk/tm/t-decisionmaking/t-law/t-law-manual.htm)

viii. This recommendation has been the subject of detailed Committee and small group work in an attempt to reach consensus about both the text of the recommendation and the examples included as guidance about generally accepted legal norms. The work has been informed by detailed discussion within the GAC and through interactions between the GNSO Committee and the GAC.

6. **Recommendation 7 Discussion -- Applicants must be able to demonstrate their technical capability to run a registry operation for the purpose that the applicant sets out.**

i. This recommendation is supported by all GNSO Constituencies and Ms Doria.

ii. The Committee agreed that the technical requirements for applicants would include compliance with a minimum set of technical standards and that this requirement would be part of the new registry operator's contractual conditions included in the proposed base contract. The more detailed discussion about technical requirements has been moved to the contractual conditions section.

iii. Reference was made to numerous Requests for Comment (RFCs) and other technical standards which apply to existing registry operators. For example, Appendix 7 of the June 2005 net agreement[68] provides a comprehensive listing of technical requirements in addition to other technical specifications in other parts of the agreement. These requirements are consistent with that which is expected of all current registry operators. These standards would form the basis of any new top-level domain operator requirements.

iv. This recommendation is referred to in two CISs. "The ISPCP considers recommendations 7 and 8 to be fundamental. The technical, financial, organisational and operational capabilities of the applicant are the evaluators' instruments for preventing potential negative impact on a new string on the activities of our sector (and indeed of many other sectors)." The NCUC submitted "...we record that this must be limited to transparent, predictable and minimum technical requirements only. These must be published. They must then be adhered to neutrally, fairly and without discrimination."

v. The GAC supported this direction in its Public Policy Principles 2 6, 2.10 and 2.11.

7. **Recommendation 8 Discussion -- Applicants must be able to demonstrate their financial and organisational operational capability.**

i. This recommendation is supported by all GNSO Constituencies and accepted with concern by Ms Doria[69].

ii. The Committee discussed this requirement in detail and determined that it was reasonable to request this information from potential applicants. It was also consistent with past practices including the prior new TLD rounds in 2000 and 2003-2004; the net and .org rebids and the conditions associated with ICANN registrar accreditation.

iii. This is also consistent with best practice procurement guidelines recommended by the World Bank (www.worldbank org), the OECD (www.oecd.org) and the Asian Development Bank (www.adb.org) as well as a range of federal procurement agencies such as the UK telecommunications regulator, Ofcom; the US Federal Communications Commission and major public companies.

iv. The challenging aspect of this recommendation is to develop robust and objective criteria against which applicants can be measured, recognising a vast array of business conditions and models. This will be an important element of the ongoing development of the Implementation Plan.

v. The ISPCP discussed the importance of this recommendation in its CIS, as found in Recommendation 7 above.

vi. The NCUC's CIS addressed this recommendation by saying "...we support this recommendation to the extent that the criteria is truly limited to minimum financial and organizational operationally capability.. All criteria must be transparent, predictable and minimum. They must be published. They must then be adhered to neutrally, fairly and without discrimination."

vii. The GAC echoed these views in its Public Policy Principle 2.5 that said "...the evaluation and selection procedure for new gTLD registries should respect the principles of fairness, transparency and non-discrimination. All applicants for a new gTLD registry should therefore be evaluated against transparent and predictable criteria, fully available to the applicants prior to the initiation of the process. Normally, therefore, no subsequent additional selection criteria should be used in the selection process."

8. **Recommendation 9 Discussion -- There must be a clear and pre-published process using objective and measurable criteria.**

i. This recommendation is supported by all GNSO Constituencies and by Ms Doria. It is consistent with ICANN's previous TLD rounds in 2000 and 2003-2004 and with its re-bid of both the .net and .org registry contracts.

ii. It is also consistent with ICANN's Mission and Core Values especially 7, 8 and 9 which address openness in decision-making processes and the timeliness of those processes.

iii. The Committee decided that the "process" criteria for introducing new top-level domains would follow a pre-published application system including the levying of an application fee to recover the costs of the application process. This is consistent with ICANN's approach to the introduction of new TLDs in the previous 2000 and 2004 round for new top-level domains.

iv. The RyC reiterated its support for this recommendation in its CIS. It said that ".. this Recommendation is of major importance to the RyC because the majority of constituency members incurred unnecessarily high costs in previous rounds of new gTLD introductions as a result of excessively long time periods from application submittal until they were able to start their business. We believe that a significant part of the delays were related to selection criteria and processes that were too subjective and not very measurable. It is critical in our opinion that the process for the introduction of new gTLDs be predictable in terms of evaluation requirements and timeframes so that new applicants can properly scope their costs and develop reliable implementation plans." The NCUC said that "...we strongly support this recommendation and again stress the need for all criteria to be limited to minimum operational, financial, and technical considerations. We all stress the need that all evaluation criteria be objective and measurable."

9. **Recommendation 10 Discussion -- There must be a base contract provided to applicants at the beginning of the process.**

i. This recommendation is supported by all GNSO Constituencies and by Ms Doria.

ii. The General Counsel's office has been involved in discussions about the provision of a base contract which would assist applicants both during the application process and in any subsequent contract negotiations.

iii. A framework for the base contract was developed for discussion at the June 2007 ICANN meeting in Puerto Rico. The base contract will not be completed until the policy recommendations are in place. Completion of the policy recommendations will enable the completion of a draft base contract that would be available to applicants prior to the start of the new gTLD process, that is, prior to the beginning of the four-month window preceding the application submittal period.

iv. The RyC, in its CIS, said, ".. like the comments for Recommendation 9, we believe that this recommendation will facilitate a more cost-effective and timely application process and thereby minimize the negative impacts of a process that is less well-defined and objective. Having a clear understanding of base contractual requirements is essential for a new gTLD applicant in developing a complete business plan."

10. **Recommendation 11 Discussion** -- (This recommendation has been removed and is left intentionally blank. Note Recommendation 20 and its Implementation Guidelines).

11. **Recommendation 12 Discussion -- Dispute resolution and challenge processes must be established prior to the start of the process.**

i. This recommendation is supported by all GNSO Constituencies and Ms Doria.

ii. The Committee has provided clear direction on its expectations that all the dispute resolution and challenge processes would be established prior to the opening of the application round. The full system will be published prior to an application round starting. However, the finalisation of this process is contingent upon a completed set of recommendations being agreed; a public comment period and the final agreement of the ICANN Board.

iii. The draft Implementation Plan in the Implementation Team *Discussion Points* document sets out the way in which the ICANN Staff proposes that disputes between applicants and challenge processes may be handled. Expert legal and other professional advice from, for example, auctions experts is being sought to augment the Implementation Plan.

TERM OF REFERENCE THREE -- ALLOCATION METHODS

12. **Recommendation 13 Discussion -- Applications must initially be assessed in rounds until the scale of demand is clear.**

i. This recommendation is supported by all GNSO Constituencies and Ms Doria.

ii. This recommendation sets out the principal allocation methods for TLD applications. The narrative here should be read in conjunction with the draft flowcharts and the draft Request for Proposals.

iii. An application round would be opened on Day 1 and closed on an agreed date in the future with an unspecified number of applications to be processed within that round.

iv. This recommendation may be amended, after an evaluation period and report that may suggest modifications to this system. The development of objective "success metrics" is a necessary part of the evaluation process that could take place within the new TLDs Project Office.

v. The ISPCP expressed its support for this recommendation. Its CIS said that "...this is an essential element in the deployment of new gTLDs, as it enables any technical difficulties to be quickly identified and sorted out, working with reduced numbers of new strings at a time, rather than many all at once. Recommendation 18 on the use of IDNs is also important in preventing any negative impact on network operators and ISPs."

13. **Recommendation 20 Discussion -- An application will be rejected if an expert panel determines that there is substantial opposition to it from a significant portion of the community to which the string may be explicitly or implicitly targeted.**

i. This recommendation is supported by the majority of GNSO Constituencies. Ms Doria supports the recommendation but has concerns about its implementation[70]. The NCUC has submitted a Minority Statement which is found in full in Annex C about the recommendation and its associated Implementation Guidelines F, H and P.

ii. This recommendation was developed during the preparations for the Committee's 7 June 2007 conference call and during subsequent Committee deliberations. The intention was to factor into the process the very likely possibility of objections to applications from a wide variety of stakeholders.

iii. The language used here is relatively broad and the implementation impact of the proposed recommendation is discussed in detail in the Implementation Team's *Discussion Points* document.

iv. The NCUC's response to this recommendation in its earlier CIS says, in part, "...recommendation 20 swallows up any attempt to narrow the string criteria to technical, operational and financial evaluations. It asks for objections based on entirely subjective and unknowable criteria and for unlimited reasons and by unlimited parties." This view has, in part, been addressed in the Implementation Team's proposed plan but this requires further discussion and agreement by the Committee.

TERM OF REFERENCE FOUR -- CONTRACTUAL CONDITIONS

14. **Recommendation 14 Discussion** -- **The initial registry agreement term must be of a commercially reasonable length.**

i. The remainder of the recommendations address Term of Reference Four on policies for contractual conditions and should be read in conjunction with Recommendation 10 on the provision of a base contract prior to the opening of an application round. The recommendation is supported by all GNSO Constituencies and Ms Doria.

ii. This recommendation is consistent with the existing registry contract provisions found in, for example, the .com and biz agreements.

iii. These conditions would form the baseline conditions of term length for new TLD operators. It was determined that a term of ten years would reasonably balance the start up costs of registry operations with reasonable commercial terms.

iv. The RyC commented on this recommendation in its CIS saying that "...the members of the RyC have learned first hand that operating a registry in a secure and stable manner is a capital intensive venture. Extensive infrastructure is needed both for redundant registration systems and global domain name constellations. Even the most successful registries have taken many years to recoup their initial investment costs. The RyC is convinced that these two recommendations [14 & 15] will make it easier for new applicants to raise the initial capital necessary and to continue to make investments needed to ensure the level of service expected by registrants and users of their TLDs. These two recommendations will have a very positive impact on new gTLD registries and in turn on the quality of the service they will be able to provide to the Internet community."

15. **Recommendation 15 -- There must be renewal expectancy.**

i. This recommendation is consistent with the existing registry contract provisions found in, for example, the com and .biz agreements and is supported by all Constituencies. Ms Doria supported the recommendation and provided the comments found in the footnote below.[71]

ii. These conditions would form the baseline conditions of term length for new TLD operators. t was determined that a term of ten years would reasonably balance the start up costs of registry operations with reasonable commercial terms.

iii. See the CIS comments from the RyC in the previous section.

16. **Recommendation 16 -- Registries must apply existing Consensus Policies**[72] **and adopt new Consensus Policies as they are approved.**

i. This recommendation is supported by all GNSO Constituencies and Ms Doria.

ii. The full set of existing ICANN registry contracts can be found here http://www.icann.org/registries/agreements.htm and ICANN's seven current Consensus Policies are found at http //www.icann.org/general/consensus-policies.htm.

iii. ICANN develops binding Consensus Policies through its policy development processes, in this case, through the GNSO[73].

17. **Recommendation 17 -- A clear compliance and sanctions process must be set out in the base contract which**

could lead to contract termination.

i. This recommendation is supported by all GNSO Constituencies and Ms Doria.

ii. Referring to the recommendations on contractual conditions above, this section sets out the discussion of the policies for contractual conditions for new top-level domain registry operators. The recommendations are consistent with the existing provisions for registry operators which were the subject of detailed community input throughout 2006[74].

iii. The Committee developed its recommendations during the Brussels and Amsterdam face-to-face consultations, with assistance from the ICANN General Counsel's office. The General Counsel's office has also provided a draft base contract which will be completed once the policy recommendations are agreed. Reference should also be made to Recommendation 5 on reserved words as some of the findings could be part of the base contract.

iv. The Committee has focused on the key principles of consistency, openness and transparency. It was also determined that a scalable and predictable process is consistent with industry best practice standards for services procurement. The Committee referred in particular to standards within the broadcasting, telecommunications and Internet services industries to examine how regulatory agencies in those environments conducted, for example, spectrum auctions, broadcasting licence distribution and media ownership frameworks.

v. Since then ICANN has developed and published a new approach to its compliance activities. These are found on ICANN's website at http //www.icann.org/compliance/ and will be part of the development of base contract materials.

vi. The Committee found a number of expert reports[75] beneficial. In particular, the World Bank report on mobile licensing conditions provides some guidance on best practice principles for considering broader market investment conditions. "...A major challenge facing regulators in developed and developing countries alike is the need to strike the right balance between ensuring certainty for market players and preserving flexibility of the regulatory process to accommodate the rapidly changing market, technological and policy conditions. As much as possible, policy makers and regulators should strive to promote investors' confidence and give incentives for long-term investment. They can do this by favouring the principle of 'renewal expectancy', but also by promoting regulatory certainty and predictability through a fair, transparent and participatory renewal process. For example, by providing details for license renewal or reissue, clearly establishing what is the discretion offered to the licensing body, or ensuring sufficient lead-times and transitional arrangements in the event of non-renewal or changes in licensing conditions. Public consultation procedures and guaranteeing the right to appeal regulatory decisions maximizes the prospects for a successful renewal process. As technological changes and convergence and technologically neutral approaches gain importance, regulators and policy makers need to be ready to adapt and evolve licensing procedures and practices to the new environment."

vii. The Recommendations which the Committee has developed with respect to the introduction of new TLDs are consistent with the World Bank principles.

18. **Recommendation 18 Discussion -- If an applicant offers an IDN service, then ICANN's IDN guidelines must be followed.**

i. This recommendation is supported by all GNSO Constituencies and Ms Doria. The introduction of internationalised domain names at the root presents ICANN with a series of implementation challenges. This recommendation would apply to any new gTLD (IDN or ASCII TLD) offering DN services. The initial technical testing[76] has been completed and a series of live root tests will take place during the remainder of 2007.

ii. The Committee recognises that there is ongoing work in other parts of the ICANN organisation that needs to be factored into the application process that will apply to IDN applications. The work includes the President's Committee on IDNs and the GAC and ccNSO joint working group on IDNs.

19. **Recommendation 19 Discussion -- Registries must use only ICANN accredited registrars in registering domain names and may not discriminate among such accredited registrars.**

i. This recommendation is supported by all GNSO Constituencies and Ms Doria.

ii. There is a long history associated with the separation of registry and registrar operations for top-level domains. The structural separation of VeriSign's registry operations from Network Solutions registrar operations explains much of the ongoing policy to require the use of ICANN accredited registrars.

iii. In order to facilitate the stable and secure operation of the DNS, the Committee agreed that it was prudent to continue the current requirement that registry operators be obliged to use ICANN accredited registrars.

iv. ICANN's Registrar Accreditation Agreement has been in place since 2001[77]. Detailed information about the accreditation of registrars can be found on the ICANN website[78]. The accreditation process is under active discussion but the critical element of requiring the use of ICANN accredited registrars remains constant.

v. In its CIS, the RyC noted that "...the RyC has no problem with this recommendation for larger gTLDs; the requirement to use accredited registrars has worked well for them. But it has not always worked as well for very small, specialized gTLDs. The possible impact on the latter is that they can be at the mercy of registrars for whom there is no good business reason to devote resources. In the New gTLD PDP, it was noted that this requirement would be less of a problem if the impacted registry would become a registrar for its own TLD, with appropriate controls in place. The RyC agrees with this line of reasoning but current registry agreements forbid registries from doing this. Dialog with the Registrars Constituency on this topic was initiated and is ongoing, the goal being to mutually agree on terms that could be presented for consideration and might provide a workable solution."

NEXT STEPS

1. Under the GNSO's Policy Development Process, the production of this *Final Report* completes Stage 9. The next steps are to conduct a twenty-day public comment period running from 10 August to 30 August 2007. The GNSO Council is due to meet on 6 September 2007 to vote on the package of principles, policy recommendations and implementation

guidelines.

2. After the GNSO Council have voted the Council Report to the Board is prepared. The GNSO's PDP guidelines stipulate that "the Staff Manager will be present at the final meeting of the Council, and will have five (5) calendar days after the meeting to incorporate the views of the Council into a report to be submitted to the Board (the "Board Report"). The Board Report must contain at least the following:
    - a. A clear statement of any Supermajority Vote recommendation of the Council;
    - b. If a Supermajority Vote was not reached, a clear statement of all positions held by Council members. Each statement should clearly indicate (i) the reasons underlying each position and (ii) the constituency(ies) that held the position;
    - c. An analysis of how the issue would affect each constituency, including any financial impact on the constituency;
    - d. An analysis of the period of time that would likely be necessary to implement the policy;
    - e. The advice of any outside advisors relied upon, which should be accompanied by a detailed statement of the advisor's (i) qualifications and relevant experience; and (ii) potential conflicts of interest;
    - f. The Final Report submitted to the Council; and
    - g. A copy of the minutes of the Council deliberation on the policy issue, including the all opinions expressed during such deliberation, accompanied by a description of who expressed such opinions.
3. It is expected that, according to the Bylaws, "...The Board will meet to discuss the GNSO Council recommendation as soon as feasible after receipt of the Board Report from the Staff Manager. In the event that the Council reached a Supermajority Vote, the Board shall adopt the policy according to the Council Supermajority Vote recommendation unless by a vote of more than sixty-six (66%) percent of the Board determines that such policy is not in the best interests of the ICANN community or ICANN. In the event that the Board determines not to act in accordance with the Council Supermajority Vote recommendation, the Board shall (i) articulate the reasons for its determination in a report to the Council (the "Board Statement"); and (ii) submit the Board Statement to the Council. The Council shall review the Board Statement for discussion with the Board within twenty (20) calendar days after the Council's receipt of the Board Statement. The Board shall determine the method (e.g., by teleconference, e-mail, or otherwise) by which the Council and Board will discuss the Board Statement. At the conclusion of the Council and Board discussions, the Council shall meet to affirm or modify its recommendation, and communicate that conclusion (the "Supplemental Recommendation") to the Board, including an explanation for its current recommendation. In the event that the Council is able to reach a Supermajority Vote on the Supplemental Recommendation, the Board shall adopt the recommendation unless more than sixty-six (66%) percent of the Board determines that such policy is not in the interests of the ICANN community or ICANN. In any case in which the Council is not able to reach Supermajority, a majority vote of the Board will be sufficient to act. When a final decision on a GNSO Council Recommendation or Supplemental Recommendation is timely, the Board shall take a preliminary vote and, where practicable, will publish a tentative decision that allows for a ten (10) day period of public comment prior to a final decision by the Board."
4. The final stage in the PDP is the implementation of the policy which is also governed by the Bylaws as follows, "...Upon a final decision of the Board, the Board shall, as appropriate, give authorization or direction to the ICANN staff to take all necessary steps to implement the policy."

Annex A – NCUC Minority Statement Recommendation 6

STATEMENT OF DISSENT ON RECOMMENDATION #6 OF

GNSO'S NEW GTLD REPORT FROM

the Non-Commercial Users Constituency (NCUC)
20 July 2007

NCUC supports most of the recommendations in the GNSO's Final Report, but Recommendation #6 is one we cannot support.[79]

We oppose Recommendation #6 for the following reasons:

1) t will completely undermine ICANN's efforts to make the gTLD application process predictable, and instead make the evaluation process arbitrary, subjective and political;

2) t will have the effect of suppressing free and diverse expression;

3) t exposes ICANN to litigation risks;

4) t takes ICANN too far away from its technical coordination mission and into areas of legislating morality and public order.

We also believe that the objective of Recommendation #6 is unclear, in that much of its desirable substance is already covered by Recommendation #3. At a minimum, we believe that the words "relating to morality and public order" must be struck from the recommendation.

1) Predictability, Transparency and Objectivity

Recommendation #6 poses severe implementation problems. It makes it impossible to achieve the GNSO's goals of predictable and transparent evaluation criteria for new gTLDs.

Principle 1 of the New gTLD Report states that the evaluation process must be "predictable," and Recommendation #1 states that the evaluation criteria must be transparent, predictable, and fully available to applicants prior to their application.

NCUC strongly supports those guidelines. But no gTLD applicant can possibly know in advance what people or governments in a far away land will object to as "immoral" or contrary to "public order." When applications are challenged on these grounds, applicants cannot possibly know what decision an expert panel – which will be assembled on an ad hoc basis with no precedent to draw on – will make about it.

Decisions by expert panels on "morality and public order" *must* be subjective and arbitrary, because there is no settled and well-established international law regarding the relationship between TLD strings and morality and public order. There is no single "community standard" of morality that ICANN can apply to all applicants in every corner of the globe. What is considered "immoral" in Teheran may be easily accepted in Los Angeles or Stockholm; what is considered a threat to "public order" in China and Russia may not be in Brazil and Qatar.

2) Suppression of expression of controversial views

gTLD applicants will respond to the uncertainty inherent in a vague "morality and public order" standard and lack of clear standards by suppressing and avoiding any ideas that might generate controversy. Applicants will have to invest sizable sums of money to develop a gTLD application and see it through the ICANN process. Most of them will avoid risking a challenge under Recommendation #6. In other words, the presence of Recommendation #6 will result in self-censorship by most applicants.

That policy would strip citizens everywhere of their rights to express controversial ideas because someone else finds them offensive. This policy recommendation ignores international and national laws, in particular freedom of expression guarantees that permit the expression of "immoral" or otherwise controversial speech on the Internet.

3) Risk of litigation

Some people in the ICANN community are under the mistaken impression that suppressing controversial gTLDs will protect it from litigation. Nothing could be further from the truth. By introducing subjective and culturally divisive standards into the evaluation process Recommendation #6 will increase the likelihood of litigation.

ICANN operates under authority from the US Commerce Department. It is undisputed that the US Commerce Department is prohibited from censoring the expression of US citizens in the manner proposed by Recommendation #6. The US Government cannot "contract away" the constitutional protections of its citizens to ICANN any more than it can engage in the censorship itself.

Adoption of Recommendation #6 invites litigation against ICANN to determine whether its censorship policy is compatible with the US First Amendment. An ICANN decision to suppress a gTLD string that would be permitted under US law could and probably would lead to legal challenges to the decision as a form of US Government action.

If ICANN left the adjudication of legal rights up to courts, it could avoid the legal risk and legal liability that this policy of censorship brings upon it.

4) ICANN's mission and core values

Recommendation #6 exceeds the scope of ICANN's technical mission. t asks ICANN to create rules and adjudicate disputes about what is permissible expression. t enables it to censor expression in domain names that would be lawful in some countries. It would require ICANN and "expert panels" to make decisions about permitting top-level domain names based on arbitrary "morality" judgments and other subjective criteria. Under Recommendation #6, ICANN will evaluate domain names based on ideas about "morality and public order" -- concepts for which there are varying interpretations, in both law and culture, in various parts of the world. Recommendation #6 risks turning ICANN into the arbiter of "morality" and "appropriate" public policy through global rules.

This new role for ICANN conflicts with its intended narrow technical mission, as embodied in its mission and core values. ICANN holds no legitimate authority to regulate in this entirely non-technical area and adjudicate the legal rights of others. This recommendation takes the adjudication of people's rights to use domain names out of the hands of democratically elected representatives and into the hands of "expert panels" or ICANN staff and board with no public accountability.

Besides exceeding the scope of ICANN's authority, Recommendation #6 seems unsure of its objective. t mandates "morality and public order" in domain names, but then lists, as examples of the type of rights to protect, the WTO TR PS Agreement and all 24 World Intellectual Property (WIPO) Treaties, which deal with economic and trade rights, and have little to do with "morality and public order". Protection for intellectual property rights was fully covered in Recommendation #3, and no explanation has been provided as to why intellectual property rights would be listed again in a recommendation on "morality and public order", an entirely separate concept.

In conclusion Recommendation #6 exceeds ICANN's authority, ignores Internet users' free expression rights, and its adoption would impose an enormous burden on and liability for ICANN. It should not be adopted by the Board of Directors in the final policy decision for new gtlds.

Annex B – Nominating Committee Appointee Avri Doria[80] Individual Comments

Comments from Avri Doria

The "Personal level of support" indications fall into 3 categories:

l Support: these are principles, recommendations or guidelines that are compatible with my personal opinions

l Support with concerns: While these principles, recommendations and guidelines are not incompatible with my personal opinions, I have some concerns about them.

l Accept with concern: these recommendations and guidelines do not necessarily correspond to my personal opinions, but I am able to accept them in that they have the broad support of the committee. I do, however, have concerns with these recommendations and guideline.

I believe these comments are consistent with comments I have made throughout the process and do not constitute new input.

Principles

#	Personal level of support	Explanation
A	Support	
B	Support with concerns	While I strongly support the introduction of IDN TLDS, I am concerned that the unresolved issues with IDN ccTLD equivalents may interfere with the introduction of DN TLDs. I am also concerned that some of these issues could impede the introduction of some new ASCII TLDs dealing with geographically related identifiers.
C	Support	
D	Support with concerns	While I favor the establishment of a minimum set of necessary technical criteria, I am concerned that this set actually be the basic minimum set necessary to protect the stability, security and global interoperability.
E-G	Support	

Recommendations

#	Level of support	Explanation
1	Support	
2	Accept with concern	My concern involves using definitions that rely on legal terminology established for trademarks for what I believe should be a policy based on technical criteria. l In the first instance I believe that this is essentially a technical issue that should have been resolved with reference to typography, homologues, orthographic neighbourhood, transliteration and other technically defined attributes of a name that would make it unacceptable. There is a large body of scientific and technical knowledge and description in this field that we could have drawn on. l By using terms that rely on the legal language of trademark law, I believe we have created an implicit redundancy between recommendations 2 and 3. I e., I believe both 2 and 3 can be used to protect trademarks and other intellectual property rights, and while 3 has specific limitations, 2 remains open to full and varied interpretation. l As we begin to consider IDNs, I am concerned that the interpretations of confusingly similar may be used to eliminate many potential TLDs based on translation. That is, when a translation may have the same or similar meaning to an existing TLD, that the new name may be eliminated because it is considered confusing to users who know both languages.
3	Support with concerns	My first concern relates to the protection of what can be called the linguistic commons. While it is true that much of trademark law and practice does protect general vocabulary and common usage from trademark protection, I am not sure that this is always the case in practice. I am also not convinced that trademark law and policy that applies to specific product type within a specific locale is entirely compatible with a general and global naming system.
4	Support	
5	Support with concerns	Until such time as the technical work on IDNAbis is completed, I am concerned about establishing reserved name rules connected to DNs. My primary concern involves policy decisions made in ICANN for reserved names becoming hard coded in the IDNAbis technical solution and thus becoming technical constraints that are no longer open to future policy reconsideration.
6	Accept with concern	My primary concern focuses on the term 'morality'. While public order is frequently codified in national laws and occasionally in international law and conventions, the definition of what constitutes morality is not generally codified, and when it is, I believe it could be referenced as public order. This concern is related to the broad set of definitions used in the world to define morality. By including morality in the list of allowable exclusions we have made the possible exclusion list indefinitely large and have subjected the process to the consideration of all possible religious and ethical systems. ICANN or the panel of reviewers will also have to decide between different sets of moral principles, e.g, a morality that holds that people should be free to express themselves in all forms of media and those who believe that people should be free from exposure to any expression that is prohibited by their faith or moral principles. This recommendation will also subject the process to the fashion and occasional demagoguery of political correctness. I do not understand how ICANN

		or any expert panel will be able to judge that something should be excluded based on reasons of morality without defining, at least de-facto, an ICANN definition of morality? And while I am not a strict constructionist and sometimes allow for the broader interpretation of ICANN's mission, I do not believe it includes the definition of a system of morality.
7	Support	
8	Accept with concern	While I accept that a prospective registry must show adequate operational capability, creating a financial criteria is of concern. There may be many different ways of satisfying the requirement for operational capability and stability that may not be demonstrable in a financial statement or traditional business plan. E g., in the case of an less developed community, the registry may rely on volunteer effort from knowledgeable technical experts. Another concern I have with financial requirements and high application fees is that they may act to discourage applications from developing nations or indigenous and minority peoples that have a different set of financial opportunities or capabilities then those recognized as acceptable within an expensive and highly developed region such as Los Angeles or Brussels.
9,10, 12-14	Support	
15	Support with concerns	In general I support the idea that a registry that is doing a good job should have the expectancy of renewal. I do, however, believe that a registry, especially a registry with general market dominance, or specific or local market dominance, should be subject to comment from the relevant user public and to evaluation of that public comment before renewal. When performance is satisfactory, there should an expectation of renewal. When performance is not satisfactory, there should be some procedure for correcting the situation before renewal.
16-19	Support	
20	Support with concerns	In general I support the policy though I do have concerns about the implementation which I discuss below in relation to IG (P)

Implementation Guidelines

#	Level of support	Explanation
A-E	Support	
F	Accept with concern	In designing a New gTLD process, one of the original design goals had been to design a predictable and timely process that did not include the involvement of the Board of Directors except for very rare and exceptional cases and perhaps in the due diligence check of a final approval. My concern is that the use of Board in step (iii) may make them a regular part of many of the application procedure and may overload both the Board and the process. If every dispute can fall through to Board consideration in the process sieve, then the incentive to resolve the dispute earlier will be lessened.
G-M	Support	
N	Support with concerns	I strongly support the idea of financial assistance programs and fee reduction for less developed communities. I am concerned that not providing pricing that enables applications from less developed countries and communities may serve to increase the divide between the haves and the haves nots in the Internet and may lead to a foreign 'land grab' of choice TLD names, especially DN TLD names in a new form of resource colonialism because only those with well developed funding capability will be able to participate in the process as currently planned.
O	Support	
P	Support with concerns	While I essentially agree with the policy recommendation and its implementation guideline, its social justice and fairness depends heavily on the implementation issues. While the implementation details are not yet settled, I have serious concerns about the published draft plans of the ICANN staff in this regard. The current proposal involves using fees to prevent vexatious or unreasonable objections. In my personal opinion this would be a cause of social injustice in the application of the policy as it would prejudice the objection policy in favor of the rich. I also believe that an objection policy based on financial means would allow for well endowed entities to object to any term they found objectionable, hence enabling them to be as vexatious as they wish to be. In order for an objection system to work properly, it must be fair and it must allow for any applicant to understand the basis on which they might have to answer an objection. If the policy and implementation are clear about objections only being considered when they can be shown to cause irreparable harm to a community then it may be possible to build a just process. In addition to the necessity for there to be strict filters on which potential objections are actually processed for further

		review by an objections review process, it is essential that an external and impartial professional review panel have a clear basis for judging any objections. I do not believe that the ability to pay for a review will provide a reasonable criteria, nor do I believe that financial barriers are an adequate filter for stopping vexatious or unreasonable objections though they are a sufficient barrier for the poor. I believe that ICANN should investigate other methods for balancing the need to allow even the poorest to raise an issue of irreparable harm while filtering out unreasonable disputes. I believe, as recommend in the Reserved Names Working group report, that the ALAC and GAC may be an important part of the solution. IG (P) currently includes support for treating ALAC and GAC as established institutions in regard to raising objections to TLD concerns. I believe this is an important part of the policy recommendation and should be retained in the implementation. I believe that it should be possible for the ALAC or GAC, through some internal procedure that they define, to take up the cause of the individual complainant and to request a review by the external expert review panel. Some have argued that this is unacceptable because it operationalizes these Advisory Committees. I believe we do have precedence for such an operational role for volunteers within ICANN and that it is in keeping with their respective roles and responsibilities as representatives of the user community and of the international community of nations. I strongly recommend that such a solution be included in the Implementation of the New gTLD process.

Annex C – NCUC Minority Statement Recommendation 20 and Implementation Guidelines F, H & P

Statement of DISSENT on Recommendation #20 &

Implementation Guidelines F, H, & P in the

GNSO New GTLD Committee's Final Report

from the

Non-Commercial Users Constituency (NCUC)

RE Domain Name Objection and Rejection Process
25 July 2007

Text of Recommendation #20

"An application will be rejected if an expert panel determines that there is substantial opposition to it from a significant portion of the community to which the string may be explicitly or implicitly targeted."

Text of Implementation Guideline F

If there is contention for strings, applicants may:

i) resolve contention between them within a pre-established timeframe

ii) if there is no mutual agreement, a claim to support a community by one party will be a reason to award priority to that application. If there is no such claim, and no mutual agreement a process will be put in place to enable efficient resolution of contention and;

iii) the ICANN Board may be used to make a final decision, using advice from staff and expert panels.

Text of Implementation Guideline H

External dispute providers will give decisions on complaints.

Text of Implementation Guideline P

The following process, definitions, and guidelines refer to Recommendation 20.

Process

Opposition must be objection based.

Determination will be made by a dispute resolution panel constituted for the purpose.

The objector must provide verifiable evidence that it is an established institution of the community (perhaps like the RSTEP pool of panelists from which a small panel would be constituted for each objection).

Guidelines

The task of the panel is the determination of substantial opposition.

a) substantial

In determining substantial the panel will assess the following: significant portion, community, explicitly targeting, implicitly targeting, established institution, formal existence, detriment.

b) significant portion:

In determining significant portion the panel will assess the balance between the level of objection submitted by one or more established institutions and the level of support provided in the application from one or more established institutions. The panel will assess significance proportionate to the explicit or implicit targeting.

c) community

Community should be interpreted broadly and will include for example an economic sector, a cultural community, or a linguistic community. t may also be a closely related community which believes it is impacted.

d) explicitly targeting

Explicitly targeting means there is a description of the intended use of the TLD in the application.

e) implicitly targeting

Implicitly targeting means that the objector makes an assumption of targeting or that the objector believes there may be confusion by users over its intended use.

f) established institution

An institution that has been in formal existence for at least 5 years. In exceptional cases, standing may be granted to an institution that has been in existence for fewer then 5 years. Exceptional circumstance include but are not limited to reorganisation, merger, or an inherently younger community. The following ICANN organizations are defined as established institutions: GAC, ALAC, GNSO, ccNSO, ASO.

g) formal existence

Formal existence may be demonstrated by: appropriate public registration, public historical evidence, validation by a government, intergovernmental organization, international treaty organisation or similar.

h) detriment

<< A >> Evidence of detriment to the community or to users more widely must be provided.
<< B >> [A likelihood of detriment to the community or to users more widely must be provided.]

Recommendation #20

The Non-Commercial Users Constituency (NCUC) Dissenting Statement on Recommendation #20 of the New GTLD Committee's Final Report[81] should be read in combination with Implementation Guidelines F, H & P, which detail the implementation of Recommendation #20. This statement should also be read in conjunction with its statement[82] of 13 June 2007 on the committee's draft report.

NCUC cannot support the committee's proposal for ICANN to establish a broad objection and rejection process for domain names that empowers ICANN and its "experts" to adjudicate the legal rights of domain name applicants (and objectors). The proposal would also empower ICANN and its "experts" to invent entirely new rights to domain names that do not exist in law and that will compete with existing legal rights to domains.

However "good-intentioned", the proposal would inevitably set up a system that decides legal rights based on subjective beliefs of "expert panels" and the amount of insider lobbying. The proposal would give "established institutions" veto power over applications for domain names to the detriment of innovators and start-ups. The proposal is further flawed because it makes no allowances for generic words to which no community claims exclusive "ownership" of. Instead, it wants to assign rights to use language based on subjective standards and will over-regulate to the detriment of competition, innovation, and free expression.

There is no limitation on the type of objections that can be raised to kill a domain name, no requirement that actual harm be shown to deny an application, and no recourse for the wrongful denial of legal rights by ICANN and its experts under this proposal. An applicant must be able to appeal decisions of ICANN and its experts to courts, who have more competence and authority to decide the applicant's legal rights. Legal due process requires maintaining a right to appeal these decisions to real courts.

The proposal is hopelessly flawed and will result in the improper rejection of many legitimate domain names. The reasons permitted to object to a domain are infinite in number. Anyone may make an objection; and an application will automatically be rejected upon a very low threshold of "detriment" or an even lower standard of "a likelihood of detriment" to anyone. Not a difficult bar to meet.

If ICANN attempted to put this policy proposal into practice it would intertwine itself in general policy debates, cultural clashes, business feuds, religious wars, and national politics, among a few of the disputes ICANN would have to rule on through this domain name policy.

The proposal operates under false assumptions of "communities" that can be defined, and that parties can be rightfully appointed representatives of "the community" by ICANN. The proposal gives preference to "established institutions" for domain names, and leaves applicants' without the backing of "established institutions" with little right to a top-level domain. The proposal operates to the detriment of small-scale start-ups and innovators who are clever enough to come up with an idea for a domain first, but lack the insider-connections and financial resources necessary to convince an ICANN panel of their worthiness.

It will be excessively expensive to apply for either a controversial or a popular domain name, so only well-financed "established institutions" will have both the standing and financial wherewithal to be awarded a top-level domain. The proposal privileges who is awarded a top-level domain, and thus discourages diversity of thought and the free flow of information by making it more difficult to obtain information on controversial ideas or from innovative new-comers.

Implementation Guideline F

NCUC does not agree with the part of Implementation Guideline F that empowers ICANN identified "communities" to support or oppose applications. Why should all "communities" agree before a domain name can be issued? How to decide who speaks for a "community"?

NCUC also notes that ICANN's Board of Directors would make the final decisions on applications and thus the legal rights of applicants under proposed IG-F. ICANN Board Members are not democratically elected, accountable to the public in any meaningful way, or trained in the adjudication of legal rights. Final decisions regarding legal rights should come from legitimate law-making processes, such as courts.

"Expert panels" or corporate officers are not obligated to respect an applicant's free expression rights and there is no recourse for a decision by the panel or ICANN for rights wrongfully denied. None of the "expert" panelists are democratically elected, nor accountable to the public for their decisions. Yet they will take decisions on the boundaries between free expression and trademark rights in domain names; and "experts" will decide what ideas are too controversial to be permitted in a domain name under this process.

Implementation Guideline H

Implementation Guideline H recommends a system to adjudicate legal rights that exists entirely outside of legitimate democratic law-making processes. The process sets up a system of unaccountable "private law" where "experts" are free to pick and choose favored laws, such as trademark rights, and ignore disfavored laws, such as free expression guarantees.

IG-H operates under the false premise that external dispute providers are authorized to adjudicate the legal rights of domain name applicants and objectors. t further presumes that such expert panels will be qualified to adjudicate the legal rights of applicants and others. But undertaking the creation of an entirely new international dispute resolution process for the adjudication of legal rights and the creation of new rights is not something that can be delegated to a team of experts. Existing international law that takes into account conflict of laws, choice of laws, jurisdiction, standing, and due process must be part of any legitimate process; and the applicant's legal rights including freedom of expression rights must be respected in the process.

Implementation Guideline P

"The devil is in the details" of Implementation Guideline P as it describes in greater detail the proposed adversarial dispute process to adjudicate legal rights to top-level domain names in Recommendation #20. IG-P mandates the rejection of an application if there is "substantial opposition" to it according to ICANN's expert panel. But "substantial" is defined in such as way so as to actually mean "insubstantial" and as a result many legitimate domain names would be rejected by such an extremely low standard for killing an application.

Under IG-P, opposition against and support for an application must be made by an "established institution" for it to count as "significant", again favoring major industry players and mainstream cultural institutions over cultural diversity, innovative individuals, small niche, and medium-sized Internet businesses.

IG-P states that "community" should be interpreted broadly, which will allow for the maximum number of objections to a domain name to count against an application. It includes examples of "the economic sector, cultural community or linguistic community" as those who have a right to complain about an application. t also includes any "related community which believes it is impacted." So anyone who claims to represent a community and believes to be impacted by a domain name can file a complaint and have standing to object to another's application.

There is no requirement that the objection be based on legal rights or the operational capacity of the applicant. There is no requirement that the objection be reasonable or the belief about impact to be reasonable. There is no requirement that the harm be actual or verifiable. The standard for "community" is entirely subjective and based on the personal beliefs of the objector.

The definition of "implicitly targeting" further confirms this subjective standard by inviting objections where "the objector makes the assumption of targeting" and also where "the objector believes there may be confusion by users". Such a subjective process will inevitably result in the rejection of many legitimate domain names.

Picking such a subjective standard conflicts with Principle A in the Final Report that states domain names must be introduced in a "predictable way", and also with Recommendation 1 that states "All applicants for a new gTLD registry should be evaluated against transparent and predictable criteria, fully available to the applicants prior to the initiation of the process." The subjectivity and unpredictability invited into the process by Recommendation #20 turn Principle A and Recommendation 1 from the same report upside down.

Besides the inherent subjectivity, the standard for killing applications is remarkably low. An application need not be intended to serve a particular community for "community-based" objections to kill the application under the proposal. Anyone who believed that he or she was part of the targeted community or who believes others face "detriment" have standing to object to a domain name, and the objection weighs in favor of "significant opposition". This standard is even lower than the "reasonable person" standard, which would at least require that the belief be "reasonable" for it to count against an applicant. The proposed standard for rejecting domains is so low it even permits unreasonable beliefs about a domain name to weigh against an applicant.

If a domain name does cause confusion, existing trademark law and unfair competition law have dealt with it for years and already balanced intellectual property rights against free expression rights in domain names. There is neither reason nor authority for ICANN processes to overtake the adjudication of legal rights and invite unreasonable and illegitimate objections to domain names.

IG-P falsely assumes that the number of years in operation is indicative of one's right to use language. It privileges entities over 5 years old with objection rights that will effectively veto innovative start-ups who cannot afford the dispute resolution process and will be forced to abandon their application to the incumbents.

IG-P sets the threshold for harm that must be shown to kill an application for a domain name remarkably low. Indeed harm need not be actual or verified for an application to be killed based on "substantial opposition" from a single objector.

Whether the committee selects the unbounded definition for "detriment" that includes a "likelihood of detriment" or the narrower definition of "evidence of detriment" as the standard for killing an application for a domain name is largely irrelevant. The difference is akin to re-arranging the deck chairs on the Titanic. ICANN will become bogged down with the approval of domain names either way, although it is worth noting that "likelihood of detriment" is a very long way from "substantial harm" and an easy standard to meet, so will result in many more domain names being rejected.

The definitions and guidelines detailed in IG-P invite a lobby-fest between competing businesses, instill the "heckler's veto" into domain name policy, privilege incumbents, price out of the market non-commercial applicants, and give third-parties who have no legal rights to domain names the power to block applications for those domains. A better standard for killing an application for non-technical reasons would be for a domain name to be shown to be illegal in the applicant's jurisdiction before it can rejected.

In conclusion, the committee's recommendation for domain name objection and rejection processes are far too broad and unwieldy to be put into practice. They would stifle freedom of expression, innovation, cultural diversity, and market competition. Rather than follow existing law, the proposal would set up an illegitimate process that usurps jurisdiction to adjudicate peoples' legal rights (and create new rights) in a process designed to favor incumbents. The adoption of this "free-for-all" objection and rejection process will further call into question ICANN's legitimacy to govern and its ability to serve the global public interest that respects the rights of all citizens.

NCUC respectfully submits that ICANN will best serve the global public interest by resisting the temptation to stray from its technical mandate and meddle in international lawmaking as proposed by Rec. #20 and IG-F, IG-H, and IG-P of the New GTLD Committee Final Report.

REFERENCE MATERIAL -- GLOSSARY[83]

TERM	ACRONYM & EXPLANATION
A-label	The A-label is what is transmitted in the DNS protocol and this is the ASCII-compatible (ACE) form of an DNA string; for example "xn--11b5bs1di".
ASCII Compatible Encoding	ACE ACE is a system for encoding Unicode so each character can be transmitted using only the letters a-z, 0-9 and hyphens. Refer also to http://www ietf.org/rfc/rfc3467 txt?number=3467
American Standard Code for Information Exchange	ASCII ASCII is a common numerical code for computers and other devices that work with text. Computers can only understand numbers, so an ASCII code is the numerical representation of a character such as 'a' or '@'. See above referenced RFC for more information.
Advanced Research Projects Agency	ARPA http://www darpa mil/body/arpa_darpa.html
Commercial & Business Users Constituency	CBUC http://www bizconst org/
Consensus Policy	A defined term in all ICANN registry contracts usually found in Article 3 (Covenants). See, for example, http://www icann.org/tlds/agreements/biz/registry-agmt-08dec06.htm
Country Code Names Supporting Organization	ccNSO http://ccnso.icann.org/
Country Code Top Level Domain	ccTLD Two letter domains, such as uk (United Kingdom), .de (Germany) and jp (Japan) (for example), are called country code top level domains (ccTLDs) and correspond to a country, territory, or other geographic location. The rules and policies for registering domain names in the ccTLDs vary significantly and ccTLD registries limit use of the ccTLD to citizens of the corresponding country. Some ICANN-accredited registrars provide registration services in the ccTLDs in addition to registering names in .biz, .com, .info, .name, net and .org, however, ICANN does not specifically accredit registrars to provide ccTLD registration services. For more information regarding registering names in ccTLDs, including a complete database of designated ccTLDs and managers, please refer to http://www iana.org/cctld/cctld.htm.
Domain Names	The term **domain name** has multiple related meanings: A name that identifies a computer or computers on the internet. These names appear as a component of a Web site's URL, e g. www.wikipedia org. This type of domain name is also called a hostname. The product that Domain name registrars provide to their customers. These names are often called **registered domain names**. Names used for other purposes in the Domain Name System (DNS), for example the special name which follows the @ sign in an email address, or the Top-level domains like .com, or the names used by the Session Initiation Protocol (VoIP),

	or DomainKeys. http://en.wikipedia.org/wiki/Domain_names
Domain Name System	The Domain Name System (DNS) helps users to find their way around the Internet. Every computer on the Internet has a unique address - just like a telephone number - which is a rather complicated string of numbers. It is called its " P address" (IP stands for "Internet Protocol"). P Addresses are hard to remember. The DNS makes using the Internet easier by allowing a familiar string of letters (the "domain name") to be used instead of the arcane IP address. So instead of typing 207.151.159.3, you can type www internic net. t is a "mnemonic" device that makes addresses easier to remember.
Generic Top Level Domain	gTLD Most TLDs with three or more characters are referred to as "generic" TLDs, or "gTLDs". They can be subdivided into two types, "sponsored" TLDs (sTLDs) and "unsponsored TLDs (uTLDs), as described in more detail below. In the 1980s, seven gTLDs (com, edu, .gov, int, mil, .net, and .org) were created. Domain names may be registered in three of these (com, .net, and .org) without restriction; the other four have limited purposes. In 2001 & 2002 four new unsponsored TLDs (.biz, .info, .name, and pro) were introduced. The other three new TLDs (.aero, .coop, and museum) were sponsored. Generally speaking, an unsponsored TLD operates under policies established by the global Internet community directly through the ICANN process, while a sponsored TLD is a specialized TLD that has a sponsor representing the narrower community that is most affected by the TLD. The sponsor thus carries out delegated policy-formulation responsibilities over many matters concerning the TLD.
Governmental Advisory Committee	GAC http://gac.icann org/web/index.shtml
Intellectual Property Constituency	IPC http://www ipconstituency.org/
Internet Service & Connection Providers Constituency	ISPCP
Internationalized Domain Names	IDNs IDNs are domain names represented by local language characters. These domain names may contain characters with diacritical marks (required by many European languages) or characters from non-Latin scripts like Arabic or Chinese.
Internationalized Domain Names in Application	IDNA IDNA is a protocol that makes it possible for applications to handle domain names with non-ASCII characters. IDNA converts domain names with non-ASCII characters to ASCII labels that the DNS can accurately understand. These standards are developed within the IETF (http://www ietf.org)
Internationalized Domain Names – Labels	IDN A Label The A-label is what is transmitted in the DNS protocol and this is the ASCII-compatible ACE) form of an DN A string. For example "xn-1lq90i". IDN U Label The U-label is what should be displayed to the user and is the representation of the IDN in Unicode. For example "北京" ("Beijing" in Chinese). LDH Label The LDH-label strictly refers to an all-ASCII label that obeys the "hostname" (LDH) conventions and that is not an IDN; for example "icann" in the domain name "icann.org"
Internationalized Domain Names Working Group	IDN-WG http://forum icann org/lists/gnso-idn-wg/
Letter Digit Hyphen	LDH The hostname convention used by domain names before internationalization. This meant that domain names could only practically contain the letters a-z, digits 0-9 and the hyphen "-". The term "LDH code points" refers to this subset. With the introduction of IDNs this rule is no longer relevant for all domain names. The LDH-label strictly refers to an all-ASCII label that obeys the "hostname" (LDH) conventions and that is not an IDN; for example "icann" in the domain name "icann.org".

Nominating Committee	NomCom http://nomcom icann.org/
Non-Commercial Users Constituency	NCUC http://www ncdnhc.org/
Policy Development Process	PDP See http //www.icann.org/general/archive-bylaws/bylaws-28feb06.htm#AnnexA
Protecting the Rights of Others Working Group	PRO-WG See the mailing list archive at http //forum.icann.org/lists/gnso-pro-wg/
Punycode	Punycode is the ASCII-compatible encoding algorithm described in Internet standard [RFC3492]. This is the method that will encode DNs into sequences of ASCII characters in order for the Domain Name System (DNS) to understand and manage the names. The intention is that domain name registrants and users will never see this encoded form of a domain name. The sole purpose is for the DNS to be able to resolve for example a web-address containing local characters.
Registrar	Domain names ending with aero, .biz, .com, coop, .info, museum, .name, net, .org, and .pro can be registered through many different companies (known as "registrars") that compete with one another. A listing of these companies appears in the Accredited Registrar Directory. The registrar asks registrants to provide various contact and technical information that makes up the domain name registration. The registrar keeps records of the contact information and submits the technical information to a central directory known as the "registry."
Registrar Constituency	RC http://www icann-registrars.org/
Registry	A registry is the authoritative, master database of all domain names registered in each Top Level Domain. The registry operator keeps the master database and also generates the "zone file" which allows computers to route Internet traffic to and from top-level domains anywhere in the world. Internet users don't interact directly with the registry operator. Users can register names in TLDs including .biz, .com, .info, .net, .name, org by using an ICANN-Accredited Registrar.
Registry Constituency	RyC http://www gtldregistries.org/
Request for Comment A full list of all Requests for Commenthttp://www rfc-editor.org/rfcxx00.html Specific references used in this report are shown in the next column. This document uses language, for example, "should", "must" and "may", consistent with RFC2119.	RFC ftp://ftp.rfc-editor.org/in-notes/rfc1591.txt ftp://ftp.rfc-editor.org/in-notes/rfc2119.txt ftp://ftp.rfc-editor.org/in-notes/rfc2606.txt
Reserved Names Working Group	RN-WG See the mailing list archive at http //forum.icann.org/lists/gnso-rn-wg/
Root server	A **root nameserver** is a DNS server that answers requests for the root namespace domain, and redirects requests for a particular top-level domain to that TLD's nameservers. Although any local implementation of DNS can implement its own private root nameservers, the term "root nameserver" is generally used to describe the thirteen well-known root nameservers that implement the root namespace domain for the Internet's official global implementation of the Domain Name System. All domain names on the Internet can be regarded as ending in a full stopcharacter e g. "en.wikipedia.org.". This final dot is generally implied rather than explicit, as modern DNS software does not actually require that the final dot be included when attempting to translate a domain name to an P address. The empty string after the final dot is called the root domain, and all other domains (i.e. com, .org, net, etc.) are contained within the root domain http://en.wikipedia.org/wiki/Root_server
Sponsored Top Level Domain	sTLD A Sponsor is an organization to which some policy making is delegated from ICANN. The sponsored TLD has a Charter, which defines the purpose for which

	the sponsored TLD has been created and will be operated. The Sponsor is responsible for developing policies on the delegated topics so that the TLD is operated for the benefit of a defined group of stakeholders, known as the Sponsored TLD Community, that are most directly interested in the operation of the TLD. The Sponsor also is responsible for selecting the registry operator and to varying degrees for establishing the roles played by registrars and their relationship with the registry operator. The Sponsor must exercise its delegated authority according to fairness standards and in a manner that is representative of the Sponsored TLD Community.
U-label	The U-label is what should be displayed to the user and is the representation of the Internationalized Domain Name (DN) in Unicode.
Unicode Consortium	A not-for-profit organization found to develop, extend and promote use of the Unicode standard. See http://www unicode.org
Unicode	Unicode is a commonly used single encoding scheme that provides a unique number for each character across a wide variety of languages and scripts. The Unicode standard contains tables that list the code points for each local character identified. These tables continue to expand as more characters are digitalized.

[39] "My concern involves using definitions that rely on legal terminology established for trademarks for what I believe should be a policy based on technical criteria.

In the first instance I believe that this is essentially a technical issue that should have been resolved with reference to typography, homologues, orthographic neighbourhood, transliteration and other technically defined attributes of a name that would make it unacceptable. There is a large body of scientific and technical knowledge and description in this field that we could have drawn on.

By using terms that rely on the legal language of trademark law, I believe we have created an implicit redundancy between recommendations 2 and 3. I e., I believe both 2 and 3 can be used to protect trademarks and other intellectual property rights, and while 3 has specific limitations, 2 remains open to full and varied interpretation.

As we begin to consider IDNs, I am concerned that the interpretations of confusingly similar may be used to eliminate many potential TLDs based on translation. That is, when a translation may have the same or similar meaning to an existing TLD, that the new name may be eliminated because it is considered confusing to users who know both languages."

[40] http://data.iana org/TLD/tlds-alpha-by-domain txt

[41] See section 4A -- http://www icann org/udrp/udrp-policy-24oct99 htm.

[42] In addition to the expertise within the Committee, the NCUC provided, as part of its Constituency Impact Statement expert outside advice from Professor Christine Haight Farley which said, in part, ".. A determination about whether use of a mark by another is "confusingly similar" is simply a first step in the analysis of infringement. As the committee correctly notes, account will be taken of visual, phonetic and conceptual similarity. But this determination does not end the analysis. Delta Dental and Delta Airlines are confusingly similar, but are not like to cause confusion, and therefore do not infringe. ... In trademark law, where there is confusing similarity and the mark is used on similar goods or services, a likelihood of confusion will usually be found. European trademark law recognizes this point perhaps more readily that U.S. trademark law. As a result, sometimes "confusingly similar" is used as shorthand for "likelihood of confusion". However, these concepts must remain distinct in domain name policy where there is no opportunity to consider how the mark is being used."

[43] In addition, advice was sought from experts within W PO who continue to provide guidance on this and other elements of dispute resolution procedures.

[44] Kristina Rosette provided the reference to the *Agreement on Trade-Related Aspects of Intellectual Property Rights*which is found online at http://www.wto.org/english/tratop_e/trips_e/t_agm1_e htm

".. *Article 16Rights Conferred* . 1The owner of a registered trademark shall have the exclusive right to prevent all third parties not having the owner's consent from using in the course of trade identical or similar signs for goods or services which are identical or similar to those in respect of which the trademark is registered where such use would result in a likelihood of confusion. In case of the use of an identical sign for identical goods or services, a likelihood of confusion shall be presumed. The rights described above shall not prejudice any existing prior rights, nor shall they affect the possibility of Members making rights available on the basis of use...."

[45] http://www.ohchr.org/english/bodies/hrc/comments.htm

[46] http://gnso.icann org/drafts/GNSO-PRO-WG-final-01Jun07.pdf

[47] Charles Sha'ban provided a range of examples from Arabic speaking countries. For example, in Jordan, Article 7 Trademarks eligible for registration are - A 1trademark shall be registered if it is distinctive, as to words, letters, numbers, figures, colors, or other signs or any combination thereof and visually perceptible. - F2or the purposes of this Article, "distinctive" shall mean applied in a manner which secures distinguishing the goods of the proprietor of the trademark from those of other persons. Article 8 Marks which may not be registered as trademarks. The following may not be registered as

trademarks: 10- A mark identical with one belonging to a different proprietor which is already entered in the register in respect of the same goods or class of goods for which the mark is intended to be registered, or so closely resembling such trademark to the extent that it may lead to deceiving third parties.

12- The trademark which is identical or similar to, or constitutes a translation of, a well-known trademark for use on similar or identical goods to those for which that one is well-known for and whose use would cause confusion with the well-known mark, or for use of different goods in such a way as to prejudice the interests of the owner of the well-known mark and leads to believing that there is a connection between its owner and those goods as well as the marks which are similar or identical to the honorary badges, flags, and other insignia as well as the names and abbreviations relating to international or regional organizations or those that offend our Arab and Islamic age-old values.

In Oman for example, Article 2 of the Sultan Decree No. 38/2000 states:

"The following shall not be considered as trademarks and shall not be registered as such: f the mark is identical, similar to a degree which causes confusion, or a translation of a trademark or a commercial name known in the Sultanate of Oman with respect to identical or similar goods or services belonging to another business, or if it is known and registered in the Sultanate of Oman on goods and service which are neither identical nor similar to those for which the mark is sought to be registered provided that the usage of the mark on those goods or services in this last case will suggest a connection between those goods or services and the owner of the known trademark and such use will cause damage to the interests of the owner of the known trademark."

Although the laws In Egypt do not have specific provisions regarding confusion they stress in great detail the importance of distinctiveness of a trade mark.

Article 63 in the IP Law of Egypt No.82 for the year 2002 states:

"A trademark is any sign distinguishing goods, whether products or services, and include is particular names represented in a distinctive manner, signatures, words, letters, numerals, design, symbols, signposts, stamps, seal, drawings, engravings, a combination of distinctly formed colors and any other combination of these elements if used, or meant to be used, to distinguish the precedents of a particular industry, agriculture, forest or mining venture or any goods, or to indicate the origin of products or goods or their quality, category, guarantee, preparation process, or to indicate the provision of any service. In all cases, a trademark shall be a sign that is recognizable by sight."

[48] Found at http://www.wipo.int/treaties/en/ip/paris/trtdocs_wo020.ht with 171 contracting parties.

[49] Further information can be found at the US Patent and Trademark Office's website http://www uspto gov/

[50] Found at http://www.icann.org/registrars/ra-agreement-17may01.htm#3

[51] Found at http://gnso.icann.org/drafts/idn-wg-fr-22mar07 htm.

[52] The 2003 correspondence between ICANN's then General Counsel and the then GAC Chairman is also usefulhttp //www.icann.org/correspondence/touton-letter-to-tarmizi-10feb03 htm.

[53] "My first concern relates to the protection of what can be called the linguistic commons. While it is true that much of trademark law and practice does protect general vocabulary and common usage from trademark protection, I am not sure that this is always the case in practice. I am also not convinced that trademark law and policy that applies to specific product type within a specific locale is entirely compatible with a general and global naming system."

[54] For example, David Maher, Jon Bing, Steve Metalitz, Philip Sheppard and Michael Palage.

[55] Reserved Word has a specific meaning in the ICANN context and includes, for example, the reserved word provisions in ICANN's existing registry contracts. See http://www icann org/registries/agreements.htm.

[56] "Until such time as the technical work on IDNAbis is completed, I am concerned about establishing reserved name rules connected to DNs. My primary concern involves policy decisions made in ICANN for reserved names becoming hard coded in the IDNAbis technical solution and thus becoming technical constraints that are no longer open to future policy reconsideration."

[57] Found online at http://gnso.icann.org/issues/new-gtlds/final-report-rn-wg-23may07 htm and in full in Part B of the*Report*.

[58] The Committee are aware that the terminology used here for the purposes of policy recommendations requires further refinement and may be at odds with similar terminology developed in other context. The terminology may be imprecise in other contexts than the general discussion about reserved words found here.

[59] The subgroup was encouraged by the ccNSO not to consider removing the restriction on two-letter names at the top level. IANA has based its allocation of two-letter names at the top level on the ISO 3166 list. There is a risk of collisions between any interim allocations, and ISO 3166 assignments which may be desired in the future.

[60] The existing gTLD registry agreements provide for a method of potential release of two-character LDH names at the second level. In addition, two character LDH strings at the second level may be released through the process for new registry services, which process involves analysis of any technical or security concerns and provides opportunity for public input. Technical issues related to the release of two-letter and/or number strings have been addressed by the RSTEP Report on GNR's proposed registry service. The GAC has previously noted the WIPO II Report statement that "If ISO 3166 alpha-2 country code elements are to be registered as domain names in the gTLDs, it is recommended that this be done in a manner that minimises the potential for confusion with the ccTLDs."

[61] Considering that the current requirement in all 16 registry agreement reserves "All labels with hyphens in the third and fourth character positions (e g., "bq--1k2n4h4b" or "xn--ndk061n")", this requirement reserves any names having any of a combination of 1296 different prefixes (36x36).

[62] Internet Draft IDNAbis Issues: http://www.ietf org/internet-drafts/draft-klensin-idnabis-issues-01 txt (J. Klensin), Section 3.1.1.1

[63] Considering that the current requirement in all 16 registry agreement reserves "All labels with hyphens in the third and fourth character positions (e g., "bq--1k2n4h4b" or "xn--ndk061n")", this requirement reserves any names having any of a combination of 1296 different prefixes (36x36).

[64] Considering that the current requirement in all 16 registry agreement reserves "All labels with hyphens in the third and fourth character positions (e g., "bq--1k2n4h4b" or "xn--ndk061n")", this requirement reserves any names having any of a combination of 1296 different prefixes (36x36).

[65] With its recommendation, the sub-group takes into consideration that justification for potential user confusion (i.e., the minority view) as a result of removing the contractual condition to reserve gTLD strings for new TLDs may surface during one or more public comment periods.

[66] Note that this recommendation is a continuation of the recommendation in the original RN-WG report, modified to synchronize with the additional work done in the 30-day extension period.

[67] Ms Doria said "...My primary concern focuses on the term 'morality'. While public order is frequently codified in national laws and occasionally in international law and conventions, the definition of what constitutes morality is not generally codified, and when it is, I believe it could be referenced as public order. This concern is related to the broad set of definitions used in the world to define morality. By including morality in the list of allowable exclusions we have made the possible exclusion list indefinitely large and have subjected the process to the consideration of all possible religious and ethical systems. ICANN or the panel of reviewers will also have to decide between different sets of moral principles, e g, a morality that holds that people should be free to express themselves in all forms of media and those who believe that people should be free from exposure to any expression that is prohibited by their faith or moral principles. This recommendation will also subject the process to the fashion and occasional demagoguery of political correctness. I do not understand how ICANN or any expert panel will be able to judge that something should be excluded based on reasons of morality without defining, at least de-facto, an ICANN definition of morality? And while I am not a strict constructionist and sometimes allow for the broader interpretation of ICANN's mission, I do not believe it includes the definition of a system of morality."

[68] http://www.icann org/tlds/agreements/net/appendix7.html

[69] 'While I accept that a prospective registry must show adequate operational capability, creating a financial criteria is of concern. There may be many different ways of satisfying the requirement for operational capability and stability that may not be demonstrable in a financial statement or traditional business plan. E g., in the case of an less developed community, the registry may rely on volunteer effort from knowledgeable technical experts.

Another concern I have with financial requirements and high application fees is that they may act to discourage applications from developing nations or indigenous and minority peoples that have a different set of financial opportunities or capabilities then those recognized as acceptable within an expensive and highly developed region such as Los Angeles or Brussels."

[70] "In general I support the policy though I do have concerns about the implementation which I discuss below in relation to IG (P)".

[71] "In general I support the idea that a registry that is doing a good job should have the expectancy of renewal. I do, however, believe that a registry, especially a registry with general market dominance, or specific or local market dominance, should be subject to comment from the relevant user public and to evaluation of that public comment before renewal. When performance is satisfactory, there should an expectation of renewal. When performance is not satisfactory, there should be some procedure for correcting the situation before renewal."

[72] Consensus Policies has a particular meaning within the ICANN environment. Refer tohttp://www icann org/general/consensus-policies htm for the full list of ICANN's Consensus Policies.

ICANN

The Internet Corporation for Assigned Names and Numbers

To All Prospective Applicants for New gTLDs –

Since ICANN's founding ten years ago as a not-for-profit, multi-stakeholder organization dedicated to coordinating the Internet's addressing system, one of its foundational principles has been to promote competition in the domain-name marketplace while ensuring Internet security and stability.

We are now engaging the Internet community in agreeing a way forward to introduce new gTLDs in the domain name space. Such expansion is driven by the demand for more innovation, choice and change to the Internet's addressing system, now constrained by only 21 generic top-level domain names. In a world with 1.5 billion Internet users—and growing—diversity, choice and competition are key to the continued success and reach of the global network.

The launch of these coming new gTLD application rounds followed a detailed and lengthy consultation process with all constituencies of the global Internet community. Representatives from a wide variety of stakeholders—governments, individuals, civil society, business and intellectual property constituencies, and the technology community—were engaged in discussions for more than 18 months. In October 2007, the Generic Names Supporting Organization (GNSO)—one of the groups that coordinate global Internet policy at ICANN—completed its policy development work on new gTLDs and approved a set of recommendations. Major contributors to this policy work were ICANN's Governmental Advisory Committee (GAC), At-Large Advisory Committee (ALAC), Country Code Names Supporting Organization (ccNSO) and Security and Stability Advisory Committee (SSAC). All this policy development work culminated with ICANN's Board of Directors deciding to adopt the community-developed policy at the ICANN Paris meeting in June 2008. You can see a thorough brief to the policy process and outcomes at http://gnso.icann.org/issues/new-gtlds/.

Please note that the Applicant Guidebook that follows this letter is a draft. Applicants should not rely on any of the proposed details of the new gTLD program, as the program remains subject to further consultation and revision. Also, some of the modules in this guidebook highlight areas of the process that remain under development. These areas will be made available for public consultation in the near future.

In addition to the Draft Applicant Guidebook, ICANN is posting a series of papers that serve as explanatory memoranda to assist the Internet community to better understand the implementation work.

ICANN expects to engage in a productive and robust dialogue with the Internet community through a consultative process. Comments will be used to revise and prepare the final Applicant Guidebook, to be released early in 2009.

The New gTLD Program enables the Internet community to open up the name space to new and innovative uses for top-level domains, and can meet some of the needs unmet by the current market. It has the potential to be one of the biggest influences on the future of the Internet.

Sincerely,

Paul D Twomey

Paul Twomey

New gTLD Program: Draft Applicant Guidebook (Draft RFP)

Please note that this is a discussion draft only. Potential applicants should not rely on any of the proposed details of the new gTLD program as the program remains subject to further consultation and revision.

ICANN

24 October 2008

Table of Contents

5.2.2 Additional Requirements

New gTLD Program: Applicant Guidebook

How to Use

The Draft Applicant Guidebook (Request for Proposals) consists of a series of modules, each focused on specific topics within the application and evaluation process:

Module 1: Introduction to the Application Process

Provides an overview of the application process, documentation requirements, and fees

Module 2: Evaluation Procedures

Describes the various reviews that occur during the evaluation process and criteria for approval of applications

Module 3: Dispute Resolution Procedures

Contains the grounds for formal objection by third parties concerning gTLD applications submitted, and the dispute resolution procedure triggered by an objection

Module 4: String Contention Procedures

Describes mechanisms for resolving contention when there is more than one qualified applicant for identical or similar gTLD strings

Module 5: Transition to Delegation

Describes the final steps required of an applicant, including execution of a registry agreement and completion of pre-delegation tests

Module 6: Terms and Conditions

Contains the terms and conditions applicable to all entities submitting an application

Glossary

Contains definitions for terms used in the Applicant Guidebook

ICANN is posting a series of explanatory memoranda to accompany this draft, to provide further details on the background work completed by ICANN. Links to these memoranda are noted within the relevant modules.

All materials contained in the Draft Applicant Guidebook are being presented for public comment. Please note that this is a discussion draft only. Potential applicants should not rely on any of the proposed details of the new gTLD program as the program remains subject to further consultation and revision.

ICANN

Draft Applicant Guidebook

Module 1

Please note that this is a discussion draft only. Potential applicants should not rely on any of the proposed details of the new gTLD program as the program remains subject to further consultation and revision.

24 October 2008

Module 1

Introduction to the gTLD Application Process

This module gives applicants an overview of the process for applying for a new generic top-level domain, and includes instructions on how to complete and submit an application, the supporting documentation an applicant must submit with an application, the fees required and when and how to submit them.

This module also describes the conditions associated with particular types of applications, and the application life cycle.

For more about the origins, history and details of ICANN's policies on new gTLDs, please see http://gnso.icann.org/issues/new-gtlds/.

A glossary of relevant terms is included with the Draft Applicant Guidebook (Draft RFP).

Prospective applicants are encouraged to read and become familiar with the content of this entire module as well as the others, before starting the application process to make sure they understand what is required of them and what they can expect at each stage of the application evaluation process.

1.1 Application Life Cycle and Timelines

This section provides a description of the stages that an application passes through once it is submitted. Some stages will occur for all applications submitted; others will only occur in specific circumstances. Applicants should be aware of the stages and steps involved in processing applications received.

1.1.1 Application Submission Dates

The application submission period opens at [time] UTC [date].

The application submission period closes at [time] UTC [date].

Applications may be submitted electronically through ICANN's online application system.

To receive consideration, all applications must be submitted electronically through the online application system by the close of the application submission period.

An application will not be considered, in the absence of exceptional circumstances, if:

- It is received after the due date.
- The application form is incomplete (either the questions have not been fully answered or required supporting documents are missing). Applicants will not ordinarily be permitted to supplement their applications after submission.
- The evaluation fee has not been paid by the deadline. Refer to Section 1.5 for fee information.

1.1.2 Application Processing Stages

This subsection provides an overview of the stages involved in processing an application submitted to ICANN. In Figure 1-1, the shortest and most straightforward path is marked with bold lines, while stages that may or may not apply in any given case are also shown. A brief description of each stage follows.

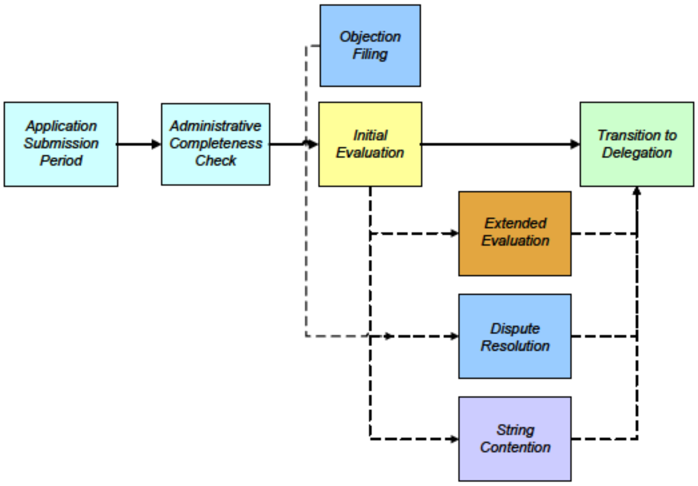

Figure 1-1 – Once submitted to ICANN, applications will pass through multiple stages of processing.

1.1.2.1 Application Submission Period

At the time the application submission period opens, applicants wishing to apply for a new gTLD can become registered users of the online application system.

Through the application system, applicants will answer a series of questions to provide general information, demonstrate financial capability, and demonstrate technical and operational capability. . The supporting documents listed in subsection 1.2.3 of this module must also be submitted through the application system.

Applicants must also submit their evaluation fees during this period. Refer to Section 1.5 of this module for additional information about fees and payments.

Following the close of the application period, applicants can continue to use the application system as a resource to track the progress of their applications, although they may receive communications from ICANN through other means.

1.1.2.2 Administrative Completeness Check

Immediately following the close of the application period, ICANN will check all applications for completeness. This check ensures that:

- All questions are answered (except those questions identified as optional);
- Required supporting documents are provided in the proper format(s); and
- The evaluation fees have been received.

ICANN will post a list of applications considered complete and ready for evaluation as soon as practical after the close of the application period. The status information for each application will also be updated in the online application system.

1.1.2.3 Initial Evaluation

Initial Evaluation will begin immediately after the administrative completeness check concludes. All complete applications will be reviewed during Initial Evaluation.

There are two main elements of the Initial Evaluation:

- String reviews (concerning the applied-for gTLD string); and
- Applicant reviews (concerning the entity applying for the gTLD and its proposed registry services).

Applicant reviews include a determination of whether the applicant has the requisite technical and financial capability to operate a registry.

- Panels of independent evaluators will perform these reviews based on the information provided by each applicant in its responses to the application form.
- There may be one round of questions and answers between the applicant and evaluators to clarify information contained in the application. Refer to Module 2 for further details on the evaluation process.

Evaluators will report whether the applicant passes or fails each of the parts of the Initial Evaluation. These reports will be available in the online application system.

At the conclusion of the Initial Evaluation period, ICANN will post a notice of all applications that have passed the Initial Evaluation. Depending on the volume of applications received, ICANN may post such notices in batches over the course of the Initial Evaluation period.

1.1.2.4 Objection Filing

Formal objections to applications can be filed on any of four enumerated grounds by parties with standing to object. The objection filing period will open after ICANN posts the list of complete applications as described in paragraph 1.1.2.2. Objectors will file directly with dispute resolution service providers (DRSPs). Refer to Module 3, Dispute Resolution Procedures, for further details.

The objection filing phase will close following the end of the Initial Evaluation period (refer to paragraph 1.1.2.3). Objections that have been filed during the objection filing phase will be addressed in the dispute resolution phase, which is outlined in paragraph 1.1.2.6 and discussed in detail in Module 3.

All applicants should be aware that third parties have the opportunity to file objections to any application during this period. Applicants whose applications are the subject of a formal objection will have an opportunity to file a response according to the dispute resolution service provider's rules and procedures (refer to Module 3).

An applicant wishing to file a formal objection to another application that has been submitted would do so within the objection filing period, following the objection filing procedures in Module 3.

1.1.2.5 Extended Evaluation

Extended Evaluation applies only to applicants that do not pass Initial Evaluation.

Applicants failing certain elements of the Initial Evaluation can request an Extended Evaluation. If the applicant does not expressly request an Extended Evaluation, the application will proceed no further. The Extended Evaluation period allows for one additional round of questions and answers between the applicant and evaluators to clarify information contained in the application. The reviews performed in Extended Evaluation do not introduce additional evaluation criteria.

An Extended Evaluation may also be required if the applied-for gTLD string or one or more proposed registry services raise technical issues that might adversely affect the security and stability of the DNS. The Extended Evaluation period provides a time frame for these issues to be investigated. Applicants will be informed if such reviews are required at the end of the Initial Evaluation period. Evaluators and any applicable experts consulted will communicate their conclusions at the end of the Extended Evaluation period. These reports will be available in the online application system.

At the conclusion of the Extended Evaluation period, ICANN will post all evaluator reports from the Initial and Extended Evaluation periods.

If an application passes the Extended Evaluation, it can then proceed to the next stage. If the application does not pass the Extended Evaluation, it will proceed no further.

1.1.2.6 Dispute Resolution

Dispute resolution applies only to applicants that are the subject of a formal objection.

Where formal objections are filed and filing fees paid during the objection filing phase, dispute resolution service providers will initiate and conclude proceedings based on the objections received. The formal objection procedure exists to provide a path for those who wish to object to an application that has been received by ICANN. Dispute resolution service providers provide the fora to adjudicate the proceedings based on the subject matter and the needed expertise.

As a result of the proceeding, either the applicant will prevail (in which case the application can proceed to the next stage), or the objector will prevail (in which case either the application will proceed no further or the application will be bound to a contention resolution procedure). Refer to Module 3, Objection and Dispute Resolution, for detailed information. Applicants will be notified by the Dispute Resolution Service Provider of the results of dispute proceedings. The online application system will also be updated with these results.

1.1.2.7 String Contention

String contention applies only when there is more than one qualified applicant for the same or similar gTLD strings.

String contention refers to the scenario in which there is more than one qualified applicant for the same gTLD or for gTLDs that are so similar that they create a probability of detrimental user confusion if more than one is delegated. ICANN will resolve cases of string contention either through comparative evaluation or through an alternative mechanism for efficient resolution of string contention.

In the event of contention between applied-for strings that represent geographical names, the parties may be asked to follow a different process to resolve the contention.

Groups of applied-for strings that are either identical or confusingly similar are called contention sets. All applicants should be aware that if an application is identified as being part of a contention set, string contention resolution procedures will not begin until all applications in the contention set have completed all aspects of evaluation, including dispute resolution, if applicable.

To illustrate, as shown in Figure 1-2, Applicants A, B, and C all apply for .EXAMPLE and are identified as a contention set. Applicants A and C pass Initial Evaluation, but Applicant B does not. Applicant B elects Extended Evaluation. A third party files an objection to Applicant C's application, and Applicant C enters the dispute resolution proceeding. Applicant A must wait to see whether Applicants B and C successfully complete the Extended Evaluation and dispute resolution phases, respectively, before it can proceed to the string contention resolution stage. In this example, Applicant B passes the Extended Evaluation, but Applicant C does not prevail in the dispute resolution proceeding. String contention resolution then proceeds between Applicants A and B.

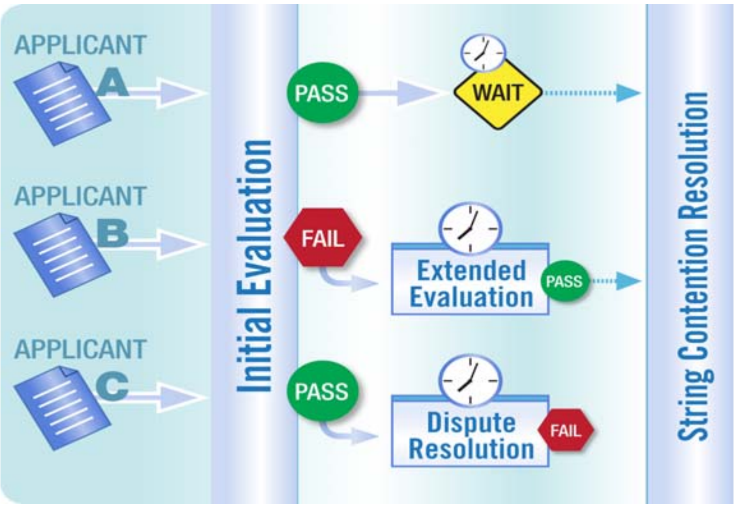

Figure 1-2 – All applications in a contention set must complete all previous evaluation and dispute resolution stages before string contention resolution can begin.

Applicants prevailing in a string contention resolution procedure will proceed toward delegation of applied-for gTLD strings. The online application system will be updated with the resolution of the string contention procedures.

1.1.2.8 Transition to Delegation

Applicants that successfully complete all the relevant stages outlined in this subsection 1.1.2 are required to carry out a series of concluding steps before delegation of the applied-for gTLD string into the root zone. These steps include execution of a registry agreement with ICANN and completion of a pre-delegation technical test to validate information provided in the application.

Following execution of a registry agreement, the prospective registry operator must complete technical set-up and satisfactory performance on technical checks before delegation of the gTLD into the root zone. If the initial start-up requirements are not satisfied so that the gTLD can be delegated into the root zone within the time frame specified in the registry agreement, ICANN may in its sole and absolute discretion elect to terminate the registry agreement.

Once all of these steps have been successfully completed, the applicant is eligible for delegation of its applied-for gTLD string into the DNS root zone.

1.1.3 Accounting for Public Comment in the Evaluation of Applications once the New gTLD Process is Launched

Public comment mechanisms are part of ICANN's policy development and implementation processes. As a private-public partnership, ICANN is dedicated to preserving the operational security and stability of the Internet, to promoting competition, to achieving broad representation of global Internet communities, and to developing policy appropriate to its mission through bottom-up, consensus-based processes. This necessarily involves the participation of many stakeholder groups in a public discussion.

In the new gTLD application process, public comments will be a mechanism for the public to bring relevant information and issues to the attention of those charged with handling new gTLD applications. ICANN will open a public comment forum at the time the applications are publicly posted on ICANN's website (refer to paragraph 1.1.2.2), which will remain open through the application round.

Public comments received will be provided to the evaluators during the Initial and Extended Evaluation periods. Evaluators will have discretion to take the information provided in these comments into consideration as deemed necessary. Consideration of the applicability of the information submitted through public comments will be included in the evaluators' reports.

Public comments may also be relevant to one or more objection grounds. (Refer to Module 3, Dispute Resolution Procedures, for the objection grounds.) ICANN will provide all public comments received to DRSPs, who will have discretion to consider them.

A distinction should be made between public comments, which may be relevant to ICANN's task of determining whether applications meet the established criteria, and formal objections that concern matters outside this evaluation. ICANN created the formal objection process to allow a full and fair consideration of objections based on subject areas outside ICANN's mission and expertise. A party contacting ICANN to pursue an objection will be referred to the formal objection channels designed specifically for resolving these matters in the new gTLD space. More information on the objection and dispute resolution processes is available in Module 3.

1.1.4 Sample Application Scenarios

The following scenarios briefly show a variety of ways in which an application may proceed through the evaluation process. The table that follows summarizes some processes and outcomes. This is not intended to be an exhaustive list of possibilities. There are other possible combinations of paths an application could follow.

Scenario Number	Initial Evaluation	Extended Evaluation	Objection(s) Raised	String Contention	Approved for Subsequent Steps
1	Pass	N/A	None	No	Yes
2	Fail	Pass	None	No	Yes
3	Pass	N/A	None	Yes	Yes
4	Pass	N/A	Applicant prevails	No	Yes
5	Pass	N/A	Objector prevails	N/A	No
6	Fail	Quit	n/a	N/A	No
7	Fail	Fail	n/a	N/A	No
8	Fail	Pass	Applicant prevails	Yes	Yes
9	Fail	Pass	Applicant prevails	Yes	No

Scenario 1 – Pass Initial Evaluation, No Objection, No Contention – In the most straightforward case, the application passes Initial Evaluation and there is no need for an Extended Evaluation. No objections are raised during the objection period, so there is no dispute to resolve. As there is no contention for the applied-for gTLD string, the applicant can enter into a registry agreement and the application can proceed toward delegation

Scenario 2 – Extended Evaluation, No Objection, No Contention – In this case, the application fails one or more aspects of the Initial Evaluation. The applicant is eligible for and requests an Extended Evaluation for the appropriate elements. Here, the application passes the Extended Evaluation. As with Scenario 1, no objections are raised during the objection period, so there is no dispute to resolve. As there is no contention for the gTLD string, the applicant can enter into a registry agreement and the application can proceed toward delegation.

Scenario 3 – Pass Initial Evaluation, No Objection, Contention – In this case, the application passes the Initial Evaluation so there is no need for Extended Evaluation. No objections are raised during the objection period, so there is no dispute to resolve and no appeal. However, there are other applications for the same or a similar gTLD string, so there is contention. In this case, one application wins the contention resolution, and the other contenders are denied their applications, so the winning applicant can enter into a registry agreement and the application can proceed toward delegation.

Scenario 4 – Pass Initial Evaluation, Win Objection, No Contention – In this case, the application passes the Initial Evaluation so there is no need for Extended Evaluation. During the objection period, a valid objection is raised by an objector with standing on one of the objection grounds (refer to Module 3, Dispute Resolution Procedures). The objection is heard by a dispute resolution service provider panel that finds in favor of the applicant. The applicant can enter into a registry agreement and the application proceeds toward delegation.

Scenario 5 – Pass Initial Evaluation, Lose Objection – In this case, the application passes the Initial Evaluation so there is no need for Extended Evaluation. During the objection period, multiple valid objections are raised by one or more objectors with standing in one or more of the objection grounds. Each objection category for which there are objections is heard by a dispute resolution service provider panel. In this case, the panels find in favor of the applicant for most of the objections, but one finds in favor of the objector. As one of the objections has been upheld, the application does not proceed.

Scenario 6 – Fail Initial Evaluation, Applicant Withdraws – In this case, the application fails one or more aspects of the Initial Evaluation. The applicant decides to withdraw the application rather than continuing with Extended Evaluation. The application does not proceed.

Scenario 7 – Fail Initial Evaluation, Fail Extended Evaluation
In this case, the application fails one or more steps in the Initial Evaluation. The applicant requests Extended Evaluation for the appropriate elements. However, the application fails Extended Evaluation also. The application does not proceed.

Scenario 8 – Extended Evaluation, Win Objection, Pass Contention –In this case, the application fails one or more aspects of the Initial Evaluation. The applicant is eligible for and requests an Extended Evaluation for the appropriate elements. Here, the application passes the Extended Evaluation. During the objection period, one valid objection is raised by an objector with standing. The objection is heard by a dispute resolution service provider panel that rules in favor of the applicant. However, there are other applications for the same or a similar gTLD string, so there is contention. In this case, the applicant prevails over other applications in the contention resolution procedure, the applicant can enter into a registry agreement and the application can proceed toward the delegation phase.

Scenario 9 – Extended Evaluation, Objection, Fail Contention – In this case, the application fails one or more aspects of the Initial Evaluation. The applicant is eligible for and requests an Extended Evaluation for the appropriate elements. Here, the application passes the Extended Evaluation. During the objection period, one valid objection is raised by an objector with standing. The objection is heard by a dispute resolution service provider that rules in favor of the applicant. However, there are other applications for the same or a similar gTLD string, so there is contention. In this case, another applicant prevails in the contention resolution procedure, and the application does not proceed.

Transition to Delegation – After an application has completed Initial or Extended Evaluation, dispute resolution, if applicable, and string contention, if applicable, the applicant is required to complete a set of steps leading to delegation of the gTLD, including execution of a registry agreement with ICANN, and completion of pre-delegation testing. Refer to Module 5 for a description of the relevant steps in this phase.

1.1.5 Subsequent Application Rounds

ICANN's goal is to launch the next gTLD application rounds as quickly as possible. The exact timing will be based on experiences gained and changes required after this round is completed. The goal is for the next application round to begin within one year of the close of the application submission period for this round.

1.2 Information for All Applicants

1.2.1 Eligibility

Any established corporation, organization, or institution in good standing may apply for a new gTLD. Applications from individuals or sole proprietorships will not be considered.

1.2.2 Two Application Types: Open or Community-Based

All applicants are required to designate each application for a new gTLD as **open** or **community-based**.

1.2.2.1 Definitions

For purposes of this RFP, an **open gTLD** is one that can be used for any purpose consistent with the requirements of the application and evaluation criteria, and with the registry agreement. An open gTLD may or may not have a formal relationship with an exclusive registrant or user population. It may or may not employ eligibility or use restrictions.

For purposes of this RFP, a **community-based gTLD** is a gTLD that is operated for the benefit of a defined community consisting of a restricted population. An applicant designating its application as community-based will be asked to substantiate its status as representative of the community it names in the application, and additional information may be requested in the event of a comparative evaluation (refer to Section 4.2 of Module 4). An applicant for a community-based gTLD is expected to:

1. Demonstrate an ongoing relationship with a defined community that consists of a restricted population.
2. Have applied for a gTLD string strongly and specifically related to the community named in the application.
3. Have proposed dedicated registration and use policies for registrants in its proposed gTLD.
4. Have its application endorsed in writing by an established institution representing the community it has named.

1.2.2.2 Implications of Application Designation

Applicants should understand how their designation as open or community-based will affect application processing at particular stages, as described in the following paragraphs.

Objection/Dispute Resolution – All applicants should understand that an objection may be filed against any application on community opposition grounds, even if the applicant has not designated itself as community-based or declared the TLD to be aimed at a particular community. Refer to Module 3, Dispute Resolution Procedures.

String Contention – Any applicant that has been identified as part of a contention set (refer to Module 4.1) may be obliged to participate in either a comparative evaluation or another efficient mechanism for contention resolution if the application reaches the string contention stage and the applicant elects to proceed.

A **comparative evaluation** will take place if a community-based applicant in a contention set has elected comparative evaluation.

Another efficient mechanism for contention resolution will result in other cases. If a comparative evaluation occurs but does not produce a clear winner, the efficient mechanism will then result.

Refer to Module 4, String Contention Procedures, for detailed discussions of contention resolution procedures.

Contract Execution and Post-Delegation – A community-based gTLD applicant will be subject to certain post-delegation contractual obligations to operate the gTLD in a manner consistent with the restrictions associated with its community-based designation, once it begins operating the gTLD. ICANN must approve material changes to the community-based nature of the gTLD and any associated contract changes.

1.2.2.3 Changes to Application Designation

An applicant may not change its designation as open or community-based once it has submitted a gTLD application for processing.

1.2.3 Required Documents

Applicants should be prepared to submit the following documents, which are required to accompany each application:

1. **Proof of legal establishment –** Examples of acceptable documentation include articles or a certificate of incorporation, articles of association or equivalent documents relative to the type of entity and the jurisdiction in which it is formed, such as statutes or membership agreements of the entity.
2. **Proof of good standing** – Examples of acceptable documentation include a certificate of good standing or other equivalent official document issued by a competent government authority, if offered by a governmental authority for the jurisdiction.

Under some laws or jurisdictions, it may be possible to prove both establishment and good standing with a single document. That is, the same document may suffice for items 1 and 2.

If no such certificates or documents are available in the applicant's jurisdiction, an affidavit drafted and signed by a notary public or a legal practitioner duly qualified to represent clients before the courts of the country in which the applicant's organization is established, declaring that the organization is established and in good standing, must be submitted.

3. If the applicant is a government body or organization, it must provide a **certified copy of the act** wherein or governmental decision whereby the government body or organization was established.

ICANN is aware that practices and documentation standards vary from region to region, and has attempted to account for a variety of these practices when specifying the requirements. Applicants with exceptional circumstances should contact ICANN to determine how to provide appropriate documentation.

4. **Financial statements**. Applicants must provide audited financial statements for the most recently completed fiscal year for the applicant, and unaudited financial statements for the most recently ended interim financial period for the applicant.
5. Before delegation: **documentary evidence of ability to fund ongoing basic registry operations** for then-existing registrants for a period of three to five years in the event of registry failure, default or until a successor operator can be designated.

All documents must be valid at the time of submission.

Supporting documentation should be submitted in the original language. English translations are not required.

Some supporting documentation will be required only in certain cases:

1. ***Community endorsement –*** If an applicant has designated its application as community-based, it will be asked to submit a written endorsement of its application by an established institution representing the community it has named.
2. ***Government support or non-objection*** – If an applicant has applied for a string that is a geographical term, the

applicant is required to submit a statement of support or non-objection for its application from the relevant government(s) or public authorities. Refer to Section 2.1.1.4 for more information on the requirements for geographical names.

3. ***Documentation of outside funding commitments* –** If an applicant lists outside sources of funding in its application, it must provide evidence of commitment by the party committing the funds.

1.2.4 Notice Concerning Technical Acceptance Issues with New gTLDs

All applicants should be aware that acceptance of their applications by ICANN and entering into a registry agreement with ICANN does not guarantee that the new gTLD will immediately function throughout the Internet. Past experience indicates that ISPs and webhosters do not automatically allow passage of or access to new gTLD strings even when these strings are authorized by ICANN, since software modifications may be required that may not happen until there is a business case for doing so.

Similarly, web applications often validate namestrings on data entry and may filter out new or unknown strings. ICANN has no authority or ability to require acceptance of new gTLD namestrings although it does prominently publicize ICANN-authorized gTLD strings on its website. ICANN encourages applicants to familiarize themselves with these issues and account for them in startup and launch plans. Successful applicants may find themselves expending considerable efforts post-implementation in working with providers to achieve acceptance of their new gTLD namestring.

Applicants should review (Informational) RFC 3696 (see http://www.ietf.org/rfc/rfc3696.txt?number=3696) for background. IDN applicants should review the material concerning experiences with IDN test strings in the root zone (see http://idn.icann.org/).

1.2.5 Terms and Conditions

All applicants must agree to a standard set of Terms and Conditions for the application process. The Terms and Conditions are available in Module 6 of this RFP.

1.3 Information for Internationalized Domain Name Applicants

Some applied-for gTLD strings are expected to be Internationalized Domain Names (IDNs) that require the insertion of IDN-encoded A-labels into the DNS root zone. IDNs are labels that contain one or more letters or characters other than LDH (letters a,…z; digits 0,…9; and the hyphen “-”).

If an applicant applies for such a string, it must provide accompanying information indicating compliance with the IDNA protocol and other requirements. The IDNA protocol is currently under revision and its documentation can be found at http://www.icann.org/en/topics/idn/rfcs.htm. Applicants must provide applied-for gTLD strings in the form of both a **U-label** and an **A-label**.

An A-label is the ASCII-Compatible Encoding form of an IDNA-valid string. Every A-label begins with the IDNA ACE prefix, “xn--”, followed by a string that is a valid output of the Punycode algorithm, and hence is a maximum of 59 ASCII characters in length. The prefix and string together must conform to all requirements for a label that can be stored in the DNS including conformance to the LDH (host name) rule described in RFC 1034, RFC 1123 and elsewhere.

A U-label is an IDNA-valid string of Unicode characters, including at least one non-ASCII character, expressed in a standard Unicode Encoding Form, normally UTF-8 in an Internet transmission context.

For example, using the current IDN test string in Cyrillic script, the U-label is <**испытание**> and the A-label is <**xn—80akhbyknj4f>.** An A-label must be capable of being produced by conversion from a U-label and a U-label must be capable of being produced by conversion from an A-label.

Applicants for IDN gTLDs will also be required to provide the following at the time of the application:

1. Short form of string (English). The applicant will provide a short description of what the string would mean in English.
2. Language of label (ISO 639-1). The applicant will specify the language of the applied-for TLD string, both

according to the ISO's codes for the representation of names of languages, and in English.

3. Script of label (ISO 15924). The applicant will specify the script of the applied-for gTLD string, both according to the ISO code for the presentation of names of scripts, and in English.
4. Unicode code points. The applicant will list all the code points contained in the U-label according to its Unicode form.
5. Representation of label in phonetic alphabet. The applicant will provide its applied-for gTLD string notated according to the International Phonetic Alphabet (http://www.arts.gla.ac.uk/IPA/ipachart.html).
6. Its IDN table. This table provides the list of characters eligible for registration in domain names according to registry policy. It will contain any multiple characters that can be considered "the same" for the purposes of registrations at the second level. For examples, see http://iana.org/domains/idn-tables/.
7. Applicants must further demonstrate that they have made reasonable efforts to ensure that the encoded IDN string does not cause any rendering or operational problems. For example, problems have been identified in strings with characters of mixed right-to-left and left-to-right directionality when numerals are adjacent to the path separator. If an applicant were applying for a string with known issues, it should document steps that will be taken to mitigate these issues in applications.

1.4 Submitting an Application

Applicants may complete the application form and submit supporting documents using ICANN's TLD Application System (TAS). To access the tool, applicants must first register as a TAS user, which involves paying a user registration fee of USD100.

As TAS users, applicants will be able to provide responses in open text boxes and submit required supporting documents as attachments. Restrictions on the size of attachments as well as the file formats are included in the instructions on the TAS site.

ICANN will not accept application forms or supporting materials submitted through other means than TAS (that is, hard copy, fax, email), unless such submission is in accordance with specific instructions from ICANN to applicants.

1.4.1 Accessing the TLD Application System

The TAS site is located at [URL to be inserted in final version of RFP].

TAS features include:

1.4.1.1 Sub-user Management

This feature allows applicants to create sub-users with varying permission levels to assist in completing the application. For example, if an applicant wishes to designate a user to complete the technical section of the application, the applicant can create a sub-user account with access only to that section.

1.4.1.2 Workflow Management

This feature allows applicants to check the status of their applications through TAS.

1.4.1.3 Security

ICANN uses all reasonable efforts to protect applicant information submitted through TAS. TAS uses advanced Internet security technology to protect applicant information against unauthorized access. This technology includes:

Secure Socket Layer (SSL) – To ensure that confidential information remains confidential, it is sent to TAS in a secure session using SSL technology. SSL technology scrambles or encrypts information as it moves between the user's browser and TAS.

Limited TAS Authorized Users and Permission Levels – TAS is a hierarchical system with defined user roles and permissions. ICANN-authorized personnel have access only to the portions of the system they need. For example, an accounting user may only need access to perform updates to the portion of a record indicating whether an applicant's evaluation fee has been received.

Although ICANN intends to follow the security precautions outlined here, it offers no assurances that these procedures will keep an applicant's data confidential and secure from access by unauthorized third parties.

1.4.2 Technical Support

TAS users can refer to the FAQ/knowledge base or contact [email address to be inserted in final version of RFP] for help using the system. Users can expect to receive a tracking ticket number and a response within 24 to 48 hours through the TAS submission tool.

1.4.3 Backup Application Process

If the online application system is not available, ICANN will provide alternative instructions for submitting applications.

1.5 Fees and Payments

This section describes the fees to be paid by the applicant. Payment instructions are also included here.

1.5.1 Breakdown of Fees and Amounts

The following fees are required from all applicants:

- ***TAS User Registration Fee* –** USD 100. This fee enables a user to enter the online application system. This fee is nonrefundable.
- ***gTLD Evaluation fee* –** USD 185,000. ICANN will not begin its evaluation of an application unless it has received the gTLD evaluation fee by the due date. Refer to subsection 1.5.4. The gTLD evaluation fee is set to recover costs associated with the new gTLD program. The fee is set to ensure that the program is fully funded, and doesn't take resources from other ICANN funding sources, including generic registries and registrars, cc TLD contributions and RIR contributions.

  In certain cases, refunds of a portion of this fee may be available for applications that are withdrawn before the evaluation process is complete. The amount of refund will depend on the point in the process at which the withdrawal is made. (Refer to subsection 1.5.5.) Details will be made available when the application process is launched.

Applicants may be required to pay additional fees in certain cases. Those possible additional fees include:

- ***Registry Services Review Fee* –** If applicable, this fee is payable for additional costs incurred in referring an application to the RSTEP for an extended review. Applicants will be notified if such a fee is due. The fee for a three member RSTEP review team is anticipated to be USD 50,000. In some cases, five-member panels might be required, or there might be increased scrutiny at a greater cost. In every case, the applicant will be advised of the review cost before its initiation. Refer to Section 2.1.3 of Module 2 on Registry Services review.

- ***Dispute Resolution Filing Fee –*** This amount must accompany any filing of a formal objection and any response that an applicant files to an objection. This fee is payable to the applicable dispute resolution service provider in accordance with the provider's payment instructions. ICANN estimates that non-refundable filing fees could range from approximately USD 1,000 to USD 5,000 (or more) per party per proceeding. Refer to the appropriate provider for the relevant amount. Refer to Module 3 for dispute resolution procedures.

- ***Dispute Resolution Adjudication Fee –*** This fee is payable to the applicable dispute resolution service provider in accordance with that provider's procedures and schedule of costs. Both parties in the dispute resolution proceeding will be required to submit an advance payment of costs in an estimated amount to cover the entire cost of the proceeding. This may be either an hourly fee based on the estimated number of hours the panelists will spend on the case (including review of submissions, facilitation of a hearing, if allowed, and preparation of a decision), or a fixed amount. The prevailing party in a dispute resolution proceeding will have its advance payment refunded, while the non-prevailing party will not receive a refund and thus will bear the cost of the proceeding.

  ICANN estimates that a proceeding involving a fixed amount could range from USD 2,000 to USD 8,000 (or more) per proceeding. ICANN further estimates that an hourly rate based proceeding with a one-member panel could range from USD 32,000 to USD 56,000 (or more) and with a three-member panel it could range from USD 70,000 to USD 122,000 (or more). These estimates may be lower if the panel does not call for written submissions beyond the objection and response, and does not allow a hearing. Please refer to the appropriate provider for the relevant amounts or fee structures. Refer also to Section 3.2 of Module 3 for further details.

- ***Comparative Evaluation Fee –*** This fee is payable to the provider appointed to handle comparative evaluations, in the event that the applicant participates in a comparative evaluation.

Applicants will be notified if such a fee is due. Refer to Section 4.2 of Module 4.

This list does not include fees (that is, registry fees) that will be payable to ICANN following execution of a registry agreement. See http://www.icann.org/en/topics/new-gtld-draft-agreement-24oct08-en.pdf.

1.5.2 Payment Methods

Payments to ICANN may be submitted by wire transfer, ACH, money order, or check.

1.5.2.1 Wire Transfer Payment

Instructions for making a payment by **wire transfer** will be available in TAS.

1.5.2.2 ACH Payment

Instructions for making **ACH payments** will be available in TAS.

1.5.2.3 Credit Card Payment

To make a **credit card payment**, note:

ICANN accepts Visa, MasterCard/Maestro, American Express and Discover credit cards as forms of payment. The maximum amount accepted is USD 20,000 per invoice.

- Fill out and sign the Credit Card Payment Form at http://www.icann.org/en/financials/credit.pdf.
- Send the completed form to ICANN at fax: +1.310.823.8649

Or mail the form to:

Internet Corporation for Assigned Names and Numbers (ICANN)
Attention: Finance Department
4676 Admiralty Way, Suite 330
Marina del Rey, CA 90292-6601 USA

1.5.2.4 Check or Money Order Payment

To make a **payment by check or money order** (USD only), mail or deliver by private carrier to:

Internet Corporation for Assigned Names and Numbers (ICANN)
Attention: Finance Department
4676 Admiralty Way, Suite 330
Marina del Rey, CA 90292-6601 USA

1.5.3 Requesting an Invoice

The TAS interface allows applicants to request issuance of an invoice for any of the fees payable to ICANN. This service is for the convenience of applicants that require an invoice to process payments.

1.5.4 Deadlines for Payments

The Evaluation Fee must be received by [time] UTC [date].

ICANN or its providers will notify the applicants of due dates for payment in respect of additional fees (if applicable).

1.5.5 Withdrawals and Refunds

Refunds may be available to applicants who choose to withdraw at certain stages of the process.

An applicant that wishes to withdraw an application must use the TAS interface to request a refund. ICANN will not consider any other form of request for refunds. Refunds will only be issued to the organization that submitted the original payment. All refunds are paid by wire transfer. Any bank transfer or transaction fees incurred by ICANN will be deducted from the amount paid.

Further details on refund amounts will be available in the final version of the RFP.

1.6 Questions about this RFP

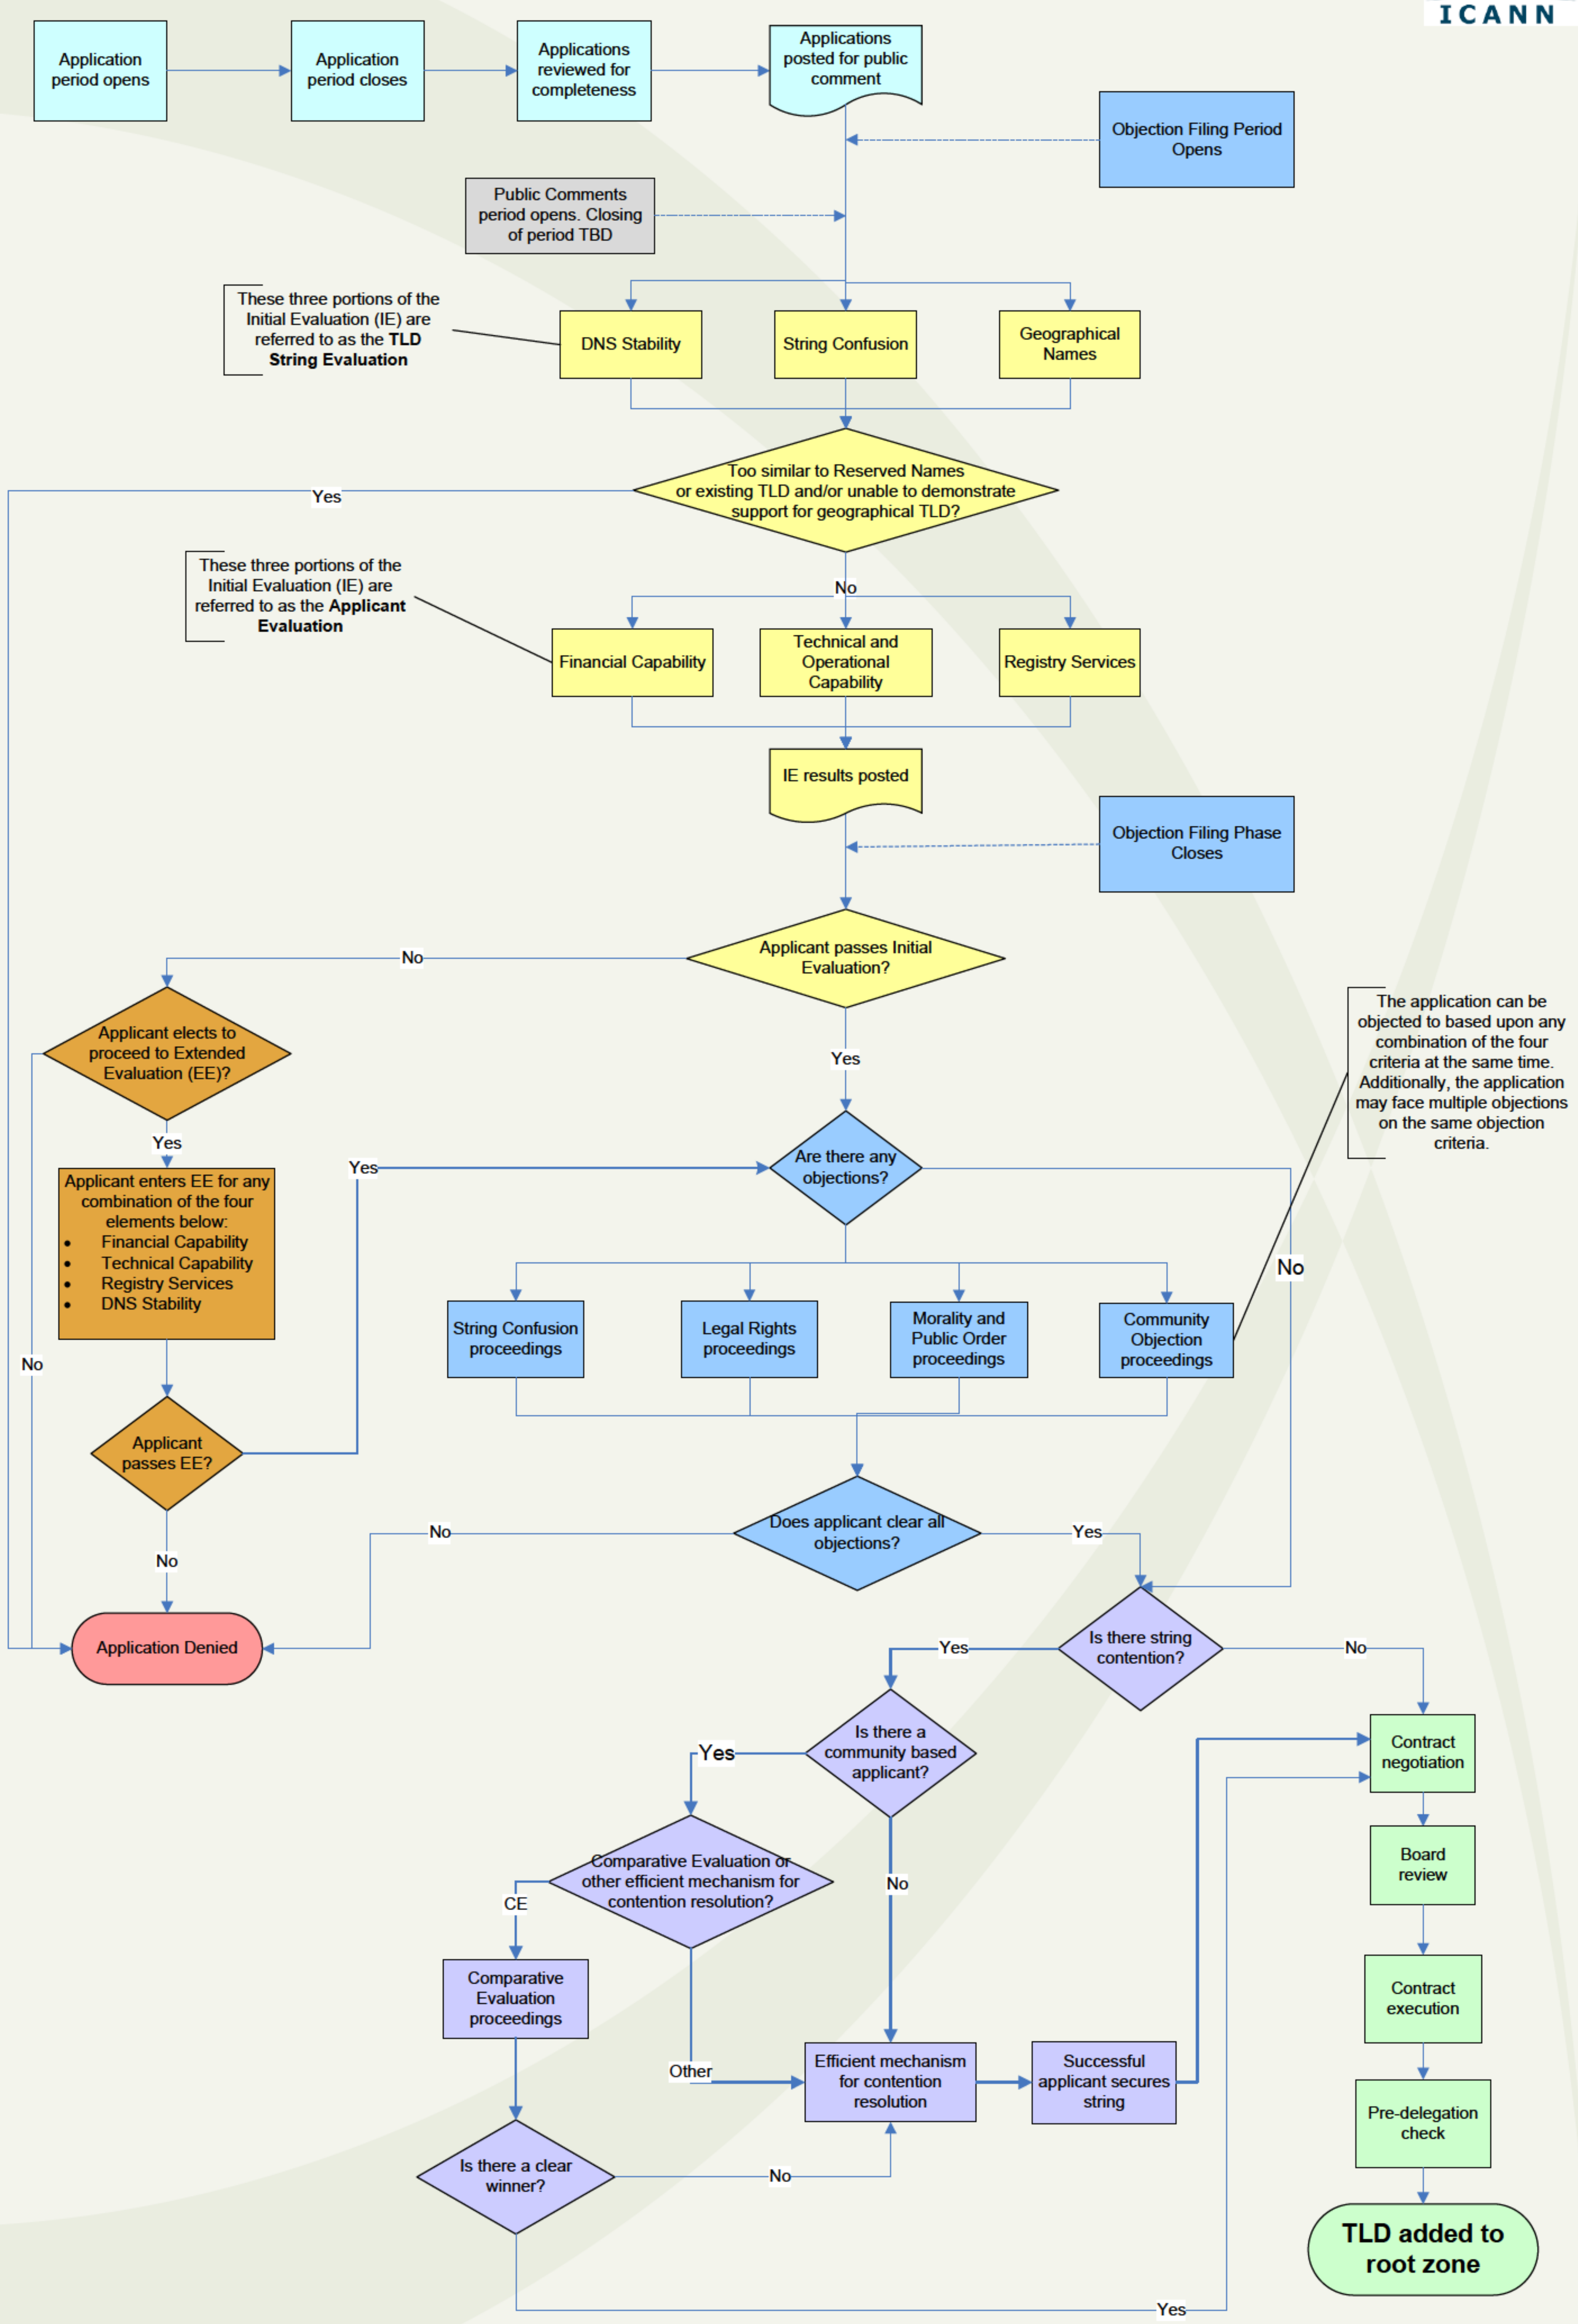
Applicants may submit questions about completing the application form to [email address to be inserted in final version of RFP]. To provide all applicants equitable access to information, ICANN will post all questions and answers in a centralized location on its website.

All requests to ICANN for information about the process or issues surrounding preparation of an application must be submitted in writing to the designated email address. ICANN will not grant requests from applicants for personal or telephone consultations regarding the preparation of an application. Applicants that contact ICANN for clarification about aspects of the application will be referred to the dedicated online question and answer area.

Answers to inquiries will only provide clarification about the application forms and procedures. ICANN will not provide consulting, financial, or legal advice.

New gTLD Program - Evaluation Process

DRAFT- For Discussion Purposes



Application period opens

Application period closes

Applications reviewed for completeness

Applications posted for public comment

Objection Filing Period Opens

Public Comments period opens. Closing of period TBD

These three portions of the Initial Evaluation (IE) are referred to as the **TLD String Evaluation**

DNS Stability

String Confusion

Geographical Names

Too similar to Reserved Names or existing TLD and/or unable to demonstrate support for geographical TLD?

Yes

No

These three portions of the Initial Evaluation (IE) are referred to as the **Applicant Evaluation**

Financial Capability

Technical and Operational Capability

Registry Services

IE results posted

Objection Filing Phase Closes

Applicant passes Initial Evaluation?

No

Yes

Applicant elects to proceed to Extended Evaluation (EE)?

Yes

No

Applicant enters EE for any combination of the four elements below:

- Financial Capability
- Technical Capability
- Registry Services
- DNS Stability

Applicant passes EE?

Yes

No

Are there any objections?

No

The application can be objected to based upon any combination of the four criteria at the same time. Additionally, the application may face multiple objections on the same objection criteria.

String Confusion proceedings

Legal Rights proceedings

Morality and Public Order proceedings

Community Objection proceedings

Does applicant clear all objections?

No

Yes

Application Denied

Is there string contention?

Yes

No

Is there a community based applicant?

Yes

No

Comparative Evaluation or other efficient mechanism for contention resolution?

Draft Applicant Guidebook

Module 2

Please note that this is a discussion draft only. Potential applicants should not rely on any of the proposed details of the new gTLD program as the program remains subject to further consultation and revision.

24 October 2008

Module 2

Evaluation Procedures

This module describes the evaluation procedures and criteria used to determine whether applications are approved for delegation as a gTLD. All applicants will undergo an Initial Evaluation and those that do not pass all phases may enter into an Extended Evaluation.

The first, required evaluation is the **Initial Evaluation**, during which ICANN first assesses an applied-for gTLD string, an applicant's qualifications, and proposed registry services.

The following elements make up **Initial Evaluation**:

- String Reviews
    - String confusion
    - Reserved Names
    - DNS stability
    - Geographical names
- Applicant Reviews
    - Demonstration of technical and operational capability
    - Demonstration of financial capability
    - Registry services

These elements, which are described in greater detail later in this module, are intended to ensure applied-for gTLD strings do not negatively impact DNS security or stability, and to ensure that applicants are capable of operating the gTLD in a stable and secure manner, and that new services can be introduced without adverse effect on the security or stability of the DNS.

An applicant must pass all these reviews to pass the Initial Evaluation. Failure to pass any one of these reviews will result in a failure to pass the Initial Evaluation.

Extended Evaluation may be applicable in cases in which an applicant does not pass the Initial Evaluation or additional inquiry is required.

2.1 Initial Evaluation

The Initial Evaluation consists of two types of examination. Each type is composed of several elements.

The first examination focuses on the applied for string to test:

- Whether the applied-for gTLD string is similar to others and would cause user confusion;
- Whether the applied-for gTLD string might disrupt DNS security or stability; and
- Whether requisite government approval is given in the case of certain geographical names.

The second examination focuses on the applicant to test:

- Whether the applicant has the requisite technical and financial capability; and
- Whether the registry services offered by the applicant might adversely affect DNS security or stability.

2.1.1 String Reviews

In the Initial Evaluation, ICANN reviews every applied-for gTLD string for string confusion, potential to introduce instability into the DNS, and whether relevant government approval is required. Those reviews are described in greater detail in the following paragraphs.

2.1.1.1 String Confusion Review

The objective of this review is to prevent user confusion and loss of confidence in the DNS. This review involves a comparison of each applied-for gTLD string against existing TLDs and against other applied-for gTLD strings. The examination is to determine whether the applied-for gTLD string is so similar to one of the others that it would create a probability of detrimental user confusion if it were to be delegated to the root zone. ICANN will perform determinations of string similarity in accordance with the steps outlined here.

The similarity review will be conducted by a panel of String Similarity Examiners. This examination will be informed by an algorithmic score for the visual similarity between each applied-for string and each of other existing and applied-for TLDs. The score will provide one objective measure for consideration by the panel.

The examiners' task is to identify string similarities that would create a probability of detrimental user confusion. The examiners will use a common standard to test for whether string confusion exists, as follows:

Standard for String Confusion – String confusion exists where a string so nearly resembles another visually that it is likely to deceive or cause confusion. For the likelihood of confusion to exist, it must be probable, not merely possible that confusion will arise in the mind of the average, reasonable Internet user. Mere association, in the sense that the string brings another string to mind, is insufficient to find a likelihood of confusion.

The standard will be applied in two sets of circumstances, when comparing:

- Applied-for gTLD strings against existing TLDs and reserved names.
- Applied-for gTLD strings against other applied for gTLD strings or strings requested in ccTLD processes).

Existing String Similarity Examination – This review involves cross-checking between each applied-for string and the list of existing TLD strings to determine whether the two strings are so similar to one another that they create a probability of detrimental user confusion.

All TLDs currently in the root zone can be found at http://iana.org/domains/root/db/.

An application that fails the string confusion review and is found too similar to an existing string will not pass the Initial Evaluation, and no further reviews will be available.

In the simple case in which an applied-for TLD string is identical to an existing TLD, the application system will recognize the existing TLD and not allow the application to be submitted.

Such testing for identical strings also takes into consideration the code point variants listed in any relevant language reference table.

For example, protocols treat equivalent labels as alternative forms of the same label, just as “foo” and “Foo” are treated as alternate forms of the same label (RFC 3490).

An applied-for gTLD string that passes the string confusion review is still subject to challenge by an existing TLD operator or by another gTLD applicant in the current application round. That process requires that a specific objection be filed by an objector having the standing to make such an objection. Refer to Module 3, Dispute Resolution Procedures, for more information about the objection process.

String Contention Sets: Similarity with Other Applied-for gTLD Strings – All applied-for gTLD strings will be reviewed against one another to identify any strings that are so similar that they create a probability of detrimental user confusion would result if more than one is delegated into the root zone. In performing the string confusion review, the panel of String Similarity Examiners will create contention sets that may be used later in the process. A contention set contains at least two applied-for strings identical to one another or so similar that string confusion would result if more than one were delegated into the root zone. Refer to Module 4, String Contention Procedures, for more information on contention sets and contention resolution. ICANN will notify applicants who are part of a contention set by the conclusion of the Initial Evaluation period. These contention sets will also be published on ICANN's website.

Similarity to TLD strings applied for as ccTLDs -- Applied-for gTLD strings will also be reviewed for similarity to TLD strings applied for in the IDN ccTLD Fast Track process (see http://www.icann.org/en/topics/idn/fast-track/). Should conflict with a prospective fast-track IDN ccTLD be identified, ICANN will take steps to resolve the conflict. (See process for Geographical Names in paragraph 2.1.1.4.)

String Similarity Algorithm – The String Similarity Algorithm (Algorithm) is a tool the examiners use to provide one objective measure as part of the process of identifying strings likely to result in confusion. The Algorithm is also available to applicants for testing and informational purposes. The Algorithm and user guidelines are available at http://80.124.160.66/icann-algorithm.

The Algorithm calculates scores for visual similarity between any two strings, using factors such as letters in sequence, number of similar letters, number of dissimilar letters, common prefixes, common suffixes, and string length.

2.1.1.2 Review for Reserved Names

The Reserved Names review involves comparison with the list of top-level Reserved Names to ensure that the applied-for gTLD string does not appear on that list.

Top-Level Reserved Names List

AFRINIC	*IANA-SERVERS*	*NRO*
ALAC	*ICANN*	*RFC-EDITOR*
APNIC	*IESG*	*RIPE*
ARIN	*IETF*	*ROOT-SERVERS*
ASO	*INTERNIC*	*RSSAC*
CCNSO	*INVALID*	*SSAC*
*EXAMPLE**	*IRTF*	*TEST**
GAC	*ISTF*	*TLD*
GNSO	*LACNIC*	*WHOIS*
GTLD-SERVERS	*LOCAL*	*WWW*
IAB	*LOCALHOST*	
IANA	*NIC*	
*Note that in addition to the above strings, ICANN will also reserve translations of the terms "test" and "example" in multiple languages.		

If an applicant enters a Reserved Name as its applied-for gTLD string, the application system will recognize the Reserved Name and not allow the application to be submitted.

In addition, applied-for gTLD strings are reviewed in a process identical to that described in the preceding section to determine whether they exceed a similarity threshold with a Reserved Name. An application for a gTLD string that is identified as too similar to a Reserved Name will not pass the Reserved Names review.

2.1.1.3 *Review for Potential DNS Instability*

This review determines whether an applied-for gTLD string might cause instability to the DNS. In all cases, this will involve a review for conformance with technical and other requirements for gTLD labels. In some exceptional cases, an extended review may be necessary to investigate possible technical stability problems with the applied-for gTLD string.

2.1.1.3.1 *String Stability Review*

New gTLD labels must not adversely affect on the security or stability of the DNS. Although no string complying with the requirements in paragraph 2.1.1.3.2 of this module is expected to adversely affect DNS security or stability, an extended review is possible if technical reviewers identify an issue with the applied-for gTLD string that requires further investigation.

String Stability Review Procedure – During the Initial Evaluation period, ICANN will conduct a preliminary review on the set of applied-for gTLD strings to ensure that proposed strings comply with relevant standards provided in the preceding section and determine whether any strings raise significant technical stability issues that may require an Extended Evaluation.

There is low probability that this review will be necessary for a string that fully complies with the string requirements in paragraph 2.1.1.3.2 of this module. However, the technical stability review process provides an additional safeguard if unanticipated security or stability issues arise concerning an applied-for gTLD string.

See Section 2.2 for further information on the Extended Evaluation process.

2.1.1.3.2 String Requirements

ICANN will review each applied-for gTLD string to ensure that it conforms with the requirements outlined in the following paragraphs.

If an applied-for gTLD string is found to violate any of these rules, the application will be denied. No further reviews are available.

Technical Requirements for all Labels (Strings) – The technical requirements for the selection of top-level domain labels follow.

- The ASCII label (that is, the label as transmitted on the wire) must be valid as specified in the technical standards *Domain Names: Implementation and Specification* (RFC 1035), and *Clarifications to the DNS Specification* (RFC 2181). This includes the following:
    - The label must have no more than 63 characters.
    - Upper and lower case characters are treated as identical.
- The ASCII label must be a valid host name, as specified in the technical standards *DOD Internet Host Table Specification* (RFC 952), *Requirements for Internet Hosts — Application and Support* (RFC 1123), and *Application Techniques for Checking and Transformation of Names (RFC 3696).* This includes the following:

    - The label must consist entirely of letters, digits and hyphens.
    - The label must not start or end with a hyphen.

- There must be no possibility for confusing an ASCII label for an IP address or other numerical identifier by application software. For example, representations such as “255”, “o377” or “0xff”representing decimal, octal, and hexadecimal strings, can be confused for IP addresses. As such, labels:
    - Must not be wholly composed of digits between “0” and “9”.
    - Must not commence with “0x” or “x”, and have the remainder of the label wholly composed of hexadecimal digits, “0” to “9” and “a” through “f”.
    - Must not commence with “0o” or “o”, and have the remainder of the label wholly composed of digits between “0” and “7”.
- The ASCII label may only include hyphens in the third and fourth position if it represents a valid Internationalized Domain Name in its A-label form (ASCII encoding).
- The presentation format of the domain (that is, either the label for ASCII domains, or the U-label for Internationalized Domain Names) must not begin or end with a digit.

Requirements for Internationalized Domain Names – These requirements apply only to prospective top-level domains that use non-ASCII characters. Applicants for these internationalized top-level domain labels are expected to be familiar with the IETF IDNA standards, Unicode standards, and the terminology associated with Internationalized Domain Names.

- The label must be a valid internationalized domain name, as specified in the technical standard *Internationalizing Domain Names in Applications* (RFC 3490). This includes the following nonexhaustive list of limitations:
    - Must only contain Unicode code points that are defined as “Valid” in *The Unicode Codepoints and IDNA* (http://www.ietf.org/internet-

drafts/draft-ietf-idnabis-tables-02.txt) and be accompanied by unambiguous contextual rules where necessary.

  - Must be fully compliant with Normalization Form C, as described in *Unicode Standard Annex #15: Unicode Normalization Forms*. See also examples in http://unicode.org/faq/normalization.html.

  - Must consist entirely of characters with the same directional property.

- The label must meet the relevant criteria of the ICANN *Guidelines for the Implementation of Internationalised Domain Names*. See http://www.icann.org/en/topics/idn/implementation-guidelines.htm. This includes the following nonexhaustive list of limitations:

  - All code points in a single label must be taken from the same script as determined by the Unicode Standard Annex #24: Unicode Script Property.

  - Exceptions are permissible for languages with established orthographies and conventions that require the commingled use of multiple scripts. However, even with this exception, visually confusable characters from different scripts will not be allowed to co-exist in a single set of permissible code points unless a corresponding policy and character table is clearly defined.

The IDNA protocol used for internationalized labels is currently under revision through the Internet standardization process. As such, additional requirements may be specified that need to be adhered to as this revision is being completed. The current status of the protocol revision is documented at http://tools.ietf.org/wg/idnabis.

Policy Requirements for Generic Top-Level Domains – Applied-for strings must be composed of three or more visually distinct letters or characters in the script, as appropriate.

2.1.1.4 Geographical Names

ICANN will review all applied-for strings to ensure that appropriate consideration is given to the interests of governments or public authorities in country or territory names, as well as certain other types of sub-national place names. The requirements and procedure ICANN will follow is described in the following paragraphs.

2.1.1.4.1 *Requirements for Strings Intended to Represent Geographical Entities*

The following types of applications must be accompanied by documents of support or non-objection from the relevant government(s) or public authority(ies).

- Applications for any string that is a meaningful representation of a *country or territory name* listed in the ISO 3166-1 standard (see http://www.iso.org/iso/country_codes/iso_3166_databases.htm). This includes a representation of the country or territory name in any of the six official United Nations languages (French, Spanish, Chinese, Arabic, Russian and English) and the country or territory's local language.

- Applications for any string that represents a *sub-national place name*, such as a county, province, or state, listed in the ISO 3166-2 standard.

- Applications for a city name, where the applicant clearly intends to use the gTLD to leverage from the city name.

- An application for a string which represents a continent or UN region appearing on the

  Composition of macro geographical (continental) regions, geographical sub-regions, and selected economic and other groupings list at http://unstats.un.org/unsd/methods/m49/m49regin.htm.

An applied-for gTLD string that falls into the above categories is considered to represent a geographical name. It is the applicant's responsibility to identify whether its applied-for gTLD string falls into the above categories and to determine the relevant government or governments, or the relevant public authority or authorities. In the case of an application for a string which represents a continent or UN region, evidence of support, or non-objection, will be required from a substantial number of the relevant governments and/or public authorities associated with the continent or the UN region.

The evidence of support or non-objection from the relevant government or public authority should include a signed letter of support or non-objection from the minister with the portfolio responsible for domain name administration, ICT, foreign affairs or the Office of the Prime Minister or President of the relevant jurisdiction. If there are reasons for doubt about the authenticity of the communication, ICANN will consult with the diplomatic authorities or members of ICANN's Governmental Advisory Committee for the government or public authority concerned on the competent authority and appropriate point of contact with their administration for communications.

The letter must clearly express the government's or public authority's support or non-objection for the applicant's application and demonstrate the government's or public authority's understanding of the string being requested and what it will be used for.

The requirement to include evidence of support for certain applications does not preclude or exempt applications from being the subject of objections on community grounds (refer to section 3.1.1 of Module 3), under which applications may be rejected based on objections showing substantial opposition from the targeted community.

2.1.1.4.2 Review Procedure for Geographical Names

A Geographical Names Panel (GNP) will be established to evaluate applications and confirm whether each string represents a geographic term, and to verify the authenticity of the supporting documentation where necessary. The Geographic Names Panel may consult with additional experts as they consider appropriate.

The steps ICANN and the Geographical Names Panel intend to follow to ensure compliance with these requirements are described here.

1. During the Initial Evaluation period, ICANN evaluates each application for a geographical name to confirm that the applicant has provided a letter of support or nonobjection from the relevant government.

2. ICANN forwards applications considered complete to the GNP for confirmation that:

    - The strings are a meaningful representation of a country or territory name or a subnational place name, and

- The communication from the government or public authority is legitimate and contains the suggested content.

3. The GNP also reviews applications that are not self-identified as a geographical name to ensure that the applied-for string is not a meaningful representation of a country or territory name or a sub-national place name.

4. All applications determined to be geographical but without necessary supporting documents will be considered incomplete. The applicant will be notified and the application will not pass Initial Evaluation.

5. The GNP may consult additional expertise if uncertainty arises about the name the applied-for gTLD string is claimed to represent.

The results of the evaluation will be publicly posted on ICANN's website at the conclusion of the Initial Evaluation, and will also be available to applicants.

If there is more than one application for a string representing a certain geographical term as described in this section, and the applications are considered complete (that is, have requisite government approvals), the applications will be suspended pending resolution by the applicants. If there is contention between identical (or similar) applicants where one is identified as a geographical name, the string contention will be settled using the string contention methodology described in Module 4.

2.1.2 Applicant Reviews

Concurrent with the applied-for gTLD string reviews described in subsection 2.1.1, ICANN will review the applicant's technical and operational capability, its financial capability, and its proposed registry services. Those reviews are described in greater detail in the following subsections.

2.1.2.1 Information Sought

The questions provided for applicants in the application form are available at http://www.icann.org/en/topics/new-gtld-draft-evaluation-criteria-24oct08-en.pdf. Applicants answer questions which cover the following three areas in relation to themselves: general information, technical and operational capability, and financial capability.

Applicants should be aware that the application materials submitted in the online application system, as well as any evaluation materials and correspondence, will be publicly posted on ICANN's website. The sections in the application that are marked CONFIDENTIAL will not be posted. Any sections of the application that ICANN has not designated CONFIDENTIAL will be posted.

The applicant questions cover the following three areas:

General Information – These questions are intended to gather information about an applicant's legal identity, contact information, and applied-for gTLD string. Failure to provide any of this information will result in an application being considered incomplete. Under specific areas of questions under this category are: the identification of the applied-for string; selection of TLD type; and requests for certain documents.

Demonstration of Technical and Operational Capability – These questions are intended to gather information about an applicant's technical capabilities and plans for operation of the proposed gTLD.

Applicants are not required to have deployed an actual registry to complete the requirements for a successful application. It will be sufficient at application time for an applicant to demonstrate a clear understanding and accomplishment of some groundwork toward the key technical and operational aspects of running a gTLD registry. Each applicant that passes the technical evaluation and all other steps will be required, following execution of a registry agreement, to complete a pre-delegation technical test before delegation of the applied-for gTLD. Refer to Module 5, Transition to Delegation, for additional information.

Demonstration of Financial Capability **–** These questions are intended to gather information about an applicant's financial capabilities to operate a gTLD registry business and its financial planning in preparation for long-term operation of a new gTLD.

2.1.2.2 Evaluation Methodology

Initial Evaluations are conducted on the basis of the information each applicant makes available to ICANN in its response to the questions in the application form. ICANN and its evaluators are not obliged to take into account any information or evidence that is not made available in the application and submitted by the due date, unless explicitly requested by the evaluators.

Evaluators are entitled, but not obliged, to request further information or evidence from an applicant, and any such request will be made solely through TAS, rather than by direct means such as phone, letter, email, or other similar means. Only one exchange of information between the applicant and the evaluators may take place within the Initial Evaluation period.

Because different registry types and purposes may justify different responses to individual questions, evaluators will pay particular attention to the consistency of an application across all criteria. For example, an applicant's scaling plans noting hardware to ensure its capacity to operate at a particular volume level should be consistent with its financial plans to secure the necessary equipment.

2.1.3 Registry Services Review

Concurrent with the string reviews described in subsection 2.1.1, ICANN will review the applicant's proposed registry services. The applicant will be required to provide a list of proposed registry services in its application.

Registry services are defined as: (1) operations of the registry critical to the following tasks: the receipt of data from registrars concerning registrations of domain names and name servers; provision to registrars of status information relating to the zone servers for the TLD; dissemination of TLD zone files; operation of the registry zone servers; and dissemination of contact and other information concerning domain name server registrations in the TLD as required by the registry agreement; (2) other products or services that the registry operator is required to provide because of the establishment of a consensus policy; and (3) any other products or services that only a registry operator is capable of providing, by reason of its designation as the registry operator.

A full definition of registry service can be found at http://www.icann.org/en/registries/rsep/rsep.html and in the draft registry agreement at http://www.icann.org/en/topics/new-gtld-draft-agreement-24oct08-en.pdf. Registry services will be examined to determine if the proposed registry service might raise significant stability or security issues. Examples of services submitted to the registry services process by established registries can be found at http://www.icann.org/en/registries/rsep.

The registration of domain names, for example, is a registry service. Lists of registry services currently provided by registries can be found in registry agreement appendices. In general cases, these services successfully pass this inquiry. See http://www.icann.org/en/registries/agreements.htm.

Review of all applicants' proposed registry services will occur during the Initial Evaluation.

Procedure – ICANN's first review will be a preliminary determination of whether a proposed registry service requires further consideration based on whether the registry service may raise significant security or stability issues.

If ICANN's preliminary determination reveals that there may be significant security or stability issues surrounding the proposed service, the application will be flagged for an extended review by the RSTEP (see http://www.icann.org/en/registries/rsep/rstep.html). This review will occur during the Extended Evaluation phase (refer to section 2.2).

Definitions for security and stability applied in the registry services review are:

Security – an effect on security by the proposed registry service means (1) the unauthorized disclosure, alteration, insertion or destruction of registry data, or (2) the unauthorized access to or disclosure of information or resources on the Internet by systems operating in accordance with all applicable standards.

Stability – an effect on stability means that the proposed registry service (1) does not comply with applicable relevant standards that are authoritative and published by a well-established, recognized, and authoritative standards body, such as relevant standards-track or best current practice RFCs sponsored by the IETF, or (2) creates a condition that adversely affects the throughput, response time, consistency, or coherence of responses to Internet servers or end systems, operating in accordance with applicable relevant standards that are authoritative and published by a well-established, recognized and authoritative standards body, such as relevant standards-track or best current practice RFCs and relying on registry operator's delegation information or provisioning services.

2.1.4 Applicant's Withdrawal of an Application

An applicant who does not pass the Initial Evaluation may be permitted to withdraw its application at this stage for a partial refund (refer to subsection 1.5.5 of Module 1, Introduction to gTLD Application Process).

2.2 Extended Evaluation

An applicant may request an Extended Evaluation if the application has failed to pass the Initial Evaluation elements concerning:

- Demonstration of technical and operational capability (refer to paragraph 2.1.2.1).
- Demonstration of financial capability (refer to paragraph 2.1.2.1).

An Extended Evaluation may also result if ICANN identifies a need for further review on the following elements:

- DNS stability (refer to paragraph 2.1.1.3).
- Registry services (refer to subsection 2.1.3). Note that this investigation incurs an additional fee (the Registry Services Review Fee) if the applicant wishes to proceed. See Section 1.5 of Module 1 for fee and payment information.

From the time an applicant receives notice of failure to pass the Initial Evaluation, it has 15 calendar days to submit to ICANN the Notice of Request for Extended Evaluation through the online application interface. If the applicant does not explicitly request the Extended Evaluation, and pay any additional fees as applicable, the application will not proceed.

2.2.1 Technical and Operational or Financial Extended Evaluation

This subsection applies to an Extended Evaluation of an applicant's technical and operational capability or financial capability, as described in paragraph 2.1.2.1.

The Extended Evaluation allows one additional round of inquiry and answer between the evaluators and the applicant to clarify information contained in the application. This supplemental information will become part of the application. Applicants may not change the information submitted in their original applications. Through the online system, the evaluators will provide the applicant a set of questions describing any deficiencies in the application and request clarification. Such communications will include a deadline for the applicant to respond.

The same panel that reviewed an application during Initial Evaluation will conduct the Extended Evaluation, using the same criteria as outlined at http://www.icann.org/en/topics/new-gtld-draft-evaluation-criteria-24oct08-en.pdf, to determine whether the application, now that certain information has been clarified, meets the criteria.

ICANN will notify applicants at the end of the Extended Evaluation period as to whether they have passed. If an applicant passes Extended Evaluation, its application continues to the next stage in the process. If an applicant does not pass Extended Evaluation, the application will proceed no further. No further reviews are available.

2.2.2 *String Stability Extended Evaluation*

This section applies to an Extended Evaluation of DNS security or stability issues with an applied-for gTLD string, as described in paragraph 2.1.1.3.

If the evaluators determine that a string poses stability issues that require further investigation, the applicant must either confirm that it intends to move forward with the application process or withdraw its application.

If an application is subject to such an Extended Evaluation, an independent 3-member panel will be formed to review the security or stability issues identified during the Initial Evaluation.

The panel will review the string and determine whether the string complies with relevant standards or creates a condition that adversely affects the throughput, response time, consistency, or coherence of responses to Internet servers or end systems, and will communicate its findings to ICANN and to the applicant.

If the panel determines that the string does not comply with relevant standards or creates a condition that adversely affects the throughput, response time, consistency, or coherence of responses to Internet servers or end systems, the application cannot proceed.

2.2.3 *Registry Services Extended Evaluation*

This section applies to an Extended Evaluation of Registry Services, as described in subsection 2.1.3.

If a proposed registry service has been referred to the Registry Services Technical Evaluation Panel (RSTEP) for an extended review, the RSTEP will form a review team of members with the appropriate qualifications.

The review team will generally consist of 3 members, depending on the complexity of the registry service proposed. In a 3-member panel, the review could be conducted within 30 to 45 days. In cases where a 5-member panel is needed, this will be identified before the extended evaluation starts. In a 5-member panel, the review could be conducted in 45 days or fewer.

The cost of an RSTEP review will be covered by the applicant through payment of the Registry Services Review Fee. Refer to payment procedures in section 1.5 of Module 1. The RSTEP team review will not commence until payment has been received.

If the RSTEP finds that one or more of the applicant's proposed registry services may be introduced without risk of a meaningful adverse effect on security or stability, these services may be included in the applicant's contract with ICANN.

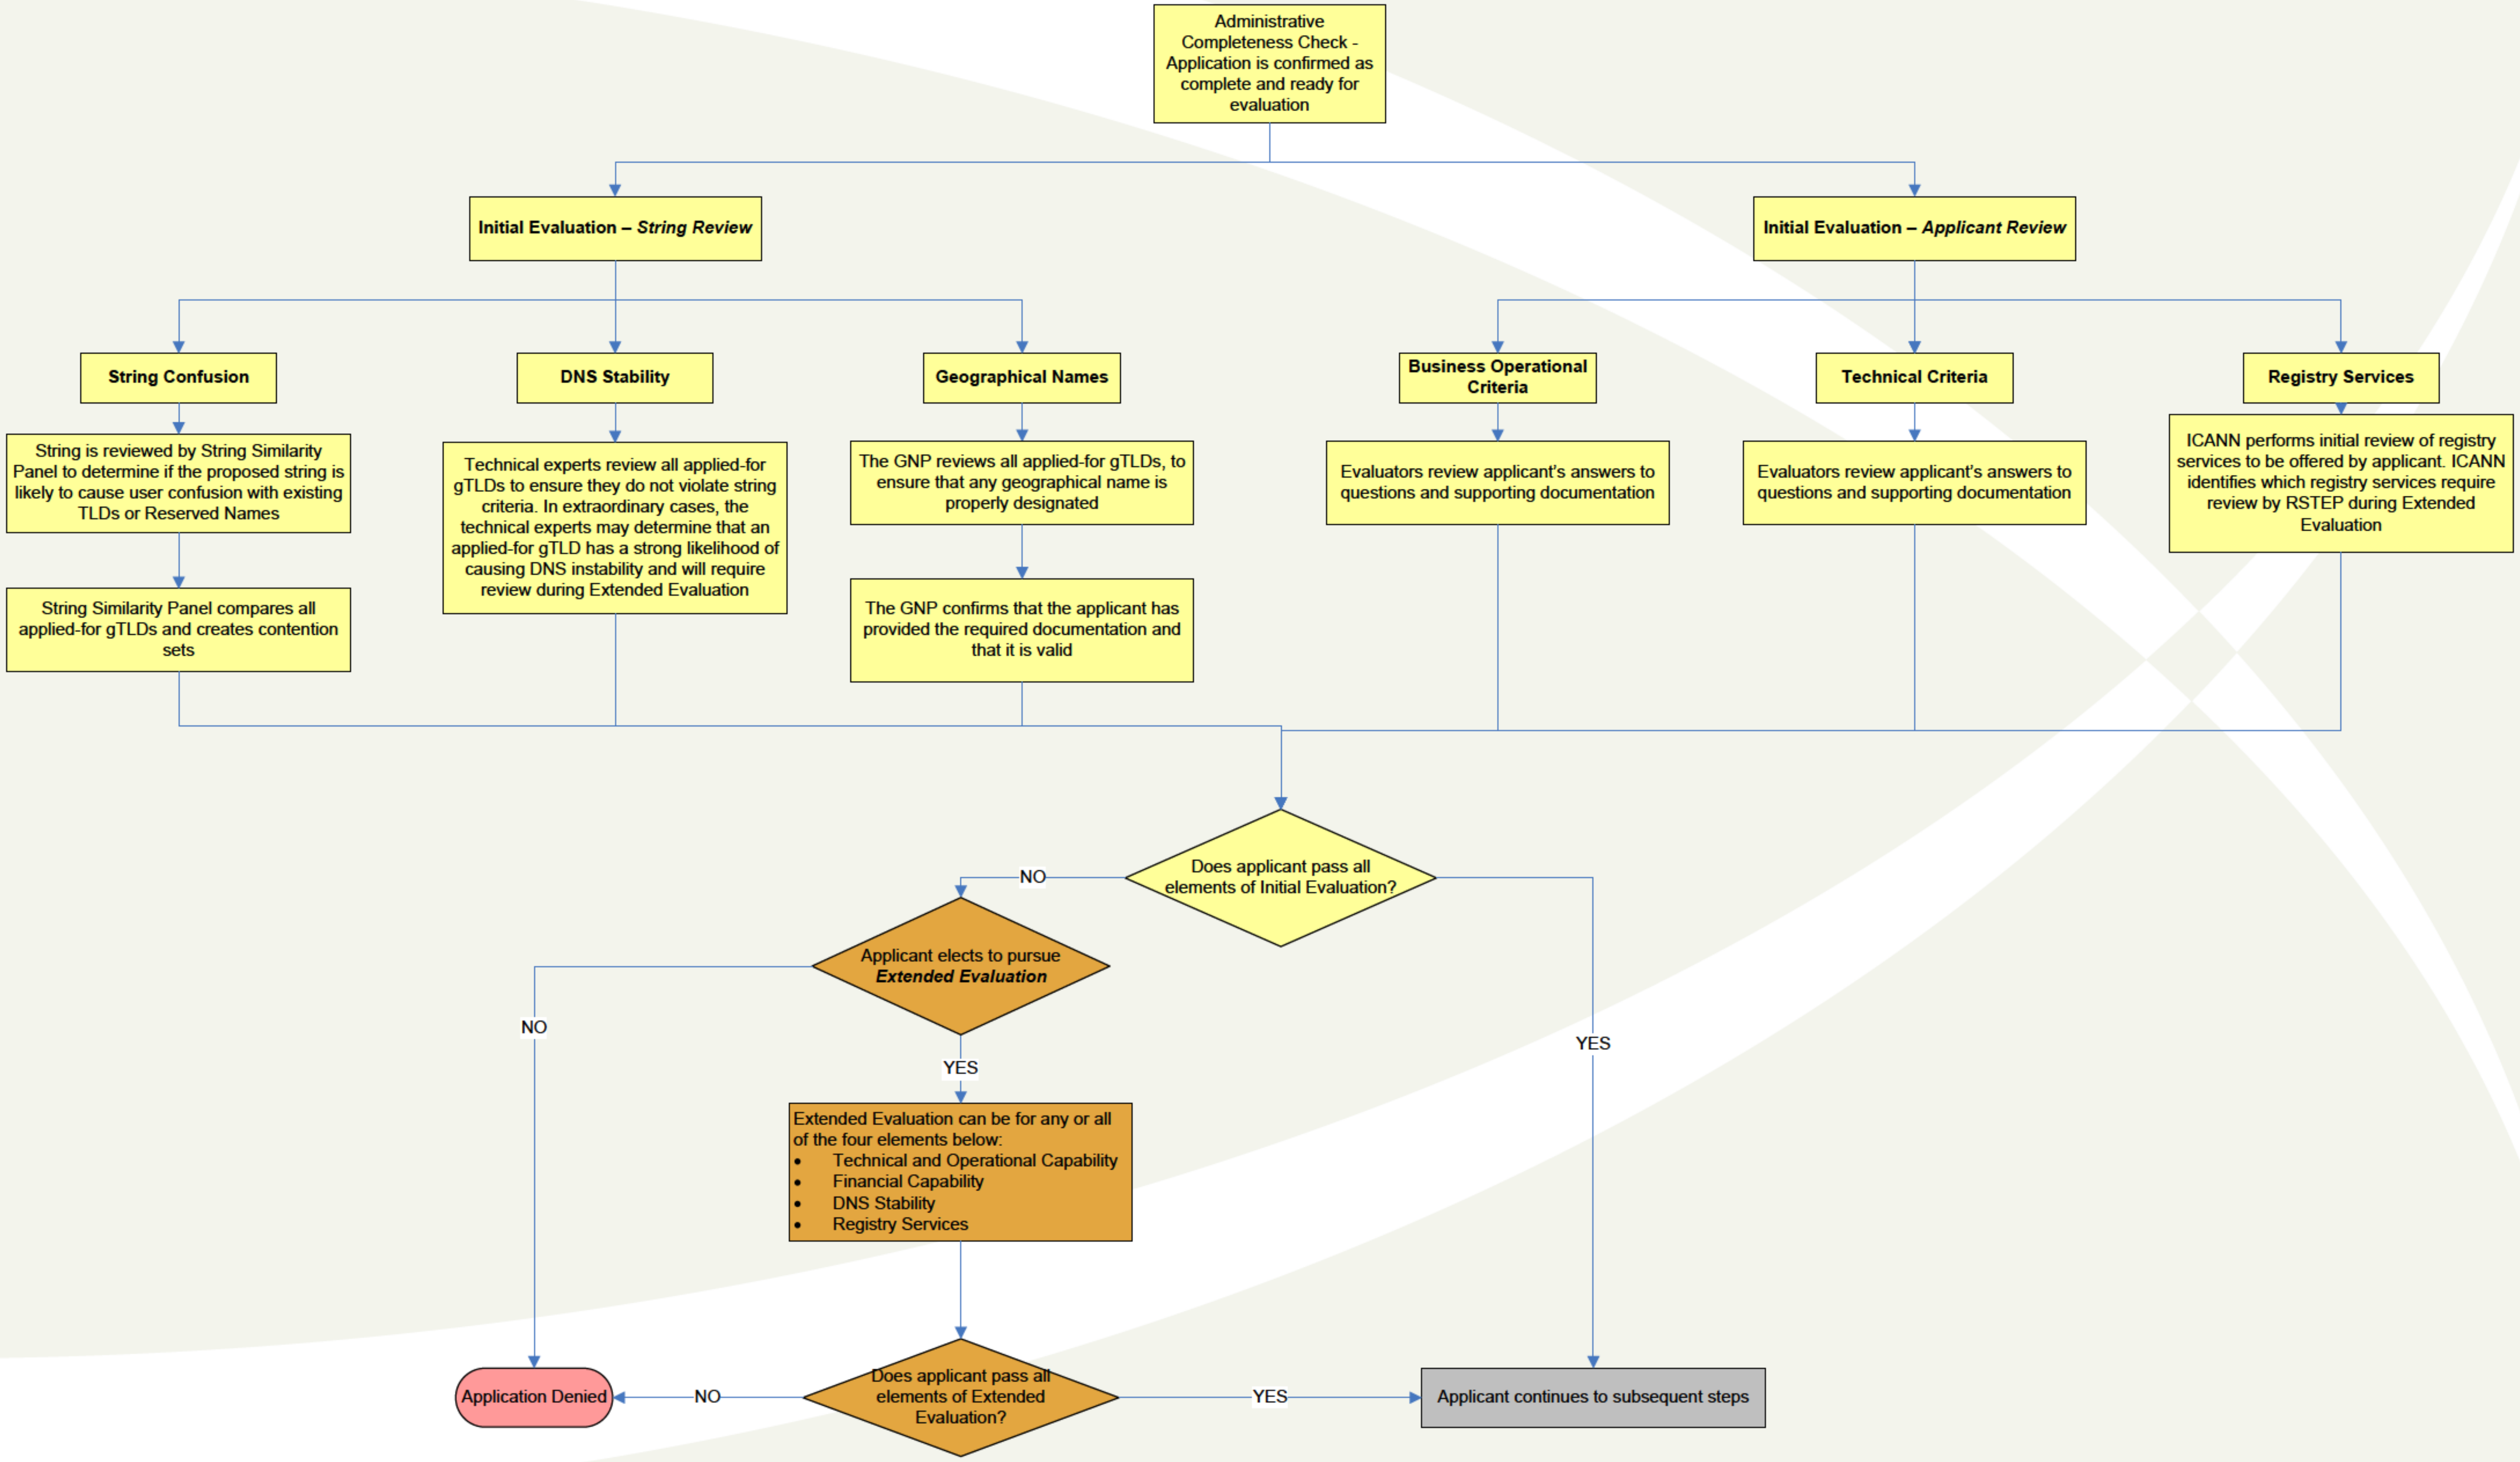
If the RSTEP finds that the proposed service would create a risk of a meaningful adverse effect on security or stability, the applicant may elect to proceed with its application without the proposed service, or withdraw its application for the gTLD.

2.3 Probity and Conflicts of Interest

ICANN staff and by various independent service providers will review all applications during **Initial Evaluation** and **Extended Evaluation**. During this entire evaluation process, applicants must not approach, or have any other person or entity approach on their behalf, any ICANN staff member, any ICANN Board member, or any person associated with the evaluation process, including any evaluators, experts, examiners, or reviewers retained by ICANN.

DRAFT - New gTLD Program – Initial Evaluation and Extended Evaluation

ICANN



Administrative Completeness Check - Application is confirmed as complete and ready for evaluation

Initial Evaluation – *String Review*

String Confusion

String is reviewed by String Similarity Panel to determine if the proposed string is likely to cause user confusion with existing TLDs or Reserved Names

String Similarity Panel compares all applied-for gTLDs and creates contention sets

DNS Stability

Technical experts review all applied-for gTLDs to ensure they do not violate string criteria. In extraordinary cases, the technical experts may determine that an applied-for gTLD has a strong likelihood of causing DNS instability and will require review during Extended Evaluation

Geographical Names

The GNP reviews all applied-for gTLDs, to ensure that any geographical name is properly designated

The GNP confirms that the applicant has provided the required documentation and that it is valid

Initial Evaluation – *Applicant Review*

Business Operational Criteria

Evaluators review applicant's answers to questions and supporting documentation

Technical Criteria

Evaluators review applicant's answers to questions and supporting documentation

Registry Services

ICANN performs initial review of registry services to be offered by applicant. ICANN identifies which registry services require review by RSTEP during Extended Evaluation

Does applicant pass all elements of Initial Evaluation?

NO

Applicant elects to pursue ***Extended Evaluation***

NO

YES

Extended Evaluation can be for any or all of the four elements below:
- Technical and Operational Capability
- Financial Capability
- DNS Stability
- Registry Services

YES

Application Denied

NO

Does applicant pass all elements of Extended Evaluation?

YES

Applicant continues to subsequent steps

Draft Applicant Guidebook

Module 3

Please note that this is a discussion draft only. Potential applicants should not rely on any of the proposed details of the new gTLD program as the program remains subject to further consultation and revision.

24 October 2008

Module 3

Dispute Resolution Procedures

This module describes the purpose of the objection and dispute resolution mechanisms, the grounds for lodging an objection to a gTLD application, the general procedures for filing or responding to an objection, and the manner in which dispute resolution proceedings are conducted.

This module also discusses the guiding principles, or standards, that each DRSP will apply in its decisions.

All applicants should be aware of the possibility that an objection may be filed against their applications, and of the options available in the event of such an objection.

3.1 Purpose and Overview of the Dispute Resolution Process

The independent dispute resolution process is designed to protect certain interests and rights. The process provides a path for formal objections during evaluation of the applications. It allows certain parties with standing to have their objections considered before a panel of qualified experts. A formal objection can be filed only on four enumerated grounds, as described in this module. A formal objection initiates a dispute resolution proceeding. In filing an application for a gTLD, the applicant agrees to accept this gTLD dispute resolution process. Similarly, an objector accepts the gTLD dispute resolution process by filing its objection.

3.1.1 Grounds for Objection

An objection may be filed on any one of the following four grounds:

String Confusion Objection – The applied-for gTLD string is confusingly similar to an existing TLD or to another applied-for gTLD string.

Legal Rights Objection – The applied-for gTLD string infringes existing legal rights of the objector.

Morality and Public Order Objection – The applied-for gTLD string is contrary to generally accepted legal norms of morality and public order that are recognized under international principles of law.

Community Objection – There is substantial opposition to the gTLD application from a significant portion of the community to which the gTLD string may be explicitly or implicitly targeted.

The rationales for these grounds are discussed in the final report of the ICANN policy development process for new gTLDs. For more information on this process, see http://gnso.icann.org/issues/new-gtlds/pdp-dec05-fr-parta-08aug07.htm.

3.1.2 Standing to Object

Objectors must satisfy standing requirements to have their objections considered. As part of the dispute proceedings, all objections will be reviewed by panelists designated by the applicable Dispute Resolution Service Provider (DRSP) to determine whether the objector has standing to object. Standing requirements for the four objection grounds are:

Objection Ground	Who may object
String confusion	Existing TLD operator or gTLD applicant in current round
Legal rights	Rightsholders
Morality and Public Order	To be determined
Community	Established institution

3.1.2.1 String Confusion Objection

Two types of entities have standing to object:

- An existing TLD operator may file a string confusion objection to assert string confusion between an applied-for gTLD and the TLD that it currently operates.
- Any gTLD applicant in this application round may also file a string confusion objection to assert string confusion between an applied-for gTLD and the gTLD for which it has applied.

In the case where a gTLD applicant successfully asserts string confusion with another applicant, the only possible outcome is for both applicants to be placed in a contention set and to be referred to a contention resolution procedure (refer to Module 4). If an objection by a gTLD applicant to another gTLD applicant is unsuccessful, the applicants may both move forward in the process without being considered in contention with one another.

3.1.2.2 Legal Rights Objection

Only a rightsholder has standing to file a legal rights objection. The source and documentation of the existing legal rights the objector is claiming are infringed by the applied-for gTLD must be included in the filing.

3.1.2.3 Morality and Public Order Objection

Standing requirements for morality and public order objections remain under study. In the case of morality and public order objections, it may be appropriate to grant standing only to parties who have recognized authority in the arena of morality or public order, such as governments, or it may be appropriate to make this option available to any interested parties who assert harm due to an applied-for gTLD string.

3.1.2.4 Community Objection

Established institutions associated with defined communities are eligible to file a community objection. To qualify for standing for a community objection, the objector must prove both of the following:

It is an established institution – Factors that may be considered in making this determination include:

- Level of global recognition of the institution;
- Length of time the institution has been in existence; and
- Public historical evidence of its existence, such as the presence of formal charter or national or international registration, or validation by a government, inter-governmental organization, or treaty. The institution must not have been established solely in conjunction with the gTLD application process.

It has an ongoing relationship with a defined community that consists of a restricted population – Factors that may be considered in making this determination include:

- The presence of mechanisms for participation in activities, membership, and leadership;
- Institutional purpose related to benefit of the associated community;
- Performance of regular activities that benefit the associated community; and
- The level of formal boundaries around the community.

3.1.3 Options in the Event of Objection

Applicants whose applications are the subject of an objection have the following options:

The applicant can file a response to the objection and enter the dispute resolution process (refer to subsection 3.3); or

The applicant can withdraw, in which case the objector will prevail by default and the application will not proceed further.

If for any reason the applicant does not file a response to an objection, the objector will prevail by default.

3.2 Procedure for Filing an Objection

To trigger a dispute resolution proceeding, an objection must be filed by the posted deadline date. Objections must be filed directly with the appropriate DRSP for each objection ground.

The **International Centre for Dispute Resolution** has agreed in principle to administer disputes brought pursuant to string confusion objections.

The Arbitration and Mediation Center of the World Intellectual Property Organization has agreed in principle to administer disputes brought pursuant to legal rights objections.

The **International Chamber of Commerce** has agreed in principle to administer disputes brought pursuant to Morality and Public Order and Community Objections.

3.2.1 Objection Filing Procedures

The procedures outlined in this subsection must be followed by any party wishing to file a formal objection to an application that has been posted by ICANN. These procedures are provided to applicants for reference and are intended to cover dispute resolution procedures generally. Each provider has its own rules and procedures that also must be followed when filing an objection.

Should an applicant wish to file a formal objection to another gTLD application, it would follow these procedures.

- All objections must be filed by the posted deadline date. Objections will not be accepted by the DRSPs after this date.

- All objections must be filed in English.
- Each objection must be filed separately. That is, if any objector wishes to object to several applications at the same time, the objector must file an objection and pay a filing fee for each application that is the subject of an objection. If an objector wishes to object to one application on different grounds, the objector must file an objection and pay a filing fee for each objection ground.
- All objections must be filed with the appropriate DRSP. If an objection is filed with a DRSP other than the DRSP specified for the objection ground, that DRSP will promptly notify the objector of the error. The objector then has 5 calendar days after receiving that notification to file its objection with the appropriate DRSP.
- Objections must be filed electronically and all interactions with the DRSPs during the objection process must be conducted online.

Each objection filed by an objector must include:

- The name and contact information, including address, phone, and email address, of all parties submitting an objection.
- The basis for standing; that is, why the objector believes it has the right to object.
- A statement of the nature of the dispute, which should include:
    - A statement giving the specific ground under which the objection is being filed.
    - A detailed explanation of how the objector's claim meets the requirements for filing a claim pursuant to that particular ground or standard.
    - A detailed explanation of the validity of the objection and why the application should be denied.
- Copies of any documents that the objector considers to be a basis for the objection.

Objections are limited to 2500 words, excluding attachments.

The DRSP will use electronic means to deliver copies of all materials filed to the applicant and to all objectors.

Each applicant and all objectors must provide copies of all submissions to the DRSP associated with the objection proceedings to one another, and to ICANN.

ICANN will publish a document on its website identifying all objections shortly after the deadline for filing objections has passed (refer to Item 1 above). Objections will not be published before that deadline.

3.2.2 Objection Filing Fees

At the time an objection is filed, the objector is required to pay a nonrefundable filing fee in the amount set and published by the relevant DRSP. If the filing fee is not paid, the DRSP will dismiss the objection without prejudice. See Section 1.5 of Module 1 regarding fees.

3.3 Filing a Response to an Objection

3.3.1 Filing Procedures

These procedures are intended to cover dispute resolution procedures generally. Each DRSP will have its own rules that also must be followed.

Upon notification that ICANN has published the list of objections filed (refer to subsection 3.2.1), the DRSPs will notify the parties that responses must be filed within 30 calendar days of receipt of that notice. DRSPs will not accept late responses. Any applicant that fails to respond to an objection within the 30-day response period will be in default, which will result in the objector prevailing.

- All responses must be filed in English.
- Each response must be filed separately. That is, if an applicant wishes to respond to several objections, the applicant must file a response and pay a filing fee to respond to each objection.
- All responses must be filed with the appropriate DRSP. If a response is filed with a DRSP other than the DRSP specified for the objection ground, that DRSP will promptly notify the applicant of the error. The applicant then has 5 calendar days after receiving the notification to file its objection with the appropriate DRSP.

- Responses must be filed electronically and all interactions with the DRSPs during the dispute resolution process must be conducted online.
- Each response filed by an applicant must include the name and contact information, including address, phone, and email address, of all parties submitting the response.
- Each responding applicant's response must contain a point-by-point confirmation or denial of the claims made by each objector. The applicant also should attach any copies of documents that it considers to be a basis for the response.
- Responses are limited to 2500, excluding attachments.
- The DRSP will use electronic means to deliver copies of all materials filed to the applicant and to all objectors.
- Each applicant and all objectors must provide copies of all submissions to the DRSP associated with the objection proceedings to one another and to ICANN.

3.3.2 Response Filing Fees

At the time an applicant files its response, it is required to pay a nonrefundable filing fee in the amount set and published by the relevant DRSP, which will be the same as the filing fee paid by the objector. If the filing fee is not paid, the response will be disregarded.

3.4 Dispute Resolution Procedure

3.4.1 Preliminary Objection Processing

Each DRSP will conduct an administrative review of each objection for compliance with all procedural rules within 14 calendar days of receiving the objection. Depending on the number of objections received, the DRSP may ask ICANN for a short extension of this deadline.

If the DRSP finds that the objection complies with procedural rules, the objection will be deemed filed, and the proceedings will continue. If the DRSP finds that the objection does not comply with procedural rules, the DRSP will dismiss the objection and close the proceedings without prejudice to the objector's submission of a new objection that complies with procedural rules. The DRSP's review or rejection of the objection will not interrupt the time limit for submitting an objection.

3.4.2 Consolidation of Objections

Once the DRSP receives and processes all objections, at its discretion the DRSP may elect to consolidate certain objections.

An example of circumstances in which consolidation might occur is multiple objections to the same application based on the same ground.

In assessing whether to consolidate objections, the DRSP will weigh the efficiencies in time, money, effort, and consistency that may be gained by consolidation against the prejudice or inconvenience consolidation may cause. The DRSPs will endeavor to have all objections resolved on a similar timeline. It is intended that no sequencing of objections will be established.

New gTLD applicants and objectors also will be permitted to propose consolidation of objections, but it will be at the DRSP's discretion whether to agree to the proposal.

3.4.3 Negotiation and Mediation

The parties to a dispute resolution proceeding are encouraged—but not required—to participate in a cooling off period to determine whether the dispute can be resolved by the parties. Each DRSP has panelists who can be retained as mediators to facilitate this process, should the parties elect to do so, and the DRSPs will communicate with the parties concerning this option and any associated fees.

If a mediator is appointed, that person may not serve on the panel to resolve the objection.

There are no automatic extensions of time associated with any cooling off period. The parties may submit joint requests for extensions of time to the DRSP according to its procedures, and the DRSP or the panel, if appointed, will decide whether to grant the requests, although extensions will be discouraged. The parties must limit their requests for extension to 30 calendar days.

3.4.4 Selection and Number of Panelists

Appropriately qualified panelists will be appointed to each proceeding by the designated DRSP.

Panelists must be independent of the parties to an objection resolution proceeding. Each DRSP will follow its adopted procedures for requiring such independence, including procedures for challenging and replacing a panelist for lack of independence.

There will be one panelist in proceedings involving a **string confusion objection**.

There will be one panelist with relevant experience in intellectual property rights disputes in proceedings involving an existing **legal rights objection**.

There will be three panelists recognized as eminent jurists of international reputation, in proceedings involving a **morality and public order objection**.

There will be one panelist in proceedings involving a **community objection**.

Neither the panelists, the DRSP, ICANN, nor their respective employees, Board members, or consultants will be liable to any party in any action for damages or injunctive relief for any act or omission in connection with any proceeding under the dispute resolution procedures.

3.4.5 Adjudication

At its discretion, the panel appointed by the DRSP may request further statements or documents from the parties, although such requests will be limited and infrequent.

To keep costs down and limit delays, the panel will discourage and, if practicable, not permit any document production or other discovery-style requests from the parties.

Without its being requested by the parties, the panelists may appoint experts to be paid for by the parties, request live or written witness testimony, or request limited exchange of documents.

Any party may request a hearing; however, it is within the panel's discretion whether to allow such a hearing. The presumption is that the panel will render decisions based on written submissions and without a hearing.

If a request for a hearing is granted, videoconferences are to be used if possible. If not possible, then the DRSP panel will select a place for hearing if the parties cannot agree. The panel will determine whether the hearings are to be public or private. Hearings will last no more than one day, except in the most exceptional circumstances.

Typically, dispute resolution proceedings will be conducted in English, but may be conducted in another language in accordance with the rules of the provider.

3.4.6 Decision

The DRSPs' final decisions will be in writing and will include:

- A summary of the dispute and findings; and
- The reasoning upon which the decision is based.

Each DRSP will develop a single format for all final decisions that its panelists render. The DRSP will notify the parties of the decision via email.

ICANN will strongly encourage DRSPs to use reasonable efforts to issue all final decisions within 45 days of the panel appointment date unless, after both parties have completed their initial submissions, the parties jointly request a short postponement of their adjudication date to accommodate negotiation or mediation or to accommodate other aspects of the proceedings, and the panel agrees.

When the panel is composed of three panelists, the decision will be made by a majority of the panelists.

Unless the panel decides otherwise, each DRSP will publish all decisions rendered by its panels in full on its website.

A dispute resolution panel decision will be considered an expert determination, and will be considered by ICANN in making a final decision regarding the success of any application.

3.4.7 Dispute Resolution Fees

Before acceptance of objections, each DRSP will publish a schedule of costs for the proceedings that it administers under this procedure. These costs cover the fees and expenses of the members of the panel and the DRSP's administrative costs.

ICANN expects that string confusion and legal rights objection proceedings will involve a fixed amount charged by the panelists while morality and public order and community objection proceedings will involve hourly rates charged by the panelists.

Within 7 business days of constituting the panel, the DRSP will estimate the total costs and request advance payment in full of its costs from both the objector and the applicant.

Each party must make its advance payment within 15 calendar days of receiving the DRSP's request for payment. The respective filing fees paid by the parties will be credited against the amounts due for this advance payment of costs.

The DRSP may revise its estimate of the total costs and request additional advance payments from the parties during the resolution proceedings.

Additional fees may be required in specific circumstances; for example, if the DRSP receives supplemental submissions or elects to hold a hearing.

If an objector fails to pay these costs in advance, the DRSP will dismiss its objection and no fees paid by the objector will be refunded.

If an applicant fails to pay these costs in advance, the DSRP will sustain the objection and no fees paid by the applicant will be refunded.

After the hearing has taken place and the panel renders its decision, the DRSP will refund any costs paid in advance to the prevailing party.

3.5 Dispute Resolution Principles (Standards)

Each panel will use appropriate general principles (standards) to evaluate the merits of each objection. The principles for adjudication on each type of objection are specified in the paragraphs that follow. The panel may also refer to other relevant rules of international law in connection with the standards.

The objector bears the burden of proof in each case.

The principles outlined below are subject to evolution based on ongoing consultation with DRSPs, legal experts, and the public.

3.5.1 String Confusion Objection

A DRSP panel hearing a string confusion objection will consider whether the applied-for gTLD string is likely to result in string confusion.

String confusion exists where a string so nearly resembles another that it is likely to deceive or cause confusion. For a likelihood of confusion to exist, it must be probable, not merely possible that confusion will arise in the mind of the average, reasonable Internet user. Mere association, in the sense that the string brings another string to mind, is insufficient to find a likelihood of confusion.

3.5.2 Legal Rights Objection

In interpreting and giving meaning to GNSO Recommendation 3 ("Strings must not infringe the existing legal rights of others that are recognized or enforceable under generally accepted and internationally recognized principles of law"), a DRSP panel presiding over a legal rights objection will determine whether the potential use of the applied-for TLD by the applicant takes unfair advantage of the distinctive character or the reputation of the objector's trademark or service mark ("mark"), or unjustifiably impairs the distinctive character or the reputation of the objector's mark, or otherwise creates an impermissible likelihood of confusion between the applied-for TLD and the objector's mark, by considering the following non-exclusive factors:

1. Whether the applied-for TLD is identical or similar, including in appearance, phonetic sound or meaning, to the objector's existing mark.

2. Whether the objector's acquisition and use of rights in the mark has been bona fide.

3. Whether and to what extent there is recognition in the relevant sector of the public of the sign corresponding to the TLD, as the mark of the objector, of the applicant or of a third party.

4. Applicant's intent in applying for the TLD, including whether the applicant, at the time of application for the TLD, had knowledge of the objector's mark, or could not have reasonably been unaware of that mark, and including whether the applicant has engaged in a pattern of conduct whereby it applied for or operates TLDs or registrations in TLDs which are identical or confusingly similar to the marks of others.

5. Whether and to what extent the applicant has used, or has made demonstrable preparations to use, the sign corresponding to the TLD in connection with a bona fide offering of goods or services or a bona fide provision of information in a way that does not interfere with the legitimate exercise by the objector of its mark rights.

6. Whether the applicant has marks or other intellectual property rights in the sign corresponding to the TLD,

and, if so, whether any acquisition of such a right in the sign, and use of the sign, has been bona fide, and whether the purported or likely use of the TLD by the applicant is consistent with such acquisition or use.

7. Whether and to what extent the applicant has been commonly known by the sign corresponding to the TLD, and if so, whether any purported or likely use of the TLD by the applicant is consistent therewith and bona fide.

8. Whether the applicant's intended-use of the TLD would create a likelihood of confusion with the objector's mark as to the source, sponsorship, affiliation, or endorsement of the TLD.

3.5.3 Morality and Public Order Objection

This section is under construction. ICANN expects to implement a standard for morality and public order objections in accordance with international legal principles. Accordingly, ICANN has reviewed legal systems in all ICANN regions. ICANN has also consulted with judges, attorneys, and legal experts in many jurisdictions. The general principles guiding ICANN in the establishment of dispute resolution standards are: (1) everyone has the right to freedom of expression; and (2) such freedom of expression may be subject to certain narrowly interpreted exceptions that are necessary to protect other important rights. See Articles 19 and 20 of the International Covenant on Civil and Political Rights. ICANN continues to address the challenge of identifying standards appropriate for the global namespace.

3.5.4 Community Objection

The four tests described here will enable a DRSP panel to determine whether there is substantial opposition from a significant portion of the community to which the string may be targeted. For an objection to be successful, the objector must prove that:

- The community invoked by the objector is a defined community; and
- Community opposition to the application is substantial; and
- There is a strong association between the community invoked and the applied-for gTLD string; and

- There is a likelihood of detriment to the community named by the objector if the gTLD application is approved.

Each of these tests is described in further detail below.

Community – The objector must prove that the community expressing opposition can be regarded as a well-defined community. A panel could balance a number of factors to determine this, including:

- Level of public recognition of the group as a community at a local and / or global level;
- Level of formal boundaries around the community and what elements are considered to form the community;
- How long the community has been in existence;
- How globally distributed is the community (breadth, level of importance)(this may not apply if the community is territorial); and
- How many people make up the community.

If opposition by a number of people is found, but the group claiming opposition is not determined to be a distinct community, the objection will fail.

Substantial opposition – The objector must prove substantial opposition within the community it has identified. A panel could balance a number of factors to determine whether there is substantial opposition, including:

- Number of expressions of opposition relative to the composition of the community;
- Distribution or diversity among sources of expressions of opposition, including:
    - Regional
    - Subsectors of community
    - Leadership of community
    - Membership of community
- Nature/intensity of opposition; and
- Costs incurred by objector in expressing opposition, including what other channels they have used to convey their opposition.

If some opposition within the community is determined, but it does not meet the standard of substantial opposition, the objection will fail.

Targeting – The objector must prove an association between the applied-for gTLD string and the community expressing opposition. Factors that could be balanced by a panel to determine this include:

- Statements contained in application;
- Other public statements by the applicant;
- Associations by the public.

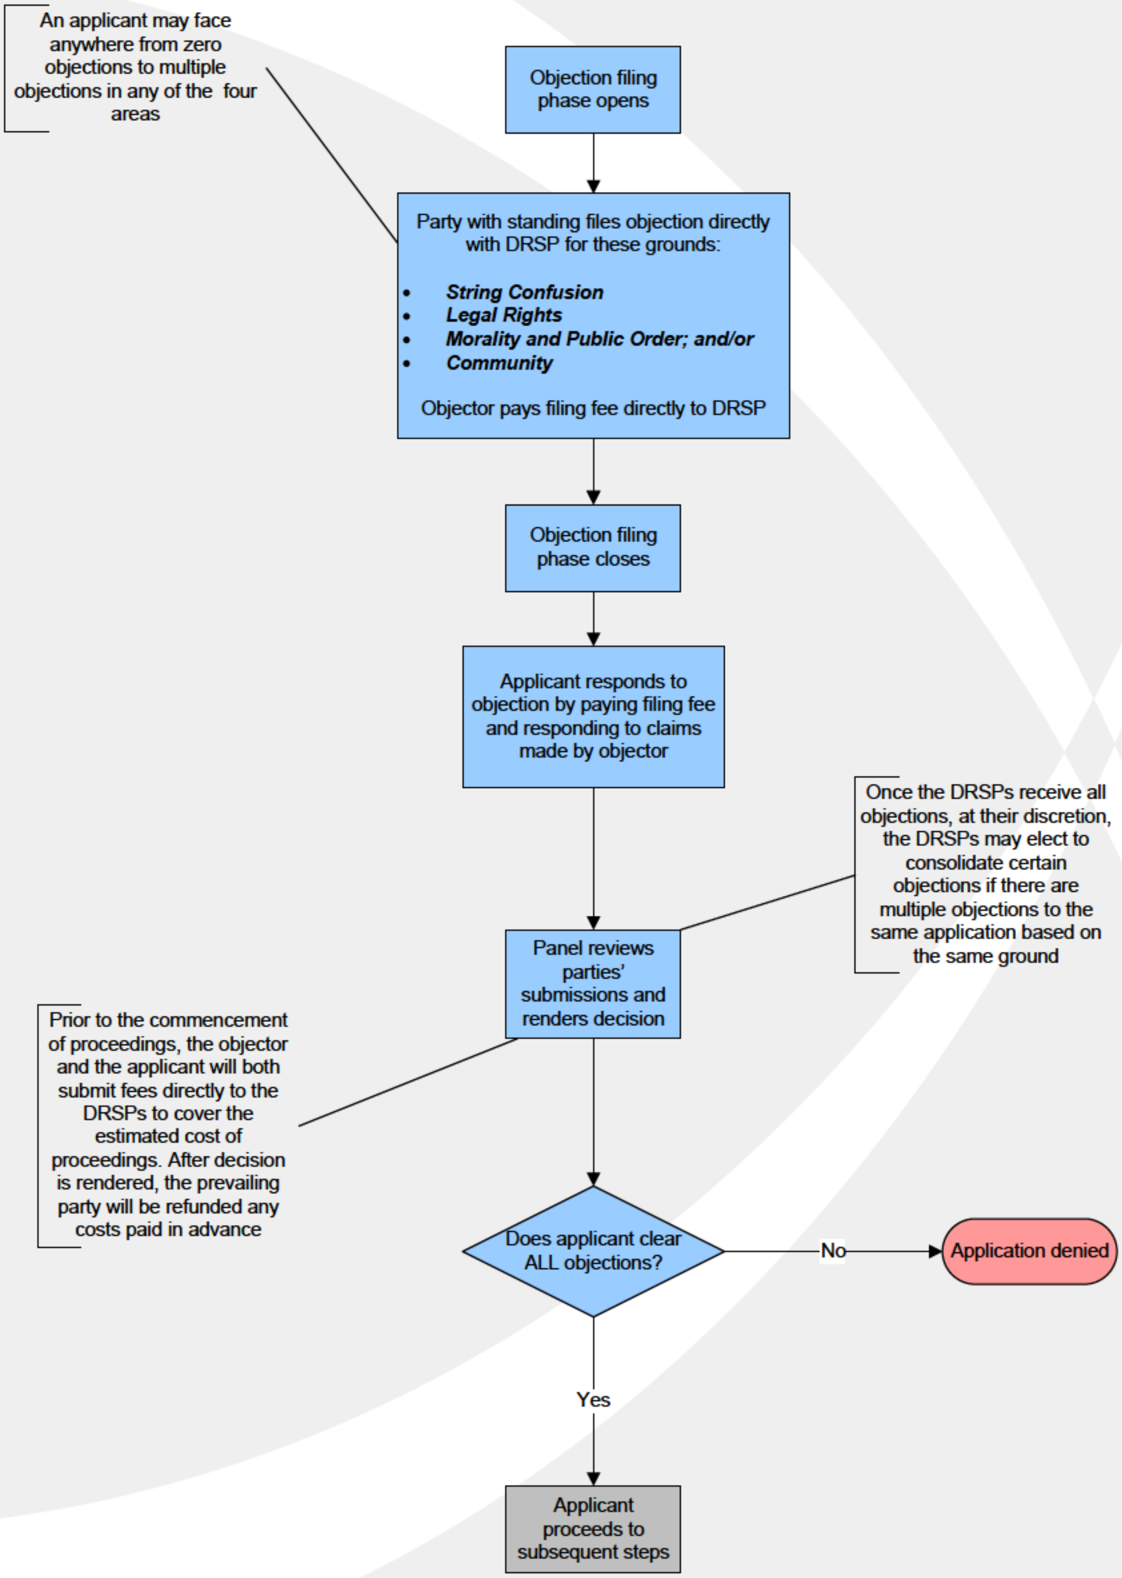
If opposition by a community is determined, but there is no clear connection between the community and the applied-for gTLD string, the objection will fail.

Detriment – The objector must prove that there is a likelihood of detriment to the rights or legitimate interests of its associated community. Factors that could be used by a panel in making this determination include:

- Damage to the reputation of the community that would result from the applicant's operation of the applied-for gTLD string;
- Evidence that the applicant is not acting or does not intend to act in accordance with the interests of the community;
- Interference with the core activities of the community that would result from the applicant's operation of the applied-for gTLD string; and
- Dependence of the community on the DNS for its core activities.

Defenses – Satisfaction of the standing requirements for filing a Community Objection (refer to paragraph 3.1.2.4) by the applicant is a complete defense to an objection filed on community grounds.

DRAFT - New gTLD Program – Objection and Dispute Resolution



An applicant may face anywhere from zero objections to multiple objections in any of the four areas

Objection filing phase opens

Party with standing files objection directly with DRSP for these grounds:

- ***String Confusion***
- ***Legal Rights***
- ***Morality and Public Order; and/or***
- ***Community***

Objector pays filing fee directly to DRSP

Objection filing phase closes

Applicant responds to objection by paying filing fee and responding to claims made by objector

Once the DRSPs receive all objections, at their discretion, the DRSPs may elect to consolidate certain objections if there are multiple objections to the same application based on the same ground

Panel reviews parties' submissions and renders decision

Prior to the commencement of proceedings, the objector and the applicant will both submit fees directly to the DRSPs to cover the estimated cost of proceedings. After decision is rendered, the prevailing party will be refunded any costs paid in advance

Does applicant clear ALL objections?

No

Application denied

Yes

Applicant proceeds to subsequent steps

Draft Applicant Guidebook

Module 4

Please note that this is a discussion draft only. Potential applicants should not rely on any of the proposed details of the new gTLD program as the program remains subject to further consultation and revision.

24 October 2008

Module 4

String Contention Procedures

This module describes situations in which contention over applied-for gTLD strings occurs, and the two methods available to applicants for resolving such contention cases.

4.1 String Contention

String contention occurs when either:

1. Two or more applicants for an identical gTLD string successfully complete all previous stages of the evaluation and dispute resolution processes; or
2. Two or more applicants for similar gTLD strings successfully complete all previous stages of the evaluation and dispute resolution processes, and the similarity of the strings is identified as creating a probability of user confusion if more than one of the strings is delegated.

ICANN will not approve applications for proposed gTLD strings that are identical or that would result in string confusion, called contending strings. If either situation 1 or 2 above occurs, such applications will proceed to contention resolution through either comparative evaluation or an efficient mechanism for contention resolution, both of which are described in this module. A group of applications for contending strings is referred to as a contention set.

4.1.1 Identification of Contention Sets

Contention sets are groups of applications containing identical or similar applied-for gTLD strings. (In this RFP, “similar” means strings so similar that it is probable that detrimental user confusion would result if the two similar gTLDs are delegated into the root zone.) Contention sets are identified during Initial Evaluation from review of all applied-for TLD strings by the panel of String Similarity Examiners. ICANN will publish contention sets by the close of the Initial Evaluation period.

Applications for identical gTLD strings will be automatically assigned to a contention set. For example, if Applicant A and Applicant B both apply for .TLDSTRING, they will be identified as being in a contention set. Such testing for identical strings also takes into consideration the code point variants listed in any relevant language reference table.

The String Similarity Examiners will also review the entire pool of applied-for strings to determine whether the strings proposed in any two or more applications are so similar that they would create a probability of user confusion if allowed to coexist in the DNS. The panel will make such a determination for each pair of applied-for gTLD strings. The outcome of the String Confusion Review described in subsection 2.1.1 is the identification of contention sets among applications that have direct or indirect contention relationships with one another.

Two strings are in **direct contention** if they are identical or so similar that there is a probability of user confusion if both were to be delegated as TLDs in the root zone. More than two applicants might be represented in a direct contention situation: if four different applicants applied for the same gTLD string, they would all be in direct contention with one another.

Two strings are in **indirect contention** if they are both in direct contention with a third string, but not with one another. Direct and indirect contention are explained in greater detail in the example that follows.

In Figure 4-1, Strings A and B are an example of direct contention. Strings C and G are an example of indirect contention. C and G both contend with B, but not with one another. The figure as a whole is one contention set. A contention set consists of all applications that are linked by string contention to one another, directly or indirectly.

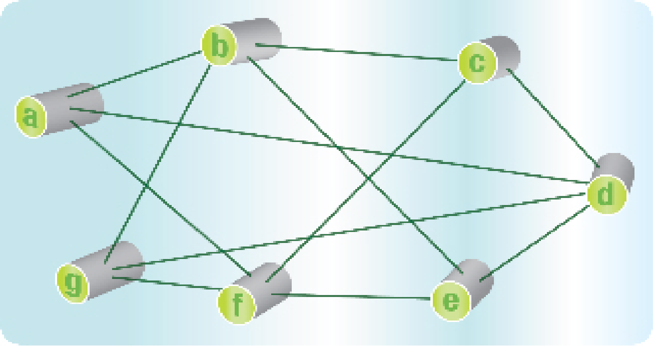


Figure 4-1 – This diagram represents one contention set, featuring both directly and indirectly contending strings.

While contention sets are determined during Initial Evaluation, the final configuration of the contention sets can only be established once the evaluation and dispute resolution process steps have concluded. This is because any application excluded through those steps might modify a contention set identified earlier. A contention set may be split it into two sets or it may be eliminated altogether as a result of an Extended Evaluation or dispute resolution proceeding.

Refer to Figure 4-2: In contention set 1, applications D and G are eliminated. Application A is the only remaining application, so there is no contention left to resolve.

In contention set 2, all applications successfully complete Extended Evaluation and Dispute Resolution, so the original contention set remains to be resolved.

In contention set 3, application F is eliminated. Since application F was in direct contention with E and J, but E and J are not in contention with one other, the original contention set splits into two sets: one containing E and K in direct contention, and one containing I and J.

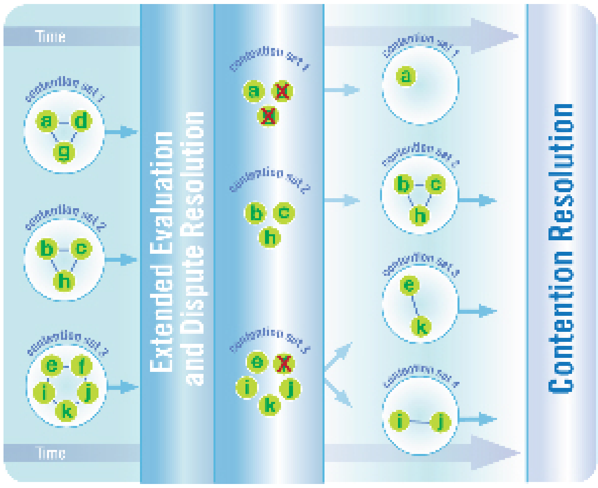

Figure 4-2 – Resolution of string contention cannot begin until all applicants within a contention set have completed all applicable previous stages.

The remaining contention cases must then be resolved through comparative evaluation or an efficient mechanism for contention resolution, depending on the circumstances. In this process, ICANN addresses each contention set to achieve an unambiguous resolution.

In their policy advice, the GNSO called for an efficient process to resolve cases of contention where there was no claim of community representation to be used as a factor for resolving the contention. While not settled, candidate means for this process are discussed below and in more detail in a companion paper to the Draft Applicant Guidebook called "Resolving string contention—a complete lifecycle including string contention resolution."

4.1.2 Impact of Dispute Resolution Proceedings on Contention Sets

If an applicant files a string confusion objection against another applicant (refer to Module 3), and the panel does find that string confusion exists; that is, rules in favor of the objector, the two applicants will be placed in direct contention with each other. Thus, the outcome of a proceeding based on a string confusion objection would result in a new contention set structure for the relevant applications.

4.1.3 Self-Resolution of String Contention

Applicants that are identified as being in contention may elect to reach a settlement or agreement among themselves whereby one or more applicants withdraws its application. This may occur at any stage of the process, once ICANN publicly posts the applications received on its website.

Applicants may not resolve a case of string contention by changing their applications by, for instance, selecting a new TLD string or creating a joint venture as a means to resolve the contention case.

4.1.4 Possible Contention Resolution Outcomes

Any application with no contention situation left to resolve is allowed to proceed to the next step. In some cases, an applicant who is not the outright winner of a string contention resolution process can still proceed. This situation is explained in the following paragraphs.

There may be more than one application that passes contention resolution within a contention set. If the strings within a given contention set are all identical, the applications are in direct contention with each other and there can only be one winner that proceeds to the next step.

However, where there are both direct and indirect contention situations within a set, more than one string may survive the resolution.

For example, if string A is in contention with B, B is in contention with C, but C is not in contention with A. If A wins the contention, B is eliminated but C can go on since C is not in direct contention with the winner and both strings can coexist in the DNS without risk for confusion.

4.2 Comparative Evaluation

Comparative evaluation can begin once all applicants in the contention set have completed all previous stages of the process.

The comparative evaluation is an independent analysis. Scores received in the applicant reviews are not carried forward to the comparative evaluation. Each applicant participating in the comparative evaluation begins with a score of zero.

4.2.1 Eligibility for Comparative Evaluation

As described in subsection 1.2.2 of Module 1, all applicants are required to identify whether their application type is:

- Open; or
- Community-based.

Only community-based applicants may elect a comparative evaluation. ICANN policy states that if there is contention for strings, a claim to support a community by one party will be a reason to award priority to that application. If one community-based applicant within a contention set makes this election, all other community-based applicants in the same contention set will be part of the comparative evaluation.

Applicants designating their applications as community-based will also be asked to respond to a set of questions in the application form that would provide relevant information if a comparative evaluation occurs.

Before the comparative evaluation begins, all community-based applicants in the contention set may be asked to provide additional information relevant to the comparative evaluation. Additionally, the community-based applicants will be required to pay a Comparative Evaluation Fee (refer to Section 1.5 of Module 1) to participate in the comparative evaluation.

4.2.2 Comparative Evaluation Procedure

Comparative evaluations for each contention set will be performed by a comparative evaluation provider appointed by ICANN to review all applications for contending gTLD strings. The panel's charter is to determine whether one of the community-based applications clearly and demonstrably would add more value to the Internet's Domain Name System. Open applicants within the contention set will not participate in the comparative evaluation.

If no single community-based applicant emerges as one that clearly and demonstrably adds more value to the namespace than all the competing contending applications, then all of the parties in the contention set (both open and community-based applicants) will proceed to an alternate mechanism for efficient contention resolution.

4.2.3 Comparative Evaluation Criteria

A panel appointed by the comparative evaluation provider will review and score the one or more community-based applicants who elected comparative evaluation against the criteria in the following table:

Criteria	Score		
	3	2	1
Nexus between Proposed String and Community	String is name or well-known abbreviation of community institution.	String is relevant to applicant's area of interest but also has other well-known associations.	No connection.
Dedicated Registration Policies	Registration eligibility is strictly limited to members of the pre-established community identified in the application. Registration policies also include name selection and use requirements consistent with the articulated scope and community-based nature of the TLD. Proposed policies include specific enforcement measures including investigation practices, penalties, takedown procedures and appeal mechanisms.	Registration eligibility is predominantly available to members of the pre-established community identified in the application, and also permits people or groups informally associated with the community to register. Policies include some elements of the above but one or more elements are missing.	No dedicated registration policies.
Community Establishment	Clearly identified, organized and pre-established community of considerable size and longevity.	The community addressed fulfills some but not all the requirements for a score of 3.	No community addressed.
Community Endorsement	Endorsement by a recognized institution or by member organizations.	Endorsement by some groups with apparent relevance, but also some opposition by groups with apparent relevance.	Assorted endorsements from individuals or groups of unknown relevance – or – no endorsement by any community.

If no applicant scores 11 or more, there is no clear winner. If only one applicant scores 11 or more, that applicant will be declared the winner.

If more than one applicant scores 11 or more, the evaluators will consider what portion of the community is represented by the application. *If one applicant represents* *a much larger share of the relevant community than another, that will be a basis for awarding priority.*

Following the comparative evaluation, ICANN will review the results and reconfigure the contention set as needed. The same procedure will occur for remaining contention sets involving any community-based application that has elected comparative evaluation. If no community-based applicant that has elected comparative evaluation is left in the contention set, any applications remaining in contention will proceed to a subsequent contention resolution process. Applications not in contention will proceed toward delegation.

4.3 Efficient Mechanism for Contention Resolution

A tie-breaker mechanism will be developed for resolving string contention among the applicants within a contention set, if the contention has not been resolved by other means. Unless the specific conditions for comparative evaluation outlined in Section 4.2 apply, this mechanism will be used to resolve the contention. This mechanism may also be used if no clear winner is identified during the comparative evaluation process.

The GNSO policy recommendations call for an efficient means of resolution. Continued investigation regarding the availability of alternative methods will guide ICANN's development of this mechanism.

The first efficient means of resolution that will be employed is a settlement arrived at by contending parties. Applicants for identical or similar TLDs can arrive at an accommodation where all in direct contention withdraw except for one. As described earlier, those withdrawing cannot apply for a new string. Nor can contending parties combine to form a new applicant. It is expected that many cases of contention will be resolved in this manner as it will be the most efficient and economical for the contending parties.

Failing to arrive at accommodation of the type described just above, auctions are one means of last resort that is being explored to resolve the contention. The purpose of an auction is to resolve contention in a clear, objective manner.

Auction proceeds – The purpose of an auction is to resolve contention in a clear, objective manner. It is not to raise revenue. While there may be significant proceeds from auctions in the event they occur, it is important to understand that this in no way the purpose of the auction. The annual budget process sets ICANN's funding and spending limits. ICANN has no authorization to spend beyond the budget. ICANN already has precedent of returning revenue to the community when last year and in 2006 ICANN reduced registration fees from 25¢ to 20¢ over two years as a result of an unforeseen growth in revenue. Proceeds from auctions will be reserved until the uses of the proceeds are determined through a community consultation. The proceeds will not go into ICANN's general expense budget but will be separately earmarked for projects or uses identified by the community. This important aspect of the auction process and its result will be an important part of the communications plan for the new gTLD program.

The new gTLD application fee is designed to be cost/revenue neutral. It factors in costs already forgone, future processing costs and legal expenses that are significant and would be a large drain on the Corporation's established budget.

See further details on the exploration of an auction model in the contention lifecycle at http://www.icann.org/en/topics/string-contention-22oct08.pdf.

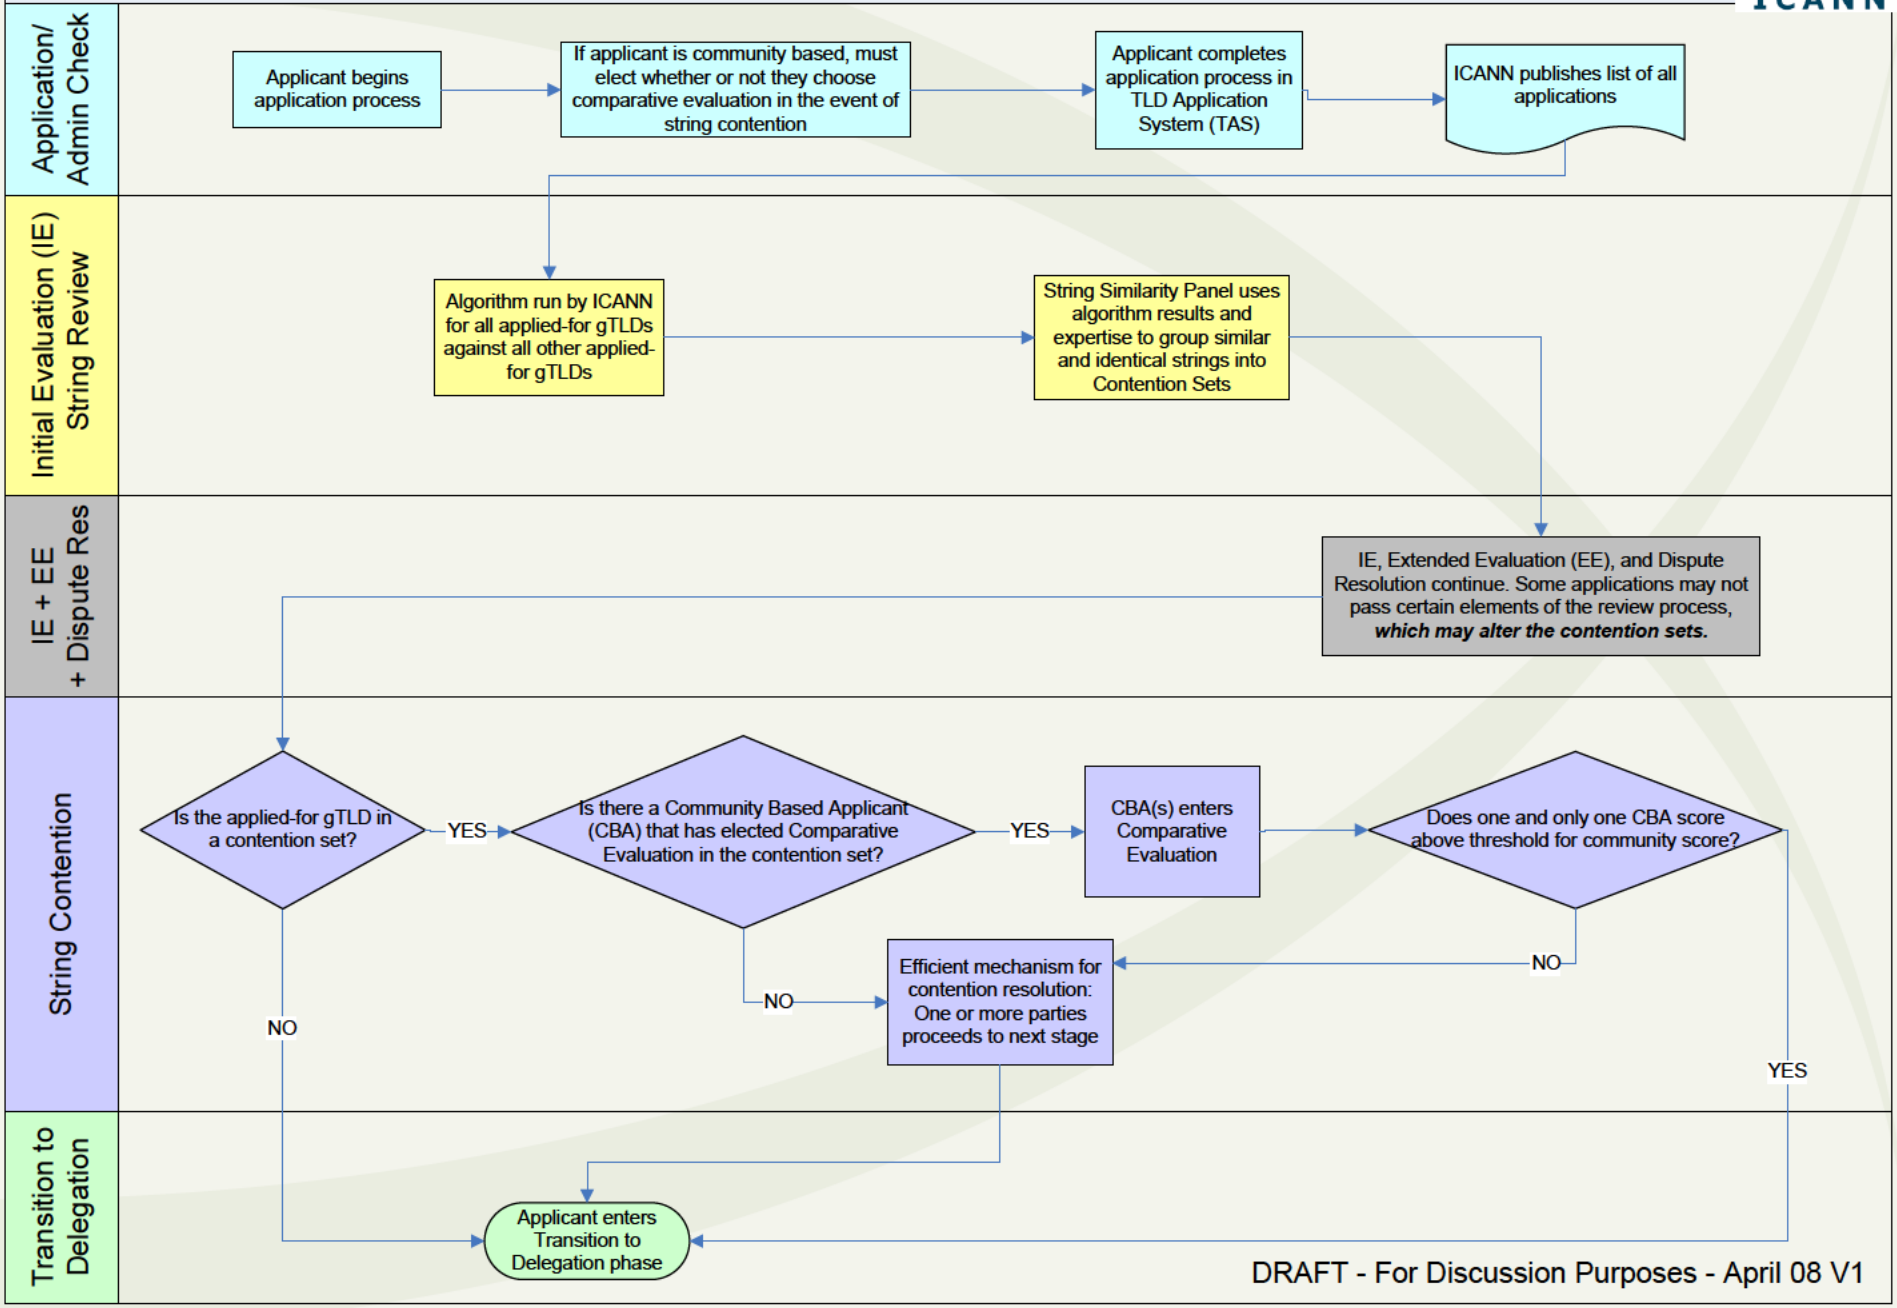
In practice, ICANN expects that most contention cases will be resolved through other means before reaching this stage.

4.4 Contention Resolution and Contract Execution

An applicant that has been declared winner of a contention resolution process will proceed by entering into the contract execution phase. (Refer to section 5.1 of Module 5.)

If the winner of the contention resolution has not executed a contract within 90 days of the decision, ICANN has the right to extend an offer to the runner-up applicant to proceed with its application. For example, in a comparative evaluation, the applicant with the second-highest score (if equal to or greater than eleven, might be selected to go on to the next step, delegation. (Refer to Module 5.) Similarly, in an efficient mechanism for contention resolution, another applicant who would be considered the runner-up applicant might proceed to the delegation step. This offer is at ICANN's option only. The runner-up applicant in a contention resolution process has no automatic right to an applied-for gTLD string if the first place winner does not execute a contract within a specified time.

DRAFT - New gTLD Program - String Contention



Application/ Admin Check

Applicant begins application process

If applicant is community based, must elect whether or not they choose comparative evaluation in the event of string contention

Applicant completes application process in TLD Application System (TAS)

ICANN publishes list of all applications

Initial Evaluation (IE) String Review

Algorithm run by ICANN for all applied-for gTLDs against all other applied-for gTLDs

String Similarity Panel uses algorithm results and expertise to group similar and identical strings into Contention Sets

DRAFT - For Discussion Purposes - April 08 V1

ICANN

Draft Applicant Guidebook

Module 5

Please note that this is a discussion draft only. Potential applicants should not rely on any of the proposed details of the new gTLD program as the program remains subject to further consultation and revision.

24 October 2008

Module 5

Transition to Delegation

This module describes the final steps required of an applicant, including execution of a registry agreement with ICANN and preparing for delegation of the new gTLD string into the root zone.

5.1 Registry Agreement

All applicants that have successfully completed the evaluation process—including, if necessary, the dispute resolution and string contention processes—are required to enter into a registry agreement with ICANN in order to proceed to delegation.

It is important to note that the agreement referred to below does not constitute a formal position by ICANN and has not been approved by the ICANN Board of Directors. The agreement is set out here for review and community discussion purposes and as a means to improve the effectiveness of the agreement in providing for increased competition and choice for consumers in a stable, secure DNS.

The contract terms can be reviewed at http://www.icann.org/en/topics/new-gtld-draft-agreement-24oct08-en.pdf. All successful applicants are expected to enter into the agreement substantially as written. The terms of the contract and, in particular, differences with existing registry agreements are explained in a companion paper to the agreement, *Summary of Changes to Base Agreement for New gTLDs,* http://www.icann.org/en/topics/new-gtld-draft-summary-changes-24oct08-en.pdf.

After an applicant has successfully completed the application process, ICANN may conduct a pre-contract review. To ensure that an applicant continues to be a going concern in good legal standing, ICANN reserves the right to ask the applicant to submit updated documentation and information before entering into the registry agreement.

If at any time during the evaluation process information previously submitted by an applicant becomes untrue or inaccurate, the applicant must promptly notify ICANN and submit updated information. This includes applicant-specific information such as changes in financial position and changes in ownership or control of the applicant.

5.2 Pre-Delegation Testing

Following completion of the Board review, each applicant will be required to complete pre-delegation steps as a prerequisite to entering the IANA process for delegation into the root zone. The pre-delegation check must be completed within the time period specified in the registry agreement.

5.2.1 Technical Testing

The purpose of the pre-delegation technical test is to verify the applicant has met its commitment to establish registry operations in accordance with the technical and operational criteria described, along with the applicant questions. (Refer to Module 2.) The checks are also intended to ensure that the applicant can operate the gTLD in a stable and secure manner. All applicants will be tested on a pass/fail basis according to the questions and criteria that follow.

Question		Criteria
1	**IDN (variant) tables**	
	If applicant will be supporting IDNs, was the IDN table attached to the application when originally submitted and does it fulfill IDN and IANA guidelines and requirements?	IDN tables must be developed and provided by the IDN string applicant at the time the application was submitted. The table must fulfill the requirements from the IDN Guidelines as well as the IANA repository requirements in order to be considered valid (see http://iana.org/procedures/idn-repository.html).
2	**DNSSEC keys, materials**	
	If DNSSEC is offered as part of registry services at time of application, can applicant comply with requirements?	Trust anchor for the registry will be published in the IANA Interim Trust Anchor Repository. Validity will be determined by verifying that DNS resolvers that support DNSSEC can successfully retrieve and DNSSEC validate information from that zone when configured with the published trust anchor for the zone.
3	**Architecture load requirements**	
	Has the applicant implemented a network architecture necessary to support load characteristics, as outlined in its application?	Applicant will self-certify adherence to this requirement and provide materials to ICANN that demonstrate adherence. Examples of self-certification documents include but are not limited to a network/system diagram of the as-built network system (demonstrating correspondence to documentation in initial application), results of load testing performed by the applicant, and actual performance of the configuration in use for other registries. At ICANN's discretion, aspects of this self-certification documentation can be audited on-site at the services delivery point of the registry.

Question		**Criteria**
4	**IPv6 for registrants**	
	Does registry support provisioning of IPv6 services for its registrants?	Registry must support provisioning of IPv6 services on behalf of its registrants. This means that registrar systems will allow entry of IPv6 addresses in all relevant address fields, that the SRS system is set up to support the communication of IPv6 addresses, and that registry name servers can be provisioned with IPv6 addresses. Applicant will demonstrate successful provisioning of a test account with IPv6 name server entries.
5	**IPv6 reachability**	***Note:*** *This requirement is under consideration and the community is urged to provide feedback on this requirement.*
	Does registry support access to DNS servers over an IPv6 network?	IANA currently has a minimum set of technical requirements for IPv4 name service. These include two nameservers separated by geography and by network topology, which each serve a consistent set of data, and are reachable from multiple locations across the globe. The registry will meet this same criterion for IPv6, requiring IPv6 transport to their network. Applicant will identify IPv6-reachable name servers that meet these requirements, and reachability will be verified by ICANN.
6	**Escrow deposit sample**	
	Has the applicant demonstrated the ability to conform to registry escrow requirements? See http://www.icann.org/en/topics/new-gtld-draft-escrow-spec-24oct-08-en.pdf.	The applicant will provide a conforming sample of a dummy data deposit showing correct type and formatting of content. The applicant will also provide evidence of an agreement with an escrow provider complying with Part B of the Data Escrow Requirements.
7	**System monitoring**	
	Has the applicant implemented the system monitoring described by the applicant in the initial application?	Applicant will self-certify adherence to this requirement and provide materials to ICANN that demonstrate adherence. Examples of self-certification documents include but are not limited to: diagrams of monitoring systems (demonstrating correspondence to documentation provided in the application), output of periodic monitoring runs performed by the applicant demonstrating capability claimed in the application, and actual performance of this monitoring set up in use for other registries. At ICANN's discretion, aspects of this self-certification documentation can be audited on-site at the services delivery point of the registry.
8	**Registry continuity planning**	
	Has applicant demonstrated capability to comply with ICANN's Registry Continuity Plan? See http://www.icann.org/registries/failover/icann-registry-failover-plan-15jul08.pdf	Applicant will self-certify adherence to this requirement and provide materials to ICANN that demonstrate adherence. Examples include identification of appropriate contact points and evidence of the registry's own continuity plan, and identification of a registry services continuity provider.
9	**System performance requirements**	
	Has applicant demonstrated capability to comply with the performance specifications? See http://www.icann.org/en/topics/new-gtld-draft-performance-spec-24oct08-en.pdf	Applicant will self-certify adherence to this requirement and provide materials to ICANN that demonstrate adherence. Examples of self-certification documents include but are not limited to performance and availability results that demonstrate DNS availability at stated levels for at least one month, and Whois service availability for at least one month. At ICANN's discretion, aspects of this self-certification documentation can be audited on-site at the services delivery point of the registry.

5.2.2 Additional Requirements

At the pre-delegation stage, an applicant must also provide documentary evidence of its ability to fund ongoing basic registry operations for then-existing registrants for a period of three to five years in the event of registry failure, default or until a successor operator can be designated. This obligation can be met by securing a financial instrument such as a bond or letter of credit (i.e., evidence of ability to provide financial security guaranteed by a creditworthy financial institution); contracting with and funding a services provider to extend services; segregating funding; or other means.

Once an applicant has met the requirements in 5.2.1 and 5.2.2 above, it is eligible to proceed to delegation of its applied-for gTLD string by IANA.

If an applicant does not complete the pre-delegation steps within the time period specified in the registry agreement, ICANN reserves the right to terminate the registry agreement.

5.3 IANA Delegation Process

Upon notice of successful completion of the ICANN pre-delegation testing, applicants may initiate the process for delegation of the new gTLD into the root zone database. Information about the delegation process is available at http://iana.org/domains/root/.

5.4 Ongoing Operations

ICANN will continue to provide support for gTLD registry operators as they launch and maintain registry operations. ICANN's gTLD registry liaison function provides a point of contact for gTLD registry operators for assistance on a continuing basis.

The registry agreement contains a provision for ICANN to perform audits to ensure that the registry operators remain in compliance with agreement obligations.

Draft Applicant Guidebook

Module 6

Please note that this is a discussion draft only. Potential applicants should not rely on any of the proposed details of the new gTLD program as the program remains subject to further consultation and revision.

24 October 2008

Module 6

Top-Level Domain Application – Terms and Conditions

By submitting this application through ICANN's online interface for a generic Top Level Domain (gTLD) (this application), applicant (including all parent companies, subsidiaries, affiliates, agents, contractors, employees and any and all others acting on its behalf) agrees to the following terms and conditions (these terms and conditions) without modification. Applicant understands and agrees that these terms and conditions are binding on applicant and are a material part of this application.

1. Applicant warrants that the statements and representations contained in the application (including any documents submitted and oral statements made in connection with the application) are true and accurate and complete in all material respects, and that ICANN may rely on those statements and representations fully in evaluating this application. Applicant acknowledges that any material misstatement or misrepresentation (or omission of material information) will reflect negatively on this application and may cause ICANN and the evaluators to reject the application.

2. Applicant warrants that it has the requisite organizational power and authority to make this application on behalf of applicant, and is able to make all agreements, representations, waivers, and understandings stated in these terms and conditions and to enter into the form of registry agreement as posted with these terms and conditions.

3. Applicant acknowledges and agrees that ICANN has the right to reject any and all applications for new gTLDs, and that there is no assurance that any additional gTLDs will be created. The decision to proceed with review and consideration of an application to establish one or more gTLDs is entirely at ICANN's discretion. ICANN reserves the right to reject any application that ICANN is prohibited from considering for a gTLD under applicable law or policy, in which case any fees submitted in connection with such application will be returned to the applicant.

4. Applicant agrees to pay all fees that are associated with this application. These fees include the evaluation fee (which is to be paid in conjunction with the submission of this application), and any fees associated with the progress of the application to the extended evaluation stages of the review and consideration process with respect to the application, including any and all fees as may be required in conjunction with the dispute resolution process as set forth in the application. Applicant acknowledges that the initial fee due upon submission of the application is only to obtain consideration of an application. ICANN makes no assurances that an application will be approved or will result in the delegation of a gTLD proposed in an application. Applicant acknowledges that if it fails to pay fees within the designated time period at any stage of the application review and consideration process, applicant will forfeit any fees paid up to that point and the application will be cancelled.

5. Applicant shall indemnify, defend, and hold harmless ICANN (including its affiliates, subsidiaries, directors, officers, employees, consultants, evaluators, and agents, collectively the ICANN Affiliated Parties) from and against any and all third-party claims, damages, liabilities, costs, and expenses, including legal fees and expenses, arising out of or relating to: (a) ICANN's consideration of the application, and any approval or rejection of the application; and/or (b) ICANN's reliance on information provided by applicant in the application.

6. Applicant hereby releases ICANN and the ICANN Affiliated Parties from any and all claims by applicant that arise out of, are based upon, or are in any way related to, any action, or failure to act, by ICANN or any ICANN Affiliated Party in connection with ICANN's review of this application, investigation or verification, any characterization or description of applicant or the information in this application, or the decision by ICANN to recommend, or not to recommend, the approval of applicant's gTLD application. APPLICANT AGREES NOT TO CHALLENGE, IN COURT OR IN ANY OTHER JUDICIAL FORA, ANY FINAL DECISION MADE BY ICANN WITH RESPECT TO THE APPLICATION, AND IRREVOCABLY WAIVES ANY RIGHT TO SUE OR PROCEED ON THE BASIS OF ANY OTHER LEGAL CLAIM AGAINST ICANN AND ICANN AFFILIATED PARTIES WITH RESPECT TO THE APPLICATION. APPLICANT ACKNOWLEDGES AND

ACCEPTS THAT APPLICANT'S NONENTITLEMENT TO PURSUE ANY RIGHTS, REMEDIES, OR LEGAL CLAIMS AGAINST ICANN OR THE ICANN AFFILIATED PARTIES WITH RESPECT TO THE APPLICATION SHALL MEAN THAT APPLICANT WILL FOREGO ANY RECOVERY OF ANY APPLICATION FEES, MONIES INVESTED IN BUSINESS INFRASTRUCTURE OR OTHER START-UP COSTS AND ANY AND ALL PROFITS THAT APPLICANT MAY EXPECT TO REALIZE FROM THE OPERATION OF A REGISTRY FOR THE TLD.

7. Applicant hereby authorizes ICANN to publish on ICANN's website, and to disclose or publicize in any other manner, any materials submitted to, or obtained or generated by, ICANN and the ICANN Affiliated Parties in connection with the application, including evaluations, analyses and any other materials prepared in connection with the evaluation of the application; provided, however, that information will not be published to the extent that the application specifically identifies such information as confidential. A general statement as the confidentiality of the application will not be sufficient for these purposes. Except for information that ICANN determines to treat as confidential, applicant understands and acknowledges that ICANN does not and will not keep the remaining portion of the application or materials submitted with the application confidential.

8. Applicant certifies that it has obtained permission for the posting of any personally identifying information included in this application or materials submitted with this application. Applicant acknowledges that the information that ICANN posts may remain in the public domain in perpetuity, at ICANN's discretion.

9. Applicant gives ICANN permission to use applicant's name and/or logo in ICANN's public announcements (including informational web pages) relating to top-level domain space expansion.

10. Applicant understands and agrees that it will acquire rights in connection with a gTLD only in the event that it enters into a registry agreement with ICANN, and that applicant's rights in connection with such gTLD will be limited to those expressly stated in the registry agreement. In the event ICANN agrees to recommend the approval of the application for applicant's proposed gTLD, applicant agrees to enter into the registry agreement with ICANN in the form published in

connection with the application materials. Applicant may not resell, assign, or transfer any of applicant's rights or obligations in connection with the application.

11. Applicant authorizes ICANN to:
    a. Contact any person, group, or entity to request, obtain, and discuss any documentation or other information that, in ICANN's sole judgment, may be pertinent to the application;
    b. Consult with persons of ICANN's choosing regarding the information in the application or otherwise coming into ICANN's possession.
12. For the convenience of applicants around the world, the application materials published by ICANN in the English language have been translated into certain other languages frequently used around the world. applicant recognizes that the English language version of the application materials (of which these terms and conditions is a part) is the version that binds the parties, that such translations are non-official interpretations and may not be relied upon as accurate in all respects, and that in the event of any conflict between the translated versions of the application materials and the English language version, the English language version controls.

Glossary

Terms Applicable to this RFP and to the New gTLD Application Process

A-Label	The ASCII-Compatible Encoding (ACE) form of an IDNA-valid string.
Applicant	An entity that has applied to ICANN for a new gTLD by submitting its application form through the online application system.
Application	An application for a new gTLD lodged in response to this RFP. An application includes the completed Application Form any supporting documents, and any other information that may be submitted by the applicant at ICANN's request.
Application form	The set of questions to which applicants provide responses, as at http://www.icann.org/en/topics/new-gtld-draft-evaluation-criteria-24oct08-en.pdf.
Application interface	The web-based interface operated by ICANN, available at [URL to be inserted in final version of RFP]
Application round	The complete succession of stages for processing the applications received during one application submission period for gTLDs. This RFP is for one application round. Any subsequent application rounds will be the subject of subsequent RFPs.
Application submission period	The period during which applicants may submit applications through the application interface.
Applied for gTLD string	A gTLD string that is subject of an application.
American Standard Code for Information Interchange (ASCII)	A character encoding based on the English alphabet. ASCII codes represent text in computers, communications equipment, and other devices that work with text. Most modern character encodings—which support many more characters than did the original—have a historical basis in ASCII.
AXFR	Asynchronous full transfer, a DNS protocol mechanism through which a DNS zone can be replicated to a remote DNS server.
Business ID	A number such as a federal tax ID number or employer information number.

ccTLD	Two-letter top-level domains corresponding with the ISO 3166-1 country code list. See http://iana.org/domains/root/db/.
Community-based TLD	A community-based gTLD is a gTLD that is operated for the benefit of a defined community consisting of a restricted population. An applicant designating its application as community-based must be prepared to substantiate its status as representative of the community it names in the application
Community objection	An objection based on the grounds that there is substantial opposition to a gTLD application from a significant portion of the community to which the gTLD string may be explicitly or implicitly targeted.
Comparative evaluation	A process to resolve string contention, which may be elected by a community-based applicant.
Consensus policy	A policy created through the GNSO policy development process listed in Annex A of the ICANN Bylaws. See http://www.icann.org/en/general/bylaws.htm#AnnexA. A list of current consensus policies is available at http://www.icann.org/en/general/consensus-policies.htm.
Contention sets	A group of applications containing identical or similar applied-for gTLD strings.
Country-code TLD	See ccTLD.
Delegation	The process through which the root zone is edited to include a new TLD, and the management of domain name registrations under such TLD is turned over to the registry operator.
Digit	Any digit between “0” and “9” (Unicode code points U+0030 to U+0039).
Dispute Resolution Service Provider (DRSP)	An entity engaged by ICANN to adjudicate dispute resolution proceedings in response to formally filed objections.
Domain name	A name consisting of two or more (for example, john.smith.name) levels, maintained in a registry database.
Domain Name System Security Extensions (DNSSEC)	DNSSEC secures domain name look-ups on the Internet by incorporating a chain of digital signatures into the DNS hierarchy.
Existing TLD	A string included on the list at http://iana.org/domains/root/db

Extended Evaluation	The second stage of evaluation applicable for applications that do not pass the Initial Evaluation, but are eligible for further review.
Extended Evaluation period	The period that may follow the Initial Evaluation period, for eligible applications which do not pass the Initial Evaluation.
Evaluator	The individuals or organization(s) appointed by ICANN to perform review tasks within Initial Evaluation and Extended Evaluation under ICANN direction
Evaluation fee	The fee due from each applicant to obtain consideration of its application.
Geographical Names Panel (GNP)	A panel of experts charged by ICANN with reviewing applied-for TLD strings that relate to geographical names.
Generic Names Supporting Organization (GNSO)	ICANN's policy-development body for generic TLDs and the lead in developing the policy recommendations for the introduction of new gTLDs.
Generic top-level domain	See gTLD
gTLD	A TLD with three or more characters that does not correspond to any country code.
Hyphen	The hyphen "-" (Unicode code point U+0029).
Internet Assigned Numbers Authority (IANA)	IANA is the authority originally responsible for overseeing IP address allocation, coordinating the assignment of protocol parameters provided for in Internet technical standards, and managing the DNS, including delegating top-level domains and overseeing the root name server system. Under ICANN, IANA distributes addresses to the Regional Internet Registries, coordinate with the IETF and other technical bodies to assign protocol parameters, and oversees DNS operation.
ICANN	Internet Corporation for Assigned Names and Numbers
ICANN-accredited registrar	A company that registers domain names for Internet users. There are more than 900 ICANN-accredited registrars who provide domains to Internet users. The list of ICANN-accredited registrars is available at http://www.icann.org/en/registrars/accredited-list.html
Internationalized Domain Name (IDN)	A domain name including at least one character other than those in letters (a,…,z), digits (0,…,9) and the hyphen (-).
Internationalizing Domain Names in Applications (IDNA)	The technical protocol used for processing domain names containing non-ASCII characters in the DNS.

IDN ccTLD Fast Track	The process for introducing a limited number of IDN ccTLDs associated with the ISO-3166 two-letter codes. See http://www.icann.org/en/topics/idn/fast-track/.
IDN table	A table listing all those characters that a particular TLD registry supports. If one or more of these characters are considered a variant this is indicated next to that/those characters. It is also indicated which character a particular character is a variant to. The IDN tables usually hold characters representing a specific language, or they can be characters from a specific script. Therefore the IDN table is sometimes referred to as “language variant table”, “language table”, “script table” or something similar.
IGO	Inter-governmental organization.
Internet Engineering Task Force (IETF)	The IETF is a large, open international community of network designers, operators, vendors, and researchers concerned with the evolution of the Internet architecture and the smooth operation of the Internet.
Initial Evaluation period	The period during which ICANN will review an applied-for gTLD string, an applicant’s technical and financial capabilities, and an applicant’s proposed registry services.
International Phonetic Alphabet	A notational standard for phonetic representation in multiple languages. See http://www.arts.gla.ac.uk/IPA/IPA_chart_(C)2005.pdf.
IXFR	Incremental Zone Transfer, a DNS protocol mechanism through which a partial copy of a DNS zone can be replicated to a remote DNS server.
LDH (Letter Digit Hyphen)	The hostname convention defined in RFC 952, as modified by RFC 1123.
Legal Rights objection	An objection on the grounds that the applied-for gTLD string infringes existing legal rights of the objector.
Letter	Any character between “a” and “z” (in either case) (Unicode code points U+0061 to U+007A or U+0041 to U+005A).
LLC	Limited liability corporation.
Morality and public order objection	An objection made on the grounds that the applied-for gTLD string is contrary to generally accepted legal norms of morality and public order that are recognized under international principles of law.
Objection	A formal objection filed with a Dispute Resolution Service Provider in accordance with that provider’s procedures.
Objection filing period	The period during which formal objections may be filed

	concerning a gTLD application submitted to ICANN
Objector	One or more persons or entities that have filed a formal objection against a new gTLD application with the appropriate DRSP.
Open TLD	An open TLD can be used for any purpose consistent with the requirements of the application and evaluation criteria, and with the registry agreement. An open TLD may or may not have a formal relationship with an exclusive registrant or user population. It may or may not employ eligibility or use restrictions.
Pre-delegation test	A technical test and other steps required of applicants before delegation of the applied-for gTLD string into the root zone.
Primary contact	The person named by the applicant as the main contact for the application, and having authority to execute decisions concerning the application.
Principal place of business	The location of the head office of a business or organization.
Registrar	See ICANN-accredited registrar.
Registry	A registry is the authoritative, master database of all domain names registered in each top-level domain. The registry operator keeps the master database and also generates the zone file that allows computers to route Internet traffic to and from top-level domains anywhere in the world.
Registry Agreement	The agreement executed between ICANN and successful gTLD applicants, which appears in draft form at http://www.icann.org/en/topics/new-gtld-draft-agreement-24oct08-en.pdf.
Registry operator	The entity entering into the Registry Agreement with ICANN, responsible for setting up and maintaining the operation of the registry.
Registry services	(1) Operations of the registry critical to the following tasks: (i) the receipt of data from registrars concerning registrations of domain names and name servers; (ii) provision to registrars of status information relating to the zone servers for the TLD; (iii) dissemination of TLD zone files; (iv) operation of the registry zone servers; and (v) dissemination of contact and other information concerning domain name server registrations in the TLD as required by the registry agreement; and (2) other products or services that the registry operator is required to provide because of the establishment of a consensus policy; and (3) any other products or services that only a registry operator is capable of providing, by reason of its

	designation as the registry operator.
Registry Services Technical Evaluation Panel (RSTEP)	The Registry Services Technical Evaluation Panel is a group of experts in the design, management, and implementation of the complex systems and standards-protocols used in the Internet infrastructure and DNS. RSTEP members are selected by its chair. All RSTEP members and the chair have executed an agreement requiring that they consider the issues before the panel neutrally and according to the definitions of security and stability.
Reserved Name	A string included on the Top-Level Reserved Names List (Refer to paragraph 2.1.1.2 of Module 2.)
Request for Comments (RFC)	The RFC document series is the official publication channel for Internet standards documents and other publications of the IESG, IAB, and Internet community.
Rightsholder	The person or entity that maintains a set of rights to a certain piece of property.
Root Zone	The root zone database represents the delegation details of top-level domains, including gTLDs and country-code TLDs. As manager of the DNS root zone, IANA is responsible for coordinating these delegations in accordance with its policies and procedures.
Round	See application round.
Script	A collection of symbols used for writing a language. There are three basic kinds of script. One is the alphabetic (e.g. Arabic, Cyrillic, Latin), with individual elements termed “letters”. A second is ideographic (e.g. Chinese), the elements of which are “ideographs”. The third is termed a syllabary (e.g. Hangul), with its individual elements represent syllables. The writing systems of most languages use only one script but there are exceptions such as for example, Japanese, which uses four different scripts, representing all three of the categories listed here. It is important to note that scripts which do not appear in the Unicode Code Chart are completely unavailable for inclusion in IDNs.
Security	In relation to a proposed registry service, an effect on security by the proposed Registry Service means (1) unauthorized disclosure, alteration, insertion, or destruction of registry data, or (2) unauthorized access to or disclosure of information or resources on the Internet by systems operating in accordance with all applicable standards.
Shared Registry System (SRS)	A system that allows multiple registrars to make changes

	to a registry simultaneously.
Stability	In relation to a proposed registry service, an effect on stability means that the proposed registry service (1) does not comply with applicable relevant standards that are authoritative and published by a well-established, recognized, and authoritative standards body, such as relevant standards-track or best current practice RFCs sponsored by the IETF; or (2) creates a condition that adversely affects the throughput, response time, consistency, or coherence of responses to Internet servers or end systems, operating in accordance with applicable relevant standards that are authoritative and published by a well-established, recognized and authoritative standards body, such as relevant standards-track or best current practice RFCs and relying on registry operator's delegation information or provisioning services.
String	The string of characters comprising an applied-for gTLD.
String confusion objection	An objection filed on the grounds that the applied-for gTLD string is confusingly similar to an existing TLD or to another applied-for gTLD.
String Similarity Algorithm	An algorithmic tool used to identify applied-for gTLD strings that may result in string confusion.
String Similarity Examiners	A panel charged with identifying applied-for gTLD strings that may result in string confusion.
String contention	The scenario in which there is more than one qualified applicant for the same gTLD or for gTLDs that are so similar that detrimental user confusion would be the probable result if more than one were to be delegated to the root zone.
TLD Application System (TAS)	The online interface for submission of applications to ICANN.
Top-level domain (TLD)	TLDs are the names at the top of the DNS naming hierarchy. They appear in domain names as the string of letters following the last (right-most) dot, such as "net" in www.example.net. The TLD administrator controls what second-level names are recognized in that TLD. The administrators of the root domain or root zone control what TLDs are recognized by the DNS.
U-Label	A "U-label" is an IDNA-valid string of Unicode characters, including at least one non-ASCII character, expressed in a standard Unicode Encoding Form, normally UTF-8 in an Internet transmission context.
Uniform Domain Name Dispute Resolution Policy	A policy for resolving disputes arising from alleged abusive registrations of domain names (for example, cybersquatting), allowing expedited administrative

(UDRP)	proceedings that a trademark rights holder initiates by filing a complaint with an approved dispute resolution service provider.
User registration fee	The fee paid by prospective applicants for new TLDs to obtain access to the TLD Application System (TAS).
Whois	Records containing registration information about registered domain names.

Restat 3d of the Foreign Relations Law of the U.S., § 201

Restatement 3d, Foreign Relations - Rule Sections > Part 2- Persons in International Law > Chapter 1- States

§ 201 State Defined

Under international law, a state is an entity that has a defined territory and a permanent population, under the control of its own government, and that engages in, or has the capacity to engage in, formal relations with other such entities.

COMMENTS & ILLUSTRATIONS

Comment:

a. Definition of state. While the definition in this section is generally accepted, each of its elements may present significant problems in unusual situations. In the absence of judicial or other means for authoritative and consistent determination, issues of statehood have been resolved by the practice of states reflecting political expediency as much as logical consistency. The definition in this section is well-established in international law; it is nearly identical to that in Article 1 of the Montevideo Convention on the Rights and Duties of States, 1933, *49 Stat. 3097,* T.S. No. 881, 165 L.N.T.S. 19.

b. Defined territory. An entity may satisfy the territorial requirement for statehood even if its boundaries have not been finally settled, if one or more of its boundaries are disputed, or if some of its territory is claimed by another state. An entity does not necessarily cease to be a state even if all of its territory has been occupied by a foreign power or if it has otherwise lost control of its territory temporarily. See § 202, Reporters' Note 5.

c. Permanent population. To be a state an entity must have a population that is significant and permanent. Antarctica, for example, would not now qualify as a state even if it satisfied the other requirements of this section. An entity that has a significant number of permanent inhabitants in its territory satisfies the requirement even if large numbers of nomads move in and out of the territory.

d. Government. A state need not have any particular form of government, but there must be some authority exercising governmental functions and able to represent the entity in international relations.

e. Capacity to conduct international relations. An entity is not a state unless it has competence, within its own constitutional system, to conduct international relations with other states, as well as the political, technical, and financial capabilities to do so. An entity that has the capacity to conduct foreign relations does not cease to be a state because it voluntarily turns over to another state control of its foreign relations, as in the "protectorates" of the period of colonialism, the case of Liechtenstein, or the "associated states" of today. See Reporters' Note 4. States do not cease to be states because they have agreed not to engage in certain international activities or have delegated authority to do so to a "supranational" entity, *e.g.*, the European Communities. Clearly, a state does not cease to be a state if it joins a common market. See § 809.

f. Claiming statehood. While the traditional definition does not formally require it, an entity is not a state if it does not claim to be a state. For example, Taiwan might satisfy the elements of the definition in this section, but its authorities have not claimed it to be a state, but rather part of the state of China. See Reporters' Note 8, and § 203, Comment *f*.

g. States of the United States. A State of the United States is not a state under international law since under the Constituton of the United States foreign relations are the exclusive responsibility of the Federal Government. A State may not make treaties (Article I, section 10) or otherwise engage in or intrude upon foreign relations to any substantial extent. See § 1, Reporters' Note 5.

h. Determination of statehood. Whether an entity satisfies the requirements for statehood is ordinarily determined by other states when they decide whether to treat that entity as a state. Ordinarily, a new state is formally recognized by other states, see § 202, but a decision to treat an entity as a state may be manifested in other ways. Since membership in the principal international organizations is constitutionally open only to states, admission to membership in an international organization such as the United Nations is an acknowledgment by the organization, and by those members who vote for admission, that the entity has satisfied the requirements of statehood. See § 222.

REPORTER'S NOTES

1. *Defined territory*. The requirement of a defined territory does not deny statehood to entities that at their creation were involved in substantial controversies about their boundaries -- *e.g.*, Israel in 1948; Kuwait in 1963; Estonia, Latvia, and Albania, in 1919. See North Sea Continental Shelf Cases (Federal Republic of Germany v. Denmark & Netherlands), [1969] I.C.J. Rep. 3, 32; see generally Crawford, The Creation of States in International Law 36-49 (1979).

2. *Government*. Some entities have been assumed to be states when they could satisfy only a very loose standard for having an effective government, *e.g.*, the Congo (Zaire) in 1960. Crawford, Reporters' Note 1, at 42-47. A state may continue to be regarded as such even though, due to insurrection or other difficulties, its internal affairs become anarchic for an extended period of time.

3. *Military occupation*. Military occupation, whether during war or after an armistice, does not terminate statehood, *e.g.*, Germany's occupation of European states during World War II, or the allies' occupation of Germany and Japan after that war. An entity's statehood would be terminated if all of its territory were lawfully annexed, but not where annexation is in violation of the United Nations Charter. See § 202, Comment *e* and Reporters' Note 6. Compare the policy of the United States in the case of Estonia, Latvia, and Lithuania, occupied and annexed before the United Nations Charter was adopted. See § 202 and Reporters' Note 6 thereto.

4. *Assignment of control over foreign relations*. In the past, one state sometimes turned over to another some or all control of its foreign relations, retaining the right to reassert such control. Some such arrangements persist, largely for reasons of convenience and economy, *e.g.*, Liechtenstein. Liechtenstein was admitted as a party to the Statute of the International Court of Justice for which only states are eligible, and its capacity to participate in the Nottebohm Case (Liechtenstein v. Guatemala), [1955] I.C.J. Rep. 4, was not contested.

Relationships characterized as "protectorate," "suzerainty," etc., were characteristic of the French and British empires. See, *e.g.*, Nationality Decrees Issued in Tunis and Morocco, P.C.I.J. ser. B, No. 4 (1923); Case Concerning Rights of Nationals of the United States of America in Morocco (France v. United States), [1952] I.C.J. Rep. 176, 188. Most such arrangements were terminated during the period of decolonization after World War II. See § 311, Reporters' Note 1.

Since World War II there have been United Nations trusteeships and "associated territories" that have not had full control over their foreign relations. See Clark, "Self-determination and Free Association -- Should the United States Terminate the Pacific Island Trust?," 21 Harv.J.Int'l L. 1 (1980).

5. *Independence*. Some writers add independence to the criteria required for statehood. Compare the Austro-German Customs Union case, P.C.I.J. ser. A/B, No. 41 (1931), in which the court advised that a proposed customs union violated Austria's obligation under the Treaty of St. Germain to retain its independence.

6. *The European Community*. "The European Community," or "The European Communities," are sometimes used to refer collectively to the European Economic Community (EEC), the European Coal and Steel Community (ECSC), and the European Atomic Energy Community (EURATOM). The creation of the European Community did not terminate the statehood of its constituent members, although the Community assumed international responsibility for a number of matters previously in the control of the individual states. The Community is not a

state, but it has become party to some international agreements in its own right, *e.g.*, the EEC is a party to the Wheat Trade Convention of 1971, 22 U.S.T. 820, T.I.A.S. No. 7144; see also 9 Official Records of Third U.N. Conf. on Law of the Sea 29-30, 187 (1978); Division of Powers between the European Communities and their Member States in the Field of External Relations (Timmermans and Voelker eds. 1981); Stein, "Towards a European Foreign Policy: The European Foreign Affairs System from the Perspective of the United States Constitution" in 1(3) Integration Through Law 3 (Cappelletti, Seccombe and Weiler eds. 1986).

7. *The Vatican and the Holy See*. The Vatican (an entity whose territory is surrounded by Italy) is generally accepted as a state, and the Holy See (the central administration of the Catholic Church) as its government. Nearly 90 states maintain diplomatic relations with the Vatican, and the Vatican (or the Holy See) is a party to many international agreements on subjects ranging from arbitration to nuclear nonproliferation. The Vatican is a member of several international organizations open only to states. On the other hand, it has the smallest population (less than 1000) of any entity claiming to be a state, and Italy performs for it many of the functions normally assumed by states. See Crawford, Reporters' Note 1, 152-60.

8. *Taiwan*. After the Second World War Japan renounced claims to Taiwan (Formosa). Both the regime governing Taiwan and the regime governing the mainland of China have claimed Taiwan as part of China, and other states have either confirmed or acquiesced in that claim. The Nationalist authorities on Taiwan continued to claim Taiwan was part of China (and that they were the government of China), even after the regime in Peking was generally recognized as the government of China. See § 203, Comment *f* and Reporters' Note 3. As of 1986, since the authorities on Taiwan do not claim that Taiwan is a state of which they are the government, the issue of its statehood has not arisen. See Comment *f*. If Taiwan should claim statehood, it would in effect be purporting to secede from China.

9. *States of the United States*. Under the United States Constitution, a State of the United States may make compacts or agreements with a foreign power with the consent of Congress (Article I, Section 10, clause 2), but such agreements are limited in scope and subject matter. In international terms, a State makes such agreements by permission of the United States. § 302, Comment *f*. A State may make some agreements with foreign governments without the consent of Congress so long as they do not impinge upon the authority or the foreign relations of the United States. Compare *Virginia v. Tennessee, 148 U.S. 503, 519, 13 S.Ct. 728, 734, 37 L.Ed. 537 (1893).* A State cannot exchange ambassadors and engage generally in relations with a foreign government, but States send commercial representatives to other countries. See, *e.g.*, Dempsey, "Legal and Economic Incentives for Foreign Direct Investment in the Southeastern United States," 9 Vand.J.Trans.L. 247, 250 (1976). For limitations on the powers of the States to make international agreements under the Articles of Confederation, see *Oneida Indian Nation v. State of New York, 691 F.2d 1070 (2d Cir.1982).*

Foreign compacts or agreements made by States with the consent of Congress might be international agreements under Part III of this Restatement. See § 301, Comment *g*; DiMarzo, "The Legal Status of Agreements Concluded by Component Units of Federal States with Foreign Entities," 16 Can.Y.B.Int'l L. 197 (1978). For a review of the foreign relations power in other federal states, see Sohn and Shafer, "Foreign Affairs" in Bowie and Friedrich, eds., Studies in Federalism 236 (1954).

10. *United States territories*. The United States conducts foreign relations for various territories linked to it by special arrangements which allow these entities substantially more authority in international matters than States have under the Constitution. See, for example, § 904 of the Covenant to Establish a Commonwealth of the Northern Mariana Islands, 1976, *90 Stat. 263,* *48 U.S.C. after § 1681,* contemplating participation by the Marianas in international organizations. Puerto Rico has been permitted by Act of Congress *(88 Stat. 818,* § 52) to become a member of regional institutions such as the Caribbean Development Bank. [1974] Digest of U.S. Practice in Int'l L. 31-33.

11. *Previous Restatement*. The definition in this section follows that in § 4 of the previous Restatement, except that the present definition includes an entity that has the capacity to engage in foreign relations but refrains from doing so. The previous Restatement did not indicate that population must be "permanent." See also the minimum

requirements for recognition of a new state in previous Restatement § 100, which paralleled § 4 but added the requirement that there be reasonable indication that the requirements would continue to be met. Compare this Restatement, § 202, Comment *d*.

Article 4

To secure the immediate organization of the commissions mentioned in the first article hereof, the high contracting parties engage themselves to notify the Pan American Union at the time of the deposit of the ratification of the present Additional Protocol in the Ministry of Foreign Relations of the Republic of Chile, the names of the two members whose designation they are empowered to make by Article 4 of the Convention at Santiago, Chile, and said members, so named, shall constitute the members of the commissions which are to be organized with bilateral character in accordance with this protocol.

Article 5

It shall be left to the Governing Board of the Pan American Union to initiate measures for bringing about the nomination of the fifth member of each Commission of Investigation and Conciliation in accordance with the stipulation established in Article 4 of the Convention at Santiago, Chile.

Article 6

In view of the character which this protocol has as an addition to the Convention of Conciliation of Washington, of January 5, 1929, the provision of Article 16 of said convention shall be applied thereto.

In witness whereof, the plenipotentiaries hereinafter indicated, have set their hands and their seals to this Additional Protocol in English, Spanish, Portuguese and French, in the City of Montevideo, Republic of Uruguay, this twenty-sixth day of the month of December in the year nineteen hundred and thirty-three.

[Signatures omitted from this provisional edition.]

CONVENTION ON RIGHTS AND DUTIES OF STATES

The governments represented in the Seventh International Conference of American States:

Wishing to conclude a Convention on Rights and Duties of States, have appointed the following plenipotentiaries:

[For names of the plenipotentiaries, see Final Act, pp. 52, *supra.*]

Who, after having exhibited their full powers, which were found to be in good and due order, have agreed upon the following:

Article 1

The state as a person of international law should possess the following qualifications: (a) a permanent population; (b) a defined territory; (c) government; and (d) capacity to enter into relations with the other states.

Article 2

The federal state shall constitute a sole person in the eyes of international law.

Article 3

The political existence of the state is independent of recognition by the other states. Even before recognition the state has the right to defend its integrity and independence, to provide for its conservation and prosperity, and consequently to organize itself as it sees fit, to legislate upon its interests, administer its services, and to define the jurisdiction and competence of its courts.

The exercise of these rights has no other limitation than the exercise of the rights of other states according to international law.

Article 4

States are juridically equal, enjoy the same rights, and have equal capacity in their exercise. The rights of each one do not depend upon the power which it possesses to assure its exercise, but upon the simple fact of its existence as a person under international law.

Article 5

The fundamental rights of states are not susceptible of being affected in any manner whatsoever.

Article 6

The recognition of a state merely signifies that the state which recognizes it accepts the personality of the other with all the rights and duties determined by international law. Recognition is unconditional and irrevocable.

Article 7

The recognition of a state may be express or tacit. The latter results from any act which implies the intention of recognizing the new state.

Article 8

No state has the right to intervene in the internal or external affairs of another.

Article 9

The jurisdiction of states within the limits of national territory applies to all the inhabitants.

Nationals and foreigners are under the same protection of the law and the national authorities and the foreigners may not claim rights other or more extensive than those of the nationals.

Article 10

The primary interest of states is the conservation of peace. Differences of any claims which arise between them should be settled by recognized pacific methods.

Article 11

The contracting states definitely establish as the rule of their conduct the precise obligation not to recognize territorial acquisitions or special advantages which have been obtained by force whether this consist in the employment of arms, in threatening diplomatic representations, or in any other effective coercive measure. The territory of a state is inviolable and may not be the object of military occupation nor of other measures of force imposed by another state directly or indirectly or for any motive whatever even temporarily.

Article 12

The present convention shall not affect obligations previously entered into by the high contracting parties by virtue of international agreements.

Article 13

The present convention shall be ratified by the high contracting parties in conformity with their respective constitutional procedures. The Minister of Foreign Affairs of the Republic of Uruguay shall transmit authentic certified copies to the governments for the aforementioned purpose of ratification. The instrument of ratification shall be deposited in the archives of the Pan American Union in Washington, which shall notify the signatory governments of said deposit. Such notification shall be considered as an exchange of ratifications.

Article 14

The present convention will enter into force between the high contracting parties in the order in which they deposit their respective ratifications.

Article 15

The present convention shall remain in force indefinitely but may be denounced by means of one year's notice given to the Pan American Union, which shall transmit it to the other signatory governments. After the expiration of this period the convention shall cease in its effects as regards the party which denounces but shall remain in effect for the remaining high contracting parties.

Article 16

The present convention shall be open for the adherence and accession of the states which are not signatories. The corresponding instruments shall be deposited in the archives of the Pan American Union which shall communicate them to the other high contracting parties.

In witness whereof, the following plenipotentiaries have signed this convention in Spanish, English, Portuguese and French and hereunto affix their respective seals in the City of Montevideo, Republic of Uruguay, this 26th day of December, 1933.

[Signatures omitted from this provisional edition.]

RESERVATIONS

The delegation of the United States of America, in signing the Convention on the Rights and Duties of States, does so with the express reservation presented to the plenary session of the Conference on December 22, 1933, which reservation reads as follows:

The delegation of the United States, in voting "yes" on the final vote on this committee recommendation and proposal, makes the same reservation to the eleven articles of the project or proposal that the United States delegation made to the first ten articles during the final vote in the full commission, which reservation is in words as follows:

"The policy and attitude of the United States Government toward every important phase of international relationships in this hemisphere could scarcely be made more clear and definite than they have been made by both word and action especially since March 4. I have no disposition therefore to indulge in any repetition or rehearsal of these acts and utterances and shall not do so. Every observing person must by this time thoroughly understand that under the Roosevelt administration the United States Government is as much opposed as any other government to interference with the freedom, the sovereignty, or other internal affairs or processes of the governments of other nations.

"In addition to numerous acts and utterances in connection with the carrying out of these doctrines and policies, President Roosevelt, during recent weeks, gave out a public statement expressing his disposition to open negotiations with the Cuban Government for the purpose of dealing with the treaty which has existed since 1903. I feel safe in undertaking to say that under our support of the general principle of non-intervention as has been suggested, no government need fear any intervention on the part of the United States under the Roosevelt administration. I think it unfortunate that during the brief period of this Conference there is apparently not time within which to prepare interpretations and definitions of these fundamental terms that are embraced in the report. Such definitions and interpretations would enable every government to proceed in a uniform way without any difference of opinion or of interpretations. I hope that at the earliest possible date such very important work will be done. In the meantime in case of differences of interpretations and also until they (the proposed doctrines and principles) can be worked out and codified for the common use of every government I desire to say that the United States Government in all of its international associations and relationships and conduct will follow scrupulously the doctrines and policies which it has pursued since March 4 which are embodied in the different addresses of President Roosevelt since that time and in the recent peace address of myself on the 15th day of December before this Conference and in the law of nations as generally recognized and accepted."

The delegates of Brazil and Peru recorded the following private vote with regard to Article 11: "That they accept the doctrine in principle but that they do not consider it codifiable because there are some countries which have not yet signed the Anti-War Pact of Rio de Janeiro of which this doctrine is a part and therefore it does not yet constitute positive international law suitable for codification."

Rules of Court

Article 30 of the Statute of the International Court of Justice provides that "the Court shall frame rules for carrying out its functions". These Rules are intended to supplement the general rules set forth in the Statute and to make detailed provision for the steps to be taken to comply with them.

RULES OF COURT (1978)

ADOPTED ON 14 APRIL 1978 AND ENTERED
INTO FORCE ON 1 JULY 1978[1]

PREAMBLE[*]

The Court,
Having regard to Chapter XIV of the Charter of the United Nations;
Having regard to the Statute of the Court annexed thereto;
Acting in pursuance of Article 30 of the Statute;
Adopts the following Rules.

---

[*] Amendment entered into force on 14 April 2005.

[1] Any amendments to the Rules of Court, following their adoption by the Court, are now posted on the Court's website, with an indication of the date of their entry into force and a note of any temporal reservations relating to their applicability (for example, whether the application of the amended rule is limited to cases instituted after the date of entry into force of the amendment); they are also published in the Court's *Yearbook*. Articles amended since 1 July 1978 are marked with an asterisk and appear in their amended form.

PART I

THE COURT

SECTION A. JUDGES AND ASSESSORS

Subsection 1. The Members of the Court

Article 1

1. The Members of the Court are the judges elected in accordance with Articles 2 to 15 of the Statute.

2. For the purposes of a particular case, the Court may also include upon the Bench one or more persons chosen under Article 31 of the Statute to sit as judges *ad hoc*.

3. In the following Rules, the term "Member of the Court" denotes any elected judge; the term "judge" denotes any Member of the Court, and any judge *ad hoc*.

Article 2

1. The term of office of Members of the Court elected at a triennial election shall begin to run from the sixth of February[1] in the year in which the vacancies to which they are elected occur.

2. The term of office of a Member of the Court elected to replace a Member whose term of office has not expired shall begin to run from the date of the election.

---

[1] This is the date on which the terms of office of the Members of the Court elected at the first election began in 1946.

Article 3

1. The Members of the Court, in the exercise of their functions, are of equal status, irrespective of age, priority of election or length of service.

2. The Members of the Court shall, except as provided in paragraphs 4 and 5 of this Article, take precedence according to the date on which their terms of office respectively began, as provided for by Article 2 of these Rules.

3. Members of the Court whose terms of office began on the same date shall take precedence in relation to one another according to seniority of age.

4. A Member of the Court who is re-elected to a new term of office which is continuous with his previous term shall retain his precedence.

5. The President and the Vice-President of the Court, while holding these offices, shall take precedence before all other Members of the Court.

6. The Member of the Court who, in accordance with the foregoing paragraphs, takes precedence next after the President and the Vice-President is in these Rules designated the "senior judge". If that Member is unable to act, the Member of the Court who is next after him in precedence and able to act is considered as senior judge.

Article 4

1. The declaration to be made by every Member of the Court in accordance with Article 20 of the Statute shall be as follows:

"I solemnly declare that I will perform my duties and exercise my powers as judge honourably, faithfully, impartially and conscientiously."

2. This declaration shall be made at the first public sitting at which the Member of the Court is present. Such sitting shall be held as soon as practicable after his term of office begins and, if necessary, a special sitting shall be held for the purpose.

3. A Member of the Court who is re-elected shall make a new declaration only if his new term is not continuous with his previous one.

Article 5

1. A Member of the Court deciding to resign shall communicate his decision to the President, and the resignation shall take effect as provided in Article 13, paragraph 4, of the Statute.

2. If the Member of the Court deciding to resign from the Court is the President, he shall communicate his decision to the Court, and the resignation shall take effect as provided in Article 13, paragraph 4, of the Statute.

Article 6

In any case in which the application of Article 18 of the Statute is under consideration, the Member of the Court concerned shall be so informed by the President or, if the circumstances so require, by the Vice-President, in a written statement which shall include the grounds therefor and any relevant evidence. He shall subsequently, at a private meeting of the Court specially convened for the purpose, be afforded an opportunity of making a statement, of furnishing any information or explanations he wishes to give, and of supplying answers, orally or in writing, to any questions put to him. At a further private meeting, at which the Member of the Court concerned shall not be present, the matter shall be discussed; each Member of the Court shall state his opinion, and if requested a vote shall be taken.

Subsection 2. Judges ad hoc

Article 7

1. Judges *ad hoc*, chosen under Article 31 of the Statute for the purposes of particular cases, shall be admitted to sit on the Bench of the Court in the circumstances and according to the procedure indicated in Article 17, paragraph 2, Articles 35, 36, 37, Article 91, paragraph 2, and Article 102, paragraph 3, of these Rules.

2. They shall participate in the case in which they sit on terms of complete equality with the other judges on the Bench.

3. Judges *ad hoc* shall take precedence after the Members of the Court and in order of seniority of age.

Article 8

1. The solemn declaration to be made by every judge *ad hoc* in accordance with Articles 20 and 31, paragraph 6, of the Statute shall be as set out in Article 4, paragraph 1, of these Rules.

2. This declaration shall be made at a public sitting in the case in which the judge *ad hoc* is participating. If the case is being dealt with by a chamber of the Court, the declaration shall be made in the same manner in that chamber.

3. Judges *ad hoc* shall make the declaration in relation to any case in which they are participating, even if they have already done so in a previous case, but shall not make a new declaration for a later phase of the same case.

Subsection 3. Assessors

Article 9

1. The Court may, either *proprio motu* or upon a request made not later than the closure of the written proceedings, decide, for the purpose of a contentious case or request for advisory opinion, to appoint assessors to sit with it without the right to vote.

2. When the Court so decides, the President shall take steps to obtain all the information relevant to the choice of the assessors.

3. The assessors shall be appointed by secret ballot and by a majority of the votes of the judges composing the Court for the case.

4. The same powers shall belong to the chambers provided for by Articles 26 and 29 of the Statute and to the presidents thereof, and may be exercised in the same manner.

5. Before entering upon their duties, assessors shall make the following declaration at a public sitting:

"I solemnly declare that I will perform my duties as an assessor honourably, impartially and conscientiously, and that I will faithfully observe all the provisions of the Statute and of the Rules of the Court."

SECTION B. THE PRESIDENCY

Article 10

1. The term of office of the President and that of the Vice-President shall begin to run from the date on which the terms of office of the Members of the Court elected at a triennial election begin in accordance with Article 2 of these Rules.

2. The elections to the presidency and vice-presidency shall be held on that date or shortly thereafter. The former President, if still a Member of the Court, shall continue to exercise his functions until the election to the presidency has taken place.

Article 11

1. If, on the date of the election to the presidency, the former President is still a Member of the Court, he shall conduct the election. If he has ceased to be a Member of the Court, or is unable to act, the election shall be conducted by the Member of the Court exercising the functions of the

presidency by virtue of Article 13, paragraph 1, of these Rules.

2. The election shall take place by secret ballot, after the presiding Member of the Court has declared the number of affirmative votes necessary for election; there shall be no nominations. The Member of the Court obtaining the votes of a majority of the Members composing it at the time of the election shall be declared elected, and shall enter forthwith upon his functions.

3. The new President shall conduct the election of the Vice-President either at the same or at the following meeting. The provisions of paragraph 2 of this Article shall apply equally to this election.

Article 12

The President shall preside at all meetings of the Court; he shall direct the work and supervise the administration of the Court.

Article 13

1. In the event of a vacancy in the presidency or of the inability of the President to exercise the functions of the presidency, these shall be exercised by the Vice-President, or failing him, by the senior judge.

2. When the President is precluded by a provision of the Statute or of these Rules either from sitting or from presiding in a particular case, he shall continue to exercise the functions of the presidency for all purposes save in respect of that case.

3. The President shall take the measures necessary in order to ensure the continuous exercise of the functions of the presidency at the seat of the Court. In the event of his absence, he may, so far as is compatible with the Statute and these Rules, arrange for these functions to be exercised by the Vice-President, or failing him, by the senior judge.

4. If the President decides to resign the presidency, he shall communicate his decision in writing to the Court through the Vice-President, or failing him, the senior judge. If the Vice-President decides to resign his office, he shall communicate his decision to the President.

Article 14

If a vacancy in the presidency or the vice-presidency occurs before the date when the current term is due to expire under Article 21, paragraph 1, of the Statute and Article 10, paragraph 1, of these Rules, the Court shall decide whether or not the vacancy shall be filled during the remainder of the term.

SECTION C. THE CHAMBERS

Article 15

1. The Chamber of Summary Procedure to be formed annually under Article 29 of the Statute shall be composed of five Members of the Court, comprising the President and Vice-President of the Court, acting ex officio, and three other members elected in accordance with Article 18, paragraph 1, of these Rules. In addition, two Members of the Court shall be elected annually to act as substitutes.

2. The election referred to in paragraph 1 of this Article shall be held as soon as possible after the sixth of February in each year. The members of the Chamber shall enter upon their functions on election and continue to serve until the next election; they may be re-elected.

3. If a member of the Chamber is unable, for whatever reason, to sit in a given case, he shall be replaced for the purposes of that case by the senior in precedence of the two substitutes.

4. If a member of the Chamber resigns or otherwise ceases to be a member, his place shall be taken by the senior in precedence of the two substitutes, who shall thereupon become a full member of the Chamber and be replaced by the election of another substitute. Should vacancies exceed the number of available substitutes, elections shall be held as soon as possible in respect of the vacancies still existing after the substitutes have assumed full membership and in respect of the vacancies in the substitutes.

Article 16

1. When the Court decides to form one or more of the Chambers provided for in Article 26, paragraph 1, of the Statute, it shall determine the particular category of cases for which each Chamber is formed, the number of its members, the period for which they will serve, and the date at which they will enter upon their duties.

2. The members of the Chamber shall be elected in accordance with Article 18, paragraph 1, of these Rules from among the Members of the Court, having regard to any special knowledge, expertise or previous experience which any of the Members of the Court may have in relation to the category of case the Chamber is being formed to deal with.

3. The Court may decide upon the dissolution of a Chamber, but without prejudice to the duty of the Chamber concerned to finish any cases pending before it.

Article 17

1. A request for the formation of a Chamber to deal with a particular case, as provided for in Article 26, paragraph 2, of the Statute, may be filed at any time until the closure of the written proceedings. Upon receipt of a request made by one party, the President shall ascertain whether the other party assents.

2. When the parties have agreed, the President shall ascertain their views regarding the composition of the Chamber, and shall report to the Court accordingly. He shall also take such steps as may be necessary to give effect to the provisions of Article 31, paragraph 4, of the Statute.

3. When the Court has determined, with the approval of the parties, the number of its Members who are to constitute the Chamber, it shall proceed to their election, in accordance with the provisions of Article 18, paragraph 1, of these Rules. The same procedure shall be followed as regards the filling of any vacancy that may occur on the Chamber.

4. Members of a Chamber formed under this Article who have been replaced, in accordance with Article 13 of the Statute following the expiration of their terms of office, shall continue to sit in all phases of the case, whatever the stage it has then reached.

Article 18

1. Elections to all Chambers shall take place by secret ballot. The Members of the Court obtaining the largest number of votes constituting a majority of the Members of the Court composing it at the time of the election shall be declared elected. If necessary to fill vacancies, more than one ballot shall take place, such ballot being limited to the number of vacancies that remain to be filled.

2. If a Chamber when formed includes the President or Vice-President of the Court, or both of them, the President or Vice-President, as the case may be, shall preside over that Chamber. In any other event, the Chamber shall elect its own president by secret ballot and by a majority of votes of its members. The Member of the Court who, under this paragraph, presides over the Chamber at the time of its formation shall continue to

preside so long as he remains a member of that Chamber.

3. The president of a Chamber shall exercise, in relation to cases being dealt with by that Chamber, all the functions of the President of the Court in relation to cases before the Court.

4. If the president of a Chamber is prevented from sitting or from acting as president, the functions of the presidency shall be assumed by the member of the Chamber who is the senior in precedence and able to act.

SECTION D. INTERNAL FUNCTIONING OF THE COURT

Article 19

The internal judicial practice of the Court shall, subject to the provisions of the Statute and these Rules, be governed by any resolutions on the subject adopted by the Court[1].

Article 20

1. The quorum specified by Article 25, paragraph 3, of the Statute applies to all meetings of the Court.

2. The obligation of Members of the Court under Article 23, paragraph 3, of the Statute, to hold themselves permanently at the disposal of the Court, entails attendance at all such meetings, unless they are prevented from attending by illness or for other serious reasons duly explained to the President, who shall inform the Court.

3. Judges *ad hoc* are likewise bound to hold themselves at the disposal of the Court and to attend all meetings held in the case in which they are participating. They shall not be taken into account for the calculation of the quorum.

4. The Court shall fix the dates and duration of the judicial vacations and the periods and conditions of leave to be accorded to individual Members of the Court under Article 23, paragraph 2, of the Statute, having regard in both cases to the state of its General List and to the requirements of its current work.

5. Subject to the same considerations, the Court shall observe the public holidays customary at the place where the Court is sitting.

6. In case of urgency the President may convene the Court at any time.

Article 21

1. The deliberations of the Court shall take place in private and remain secret. The Court may however at any time decide in respect of its deliberations on other than judicial matters to publish or allow publication of any part of them.

2. Only judges, and the assessors, if any, take part in the Court's judicial deliberations. The Registrar, or his deputy, and other members of the staff of the Registry as may be required shall be present. No other person shall be present except by permission of the Court.

3. The minutes of the Court's judicial deliberations shall record only the title or nature of the subjects or matters discussed, and the results of any vote taken. They shall not record any details of the discussions nor the views expressed, provided however that any judge is entitled to require that a statement made by him be inserted in the minutes.

PART II

THE REGISTRY

Article 22

1. The Court shall elect its Registrar by secret ballot from amongst candidates proposed by Members of the Court. The Registrar shall be elected for a term of seven years. He may be re-elected.

2. The President shall give notice of a vacancy or impending vacancy to Members of the Court, either forthwith upon the vacancy arising, or, where the vacancy will arise on the expiration of the term of office of the Registrar, not less than three months prior thereto. The President shall fix a date for the closure of the list of candidates so as to enable nominations and information concerning the candidates to be received in sufficient time.

3. Nominations shall indicate the relevant information concerning the candidate, and in particular information as to his age, nationality, and present occupation, university qualifications, knowledge of languages, and any previous experience in law, diplomacy or the work of international organizations.

4. The candidate obtaining the votes of the majority of the Members of the Court composing it at the time of the election shall be declared elected.

Article 23

The Court shall elect a Deputy-Registrar: the provisions of Article 22 of these Rules shall apply to his election and term of office.

Article 24

1. Before taking up his duties, the Registrar shall make the following declaration at a meeting of the Court:

"I solemnly declare that I will perform the duties incumbent upon me as Registrar of the International Court of Justice in all loyalty, discretion and good conscience, and that I will faithfully observe all the provisions of the Statute and of the Rules of the Court."

2. The Deputy-Registrar shall make a similar declaration at a meeting of the Court before taking up his duties.

Article 25

1. The staff-members of the Registry shall be appointed by the Court on proposals submitted by the Registrar. Appointments to such posts as the Court shall determine may however be made by the Registrar with the approval of the President.

2. Before taking up his duties, every staff-member shall make the following declaration before the President, the Registrar being present:

"I solemnly declare that I will perform the duties incumbent upon me as an official of the International Court of Justice in all loyalty, discretion

---

[1] The resolution now in force was adopted on 12 April 1976.

and good conscience, and that I will faithfully observe all the provisions of the Statute and of the Rules of the Court."

Article 26

1. The Registrar, in the discharge of his functions, shall:

(a) be the regular channel of communications to and from the Court, and in particular shall effect all communications, notifications and transmission of documents required by the Statute or by these Rules and ensure that the date of despatch and receipt thereof may be readily verified;

(b) keep, under the supervision of the President, and in such form as may be laid down by the Court, a General List of all cases, entered and numbered in the order in which the documents instituting proceedings or requesting an advisory opinion are received in the Registry;

(c) have the custody of the declarations accepting the jurisdiction of the Court made by States not parties to the Statute in accordance with any resolution adopted by the Security Council under Article 35, paragraph 2, of the Statute, and transmit certified copies thereof to all States parties to the Statute, to such other States as shall have deposited declarations, and to the Secretary-General of the United Nations;

(d) transmit to the parties copies of all pleadings and documents annexed upon receipt thereof in the Registry;

(e) communicate to the government of the country in which the Court or a Chamber is sitting, and any other governments which may be concerned, the necessary information as to the persons from time to time entitled, under the Statute and relevant agreements, to privileges, immunities, or facilities;

(f) be present, in person or by his deputy, at meetings of the Court, and of the Chambers, and be responsible for the preparation of minutes of such meetings;

(g) make arrangements for such provision or verification of translations and interpretations into the Court's official languages as the Court may require;

(h) sign all judgments, advisory opinions and orders of the Court, and the minutes referred to in subparagraph *(f)*;

(i) be responsible for the printing and publication of the Court's judgments, advisory opinions and orders, the pleadings and statements, and minutes of public sittings in cases, and of such other documents as the Court may direct to be published;

(j) be responsible for all administrative work and in particular for the accounts and financial administration in accordance with the financial procedures of the United Nations;

(k) deal with enquiries concerning the Court and its work;

(l) assist in maintaining relations between the Court and other organs of the United Nations, the specialized agencies, and international bodies and conferences concerned with the codification and progressive development of international law;

(m) ensure that information concerning the Court and its activities is made accessible to governments, the highest national courts of justice, professional and learned societies, legal faculties and schools of law, and public information media;

(n) have custody of the seals and stamps of the Court, of the archives of the Court, and of such other archives as may be entrusted to the Court[1].

2. The Court may at any time entrust additional functions to the Registrar.

3. In the discharge of his functions the Registrar shall be responsible to the Court.

---

[1] The Registrar also keeps the Archives of the Permanent Court of International Justice, entrusted to the present Court by decision of the Permanent Court of October 1945 (*I.C.J. Yearbook 1946-1947*, p. 26). and the Archives of the Trial of the Major War Criminals before the International Military Tribunal at Nuremberg (1945-1946), entrusted to the Court by decision of that Tribunal of 1 October 1946; the Court authorized the Registrar to accept the latter Archives by decision of 19 November 1949.

Article 27

1. The Deputy-Registrar shall assist the Registrar, act as Registrar in the latter's absence and, in the event of the office becoming vacant, exercise the functions of Registrar until the office has been filled.

2. If both the Registrar and the Deputy-Registrar are unable to carry out the duties of Registrar, the President shall appoint an official of the Registry to discharge those duties for such time as may be necessary. If both offices are vacant at the same time, the President, after consulting the Members of the Court, shall appoint an official of the Registry to discharge the duties of Registrar pending an election to that office.

Article 28

1. The Registry shall comprise the Registrar, the Deputy-Registrar, and such other staff as the Registrar shall require for the efficient discharge of his functions.

2. The Court shall prescribe the organization of the Registry, and shall for this purpose request the Registrar to make proposals.

3. Instructions for the Registry shall be drawn up by the Registrar and approved by the Court.

4. The staff of the Registry shall be subject to Staff Regulations drawn up by the Registrar, so far as possible in conformity with the United Nations Staff Regulations and Staff Rules, and approved by the Court.

Article 29

1. The Registrar may be removed from office only if, in the opinion of two-thirds of the Members of the Court, he has either become permanently incapacitated from exercising his functions, or has committed a serious breach of his duties.

2. Before a decision is taken under this Article, the Registrar shall be informed by the President of the action contemplated, in a written statement which shall include the grounds therefor and any relevant evidence. He shall subsequently, at a private meeting of the Court, be afforded an opportunity of making a statement, of furnishing any information or explanations he wishes to give, and of supplying answers, orally or in writing, to any questions put to him.

3. The Deputy-Registrar may be removed from office only on the same grounds and by the same procedure.

PART III

PROCEEDINGS IN CONTENTIOUS CASES

SECTION A. COMMUNICATIONS TO THE COURT AND CONSULTATIONS

Article 30

All communications to the Court under these Rules shall be addressed to the Registrar unless otherwise stated. Any request made by a party shall likewise be addressed to the Registrar unless made in open court in the course of the oral proceedings.

Article 31

In every case submitted to the Court, the President shall ascertain the views of the parties with regard to questions of procedure. For this purpose he shall summon the agents of the parties to meet him as soon as possible after their appointment, and whenever necessary thereafter.

SECTION B. THE COMPOSITION OF THE COURT FOR PARTICULAR CASES

Article 32

1. If the President of the Court is a national of one of the parties in a case he shall not exercise the functions of the presidency in respect of that case. The same rule applies to the Vice-President, or to the senior judge, when called on to act as President.

2. The Member of the Court who is presiding in a case on the date on which the Court convenes for the oral proceedings shall continue to preside in that case until completion of the current phase of the case, notwithstanding the election in the meantime of a new President or Vice-President. If he should become unable to act, the presidency for the case shall be determined in accordance with Article 13 of these Rules, and on the basis of the composition of the Court on the date on which it convened for the oral proceedings.

Article 33

Except as provided in Article 17 of these Rules, Members of the Court who have been replaced, in accordance with Article 13, paragraph 3, of the Statute following the expiration of their terms of office, shall discharge the duty imposed upon them by that paragraph by continuing to sit until the completion of any phase of a case in respect of which the Court convenes for the oral proceedings prior to the date of such replacement.

Article 34

1. In case of any doubt arising as to the application of Article 17, paragraph 2, of the Statute or in case of a disagreement as to the application of Article 24 of the Statute, the President shall inform the Members of the Court, with whom the decision lies.

2. If a party desires to bring to the attention of the Court facts which it considers to be of possible relevance to the application of the provisions of the Statute mentioned in the previous paragraph, but which it believes may not be known to the Court, that party shall communicate confidentially such facts to the President in writing.

Article 35

1. If a party proposes to exercise the power conferred by Article 31 of the Statute to choose a judge *ad hoc* in a case, it shall notify the Court of its intention as soon as possible. If the name and nationality of the judge selected are not indicated at the same time, the party shall, not later than two months before the time-limit fixed for the filing of the Counter-Memorial, inform the Court of the name and nationality of the person chosen and supply brief biographical details. The judge *ad hoc* may be of a nationality other than that of the party which chooses him.

2. If a party proposes to abstain from choosing a judge *ad hoc*, on condition of a like abstention by the other party, it shall so notify the Court which shall inform the other party. If the other party thereafter gives notice of its intention to choose, or chooses, a judge *ad hoc*, the time-limit for the party which has previously abstained from choosing a judge may be extended by the President.

3. A copy of any notification relating to the choice of a judge *ad hoc* shall be communicated by the Registrar to the other party, which shall be requested to furnish, within a time-limit to be fixed by the President, such observations as it may wish to make. If within the said time-limit no objection is raised by the other party, and if none appears to the Court itself, the parties shall be so informed.

4. In the event of any objection or doubt, the matter shall be decided by the Court, if necessary after hearing the parties.

5. A judge *ad hoc* who has accepted appointment but who becomes unable to sit may be replaced.

6. If and when the reasons for the participation of a judge *ad hoc* are found no longer to exist, he shall cease to sit on the Bench.

Article 36

1. If the Court finds that two or more parties are in the same interest, and therefore are to be reckoned as one party only, and that there is no Member of the Court of the nationality of any one of those parties upon the Bench, the Court shall fix a time-limit within which they may jointly choose a judge *ad hoc*.

2. Should any party amongst those found by the Court to be in the same interest allege the existence of a separate interest of its own, or put forward any other objection, the matter shall be decided by the Court, if necessary after hearing the parties.

Article 37

1. If a Member of the Court having the nationality of one of the parties is or becomes unable to sit in any phase of a case, that party shall thereupon become entitled to choose a judge *ad hoc* within a time-limit to be fixed by the Court, or by the President if the Court is not sitting.

2. Parties in the same interest shall be deemed not to have a judge of one of their nationalities upon the Bench if the Member of the Court having one of their nationalities is or becomes unable to sit in any phase of the case.

3. If the Member of the Court having the nationality of a party becomes able to sit not later than the closure of the written proceedings in that

phase of the case, that Member of the Court shall resume his seat on the Bench in the case.

SECTION C. PROCEEDINGS BEFORE THE COURT

Subsection 1. Institution of Proceedings

Article 38

1. When proceedings before the Court are instituted by means of an application addressed as specified in Article 40, paragraph 1, of the Statute, the application shall indicate the party making it, the State against which the claim is brought, and the subject of the dispute.

2. The application shall specify as far as possible the legal grounds upon which the jurisdiction of the Court is said to be based; it shall also specify the precise nature of the claim, together with a succinct statement of the facts and grounds on which the claim is based.

3. The original of the application shall be signed either by the agent of the party submitting it, or by the diplomatic representative of that party in the country in which the Court has its seat, or by some other duly authorized person. If the application bears the signature of someone other than such diplomatic representative, the signature must be authenticated by the latter or by the competent authority of the applicant's foreign ministry.

4. The Registrar shall forthwith transmit to the respondent a certified copy of the application.

5. When the applicant State proposes to found the jurisdiction of the Court upon a consent thereto yet to be given or manifested by the State against which such application is made, the application shall be transmitted to that State. It shall not however be entered in the General List, nor any action be taken in the proceedings, unless and until the State against which such application is made consents to the Court's jurisdiction for the purposes of the case.

Article 39

1. When proceedings are brought before the Court by the notification of a special agreement, in conformity with Article 40, paragraph 1, of the Statute, the notification may be effected by the parties jointly or by any one or more of them. If the notification is not a joint one, a certified copy of it shall forthwith be communicated by the Registrar to the other party.

2. In each case the notification shall be accompanied by an original or certified copy of the special agreement. The notification shall also, in so far as this is not already apparent from the agreement, indicate the precise subject of the dispute and identify the parties to it.

Article 40

1. Except in the circumstances contemplated by Article 38, paragraph 5, of these Rules, all steps on behalf of the parties after proceedings have been instituted shall be taken by agents. Agents shall have an address for service at the seat of the Court to which all communications concerning the case are to be sent. Communications addressed to the agents of the parties shall be considered as having been addressed to the parties themselves.

2. When proceedings are instituted by means of an application, the name of the agent for the applicant shall be stated. The respondent, upon receipt of the certified copy of the application, or as soon as possible thereafter, shall inform the Court of the name of its agent.

3. When proceedings are brought by notification of a special agreement, the party making the notification shall state the name of its agent. Any other party to the special agreement, upon receiving from the Registrar a certified copy of such notification, or as soon as possible thereafter, shall inform the Court of the name of its agent if it has not already done so.

Article 41

The institution of proceedings by a State which is not a party to the Statute but which, under Article 35, paragraph 2, thereof, has accepted the jurisdiction of the Court by a declaration made in accordance with any resolution adopted by the Security Council under that Article[1], shall be accompanied by a deposit of the declaration in question, unless the latter has previously been deposited with the Registrar. If any question of the validity or effect of such declaration arises, the Court shall decide.

---

[1] The resolution now in force was adopted on 15 October 1946.

Article 42

The Registrar shall transmit copies of any application or notification of a special agreement instituting proceedings before the Court to: *(a)* the Secretary-General of the United Nations; *(b)* the Members of the United Nations; *(c)* other States entitled to appear before the Court.

Article 43[*][1]

1. Whenever the construction of a convention to which States other than those concerned in the case are parties may be in question within the meaning of Article 63, paragraph 1, of the Statute, the Court shall consider what directions shall be given to the Registrar in the matter.

2. Whenever the construction of a convention to which a public international organization is a party may be in question in a case before the Court, the Court shall consider whether the Registrar shall so notify the public international organization concerned. Every public international organization notified by the Registrar may submit its observations on the particular provisions of the convention the construction of which is in question in the case.

3. If a public international organization sees fit to furnish its observations under paragraph 2 of this Article, the procedure to be followed shall be that provided for in Article 69, paragraph 2, of these Rules.

---

[*] Amendment entered into force on 29 September 2005.

[1] Article 43, paragraph 1, as amended, repeats unchanged the text of Article 43, as adopted on 14 April 1978.

Paragraphs 2 and 3 of the amended Article 43 are new.

Subsection 2. The Written Proceedings

Article 44

1. In the light of the information obtained by the President under Article 31 of these Rules, the Court shall make the necessary orders to determine, *inter alia*, the number and the order of filing of the pleadings and the time-limits within which they must be filed.

2. In making an order under paragraph 1 of this Article, any agreement between the parties which does not cause unjustified delay shall be taken into account.

3. The Court may, at the request of the party concerned, extend any time-limit, or decide that any step taken after the expiration of the time-limit fixed therefor shall be considered as valid, if it is satisfied that there is adequate justification for the request. In either case the other party shall be given an opportunity to state its views.

4. If the Court is not sitting, its powers under this Article shall be exercised by the President, but without prejudice to any subsequent decision of the Court. If the consultation referred to in Article 31 reveals persistent disagreement between the parties as to the application of Article 45, paragraph 2, or Article 46, paragraph 2, of these Rules, the Court shall be convened to decide the matter.

Article 45

1. The pleadings in a case begun by means of an application shall consist, in the following order, of: a Memorial by the applicant; a Counter-Memorial by the respondent.

2. The Court may authorize or direct that there shall be a Reply by the applicant and a Rejoinder by the respondent if the parties are so agreed, or if the Court decides, *proprio motu* or at the request of one of the parties, that these pleadings are necessary.

Article 46

1. In a case begun by the notification of a special agreement, the number and order of the pleadings shall be governed by the provisions of the agreement, unless the Court, after ascertaining the views of the parties, decides otherwise.

2. If the special agreement contains no such provision, and if the parties have not subsequently agreed on the number and order of pleadings, they shall each file a Memorial and Counter-Memorial, within the same time-limits. The Court shall not authorize the presentation of Replies unless it finds them to be necessary.

Article 47

The Court may at any time direct that the proceedings in two or more cases be joined. It may also direct that the written or oral proceedings, including the calling of witnesses, be in common; or the Court may, without effecting any formal joinder, direct common action in any of these respects.

Article 48

Time-limits for the completion of steps in the proceedings may be fixed by assigning a specified period but shall always indicate definite dates. Such time-limits shall be as short as the character of the case permits.

Article 49

1. A Memorial shall contain a statement of the relevant facts, a statement of law, and the submissions.

2. A Counter-Memorial shall contain: an admission or denial of the facts stated in the Memorial; any additional facts, if necessary; observations concerning the statement of law in the Memorial; a statement of law in answer thereto; and the submissions.

3. The Reply and Rejoinder, whenever authorized by the Court, shall not merely repeat the parties' contentions, but shall be directed to bringing out the issues that still divide them.

4. Every pleading shall set out the party's submissions at the relevant stage of the case, distinctly from the arguments presented, or shall confirm the submissions previously made.

Article 50

1. There shall be annexed to the original of every pleading certified copies of any relevant documents adduced in support of the contentions contained in the pleading.

2. If only parts of a document are relevant, only such extracts as are necessary for the purpose of the pleading in question need be annexed. A copy of the whole document shall be deposited in the Registry, unless it has been published and is readily available.

3. A list of all documents annexed to a pleading shall be furnished at the time the pleading is filed.

Article 51

1. If the parties are agreed that the written proceedings shall be conducted wholly in one of the two official languages of the Court, the pleadings shall be submitted only in that language. If the parties are not so agreed, any pleading or any part of a pleading shall be submitted in one or other of the official languages.

2. If in pursuance of Article 39, paragraph 3, of the Statute a language other than French or English is used, a translation into French or English certified as accurate by the party submitting it, shall be attached to the original of each pleading.

3. When a document annexed to a pleading is not in one of the official languages of the Court, it shall be accompanied by a translation into one of these languages certified by the party submitting it as accurate. The translation may be confined to part of an annex, or to extracts therefrom, but in this case it must be accompanied by an explanatory note indicating what passages are translated. The Court may however require a more extensive or a complete translation to be furnished.

Article 52[*1] [2]

1. The original of every pleading shall be signed by the agent and filed in the Registry. It shall be accompanied by a certified copy of the pleading, documents annexed, and any translations, for communication to the other party in accordance with Article 43, paragraph 4, of the Statute, and by the number of additional copies required by the Registry, but without prejudice to an increase in that number should the need arise later.

2. All pleadings shall be dated. When a pleading has to be filed by a certain date, it is the date of the receipt of the pleading in the Registry which will be regarded by the Court as the material date.

3. The correction of a slip or error in any document which has been filed may be made at any time with the consent of the other party or by leave of the President. Any correction so effected shall be notified to the other party in the same manner as the pleading to which it relates.

---

[*] Amendment entered into force on 14 April 2005.

[1] The agents of the parties are requested to ascertain from the Registry the usual format of the pleadings.

[2] The text of Article 52, as adopted on 14 April 1978, contained a paragraph 3 concerning the procedure to be followed where the Registrar arranges for the printing of a pleading; this paragraph has been deleted and the footnote to the Article has been amended. Former paragraph 4 has been renumbered and is now paragraph 3.

Article 53

1. The Court, or the President if the Court is not sitting, may at any time decide, after ascertaining the views of the parties, that copies of the pleadings and documents annexed shall be made available to a State entitled to appear before it which has asked to be furnished with such copies.

2. The Court may, after ascertaining the views of the parties, decide that copies of the pleadings and documents annexed shall be made accessible to the public on or after the opening of the oral proceedings.

Subsection 3. The Oral Proceedings

Article 54

1. Upon the closure of the written proceedings, the case is ready for hearing. The date for the opening of the oral proceedings shall be fixed by the Court, which may also decide, if occasion should arise, that the opening or the continuance of the oral proceedings be postponed.

2. When fixing the date for, or postponing, the opening of the oral proceedings the Court shall have regard to the priority required by Article 74 of these Rules and to any other special circumstances, including the urgency of a particular case.

3. When the Court is not sitting, its powers under this Article shall be exercised by the President.

Article 55

The Court may, if it considers it desirable, decide pursuant to Article 22, paragraph 1, of the Statute that all or part of the further proceedings in a case shall be held at a place other than the seat of the Court. Before so deciding, it shall ascertain the views of the parties.

Article 56

1. After the closure of the written proceedings, no further documents may be submitted to the Court by either party except with the consent of the other party or as provided in paragraph 2 of this Article. The party desiring to produce a new document shall file the original or a certified copy thereof, together with the number of copies required by the Registry, which shall be responsible for communicating it to the other party and shall inform the Court. The other party shall be held to have given its consent if it does not lodge an objection to the production of the document.

2. In the absence of consent, the Court, after hearing the parties, may, if it considers the document necessary, authorize its production.

3. If a new document is produced under paragraph 1 or paragraph 2 of this Article, the other party shall have an opportunity of commenting upon it and of submitting documents in support of its comments.

4. No reference may be made during the oral proceedings to the contents of any document which has not been produced in accordance with Article 43 of the Statute or this Article, unless the document is part of a publication readily available.

5. The application of the provisions of this Article shall not in itself constitute a ground for delaying the opening or the course of the oral proceedings.

Article 57

Without prejudice to the provisions of the Rules concerning the production of documents, each party shall communicate to the Registrar, in sufficient time before the opening of the oral proceedings, information regarding any evidence which it intends to produce or which it intends to request the Court to obtain. This communication shall contain a list of the surnames, first names, nationalities, descriptions and places of residence of the witnesses and experts whom the party intends to call, with indications in general terms of the point or points to which their evidence will be directed. A copy of the communication shall also be furnished for transmission to the other party.

Article 58

1. The Court shall determine whether the parties should present their arguments before or after the production of the evidence; the parties shall, however, retain the right to comment on the evidence given.

2. The order in which the parties will be heard, the method of handling the evidence and of examining any witnesses and experts, and the number of counsel and advocates to be heard on behalf of each party, shall be settled by the Court after the views of the parties have been ascertained in accordance with Article 31 of these Rules.

Article 59

The hearing in Court shall be public, unless the Court shall decide otherwise, or unless the parties demand that the public be not admitted. Such a decision or demand may concern either the whole or part of the hearing, and may be made at any time.

Article 60

1. The oral statements made on behalf of each party shall be as succinct as possible within the limits of what is requisite for the adequate presentation of that party's contentions at the hearing. Accordingly, they shall be directed to the issues that still divide the parties, and shall not go over the whole ground covered by the pleadings, or merely repeat the facts and arguments these contain.

2. At the conclusion of the last statement made by a party at the hearing, its agent, without recapitulation of the arguments, shall read that party's final submissions. A copy of the written text of these, signed by the agent, shall be communicated to the Court and transmitted to the other party.

Article 61

1. The Court may at any time prior to or during the hearing indicate any points or issues to which it would like the parties specially to address themselves, or on which it considers that there has been sufficient argument.

2. The Court may, during the hearing, put questions to the agents, counsel and advocates, and may ask them for explanations.

3. Each judge has a similar right to put questions, but before exercising it he should make his intention known to the President, who is made responsible by Article 45 of the Statute for the control of the hearing.

4. The agents, counsel and advocates may answer either immediately or within a time-limit fixed by the President.

Article 62

1. The Court may at any time call upon the parties to produce such evidence or to give such explanations as the Court may consider to be necessary for the elucidation of any aspect of the matters in issue, or may itself seek other information for this purpose.

2. The Court may, if necessary, arrange for the attendance of a witness or expert to give evidence in the proceedings.

Article 63

1. The parties may call any witnesses or experts appearing on the list communicated to the Court pursuant to Article 57 of these Rules. If at any time during the hearing a party wishes to call a witness or expert whose name was not included in that list, it shall so inform the Court and the other party, and shall supply the information required by Article 57. The witness or expert may be called either if the other party makes no objection or if the Court is satisfied that his evidence seems likely to prove relevant.

2. The Court, or the President if the Court is not sitting, shall, at the request of one of the parties or *proprio motu*, take the necessary steps for the examination of witnesses otherwise than before the Court itself.

Article 64

Unless on account of special circumstances the Court decides on a different form of words,

(a) every witness shall make the following declaration before giving any evidence:

"I solemnly declare upon my honour and conscience that I will speak the truth, the whole truth and nothing but the truth";

(b) every expert shall make the following declaration before making any statement:

"I solemnly declare upon my honour and conscience that I will speak the truth, the whole truth and nothing but the truth, and that my statement will be in accordance with my sincere belief."

Article 65

Witnesses and experts shall be examined by the agents, counsel or advocates of the parties under the control of the President. Questions may be put to them by the President and by the judges. Before testifying, witnesses shall remain out of court.

Article 66

The Court may at any time decide, either *proprio motu* or at the request of a party, to exercise its functions with regard to the obtaining of evidence at a place or locality to which the case relates, subject to such conditions as the Court may decide upon after ascertaining the views of the parties. The necessary arrangements shall be made in accordance with Article 44 of the Statute.

Article 67

1. If the Court considers it necessary to arrange for an enquiry or an expert opinion, it shall, after hearing the parties, issue an order to this effect, defining the subject of the enquiry or expert opinion, stating the number and mode of appointment of the persons to hold the enquiry or of the experts, and laying down the procedure to be followed. Where appropriate, the Court shall require persons appointed to carry out an enquiry, or to give an expert opinion, to make a solemn declaration.

2. Every report or record of an enquiry and every expert opinion shall be communicated to the parties, which shall be given the opportunity of commenting upon it.

Article 68

Witnesses and experts who appear at the instance of the Court under Article 62, paragraph 2, and persons appointed under Article 67, paragraph 1, of these Rules, to carry out an enquiry or to give an expert opinion, shall, where appropriate, be paid out of the funds of the Court.

Article 69

1. The Court may, at any time prior to the closure of the oral proceedings, either *proprio motu* or at the request of one of the parties communicated as provided in Article 57 of these Rules, request a public international organization, pursuant to Article 34 of the Statute, to furnish information relevant to a case before it. The Court, after consulting the chief administrative officer of the organization concerned, shall decide whether such information shall be presented to it orally or in writing, and the time-limits for its presentation.

2. When a public international organization sees fit to furnish, on its own initiative, information relevant to a case before the Court, it shall do so in the form of a Memorial to be filed in the Registry before the closure of the written proceedings. The Court shall retain the right to require such information to be supplemented, either orally or in writing, in the form of answers to any questions which it may see fit to formulate, and also to authorize the parties to comment, either orally or in writing, on the information thus furnished.

3. In the circumstances contemplated by Article 34, paragraph 3, of the Statute, the Registrar, on the instructions of the Court, or of the President if the Court is not sitting, shall proceed as prescribed in that paragraph. The Court, or the President if the Court is not sitting, may, as from the date on which the Registrar has communicated copies of the written proceedings and after consulting the chief administrative officer of the public international organization concerned, fix a time-limit within which the organization may submit to the Court its observations in writing. These observations shall be communicated to the parties and may be discussed by them and by the representative of the said organization during the oral proceedings.

4. In the foregoing paragraph, the term "public international organization" denotes an international organization of States.

Article 70

1. In the absence of any decision to the contrary by the Court, all speeches and statements made and evidence given at the hearing in one of the official languages of the Court shall be interpreted into the other official language. If they are made or given in any other language, they shall be interpreted into the two official languages of the Court.

2. Whenever, in accordance with Article 39, paragraph 3, of the Statute, a language other than French or English is used, the necessary arrangements for interpretation into one of the two official languages shall be made by the party concerned; however, the Registrar shall make

arrangements for the verification of the interpretation provided by a party of evidence given on the party's behalf. In the case of witnesses or experts who appear at the instance of the Court, arrangements for interpretation shall be made by the Registry.

3. A party on behalf of which speeches or statements are to be made, or evidence given, in a language which is not one of the official languages of the Court, shall so notify the Registrar in sufficient time for him to make the necessary arrangements.

4. Before first interpreting in the case, interpreters provided by a party shall make the following declaration in open court:

"I solemnly declare upon my honour and conscience that my interpretation will be faithful and complete."

Article 71

1. A verbatim record shall be made by the Registrar of every hearing, in the official language of the Court which has been used. When the language used is not one of the two official languages of the Court, the verbatim record shall be prepared in one of the Court's official languages.

2. When speeches or statements are made in a language which is not one of the official languages of the Court, the party on behalf of which they are made shall supply to the Registry in advance a text thereof in one of the official languages, and this text shall constitute the relevant part of the verbatim record.

3. The transcript of the verbatim record shall be preceded by the names of the judges present, and those of the agents, counsel and advocates of the parties.

4. Copies of the transcript shall be circulated to the judges sitting in the case, and to the parties. The latter may, under the supervision of the Court, correct the transcripts of speeches and statements made on their behalf, but in no case may such corrections affect the sense and bearing thereof. The judges may likewise make corrections in the transcript of anything they may have said.

5. Witnesses and experts shall be shown that part of the transcript which relates to the evidence given, or the statements made by them, and may correct it in like manner as the parties.

6. One certified true copy of the eventual corrected transcript, signed by the President and the Registrar, shall constitute the authentic minutes of the sitting for the purpose of Article 47 of the Statute. The minutes of public hearings shall be printed and published by the Court.

Article 72

Any written reply by a party to a question put under Article 61, or any evidence or explanation supplied by a party under Article 62 of these Rules, received by the Court after the closure of the oral proceedings, shall be communicated to the other party, which shall be given the opportunity of commenting upon it. If necessary the oral proceedings may be reopened for that purpose.

SECTION D. INCIDENTAL PROCEEDINGS

Subsection 1. Interim Protection

Article 73

1. A written request for the indication of provisional measures may be made by a party at any time during the course of the proceedings in the case in connection with which the request is made.

2. The request shall specify the reasons therefor, the possible consequences if it is not granted, and the measures requested. A certified copy shall forthwith be transmitted by the Registrar to the other party.

Article 74

1. A request for the indication of provisional measures shall have priority over all other cases.

2. The Court, if it is not sitting when the request is made, shall be convened forthwith for the purpose of proceeding to a decision on the request as a matter of urgency.

3. The Court, or the President if the Court is not sitting, shall fix a date for a hearing which will afford the parties an opportunity of being represented at it. The Court shall receive and take into account any observations that may be presented to it before the closure of the oral proceedings.

4. Pending the meeting of the Court, the President may call upon the parties to act in such a way as will enable any order the Court may make on the request for provisional measures to have its appropriate effects.

Article 75

1. The Court may at any time decide to examine *proprio motu* whether the circumstances of the case require the indication of provisional measures which ought to be taken or complied with by any or all of the parties.

2. When a request for provisional measures has been made, the Court may indicate measures that are in whole or in part other than those requested, or that ought to be taken or complied with by the party which has itself made the request.

3. The rejection of a request for the indication of provisional measures shall not prevent the party which made it from making a fresh request in the same case based on new facts.

Article 76

1. At the request of a party the Court may, at any time before the final judgment in the case, revoke or modify any decision concerning provisional measures if, in its opinion, some change in the situation justifies such revocation or modification.

2. Any application by a party proposing such a revocation or modification shall specify the change in the situation considered to be relevant.

3. Before taking any decision under paragraph 1 of this Article the Court shall afford the parties an opportunity of presenting their observations on the subject.

Article 77

Any measures indicated by the Court under Articles 73 and 75 of these Rules, and any decision taken by the Court under Article 76, paragraph 1, of these Rules, shall forthwith be communicated to the Secretary-General of the United Nations for transmission to the Security Council in pursuance of Article 41, paragraph 2, of the Statute.

Article 78

The Court may request information from the parties on any matter connected with the implementation of any provisional measures it has indicated.

Subsection 2. Preliminary Objections

Article 79[*] [1]

1. Any objection by the respondent to the jurisdiction of the Court or to the admissibility of the application, or other objection the decision upon which is requested before any further proceedings on the merits, shall be made in writing as soon as possible, and not later than three months after the delivery of the Memorial. Any such objection made by a party other than the respondent shall be filed within the time-limit fixed for the delivery of that party's first pleading.

2. Notwithstanding paragraph 1 above, following the submission of the application and after the President has met and consulted with the parties, the Court may decide that any questions of jurisdiction and admissibility shall be determined separately.

3. Where the Court so decides, the parties shall submit any pleadings as to jurisdiction and admissibility within the time-limits fixed by the Court and in the order determined by it, notwithstanding Article 45, paragraph 1.

4. The preliminary objection shall set out the facts and the law on which the objection is based, the submissions and a list of the documents in support; it shall mention any evidence which the party may desire to produce. Copies of the supporting documents shall be attached.

5. Upon receipt by the Registry of a preliminary objection, the proceedings on the merits shall be suspended and the Court, or the President if the Court is not sitting, shall fix the time-limit within which the other party may present a written statement of its observations and submissions; documents in support shall be attached and evidence which it is proposed to produce shall be mentioned.

6. Unless otherwise decided by the Court, the further proceedings shall be oral.

7. The statements of facts and law in the pleadings referred to in paragraphs 4 and 5 of this Article, and the statements and evidence presented at the hearings contemplated by paragraph 6, shall be confined to those matters that are relevant to the objection.

8. In order to enable the Court to determine its jurisdiction at the preliminary stage of the proceedings, the Court, whenever necessary, may request the parties to argue all questions of law and fact, and to adduce all evidence, which bear on the issue.

9. After hearing the parties, the Court shall give its decision in the form of a judgment, by which it shall either uphold the objection, reject it, or declare that the objection does not possess, in the circumstances of the case, an exclusively preliminary character. If the Court rejects the objection or declares that it does not possess an exclusively preliminary character, it shall fix time-limits for the further proceedings.

10. Any agreement between the parties that an objection submitted under paragraph 1 of this Article be heard and determined within the framework of the merits shall be given effect by the Court.

---

[*] Amendment entered into force on 1 February 2001. Article 79 of the Rules of Court as adopted on 14 April 1978 has continued to apply to all cases submitted to the Court prior to 1 February 2001.

[1] In Article 79, paragraph 1, as amended, the words “as soon as possible, and not later than three months after the delivery of the Memorial” have been substituted for the words “within the time-limit fixed for the delivery of the Counter-Memorial” contained in the text of this paragraph as adopted on 14 April 1978.

Paragraphs 2 and 3 of the amended Article 79 are new.

The former paragraphs 2 to 8 have been renumbered, respectively, as paragraphs 4 to 10.

Subsection 3. Counter-Claims

Article 80[*] [1]

1. The Court may entertain a counter-claim only if it comes within the jurisdiction of the Court and is directly connected with the subject-matter of the claim of the other party.

2. A counter-claim shall be made in the Counter-Memorial and shall appear as part of the submissions contained therein. The right of the other party to present its views in writing on the counter-claim, in an additional pleading, shall be preserved, irrespective of any decision of the Court, in accordance with Article 45, paragraph 2, of these Rules, concerning the filing of further written pleadings.

3. Where an objection is raised concerning the application of paragraph 1 or whenever the Court deems necessary, the Court shall take its decision thereon after hearing the parties.

---

[*] Amendment entered into force on 1 February 2001. Article 80 of the Rules of Court as adopted on 14 April 1978 has continued to apply to all cases submitted to the Court prior to 1 February 2001.

[1] Article 80 of the Rules of Court as adopted on 14 April 1978 read as follows:

> “*Article 80*
>
> 1. A counter-claim may be presented provided that it is directly connected with the subject-matter of the claim of the other party and that it comes within the jurisdiction of the Court.
>
> 2. A counter-claim shall be made in the Counter-Memorial of the party presenting it, and shall appear as part of the submissions of that party.

3. In the event of doubt as to the connection between the question presented by way of counter-claim and the subject-matter of the claim of the other party the Court shall, after hearing the parties, decide whether or not the question thus presented shall be joined to the original proceedings."

Subsection 4. Intervention

Article 81

1. An application for permission to intervene under the terms of Article 62 of the Statute, signed in the manner provided for in Article 38, paragraph 3, of these Rules, shall be filed as soon as possible, and not later than the closure of the written proceedings. In exceptional circumstances, an application submitted at a later stage may however be admitted.

2. The application shall state the name of an agent. It shall specify the case to which it relates, and shall set out:

(a) the interest of a legal nature which the State applying to intervene considers may be affected by the decision in that case;

(b) the precise object of the intervention;

(c) any basis of jurisdiction which is claimed to exist as between the State applying to intervene and the parties to the case.

3. The application shall contain a list of the documents in support, which documents shall be attached.

Article 82

1. A State which desires to avail itself of the right of intervention conferred upon it by Article 63 of the Statute shall file a declaration to that effect, signed in the manner provided for in Article 38, paragraph 3, of these Rules. Such a declaration shall be filed as soon as possible, and not later than the date fixed for the opening of the oral proceedings. In exceptional circumstances a declaration submitted at a later stage may however be admitted.

2. The declaration shall state the name of an agent. It shall specify the case and the convention to which it relates and shall contain:

(a) particulars of the basis on which the declarant State considers itself a party to the convention;

(b) identification of the particular provisions of the convention the construction of which it considers to be in question;

(c) a statement of the construction of those provisions for which it contends;

(d) a list of the documents in support, which documents shall be attached.

3. Such a declaration may be filed by a State that considers itself a party to the convention the construction of which is in question but has not received the notification referred to in Article 63 of the Statute.

Article 83

1. Certified copies of the application for permission to intervene under Article 62 of the Statute, or of the declaration of intervention under Article 63 of the Statute, shall be communicated forthwith to the parties to the case, which shall be invited to furnish their written observations within a time-limit to be fixed by the Court or by the President if the Court is not sitting.

2. The Registrar shall also transmit copies to: *(a)* the Secretary-General of the United Nations; *(b)* the Members of the United Nations; *(c)* other States entitled to appear before the Court; *(d)* any other States which have been notified under Article 63 of the Statute.

Article 84

1. The Court shall decide whether an application for permission to intervene under Article 62 of the Statute should be granted, and whether an intervention under Article 63 of the Statute is admissible, as a matter of priority unless in view of the circumstances of the case the Court shall otherwise determine.

2. If, within the time-limit fixed under Article 83 of these Rules, an objection is filed to an application for permission to intervene, or to the admissibility of a declaration of intervention, the Court shall hear the State seeking to intervene and the parties before deciding.

Article 85

1. If an application for permission to intervene under Article 62 of the Statute is granted, the intervening State shall be supplied with copies of the pleadings and documents annexed and shall be entitled to submit a written statement within a time-limit to be fixed by the Court. A further time-limit shall be fixed within which the parties may, if they so desire, furnish their written observations on that statement prior to the oral proceedings. If the Court is not sitting, these time-limits shall be fixed by the President.

2. The time-limits fixed according to the preceding paragraph shall, so far as possible, coincide with those already fixed for the pleadings in the case.

3. The intervening State shall be entitled, in the course of the oral proceedings, to submit its observations with respect to the subject-matter of the intervention.

Article 86

1. If an intervention under Article 63 of the Statute is admitted, the intervening State shall be furnished with copies of the pleadings and documents annexed, and shall be entitled, within a time-limit to be fixed by the Court, or by the President if the Court is not sitting, to submit its

written observations on the subject-matter of the intervention.

2. These observations shall be communicated to the parties and to any other State admitted to intervene. The intervening State shall be entitled, in the course of the oral proceedings, to submit its observations with respect to the subject-matter of the intervention.

Subsection 5. Special Reference to the Court

Article 87

1. When in accordance with a treaty or convention in force a contentious case is brought before the Court concerning a matter which has been the subject of proceedings before some other international body, the provisions of the Statute and of the Rules governing contentious cases shall apply.

2. The application instituting proceedings shall identify the decision or other act of the international body concerned and a copy thereof shall be annexed; it shall contain a precise statement of the questions raised in regard to that decision or act, which constitute the subject of the dispute referred to the Court.

Subsection 6. Discontinuance

Article 88

1. If at any time before the final judgment on the merits has been delivered the parties, either jointly or separately, notify the Court in writing that they have agreed to discontinue the proceedings, the Court shall make an order recording the discontinuance and directing that the case be removed from the list.

2. If the parties have agreed to discontinue the proceedings in consequence of having reached a settlement of the dispute and if they so desire, the Court may record this fact in the order for the removal of the case from the list, or indicate in, or annex to, the order, the terms of the settlement.

3. If the Court is not sitting, any order under this Article may be made by the President.

Article 89

1. If in the course of proceedings instituted by means of an application, the applicant informs the Court in writing that it is not going on with the proceedings, and if, at the date on which this communication is received by the Registry, the respondent has not yet taken any step in the proceedings, the Court shall make an order officially recording the discontinuance of the proceedings and directing the removal of the case from the list. A copy of this order shall be sent by the Registrar to the respondent.

2. If, at the time when the notice of discontinuance is received, the respondent has already taken some step in the proceedings, the Court shall fix a time-limit within which the respondent may state whether it opposes the discontinuance of the proceedings. If no objection is made to the discontinuance before the expiration of the time-limit, acquiescence will be presumed and the Court shall make an order officially recording the discontinuance of the proceedings and directing the removal of the case from the list. If objection is made, the proceedings shall continue.

3. If the Court is not sitting, its powers under this Article may be exercised by the President.

SECTION E. PROCEEDINGS BEFORE THE CHAMBERS

Article 90

Proceedings before the Chambers mentioned in Articles 26 and 29 of the Statute shall, subject to the provisions of the Statute and of these Rules relating specifically to the Chambers, be governed by the provisions of Parts I to III of these Rules applicable in contentious cases before the Court.

Article 91

1. When it is desired that a case should be dealt with by one of the Chambers which has been formed in pursuance of Article 26, paragraph 1, or Article 29 of the Statute, a request to this effect shall either be made in the document instituting the proceedings or accompany it. Effect will be given to the request if the parties are in agreement.

2. Upon receipt by the Registry of this request, the President of the Court shall communicate it to the members of the Chamber concerned. He shall take such steps as may be necessary to give effect to the provisions of Article 31, paragraph 4, of the Statute.

3. The President of the Court shall convene the Chamber at the earliest date compatible with the requirements of the procedure.

Article 92

1. Written proceedings in a case before a Chamber shall consist of a single pleading by each side. In proceedings begun by means of an application, the pleadings shall be delivered within successive time-limits. In proceedings begun by the notification of a special agreement, the pleadings shall be delivered within the same time-limits, unless the parties have agreed on successive delivery of their pleadings. The time-limits referred to in this paragraph shall be fixed by the Court, or by the President if the Court is not sitting, in consultation with the Chamber concerned if it is already constituted.

2. The Chamber may authorize or direct that further pleadings be filed if the parties are so agreed, or if the Chamber decides, *proprio motu* or at the request of one of the parties, that such pleadings are necessary.

3. Oral proceedings shall take place unless the parties agree to dispense with them, and the Chamber consents. Even when no oral proceedings take place, the Chamber may call upon the parties to supply information or furnish explanations orally.

Article 93

Judgments given by a Chamber shall be read at a public sitting of that Chamber.

SECTION F. JUDGMENTS, INTERPRETATION AND REVISION

Subsection 1. Judgments

Article 94

1. When the Court has completed its deliberations and adopted its judgment, the parties shall be notified of the date on which it will be read.

2. The judgment shall be read at a public sitting of the Court and shall become binding on the parties on the day of the reading.

Article 95

1. The judgment, which shall state whether it is given by the Court or by a Chamber, shall contain:

the date on which it is read;
the names of the judges participating in it;
the names of the parties;
the names of the agents, counsel and advocates of the parties;
a summary of the proceedings;
the submissions of the parties;
a statement of the facts;
the reasons in point of law;
the operative provisions of the judgment;
the decision, if any, in regard to costs;
the number and names of the judges constituting the majority;
a statement as to the text of the judgment which is authoritative.

2. Any judge may, if he so desires, attach his individual opinion to the judgment, whether he dissents from the majority or not; a judge who wishes to record his concurrence or dissent without stating his reasons may do so in the form of a declaration. The same shall also apply to orders made by the Court.

3. One copy of the judgment duly signed and sealed, shall be placed in the archives of the Court and another shall be transmitted to each of the parties. Copies shall be sent by the Registrar to: *(a)* the Secretary-General of the United Nations; *(b)* the Members of the United Nations; *(c)* other Sates entitled to appear before the Court.

Article 96

When by reason of an agreement reached between the parties, the written and oral proceedings have been conducted in one of the Court's two official languages, and pursuant to Article 39, paragraph 1, of the Statute the judgment is to be delivered in that language, the text of the judgment in that language shall be the authoritative text.

Article 97

If the Court, under Article 64 of the Statute, decides that all or part of a party's costs shall be paid by the other party, it may make an order for the purpose of giving effect to that decision.

Subsection 2. Requests for the Interpretation or Revision of a Judgment

Article 98

1. In the event of dispute as to the meaning or scope of a judgment any party may make a request for its interpretation, whether the original proceedings were begun by an application or by the notification of a special agreement.

2. A request for the interpretation of a judgment may be made either by an application or by the notification of a special agreement to that effect between the parties; the precise point or points in dispute as to the meaning or scope of the judgment shall be indicated.

3. If the request for interpretation is made by an application, the requesting party's contentions shall be set out therein, and the other party shall be entitled to file written observations thereon within a time-limit fixed by the Court, or by the President if the Court is not sitting.

4. Whether the request is made by an application or by notification of a special agreement, the Court may, if necessary, afford the parties the opportunity of furnishing further written or oral explanations.

Article 99

1. A request for the revision of a judgment shall be made by an application containing the particulars necessary to show that the conditions specified in Article 61 of the Statute are fulfilled. Any documents in support of the application shall be annexed to it.

2. The other party shall be entitled to file written observations on the admissibility of the application within a time-limit fixed by the Court, or by the President if the Court is not sitting. These observations shall be communicated to the party making the application.

3. The Court, before giving its judgment on the admissibility of the application may afford the parties a further opportunity of presenting their views thereon.

4. If the Court finds that the application is admissible it shall fix time-limits for such further proceedings on the merits of the application as, after ascertaining the views of the parties, it considers necessary.

5. If the Court decides to make the admission of the proceedings in revision conditional on previous compliance with the judgment, it shall make an order accordingly.

Article 100

1. If the judgment to be revised or to be interpreted was given by the Court, the request for its revision or interpretation shall be dealt with by the Court. If the judgment was given by a Chamber, the request for its revision or interpretation shall be dealt with by that Chamber.

2. The decision of the Court, or of the Chamber, on a request for interpretation or revision of a judgment shall itself be given in the form of a judgment.

SECTION G. MODIFICATIONS PROPOSED BY THE PARTIES

Article 101

The parties to a case may jointly propose particular modifications or additions to the rules contained in the present Part (with the exception of Articles 93 to 97 inclusive), which may be applied by the Court or by a Chamber if the Court or the Chamber considers them appropriate in the circumstances of the case.

PART IV

ADVISORY PROCEEDINGS

Article 102

1. In the exercise of its advisory functions under Article 65 of the Statute, the Court shall apply, in addition to the provisions of Article 96 of the Charter and Chapter IV of the Statute, the provisions of the present Part of the Rules.

2. The Court shall also be guided by the provisions of the Statute and of these Rules which apply in contentious cases to the extent to which it recognizes them to be applicable. For this purpose, it shall above all consider whether the request for the advisory opinion relates to a legal question actually pending between two or more States.

3. When an advisory opinion is requested upon a legal question actually pending between two or more States, Article 31 of the Statute shall apply, as also the provisions of these Rules concerning the application of that Article.

Article 103

When the body authorized by or in accordance with the Charter of the United Nations to request an advisory opinion informs the Court that its request necessitates an urgent answer, or the Court finds that an early answer would be desirable, the Court shall take all necessary steps to accelerate the procedure, and it shall convene as early as possible for the purpose of proceeding to a hearing and deliberation on the request.

Article 104

All requests for advisory opinions shall be transmitted to the Court by the Secretary-General of the United Nations or, as the case may be, the chief administrative officer of the body authorized to make the request. The documents referred to in Article 65, paragraph 2, of the Statute shall be transmitted to the Court at the same time as the request or as soon as possible thereafter, in the number of copies required by the Registry.

Article 105

1. Written statements submitted to the Court shall be communicated by the Registrar to any States and organizations which have submitted such statements.

2. The Court, or the President if the Court is not sitting, shall:

(a) determine the form in which, and the extent to which, comments permitted under Article 66, paragraph 4, of the Statute shall be received, and fix the time-limit for the submission of any such comments in writing;

(b) decide whether oral proceedings shall take place at which statements and comments may be submitted to the Court under the provisions of Article 66 of the Statute, and fix the date for the opening of such oral proceedings.

Article 106

The Court, or the President if the Court is not sitting, may decide that the written statements and annexed documents shall be made accessible to the public on or after the opening of the oral proceedings. If the request for advisory opinion relates to a legal question actually pending between two or more States, the views of those States shall first be ascertained.

Article 107

1. When the Court has completed its deliberations and adopted its advisory opinion, the opinion shall be read at a public sitting of the Court.

2. The advisory opinion shall contain:

the date on which it is delivered;
the names of the judges participating;
a summary of the proceedings;
a statement of the facts;
the reasons in point of law;
the reply to the question put to the Court;

the number and names of the judges constituting the majority;
a statement as to the text of the opinion which is authoritative.

3. Any judge may, if he so desires, attach his individual opinion to the advisory opinion of the Court, whether he dissents from the majority or not; a judge who wishes to record his concurrence or dissent without stating his reasons may do so in the form of a declaration.

Article 108

The Registrar shall inform the Secretary-General of the United Nations, and, where appropriate, the chief administrative officer of the body which requested the advisory opinion, as to the date and the hour fixed for the public sitting to be held for the reading of the opinion. He shall also inform the representatives of the Members of the United Nations and other States, specialized agencies and public international organizations immediately concerned.

Article 109

One copy of the advisory opinion, duly signed and sealed, shall be placed in the archives of the Court, another shall be sent to the Secretary-General of the United Nations and, where appropriate, a third to the chief administrative officer of the body which requested the opinion of the Court. Copies shall be sent by the Registrar to the Members of the United Nations and to any other States, specialized agencies and public international organizations immediately concerned.

REPORTS OF INTERNATIONAL ARBITRAL AWARDS

RECUEIL DES SENTENCES ARBITRALES

Island of Palmas case (Netherlands, USA)

4 April 1928

VOLUME II pp. 829-871

XX.

ISLAND OF PALMAS CASE [1].

PARTIES: Netherlands, U.S.A.

SPECIAL AGREEMENT: January 23, 1925.

ARBITRATOR: Max Huber (Switzerland).

AWARD: The Hague, April, 1928.

Territorial sovereignty.—Contiguity and title to territory.—Continuous and peaceful display of sovereignty.—The "intertemporal" law.—Rules of evidence in international proceedings.—Maps as evidence.—Inchoate title.—Passivity in relation to occupation.—Dutch East India Company as subject of international law.—Treaties with native princes.—Subsequent practice as an element of interpretation.

---

[1] For bibliography, index and tables, see Volume III.

Special Agreement.

[*See beginning of Award below.*]

AWARD OF THE TRIBUNAL.

Award of the tribunal of arbitration rendered in conformity with the special agreement concluded on January 23, 1925, *between the United States of America and the Netherlands relating to the arbitration of differences respecting sovereignty over the Island of Palmas* (*or Miangas*).—*The Hague, April* 4, 1928.

An agreement relating to the arbitration of differences respecting sovereignty over the Island of Palmas (or Miangas) was signed by the United States of America and the Netherlands on January 23rd, 1925. The text of the agreement runs as follows :

> The United States of America and Her Majesty the Queen of the Netherlands,
>
> Desiring to terminate in accordance with the principles of International Law and any applicable treaty provisions the differences which have arisen and now subsist between them with respect to the sovereignty over the Island of Palmas (or Miangas) situated approximately fifty miles south-east from Cape San Augustin, Island of Mindanao, at about five degrees and thirty-five minutes (5° 35′) north latitude, one hundred and twenty-six degrees and thirty-six minutes (126° 36′) longitude east from Greenwich;
>
> Considering that these differences belong to those which, pursuant to Article I of the Arbitration Convention concluded by the two high contracting parties on May 2, 1908, and renewed by agreements, dated May 9, 1914, March 8, 1919, and February 13, 1924, respectively, might well be submitted to arbitration,
>
> Have appointed as their respective plenipotentiaries for the purpose of concluding the following special agreement:
>
> The President of the United States of America: Charles Evans Hughes, Secretary of State of the United States of America, and
>
> Her Majesty the Queen of the Netherlands: Jonkheer Dr. A. C. D. de Graeff, Her Majesty's Envoy Extraordinary and Minister Plenipotentiary at Washington,
>
> Who, after exhibiting to each other their respective full powers, which were found to be in due and proper form, have agreed upon the following articles:
>
> ### Article I.
>
> The United States of America and Her Majesty the Queen of the Netherlands hereby agree to refer the decision of the above-mentioned

differences to the Permanent Court of Arbitration at The Hague. The arbitral tribunal shall consist of one arbitrator.

The sole duty of the Arbitrator shall be to determine whether the Island of Palmas (or Miangas) in its entirety forms a part of territory belonging to the United States of America or of Netherlands territory.

The two Governments shall designate the Arbitrator from the members of the Permanent Court of Arbitration. If they shall be unable to agree on such designation, they shall unite in requesting the President of the Swiss Confederation to designate the Arbitrator.

Article II.

Within six months after the exchange of ratifications of this special agreement, each Government shall present to the other party two printed copies of a memorandum containing a statement of its contentions and the documents in support thereof. It shall be sufficient for this purpose if the copies aforesaid are delivered by the Government of the United States at the Netherlands Legation at Washington and by the Netherlands Government at the American Legation at The Hague, for transmission. As soon thereafter as possible and within thirty days, each party shall transmit two printed copies of its memorandum to the International Bureau of the Permanent Court of Arbitration for delivery to the Arbitrator.

Within six months after the expiration of the period above fixed for the delivery of the memoranda to the parties, each party may, if it is deemed advisable, transmit to the other two printed copies of a counter-memorandum and any documents in support thereof in answer to the memorandum of the other party. The copies of the counter-memorandum shall be delivered to the parties, and within thirty days thereafter to the Arbitrator, in the manner provided for in the foregoing paragraph respecting the delivery of memoranda.

At the instance of one or both of the parties, the Arbitrator shall have authority, after hearing both parties and for good cause shown, to extend the above-mentioned periods.

Article III.

After the exchange of the counter-memoranda, the case shall be deemed closed unless the Arbitrator applies to either or both of the parties for further written explanations.

In case the Arbitrator makes such a request on either party, he shall do so through the International Bureau of the Permanent Court of Arbitration which shall communicate a copy of his request to the other party. The party addressed shall be allowed for reply three months from the date of the receipt of the Arbitrator's request, which date shall be at once communicated to the other party and to the International Bureau. Such reply shall be communicated to the other party and within thirty days thereafter to the Arbitrator in the manner provided for above for the delivery of memoranda, and the opposite party may if it is deemed advisable, have a further period of three months to make rejoinder thereto, which shall be communicated in like manner.

The Arbitrator shall notify both parties through the International Bureau of the date upon which, in accordance with the foregoing provisions, the case is closed, so far as the presentation of memoranda and evidence by either party is concerned.

Article IV.

The parties shall be at liberty to use, in the course of arbitration, the English or Netherlands language or the native language of the Arbitrator. If either party uses the English or Netherlands language, a translation into the native language of the Arbitrator shall be furnished if desired by him.

The Arbitrator shall be at liberty to use his native language or the English or Netherlands language in the course of the arbitration and the award and opinion accompanying it may be in any one of those languages.

Article V.

The Arbitrator shall decide any questions of procedure which may arise during the course of the arbitration.

Article VI.

Immediately after the exchange of ratifications of this special agreement each party shall place in the hands of the Arbitrator the sum of one hundred pounds sterling by way of advance of costs.

Article VII.

The Arbitrator shall, within three months after the date upon which he declares the case closed for the presentation of memoranda and evidence, render his award in writing and deposit three signed copies thereof with the International Bureau at The Hague, one copy to be retained by the Bureau and one to be transmitted to each party, as soon as this may be done.

The award shall be accompanied by a statement of the grounds upon which it is based.

The Arbitrator shall fix the amount of the costs of procedure in his award. Each party shall defray its own expenses and half of said costs of procedure and of the honorarium of the Arbitrator.

Article VIII.

The parties undertake to accept the award rendered by the Arbitrator within the limitations of this special agreement, as final and conclusive and without appeal.

All disputes connected with the interpretation and execution of the award shall be submitted to the decision of the Arbitrator.

Article IX.

This special agreement shall be ratified in accordance with the constitutional forms of the contracting parties and shall take effect immediately upon the exchange of ratifications, which shall take place as soon as possible at Washington.

In witness whereof the respective plenipotentiaries have signed this special agreement and have hereunto affixed their seals.

Done in duplicate in the City of Washington in the English and Netherlands languages this 23rd day of January, 1925.

(*L. S.*) CHARLES EVANS HUGHES.
(*L. S.*) DE GRAEFF.

I.

The *ratifications of the above agreement* (hereafter called the Special Agreement) were exchanged at Washington on April 1st, 1925. By letters dated September 29th, 1925, the Ministry of Foreign Affairs of Her Majesty the Queen of the Netherlands and the Minister of the United States of America at The Hague asked the undersigned, Max Huber, of Zurich (Switzerland), member of the Permanent Court of Arbitration, whether he would be disposed to accept the mandate to act as sole arbitrator under the Special Agreement of January 23rd, 1925. The undersigned informed the Minister of Foreign Affairs of the Netherlands and the Minister of the United States of America at The Hague that he was willing to accept the task.

On October 16th and 23rd, 1925, the International Bureau of the Permanent Court of Arbitration transmitted to the Arbitrator the *Memoranda* of the United States of America [1] and the Netherlands [2] with the documents in support thereof. On April 23rd and 24th, 1926, the *Counter-Memoranda* of the Netherlands [3] and the United States of America [4] with documents in support thereof were transmitted to the Arbitrator through the International Bureau.

Availing himself of the authority given him under Article III of the Special Agreement, the Arbitrator transmitted through the intermediary of the International Bureau of the Permanent Court of Arbitration to each party a list of points upon which he was desirous to obtain *further written Explanations*. This request was obtained by the Netherlands on December 24th, 1926, and by the United States of America on January 6th, 1927. The Arbitrator received through the intermediary of the International Bureau the Explanations of the Netherlands [5], with documents in support thereof, on March 24th, 1927, and those of the United States of America [6] on April 22nd, 1927.

On May 19th, 1927, the Arbitrator received through the International Bureau a memorandum of the American Government, dated May 2nd, 1927.

---

[1] Memorandum of the United States, with appendix, 219 pages and 12 maps in folder.

[2] Memorandum of the Netherlands, with appendices, 83 pages, 4 maps and sketches and reproduction of photos in folder, British Admiralty Chart 2575, with inscriptions, six copies of diplomatic correspondence between the United States Department of State and the Netherlands Legation in Washington.

[3] Counter-Memorandum of the Netherlands, with appendices, 95 pages and 1 map.

[4] Counter-Memorandum of the United States, with appendix, 121 pages, 3 photos and 3 maps.

[5] Explanations of the Netherlands, 146 pages and XX annexes (25 maps and sketches, reproduction of Dampiers' Journal, copies of entries of log-books and biographical notice concerning the late Dr. Adriani).

[6] Explanations of the United States, with appendix, 68 pages.

The United States expressed the desire to make a *Rejoinder* as provided for in Article III of the Special Agreement "unless the Arbitrator prefers not to receive it, in which case none will be filed, unless one is filed by the Netherlands Government". At the same time the United States Government made an application for an extension of three months beyond the period mentioned in Article III for the filing of a Rejoinder, and invoked in support of this application the fact that the Explanations of the Netherlands were considerably more voluminous than the Memorandum, and contained a large mass of untranslated Dutch documents, and more than 25 maps.

The Netherlands Government had already on May 9th, 1927, declared that they renounced the right to submit a Rejoinder, making however the express reservation that they maintained the points of view which the American Explanations contested.

The Arbitrator, on the analogy of the rule laid down in the last paragraph of Article II, invited the Netherlands Government by a letter dated May 13th, 1927, and addressed to the International Bureau, to state their point of view in regard to the American application.

The Netherlands Government having declared that they had no objection to the extension of the time-limit in conformity with the American application, the Arbitrator, in a letter to the International Bureau dated May 23rd, 1927, informed the Parties that the extension of three months beyond the period provided for in Article III for the filing of a Rejoinder was granted.

On October 21st, 1927, the Rejoinder of the United States[1] was transmitted by the International Bureau to the Arbitrator.

No observation by either Party was made during the proceedings in regard to the fact that one of the documents provided for in the Agreement of January 23rd, 1925, was not filed within the time-limits fixed in the said Agreement.

On March 3rd, 1928, the Arbitrator informed the Parties through the International Bureau of the Permanent Court of Arbitration, that, in conformity with the last paragraph of Article III, *the case was closed.*

On this fourth day of April 1928, i.e. within the period fixed by Article VII, the three copies of the award are deposited with the International Bureau of the Permanent Court of Arbitration, at The Hague.

In conformity with the second paragraph of Article IV of the Special Agreement, the Arbitrator selected the *English language*. Having regard to the fact that geographical names are differently spelt in different documents and on different maps, the Arbitrator gives geographical names as shown on the British Admiralty Chart 2575, as being the most modern of the large scale maps laid before him. Other names and, if necessary, their variations, are given in bracket or parenthesis.

In accordance with Article VIII, paragraph 3, the costs of procedure are fixed at £140.

II.

The *subject of the dispute* is the sovereignty over the Island of Palmas (or Miangas). The Island in question is indicated with precision in the preamble to the Special Agreement, its latitude and longitude being specified. The fact that in the diplomatic correspondence prior to the conclusion of the Special Agreement, and in the documents of the arbitration proceedings, the United States refer to the "Island of Palmas" and the Netherlands to the

---

[1] Rejoinder of the United States, with appendix, 126 pages and 8 maps.

"Island of Miangas", does not therefore concern the identity of the subject of the dispute. Such difference concerns only the question whether certain assertions made by the Netherlands Government really relate to the island described in the Special Agreement or another island or group of islands which might be designated by the name of Miangas or a similar name.

It results from the evidence produced by either side that Palmas (or Miangas) is a single, isolated island, not one of several islands clustered together. It lies about half way between Cape San Augustin (Mindanao, Philippine Islands) and the most northerly island of the Nanusa (Nanoesa) group (Netherlands East Indies).

*

The origin of the dispute is to be found in the visit paid to the Island of Palmas (or Miangas) on January 21st, 1906, by General Leonard Wood, who was then Governor of the Province of Moro. It is true that according to information contained in the Counter-Memorandum of the United States the same General Wood had already visited the island "about the year 1903", but as this previous visit appears to have had no results, and it seems even doubtful whether it took place, that of January 21st, 1906, is to be regarded as the first entry into contact by the American authorities with the island. The report of General Wood to the Military Secretary, United States Army, dated January 26th, 1906, and the certificate delivered on January 21st by First Lieutenant Gordon Johnston to the native interrogated by the controller of the Sangi (Sanghi) and Talauer (Talaut) Islands clearly show that the visit of January 21st relates to the island in dispute.

This visit led to the statement that the Island of Palmas (or Miangas), undoubtedly included in the "archipelago known as the Philippine Islands", as delimited by Article III of the Treaty of Peace between the United States and Spain, dated December 10th, 1898 (hereinafter also called "Treaty of Paris"), and ceded in virtue of the said article to the United States, was considered by the Netherlands as forming part of the territory of their possessions in the East Indies. There followed a diplomatic correspondence, beginning on March 31st, 1906, and leading up to the conclusion of the Special Agreement of January 23rd, 1925.

*

Before beginning to consider the arguments of the Parties, we may at the outset take as established certain *facts which, according to the pleadings, are not contested.*

1. The Treaty of Peace of December 10th, 1898, and the Special Agreement of January 23rd, 1925, are the only international instruments laid before the Arbitrator which refer precisely, that is, by mathematical location or by express and unequivocal mention, to the island in dispute, or include it in or exclude it from a zone delimited by a geographical frontier-line. The scope of the international treaties which relate to the "Philippines" and of conventions entered into with native Princes will be considered in connection with the arguments of the Party relying on a particular act.
2. Before 1906 no dispute had arisen between the United States or Spain, on the one hand, and the Netherlands, on the other, in regard specifically to the Island of Palmas (or Miangas), on the ground that these Powers put forward conflicting claims to sovereignty over the said island.

3. The two Parties claim the island in question as a territory attached for a very long period to territories relatively close at hand which are incontestably under the sovereignty of the one or the other of them.

4. It results from the terms of the Special Agreement (Article I) that the Parties adopt the view that for the purposes of the present arbitration the island in question can belong only to one or the other of them. Rights of third Powers only come into account in so far as the rights of the Parties to the dispute may be derived from them.

* * *

The dispute having been submitted to arbitration by Special Agreement, each Party is called upon to establish the arguments on which it relies in support of its claim to sovereignty over the object in dispute. As regards the *order in which the Parties' arguments should be considered*, it appears right to examine first the title put forward by the United States, arising out of a treaty and itself derived, according to the American arguments, from an original title which would date back to a period prior to the birth of the title put forward by the Netherlands; in the second place, the arguments invoked by the Netherlands in favour of their title to sovereignty will be considered; finally the result of the examination of the titles alleged by the two Parties must be judged in the light of the mandate conferred on the Arbitrator by Article I, paragraph 2, of the Special Agreement.

*

In the absence of an international instrument recognized by both Parties and explicitly determining the legal position of the Island of Palmas (or Miangas), *the arguments of the Parties* may in a general way be summed up as follows:

The *United States*, as successor to the rights of Spain over the Philippines, bases its title in the first place on discovery. The existence of sovereignty thus acquired is, in the American view, confirmed not merely by the most reliable cartographers and authors, but also by treaty, in particular by the Treaty of Münster, of 1648, to which Spain and the Netherlands are themselves Contracting Parties. As, according to the same argument, nothing has occurred of a nature, in international law, to cause the acquired title to disappear, this latter title was intact at the moment when, by the Treaty of December 10th, 1898, Spain ceded the Philippines to the United States. In these circumstances, it is, in the American view, unnecessary to establish facts showing the actual display of sovereignty precisely over the Island of Palmas (or Miangas). The United States Government finally maintains that Palmas (or Miangas) forms a geographical part of the Philippine group and in virtue of the principle of contiguity belongs to the Power having the sovereignty over the Philippines.

According to the Netherlands Government, on the other hand, the fact of discovery by Spain is not proved, nor yet any other form of acquisition, and even if Spain had at any moment had a title, such title had been lost. The principle of contiguity is contested.

The Netherlands Government's main argument endeavours to show that the Netherlands, represented for this purpose in the first period of colonisation by the East India Company, have possessed and exercised rights of sovereignty from 1677, or probably from a date prior even to 1648, to the present day. This sovereignty arose out of conventions entered into with native princes of the Island of Sangi (the main island of the Talautse (Sangi) Isles), establishing the suzerainty of the Netherlands over the territories of these princes, including Palmas (or Miangas). The state of affairs thus set up is claimed to be validated by international treaties.

The facts alleged in support of the Netherlands arguments are, in the United States Government's view, not proved, and, even if they were proved, they would not create a title of sovereignty, or would not concern the Island of Palmas.

* * *

Before considering the Parties' arguments, two points of a general character are to be dealt with, one relating to the substantive law to be applied, namely the rules on territorial sovereignty which underly the present case, and the other relating to the rules of procedure, namely the conditions under which the Parties may, under the Special Agreement, substantiate their claims.

*

In the first place the Arbitrator deems it necessary to make some general remarks on *sovereignty in its relation to territory.*

The Arbitrator will as far as possible keep to the terminology employed in the Special Agreement. The preamble refers to "sovereignty over the Island of Palmas (or Miangas)", and under Article I, paragraph 2, the Arbitrator's task is to "determine whether the Island of Palmas (or Miangas) in its entirety forms a part of Netherlands territory or of territory belonging to the United States of America". It appears to follow that sovereignty in relation to a portion of the surface of the globe is the legal condition necessary for the inclusion of such portion in the territory of any particular State. Sovereignty in relation to territory is in the present award called "territorial sovereignty".

Sovereignty in the relations between States signifies independence. Independence in regard to a portion of the globe is the right to exercise therein, to the exclusion of any other State, the functions of a State. The development of the national organisation of States during the last few centuries and, as a corollary, the development of international law, have established this principle of the exclusive competence of the State in regard to its own territory in such a way as to make it the point of departure in settling most questions that concern international relations. The special cases of the composite State, of collective sovereignty, etc., do not fall to be considered here and do not, for that matter, throw any doubt upon the principle which has just been enunciated. Under this reservation it may be stated that territorial sovereignty belongs always to one, or in exceptional circumstances to several States, to the exclusion of all others. The fact that the functions of a State can be performed by any State within a given zone is. on the other hand, precisely the characteristic feature of the legal situation pertaining in those parts of the globe which, like the high seas or lands without a master, cannot or do not yet form the territory of a State.

Territorial sovereignty is, in general, a situation recognized and delimited in space, either by so-called natural frontiers as recognised by international law or by outward signs of delimitation that are undisputed, or else by legal engagements entered into between interested neighbours, such as frontier conventions, or by acts of recognition of States within fixed boundaries. If a dispute arises as to the sovereignty over a portion of territory, it is customary to examine which of the States claiming sovereignty possesses a title—cession conquest, occupation, etc.—superior to that which the other State might possibly bring forward against it. However, if the contestation is based on the fact that the other Party has actually displayed sovereignty, it cannot be sufficient to establish the title by which territorial sovereignty was validly acquired at a certain moment; it must also be shown that the territorial sovereignty has continued to exist and did exist at the moment which for the decision of the dispute must be considered as critical. This demonstration consists in the actual display of State activities, such as belongs only to the territorial sovereign.

Titles of acquisition of territorial sovereignty in present-day international law are either based on an act of effective apprehension, such as occupation or conquest, or, like cession, presuppose that the ceding and the cessionary Powers or at least one of them, have the faculty of effectively disposing of the ceded territory. In the same way natural accretion can only be conceived of as an accretion to a portion of territory where there exists an actual sovereignty capable of extending to a spot which falls within its sphere of activity. It seems therefore natural that an element which is essential for the constitution of sovereignty should not be lacking in its continuation. So true is this, that practice, as well as doctrine, recognizes—though under different legal formulae and with certain differences as to the conditions required—that the continuous and peaceful display of territorial sovereignty (peaceful in relation to other States) is as good as a title. The growing insistence with which international law, ever since the middle of the 18th century, has demanded that the occupation shall be effective would be inconceivable, if effectiveness were required only for the act of acquisition and not equally for the maintenance of the right. If the effectiveness has above all been insisted on in regard to occupation, this is because the question rarely arises in connection with territories in which there is already an established order of things. Just as before the rise of international law, boundaries of lands were necessarily determined by the fact that the power of a State was exercised within them, so too, under the reign of international law, the fact of peaceful and continuous display is still one of the most important considerations in establishing boundaries between States.

Territorial sovereignty, as has already been said, involves the exclusive right to display the activities of a State. This right has as corollary a duty: the obligation to protect within the territory the rights of other States, in particular their right to integrity and inviolability in peace and in war, together with the rights which each State may claim for its nationals in foreign territory. Without manifesting its territorial sovereignty in a manner corresponding to circumstances, the State cannot fulfil this duty. Territorial sovereignty cannot limit itself to its negative side, i.e. to excluding the activities of other States; for it serves to divide between nations the space upon which human activities are employed, in order to assure them at all points the minimum of protection of which international law is the guardian.

Although municipal law, thanks to its complete judicial system, is able to recognize abstract rights of property as existing apart from any material display of them, it has none the less limited their effect by the principles of prescription and the protection of possession. International law, the structure of which is not based on any super-State organisation, cannot be presumed to reduce a right such as territorial sovereignty, with which almost all international relations are bound up, to the category of an abstract right, without concrete manifestations.

The principle that continuous and peaceful display of the functions of State within a given region is a constituent element of territorial sovereignty is not only based on the conditions of the formation of independent States and their boundaries (as shown by the experience of political history) as well as on an international jurisprudence and doctrine widely accepted; this principle has further been recognized in more than one federal State, where a jurisdiction is established in order to apply, as need arises, rules of international law to the interstate relations of the States members. This is the more significant, in that it might well be conceived that in a federal State possessing a complete judicial system for interstate matters—far more than in the domain of international relations properly so-called—there should be applied to territorial questions the principle that, failing any specific provision of law to the contrary, a *jus in re* once lawfully acquired shall prevail over *de facto* possession however well established.

It may suffice to quote among several non dissimilar decisions of the Supreme Court of the United States of America that in the case of the State of Indiana *v.* State of Kentucky (136 U.S. 479) 1890, where the precedent of the case of Rhode Island *v.* Massachusetts (4 How. 591, 639) is supported by quotations from Vattel and Wheaton, who both admit prescription founded on length of time as a valid and incontestable title.

Manifestations of territorial sovereignty assume, it is true, different forms, according to conditions of time and place. Although continuous in principle, sovereignty cannot be exercised in fact at every moment on every point of a territory. The intermittence and discontinuity compatible with the maintenance of the right necessarily differ according as inhabited or uninhabited regions are involved, or regions enclosed within territories in which sovereignty is incontestably displayed or again regions accessible from, for instance, the high seas. It is true that neighbouring States may by convention fix limits to their own sovereignty, even in regions such as the interior of scarcely explored continents where such sovereignty is scarcely manifested, and in this way each may prevent the other from any penetration of its territory. The delimitation of Hinterland may also be mentioned in this connection.

If, however, no conventional line of sufficient topographical precision exists or if there are gaps in the frontiers otherwise established, or if a conventional line leaves room for doubt, or if, as e.g. in the case of an island situated in the high seas, the question arises whether a title is valid *erga omnes*, the actual continuous and peaceful display of State functions is in case of dispute the sound and natural criterium of territorial sovereignty.

*

The United States in their Counter-Memorandum and their Rejoinder maintain the view that statements without *evidence* to support them cannot be taken into consideration in an international arbitration, and that evidence is not only to be referred to, but is to be laid before the tribunal. The United States further hold that, since the Memorandum is the only document necessarily to be filed by the Parties under the Special Agreement, evidence in support of the statements therein made should have been filed at the same time. The Netherlands Government, particularly in the Explanations furnished at the request of the Arbitrator, maintains that no formal rules of evidence exist in international arbitrations and that no rule limiting the freedom of the tribunal in forming its conclusions has been established by the Special Agreement of January 23rd, 1925. They hold further that statements made by a government in regard to its own acts are evidence in themselves and have no need of supplementary corroboration.

Since a divergence of view between the Parties as to the necessity and admissibility of evidence is a question of procedure, it is for the Arbitrator to decide it under Article V of the Special Agreement.

The provisions of Article II of the Special Agreement to the effect that documents in support of the Parties' arguments are to be annexed to the Memoranda and Counter-Memoranda, refers rather to the time and place at which each Party should inform the other of the evidence it is producing, but does not establish a necessary connection between any argument and a document or other piece or evidence corresponding therewith. However desirable it may be that evidence should be produced as complete and at as early a stage as possible, it would seem to be contrary to the broad principles applied in international arbitrations to exclude *a limine*, except under the explicit terms of a conventional rule, every allegation made by a Party as irrelevant, if it is not supported by evidence, and to exclude evidence relating to such allegations from being produced at a later stage of the procedure.

The provisions of the Hague Convention of 1907 for the peaceful settlement of international disputes are, under Article 51, to be applied, as the case may be, as subsidiary law in proceedings falling within the scope of that convention, or should serve at least to construe such arbitral agreements. Now, Articles 67, 68 and 69 of this convention admit the production of documents apart from that provided for in Article 63 in connection with the filing of cases, counter-cases and replies, with the consent, or at the request of the tribunal. This liberty of accepting and collecting evidence guarantees to the tribunal the possibility of basing its decisions on the whole of the facts which are relevant in its opinion.

The authorization given to the Arbitrator by Article III of the Special Agreement to apply to the Parties for further written Explanations would be extraordinary limited if such explanations could not extend to any allegations already made and could not consist of evidence which included documents and maps. The limitation to written explanations excluded oral procedure; but it is not to be construed as excluding documentary evidence of any kind. It is for the Arbitrator to decide both whether allegations do or— as being within the knowledge of the tribunal—do not need evidence in support and whether the evidence produced is sufficient or not; and finally whether points left aside by the Parties ought to be elucidated. This liberty is essential to him, for he must be able to satisfy himself on those points which are necessary to the legal construction upon which he feels bound to base his judgment. He must consider the totality of the allegations and evidence laid before him by the Parties, either *motu proprio* or at his request and decide what allegations are to be considered as sufficiently substantiated.

Failing express provision, an arbitral tribunal must have entire freedom to estimate the value of assertions made by the Parties. For the same reason, it is entirely free to appreciate the value of assertions made during proceedings at law by a government in regard to its own acts. Such assertions are not properly speaking legal instruments, as would be declarations creating rights; they are statements concerning historical facts. The value and the weight of any assertion can only be estimated in the light of all the evidence and all the assertions made on either side, and of facts which are notorious for the tribunal.

For the reasons stated above the Arbitrator is unable to construe the Special Agreement of January 23rd, 1925, as excluding the subsidiary application of the above-mentioned articles of the Hague Convention or the taking into consideration of allegations not supported by evidence filed at the same time. No documents which are not on record have been relied upon, with the exception of the Treaty of Utrecht—invoked however in the Netherlands Counter-Memorandum—the text of which is of public notoriety and accessible to the Parties, and no allegation not supported by evidence is taken as foundation for the award. The possibility to make Rejoinder to the Explanations furnished at the request of the Arbitrator on points contained in the Memoranda and Counter-Memoranda and the extension of the time-limits for filing a Rejoinder has put both Parties in a position to state—under fair conditions—their point of view in regard to that evidence which came forth only at a subsequent stage of the proceedings.

III.

The *title alleged by the United States of America* as constituting the immediate foundation of its claim is that of *cession*, brought about by the Treaty of Paris, which cession transferred all rights of sovereignty which Spain may have possessed in the region indicated in Article III of the said Treaty and therefore also those concerning the Island of Palmas (or Miangas).

It is evident that Spain could not transfer more rights than she herself possessed. This principle of law is expressly recognized in a letter dated April 7th, 1900, from the Secretary of State of the United States to the Spanish Minister at Washington concerning a divergence of opinion which arose about the question whether two islands claimed by Spain as Spanish territory and lying just outside the limits traced by the Treaty of Paris were to be considered as included in, or excluded from the cession. This letter, reproduced in the Explanations of the United States Government, contains the following passage:

> The metes and bounds defined in the treaty were not understood by either party to limit or extend Spain's right of cession. Were any island within those described bounds ascertained to belong in fact to Japan, China, Great Britain or Holland, the United States could derive no valid title from its ostensible inclusion in the Spanish cession. The compact upon which the United States negotiators insisted was that all Spanish title to the archipelago known as the Philippine Islands should pass to the United States—no less or more than Spain's actual holdings therein, but all. This Government must consequently hold that the only competent and equitable test of fact by which the title to a disputed cession in that quarter may be determined is simply this: "Was it Spain's to give? If valid title belonged to Spain, it passed; if Spain had no valid title, she could convey none."

Whilst there existed a divergence of views as to the extension of the cession to certain Spanish islands outside the treaty limits, it would seem that the cessionary Power never envisaged that the cession, in spite of the sweeping terms of Article III, should comprise territories on which Spain had not a valid title, though falling within the limits traced by the Treaty. It is evident that whatever may be the right construction of a treaty, it cannot be interpreted as disposing of the rights of independent third Powers.

One observation, however, is to be made. Article III of the Treaty of Paris, which is drafted differently from the preceding Article concerning Porto

Rico, is so worded that it seems as though the Philippine Archipelago, within the limits fixed by that Article, was at the moment of cession under Spanish sovereignty. As already stated the Island of Palmas lies within the lines traced by the Treaty. Article III may therefore be considered as an affirmation of sovereignty on the part of Spain as regards the Island of Palmas (or Miangas), and this right or claim of right would have been ceded to the United States, though the negotiations of 1898, as far as they are on the record of the present case, do not disclose that the situation of Palmas had been specifically examined.

It is recognized that the United States communicated, on February 3rd, 1899, the Treaty of Paris to the Netherlands, and that no reservations were made by the latter in respect to the delimitation of the Philippines in Article III. The question whether the silence of a third Power, in regard to a treaty notified to it, can exercise any influence on the rights of this Power, or on those of the Powers signatories of the treaty, is a question the answer to which may depend on the nature of such rights. Whilst it is conceivable that a conventional delimitation duly notified to third Powers and left without contestation on their part may have some bearing on an inchoate title not supported by any actual display of sovereignty, it would be entirely contrary to the principles laid down above as to territorial sovereignty to suppose that such sovereignty could be affected by the mere silence of the territorial sovereign as regards a treaty which has been notified to him and which seems to dispose of a part of his territory.

The essential point is therefore whether the Island of Palmas (or Miangas) at the moment of the conclusion and coming into force of the Treaty of Paris formed a part of the Spanish or Netherlands territory. The United States declares that Palmas (or Miangas) was Spanish territory and denies the existence of Dutch sovereignty; the Netherlands maintain the existence of their sovereignty and deny that of Spain. Only if the examination of the arguments of both Parties should lead to the conclusion that the Island of Palmas (or Miangas) was at the critical moment neither Spanish nor Netherlands territory, would the question arise whether—and, if so, how—the conclusion of the Treaty of Paris and its notification to the Netherlands might have interfered with the rights which the Netherlands or the United States of America may claim over the island in dispute.

*

As pointed out above, the United States bases its claim, as successor of Spain, in the first place on *discovery*. In this connection a distinction must be made between the discovery of the Island of Palmas (or Miangas) as such, or as a part of the Philippines, which, beyond doubt, were discovered and even occupied and colonised by the Spaniards. This latter point, however, will be considered with the argument relating to contiguity; the problem of discovery is considered only in relation to the island itself which forms the subject of the dispute.

The documents supplied to the Arbitrator with regard to the discovery of the island in question consist in the first place of a communication made by the Spanish Government to the United States Government as to researches in the archives concerning expeditions and discoveries in the Moluccas, the "Talaos" Islands, the Palaos Islands and the Marianes. The United States Government, in its Rejoinder, however states that it does not specifically rely on the papers mentioned in the Spanish note.

It is probable that the island seen when the Palaos Islands were discovered, and reported as situated at latitude 5° 48′ North, to the East of Sarangani and Cape San Augustin, was identical with the Island of Palmas (or Miangas). The Island "Meanguis" mentioned by the Spanish Government and presumed by them to be identical with the Talaos—probably Talautse or Talauer Islands—seems in reality to be an island lying more to the south, to which, perhaps by error, the name of another island has been transferred or which may be identified with the island Tangulandang (Tangulanda or Tahoelandang) just south of Siau (Siaoe), the latter island being probably identical with "Suar" mentioned in the same report as lying close by. Tangulandang is almost the southernmost of the islands situated between Celebes and Mindanao, whilst Palmas (or Miangas) is the northernmost. On Tangulandang there is a place called Minangan, the only name, as it would seem, to be found on maps of the region in question which is closely similar to Miangas and the different variations of this word. The name of "Mananga" appears as that of a place on "Tagulanda" in official documents of 1678, 1779, 1896 and 1905, but is never applied to the island itself; it is therefore not probable that there exists a confusion between Palmas (Miangas) and Minangan (Manangan) in spite of the fact that both islands belonged to Tabukan. However there may exist some connection between Minangan and the island "Meanguis", reported by the Spanish navigators.

The above-mentioned communication of the Spanish Government does not give any details as to the date of the expedition, the navigators or the circumstances in which the observations were made; it is not supported by extracts from the original reports on which it is based, nor accompanied by reproductions of the maps therein mentioned.

In its Rejoinder the United States Government gives quotations (translations) from a report of the voyages of Garcia de Loaisa which point to the fact that the Spanish explorer saw the Island of Palmas (Miangas) in October 1526.

The fact that an island marked as "I (Ilha) de (or das) Palmeiras", or by similar names (Polanas, Palmas), appears on maps at any rate as early as 1595 (or 1596) (the date of the earliest map filed in the dossier), approximately on the site of the Island of Palmas (or Miangas), shows that that island was known and therefore already discovered in the 16th century. According to the Netherlands memorandum, the same indications are found already on maps of 1554, 1558 and 1590. The Portuguese name (Ilha das Palmeiras) could not in itself decide the question whether the discovery was made on behalf or Portugal or of Spain; Linschoten's map, on which the name "I. das Palmeiras" appears, also employs Portuguese names for most of the Philippine Islands, which from the beginning were discovered and occupied by Spain.
